Applicants are reminded that a University degree in dentistry does not in itself confer the right to practise the profession of dentistry. It is necessary to comply with the dental laws of the country, state, or province in which it is proposed to begin practice. Students, therefore, are advised to register their qualifications at the beginning of their University course with the licensing body in the area in which they intend to practise.

3.5 PROVINCIAL REQUIREMENTS

3.5.1 Province of Quebec

All students who are registered in the first year of the Faculty of Dentistry, McGill University, *must* register with the Order of Dentists of Québec. The registration fee is $25.00. Further information may be obtained from the Registrar of the Order of Dentists of Québec, 801 Sherbrooke Street East, Montreal, PQ H2L 1K4.

Candidates who have successfully completed the regular program as given in the Faculty of Dentistry, McGill University, may be granted the licence; provincially, by the satisfactory completion of the Order of Dentists of Québec progress survey throughout the program and by meeting the French language requirement; and nationally, by registering with the National Dental Examining Board prior to the completion of the final year of studies.

LANGUAGE REQUIREMENT FOR PROFESSIONS

Quebec law now requires that candidates seeking admission to provincially-recognized professional corporations* must possess a working knowledge of the French language, i.e. be able to communicate verbally and in writing in that language.

To demonstrate this capability, a candidate will normally be required to pass an examination set by the Régie de la langue française, unless he or she can show that three years of instruction in a French post-primary school have been completed. The professional corporation will require this proof of attendance or of successful completion of the Régie examination.

This examination shall test the candidate's mastery of oral and written comprehension and expression in French. The contents may vary in accordance with the current terminological requirements of the profession or professional group.

In special cases where the candidate can clearly demonstrate to the Régie by means of an interview that a true mastery of French exists, the examination requirement may be waived.

Information on the current testing regulations of the Régie may be obtained by writing to: Régie de la langue française, 800, Place Victoria, 16 étage, Montréal, PQ H4Z 1G8, Telephone 873-6571.

Students who need to acquire a functional level of proficiency in French may register in courses at either the French Language Centre, 3438 McTavish Street, Telephone 392-5727, for courses during the day, or at the Centre for Continuing Education, 772 Sherbrooke Street West, Telephone 392-4901, for courses in the evening.

Students already proficient in French but who wish to keep up practice may register in courses at the Department of French Language and Literature, 3460 McTavish Street, Telephone 392-4577, or at the Centre d'études canadiennes-françaises, 3475 Peel Street.

McGill degrees and diplomas currently give access to corporations regulating the activities of the following professional groups:

Advocates
Agrologists
Architects
Chartered Accountants
Chartered Administrators
Chartered Appraisers
Chemists
Dentists
Dietitians
Engineers
Industrial Administration Accountants
Industrial Relations Counsellors
Licensed General Accountants
Notaries
Nurses
Occupational Therapists
Physicians
Physiotherapists
Psychologists
Social Workers
Speech Therapists & Audiologists
Urbanists
Vocational Guidance Counsellors

3.5.2 Other Provinces

The following is a list of the provincial Dental Boards in Canada. Students are advised to write to those listed below for information whenever they are in doubt as to the regulations of any province.

ALBERTA – Dr. B.P. Martinello, Executive Director, Registrar, Alberta Dental Association, 10240-124 Street, Suite 608, Edmonton T5N 3W8

BRITISH COLUMBIA – Dr. R.B. Telford, Registrar, College of Dental Surgeons of British Columbia, 1125 West 8th Avenue, Vancouver V6H 3N4

MANITOBA – Dr. B. Goldberg, Registrar, Manitoba Dental Association, 201-308 Kennedy Street, Winnipeg R3B 2M6

NEW BRUNSWICK – Dr. John C. Rooney, Executive Director-Registrar, New Brunswick Dental Association, 65 Pacific Avenue, Moncton, N.B.

NEWFOUNDLAND – Dr. D.K. Peters, Registrar, Newfoundland Dental Board, 103 LeMarchant Road, St. John's A1C 2H1

NOVA SCOTIA – Dr. S. G. Bagnall, Secretary-Registrar, Provincial Board of Nova Scotia, P.O. Box 604, Halifax B3J 2R7

ONTARIO – Dr. Kenneth F. Pownall, Registrar, The Royal College of Dental Surgeons of Ontario, 230 St. George Street, Toronto M5R 2N5

QUEBEC – Dr. Marcel Archambault, Registrar, Order of Dentists of Quebec, 801 Sherbrooke Street East, Montreal H2L 1K4

PRINCE EDWARD ISLAND – Dr. I.A.L. Millar, Registrar, Dental Association of Prince Edward Island, R.R. #5, Montague C0A 1R0

SASKATCHEWAN – Dr. G. H. Peacock, Secretary-Registrar-Treasurer, College of Dental Surgeons of Saskatchewan, 811-105-21st Street East, Saskatoon S7K 0B3

3.5.3 National Dental Examining Board of Canada

The National Dental Examining Board of Canada issues a certificate to successful candidates which may be registered with the Canadian provincial licensing boards for the purpose of securing a licence to practise. This privilege will be granted only on receipt of a proper application dated not later than March 30th of the year of graduation. Failure to apply by that date will entail the passing of an examination in order to receive the certificate.

Candidates must hold a degree in dentistry from a school of dentistry approved by the Council on Education of the Canadian Dental Association at the time of graduation; or be certified by the Dean or Registrar of a University as a bona-fide senior year student of an approved dental school.

Detailed information may be obtained from the Registrar, National Dental Examining Board of Canada, 100 Bronson Street, Suite 103, Ottawa, Ontario K1R 6G8.

3.5.4 National Dental Examining Board of the U.S.

Students intending to practise in the United States are advised to contact the Secretary, Council of the National Board of Dental Examiners, American Dental Association, 211 East Chicago Ave., Chicago, Illinois 60611. Information should also be obtained from the Secretary of the licensing board of the specific state in which the student intends to practise.

3.5.5 Registration

Registration for the 1977-78 session will be held on Tuesday, September 6. Information and forms for payment of fees will be forwarded in the summer. All lectures will begin on Wednesday, September 7, 1977.

3.6 FEES

The University reserves the right to make changes without notice in its published scale of fees if, in the opinion of the Board of Governors, circumstances so require. Fees are not refundable except under special conditions described in the General Announcement.

TUITION FEES

Annual undergraduate tuition fee (all years)	$570.00
Student Services fee (all years).	70.00
Student Societies fees (all years including Dental Review)	26.50
By instalments: Each of two instalments (plus one half of the applicable equipment supplies and rental fees noted below)	328.25

REPEATING A YEAR

Students repeating a year pay fees as listed above.

EQUIPMENT SUPPLIES AND RENTALS

In First year – Instrument & equipment (rental)	$75.00
– Microscope (rental)	25.00
In Second year – Handpiece (rental-low speed)	25.00
In Second year – Handpiece (rental-high speed)	25.00
In Second year – Instrument & equipment (rental)	125.00
In Third year – Handpiece (rental)	25.00
In Third year – Clinic handpiece (rental)	50.00
In Third year – Instrument & equipment (rental)	150.00
In Fourth year – Handpiece (rental)	25.00
In Fourth year – Clinic Handpiece (rental)	50.00
In Fourth year Instrument & equipment (rental)	150.00

AD EUNDEM FEE

Transfer students entering any year above the first pay a special *ad eundem* fee of $10.00

GENERAL REGULATIONS

NEW STUDENTS

Students entering the University for the first time are required to pay their fees either by mail or in person at the Accounting Office.

The first instalment is due 10 days after registration, the second instalment by January 15, 1978.

A late payment fee of $10.00 is charged for payment within the first 30 days; and $25.00 thereafter.

RETURNING STUDENTS

Students who have completed one or more years and intend to register in the succeeding year must pay one half of the total sessional fee by mail or in person to the Accounting Office before August 19, 1977. Instructions for paying fees in advance will be mailed to all returning students, either with their Reports of Standing or a short time later. Students who have been notified by the University of the award of a scholarship, bursary, or student loan, and who require this for payment of the first instalment of fees, must obtain from the Student Aid Office, McGill University, permission to delay payment of fees.

The second instalment is due by January 15, 1978. A late payment fee of $10.00 is charged for payment within the first 30 days; and $25.00 thereafter.

LATE REGISTRATION

Students registering late must pay their fees at the time of registration, failing which they become subject to the late payment fee and the provisions of the following paragraph:

As soon as possible after the prescribed dates for the payment of fees the Chief Accountant will send to the Registrar's Office a list of the registered students who have not paid their fees. Reports of standing, transcripts of record and diplomas will be withheld until such time as the fees are paid or a satisfactory arrangement is made with the Chief Accountant.

3.7 GRADUATION FEE

Application by students who expect to graduate at the Spring Convocation must be filed by April 1st of each year and by those who expect to graduate at the Fall Convocation by October 1st of each year. An application form will be mailed to each eligible student and must be returned to the Registrar's Office together with the graduation fee of $15.00 by the appropriate date listed above. This fee will cover all expenses in connection with graduation including academic dress. It is the student's responsibility to ensure that his or her name is included in the graduation list.

Note: *Special fees* are given in the *General Announcement.*

3.8 INSTRUMENTS

In addition to the rental fee, certain items of equipment and supplies are purchased by each student. Approximate cost of this equipment is as follows:

First year	$500.00
Second year	$600.00
Third year	$100.00

Books are not included in these amounts.

3.9 MEDALS AND PRIZES

FOURTH YEAR:

Dr. A. W. Thornton Gold Medal awarded to the student in the final year attaining the highest overall standing in the four years of the dental undergraduate program.

Dr. J. K. Carver Medal awarded to the student in the final year attaining the second highest overall standing in the four years of the dental undergraduate program.

Dr. A. L. Walsh Prize awarded to the student in the final year for meritorious achievement in Oral Medicine throughout the clinical undergraduate program.

Dr. W. G. Leahy Prize awarded to the student in the final year for meritorious achievement in Restorative Dentistry throughout the clinical undergraduate program.

THIRD YEAR:

Dr. Gerald Franklin Prize awarded to the student attaining the highest standing in the examinations in the third year of the dental undergraduate program.

International College of Dentists Prize (Canadian Section) awarded to the student attaining the second highest standing in the third year of the dental undergraduate program.

SECOND YEAR:

Dr. D. P. Mowry Prize awarded to the student attaining the highest standing in the examinations in the second year of the dental undergraduate program.

Dr. I. K. Lowry Prize awarded to the student attaining the second highest standing in the second year of the dental undergraduate program.

Dr. K. I. Melville Prize awarded to the student attaining the highest aggregate standing in the Basic Science subjects in the first two years of the dental undergraduate program.

Dr. W. C. Bushell Prize awarded to the student attaining the highest aggregate standing in Dental Anatomy and Applied Sciences in the first two years of the dental undergraduate program.

FIRST YEAR:

Dr. Arthur S. Solomon Prize awarded to the student attaining the highest standing in the examinations in the first year of the dental undergraduate program.

Dr. M. Donigan Prize awarded to the student attaining the second highest standing in the first year of the dental undergraduate program.

GRADUATE PRIZE:

Dr. L. A. Cohn Prize awarded to the student in the Masters program in Prosthodontics and Restorative Dentistry for outstanding achievement.

3.9.1 Scholarships, Bursaries and Loans

Details of University and other scholarships and bursaries are given in the *Undergraduate Scholarships and Awards Announcement*, which may be obtained from the Registrar's Office.

The University has a fund from which loans may be made to students of good academic standing.

The Order of Dentists of Québec has created a loan fund to assist students of the Faculty who are registered with the Order. The W. K. Kellogg Foundation Loan Fund and the Dental Students' Society Dean D. P. Mowry Memorial Fund are available to assist any student registered in the Faculty.

Loans are made only to students in the upper years. Applications for all loans should be made to the Student Aid Office.

3.10 CLINICAL FACILITIES

The McGill University Dental Clinic is an integral part of the Department of Dentistry of the Montreal General Hospital. At the Clinic, under the guidance of the dental staff, students are taught to carry out all phases of clinical dentistry and related laboratory procedures.

Third and Fourth year students attend this Clinic daily except for such time as may be taken up by lectures or other University work. Students entering the Third year must spend the period between the last of the regular May examinations and the middle of June in the Clinic.

An abundance of teaching material in all aspects of dentistry is always available. Integration with the Montreal General Hospital offers the facilities of all departments in the Hospital and allows the students to observe a wide variety of interesting and unusual cases under treatment.

Graduate students, interns, registered nurses, and dental assistants are in attendance.

3.11 LIBRARY

Undergraduate dental students are fortunate to have, for their use, a modern dental library on the first floor of the Strathcona Anatomy and Dentistry Building. The Library's collection includes the preclinical sciences, as well as dentistry and periodical literature. There is a full time librarian in charge as well as assistants to enable the staff and students to obtain the advice and help they require. The library is open daily and in the evenings for the use of the dental community.

4 STUDENT SERVICES

4.1 OFFICE OF THE DEAN OF STUDENTS

The Dean of Students has the responsibility for the provision of and the coordination of all student services and works closely with the Students' Society in the interests of all students. The Dean and Associate Dean are available for consultation with individual students who may wish to discuss problems not already provided for by one or other of the existing services. The Office of the Dean of Students maintains an "open-door" policy and students are invited to make use of these services at any time.

Location:	3465 Peel St.
General Information:	392-4551

4.2 CHAPLAINCY SERVICE

A pastoral service is available through the campus chaplains independent of McGill administration. This service exists to serve the needs of all McGill students, families and staff. The service is related to areas such as problems of faith, pre-marriage counselling, marital problems, value systems and personal relations. Open meetings on a variety of religious and campus topics are regularly sponsored by the Chaplains.

Social Service projects are sponsored in conjunction with Hillel, Newman and S.C.M. Yellow Door and opportunities are offered to work with the poor, aged, children and prisoners.

At 3484 University Street there is a lounge and reading area where books and periodicals are available to students free of charge. Information concerning individual denominational services is also available.

Location:	3484 University St.
General Information:	392-5890

4.3 STUDENT AID & FOREIGN STUDENT ADVISER'S OFFICE

The Student Aid section of this office handles all matters relating to financial assistance whether University, Provincial or Federal. Non-Canadian students requiring certification of registration and/or letters of advice to Foreign Exchange Control Boards obtain these from this office.

The Foreign Student Adviser section of this office deals with all matters which may affect non-Canadian students such as problems with the Canadian

Department of Manpower and Immigration and information concerning the necessity of the compulsory health insurance.

Location:	3465 Peel St.
General Information:	392-5206

4.4 STUDENT COUNSELLING SERVICE

This office provides a place where students of all faculties may discuss any problem confidentially. Among the services offered are individual and group therapy, awareness groups, human relations training, marital and sexual therapy, psychological assessment, vocational testing, effective reading courses, educational and career planning and the Career Information Library. The service is free to the McGill Community.

Location:	522 Pine Ave., W.
General Information:	392-5119

4.5 HEALTH SERVICE

When students enrol at McGill University they have available to them a full range of medical service provided by the McGill University Health Service. Medical clinics operate daily, five days of the week from 9:00 a.m. – 5:00 p.m. A physician is always on call at night and on weekends and he can be contacted by dialing the Health Service number. There are both male and female physicians on staff as well as a competent staff of college health nurses.

This service is available to all full-time students, undergraduate and post-graduate. Students are asked to bring their Medicare cards or equivalent. *All information is completely confidential and forms no part of any University record.*

Many students are seen for discussion about sexual life, contraception, drug problems and venereal disease. We urge students who suspect that they have V.D. to consult us. We invite students who are concerned about a drug problem to contact the Health Section.

Part of the Health Service consists of a *Mental Health Service* which makes available to students psychiatric and psychological help. Students who wish to come are advised to make an appointment. If a psychological emergency arises the student should come directly to the Mental Health Service or phone immediately. All contacts by students with this service are kept completely confidential.

PARTICIPATION IN ATHLETICS: A student in any academic year wishing to participate in heavy contact athletics, e.g. football, will be required by the Athletics Department to undergo a physical examination at the University Health Service.

In order to ensure medical coverage while a student at McGill, Canadian students from provinces other than Québec are advised to consult with the medicare and hospital insurance offices of their own province before coming to McGill. This is particularly important since residents of other provinces are not covered by Québec Medicare and Hospitalization while studying at McGill.

Non-Canadian students, whether undergraduate or post graduate, are obliged to enrol in a medical and hospital insurance program. Consequently, the student and his or her dependents are covered to a large extent for medical and hospital expenses during the academic year. Information concerning this program can be obtained at the general office of the Health Service.

Location:	517 Pine Avenue West
Appointment and General Office	392-5441
Mental Health Section	392-5449

4.6 RESIDENCE ACCOMMODATION

Students who wish to apply for residential accommodation must do so on special forms which may be obtained from the Secretary, Co-Ed Residences, McGill University, 3935 University Street, Montreal, PQ H3A 2B4.

4.7 OFF-CAMPUS HOUSING SERVICE

Students unable to secure a room in residence should apply in person to the

Off-Campus Housing Service
Dean of Students' Office
3465 Peel Street, Room 401
Montreal, PQ H3A 1W7
General Information: 392-4554

This office maintains an up-to-date computer listing of available off-campus housing, including the names of families willing to take in student boarders and other students seeking roommates.

4.8 HOUSING FOR MARRIED STUDENTS

The University maintains a limited number of apartment units in several nearby locations for married students. As the demand for these apartments greatly exceeds the number of vacancies occurring each year, applications are restricted to married, full-time undergraduate and graduate students who have not yet attained the Ph.D or M.D. degree or equivalent. Further information and application forms may be obtained from the Real Estate Office, Apt. P.1, 3474 Hutchison Street, Montreal, PQ H2X 2G7.

4.9 STUDENT PLACEMENT

The Canada Manpower Centre provides a comprehensive placement service to McGill students in the areas of part-time, summer and permanent employment. The principal aims of the service are to

encourage employers to make available a wide variety of job opportunities to McGill students; to assist students in finding suitable employment, by providing information on the labour market and arranging interviews with prospective employers; to encourage students to prepare for a career by doing their own research into the labour market, through library facilities, seminars, summer and part-time jobs.

Location: 762 Sherbrooke St. W.
General Information: 283-4411

4.10 BOOKSTORE

The McGill University Bookstore, located in the Bronfman Building at 1001 Sherbrooke Street West, provides a comprehensive stock of current textbooks, reference material and academic supplies as well as items of general interest. It is administered by a Senate committee representing the students, the faculty and the administration.

4.11 ATHLETICS

McGill's facilities for athletics, physical education, and recreation are centered in the Sir Arthur Currie Memorial Gymnasium, the Percival Molson Memorial Stadium, the McGill Winter Stadium and the Garfield Weston Pool. Sports facilities in the gymnasium include basketball, squash, badminton, and volleyball courts; swimming pool; facilities for gymnastics, wrestling, fencing, judo, and track.

The athletics instructional program provides a learning environment for men and women students in a variety of leisure time sports.

Numerous intramural and recreational sports clubs provide opportunities for students to participate in sports for relaxation and to represent their faculty or residence on intramural teams of their choice.

On the intercollegiate level McGill participates in sports sponsored by the Québec Universities Athletics Association and the Ontario Women's Intercollegiate Athletics Association.

Complete information concerning athletics may be obtained from the Athletics Office in the Currie Gymnasium.

4.12 EXTRA-CURRICULAR ACTIVITIES

There are over 250 activities and clubs which students may join. These include international clubs, religious groups, political clubs, fraternities, communications (Radio McGill), the McGill Daily and some 50 miscellaneous groups (such as science clubs, literary, theatrical and musical societies, chess and bridge clubs, and the Voyageurs' Society). All students registered in the University are members of the Students' Society. Headquarters are in the University Centre, a modern four-storey building, with cafeterias, a ballroom, meeting rooms, lounges, and an experimental theatre.

4.13 STUDENT ORCHESTRA, CHOIR, AND WIND ENSEMBLE

The Student Orchestra and Choir of the Faculty of Music as well as the McGill Wind Ensemble have some vacancies for amateur musicians. Advanced instrumentalists (strings, winds, harp, percussion), or experienced choir singers who would like to become regular members of the Orchestra, the Choir, or the Wind Ensemble, should contact the office of the Faculty of Music for further information (Telephone 392-4501).

5 PROGRAM FOR THE DEGREE OF D.D.S.

5.1 CURRICULUM*

Candidates for the degree of Doctor of Dental Surgery must have completed the requirements for entrance as noted in Section 3.1, before entering upon the four-year program in this Faculty.

The dental curriculum is as follows:

FIRST YEAR

Anatomy, General
Behavioural Science
Biochemistry
Dental Anatomy and applied Sciences
-Dental Materials
-Occlusion
-Operative Dentistry
-Prosthodontics (Fixed)
Epidemiology
Growth and Development
Histology, General
Histology, Oral
History, Dental
Medicine
Orientation in Dentistry
Physiology
Statistics

SECOND YEAR

Anxiety and Pain Control
Community Dentistry
Dental Materials
Microbiology and Immunology
Occlusion
Operative Dentistry
Orthodontics
Nutrition
Pathology, General
Pathology, Oral
Periodontics
Pharmacology, General

Preventitive Dentistry
Prostholdontics (Fixed)
Prosthodontics (Removable)
Radiology

THIRD YEAR

Anaesthesiology
Behavioural Science
Dental Pharmacology and Therapeutics
Endodontics
Epidermiology and Dental Health Care
Medicine
Occlusion
Operative Dentistry
Oral Diagnosis and Pathology
Oral Diagnosis and Treatment Planning Seminar
Oral Surgery
Orthodontics
Paedodontics
Periodontics
Practice Administration
Prosthodontics (Fixed)
Prosthodontics (Removable)
Radiology

FOURTH YEAR

Endodontics
Jurisprudence
Occlusion
Oral Surgery
Operative Dentistry
Oral Medicine Seminar
Orthodontics
Paedodontics
Paedodontic Seminar
Periodontics
Practice Administration
Prosthodontics (Fixed)
Prosthodontics (Removable)
Restorative Dentistry Seminar

** It should be understood that this curriculum is subject to change without notice.*

5.2 REGULATIONS GOVERNING EXAMINATIONS AND ADVANCEMENT

Occasional oral and written examinations are held throughout the session to test the progress of the student. Final examinations in most subjects are held at the end of the session.

A minimum of 60 per cent in each subject is required to pass and 80 per cent for Honours.

At the discretion of Faculty, the following regulations will apply:

All examinations in each year must be passed before a student is allowed to advance to the next.

Students who are unable to appear for any examination or whose performance may be affected in any way, due to illness or personal matters, must notify Faculty in writing prior to the examination date; or not later than 72 hours after the scheduled examination period and before publication of results. Requests for special Faculty consideration should be directed to the Administrative Assistant, and be supported by relevant medical certificates. Students granted special consideration could, at the discretion of Faculty, be excluded from receiving Faculty awards.

Candidates who fail at the regular examinations in not more than two subjects may be allowed to sit supplemental examinations before the beginning of the following session. These examinations are held during the week preceding the regular opening of the session.

Candidates who fail in three subjects at the regular examinations or who are unsuccessful in the supplemental examinations may be permitted to repeat the year.

A student who has been requested to repeat a year, may not seek authorization to attempt laboratory and/or clinical procedures in any discipline, over the summer months, for the express purpose of being reconsidered for advancement.

Candidates who fail at the regular examinations in more than three subjects will be required to withdraw.

A student repeating a year must attain, at the regular examination, satisfactory standing in all courses. Failing this, the student will be required to withdraw.

A single grade D (60%) is considered a passing mark. In the presence of additional D or F grades, all D grades are considered failures.

A student who, in any year, fails in a subject in which practical or clinical work is necessary, may be required to fulfil prescribed additional clinical or laboratory work before presenting himself/herself for supplemental examination. A fee may be attached to these requirements.

The Faculty reserves the right to require the withdrawal of any student at any time, if, in the opinion of his/her instructors, he/she displays unprofessional conduct or is incompetent.

The quality of the written language will be considered in evaluating examinations.

Applications for supplemental examinations must be made to the Administrative Assistant at least 30 days before the date set for each examination, and must be accompanied by a fee of $10.00 for each examination.

Subjects comprising practical and theoretical components shall be reported as a single mark in final examinations.

5.3 QUALIFICATIONS FOR THE DEGREE

1. Candidates for the degree of Doctor of Dental Surgery shall have attended courses of instruction for four full sessions in the Faculty of Dentistry of this University.

2. Students of other universities who may be admitted to advanced standing in this University are required to pass a qualifying entrance examination and thereafter the same examinations as regular students of this University.
3. Candidates for the degree, admitted in advanced standing as noted above, shall have completed at least the final year of the course at this University.
4. Every candidate for the degree shall provide evidence of satisfactory completion of all of the required subjects which comprise the dental curriculum.

5.4 DENTAL INTERNSHIPS

5.4.1 Internship and Residency Programs

a) Rotating Internships

A rotating internship program is offered at the Montreal General Hospital, in conjunction with the Faculty of Dentistry, beginning *July 1* each year. Applications for internships should be received prior to December 31 in any year. Further details may be obtained by writing to the Dental Surgeon-in-Chief, Montreal General Hospital, 1650 Cedar Avenue, Montreal, PQ H3G 1A4

b) First Year Residency in Paedodontics

One candidate is selected each year for this one-year program beginning *July 1*. For further information apply to the Director of Dental Services, Montreal Children's Hospital, 2300 Tupper Street, Montreal, PQ H3H 1P3.

c) Residency Program in Oral Surgery leading to M.Sc. degree

One candidate is selected each year for this program beginning *July 1*. For further information apply to the Department of Oral Surgery, Faculty of Dentistry, McGill University, 3640 University Street, Montreal, PQ H3A 2B2.

d) Residency in Prosthodontics

One candidate is selected each year for this program beginning *July 1*. For further information apply to the Department of Prosthodontics, Faculty of Dentistry, McGill University, 3640 University Street, Montreal, PQ H3A 2B2.

5.4.2 Student Interns

In the senior year each student serves as a student intern for a minimum period of three weeks. During this time he/she lives in the Montreal General Hospital. He/she serves each morning in the Oral Diagnosis and/or Screening Clinics and is on call with the resident intern for the remainder of the entire day for the diagnosis and dental treatment of hospitalized cases both on the wards and in the main hospital operating theatres with the attending oral surgeons. In this way the student is afforded an excellent opportunity to observe and to participate in dental services under hospital conditions. A period of time is spent in the Department of Anaesthesia and the Emergency Department of the Hospital.

5.5 DENTAL OFFICER TRAINING PLAN

The Dental Officer Training Plan is offered by the Canadian Forces to undergraduates interested in a military career following graduation.

The plan is designed to assist dental students financially, in that it provides for payment of tuition, instruments, supplies and books, and in addition, pay in accordance with rank. The plan also provides training during the summer months for the undergraduate as an officer in the Armed Forces.

To be eligible a student must be able to meet the Canadian Forces standards for enrolment and be academically acceptable, without condition, to any one of the four professional years of the dental faculty.

Full details of the Dental Officer Training Plan may be obtained from Canadian Forces Recruitment and Selection Unit, 1254 Bishop Street, Montreal, PQ H3G 2E3.

6 COURSES OF INSTRUCTION

DIVISION OF COMMUNITY DENTISTRY

6.1 BEHAVIOURAL SCIENCE

Professor
- H. Caplan, B.Sc., M.D., C.M.(McG.), F.R.C.P.S.(Course Director)

Associate Professor
- J. W. Stamm, D.D.S.(Alta.), D.D.P.H., M.Sc.D.(Tor.)

Lecturers
- F. Vosburg, B.A., D.D.S.(McG.)
- C. Yung, M.D.(Taiwan), Dip. Psy.(McG.), F.R.C.P.& S.(C).

First Year (524-161P)

This course aims to increase the student's familiarity with the impact of disease on a patient's style of living, his socio-economic security, and his family. It will cover tasks in life as well as style in living from infancy to old age. Sessions involve presentation of live patients, selected films and audio-visual material. Ample time is devoted to small group discussion.

6.2 EPIDEMIOLOGY AND DENTAL HEALTH CARE

Professors
- R. O. Oseasohn, B.S.(Tufts), M.D., C.M.(S.U.N.Y.), F.A.C.P.
- S.S. Lee, B.S., M.D., M.P.H., Dr. P.H. (Yale)

Associate Professor
- J. W. Stamm, D.D.S.(Alta.), D.D.P.H., M.Sc.D.(Tor.)(Course Director)

First Year (513-121P)
In the first quarter of the first year, a series of lectures and symposia presented on the Social Aspects of Health Care dealing with the impact of disease on, and the doctors' responsibility to the community. Subjects include the present health care system in Québec, how it is used by doctors and patients, doctor payment, nutrition, and the drug industry.

Third Year (513-311P)
This course consists of lectures and seminars designed to introduce students to the methods used in the assessment of health in a population. With this background in health evaluation, the student is introduced to modern approaches in the provision of community health services. Various facets of dental health care delivery are discussed. (Text – David F. Striffler, *The Dentist, His Practice, and His Community.)*

6.3 GROWTH AND DEVELOPMENT IN CHILDREN

Professor
- G. McKay, B.A.(Dal.), M.A.(Yale & Dal.), Ed.D.(Harv.)(Course Director)

First Year (590-113P)

This course aims to familiarize the student with cognitive, physical, and behavioural growth of children.

6.4 HISTORY OF THE DENTAL PROFESSION

Associate Professor
- J.W. Stamm, D.D.S.(Alta.), D.D.P.H., M.Sc.D.(Tor.)

First Year (590-112P)

The course emphasizes the development of dentistry as a profession. While a brief review of the state of the art from earliest civilization to 1800 is undertaken, the major focus of the course is on the developments, particularly in North America, which entail the growth of the formal professional structure of dentistry. Whenever possible, parallels are drawn to current professional preoccupations.

6.5 DENTAL ETHICS AND JURISPRUDENCE

Lecturer
- P. Graham, B.A., B.C.L.(McG.)

Fourth Year (590-412P)

A discussion of the Dental Code of Ethics, the Dental Act, the Health Act, and other laws governing the practice of dentistry.

The responsibility of the dentist under the laws of the Province and his position as defendant in suits for damages, as plaintiff in suits for fees and as expert witness in cases between other parties and his use of techniques for identification from dental remains are explained through the analysis of various specific cases. Legal and taxation aspects of the business arrangements of dental practice are also considered. (Text – Harvey Sarner, *Dental Jurisprudence)*

6.6 NUTRITION

Lecturer
- C.J. Ayers, B.Sc., M.Sc.(McG.), M.Sc.(Lond.)

Second Year (590-227P)

This course consists of lectures and discussion on nutrition and diet as they affect both systemic and oral health. The emphasis is on nutritional status assessment and diet counselling with particular reference to dental health. (Text – Abraham E. Nizel, *Nutrition in Preventive Dentistry; Science and Practice)*

6.7 PRACTICE ADMINISTRATION

Lecturers
- J.A. Claener, D.D.S.(McG.) and Staff

Fourth Year (590-417P)

A study of the orderly arrangement and administration of all the useful facilities and services needed for a professional practice, based on needs demands, regulations, system, analysis, psychology and common sense in dealing with people.

It is concerned with all the functions of the dental office which are not part of operative, technical or diagnostic procedures. (Text – Robert K. Stinaff, *Dental Practice Administration;* H.C. Kilpatrick, *Work Simplification in Dental Practice.)*

6.8 PREVENTIVE DENTISTRY

Associate Professors
- J.W. Stamm, D.D.S.(Alta.), D.D.P.H., M.Sc.D. (Tor.)(Course Director)
- R.F. Harvey, D.D.S.(McG.), F.R.C.D.(C), F.A.C.D., F.I.C.D.

Lecturer
- J.A. Claener, D.D.S. (McG.)

Second Year (590-228P)

This course consists of lectures to give a scientific understanding of the initiation and progression of the major dental diseases. In addition, the student is introduced to the most important techniques and agents which are used in the prevention of these diseases. Included is a look at the current and future research in this field. (Texts – *The Dental Clinics of North America, October, 1972;* Ernest Newburn, editor, *Fluorides and Dental Caries;* Simon Katz, James L. McDonald, George K. Stookey, *Preventive Dentistry in Action.)*

6.9 STATISTICS

Associate Professor
- J. W. Stamm, D.D.S.(Alta.), D.D.P.H., M.Sc.D.(Tor.)

First Year (590-126P)

This course consists of an introduction to the principles of descriptive and inferential statistics as applied to dental science. The course stresses the proper collection, tabulation and presentation of data. In addition, it is intended to familiarize the student with those statistical concepts which will help in the interpretation of dental professional literature. (Text – Olive Jean Dunn, *Basic Statistics: A Primer for the Bio-medical Sciences).*

DIVISION OF PREVENTIVE AND RESTORATIVE DENTISTRY

6.10 DENTAL ANATOMY AND APPLIED SCIENCES

Associate Professor
- W. D. Sanders, B.Sc.(Sir G. Wms.), D.D.S.(McG.)(Chairman)
- J.D. Townsend, B.Sc.(U.B.C.), D.D.S.(McG.), M.S.D.(Wash.)

Assistant Professors
- C.L. Moran, B.Sc., D.D.S.(McG.)
- E. Ostro, B.Sc.(Sir G. Wms.), D.D.S.(McG.)

Lecturers
- J.D. Fenwick, B.Sc., D.D.S.(McG.)
- D.T. Shizgal, D.D.S.(McG.)
- M.D. Shizgal, B.Sc., D.D.S.(McG.)

Demonstrators
- A. Androutsos, D.S.(Athens), D.D.S.(McG.)
- J. Bartos, M.U.Dr.(Purzyrije), D.M.D.(Alabama)
- I.A. Cameron, B.Sc.(Sir G. Wms.), D.D.S.(McG.)
- G.M. Griffiths, D.D.S.(McG.)
- C.L. Herscovitch, D.D.S.(McG.)
- J.M. Little, B.A.(Loyola), D.D.S.(McG.)
- A.F. Small, D.D.S.(McG.)
- M. Szikman, B.Sc., D.D.S. (McG.)
- D. Taylor, D.D.S.(McG.)
- A. Tekela, D.D.S.(McG.)

DENTAL ANATOMY

First Year (590-114P)

Instruction in the form and function of normal teeth and supporting tissues, and the development of manual dexterity in the student through drawings and waxing procedures, and sectioning of natural teeth.

APPLIED SCIENCES

First Year (590-115P)

An introduction to the theory and practical application of procedures relating to fixed prosthodontics and to operative dentistry.

OCCLUSION

First Year

Occlusal concepts are developed through an appreciation of the anatomy and physiology of the masticatory system. (Text – Wheeler, *Textbook of Dental Anatomy and Physiology,* 4th. ed.: Saunders.)

6.11 DENTAL MATERIALS

Assistant Professor
- J.M. Gourley, B.Sc., Ph.D.(Nott.), D.D.S.(McG.)

Lecturers
- W. Kowal, B.A., D.D.S.(McG.)
- M. Pinchuk, B.Sc., D.D.S.(McG.)

First Year (590-129P)

Introduction to basic physical and chemical properties of dental materials. Emphasis is on those materials involved in casting and fabrication of fixed dental prostheses.

Second Year (590-229P)

Presentation in greater detail of the physical and mechanical properties as well as chemical and structural features of clinical dental materials. (Texts – R.W. Phillips, Skinner; *Science of Dental Materials,* 7th Edition; Peyton and Craig, *Restorative Dental Materials, 5th ed.)*

6.12 ENDODONTICS

Associate Professor
- B. Sedlezky, B.Sc., D.D.S.(McG.), F.I.C.D. (Chairman)

Lecturers
- R.J.C. David, D.D.S.(McG.)
- D. J. Munro, B.A., D.D.S.(McG.)
- B. H. Wiener, B.Sc., D.D.S. (McG.), M.Sc.D.(Boston), F.R.C.D.(C)

Demonstrator
- D. Auerbach, B.Sc., D.D.S.(McG.), M.Sc.D.(Boston)

Guest Lecturer
- P. Lawrence, B.A., D.D.S.(N.Y.U.)

Third Year (590-311P)

The third year program consists of a concentrated course given midway in the year. Included are laboratory exercises, lectures and clinical procedures. Credit is given.

Fourth Year (590-411P)

A concentrated course in the theory and clinical practice of endodontics, correlated with the teachings of the Departments of Microbiology and Immunology, Pathology, Histology, Oral Surgery and Dental Anatomy given midway through the junior year and followed by weekly clinical sessions until the end of the senior year. (Texts – L.I. Grossman, *Root Canal Therapy;* Sommer, Ostrander and Crowley, *Clinical Endodontics;* E. Nicholls, *Endodontics;* Ingle, *Endodontics,* Lea and Febiger; Bender and Seltzer, *The Pulp,* Lippincott.)

6.13 OPERATIVE DENTISTRY

Professor
- H. Rosen, B.Sc., D.D.S.(McG.), F.I.C.D., F.A.C.D.

Associate Professors
- W.D. Sanders, B.Sc.(Sir G. Wms.), D.D.S.(McG.)
- J.D. Townsend, B.Sc. (U.B.C.), D.D.S.(McG.), M.S.D.(Wash.)
- G.H. G. Weinlander, D.K.F.M.(Vienna), D.D.S.(McG.), Dip. Paedo. (Mich.), F.I.C.D.

Assistant Professors
- J.V. Blomfield, B.D.Sc.(Melbourne), D.D.S., Dip. Pros.(Rest. Dent.)(McG.), M.Sc. (Lond.)(Acting Chairman)
- J.R. Fong Chong, B.Sc.(St. F.X.), D.D.S. (McG.)
- H. Greenwald, B.Sc., D.D.S.(McG.)
- M. Shevell, B.Sc., D.D.S.(McG.)

Lecturers
- N.I. Hanna, B.Sc. Agr., D.D.S.(McG.)
- P. Hwang, D.D.S. (Seoul), D.D.S., Dip. Pros. (Rest. Dent.)(McG.)
- I. Seltzer, B.Sc., D.D.S.(McG.)
- I.I. Silver, B.A., D.D.S.(McG.)
- J.W. Whitehead, B.A.(N.C.), D.D.S.(McG.)

Demonstrators
- S.S. Blum, B.Sc., D.D.S.(McG.)
- A. St. O. Byer, B.Sc., D.D.S., Dip Pros. (Rest. Dent.)(McG.)
- R.B. Crutchfield, B.Sc., D.D.S.(McG.)
- D.R. Harvey, B.Sc., D.D.S.(McG.)
- A.S. Israel, B.Sc., D.D.S. (McG.)
- F.A. Kay, B.Sc.(Loyola), D.D.S. (McG.)
- P.R. Owen, B.Sc., D.D.S.(McG.)

Second Year (590-214P)
Third Year (590-314P)
Fourth Year (590-414P)

Students receive the basic and, where indicated, some advanced theoretical laboratory and clinical instruction in: diagnosis and treatment planning; prevention; the "biomechanical" treatment for diseased and/or traumatized tooth structure; the anatomical restoration of individual teeth in all age groups to physiologic form and function with the restorative materials generally used by the dental practitioner. (Texts – Howard, *Atlas of Operative Dentistry:* Mosby; Bell and Grainger, *Basic Operative Dentistry Procedures:* Lea & Febiger; Gilmore, *Textbook of Operative Dentistry:* Mosby; Schultz, *Operative Dentistry:* Lea & Febiger; Ingraham and Koser, *An Atlas of Gold Foil and Rubber Dam Procedures:* West Orange County, California.)

6.14 ORTHODONTICS

Associate Professors
- M. D. Rennert, B.Sc., D.D.S.(McG.), M.S.(Buffalo), F.R.C.D.(C), F.I.C.D. (Chairman)
- R.W. Faith, B.A., D.D.S.(McG.), Cert. Ortho.(Tufts), F.R.C.D.(C), F.I.C.D.

Assistant Professor
- M. Weinstock, D.D.S.(Tor.), Cert. Ortho., (Harv.), Ph.D.(McG.)

Lecturers
- S.S. Miller, B.Sc., D.D.S.(McG.), Cert. Ortho. (Oregon)

Demonstrators
- O. S. Kopytov, B.Sc., D.D.S.(McG.), M.Sc.(Minn.)
- H.L. Levitt, B.Sc., D.D.S. (McG.), Cert. Ortho.(Montr.), F.R.C.D.(C)
- S. Konigsberg, B.Sc., D.D.S.(McG.), M.S., Cert. Orthod. (Tufts)
- R. Nadeau, D.D.S.(McG.), M.S. (Montr.)
- W. Northway, B.A.(Kenyon), D.D.S.(Mich.), Cert. Ortho.(Montr.)
- L. Prosterman, B.A., D.D.S.(McG.), M.S.D.(Temple), F.R.C.D. (C)

Guest Lecturers
- L. Bossé, D.D.S., M.S.(Montr.)
- M. Cardozo, B.A. (Brooklyn), M.A.(Col.)
- H. T. Oliver, D.D.S.(McG.), Dip. Ortho. (Montr.), F.R.C.D.(C), F.A.C.D., F.I.C.D.

Second Year (590-215P)
Third Year (590-315P)
Fourth Year (590-415P)

Courses comprise lectures, technique exercises, treatment of selected cases and seminars.

The purpose of the course is to present as much theoretical background as possible and to make the student familiar with diagnostic procedures and with the preventive, interceptive and limited corrective procedures that can be undertaken in a general dental practice. (Texts – Graber, *Orthodontics,* 3rd

ed.: W.B. Saunders Co., 1972; Moyers, *Handbook of Orthodontics:* The Year Book Publishers Inc., 3rd. Ed., 1973; Hitchcock, *Orthodontics for Undergraduates;* Lea and Febinger, 1974)

6.15 PAEDODONTICS

Associate Professor
- G.H. G. Weinlander, D.K.F.M.(Vienna), D.D.S.(McG.), F.I.C.D.

Assistant Professors
- C. T. Dixter, B.Sc.(McG.), D.D.S. (Montr.), Cert. Paedo.(Tufts)(Acting Chairman)
- R.P. Dundass, D.D.S.(McG.), M.S.D.(Mich.)
- P.R. Weinstein, B.Sc., D.D.S.(McG.), Cert. Paedo.(Roch.)

Demonstrator
- A. Felgar, B.A.(Sir G.Wms.), D.D.S.(McG.), M.Sc.D.(Boston)

Third Year (590-316P)

Lecture course on child management, treatment planning, operative procedures, management of injuries to teeth and preventive dentistry for children.

A concentrated laboratory course covers routine cavity preparations, amalgam restorations and stainless steel crown adaptation on primary manikin teeth, endodontic procedures on extracted deciduous teeth, and a splinting exercise.

Clinical dentistry for children commences following the laboratory course.

Fourth Year (590-416P)

A seminar course on selected paedodontic topics has as its aim a systematic review and evaluation of important paedodontic literature.

A two week rotation to the Montreal Children's Hospital introduces the student to dentistry for sick children, oral rehabilitation under general anaesthesia and emergency dental care for all children. Students also act as consultant dental externes to various medical clinics.

Clinical dentistry for children continues at the University Dental Clinic. (Texts – Finn, *Clinical Pedodontics:* Saunders; Ellis, *The Classification and Treatment of Injuries to the Teeth of Children.* Year Book Publishers; Law, Lewis, Davis, *An Atlas of Pedodontics;* Saunders; McDonald, *Dentistry for the Child and Adolescent:* Mosby)

6.16 PERIODONTOLOGY

Associate Professors
- R. F. Harvey, D.D.S.(McG.), F.R.C.D.(C), F.A.C.D., F.I.C.D. (Chairman)
- P. J. Gitnick, D.D.S. (McG.), F.I.C.D., F.A.C.D., F.R.C.D.(C)

Assistant Professors
- S. Galperin, B.Sc.(Bogota), D.D.S.(Col.), Cert. Perio.(N.Y.U.)
- E. M. Hershenfield, B.Sc., D.D.S.(McG.), M.Sc.D.(Boston), F.R.C.D.(C)
- F. I. Muroff, B.Sc., D.D.S. (Detroit), M.Sc.D.(Boston), F.R.C.D.(C)
- A. S. Wainberg, B.Sc., D.D.S.(McG.), Cert. Perio.(Penn.), F.R.C.D. (C)

Lecturers
- E. Shore B.Sc., D.D.S.(McG.), Cert. Perio.(Tufts)
- M. Stutman, B.Sc., D.D.S.(McG.), M.Sc.D.(Boston)

Demonstrators
- F. Fagan, B.Sc.,D.D.S.(McG.), Dip. Perio.(Tor.)
- A. Shuster, B.Sc.,D.D.S.(McG.), Cert. Perio.(Temple)
- M. Werbitt, B.Sc., D.D.S.(McG.), M.Sc.D. (Boston)

First Year (590-118P)

Introductory lectures are presented, related to oral hygiene procedures and the role of the basic sciences.

Second Year (590-218P)

Basic lecture series and introduction to clinical experience; laboratory exercises integrating teaching with other departments of the Restorative Division.

Third Year (590-318P)

Concentrated lecture series involving all aspects of recognition, diagnosis, prognosis, treatment planning and specifics of therapy; weekly seminars reviewing the literature and specific subjects are also presented by the students. Clinical periods are held weekly as well as periods in which Junior students assist their Senior partners in seminars and clinics.

Fourth Year (590-418P)

Lectures and seminars stress the relation of the biological sciences to periodontal conditions. More advanced forms of periodontal therapy are undertaken in conjunction with a multi-disciplinary approach to overall therapy; seminars on treatment planning are held weekly with other disciplines. Demonstrators are present or available in all clinics in addition to the specific Periodontics clinics. (Texts – A Manual of the Department is presented which covers all aspects of the course; Goldman & Cohen, *Periodontal Therapy,* 5th. ed., Glickman, *Clinical Periodontology,* 4th ed; Grant, Stern & Everett, *Orban's Periodontics,* 4th ed.; Ramfjord & Ash: *Occlusion,* 2nd ed.; Reference – J. G. Jones *Physiological Role of Dental Occlusion in the Masticatory System,* Vol. 1 & 2).

6.17 FIXED PROSTHODONTICS

Professor
- H. Rosen, B.Sc., D.D.S.(McG.), F.I.C.D., F.A.C.D.

Associate Professors
- J. D. Townsend, B.Sc.(U.B.C.), D.D.S.(McG.), M.S.D.(Wash.) (Chairman)
- R. G. Jones, B.A., D.D.S.(McG.), M.S.D.(Indiana), F.R.C.D.(C)
- D. Kepron, B.Sc.(Man.), D.D.S.(McG.), M.Sc.(Mich.), F.R.C.D.(C)

Assistant Professors
- J. V. Blomfield, B.D.Sc.(Melbourne), D.D.S.(McG.), M.Sc.(London), Dip. Pros. (Rest.Dip.)(McG.)
- J. R. Fong Chong, B.Sc.(St. F.X.), D.D.S.(McG.)
- J.M. Gourley, B.Sc., Ph.D.(Nott.), D.D.S.(McG.)
- E. Ostro, B.Sc.(Sir G. Wms.), D.D.S.(McG.)
- H. Ptack, D.D.S.(McG.), Cert.(Ill.)
- A. G. Pullinger, B.D.S.(Lond.), D.D.S, M.Sc(McG.)

Lecturers
- J.D. Fenwick, B.Sc., D.D.S.(McG.)
- S. M. Kennedy, D.D.S.(McG.), M.Sc. (Boston)
- M. Pinchuk, B.Sc., D.D.S.(McG.), Cert. Pros. (Boston)
- M. D. Shizgal, B.Sc., D.D.S.(McG.)
- H. Skurnik, B.Sc., D.D.S.(McG.)

Demonstrators
- A. Androutsos, D.S.(Athens), D.D.S. (McG.)
- J. Bartos, M.U.Dr.(Purzyrije), D.M.D.(Alabama), M.Sc.(McG.)
- D. V. Bridger, B.Sc.(Bishop's), D.D.S.(McG.)
- P. V. Goldberg, B.Sc., D.D.S.(McG.), M.S.D.(Wash.)
- J. M. Little, B.A.(Loyola), D.D.S.(McG.)
- P. Stutman, B.Sc., D.D.S.(McG.) M.Sc.D.(Boston)
- D. Taylor, D.D.S.(McG.)

Visiting Lecturers
- J. Aufreiter, M.D.(Vienna), F.R.C.P.(C)
- L. P. Lemay, B.A.(Ott.), D.D.S.(Montr.), M.S.(Mich.)

Consultant
- R.T. Lamb, B.Sc., D.D.S.(McG.), F.I.C.D., F.A.C.D.

Demonstrators in Dental Technology
- I. Blumberger, C.D.T.
- A.E. Pickard, C.D.T.
- A. Woo, C.D.T.

First Year (590-121P)
Second Year (590-221P)
Third Year (590-321P)
Fourth Year (590-421P)

In the pre-clinical years the student is introduced to indirect restorative procedures by lecture series, literature reviews and laboratory projects.

In the clinical years, Fixed Prosthodontic procedures are performed within the overall treatment of clinical patients. Lectures, seminars, and references from the periodic literature complement clinical experience to increase the knowledge and understanding of Fixed Prosthodontics. (Reference texts – Bassett, Ingraham and Koser, *An Atlas of Cast Gold Procedure*, West Orange County, California; Baum, *Advanced Restorative Dentistry*, Saunders; Craig and Peyton, *Restorative Dental Materials*, 5ed., Mosby; Johnston, Mumford and Dykema, *Modern Practice in Dental Ceramics*, Saunders; Johnston, Phillips and Dykema, *Modern Practice in Crown and Bridge Prosthodontics*, 3rd ed., Saunders; Kornfeld, *Mouth Rehabilitation*, Vol. I and II, Mosby; Shillingburg, Hobo and Fisher, *Preparations for Cast Gold Restorations*, Quintessence; Skinner and Phillips, *The Science of Dental Materials*, 7th ed., Saunders; Tylman, *Theory and Practice of Crown and Fixed Partial Prosthodontics*, 6th.ed., Mosby; Wilson and Lang, *Practical Crown and Bridge Preparations*, McGraw.)

6.18 REMOVABLE PROSTHODONTIC

Associate Professors
- N. Dibai, D.D.S.(Tehran), M.S.(Ohio)(Acting Chairman)
- D.W. Henry, B.A.(Bishop's), D.D.S.(McG.), F.I.C.D.

Assistant Professors
- J.F. Giacomelli, B.Sc., D.D.S.(McG.)
- J.M. Gourley, B.Sc., Ph.D.(Nott.)
- P.C. Staples, D.D.S.(McG.), F.I.C.D.

Lecturers
- W. Kowal, B.A., D.D.S.(McG.)
  G. Poznak, B.Sc.(Sir G. Wms.), D.D.S. (McG.)

Demonstrators
- D.S. Ahn, D.D.S.(Soeul), D.D.S., Dip. Pros. (Rest. Dent.)(McG.)
- R. G. Fletcher, B.A., B.Sc.(Sir G. Wms.), D.D.S.(McG.)
- C. Galperin, D.M.D.(Istanbul), Cert.(N.Y.)
- S. Homayun, D.M.D. (Istanbul), D.D.S. (McG.)
- G. Konanec, D.D.S.(McG.)
- H. Konieczna, D.D.S. Ph.D. (Poland), D.D.S. (McG.)
- N. Miller, B.Sc., D.D.S.(McG.)

Demonstrator in Dental Technology
- I. Blumberger, C.D.T.

Second Year (590-220P)
Third Year (590-320P)
Fourth Year (590-420P)

In the pre-clinical year (2nd year) the students receive the basic theoretical and laboratory instruction related to complete and removable partial dentures.

In the clinical years (3rd and 4th years) the students are introduced to the clinical and theoretical aspects of complete and removable partial dentures which involve the examination, diagnosis, treatment planning, construction and maintenance of the soft tissues and the abutment teeth. (Texts – Boucher, Hickey and Zarb, *Prosthodontic Treatment for Edentulous Patients* Mosby; Sharry, *Complete Denture Prosthodontics;* McGraw-Hill; Ellinger, Royson, Terry and Rahn, *Synopsis of Complete Dentures,* Lea & Febiger; Hartwell, Jr., *Syllabus of Complete Dentures,* Lea and Febiger; Boucher, *Current Clinical Dental Terminology,* Brewer and Morrow, *Overdentures,* Mosby; McCracken's *Removable Partial Prosthodontics:* Mosby; Miller, *Removable Partial Prosthodontics:* Willams & Wilkins; Dykema, Cunningham and Johnston, *Modern Practice in Removable Partial Prosthodontics:* Saunders; Applegate, *Partial Denture Construction:* Mosby.)

DIVISION OF SURGERY AND ORAL MEDICINE

6.19 ANXIETY AND PAIN CONTROL

Professor

- K. C. Bentley, D.D.S., M.D., C.M.(McG.), Cert. Oral Surg. (N.Y.U.-Bellevue), F.I.C.D., F.A.C.D. (Chairman)

Assistant Professors

- G.A. Browne, B.Sc., B.D.S.(Otago), M.Sc. (McG.)
- D. S. Shapiro, B.A., D.D.S.(McG.), M.S.(Iowa)

Guest Lecturers

- M. Dunkley, M.B., B.Ch.(Wales), F.R.C.P.(C), C.S.P.Q. (Anaesth.), F.A.C.A., D.A.B.A.
- J.R. Hewson, B.Sc., M.Sc., M.D.C.M.(McG.), F.R.C.P.(C)
- T. McCaughey, M.B., B.Ch.(Ireland), F.R.C.P.(C), C.S.P.Q. (Anaesth.)
- A. Surkis, B.A., B.Ph., M.A., Ph.D.(Montr.)

Second Year (590-224P)

An understanding of the complex nature of problems pertaining to anxiety and pain control is provided, and students are made aware that the use of drugs is only one means by which pain and anxiety can be controlled.

Anaesthetic drugs and solutions, the evaluation of new drugs and techniques, with a review of related anatomy are discussed. Demonstrations and clinical experience are provided.

Third Year (590-324P)

General principles and the physiology of general anaesthesia with emphasis on factors of safety and the suitability of the agent used are discussed. Co-operation with the anaesthetist under hospital or office conditions and emergency resuscitative measures are stressed. (Texts – Niven and Bourgoyne, *Conduction, Infiltration and General Anaesthesia in Dentistry;* Archer, *Dental Anaesthesia;* Monheim, *Local Anaesthesia and Pain Control in Dental Practice;* Howe, Whitehead, *Local Anaesthesia in Dentistry)*

6.20 ANATOMY

Professors

- Y. Clermont, B.Sc.(Montr.), Ph.D. (McG.) (Chairman)
- C.P. Leblond, M.D.(Paris), Ph.D.(Montr.), D.Sc.(Sorbonne)
- D.G. Osmond, B.Sc., M.B.Ch.B., D.Sc.(Brist.)

Associate Professor

- N.J. Nadler, M.D.C.M., Ph.D.(McG.)
- H. Warshawsky, B.Sc.(Sir G. Wms.), M.Sc., Ph.D.(McG.)

Assistant Professors

- J.R. Brawer, B.S.(Tufts), Ph.D.(Harv.)
- E. Daniels, B.Sc.(S.Africa), M.Sc., Ph.D.(Man.)
- M. F. Lalli, M.A.(Bowling Green), Ph.D. (McG.)
- H. J. Monié, B.Sc.(St.Edward's), M.Sc. (Ore.State), Ph.D.(Wash.)
- C.E. Smith, D.D.S., Ph.D.(McG.)
- M. Weinstock, D.D.S. (Tor.), Ph.D.(McG.)

Lecturer

- W.C. Lim, B.A. (Wellesley), M.Sc., Ph.D.(U.B.C.)

GROSS ANATOMY

First Year (3 terms) (504-111P)

The structure of the human body is studied by:

1) lectures and laboratory prosections of the musculo-skeletal and neuro-vascular systems in the upper limb and the visceral systems (circulatory, respiratory, digestive and reproductive systems) in the trunk;

2) a detailed dissection of the head and neck, emphasizing regional anatomy of special dental interest. (Texts – W. H. Hollinshead, *Textbook of Anatomy,* 3rd ed., Harper and Row, 1974; J.T. Aiken, G. Causey, J. Joseph and J.Z. Young, *A Manual of Human Anatomy,* Vol. II, *Head and Neck,* 3rd ed. Churchi; Livingstone, 1976; J.C.B. Grant, *An Atlas of Anatomy,* 6th ed.: Williams and Wilkins, 1972; S.M. Friedman, *Visual Anatomy,* Vol. 1, *Head and Neck,* 1st. ed.: Harper and Row, 1970)

HISTOLOGY

First Year (504-112P)

A study by means of microscopes (light and electron microscopes) of the cells and tissues that compose the various parts or organs of the human body. (Texts – A.W. Ham, *Histology,* 7th ed.: Lippincott, 1974; W. Bloom and D.W. Fawcett, *A Text-book of Histology,* 10th ed.: Saunders, 1975).

ORAL HISTOLOGY AND EMBRYOLOGY

First Year (504-117P)

A microscopic study of the development of the teeth and their supporting structures, and of the adult oral tissues through their life cycle. (Text – D.V. Provenza, *Fundamentsls of Oral Histology and Embryology;* Lippincott, 1972; E.J. Reith and M.H. Ross, *Atlas of Descriptive Histology,* 2nd ed., Harper and Row)

6.21 BIOCHEMISTRY

Professors
- A.F. Graham, B.A.Sc., M.A.Sc.(Tor.), Ph.D.(Edin.) (Chairman)
- E. A. Hosein, B.Sc., M.Sc., Ph.D. (McG.) (Course Coordinator)

First Year (507-113P)

An outline of the general subject of biochemistry with a more special knowledge of such aspects which relate particularly to the science and practice of dentistry. Two to four lectures and one laboratory per week. (Texts – White, Handler and Smith, *Principles of Biochemistry,* 5th ed., McGraw Hill; E.P. Lazzari, *Dental Chemistry;* Lea and Febiger.)

6.22 DIAGNOSIS, ORAL

Associate Professor
- T.P. McCrory, B.A., B.Sc. (Sir G. Wms.), D.D.S.(McG.), M.S.(Georgetown) (Chairman)

Assistant Professor
- R. P. Langlais, B.A.(Loyola), D.D.S.(McG.), M.S.D.(Indiana)
- R.F. Scholes, B.D.Sc.(Queensland)

Lecturers
- Z.B. Nyeste, B.Sc., D.D.S.(McG.)
- A. F. Sonin, B.Sc., D.D.S. (McG.)

Demonstrators
- A. Closner, B.Sc., D.D.S.(McG.)

Guest Lecturer
- R.B. J. Dorion, B.Sc., D.D.S.(McG.)

Third Year (590-328P)

The course provides a method of approach to the diagnosis of disease. The student is taught the principles as well as the procedures involved in conducting a patient interview, performing a clinical examination, observing and describing deviations from normal, and formulating a diagnosis. With this knowledge, and that acquired previously about the mechanisms of disease, the student is then able to devise a rational treatment plan for the patient. Individual clinical instruction augments the lectures.

The course also provides an introduction to Forensic Dentistry. This includes malpractice and negligence lawsuits, evaluation of traumatic injuries, insurance and /or compensation claims, as well as identification. (Text – Kerr, Ash, Millard, *Oral Diagnosis,* Mosby; Bhaskar, *Synopsis or Oral Pathology,* Mosby; Mitchell, Standish and Fast, *Oral Diagnosis/Oral Medicine,* Lea and Febiger; Wood and Goaz, *Differential Diagnosis of Oral Lesions,* Mosby)

6.23 MEDICINE

Lecturer
- Lorne Cassidy, B.A.(Loyola), M.D.(Ott.) (Course Director)

First Year (526-113P)

This course comprises a series of introductory lectures to the course in Medicine which will be given subsequently in the clinical years.

Associate Professors
- J.L. McCallum, B.A., M.D.,C.M.(McG.), F.R.C.P.(C), F.A.C.S. (Chairman)

Assistant Professors
- J.L. Hutchison, B.Sc., M.D.,C.M.(McG.), F.R.C.P.(C), F.A.C.P.
- G. Joroh, B.A.(Loyola), M.D.,C.M. (McG.)

Lecturers
- K. Cantor, B.Sc., M.D.C.M.(McG.), F.R.C.P.(C)
- R. LaFleur M.D.(Ott.)
- O. Schlapner, M.D.(Qu.)

Third Year (526-313P)

A review of the principles of medicine with particular attention to the relationship of good prenatal care and proper nutrition during infancy and childhood to dentition and the subsequent health of teeth and gums; oral manifestations of systemic disease and the importance of oral health in the successful treatment of certain medical conditions; medical complications of dental surgery and their prophylaxis.

6.24 MICROBIOLOGY AND IMMUNOLOGY

Professors
- S.I. Vas, M.D., Ph.D.(Bud.)(Chairman)
- J. de Vries, B.A.(Dal.), M.D., C.M. (McG.)(Course Coordinator)

Second Year (528-213P)

Elementary dental bacteriology and immunology. (42 hours of lectures.) (Text – *Oral Microbiology;* W.A. Noite, 2nd ed.: Mosby)

6.25 PATHOLOGY, GENERAL

Professors
- R.H. More, M.D. (Tor.), F.R.S.C. (Chairman)

Associate Professor
- T.P. McCrory, B.A., B.Sc.(Sir G. Wms.), D.D.S.(McG.), M.S.(Georgetown)

Assistant Professor
- G. Berry, B.A., B.Sc.(St. F.X.), M.D.(Dal.)

Second Year (546-216P)

A course in general pathology principles and processes with an immediate correlation to and integration of oral pathology.

6.26 PATHOLOGY, ORAL

Associate Professor
- T. P. McCrory, B.A., B.Sc.(Sir G. Wms.), D.D.S.(McG.), M.S.(Georgetown, (Chairman)

Assistant Professor
- R. P. Langlais, B.A.(Loyola), D.D.S.(McG.), M.S.D.(Indiana)

Second Year (590-217P)

This course is closely integrated with the course in Pathology. It attempts to correlate the principles presented in general pathology with the signs and symptoms of oral disease. It deals with the nature of disease affecting the oral regions, through study of their causes, processes and effects, together with the associated alterations of oral structure and function. Clinical sessions complement the lectures. The objective is to present the oral pathology necessary for quality care by the general practitioner.

In the second half of the year, clinical sessions are used to complement the lectures. These sessions are spent in the diagnosis areas of the dental department of the three main McGill teaching hospitals, examining and discussing patients who present with a variety of oral and systemic diseases. (Texts – Shafer, Hine and Levy, *Oral Pathology; Saunders; Color Atlas of Oral Pathology:* Lippincott; J.D. Spouge, *Oral Pathology:* Mosby.)

6.27 PHARMACOLOGY AND THERAPEUTICS

Professors
- J. R. Ruedy, M.D., C.M.(Qu.), F.R.C.P.(C), (Chairman)
- J. Lowenthal, B.Sc., M.Sc., Ph.D.(Montr.)
- B.G. Benfey, M.D.(Hamburg)

Associate Professors
- B. Collier, B.Sc., Ph.D.(Leeds)
- N. R. Eade, B.Sc., M.Sc.(Sask.), D.Phil.(Oxon.)
- A. Tenenhouse, B.Sc., Ph.D., M.D., C.M.(McG.)

Assistant Professors
- B. Esplin, M.D.(Warsaw)
- M.S. Yong, B.Sc.(Taiwan), M.Sc., Ph.D.(Alta.)

Second Year (549-219P)

A course of 41 lectures, given twice weekly, concerned with the basic principles of the actions of drugs and applied therapeutics where indicated. (Texts – Andres Goth, *Medical Pharmacology;* Goodman and Gilman, *The Pharmacological Basis of Therapeutics,* 4th ed.)

6.28 PHARMACOLOGY AND THERAPEUTICS, DENTAL

Professors
- K.C. Bentley, D.D.S., M.D., C.M. (McG.), Cert. Oral Surg.(N.Y.U.-Bellevue), F.I.C.D., F.A.C.D.
- J.A. de Vries, B.A.(Dal.), M.D., C.M.(McG.)

Associate Professor
- J. W. Stamm, D.D.S.(Alta.), D.D.P.H., M.Sc.D.(Tor.)

Assistant Professor
- G.A. Browne, B.Sc., B.D.S.(Otago), M.Sc.(McG.)

Guest Lecturer
- S.O. Freedman, B.Sc., M.D., C.M. (McG.), F.R.C.P.(C)., F.A.C.P., F.R.S.C.
- J. L. Hutchison, B.Sc., M.D., C.M.(McG.), F.R.C.P.(C), F.A.C.P.
- J.R. Ruedy, M.D., C.M.(Qu.), F.R.C.P.(C)

Third Year (590-319P)

A study of those drugs that have special application to dental practice is presented by means of lectures. Lectures and seminars reviewing various pathological conditions and possible therapy. (Texts – A.D.A. *Accepted Dental Remedies 1968;* Sutherland, *A Synopsis of Pharmacology; Compendium of Pharmaceuticals and Specialties,* 9th ed. 1974.)

6.29 PHYSIOLOGY

Professor
- J. Milic-Emili, M.D.(Milan)(Chairman)

Associate Professor
- P.B. Noble, B.Sc.(Edin.), Ph.D.(W. Ont.) (Course Coordinator)

First Year (552-116P)

Selected topics in areas of human physiology of particular significance for dental practice. These will include the more detailed study of aspects of blood, the cardiovascular, respiratory, digestive, endocrinological and central nervous systems (3 hours of lectures and/or laboratory periods per week). Textbook – No text specified. Recommended reading lists will be provided for each of the subjects studied.

It is recommended that students take a general course in physiology (e.g. Physiology 211D at McGill, or a similar "college course" in Physiology) during their pre-dental studies.

6.30 RADIOLOGY

Associate Professor
- T.P. McCrory, B.A., B.Sc. (Sir G. Wms.), D.D.S.(McG.), M.S.(Georgetown) (Chairman)

Professor
- K. C. Bentley, D.D.S., M.D., C.M.(McG.), F.I.C.D., F.A.C.D.

Assistant Professors
- R. P. Langlais, B.A.(Loyola), D.D.S.(McG.), M.S.D.(Indiana)

Lecturers
- Z.B. Nyeste, B.Sc., D.D.S.(McG.)
- A.F. Sonin, B.Sc., D.D.S.(McG.)

Demonstrators
- A. Closner, B.Sc., D.D.S.(McG.)

Second Year (590-222P)

In the second semester this course instructs the student in the fundamentals of radiography, and the basics in taking and processing radiographs. Clinical experience supplements the lectures.

Third Year (590-322P)

Advanced instruction and additional experience is provided in technique and interpretation. (Texts – Stafne, *Oral Roentgenographic Diagnosis,* Saunders; Wuehrmann and Manson-Hing, *Dental Radiology,* Mosby.)

6.31 SURGERY, ORAL

Professor
- K. C. Bentley, D.D.S., M.D., C.M.(McG.), Cert. Oral Surg.(N.Y.U.-Bellevue), F.I.C.D., F.A.C.D.(Chairman)

Associate Professors
- J.J. McCarthy, B.Sc.(St.F.X.), D.D.S. (McG.), Dip. Oral Surgery(Penn.), F.R.C.D.(C), F.I.C.D.
- E.P. Millar, D.D.S.(McG.), Dip. Oral Surgery (Penn.), F.R.C.D.(C), F.I.C.D.

Assistant Professors
- G.A. Browne, B.Sc., B.D.S. (Otago), M.Sc.(McG.)
- G.L. Freedman, D.D.S. (McG.), M.S.D.(Wis.), F.R.C.D.(C)
- R.F. Scholes, B.D.Sc.(Queensland)
- E. Slapcoff, B.Sc., D.D.S.(McG.), F.R.C.D.(C)
- D.S. Shapiro, B.A., D.D.S.(McG.), M.S.(Iowa)

Demonstrator
- J. Sherman, D.D.S.(McG.)

Third Year (590-323P)
Fourth Year (590-423P)

These courses are designed to help the student develop a foundation of professional knowledge coupled with surgical skills to enable him/her to diagnose and manage competently the oral surgery problems related to the practice of general dentistry. The student is also expected to acquire an academic appreciation of the advanced field of oral surgery, which involves the diagnosis, treatment, prescribing for and operating upon any disease, injury, malformation or deficiency of the human jaws or associated structures. (Texts and Reference Books – Thoma, *Oral Surgery,* Archer, *Oral Surgery;* Nevin and Bourgoyne, *Conduction, Infiltration and General Anaesthesia in Dentistry;* Rowe and Killey, *Fractures of the Facial Skeleton;* Kazanjian and Converse, *The Surgical Treatment of Facial Injuries;* Schwartz, *Disorders of the Temporomandibular Joint;* H.G. Clark, *Practical Oral Surgery;* G.L. Howe, *The Extraction of Teeth;* G. O. Kruger, *Text-book of Oral Surgery;* Killey and Kay, *Benign Cystic Lesions of the Jaws)*

7 COURSES OFFERED IN THE FACULTY OF GRADUATE STUDIES AND RESEARCH

All student students who are registered in Graduate Programs in the Faculty of Dentistry, McGill University, and who are not already registered with the Order, **must** register with the Order of Dentists of Québec. This registration fee is $25.00. Further information may be obtained from the Registrar of the Order of Dentists of Québec, 801 Sherbrooke Street East, Montreal, PQ H2L 1K4.

7.1 MASTER OF SCIENCE IN PROSTHODONTICS (RESTORATIVE DENTISTRY)

Professor
- H. Rosen, B.Sc., D.D.S.(McG.), F.I.C.D., F.A.C.D.(Director)

Associate Professors
- N. Dibai, D.D.S.(Tehran), M.S.(Ohio)
- R.F. Harvey, D.D.S.(McG.), F.R.C.D.(C), F.A.C.D., F.I.C.D.
- D.W. Henry, B.A. (Bishop's), D.D.S.(McG.), F.I.C.D.
- R.G. Jones, B.A., D.D.S.(McG.), M.S.D.(Indiana), F.R.C.D.(C)
- D. Kepron, B.Sc.(Man.), D.D.S.(McG.), M.Sc.(Mich.), F.R.C.D.(C)
- B. Sedlezky, B.Sc. D.D.S.(McG.), F.I.C.D.
- J. D. Townsend, B.Sc.(U.B.C.), D.D.S. (McG.), M.S.D.(Wash.)

Lecturer
- J. Valiquette, D.D.S., (Montr.), F.R.C.D.(C)

Members of the Departments of Endodontics, Operative Dentistry, Oral Surgery, Orthodontics, Pathology and Diagnosis, Periodontics,

Pharmacology and Therapeutics, Fixed and Removable Prosthodontics.

Admission is restricted to candidates who hold a D.D.S. or equivalent degree with good standing from an approved institution. Preference will be given to those applicants who have been in general practice or rotating internships for at least one year. Disciplines involved are: Advanced Operative Dentistry, Fixed Prosthodontics, Maxillofacial Prosthesis, Removable Prosthodontics as well as supportive and allied clinical sciences. The course will consist of didactic lectures, case presentation seminars, treatment of clinical cases under supervision, reports on clinical cases, teaching assistantship, selected office visits. Candidates will be required to attend pertinent basic science lectures. A research project must begin by the end of the first year and continue through the second year resulting in a Master's thesis upon completion of the program.

Duration: At least twenty-six months beginning July 1.

One candidate is accepted each year.

Tuition (Approximate): $570.00 for the first year
$285.00 for the second year

Equipment Rental: $150.00

Information for financial support may be obtained by writing to the Director of the course.

7.2 MASTER OF SCIENCE (ORAL SURGERY)

Professors
- K. C. Bentley, D.D.S., M.D., C.M.(McG.), Cert. Oral Surg.(N.Y.U.-Bellevue), F.I.C.D., F.A.C.D.(Director)

Associate Professors
- J. J. McCarthy, B.Sc.(St. F.X.), D.D.S. (McG.), F.R.C.D.(C), F.I.C.D.
- E. P. Millar, D.D.S. (McG.), F.R.C.D.(C), F.I.C.D.

Assistant Professors
- G.A. Browne, B.Sc., B.D.S.(Otago), M.Sc.(McG.)
- G. L. Freedman, D.D.S.(McG.), M.S.D. (Wash.), F.R.C.D.(C)
- D. S. Shapiro, B.A., D.D.S.(McG.), M.S.(Iowa)

A residency training program in Oral Surgery has been developed to provide students with a comprehensive background for the practice of Oral Surgery as a specialty.

During the three years of the program the candidate will serve as a first year resident, second year resident and third year resident. During this time he/she will be given increasing responsibility for the care of in-patients and out-patients, as well as being required to fulfill certain basic science courses and other assignments. Candidates for this program must possess a D.D.S. or D.M.D. degree or its equivalent, and be acceptable to the Order of Dentists of Québec as a training candidate in a hospital. A research project must be commenced in the second year of the program and continued throughout the third year, followed by a Master's thesis.

Duration: Three academic years commencing July 1.

Further information may be obtained by writing to Dr. K. C. Bentley, Dental Surgeon-in-Chief, Montreal General Hospital, Montreal, PQ H3G 1A4.

The program is open to one candidate per year.

Tuition (approximate):
$570.00 for each of the first two years
$285.00 for each additional year

Information for financial support for these courses may be obtained by writing to the Director of the course.

8 CONTINUING DENTAL EDUCATION

Associate Professor
- J. W. Stamm, D.D.S.(Alta.), D.D.P.H., M.Sc.D.(Tor.) (Coordinator)

CREDIT COURSES

At periodic intervals, the Faculty, along with other established bodies in the health field, sponsors courses in Continuing Dental Education which are recognized for Continuing Dental Education credits by dental licensing bodies.

Generally the Faculty offers a series of limited enrolment courses in various clinical and basic sciences related to dentistry. In most cases, the courses are designed to meet the needs of the general practitioner, to keep him/her abreast of current concepts and practices and to make him/her aware of recent advances in dental science.

Enquiries should be directed to:

CALENDAR FOR SESSION 1977-78

1977

May 9, Monday to June 17, Friday	Summer Session – Part I
July 4, Monday to August 12, Friday	Summer Session – Part II
August 8, Monday to August 18, Thursday	Supplemental Examinations
Sept 2, Friday	Pre-Registration Counselling, U2 and U3 students
Sept 5, Monday	Labour Day
Sept. 6, Tuesday	Registration in Diploma Programs in Education A-K 1-3 p.m. L-Z 3-5 p.m. Pre-Registration Counselling, U1 students (A-K)
Sept 7, Wednesday	Registration in Graduate Programs begins Course Counselling, U1 students (A-K) Pre-Registration Counselling, U1 students (L-Z)
Sept 9, Friday	B. Ed Registration: – Returning U2-U3 A-K 8.30 – 10.30 a.m. L-Z 10.30 – 12.30 p.m. New students A-K 1-3 p.m. L-Z 3-5 p.m.
Sept 12, Monday	Lectures begin B.Ed, Diploma Programs & Graduate Programs.
Sept 16, Friday	Last day to complete Graduate registration
Sept 30, Friday	Last day for course changes B.Ed & Diploma Programs
Oct 10, Monday	Thanksgiving Day
Oct 14, Friday	Deadline for withdrawing from "A" courses
Oct 28, Friday	Last day for course changes in Graduate Programs
Nov 25, Friday	Deadline for withdrawing from "D" courses
Dec 9, Friday	B.Ed. and Graduate Programs end.
Dec 12, Monday	Class tests in B.Ed. 'D' courses begin.
Dec 15, Thursday	Lectures end in Diploma programs
Dec 16, Friday	Class tests in Diploma program in 'D' courses Last day class tests in B.Ed. 'D' courses.

1978

Jan 3, Tuesday to Jan 13, Friday	Examinations in "A" courses B.Ed program
Jan 9, Monday	Diploma programs resume
Jan 13, Friday	January Registration for new B.Ed students
Jan 16, Monday	Lectures resume in B.Ed & Graduate programs
Jan 27, Friday	Last day for "B" course changes
Feb 10, Friday and Feb 11, Saturday	Mid-term holiday
Feb 17, Friday	Deadline for withdrawing from "B" courses
March 24, Friday to March 27, Monday (inclusive)	Easter – no lectures
April 14, Friday	Lectures end – B.Ed & Graduate programs
April 17, Monday to May 5, Friday	Final examinations in "B" & "D" courses
April 21, Friday	Lectures end in Diploma programs
April 24, Monday	All reports on theses for Spring Convocation must be returned to Thesis Office
May 5, Friday	Non-Thesis forms for Spring Convocation must be returned to Thesis Office
May 15, Monday	Last day for holding Doctoral Orals for Spring Convocation
May 22, Monday	Victoria Day
June 6-7, Tuesday and Wednesday	Convocations

Assistant Professor, Faculty of Education and Jewish Studies Program

FLOCH, Wolfgang J., B.A.(U.B.C.), M.Ed., Ed.D.(Tor.) **Associate Professor**

FLOWER, George E., B.A., M.A.(McG.), Ed.D.(Harv.), F.C.C.T., F.O.T.F.
Professor and Dean

FRANCOEUR, Pearl, B.Sc.(Sir G. Wms.), M.Sc., M.Ed.(McG.) **Associate Professor**

FRANCOEUR, Thomas A., B.A. Lic. Ped. D.Ed. (Montr.), M.A.(Ott.), Dipl. Past. Theol. (Lumen Vitae, Brussels) **Professor,**
Chairman, Department of Catholic Studies

FRITH,May B., B.A.(Lond.), M.A.(Col.), M.A., Ph.D.(Mich.) **Associate Professor**

GARBARINI, Maria G., B.A.(New Rochelle), B.Ed.(Mt. St. Vincent), M.Ed.(Boston Coll.)
Lecturer

GARDNER, J. Robert, B.Ed.(McG.), M.Ed.(Boston)
Assistant Professor

GEIS, George L., B.A., M.A., Ph.D.(Col.)
Associate Professor, Faculty of Education and Centre for Learning and Development

GILLETT, Margaret, B.A., Dip. Ed.(Syd.), M.A.(Russel Sage), Ed.D.(Col.) **Professor**

GOUGEON, Helen Vasos, B.A., B.Ed.(Montr.), M.A.(Ott.) **Assistant Professor**

GRADWELL, John B., B.A., M.A.(San Francisco State), Ph.D.(Iowa) **Associate Professor**

GREENE, Frank P., B.A., M.A., Ph.D.(Mich.)
Professor

GREENISEN, Michael C., B.S.(Ed.) (Northern Illinois), M.A., Ph.D.(Mich. State)
Assistant Professor

GROEN, Guy, B.A., M.A.(Tor.), Ph.D.(Stan.)
Associate Professor
Consultant, Centre for Medical Education

HALL, C. Wayne., B.A., M.A.(Bishop's)
Professor Emeritus

HANRAHAN, James, B.A., B.Ed.(St.F.X.), M.A.(McG.), Ph.D.(Lond.) **Assistant Professor**

HARLEY, John K., M.A.(St. Andrew's), Ed.M., Ed.D.(Harv.) **Associate Professor**

HARRIS, Justine, B.A.(Swarthmore), M.Ed., Ed.D.(U.B.C.) **Associate Professor**

HAWORTH, Lorna H., B.A.(Sir G. Wms.), M.A.(McG.), Ph.D.(Syr.) **Associate Professor**

HENCHEY, Norman, B.A.(Montr.), B.Ed. Lic. Ped. .(Montr.), Ph.D.(McG.) **Professor**

HICKS, Nancy, B.A.(Acad.) **Assistant Professor**

HILTON, The Rev. John P., LicTh.(Montr.), M.A.(C.U.A.) **Associate Professor**
Associate Dean (Academic)

HODGE, Jane, Dip.P.E.(Bedford Coll) **Lecturer**

HUM, Andrew, B.A.(Sir G. Wms.), M.Ed.(McG.), Ph.D.(Alta.) **Associate Professor**

HUTTON, Lee D., B.Sc.(McG.)
Assistant Professor

ISHERWOOD, Geoffrey B., B.S.(Tufts), M.Ed. (Del.), Ed.D.(Rutgers) **Associate Professor**
Chairman, Department of Educational Administration

JAQUES, Annie Elizabeth, Associate of the University of London, **Associate Professor**
Chairman, Department of Education in Art

JEFFERY, The Rev. Martin, S.T.L., B.Ph., M.A.(Ott.)
Assistant Professor

JOBLING, J. Keith, B.A.(Leeds), M.A.(McG.), Ph.D.(Ott.), F.C.C.T. **Associate Professor**

JONES, Robert, B.A., M.A.(Sir G. Wms.), Bac. Ped. (Montr.) **Assistant Professor**
Director, Educational Media Centre

KELEBAY, Y. Gregory, B.A., B.Ed.(Montr.), M.A.(Sir G. Wms.) **Assistant Professor**

KLISSOURAS, Vassilis, Dip. (P.E.)., (Athens), B.Sc., M.Sc., D.P.E.(Springfield) F.S.C.S.M.
Professor, Faculty of Education and Associate Professor of Physiology, Faculty of Medicine

LAFERRIÈRE, Michel, Dip. Inst. d'Etudes Politiques,(Paris), Lic.Maitrise(Sorbonne), M.Phil. (Col.) **Assistant Professor**

LANDRY, Peter C., M.A.(Col.), B.Eng., M.Sc.(McG.)
Associate Professor, Faculty of Education
Honorary Lecturer, Department of Physics

LANE, Miki, AB (Berkeley), M.A., Ph.D.(UCLA)
Assistant Professor

LAVERS, Robert, B.A.(Bishop's), M.Sc., Ph.D.(McG.) **Associate Professor**

LAWLOR, William, B.Com., B.Ed.(Montr.), M.A., Ph.D.(Ott.) **Associate Professor**

LEARD, Hugh M., B.A., B.Ed.(Sask.), M.A.(Minn.), Ed.D.(Arizona State) **Associate Professor**

LIPKIN, John P., B.A.(Gettysburg), M.A.T.(Brown), Ph.D.(Mich.) **Associate Professor**
Chairman, Department of Social Foundations of Education

LOBELLE, Jan, Lic.Sc.Ec.(Ghent), M.A.(Middlebury)
Associate Professor

LOURENCO, Susan, B.A., M.A.(Oxon), M.A.(Col.), Ph.D.(Chic) **Associate Professor**

LUCAS, Barry, B.A.(U.B.C.), Ed.M.(W. Wash.), Ph.D.(Mich.) **Assistant Professor**

LUCAS, Christine, B.A.(Ithaca), M.A.(Buffalo), Ph.D.(McG.) **Assistant Professor**

LUSTHAUS, Charles, B.S., Ph.D.(S.U.N.Y.), M.S.(Canisius) **Assistant Professor**

MacNEILL, A. Daisy, B.A.(U.B.C.), B.D.(McG.), M.A.(Col.) **Associate Professor**

MACONOCHIE, A. Kennedy, M.A.(Edin.)
Associate Professor

MACRAE, Maisie, B.A.(Sir G. Wms.), M.A.(McG.)
Associate Professor

MAGER, George, A.B.(Franklin & Marshall), Ed.M., Ed.D.(Harv.) **Associate Professor**

MAGNUSON, Roger P., B.A., M.A., Ph.D.(Mich.)
Professor
Director, Graduate Studies in Education

MARISI, Daniel, B.Ed., B.A., M.Sc.(Sask.), Ph.D.(Calif.) **Associate Professor**

MAROUN, Theodore J., B.S.(S.U.N.Y. Potsdam), M.S.(Canisius), M.Ed.(S.U.N.Y. Buffalo), Ed.D.(Indiana) **Associate Professor**
Director, Counselling Service

McCARDELL, Nora, B.A.(Sir G. Wms), M.Sc. (McG.), M.A., Ph.D.(Wat.) **Assistant Professor**

McDONALD, L. Elaine, B.Mus.(Sam Houston State), M.A.(Col.) **Associate Professor**

McELROY, Gordon W.E., B.A.(Qu.), M.A.(McG.)
Associate Professor

McKAY, Gerald H., B.A., M.A.(Dal.), M.A.(Yale), Ed.D.(Harv.) **Professor**

McNICOL, Shirley W.C., B.A.(McG.), M.A.(Col.),
Associate of the University of London
Associate Professor

McWETHY, David D., B.S., M.A.(Mich. State), Ph.D.(Iowa State) **Assistant Professor**

MODAFFERI, Dominic, B.A.(Montr.), M.A.(Wesleyan) **Associate Professor**

MONTGOMERY, David L., B.Sc.(Guelph), M.Sc., Ph.D.(Purdue) **Assistant Professor**

MORRISON, Harry D., B.A., M.Ed.(Bishop's)
Professor
Coordinator, Undergraduate Degree Programs

NEIL, Graham, B.Ed.(P.E.), M.A.(McG.), Ph.D.(Ore.)
Associate Professor

NEMIROFF, Stanley, B.Sc., M.A.(McG.)
Assistant Professor

NICHOL, Dorothy A., B.Sc.(P.E.)(McG.), M.Sc.(P.E.), (Syr.) **Associate Professor**

NIXON, Martha, B.Ed., M.Ed.(McG.)
Assistant Professor

O'HARA, Martin, B.A., B.Ed., M.A.(Montr.)
Associate Professor

PALUMBO, Suzanne, B.A.(Lycée de Brive), M.Ed.(McG.) **Assistant Professor**

PAPKE, Clifford, B.A.(Montr.), A.O.C.A.
Associate Professor

PARE, Donald, B.A., M.A.(Gonzaga), B.Th.(Regis Col.), M.Sc.(Fordham), Ph.D.(Florida)
Associate Professor

PASCAL, Charles E., B.A., M.A., Ph.D.(Mich.)
Associate Professor, Faculty of Education and Centre for Learning and Development

PEDERSEN, Eigil, B.A.(Sir G. Wms.), M.A.(McG.), Ed.D.(Harv.) **Professor and Vice-Principal (Academic)**

PINTO, Francis, B.A.(Madras), LL.B., M.A.(Bombay), L.Ph.(Gregorian) **Associate Professor**

POLLARD, Michael, B.Ed.(Montr.), M.Ed.(McG.)
Assistant Professor

PROVENCHER, André, Bacc. ès A.(Montr.), Lic. ès Lett.(Lille) **Associate Professor**

PUPO, Salvatore, B.Ed.(Duquesne), M.Sc.(Notre Dame) **Associate Professor**

PURDY, H. Oscar, B.A., M.A.(Acad.), M.A.(Bowdoin) **Associate Professor**

RAPAGNA, Socrates, B.A.(Don Boscoê), B.Ph.(Turin), Lic. Ped., M.A.(Montr.), Ph.D.(Colorado) **Associate Professor**

REBUFFO, Jacques, B. ès L., L. ès L., D.E.S., (Aix-Marseilles), Dip. I.E.P., Dr. 3rd Cy.(Strasbourg) **Assistant Professor**
Chairman, Dept. of Ed. in Second Languages

REID, Gregory D., B.Ed.(P.E.)(McG.), M.S.(Calif.) **Assistant Professor**

REJSKIND, Gillian, B.A., M.A.(Sask.) **Assistant Professor**

Assistant Professor

WOLFORTH, John, B.Sc.(Sheff.), M.A., Ph.D.(U.B.C.) **Associate Professor**
Assistant Director, Graduate Studies in Education

YOUNG, F. Jack, Dip. Ed.(Lond.), B.Ed.(U.B.C.), M.A.(Kent State) **Associate Professor**
Director, Technical-Vocational Programs

YOUNG, John E. M., B.A.(McMaster), B.Ed., M.Ed.(Sask.), Ph.D.(Tor.) **Professor**

2 PROGRAMS OFFERED AND ADMISSION REQUIREMENTS

The Faculty of Education offers a wide variety of programs leading to professional careers in the fields of elementary and secondary education. In addition, the Faculty offers a number of part-time or in-service programs for certified teachers who wish to upgrade their qualifications or add areas of specialization. See page 23. Also, through the Faculty of Graduate Studies and Research, the Faculty of Education offers graduate degree programs designed primarily for educators who wish to study further in their area of competence or obtain professional and academic qualifications in advanced fields of educational theory and practice. See page 64.

All of these programs meet provincial standards in regard to teacher classification (Regulation #5) and, when applicable, meet current certification requirements of the Ministry of Education, Province of Québec (Regulation #4). Successful candidates eligible to teach in Québec are recommended to the Ministry of Education by the University for provincial certification. For more detail on eligibility and procedures see Section 7, page 65.

Fluency in one of the official languages of Canada (English or French) is a requirement for all candidates seeking provincial teacher certification; candidates who cannot demonstrate this fluency cannot be recommended for certification and will be required to withdraw from the Faculty. In addition, all applicants are reminded that the normal language of instruction at McGill is English. Students may write term papers and final examinations in French, but a good functional knowledge of English is necessary before commencing a program and is essential for success. Applicants whose mother tongue is a language other than English or French are strongly advised to have their oral and written ability evaluated before submitting an application (see Section 6, page 60). Candidates who intend to seek employment in schools in the Montreal area are advised that French-immersion programs have recently grown in popularity in some School Boards and that ability to teach fluently in both English and French is a decided advantage.

Admission to most programs offered by the Faculty is selective and better than average grades are normally required. A high academic average does not, however, necessarily ensure admission; nor does a low academic average automatically disqualify an applicant from admission. The Faculty recognizes that such factors are only meaningful when considered within the broader perspective provided by all of the application materials. Letters of reference can provide important qualitative evidence concerning an applicant's background and potential; they are reviewed most carefully by the Admissions Committee. In addition, the Faculty recognizes that experience gained outside of the normal academic milieu may have contributed valuable motivational and personal dimensions not necessarily known to others. Any applicant who believes that these experiences have been of value in this way is invited to append a personal statement to the Application Form.

2.1 BACHELOR OF EDUCATION

(90 credit, full-time, university-level programs)

The B.Ed. degree programs are designed primarily for graduates of Québec's Junior Colleges (CEGEP's) who wish to qualify as teachers at the elementary and/or secondary school levels. The program is normally completed during three years of full-time study and combines academic courses in the area of concentration, professional courses related to the teaching area and appropriate Field Experiences within the elementary or secondary schools of the Province. There are four programs at the Elementary level:

Pre-School
Early Childhood
Later Childhood
Elementary French

and there are programs designed to prepare High School teachers in one or two academic subjects taught at the secondary level. In addition, there are programs designed to prepare teachers of Physical Education, Art and Religious Studies at both elementary and secondary levels.

Programs leading to the degree of Bachelor of Education (Vocational Education) are also available, but only students in the Business Education option may follow the program on a full-time basis. The admission requirement for Québec applicants is a Diploma of Collegial Studies as awarded by a CEGEP, or its equivalent. There are no specified pre-requisite courses required for admission but candidates are advised to include French, Introductory Psychology and Introductory Sociology and

other courses relevant to their proposed teaching areas. For example, a prospective teacher of mathematics would be advised to have included a concentration in Mathematics; courses in Biology and Chemistry are strongly advised for applicants in Physical Education or Home Economics; courses in Art and Music would be appropriate for Pre-School or Early Childhood applicants. Generally speaking, CEGEP candidates are advised to concentrate on those subjects which are taught in the elementary and secondary schools e.g. English, French, Mathematics, Science, History, Geography, Social Studies, Languages, Art, Music, Religion.

Ontario Grade XIII candidates may apply if they have an average of 70% in five appropriate Grade XIII subjects. Candidates from Commonwealth countries with three G.C.E. "A" level subjects are also eligible to apply.

Other overseas students are encouraged to apply if they have certificates equivalent to those outlined above. Such applicants should refer to the **General Announcement** and are advised to write directly to the Admissions Office for an evaluation of their qualifications.

Candidates with Grade XII qualifications, with good grades in five appropriate G.C.E. "O" levels plus one full year of formal schooling, and mature applicants are eligible to apply for a program requiring the completion of 120 credits (normally four years of study).

Residents of Canada who are 23 years of age or older and who lack the academic background normally required for admission may apply for entrance as mature students into a 120 credit program normally requiring four years of study.

Apply before 1st March to:

Admissions Office
McGill University
845 Sherbrooke St. West
Montreal, PQ, H3A 2T5, Canada

Note 1. Québec applicants applying for B.Ed. programs in Elementary Education, Home Economics, Physical Education, Physics, Chemistry, French and Modern Languages are required to arrange interviews with the Department concerned prior to admission.

Note 2. Applicants who possess qualifications at university-level beyond the minimum required for admission may apply for transfer credit and advanced standing. Such requests must be clearly indicated on the Application Form. Retroactive credit after admission will not normally be considered.

Note 3. In certain circumstances it is possible for B.Ed. applicants to be admitted in January or to the Summer Session. Interested applicants should contact the Admissions Office in the first instance.

Note 4. Inter-Faculty transfer students should apply before 1st May to the Associate Dean's Office, Faculty of Education, 3700 McTavish Street Montreal, PQ. H3A 1Y2.

Note 5. Applicants for the B.Ed. (Home Economics) should apply before 1st March to:

School of Food Science
Macdonald College, P.Q.
Canada, H0A 1C0.

Note 6. Applicants for the B.Ed. (Vocational Education), Business Education option, should apply before March 1 to:

Admissions Office
Vocational Education Program
Faculty of Education
3700 McTavish Street
Montreal, PQ. H3A 1Y2.

2.2 DIPLOMA IN EDUCATION

(One year, full-time program for University graduates)

This Diploma program requires one full-time year of professional studies. Recognized by the Government of Québec, it is designed to prepare university graduates for a teaching career in elementary or secondary education. The Diploma is recognized in all the Provinces of Canada and in most countries in the world. Eligible candidates are recommended to the Québec Ministry of Education by the University for provincial teacher certification.

The three programs at the Elementary level (Early Childhood, Later Childhood and Elementary French) are somewhat unique in that each candidate is required to enroll in an internship which takes place within an elementary school. This internship takes up approximately 50% of the program and requires full-time attendance at an elementary school for two or three days each week throughout the year. In this way, the program provides an opportunity to integrate theory and practice.

Potential high school teachers are provided with programs preparing them to teach one or two subjects at the secondary level. With the one exception of Physical Education the Faculty offers the whole range of both academic and vocational courses taught in Québec High Schools. All programs provide for students to spend up to eight weeks full-time in High School settings and in this way each student is given the opportunity to integrate theory with practice in a realistic setting. The Diploma programs at the secondary level have also provided valuable training and experience to those graduates with Master's or Doctoral degrees seeking employment in CEGEP, Community or Junior Colleges.

The Diploma programs, at either Elementary or Secondary level, provide one of the normal prerequisites for admission to Graduate level specializations in Educational Administration, Guidance and

Counselling, Special Education, Teaching of Reading, Educational Psychology etc.

The admission requirements are a university degree, or its equivalent, prior to admission. Candidates must normally have at least a 2nd class average in their degree and either a major (six full university-level courses) in one subject taught in the elementary or secondary schools of the Province of Québec, or two minors (three full university-level courses) in two such subjects.

In addition to these minimum requirements certain areas have further requirements as indicated below:–

Elementary (Early and Later Childhood)

Candidates whose degrees do not contain the exact concentration of courses as outlined above may be considered for admission if they have a high standard of scholarship, if their degrees include a range of courses in subjects normally taught in elementary schools, and if their letters of reference and personal statement show evidence of relevant experience or high potential as elementary school teachers.

Elementary French

In addition to the requirements for all Elementary candidates as outlined above, all applicants will be assessed in their oral and written competence in the French language.

Secondary Art

Candidates must possess a degree of Bachelor of Fine Arts, an Art School equivalent plus a university degree, or a degree with Art Major in which studio work formed the major part of the program. Candidates are required to present a portfolio of their work and to arrange for an interview with a member of the Department usually during the month of April prior to admission.

Secondary English

Candidates should normally have taken six full university-level courses from those offered in Departments of English, or three courses in English and three courses in another teaching subject; courses in linguistics, drama, and film are also recognized. For candidates who have graduated from a four-year B.A. degree program, a required first-year course in English may not be included in order to achieve the requisite number of courses. Candidates with special experience in English outside academic course work should apply to the Department of Education in English of the Faculty of Education if they are otherwise short of requirements.

Candidates should note that "English" and "English as a Second Language" are two different options. Those interested in the latter option should refer to the section below headed "Secondary Second Languages."

Secondary Social Studies

a) Geography: The normal requirement of six full university level courses in geography, or three courses in geography and three courses in another teaching subject is applicable. Candidates should have courses in both physical and human geography and, preferably, one course in Cartography.

b) History: The normal requirement applies as for geography above, but candidates should have at least one course in Canadian history and one course in European history.

c) Economics: Candidates must have the normal requirement of six full university level courses in Economics.

d) Social Studies: Candidates may elect Social Studies as one of their teaching options but, in addition, they must have the qualifications to be admitted into a second teaching area. Their degree must show an acceptable sequence of courses in at least one social science discipline, e.g., political science, economics, anthropology, or sociology.

Candidates who do not have the required number of courses to apply for the above programs may be counselled to undertake qualifying summer courses prior to admission.

Secondary Mathematics

Candidates seeking to teach only mathematics at secondary level must possess the normal requirement of six full courses in university level mathematics provided that there has been no undue emphasis in one particular area, e.g. four courses in statistics.

Secondary Science

(Biology, Chemistry, Physics, General Science)

Candidates for the Secondary Biology, Chemistry and Physics options must possess appropriate prerequisites at the college level (or equivalent) as well as a minimum of **three** full university level courses in the discipline concerned. Candidates for the General Science option must have some college level (or equivalent) background in science as well as **three** full university level courses in science. Preference will be given to candidates who have taken courses over and above these minimum requirements. All candidates must have the qualifications to be admitted to two subjects: either two science subjects or one science subject and one other secondary-level subject.

Secondary Religious Studies

(Catholic, Protestant, Jewish)

a) Catholic: available as either one subject in which case six full courses in Theology are required or as one of two subjects in

which case three full courses in Theology are required.

b) Protestant: available only as one of two subjects. A minimum of three full university level courses in Religion are required.

c) Jewish Studies: available only as one subject but certification is for Religion at both Elementary and Secondary levels. Candidates must possess an appropriate university degree and appropriate background in Hebrew and/or Yiddish, Biblical literature, customs, etc.

Secondary Second Languages

(French, English, Italian, German, Spanish, Latin)

For candidates choosing a second language or Modern Languages as a single option, the requirement of a major in this teaching subject (i.e. six (6) full university courses) may include, besides a minimum of three (3) courses in literature and linguistics, other courses that are related to the culture concerned and to aspects of language communication and civilization in general. In addition, all candidates will be assessed on their oral and written competence in the language(s) they wish to teach. Assessment sessions will be held in the spring prior to admission. The options available are:-

a) French as a Second Language: candidates are reminded that in addition to oral and written competence in French they will also be required to take some courses given in the English language.

b) English as a Second Language: candidates should note that this is not the same option as "Secondary English". A functional knowledge of French would prove useful to those who plan to teach English as a Second Language.

c) Modern Languages (German, Italian, Spanish): candidates are reminded that in addition to oral and written competence in the language(s) they wish to teach they will also be required to possess a good functional knowledge of English.

d) Latin: candidates interested in this option should contact the Chairman of the Department of Education in Second Languages of the Faculty of Education before submitting an application.

Secondary Home Economics

Candidates must possess a university degree in Home Economics or an acceptable equivalent.

The candidate's transcript should contain appropriate courses in at least three of the areas of the secondary school curriculum in Home Economics and at least some courses in the remaining areas. The Québec Secondary School Curriculum in Home Economics has the following areas – Foods and Nutrition, Family Living, Housing and Design, Consumer Education and Clothing and Textiles.

Secondary Technical-Vocational or Business Education

The candidate must possess a university degree, or its equivalent, in appropriate subjects. Each candidate's credentials will be individually evaluated to ensure that they meet the requirements with respect to academic background and work experience. This will be followed by an interview to further determine the candidate's suitability for admission to this program. All interested applicants should contact the Admissions Officer, Technical-Vocational Education, Faculty of Education, 3700 McTavish Street, Montreal, P.Q. H3A 1Y2.

Music

Candidates must possess a Bachelor of Music in School Music or its equivalent. Certification is for Music at both Elementary and Secondary levels and thus students are required to undertake course work and student teaching at both elementary and secondary levels.

Physical Therapy

In conjunction with the School of Physical and Occupational Therapy, a one-year program leading to the McGill Diploma in Education is offered to qualified Physical Therapists who aspire to a teaching career in a recognized school of Physical Therapy. For further information write to The School of Physical and Occupational Therapy, 3654 Drummond Street, Montreal P.Q., Canada H3G 1Y5.

3 PROGRAM PROFILES

3.1 DEGREE PROGRAMS

All the programs leading to the Bachelor of Education degree are designed primarily to accommodate the graduates of Québec's Colleges (CEGEPS) who aspire to a career in the teaching profession.

While requiring an academic and professional concentration which is essential for the candidate's basic preparation as a teacher in a given subject area and/or level of education, these programs also provide for the selection of a broad range of optional courses. This flexibility is intended to satisfy the diverse needs and interests of each student as these are perceived by the Faculty (staff adviser) or by the students themselves.

Each program, therefore, requires the completion of at least ninety (90) course credits in academic and professional studies chosen in consultation with a staff adviser (see 1 below) according to the following pattern which differs slightly from program to program:

a) A minimum of thirty (30) course credits in an **ACADEMIC CONCENTRATION** (see 2 below);
b) A minimum of thirty (30) course credits in an **EDUCATION CONCENTRATION** (see 3, below);
c) A maximum of fifteen (15) course credits which are determined by **DEPARTMENTAL SELECTION** (see 4 below);
d) A maximum of fifteen (15) course credits which each candidate may choose as **FREE ELECTIVES** (see 5 below).

GUIDELINES FOR COURSE SELECTIONS

1) Advisers

Before registration, each first year student will be introduced to a staff adviser with whom he will consult concerning program and course selection. Second and third year students will have an opportunity to make their selections in the month of April preceding registration in September. All new students (whatever year) will have the opportunity for pre-registration counselling (see Calendar dates). At registration, each student must present a copy of the Study Plan Form which was completed and signed by the staff adviser at the pre-registration meeting.

2) Academic Concentration

Academic concentration refers to those courses which provide content material related to the school subject(s) for which the teacher candidate is preparing, for example, English, History, Chemistry, etc...

For selection of available courses students are referred to the *University Timetable* and the *Announcements* of the Faculties of Arts, Science, Music, and Religious Studies. For academic courses offered by the Faculty of Education see Section 5 of this booklet.

3) Education Concentration

Education concentration refers to those courses, both required and elective, which deal with educational theory and practice. These courses are found in a FIELD EXPERIENCE SEMESTER (FES) and, depending on the program, either scattered through the remaining five semesters or grouped in a BASIC EDUCATION SEMESTER (BES).

The **required** education courses for each program are indicated by number and title within the profile given for each program (see below). The **elective** courses are intended to supplement the studies undertaken in the required courses, offering the opportunity for study in greater depth or breadth of general theories and practice in education. In consultation with a staff adviser, students may choose electives from those listed on page 14. Selection of a course not included here requires the approval of the Associate Dean (Academic).

4) Departmental Course Selection

Departmental course selection refers to those courses which are determined for each student or group of students by the Department responsible for the teaching area and/or level for which each student is preparing (example: for English, Secondary level, Department of Education in English; for elementary schools, early childhood. Department of Elementary Education, etc.). Whatever the nature of the courses selected (academic or education) they do not replace the requirements of the education concentration or the academic concentration. Thereby, the Department is able to supplement basic program requirements with other courses judged most likely to lead to a well-balanced profile relative to both the individual needs of each student and the teaching competencies demanded by the profession.

5) Free Electives

Free electives refer to those courses, which may be chosen by the student in order to fulfill perceived needs or to pursue areas of scholarly interest. Thus, the student is free to enrol in any course (academic or education) offered by the University within the limits established by timetables, prerequisites, faculty jurisdictions, etc.

Before making selections, students are urged to discuss the matter with Departmental advisers or other competent counsellors. Although not required, it is recommended that the student use the opportunity provided by these free electives to plan a coherent package of course selections which complement the basic program according to individual needs.

Suggestions for Free Electives

a) to prepare for graduate study in a subject discipline, additional courses in the **ACADEMIC CONCENTRATION;**

b) to prepare for graduate study in Education, a group of courses from a selected area (for example, Educational Psychology and Sociology of Education, Foundations of Education);
c) to support the minimum requirements of a General Secondary program, a choice of additional academic and curriculum courses in the areas of concentration;
d) to supplement preparation in elementary education, appropriate courses offered in Psychology, curriculum, or related academics;
e) to provide background for those who intend to teach in Catholic schools, selected courses in Catholic studies;
f) to enhance the basic teaching techniques, courses available in Educational Media.

For a full range of course offerings which might serve this purpose, consult the *Announcements* of other faculties, especially those of Arts and Science. Courses available as **Free Electives** in the Faculty of Education may be selected from the List of Course Offerings (Section 5) in consultation with a Faculty adviser.

RECOMMENDED EDUCATION ELECTIVES

(Note: χ denotes Field Experience Component)

To supplement required courses in the Education Concentration, students should select courses from the following list of electives in consultation with program adviser. In individual cases, other education courses may be substituted with the consent of the adviser and the approval of the Associate Dean (Academic).

	412-304	Group Processes	3 credits
	413-405	The Critical Spirit and Education	3 credits
	413-406	Introduction to Comparative Education	3 credits
	413-407	Education and Society in Québec	3 credits
	413-408	Human Values and Education	3 credits
	413-409	Women and Education	3 credits
	414-201	The Nature and Conditions of School Learning	3 credits
	414-203	Education and Society	3 credits
χ	414-205	Sociology of Education – an overview	3 credits
χ	414-208	The Development of Personality and Social Behaviour in the School Age Child	3 credits
χ	414-249	Creativity and its Cultivation	3 credits
	414-304	Measurement and Evaluation in Education	3 credits
	414-305	Non-Verbal Communication	3 credits
χ	414-377	Adolescence and the Process of Education	3 credits
χ	414-394	Cognitive Development in the School Age Child and Adolescent	3 credits
χ	414-396	The Nature of Intelligence	3 credits
	415-398	Philosophy of Catholic Education (for those intending to teach in Catholic Schools)	3 credits
	427-305	Experience in Communications	3 credits
	427-576	Reading in the Content Fields (U2, U3) section for B Eds	3 credits
	431-311	Linguistics Applied to Teaching English as a Second Language	3 credits
	432-204	Media I	3 credits

MAJOR PROGRAM PROFILES

For those who wish to prepare for a teaching career at the secondary school level, the Faculty offers MAJOR PROGRAMS in a variety of concentrations: BIOLOGY, CHEMISTRY, ENGLISH, ENGLISH or FRENCH (SECOND LANGUAGE), GEOGRAPHY, HISTORY, LATIN, MATHEMATICS, MODERN LANGUAGES (GERMAN, ITALIAN or SPANISH) or PHYSICS.

Profiles and Course requirements for these 90 credit MAJOR PROGRAMS are as follows:

Academic Concentration: 30 credits in the selected subject. Courses should be chosen in consultation with a departmental adviser from the offerings available in the Faculty of Arts or Science. It is recommended that these courses to be completed by the end of the second year and before the major field experience.

Education Concentration: 36 credits to be completed normally according to the following semester profile:

Sem. 1: 413-204A (Required)
Sem. 2: 414-260B; and a field based course in Observation and Familiarization (—291B) through teaching area department (both required)
Sems. 3 & 4: 9 credits selected from list of available Education electives (see page). At least 3 credits must be taken in a course which includes a field component.
Sem. 5: 435-376A; an associated curriculum course (both required); and 3 additional (elective) credits.
Sem. 6: 413-420B and a Special Project (—490B) supervised by department of choice (both required).

Departmental Course Selections – 9 credits to be authorized by Departmental Chairman or adviser according to individual student's scholastic background, career orientation, and program need. May be taken any time but semester 5.

Free Electives – 15 credits chosen by the student in consultation with department adviser from any available course in the University (for more detail, see page). May be taken any time but semester 5.

Major in Teaching of Art

Education-Required Courses

413-204A	Sem. 1	3 credits
448-305B	Sem. 4	6 credits
435-444B	Sem. 4	3 credits
435-376A	Sem. 5	9 credits
426-473A	Sem. 5	3 credits

Education-Elective Courses

2 courses	Sem. 4	6 credits
1 course	Sem. 5	3 credits

Academic Concentration

SEMESTERS 1 & 2

Students must take:

426-204	Drawing	
426-296	Basic Design	
426-208	Ceramics I	
426-206	Graphics I	12 credits

and 2 of the following:

426-205	Painting II	
426-209	Ceramics II	
426-297	Design II	
426-207	Graphics II	
426-398	Canadian Art History	6 credits

SEMESTER 3

Students must select 3 courses from 2 areas of concentration. 9 credits

SEMESTER 6

Students must select 1 course from 2 areas of concentration (above) 3 credits.

Departmental Course Selections

1 course	Sem. 2	3 credits
426-342A	Sem. 3	3 credits
2 courses	Sem. 6	6 credits

Free Electives

2 courses	Sem. 1 & 2	6 credits
1 course	Sem. 3	3 credits
2 courses	Sem. 6	6 credits

NOTE 1: Students are required to present an exhibition of their work at the end of the third year.

NOTE 2: Sketching School – a ten day resident sketching school (Labour Day week-end through early September) is offered to students who have completed Painting II (426-205). This will be considered an optional part of Painting V (426-404) but may be taken in the first summer. Students will be expected to pay transportation, room and board (cost will be kept to a minimum).

Major in Physical Education

Education-Required Courses

413-204A	Sem. 1	3 credits
434-342B	Sem. 2	3 credits
414-260B	Sem. 2	3 credits
435-246B	Sem. 2	3 credits
414-208A or 414-377A	Sem. 3	3 credits
435-346A or 435-376A or 435-496A	Sem. 5	9 credits
434-494A	Sem. 5	3 credits

Education-Elective Courses

One in semester 1	3 credits
Two in semester 6	6 credits

Departmental Selection Courses

434-203A	Sem. 1	3 credits
434-206B	Sem. 2	3 credits
435-444B or 435-474B or 434-480B	Sem. 4	3 credits

Academic Concentration

434-205A	Sem. 1	3 credits
434-331A	Sem. 3	3 credits
434-391B	Sem. 4	3 credits
434-492B	Sem. 6	3 credits

Physical Education Skills and Techniques (see page 51).

3 credits in each of 6 semesters 18 credits

Free Electives

Sem. 3	6 credits
Sem. 4	6 credits
Sem. 6	3 credits

NOTE 1: Costume & Equipment: All students pursuing a major program in Physical Education are required to wear a costume appropriate to the activity as approved by the instructor. Students are also responsible for providing some items of personal sports equipment such as skis, skates, tennis racquets, etc.

NOTE 2: All students in the physical education major program must complete a minimum of 18 semester credits in physical educational Skill and Techniques courses before graduation. Of these, 11 credits and 10 credits are required of men and women respectively. The remaining credits are to be chosen from the optional list. Registration in an advanced activity course requires at least a "C" grade in the introductory course and permission of the instructor. Not all elective activity courses will be offered each year. It should be possible, however, for a candidate to elect any of these options sometime during the three year program. (see Section 5, page 49).

Major in Religious Education (Catholic)

Education-Required Courses 24 credits

413-204A	Sem. 1	3 credits
414-260B	Sem. 2	3 credits
415-291B	Sem. 2	1 credit
435-496A	Sem. 5	9 credits
415-392A	Sem. 5	3 credits
413-420B	Sem. 6	3 credits
415-490B	Sem. 6	2 credits

Education-Elective Courses 12 credits

Semesters 3 & 4: 9 credits (3 of which should include a field component)
Semester 5: 3 credits. These courses may be selected from the list of available offerings (see page 14).

Departmental Selection Courses 9 credits

415-341 in Semester 4 and 6 credits which may be authorized in any semester except 5.

Academic Concentration 30 credits

Recommended courses are: 415-200, 290, 206, 207,208,391, 394, 395 and 396.

Free Electives **15 credits**

May be taken in any semester except 5.

NOTE: Candidates for Catholic schools should seek advice from the Department of Catholic Studies.

Major in Religious Education (Protestant)

Education-Required Courses 24 credits

413-204A	Sem 1	3 credits
414-260B	Sem 2	3 credits
421-291B	Sem 2	1 credit
435-496A	Sem 5	9 credits
421-372A	Sem 5	3 credits
413-420B	Sem 6	3 credits
421-490B	Sem 6	2 credits

Education-Elective Courses 12 credits

Semesters 3 & 4: 9 credits (3 of which should include field component
Semester 5: 3 credits. These courses may be selected from the list of available offerings (see page 14).

Departmental Selection Courses 9 credits

421-342 in Sem. 3 and 6 credits which may be authorized in any semester except 5.

Academic Concentration 30 credits

For Semesters 1 & 2 the following six are recommended: 260-201A, 202B, 252A, 253B, 341A, 371B.

For Semesters 3 & 4 the following four are recommended: 260-345, -408, -410, -420.

Free Electives **15 credits**
May be taken in any semester except 5.

Note: Candidates for Protestant schools should seek the advice of Prof. D. MacNeill, Department of Elementary Education.

Major in Religious Education (Jewish)

YEAR I

Academic Concentration 18 credits
Education-Required (413-204A) 3 credits
Education-Elective 3 credits
Free Electives 6 credits

YEAR II

Academic Concentration 12 credits
Departmental Selections 9 credits
Free Electives 9 credits

YEAR III

Education-Required Courses (1G Pattern)

413-500D	422-401A
414-500D	422-404A
	422-402B
446-505D	422-400B
435-574D	411-592B

NOTE: Students who have already taken 413-204 will be exempt from taking 411-592.

NOTE: Students who choose this option are referred to Prof. S. Epstein, 3511 Peel Street (Tel. 392-8257) for advice and consultation.

Major in Home Economics Education

Students who elect to follow a Major program in Home Economics are required to enrol in the courses offered in the School of Food Science for the first four semesters. During that period they are required to complete 60 course credits of which at least 30 must be in the Academic Concentration. Students then enrol for 30 course credits in professional subjects at the Faculty of Education.

THIRD YEAR (1G Pattern)

413-500D	6 credits
414-500D	6 credits
418-472A	3 credits
418-473B	3 credits
418-474B	3 credits
426-298A	3 credits
435-574D	6 credits
411-592B	1 credit
446-505D	0 credit

Note: The addition of 432-204A INTRODUCTION TO MEDIA is highly recommended, but at extra cost to the student.

Major in the Teaching of French Language

Education-Required Courses 24 credits

413-204A	Sem 1	3 credits
414-260B	Sem 2	3 credits
431-291B	Sem 2	1 credit
435-346A	Sem 5	9 credits
431-344A	Sem 5	3 credits
413-420B	Sem 6	3 credits
431-490B	Sem 6	2 credits

Education-Elective Courses 12 credits

Semesters 3 & 4: 9 credits (3 of which should include a field component).
Semester 5: 3 credits. These courses may be selected from the list of available offerings (see page 14).

Departmental Course Selections 9 credits

431-301, -305 & -373, in semesters 3, 4 and 6 respectively.

Academic Concentration 30 credits

In first year, a student must select 18 credits from the following:

126-225D	104-200B
126-229D	104-201D
126-245D	104-230A
126-247D	104-241B
126-264D	157-200A
126-275D	157-203D
104-200A	157-226A

In second year, a student must select 12 credits from the following:

126-317A	104-410B
126-329D	104-425A
126-333A	157-316A
126-334B	157-336B
126-342D	157-370D
126-345D	157-406B
126-442D	157-480B
104-321B	

Free Electives 15 credits

May be taken in any semester except 5.

General Programs Secondary Education

For degree candidates who seek preparation at the secondary level. Select two (2) subject areas:
BIOLOGY, CHEMISTRY, ENGLISH, ENGLISH or FRENCH (Second Language), GEOGRAPHY, HISTORY, LATIN, MATHEMATICS, MODERN LANGUAGES (German, Italian or Spanish), PHYSICAL EDUCATION, PHYSICS, and RELIGIOUS EDUCATION (Catholic or Protestant).
Profiles and Course requirements for these 90 credit GENERAL PROGRAMS are as follows:

Academic Concentration: 36 credits (18 credits in each of the selected subjects). Courses should be chosen in consultation with a department adviser from the offerings available in the Faculty of Arts, Science, Religious Studies, or Education. It is recommended that these courses be completed by the end of the second year and before the major field experience.

Education Concentration: 36 credits to be completed normally according to the following semester profile:

Sem. 1: 413-204A (Required)

Sem. 2: 414-260B; and a field based course in Observation & Familiarization (– 291B) through teaching area department (both required)

Sems. 3 and 4: 9 credits selected from a list of available electives (see page 14). At least 3 credits must be taken in a course which includes a field component.

Sem. 5: 435-377A; curriculum courses (3 credits each) relevant to teaching subjects (all required). Sem. 6: 413-420B; and a Special Project course (– 490B) supervised by department of choice (both required).

Departmental Course Selections – 3 credits to be authorized by Departmental Chairman or adviser according to individual student's background, orientation, and need. May be taken in any semester except 5.

Free Electives – 15 credits chosen by the students in consultation with departmental adviser from any available course in the University (for more detail, see page 13). May be taken in any semester except 5.

General Programs Elementary Education

Candidates admitted to degree programs in Elementary Education (Nursery-Kindergarten, Early or Later Childhood) must meet the follow program requirements:

Academic Concentration

30 credits in five (5) subject areas chosen in the prescribed pattern:
12 credits in first subject area (Option I)
9 credits in second subject area (Option II)
3 credits in third subject area (Option III)
3 credits in fourth subject area (Option IV)
3 credits in fifth subject area (Option V)

Note: Subject areas are restricted to those taught in elementary schools: Art, English, French, Mathematics, Music, Physical Education, Science, Social Studies and Religion. Those selected as OPTION I OR II carry departmental requirements listed hereunder. Faculty of Education students are advised to examine the course offerings in other Faculties of the University. Departmental advisers should be consulted when choosing academic courses.

Art – Introductory Drawing or Basic Design must be taken as first course.
English – Minimum of 3 credits in Linguistics is recommended
Minimum of 3 credits must be taken in Faculty of Arts.
French (Second Language) Interview with French Department is required if selecting French as 1st or 2nd option, and before acceptance into French Methods course.
Mathematics – Background Mathematics for Elementary teachers is strongly recommended.
Music – May **not** be taken as 1st or 2nd option except with consent of Music Department chairman.
Physical Education – Foundations of Movement is required.
Protestant Studies – Living with Questions is required.
Science – Background Science for Elementary teachers – strongly recommended, but *not* open to students with strong Science background from CEGEP.
Social Studies – Including work done at the college level, course selections must ensure background in Canadian History and Geography (human, physical, or cartography).

Education Concentration

9 credits in Basic Education (413-204 & 448-305)
12 credits in relevant Field Experience
3 credits in Reading and Language Arts (or 3 credits in Creative Program Skills in N-K program.)
3 credits in Mathematics Curriculum (or Primary Science in N-K program).
6 credits in Education Electives
3 credits in Elementary (or Pre-school for N-K) Curriculum.

9 credits – usually curriculum courses, determined by the Department of Elementary Education. If not otherwise required (e.g. Math, Reading & Language Arts), students must register for curriculum courses related to OPTIONS I and II. 15 credits Curriculum and Instruction must be completed before Field Experience. NK students take Communications and Nutrition and Curriculum courses related to OPTIONS I and II. Required before Field Experience.

NOTE: A grade of "C" or better is required in all courses of academic OPTIONS I and II and in the associated curriculum courses. Also a grade of C is required in the compulsory methods courses in Math & Language Arts.

Free Electives

12 (15 N-K) credits chosen by the student in consultation with a departmental adviser.

Elementary Education – Nursery & Kindergarten

SEMESTER 1

Academic Concentration 12 credits

Students will select 4 academic courses in at least 3 (options I, II, III) of the following subject areas: Art, English, French, Mathematics, Music, Physical Education, Science, Social Studies, and Religion, (one of which must be Art, Music or Physical Education).

NOTE: Two of the subject areas elected must be continued in second and third years (options I and II).

Education Required Course (3 credits)

413-204 INTRODUCTION TO EDUCATION

SEMESTER 2 (BASIC EDUCATION SEMESTER)

Education Required Courses (3 credits)

448-305 – INTEGRATED STUDY OF TEACHING & LEARNING (6 credits)
435-215 – DIRECTED OBSERVATION – PRE-SCHOOL (3 credits)
417-312 – PRIMARY SCIENCE (3 credits)
EDUCATION ELECTIVE (3 credits)

SEMESTERS 3 AND 4

Departmental Course Selections 12 credits

Students must take 427-305, 433-322, 433-412, and 3 credits authorized by Departmental Chairman or adviser. If English is Option I or II, must take 433-221.

Academic Concentration 12 credits

Students must continue Option I (3 credits) and Option II (3 credits) and select Options IV & V (3 credits each).

Free Electives 6 credits

SEMESTER 5 (FIELD EXPERIENCE SEMESTER)

ACADEMIC CONCENTRATION (6 credits)

Option I (3 credits)
Option II (3 credits)

FREE ELECTIVES (9 credits)

SEMESTER 6

EDUCATION REQUIRED COURSES (12 credits)

435-411 Field Experience-Nursery-Kindergarten (9 credits)
433-411 Pre-school Curriculum (3 credits)

EDUCATION ELECTIVE (3 credits)

Elementary Education – Early or Later Childhood

SEMESTER 1

Academic Concentration 12 credits

Students will select 4 academic courses in at least 3 of the following subject areas (options I, II, III): Art, English, French, Mathematics, Music, Physical Education, Science, Social Studies, and Religion.

NOTE: Two of the subject areas selected must be continued in second and third years (Options I & II.)

Education Required Course 3 credits

413-204 INTRODUCTION TO EDUCATION

SEMESTER 2 (BASIC EDUCATION SEMESTER)

Education Required Courses 12 credits

448-305 – INTEGRATED STUDY OF TEACHING & LEARNING (6 credits)
435-245 – DIRECTED OBSERVATION – ELEMENTARY (3 credits)
CURRICULUM COURSE
Early Childhood (433-221 or 428-322) 3 credits
Later Childhood (433-231 or 428-332) 3 credits

EDUCATION ELECTVE (3 credits)

SEMESTERS 3 AND 4

Education Required Course 3 credits

Early Childhood – select in Semester 3 433-221 or 428-322, whichever not yet taken.

Departmental Course Selections 12 credits

Early Childhood – In semester 4 will take 433-222 and 3 Curriculum courses, as authorized by adviser.

Note: Students who completed 433-221 in semester 2 must take 433-222 in semester 3.

Education Required Course 3 credits

Later Childhood – Select in Semester 3 433-231 or 428-332, whichever not yet taken.

Departmental Course Selections 12 credits

Later Childhood – In semester 4 take 433-232 and 3 Curriculum courses as authorized by adviser.

NOTE: Students who completed 433-231 in semester 2 must take 433-232 in semester 3.

Academic Concentration 12 credits

Students must continue Options I and II and select remaining options IV and V.

Free Electives 3 credits

SEMESTER 5 (FIELD EXPERIENCE SEMESTER)

Education Required Courses 12 credits

EARLY CHILDHOOD – 435-421 and 433-421

LATER CHILDHOOD – 435-431 and 433-431

Education elective (3 credits) – See P. 14.

SEMESTER 6

Academic Concentration 6 credits

Option I (3 credits)
Option II (3 credits)

Free Electives 9 credits

NOTE: Based on alphabetical listing, students will be registered in the Field Experience Semester in either September or January. Any contrary arrangement must have the approval of the Department of Elementary Education. Accordingly, U3 semesters are interchangeable.

3.2 DIPLOMA PROGRAMS

The Faculty of Education offers a variety of one-year professional programs in preparation for a teaching career in elementary or secondary education. These programs are open to candidates who hold a university degree. For admission details, see Section 2, page 10.

Secondary Education

Candidates will be admitted to prepare in either one or two teaching subject areas.

Required Courses

411-592 – SCHOOL LAW
413-500 – FOUNDATION STUDIES IN EDUCATION or
415-595 – PHILOSOPHY OF CATHOLIC EDUCATION
414-500 – EDUCATIONAL PSYCHOLOGY
427-505 – EXPERIENCES IN COMMUNICATION
435-574 – STUDENT TEACHING
446-505 – ORIENTATION TO SECONDARY SCHOOL TEACHING

Students in the Secondary Diploma Program are required to complete two periods of student teaching comprising three weeks in the first semester and five weeks in the second, in selected high schools. During these periods, students are expected to commit themselves exclusively to the teaching programs arranged by the Faculty in cooperation with the schools.

From the following list, the candidate preparing in a single teaching subject **CHOOSES ONE,** the candidate preparing in two teaching subjects **CHOOSES TWO:**

ART **	426-572
BIOLOGY*	417-576
CHEMISTRY*	417-577
ENGLISH	427-572
ENGLISH (Second Language)	431-558
GENERAL SCIENCES*	417-575
GEOGRAPHY	430-572
HOME ECONOMICS**	418-472 & 473
HISTORY	430-575
MATHEMATICS	428-572
PHYSICS*	417-578
RELIGION (Catholic)	415-571
RELIGION*(Protestant)	421-572
FRENCH	431-572
LATIN	431-578
GERMAN	431-579
ITALIAN	431-579
SPANISH	431-579
SOCIAL STUDIES	430-579

*Not available as a single subject.
**Available as a single subject only.

Elective Courses

The candidate preparing in a single teaching subject must take an additional Advanced Curriculum and Instruction course in his or her teaching subject (List A) and one other course (List B)

List A

415-503	Catholic Studies
418-474	Home Economics
426-573	Art
427-573	English
428-573	Mathematics
430-569	Social Studies
430-573	Geography
430-576	History
431-573	Second Languages

List B

411-575	Secondary School Curriculum
415-573	Living With Insight (Catholic Studies)
427-576	Reading in the Content Fields
430-403	Simulation in the Social Sciences
430-453	Fieldwork in School Geography
431-501	Linguistics Applied to Second Language Teaching
431-504	Cultural Content of Second Language Programs
432-204	Educational Media

Note: Students in Home Economics must take 426-298, although if an equivalent course has been taken elsewhere, permission may be granted to take another course from List B.

Technical/Vocational and Business Education Concentrations

Required Courses

411-592 – SCHOOL LAW
413-500 – FOUNDATION STUDIES IN EDUCATION or
415-595 – PHILOSOPHY OF CATHOLIC EDUCATION
414-500 – EDUCATIONAL PSYCHOLOGY
427-505 – EXPERIENCES IN COMMUNICATION
435-574 – STUDENT TEACHING
446-505 – ORIENTATION TO SECONDARY SCHOOL TEACHING

Technical/Vocational Concentration only:

436-572 – METHODS IN TEACHING TECHNICAL/VOCATIONAL SUBJECTS
436-574 – ORGANIZATION AND ADMINISTRATION IN TECHNICAL/VOCATIONAL SUBJECTS

Business Education Concentration only:

436-562 – TEACHING METHODS IN BUSINESS EDUCATION
436-564 – ORGANIZATION AND ADMINISTRATION IN BUSINESS EDUCATION

Elective Course(s)

Students in the Technical/Vocational and Business Education concentrations will take the following courses:

436-575 – CURRICULUM DEVELOPMENT IN TECHNICAL/VOCATIONAL EDUCATION
436-576 – EDUCATIONAL EVALUATION IN TECHNICAL/VOCATIONAL EDUCATION

or

the equivalent of one full course from options available in the Faculty of Education or in other faculties.

Music Education

Candidates with an acceptable degree in school music (or equivalent) will be admitted to a program which provides preparation for the teaching of music at both the elementary and secondary school levels. Students will take all of the REQUIRED COURSES listed in the previous section together with the following:

429-542 – ELEMENTARY MUSIC CURRICULUM AND INSTRUCTION
429-572 – SECONDARY MUSIC CURRICULUM AND INSTRUCTION

Religious Studies (Jewish)

A program offered for candidates with an acceptable undergraduate degree and with appropriate background in Jewish Studies as a preparation for the teaching of Jewish subject matter at the elementary and secondary levels. Students will take all of the REQUIRED COURSES listed in the previous section together with the following:

422-400 – TEACHING CUSTOMS & CEREMONIES
422-401 – TEACHING BIBLICAL LITERATURE I
422-402 – TEACHING BIBLICAL LITERATURE II
422-404 – TEACHING HEBREW/YIDDISH-SECOND LANGUAGE

Elementary Education – Early or Later Childhood

Candidates will be admitted to prepare for teaching at the Early or Later Childhood levels.

The integration of theoretical and practical dimensions of the various courses is provided through an internship in schools and through a year-long course, Orientation to Teaching, given by the student's adviser.

Students are required to teach in schools two or three days each week throughout the year in addition to following studies in the Faculty. Course work in Semester I is approximately 13 hours per week and 8 hours in Semester 2. Thus, students are advised that the Diploma Program is demanding and should consider that five full days per week are necessary to meet the requirements.

ALL CANDIDATES

411-592 – SCHOOL LAW
413-502 – SOCIAL FOUNDATIONS OF EDUCATION

or

415-594 – PHILOSOPHY OF CATHOLIC EDICATION
414-500 – EDUCATIONAL PSYCHOLOGY
435-544 – STUDENT TEACHING
446-504 – ORIENTATION TO ELEMENTARY SCHOOL TEACHING

EARLY CHILDHOOD

433-522 – READING & LANGUAGE ARTS
428-522 – MATHEMATICS

and ONE of

426-522 – ART
429-522 – MUSIC
434-521 – MOVEMENT

Two of the following:

415-547 – RELIGIOUS RESPONSE
417-522 – SCIENCE
421-542 – HUMAN & RELIGIOUS VALUES
426-522 – ART
429-522 – MUSIC
430-522 – SOCIAL STUDIES
431-522 – FRENCH CURRICULUM & INSTRUCTION
431-547 – TEACHING ENGLISH AS A SECOND LANGUAGE
434-521 – MOVEMENT EDUCATION

LATER CHILDHOOD

433-532 – READING & LANGUAGE ARTS
428-532 – MATHEMATICS
430-532 – LOCAL & COMMUNITY STUDIES

Two of the following:

415-547 – RELIGIOUS RESPONSE
417-532 – SCIENCE
421-542 – HUMAN & RELIGIOUS VALUES
426-532 – ART

427-594 – CREATIVE DRAMA FOR THE CLASSROOM
429-532 – MUSIC
430-533 – COMPARATIVE SOCIAL STUDIES
431-532 – FRENCH
431-547 – TEACHING ENGLISH AS A SECOND LANGUAGE
432-204 – EDUCATIONAL MEDIA
434-531 – PHYSICAL EDUCATION

Elementary Education – French (Second Language)

411-592 – SCHOOL LAW
413-502 – SOCIAL FOUNDATIONS OF EDUCATION, or
415-594 – PHILOSOPHY OF CATHOLIC EDUCATION
414-500 – EDUCATIONAL PSYCHOLOGY
431-501 – LINGUISTICS APPLIED TO SECOND LANGUAGE TEACHING
431-544 – TEACHING FRENCH AS A SECOND LANGUAGE
431-545 – THE BILINGUAL CLASS
431-540 – ANIMATION TECHNIQUES
435-544 – CLASSROOM STUDENT TEACHING
446-504 – ORIENTATION TO ELEMENTARY SCHOOL TEACHING

Any one Early or Later Childhood elective except French and Reading and Language Arts (see above.)

4 PROGRAMS OF PROFESSIONAL DEVELOPMENT FOR TEACHERS

During the summer months as well as in the evenings of the fall and winter terms the Faculty of Education offers a selected number of programs designed for teachers who are interested in pursuing further studies. All the programs listed below meet provincial standards in regard to the up-grading of teacher classification (Regulation #5).

For calendars outlining courses offered during the various sessions and for information regarding registration procedures, fees, etc., contact:

Centre for Continuing Education
772 Sherbrooke Street West
Montreal, PQ. H3A 1G1
392-4757

or

McGill Summer Session
F. Cyril James Building
845 Sherbrooke St. West
Montreal, PQ. H3A 2T5
392-6740

Unless otherwise directed, for admission to all the following part-time programs apply to:

Student Affairs Office
Faculty of Education
3700 McTavish Street
Montreal, PQ. H3A 1Y2
392-8899

Applications and admission to these programs are processed at all times during the academic year and the summer months.

Bachelor of Education for Certified Teachers (Elementary Education)

This 90 credit B.Ed. degree was designed for teachers who are already certified to teach in elementary schools and who wish to upgrade their qualifications and scolarité to degree status. A student must take a minimum of 60 credits at McGill in order to qualify for the degree. Thus, only 30 credits from other institutions may be considered as transfer credits. This program is available on a part-time basis in the summer, and in the evening during the fall and winter terms. It is available also on a full time basis.

The program combines academic courses in areas of concentration, academic and free electives, and professional courses related to educational theories and teaching strategies. Candidates may satisfy the professional requirements of the degree by following concurrently a 30 credit diploma program in Special Education, Reading, Educational Media, Kindergarten, or Second Language Teaching. These diploma programs are described below.

The admission requirements are:

1. Québec teacher certification or its equivalent;
2. At least 13 years of schooling

Further information regarding the program may be obtained from the office of:

Senior Adviser, B.Ed. (Cert.Teach)
Faculty of Education
3700 McTavish Street
Montreal, PQ. H3A 1Y2
392-8871

Program Profile

Candidates enrolled in this 90-credit program must complete course work within the following general pattern:

1) Thirty (30) academic credits in five (5) subject areas relevant to elementary education in a 12-9-3-3-3 pattern (i.e. 12 credits in one subject, 9 credits in a second subject, and 3 credits in each of three other subject areas.)

NOTE: Subject areas, relevant to elementary education, in broad terms, are English, French, History, Geography, Mathematics, General Science, Religion, Art, Music, Physical Education, etc. ...

2) Fifteen (15) academic credits chosen in consultation with departmental adviser.

3) Fifteen (15) credits as **FREE ELECTIVES** (courses selected by candidate after consultation with departmental adviser). See Guidelines, page .

4) Thirty (30) credits in a prescribed "education package" as prepared by the Faculty of Education. At the present time, these "packages" are available in Reading, Kindergarten, Special Education, Ed. Media, and Second Language Teaching as described below.

OR

Fifteen (15) credits as selected by the candidate and fifteen (15) education credits as determined by the Department of Elementary Education.

BACHELOR OF EDUCATION IN VOCATIONAL EDUCATION

The primary objective of this program is to provide professional growth and development to vocational teachers in three ways:

1. By developing and improving technical competencies and business skills related to the subject matter being taught in the secondary schools (subject specialization aims).

2. By developing and improving methods of transmitting the subject matter to secondary school pupils (pedagogical aims).

3. By establishing relationships which exist between vocational specializations and other cultural aspects of our society (cultural goals).

These needs are identified by an individual in conjunction with an adviser, taking into consideration each person's academic background, professional skills, teaching subject(s) and cultural needs.

This program is available on a part-time basis in the summer and in the evening during the fall and winter terms. Candidates may also enrol as full-time students for one-year to complete the requirements for basic certification. The balance of the program could then be completed by part-time studies.

The admission requirements are:

1. A Diploma of Collegial Studies or equivalent qualifications.*

2. Appropriate experiences within a trade, business or professional area corresponding to the subjects which the candidate would teach in high school.

* Candidates who fail to meet this requirement may be admitted under the University's Mature Admissions Policy provided they are 23 years of age or older.

Further information regarding the program may be obtained by writing to:

Admissions Officer
Vocational Education Programs
Faculty of Education
3700 McTavish Street
Montreal, PQ, H3A 1Y2
392-8059

Program Profile

The following four areas represent the main program components:

Subject Specialization Courses relating to the subject(s) matter taught in the Secondary School. Includes industrial field experiences.
30 credits (minimum of 18 in area of specialization).

Pedagogy Teaching methodology including psychopedagogy and field experiences.
30 credits

Departmental Selection Additional courses relating to either subject specialization or pedagogy at the discretion of the Program Director.
15 credits

Free Electives Courses chosen by the candidate from any course available in the university.
15 credits
MINIMUM TOTAL 90 credits

It is anticipated that many applicants will have completed portions of the program prior to their formal acceptance as B.Ed. (Vocational) candidates. Wherever possible, full credit will be given for courses previously completed providing that admission requirements as previously stated are met. A student must take a minimum of 60 credits at McGill in order to qualify for the degree. Up to 30 credits from other institutions may be considered as transfer credits.

Québec Diploma in Special Education

The Diploma in Special Education is required by teachers wishing to work with children who have learning and/or behaviour problems and who have been classified as exceptional children for Ministry of Education purposes. However, courses leading to the diploma have been found useful also to "regular" class teachers interested in children with learning and/or behavioural problems or physical handicaps. At present the Québec Ministry of Education requires that a "free flow" teacher have: a degree; a diploma in Special Education (if the "free flow" assignment is in fact restricted to instruction in reading, a teacher may substitute a diploma in reading); a clinical experience that may or may not be included in the Diploma work.

All eligible candidates may follow this diploma program concurrently as part of the B.Ed. for Certified Teachers.

The admission requirements are:

1. a teacher authorization (Permit, Diploma, P.T.A., etc), from the Québec Ministry of Education;

2. a recommendation from a school principal or Special Education Director who has the most recent knowledge of the teacher's competence.

Priority is given to teachers who have already been appointed to a Special Education assignment.

Further information regarding this program may be obtained from:

Special Education Office
Faculty of Education
3700 McTavish Street
Montreal, PQ. H3A 1Y2 392-8809

For off-campus courses in Special Education, apply to the office responsible for coordinating continuing education at the Regional School Board Offices.

Program Profile

Required Pre-requisite Courses 12 credits

These courses must be completed before proceeding to further course work.

414-340 Education of Exceptional Children (3 credits)
414-341 General Methods in Special Education (3 credits)
414-342 Organization of Special Education Programs (3 credits)
414-343 Introduction to Diagnosis and Assessment (3 credits)

Required Courses **12 credits**

414-344 Practicum in Diagnosis and Assessment of Learning Problems (3 credits)
414-440 Cognitive and Psychomotor Problems of Exceptional Children (3 credits)
414-441 Behavioural Problems of Exceptional Children (3 credits)
414-442 Psychology of Learning Problems (3 credits)

Electives **6 credits**

414-443 School – Home – Community Relations in Special Education (3 credits)
414-444 Materials in Special Education (3 credits)
414-445 Vocational Habilitation of Exceptional Children (3 credits)
414-446 Special Topics in the Education of Exceptional Children (3 credits)
414-240 Craft Course (0 credit)

Courses may be selected from other departments in the university with the approval of the program director.

Québec Diploma in Reading Instruction

The Diploma in Reading Instruction is a 30 credit program which consists of a sequence of ten courses offered at the Faculty of Education and at off-campus locations during the summer, and during the fall and winter as evening classes. This diploma program is intended to train practicing teachers in more effective developmental and corrective teaching of reading.

This program must be completed within 5 years; that is, no course will be counted if it was completed more than 5 years before the completion of the last course which is to be counted toward the diploma.

All eligible candidates may follow this diploma program concurrently as part of the B.Ed. for Certified Teachers.

The admission requirements are:

1. a teaching certificate valid in Québec;
2. evidence of successful teaching experience;
3. a recommendation from a school principal.

Further information regarding this program may be obtained from:

The Director, Reading Centre,
Faculty of Education
3700 McTavish Street
Montreal, PQ. H3A 1Y2 392-8888

Program Profile

Required Courses **21 credits**

Candidates will normally take seven courses from the following. Please note special requirements where applicable.

1) Candidates must take at least two of the following three Reading Instruction courses. These two must be either 223 **and** 233 or 233 **and** 523.

427-223 Reading Instruction: Early Childhood (3 credits)

427-233 Reading Instruction: Later Childhood (3 credits)

427-523 Reading Instruction: High School (3 credits)

2) Candidates must take at least two of the following three Corrective Reading courses. These two courses must be either 224 **and** 234 or 234 **and** 577. In addition, the **Reading Instruction course at the same level is a prerequisite for a Corrective Reading course.** Both Corrective Reading courses are normally done in the same summer, making a full six week program. Due to time conflicts, no other courses can be done while enrolled in the corrective courses.

427-224 Corrective Reading Instruction: Early Childhood (3 credits)

427-234 Corrective Reading Instruction: Later Childhood (3 credits)

427-577 Corrective Reading Instruction: High School (3 credits)

3) **At least one** of the following courses must be taken:

427-344 Children's Literature (3 credits)
427-345 Literature for Young Adults (3 credits)

4) The following two courses must also be included:

427-533 Integrated Language Arts (3 credits)
427-576 Reading in the Content Fields (3 credits)

Elective **9 credits**

The remaining three courses in the diploma sequence are to be elected by the student **with the advice and consent of reading faculty members.** Students who do **not** plan study beyond the diploma level are encouraged to select electives in reading, special education, educational measurement, teaching English as a second language, or any other area of interest and utility. Students who

are planning further study in reading are encouraged to elect educational measurement, introductory statistics, psycholinguistics, or other courses necessary to advanced study.

Québec Educational Media Diploma

The Educational Media program is a 30 credit program for Québec certified teachers leading to the Québec Educational Media diploma. It is designed to provide media communication skills to classroom teachers, developers of instructional materials, media coordinators and others interested in the design, production, evaluation, utilization and administration of instructional media.

The courses are offered in the evening and in the summer by the Educational Media Centre of the Faculty of Education. Students enrolled in the program are given access to the television, film, photography and other audio-visual facilities of the Centre for the production and presentation of instructional materials.

All eligible candidates may follow this diploma program concurrently as part of the B.Ed. for Certified Teachers.

The admission requirement is a teaching authorization (Permit, Diploma, P.T.A. etc.,) from the Québec Ministry of Education.

Further information regarding this program may be obtained from:

The Director, Educational Media Centre
Faculty of Education
3700 McTavish Street
Montreal, PQ. H3A 1Y2 392-8876

Program Profile

A candidate's profile will consist of a minimum of 24 credits in Educational Media courses and a maximum of 6 credits from approved courses in other departments. Candidates should consult the program director concerning an appropriate profile.

Required: The following 12 credits are compulsory:

432-204 Educational Media I (3 credits)
432-209 Media and Instructional Design (3 credits)
432-405 Independent Project (6 credits)

Media electives. A minimum of 12 credits from the following courses:

432-205 Film Production and Film Criticism (3 credits)
432-303 Photography (3 credits)
432-304 Educational Media II (3 credits)
432-306 Educational Television (3 credits)
432-309 The Library-Resource Centre (3 credits)
432-403 Photography II (3 credits)
432-404 Contemporary Developments in Educational Media (3 credits)
432-406 Management of Educational Media Services (3 credits)
432-409 Special Topics in Educational Media (3 credits)
432-440 Media Curriculum and Instruction: Elementary (3 credits)
432-470 Media Curriculum and Instruction: Secondary (3 credits)

Electives. With the approval of the program director, a maximum of 6 credits from the following list of courses offered in other departments.

414-305 Non Verbal Communication (3 credits)
414-444 Materiala in Special Education (3 credits)
414-456 Application of Psychological Principles to Educational Problems (3 credits)
414-492 Psychology and Instructional Design (3 credits)
462-204 Drawing (3 credits)
426-296 Basic Design (3 credits)
427-305 Experiences in Communications (3 credits)
427-344 Children's Literature (3 credits)
427-345 Literature for Young Adults (3 credits)
430-403 Simulation in the Social Sciences (3 credits)
431-303 Media and Second Language Teaching (3 credits)

Québec Kindergarten Diploma

This Diploma program is designed for certified elementary school teachers who wish to become Kindergarten Specialists. This 30 credit program includes courses in Child Development, Art, Music, Creative Movement and Dramatics, Teaching Methods and Materials for children of the 5-8 age groups.

All eligible candidates may follow this program concurrently as part of the B.Ed. for Certified Teachers.

The admission requirements are:

1. Québec teacher certification or its equivalent;
2. at least 13 years of schooling.

Further information regarding this program may be obtained from:

Program Director
Kindergarten Diploma
Faculty of Education
3700 McTavish Street
Montreal, P.Q. H3A 1Y2 392-8898

Program Profile

Required Courses **24 credits**

414-214 Child Development (6 credits)
414-314 Developmental Testing of Young Children (3 credits)
427-328 Creative Movement and Dramatics (3 credits)

427-327 Creative Dramatics and Children's Literature (3 credits)
433-312 Methods and Materials for the Kindergarten (3 credits)
429-212 Music for Nursery – Kindergarten Teachers (3 credits)
426-212 Art for Nursery – Kindergarten Teachers (3 credits)

Electives **6 credits**

Candidates may select 6 credits from the following list in consultation with Departmental Adviser:

414-340 Education of Exceptional Children (3 credits)
414-341 General Methods in Special Education (3 credits)
414-342 Organization of Special Education Programs (3 credits)
414-440 Cognitive and Psychomotor Problems of Exceptional Children (3 credits)
414-441 Behavioural Problems of Exceptional Children (3 credits)
414-442 Psychology of Learning Problems (3 credits)
414-443 School – Home – Community Relations in Special Education (3 credits)
427-223 Reading Instruction – Early Childhood (3 credits)
427-224 Corrective Reading Instruction – Early Childhood (3 credits)

Certificate in Second Language Teaching

This 30 credit program is open to certified teachers who wish to specialize in the teaching of second languages.

General Objective: To enhance professional competence of certified teachers who are interested in teaching second languages and who are sufficiently bilingual to do so.

Specific Objectives: (a) To consolidate proficiency in the language to be taught as a second language; (b) to impart information, skills and techniques related to second language teaching and testing; (c) to acquaint teachers with modern theories of psycholinguistics and socio-linguistics for a better understanding of their application to procedures and materials used in language learning.

Applicants will be assessed on their oral and written competence in the language they wish to teach as a second language. Normally candidates must be recommended by the school boards for which they work.

All eligible candidates may follow this program concurrently as part of the B.Ed. for Certified Teachers.

Before submitting an application candidates must contact:

The Chairman
Department of Education in Second Languages
Faculty of Education
3700 McTavish Street
Montreal, PQ, H3A 1Y2
392-8863 or 8861

N.B. Candidates who wish to benefit from the financial advantages provided through the Ministry of Education for this program are advised to contact their local school authorities for information on procedures to be followed.

Program Profile

CORE COMPONENT **18 credits**

a)	431-544	(Elem. French) Methodology	(6 cr.)
or	431-572	(Sec. French) Methodology	
	or		
	431-548	(Elem. ESL) Methodology	
or	431-558	(Sec. ESL) Methodology	
b)	431-360	Supervised Teaching: one year	(6 cr.)
c)	431-301	Applied Linguistics (French)	(3 cr.)
or	431-311	Applied Linguistics (TESL)	
d)		Selected Academic Course: Language, Linguistics or Literature	(3 cr.)

ELECTIVE COMPONENT **12 credits**

4 (four) courses chosen from the following: *

e)	431-345	Bilingual Class	(3 cr.)
f)	431-304	Cultural Content	(3 cr.)
g)	431-303	Media & Second Language Teaching (Didactique instrumentale)	(3 cr.)
h)	431-340	Animation Techniques	(3 cr.)
i)	431-306	Phonology and Second Language Teaching	(3 cr.)
j)	431-307	Anticipation of Difficulties in Second Language Teaching	(3 cr.)
k)	431-373	In-depth Study of Curriculum Development in Second Language	(3 cr.)
l)	431-302	Measurement and Evaluation in Second Language Education	(3 cr.)
m)	431-305	Psycholinguistic Implication in Second Language Teaching	(3 cr.)

* Elective offerings depend on availability of instructors and number of students.

Certificate in Technical-Vocational Education

The Faculty of Education has been experimenting with different approaches to the training of Vocational Education teachers in both full-time and part-time programs. While the full-time one-year program has been very successful, there remains the ongoing problem of meeting the needs of the school commissions in remote geographic locations and of predicting the types of Vocational teachers that the school commissions are going to require, especially in the lower frequency subjects.

Since it has been impossible to forecast the total need, candidates who have been teaching Vocational Education subjects for at least one year, and who have no teacher training, are being admitted to a new experimental program which was initiated in 1973.

The program follows a philosophy of "on-the-job training", based on the premise that student and instructor will jointly solve the problems that arise in the teaching situation while making maximum use of the milieu. For this reason, supervised field experience, seminars, and work-shops play a major role in this program.

The complete program includes 30 credits of course work offered over a period of three summers and two winters leading to a Certificate awarded by the University and to a Teaching Permit from the Ministry of Education.

To be admitted to the program candidates must possess a legal authorization valid in Québec, and a contract to teach full time with a recognized school board.

Address all inquiries and applications to:

Program Director
Vocational Education
3700 McTavish Street
Montreal, PQ. H3A 1Y2 392-8824

Program Profile

Candidates must complete the following 30 credits of course work:

436-266 Basic Integrated Study in Vocational Education (8 credits)
435-235 Supervised Field Experience – Vocational-Secondary (4 credits)
436-267 Development of Vocational Education in Québec (2 credits)
436-268 Instructional Technology in Vocational Education (6 credits)
436-269 Instructional Design in Vocational Education (4 credits)
436-564 Organization and Administration in Business Education (6 credits)

or

436-574 Organization and Administration in Technical Education (6 credits)

The program is normally completed over a period of three summer and two fall/winter sessions following the sequence outlined above.

Teacher Certification Program

This program was inaugurated at the request of the Ministry of Education to serve the needs of uncertified teachers now holding a Provisional Teaching Authorization and who are under contract to teach full time in a recognized school.

The courses in this 30 credit program are made available during the summer, and in the evenings during the fall and winter sessions. The admission requirements are:

1. a currently valid Québec Provisional Teaching Authorization;
2. a contract to teach full time in a recognized institution.

Further information regarding this program may be obtained from the office of:

Senior Adviser
Part-time Programs
Faculty of Education
3700 McTavish Street
Montreal, PQ, H3A 1Y2
392-8871

Program Profile

Candidates must complete 30 credits of course work selected in consultation with a program adviser according to the following pattern:

a) An appropriate Psychology (3 credits)
b) Québec Education (including School Law) (3 credits)
c) A Subject Methodology (3 credits)
d) Supportive Teaching Strategies (or 2nd Subject Methodology)(3 credits)
e) Field Experience (6 credits)
f) Education Theory or Teaching Strategy Eléctives (12 credits)

Program of Professional Development for College Teachers

This program was developed as a pilot project in close consultation with the Anglophone CEGEP's of Québec in an attempt to meet the general staff development needs of the colleges and the particular needs of individual teachers. The experimental phase of this program has been completed and its evaluation is being reviewed. Admission of new candidates into a revised or new program will be determined by university authorities when the study of the program evaluation has been completed. For information regarding the status of professional development activities for college teachers contact:

Associate Director of College Level Programs
Faculty of Education
3700 McTavish Street
Montreal, PQ. H3A 1Y2
392-8807

Diploma in Educational Administration

This new in-service program is designed to meet the needs of educational administrators who wish to obtain further knowledge and expertise in their field. The focus for this Diploma is practice and will include both practical applications and critical appraisal of present practices in educational administration. The program has been developed at the request of school administrators and is expected to appeal to both school personnel (Principals, Vice-Principals, etc.) and to those engaged in other types of educational administration (school board officers, CEGEP officials, adult education directors, finance officers, etc.)

The program has been developed in a sequential manner and will be available on a part-time basis during the Summer Sessions and intervening evening winter sessions when enrolment permits.

The basic admission requirements include a Bachelor's degree from a recognized university and at least two years of attested experience as an administrator in the educational milieu. Preference will be given to those currently engaged in full-time administrative work.

Requests for further information and for application materials should be directed to:

Diploma Program Director
Dept. of Educational Administration,
Faculty of Education
3700 McTavish Street
Montreal, PQ. H3A 1Y2
392-8833

Courses are offered in the summer and evenings during the winter. Students must begin the program in July, 1977.

Program Profile

Required Courses **24 credits**

411-511 General Administrative Practice (6 credits)
411-530 Administration of Education in Québec (3)
411-544 Resource Utilization in Education (3)
411-552 School Personnel Practice (3)
411-542 Curriculum Planning in Publication Ed. (3)
411-562 Planning for Change in Public Education (3)
411-582 Social Groups in Administration (3)

Elective Courses **6 credits**

Selected from the Continuing Education offerings, with the approval of the program director.

Certificate in Moral and Religious Education

A 30 credit program in Moral and Religious Education has been designed and is awaiting university approval.

Further information regarding this proposed program may be obtained from

Program Director
Certificate in Moral and Religious Education
Faculty of Education
3700 McTavish Street
Montreal, PQ H3A 1Y2
392-8810 or 8811

5 COURSE OFFERINGS

This section of the Announcement lists all undergraduate courses offered by the Faculty of Education in one or another of its many degree, diploma, or certificate programs.

Some courses will not be offered in 1977-78 and some will be available in the evenings only through the Centre for Continuing Education.

IMPORTANT: WHEN THIS LIST IS USED FOR THE PURPOSE OF COURSE SELECTION (ELECTIVES ETC.) REFERENCE MUST BE MADE TO THE **UNIVERSITY TIMETABLE GUIDE** OR, FOR EVENING COURSES, TO THE ANNOUNCEMENT OF THE **CENTRE FOR CONTINUING EDUCATION.** THOSE PUBLICATIONS PROVIDE THE NECESSARY INFORMATION ON COURSE SCHEDULES (SESSION, TIME, PLACE ETC.). FOR FURTHER ASSISTANCE CONSULT YOUR FACULTY ADVISER.

EXPLANATORY NOTES

The information given below for each course includes the number and title by which it is identified, a short description of its content, its credit rating or weight and, if possible, the professor.

COURSE NUMBER – The first digits of the course number are used to designate the department or teaching unit from which the course originates. The code used is as follows:

411 – Educational Administration
412 – Counsellor Education
413 – Social Foundations of Education
414 – Educational Psychology & Sociology
415 – Catholic Studies
417 – Education in Science
418 – Education in Home Economics
421 – Protestant Studies
422 – Jewish Studies
426 – Education in Art
427 – Education in English
428 – Education in Mathematics
429 – Education in Music
430 – Education in Social Sciences
431 – Education in Second Languages
432 – Educational Media
433 – Elementary Education
434 – Physical Education
435 – Student Teaching
436 – Technical – Vocational and Business Education
446 – Orientation
448 – B. Ed. Core Programs
449 – College Level Programs

The last three digits of the number are generally used to indicate the year during which the course is normally taken, the teaching area or level for which it is intended, and the nature of the course.

NOTE: In the University Timetable Guide, a letter suffix is added to each course number (e.g. 411-394A) to indicate when a course is offered: A = Fall semester; B = Winter semester; D = beginning in Fall and continuing through Winter semester; C and/or L = Summer Session. Parentheses around the course number indicate such courses are pending approval.

CREDIT RATING

In degree programs the credits given for any course are a measure of the effort expected of the student during each week of a fifteen week period. The number of hours per week, inclusive of lectures, labs, personal study, etc., devoted to a course should normally be three times the number of credits specified.

COURSE WEIGHT

In the diploma and certificate programs a weight in hours is given to each course relative to the lectures each week during one or two terms.

EDUCATIONAL ELECTIVES †

Education courses which are generally available as ELECTIVES are designated in the course list by a (†) placed beside the course number. For electives which should be selected within the EDUCATION CONCENTRATION, see page 14.

ACADEMIC COURSES *

Courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the ACADEMIC CONCENTRATION are designated in the course list by a (*) placed beside the course number.

411 – Educational Administration

411-394 ADMINISTRATION OF EDUCATION IN QUEBEC. An introduction to the system of administration and decision-making in the public schools of the province as these relate to teachers. Consideration will be given to staff relationships, the politics of education, finance and administrative roles at all levels of the system. 3 credits.

411-511 GENERAL ADMINISTRATIVE PRACTICE. An overview of the administrative practice and procedure in use in education today. Relevant theory to practice relationship will be explored. 6 credits.

411-530 ADMINISTRATION OF EDUCATION IN QUEBEC. A consideration of the system of education in Québec. The focus will be on the basic legal framework of education in Québec and the principal legal documents, and on the educational system in inter-action with other social systems and society as a whole. 3 credits.

411-542 CURRICULUM PLANNING IN PUBLIC EDUCATION. Study of the means for developing and implementing the school curriculum in education today. 3 credits.

411-544 RESOURCE UTILIZATION IN EDUCATION. A focus on the resources available to administrators, finances and the computer in day to day operations will be considered relative to Québec today. 3 credits.

411-552 SCHOOL PERSONNEL PRACTICES. Present personnel practices and procedures relevant to the current Québec scene. Emphasis on hiring, probation, supervision, dismissal and negotiations for education employees. 3 credits.

411-562 PLANNING FOR CHANGE IN PUBLIC EDUCATION. The political and social implications for administrative change in public education. The process and procedure for planned change in education. *3 credits.*

411-575 SECONDARY SCHOOL CURRICULUM. This course focuses on the development of high school curricula in specific fields and their relationship to the total school program. It attempts to bring into perspective the total school program and the individual learning experience. It considers problems arising in the administration of curriculum development and curriculum implementation. 3 hours, 1 term.

411-582 SOCIAL GROUPS IN ADMINISTRATION. The dynamics of the many groups affecting the education scene today; including Parent Committees, School Committees, School Boards, Public Action Groups and others. 3 credits.

411-592 SCHOOL LAW. Compulsory certification course to give prospective teachers an understanding of the framework of education in the Province of Québec. 1 hour, 1 term.

412 – Counsellor Education

† **412-304 GROUP PROCESSES:** This course is intended to make the student familiar with group organization and operation as it relates to the schools. Interpretation of group interaction and typical roles played by members in groups. 3 credits. (Limited Enrolment).

413 – Social Foundations of Education

413-204 INTRODUCTION TO EDUCATION. An overview of present day educational practices and policies with particular reference to the schools of Québec; designed to provide the student with a personal frame of reference within which subsequent academic and professional studies preparatory to a teaching career may be effectively evaluated and pursued. 3 credits.

413-402 COMPARATIVE EDUCATION. A study and comparison of recent education developments in England, France, Germany, the Soviet Union, and the United States. 6 credits.
Dr. Lipkin

413-403 EDUCATION OF MINORITY GROUPS. An examination of the education of minorities in Canada (with emphasis on Québec), in historical, sociological and psychological perspectives. Both immigrant groups and native people will be studied. This course includes a field component. 3 credits.
Prof. Laferrière

† **413-404 THE RISE OF PUBLIC EDUCATION IN THE 19TH CENTURY.** The impact of industrialism, nationalism and colonialism on the development of public education in Western society. 3 credits.
Dr. Jobling

† **413-405 THE CRITICAL SPIRIT AND EDUCATION.** A study of contemporary social and educational criticism, and its impact on the teacher and the school. Readings may be drawn from among the works of Marcuse, Roszak, Toffler, Camus, Buber, Hutchins, Neatby et al. 3 credits.

† **413-406 INTRODUCTION TO COMPARATIVE EDUCATION.** Study of the dynamics of education in various societies throughout the world. The ideas and approaches of several disciplines are utilized in order to gain an understanding of educational systems and problems in comparative perspective. 3 credits.
Dr. Eisemon

† **413-407 EDUCATION AND SOCIETY IN QUEBEC.** A study of the relationship between education and society in Québec from the 17th century to the present. Such topics as cultural dualism and education, church and education, modernization, are examined. 3 credits.
Dr. Jobling

† **413-408 HUMAN VALUES AND EDUCATION.** A study of selected works dealing with moral, religious, social, and political values with a view to determining their relevance to basic educational issues. 3 credits.
Professor Nemiroff

† **413-409 WOMEN AND EDUCATION.** This course explores the school as a sexist institution in both historical and contemporary perspectives; identifies women's contributions to intellectual history and the development of educational ideas and practices; analyzes problems such as those of prejudice in schools, women teachers and promotion, sex role sterotypes in texts. Interdisciplinary approach. Guest speakers. 3 credits.
Dr. Gillett

† **413-410 WOMEN IN HIGHER EDUCATION.** Examines the roots of prejudice against women in the ivy-covered halls of learning. Considers women's struggles for intellectual equality in historic and

contemporary perspectives. Interdisciplinary approach. 3 credits.
Dr. Gillett

413-420 ISSUES IN EDUCATION. The examination of major educational issues against the background of the student's own field experiences. The relevant principles and findings of educational philosophy, history and psychology are treated. 3 credits.

413-500 FOUNDATION STUDIES IN EDUCATION. An examination of selected developments in the social foundations of modern education. 3 hours, 2 terms.
Staff

413-502 SOCIAL FOUNDATIONS OF EDUCATION (See 413-500D.) 3 hours, 1 term.
Staff

414 – Educational Psychology and Sociology

† **414-201 THE NATURE AND CONDITIONS OF SCHOOL LEARNING.** Learning and behaviour. Maturation and Learning. Classical conditioning and its adequacy as a model for classroom teaching. Operant conditioning and basic learning processes. Verbal learning and concept formation. Remembering and forgetting. Transfer of learning and problem solving. 3 credits.
Professor Birch

† **414-203 EDUCATION AND SOCIETY.** This course focuses broadly on education, dealing with the functions of different levels of education in societies at various stages of development, and emphasizing present-day Québec and Canadian society. The sources of support for public education, the controls imposed upon educators, and the relationship of education to the occupational structure are analysed. Educational opportunity and social mobility in an industrial society, and the impact of social stratification on educational policies are discussed. (Not offered 1977-78). 3 credits.
Professor Pinto

414-204 A GENERAL INTRODUCTION TO PSYCHOLOGY FOR TEACHERS. This course is designed for students who have had little or no previous psychology. Topics dealt with are those considered most likely to be useful for an understanding of other courses in Educational Psychology offered by the Department. The course will deal with Learning, Intelligence, Motivation, and Personality. 3 credits. *Not offered 1977-78).*

† **414-205 SOCIOLOGY OF EDUCATION – AN OVERVIEW.** An introductory course, designed to present students with a broad sociological perspective from which to view education and to provide background for subsequent courses in the sociology of education. Topics will include the role of education as an institution in society, the school as a social system, the role of educational personnel and the influence of social variables such as race, sex, ethnicity, and socio-economic status on teaching and learning. *(Includes a field experience component.)* 3 credits.
Professor Pinto

† **414-208 THE DEVELOPMENT OF PERSONALITY AND SOCIAL BEHAVIOUR IN THE SCHOOL-AGE CHILD.** This course will deal with personality, social behaviour, and moral development from nursery school up to but not including adolescence. The emphasis will be on aspects of personal and social development that are related to the process of schooling with attention to teacher attitudes and practices in dealing with the problems of children. *(Includes a field experience component.)* 3 credits. *(This course is offered in both semesters.* Enrolment is limited in the 1st semester *only* to 25 students. Students should pre-register in September with Professor in charge of course.)
Professor McKay

414-214 CHILD DEVELOPMENT. The social, emotional, psychological and intellectual growth and development of the young child; guided observation of children; seminars; reports; individual readings. *(Not offered 1977-78).* 6 credits.

414-240 CRAFT COURSE. A workshop approach intended to show how learning and behaviour may be helped by skills developed through craft work; includes use of wood, leather, metals and ceramics as well as demonstrating how to improvise with commonplace materials. This course is usually taken in Phase 1. Valid for Diploma in Special Education only. (No credit.)

† **414-249 CREATIVITY AND ITS CULTIVATION.** Survey of recent research and theory concerning creativity, with special attention to creativity in school-age children; treats problems of defining and assessing creativity, the relationship between creativity and intelligence, the nature of the creative process and personality and creative behaviour. Methods of enhancing creativity will be examined, emphasizing ways of facilitating creativity in a school setting. *(Includes a field experience component.)* 3 credits.
Professor Rejskind

414-260 INTRODUCTION TO EDUCATIONAL PSYCHOLOGY (SECONDARY LEVEL). An introduction to how concepts and principles from contemporary research and theory may be applied in the classroom. This course aims to answer the question, How do secondary pupils within the "normal" range of abilities and circumstances best acquire the skills and content that the schools impart? Measurement and evaluation by teachers and classroom discipline are also considered. 3 credits.
Professors Pupo, Derevensky & Staff

414-300 THE SCHOOL AS AN ORGANIZATION. Structures and functions of schools at various levels. Pre-school to university, and in various

segments of society; relationships of schools as organizations to other organizations; school size, complexity of organizational structure; authority patterns, and modes of compliance related to teaching and learning; career patterns in education and patterns of interactions among school personnel. 3 credits. (Prerequisite: 414-203 or 414-205.) *(Not offered 1977-78).*

† **414-304 MEASUREMENT AND EVALUATION IN EDUCATION.** The purposes of examinations. Causes of complaints about examinations. Equalizing means and dispersions in distribution of marks. Standardized scores. The percentile system. Essay and objective-type examinations. Taxonomies of educational objectives. Validity and reliability: item analysis. 3 credits.
Professor Gougeon

† **414-305 NON-VERBAL COMMUNICATION.** An introductory course dealing with non-verbal aspects of behaviour and its interpretation. It will deal also with non-verbal communication in young children and children without speech. Some consideration will be given to the cognition of behaviour acts from drawings, cartoons, and illustrative gestures. 3 credits. (Enrolment is limited to 25 students in each semester; students should pre-register in September for both semesters, with professor in charge of the course.)
Professor Edwards

† **414-308 SOCIOLOGY OF THE CLASSROOM.** The classroom as a social system; school or class climate as it influences the learner. The socialization process; social class, racial and ethnic variations in socialization styles. Influences on learning of teacher on child's self-concept and subsequent results in terms of achievement, level of aspiration, and social mobility. *(Includes a field experience component).* 3 credits. *(Pre-requisites: 414-203 or 414-205 or an introductory course in Sociology).*
Professor Pinto

† **414-310 COMPUTER APPLICATIONS IN EDUCATION.** The course will be non-mathematical in nature and will deal with such topics as recent developments in computer-assisted instruction, computer-assisted testing, and computer-managed instruction. The results of recent research and their field applications will be considered. 3 credits.
Professor Cartwright

414-314 DEVELOPMENTAL TESTING OF YOUNG CHILDREN. Guided observation of children with emphasis on developmental testing. Lectures, demonstrations and testing practicum. *(Not offered 1977-78).* 3 credits. (Prerequisite: 414-214.)

† **414-340 EDUCATION OF EXCEPTIONAL CHILDREN.** Introduction to the education of exceptional children; characteristics, classification, needs of exceptional children; developmental and corrective programs; areas of current research. *(Includes a field experience component).* 3 credits. (The course includes two hours of lectures and four hours of field work – one morning or afternoon per week. Enrolment is limited to thirty students, depending on the number of field experience situations available in schools).
Professor Wilkinson.

† **414-341 GENERAL METHODS IN SPECIAL EDUCATION.** Class organization, teaching methods, assessments of educational level, setting objectives, grouping, individual programming, and reporting *(Includes a field experience component).* 3 credits. (Enrolment is limited to twenty students).
Miss Norton.

414-342 ORGANIZATION OF SPECIAL EDUCATION PROGRAMS. Needs of EMR, slow-learning and emotionally disturbed children: characteristics, school programs, evaluation of progress; integration into the community. 3 credits.
Professor Stutt

† **414-343 INTRODUCTION TO DIAGNOSIS AND ASSESSMENT.** Principles and procedures in the evaluation of pupil growth and achievement. Emphasis on the use and interpretation of tests to be given by the class teacher. 3 credits.
Professor Pupo

414-344 PRACTICUM IN DIAGNOSIS AND ASSESSMENT OF LEARNING PROBLEMS. A supervised practicum in the use of various tests and measures in learning problems of children; developing prescriptive teaching programs. 3 credits. (Prerequisite: 414-343.)
Professor Sokolyk

† **414-346 TALENTED AND GIFTED STUDENTS.** The psychology and education of exceptionally able children. Definitions, assessment, types of programs and goals, and teacher requirements. The course combines theoretical background and practical concerns. *(Includes a field experience component.)* (Not offered in 1977-78). 3 credits.
Professor Shore

† **414-377 ADOLESCENCE AND THE PROCESS OF EDUCATION.** Development of personality and social behaviour in adolescence. Problems relating to self-concept, academic achievement, relationships with others, and development of values in a changing culture. Some attention to current criticisms of the school as an agency involved in adolescent development. *(This course includes an optional field experience component which will fulfill that requirement for U2 Secondary B.Ed. students, but is also available to others.)* 3 credits.
Professors Mager & Pupo

† **414-394 COGNITIVE DEVELOPMENT IN THE SCHOOL-AGE CHILD AND ADOLESCENT.** The major orientation of the course will be around Piaget's theory of intellectual development and its relevance for the school, although the work of others in the field will also be considered. (This course should be seen as a complement to either 414-208, The Development of Personality and Social Behaviour in

the School-age Child, or 414-377, Adolescence and the Process of Education). *(Includes a field experience component).* 3 credits.
Professor Hanrahan

† **414-396 THE NATURE OF INTELLIGENCE.** The nature, development and measurement of intelligence in a school setting. Intelligence and learning; creativity and intelligence; intelligence and cultural deprivation. The role of the school in developing intelligence. 3 credits.
Professor Birch

414-440 COGNITIVE AND PSYCHOMOTOR PROBLEMS OF EXCEPTIONAL CHILDREN. Teaching methods appropriate to individual and small group instruction to overcome a variety of learning problems. Emphasis on perceptual difficulties. (Pre-requisite 414-341.) 3 credits.

† **414-441 BEHAVIOURAL PROBLEMS OF EXCEPTIONAL CHILDREN.** Teaching methods appropriate to the needs of pupils with emotional and behaviour problems. Methods presented will include behaviour modification techniques. 3 credits.
Professor Mager

414-442 PSYCHOLOGY OF LEARNING PROBLEMS. The Learning Process; personality development, perceptual dysfunction, behaviour disorders and other handicapping conditions related to learning. 3 credits.

414-443 SCHOOL-HOME-COMMUNITY RELATIONS IN SPECIAL EDUCATION. Influence of home and community on the child, teacher-parent interviews, reporting, co-operation with hospital clinics, other professionals, etc. 3 credits.

414-444 MATERIALS IN SPECIAL EDUCATION. A critical examination of materials available for special educational programs, commercial and teacher-made materials; the application of A-V techniques to Special Education. 3 credits.

414-445 VOCATIONAL HABILITATION OF EXCEPTIONAL CHILDREN. Vocational requirements of non-academic children, vocational preparation as a responsibility of the special class teacher, placement services, follow-up. 3 credits.

414-446 SPECIAL TOPICS IN THE EDUCATION OF EXCEPTIONAL CHILDREN. A seminar or workshop approach to selected topics in the field of Special Education. Examples of possible topics include Language Development, Educable Retarded Adolescents, and Behaviour Modification. 3 credits.

† **414-456 APPLICATION OF PSYCHOLOGICAL PRINCIPLES TO EDUCATIONAL PROBLEMS.** Major problems in education and instruction and review of related psychological research findings which bear on these issues. Students will investigate literature and design and *conduct an experiment* related to one of the following areas: (1) Individual Student Differences; (2) Social Aspects of Education; (3) Programmed Learning; (4) Design and Evaluation of Learning Environments and (5) Classroom Management. *(Includes a field experience component).* 3 credits. (Prerequisites: This course has a limited enrolment and permission of the instructor is required.) (Not offered in 1977-78).
Professor Pascal

† **414-492 PSYCHOLOGY AND INSTRUCTIONAL DESIGN.** This course draws on the fields of learning theory, developmental psychology, and measurement to focus on the tasks of constructing instructional materials. Areas to be considered include behaviour analysis, concept formation, and test construction. *(Includes a field experience component).* 3 credits.
Professor Geis

† **414-495 SEMINAR IN SPECIAL TOPICS.** The content of the seminar will vary from year to year and will be announced prior to registration. The seminar may be given by a single instructor or by a group, as the occasion warrants. Among the seminars to be offered will be Psychological Aspects of Mathematical Problem Solving (Professor Groen) 3 credits. (Permission must be obtained from the department before registration). (Not offered in 1977-78).

† **414-496 INDIVIDUAL READING COURSE.** By arrangement with individual instructor. Permission must be obtained from the Department before registration. 3 credits.

414-500 EDUCATIONAL PSYCHOLOGY. This course is offered in separate sections for future elementary and secondary teachers in the 1G program.

415 – Catholic Studies

* **415-200 GOD AND MAN IN DIALOGUE.** An exploration of "Revelation" (especially as conceived by the Second Vatican Council) with particular concern for man's responsibility within the revelational process today. 3 credits.
Professor Jeffery

* **415-204 MAN BEFORE REALITY.** An exploration of the real in its being and its becoming, in its principles and its causes, in its unity and its diversity, in its truth and its goodness. 3 credits.
Professor Pinto

* **415-205 PHILOSOPHY OF RELIGION.** An investigation of the meaning of Religion and its relevance to our age. A study of the basic truths which enable men and women of every age to relate themselves to the Supreme Being and thus achieve complete self-realization. 3 credits.
Professor Jeffery

* **415-206 THE CHURCH AND THE FUTURE.** What does it mean "to be Church" at a time when new

styles of consciousness and new world views are advocated. 3 credits.
Professor Lawlor

* **415-207 WHO IS CHRIST?** An open search for the authentic person of Christ – from Scriptures and present day manifestations. 3 credits.
Professor Francoeur

* **415-208 IN SEARCH OF MAN.** An exploration of man's place in the world; his role as a knower; his dynamic responses to his environment; his ultimate nature as a human person. 3 credits.
Professor Jeffery

* **415-209 THE SEARCH FOR AUTHENTICITY.** An exploration of contemporary man's search for himself and his God as reflected in the lives and writings of such persons as: Daniel Berrigan, Mohandas Gandhi, Hermann Hesse, and Elie Wiesel. 3 credits.
Professor Lawlor

* **415-290 GUIDE TO READING THE BIBLE.** A basic introduction to the Judaeo-Christian Scriptures with the emphasis upon reading and existential interpretation. 3 credits.
Professor Hilton

415-291 OBSERVATION AND FAMILIARIZATION. Observation, individual tutoring, and small group work in a secondary or elementary school environment. (Student activity to approximate 10 days in school setting; arrangements by Student Teaching Office in consultation with adviser). 1 credit.

415-341 GUIDING THE RELIGIOUS RESPONSE – ELEMENTARY SCHOOL. In harmony with the discoveries of developmental religious and moral phases in the life of the elementary school child, this course explores developing programs and procedures in the elementary school. 3 credits.
Professor Francoeur

* **415-391 A THEOLOGY OF PROCLAMATION.** Man's responsibility and involvement in realizing the Divine Plan; how God chooses to depend upon man for the growth of His People towards Him. 3 credits.
Professor Jeffery

415-392 GUIDING THE RELIGIOUS RESPONSE – SECONDARY. An introduction to the science of the guidance of young people through the slow developmental patterns of grasping life's meaning and of directing their lives in consequence. Attention is given to the importance of the teacher's own self-image. 3 credits.
Professor Jeffery

* **415-394 PHILOSOPHY OF GOD.** Starting with man's experience of being, and exploration of fundamental truths concerning the existence and the nature of God. The study draws extensively upon the thought of Thomas Aquinas and considers such basic issues as freedom and evil in relation to the knowledge and goodness of God. 3 credits.
Professor Pinto

* **415-395 CHRISTIAN VALUES AND HUMAN ACTION.** A philosophical critical inquiry into the relationship between belief and conduct oriented towards the teacher and his/her role in moral education. Investigation of the ethical nature of the human act and the natural laws as the basis for morality. 3 credits.
Professor Pinto

* **415-396 SEMINAR IN CONTEMPORARY THEOLOGY I.** A reading seminar course in which current theological problems are discussed. Specific topics may differ from year to year. 3 credits.

* **415-397 VARIETIES OF CHRISTIAN WITNESS.** An exploration of divergent paths of Christian Witness as exemplified in the lives and writings of Thomas Merton, contemplative-critic, and Teihard de Chardin, philosopher-scientist. 3 credits.

† **415-398 PHILOSOPHY OF CATHOLIC EDUCATION.** An exploration of the philosophy of Catholic education, and its relevance in the world today. *(Will include a field experience component).* 3 credits.

415-399 THE CATHOLIC SCHOOL OF THE FUTURE. A projection into the future – new models for Catholic schools in the Province of Québec; a consideration of the identity of the Catholic school, the Protestant school, and the Neutral school of the future, in relation to the expectations of parents, students, teachers, and the larger community. 3 credits. *(Not offered 1977-78).*

415-490 SPECIAL PROJECT. An independent undertaking requiring the preparation, execution, and retrospective analysis of a project focussed on practical activities in a school setting. 2 credits.

* **415-491 CATECHETICAL THEMES.** Following upon exploration of the basics of guiding the Religious Response, the student is afforded the opportunity of enriching his/her background by exploring great catechetical themes in the light of the newest theological insights. 3 credits. (Prerequisite: 415-341 or 415-392.)

* **415-494 ETHICS IN PRACTICE.** Fundamental principles of ethics are applied to specific moral issues. The questions investigated are topics which form a part of or are related to the high school religion curriculum, or which are of particular concern to the high school student today: abortion; drugs; protests; education; nuclear war; disarmament and the like. 3 credits. (Prerequisite: 415-395.)
Professor Pinto

* **415-495 THE EUCHARIST.** Bibical concepts of covenant and covenant rites, especially of shared blood and shared food, studies in relation to significance of the Last Supper; Christ as covenant; Eucharist as covenant meal and its meaning in the modern context. 3 credits.

415-503 GUIDING THE RELIGIOUS RESPONSE – SECONDARY SCHOOL – AN ADVANCED STUDY. This course aims to examine in depth those programs currently under experimentation in

our high schools. Serious study is to be made of adolescent religious response and those techniques, attitudes and personal approaches that may best enable the teacher to guide this response. 3 hours.
Professor Francoeur

415-547 GUIDING THE RELIGIOUS RESPONSE – ELEMENTARY SCHOOL. Exploration of the content and direction of moral and religious guidance in the elementary school. Emphasis is placed on the development needs of the child. 2 hours.
Professor Francoeur

415-571 GUIDING THE RELIGIOUS RESPONSE – SECONDARY SCHOOL. A study of the scope and procedures of the psycho-pedagogy of religious response for secondary school students intended for those planning to specialize in moral and religious education at the secondary school level. 3 hours.
Professor Francoeur

415-573 LIVING WITH INSIGHT. Examination of the shaping of contemporary living in the light of the gospel demands. The starting point will be man's experience in today's realities. 3 hours, 1 term.
Professor Jeffery

415-594 PHILOSOPHY OF CATHOLIC EDUCATION. An exploration of the philosophy of Catholic education, its relation to other philosophical systems, and its relevance in the world today. 3 hours, 1 term.

415-595 PHILOSOPHY OF CATHOLIC EDUCATION. An exploration of the philosophy of Catholic education and its relevance in the world today. Some areas to be considered are: contemporary understandings of traditional beliefs, values-education, objectives of Catholic schools. 3 hours, 2 terms.

417 – Education in Science

* **417-241 BACKGROUND SCIENCE FOR ELEMENTARY SCHOOL TEACHERS.** This course presents science as a means of exploring and explaining our environment. A study of some of the fundamental concepts common to most elementary programs –an elective. Not open to students with CEGEP Science. Limited enrolment. 3 credits.
Professors Wolfe and Hutton

417-291 OBSERVATION AND FAMILIARIZATION. Observation, individual tutoring, and small group work in a secondary or elementary school environment. (Student activity to approximate 10 days in school setting; arrangements by Student Teaching Office in consultation with adviser). 1 credit.

417-312 PRIMARY SCIENCE. Methods of providing children at the nursery school and kindergarten levels with useful learning experiences related to their natural environment. Restricted enrolment. (Open only to students in N-K option). 3 credits.
Professor Wolfe

417-372 SECONDARY SCIENCE CURRICULUM AND INSTRUCTION. This course relates to directed observations in secondary schools and includes the study of general objectives, curriculum trends, and the planning of teaching strategies and pupil experiences needed to promote the learning of the skills, concepts and processes of science. Prerequisite: A minimum of 18 credits in post-secondary science. 3 credits.
Professor Hutton

417-405 ECOLOGICAL FEATURES OF OUR NATURAL ENVIRONMENT. A lecture, laboratory and field course to train elementary school teachers in the principles and practices of field biology and nature tours. The observation and identification of various organisms and a study of their ecological relationships in the web of life. Field trips. Limited enrolment. 3 credits.

417-406 ECOLOGICAL PROBLEMS IN OUR ENVIRONMENT. A modern study of environmental problems designed for elementary school teachers. The role of man in the web of life in relation to conservation, the population explosion, waste disposal, sewage treatment, air and water pollution, chemical and radiation pollution. Restricted enrolment. 3 credits.

417-442 CURRICULUM AND INSTRUCTION IN ELEMENTARY SCIENCE. A survey of modern curricula and teaching strategies in use at the elementary school levels and the design of suitable exploratory activities using simple equipment to give children some appreciation of the nature of science. Limited enrolment. 3 credits.
Professor Wolfe

417-443 PERSPECTIVES ON ELEMENTARY SCIENCE EDUCATION. A course to provide a deeper perspective of modern elementary science education through a study of the active learning approach, modern elementary science projects and research – an elective. 3 credits. (Prerequisite: 417-442 or equivalent)

417-490 SPECIAL PROJECT. An independent undertaking requiring the preparation, execution, and retrospective analysis of a project focussed on practical activities in a school setting. 2 credits.

417-522 SCIENCE CURRICULUM AND INSTRUCTION – EARLY CHILDHOOD. A materials-centered workshop approach to teaching science to young children. Emphasis is on design of teaching aids and application to pupil-oriented activities in the elementary classroom. Limited enrolment. 2 hours, 1 term.
Professor Wolfe

417-532 SCIENCE CURRICULUM AND INSTRUCTION – LATER CHILDHOOD. A materials-centered workshop approach to teaching science to the older elementary school child. Emphasis is on design of teaching aids and application of pupil-oriented activities in the classroom. Limited enrolment. 2 hours, 1 term.

417-575 GENERAL SCIENCE CURRICULUM AND INSTRUCTION – SECONDARY SCHOOL. Principles and procedures for implementation of the general science curriculum in the secondary schools of Québec. A survey of teaching methods and laboratory management appropriate to the junior high school level. 3 hours, 2 terms.
Professor Hutton

417-576 BIOLOGY CURRICULUM AND INSTRUCTION – SECONDARY SCHOOL. A survey of curricula and teaching methods in biology at the secondary level, and the design of a modern laboratory program. 3 hours, 2 terms.
Professor Searles

417-577 CHEMISTRY CURRICULUM AND INSTRUCTION – SECONDARY SCHOOL. A study of teaching strategies, philosophy and objectives of science education in chemistry at the secondary level, with special emphasis on recently developed curriculum projects. Establishment and maintenance of a chemistry laboratory. 3 hours, 2 terms.

417-578 PHYSICS CURRICULUM AND INSTRUCTION – SECONDARY SCHOOL. A survey of curricula and teaching methods in Physics at the secondary level, and the design of a modern laboratory program. 3 hours, 2 terms.
Professor Landry

418 – Education in Home Economics

418-472 CURRICULUM AND INSTRUCTION IN HOME ECONOMICS. The nature and purpose of the high school curriculum in Home Economics; knowledge and practical experience of the various techniques of teaching in all areas of that curriculum. 3 hours, 1 term.
Professor A. Smith–Henderson

418-473 CURRICULUM AND INSTRUCTION IN HOME ECONOMICS. A study of various types of instructional areas for Home Economics; necessary equipment; planning of budgets and keeping of records, examination of and practice in preparing evaluation and measurement devices. 3 hours, 1 term.
Professor A. Smith–Henderson

418-474 ADVANCED STUDY IN HOME ECONOMICS C & I. A seminar course to provide in depth study in areas of the Home Economics Curriculum and Instruction selected to suit interests of the students. 3 hours, 1 term. (Prerequisite(s): 418-472 and approval of instructor.)
Professor A. Smith–Henderson

421 – Protestant Studies

421-291 OBSERVATION AND FAMILIARIZATION. Observation, individual tutoring, and small group work in a secondary or elementary school environment. (Student activity to approximate 10 days in school setting; arrangements by Student Teaching Office in consultation with adviser). 1 credit.

* **421-301 LIVING WITH QUESTIONS.** A survey of Old and New Testament literature together with current ethical and philosophical questions which arise out of such study and which confront teachers in modern society. 3 credits.
Professor MacNeill

421-342 HUMAN AND RELIGIOUS VALUES IN THE ELEMENTARY SCHOOL. Living together in the modern world raises problems of behaviour and belief. This course explores ways in which teachers may help children in elementary school to appreciate each other's traditions and values and to realize their own identity within their own life circumstances. 3 credits.
Professor MacNeill

421-372 HUMAN AND RELIGIOUS VALUES IN THE SECONDARY SCHOOL. An enquiry into teaching methods in two areas: (1) Religion (as a phenomenon of human experience). Some of the topics: the Bible, the Judaeo-Christian tradition, world religions. (2) The development of moral judgement in social and personal issues. Some of the techniques: values clarification, discussion leading, role playing and other means of stimulating moral reflection. 3 credits.

421-490 SPECIAL PROJECT. An independent undertaking requiring the preparation, execution, and retrospective analysis of a project focussed on practical activities in a school setting. 2 credits

421-542 HUMAN AND RELIGIOUS VALUES IN THE ELEMENTARY SCHOOL. 2 hours, 1 term. For description, see 421-342.

421-572 HUMAN AND RELIGIOUS VALUES IN THE SECONDARY SCHOOL. 3 hours, 2 terms. For description, see 421-372 above.

422 – Jewish Studies

422-400 TEACHING CUSTOMS AND CEREMONIES. An exposure to all facets of Jewish practices, life cycle, calendar cycle, prayer, etc. Methods of applying this material to the Jewish Classroom. 3 credits. (Prerequisite: permission of instructor.) Sessions will be conducted in Hebrew.
Dr. Jay Braverman

422-401 TEACHING BIBLICAL LITERATURE I. A survey of the narrative portion of the Pentateuch with a view to teaching this material in Jewish schools. An examination of some of the techniques

presently being developed in Bible teaching. 3 credits. (Prerequisite: permission of instructor.) Sessions will be conducted in Hebrew.
Mr. Howard Rosenblatt

422-402 TEACHING BIBLICAL LITERATURE II. A survey of selected material in Prophets and Writings with a view to teaching this material in Jewish schools. An examination of some of the techniques presently being developed as they relate to Prophets and Writings. 3 credits. (Prerequisite: permission of instructor.) Sessions will be conducted in Hebrew.
Mr. Howard Rosenblatt

422-404 TEACHING HEBREW/YIDDISH – SECOND LANGUAGE. A study of the most up-to-date methods and theories related to the teaching of Hebrew and Yiddish as a second language in both day schools and supplementary settings. 3 credits. (Prerequisite: permission of instructor.) Sessions will be conducted in Hebrew.
Ms. Janet Weinroth

426 – Education in Art

426-204 DRAWING. Development of sound draughtmanship through the study of organic forms and the human figure in various media. 3 credits.
Professors Papke & Watling, and Mr. G. Tondino

* **426-205 PAINTING II.** Investigation of color, media, tools, techniques. Studies of natural forms, the human figure. 3 credits. (Prerequisite: 204).
Mr. G. Tondino

* **426-206 GRAPHICS I.** An introduction to some graphic media, monoprints, collagraphy, linocuts, woodcuts, etc. A practical study of the various elementary processes. Exhibition of student work required at end of term. 3 credits.
Professor B. White

* **426-207 GRAPHICS II.** Study in further graphic media techniques. These may include line engraving, dry point relief etching, intaglio and related processes. 3 credits. (Prerequisite: 426-206.)
Professor B. White

* **426-208 CERAMICS I.** A consciousness of the medium is developed through basic ceramic processes: hand building experiences and introduction to wheel thrown construction. 3 credits.
Professor Studham

* **426-209 CERAMICS II.** A continuation and concentration of wheel projects. Elementary clay and glaze preparations. 3 credits. (Prerequisite: 208.)
Professor Studham

426-212 ART FOR KINDERGARTEN TEACHERS. Exploration of a variety of art media suitable for the kindergarten child; relationships of line, colour and texture; development of manipulative skills and the child's perceptual awareness of his environment. 3 credits. Summer Session only. (Prerequisite: 426-241.)

* **426-241 BASIC ART MEDIA.** A course to acquaint the student with basic art media in two and three dimensions and to provide for involvement and in-depth experience in the creative process. This course, or equivalent, is a Prerequisite for Art Methods in elementary schools. Advisable for students taking only one background art course. 3 credits.
Staff

* **426-296 BASIC DESIGN.** Exploration of the basic elements of visual art through two dimensional composition and three-dimensional constructions. Investigation of materials and tools and the processes of manipulating and relating materials. 3 credits.
Professors Papke & Watling and Mr. G. Tondino

* **426-297 DEGIGN II.** Further rendering of two- and three-dimensional compositions (296) investigating the potential of basic geometric and organic forms, spatial relationships and environment. 3 credits. (Continuation of prerequisite 296.)
Professor Watling

* **426-298 APPLIED DESIGN.** A study of historical stages of furniture and interior design through lectures, museum studies, field trips, assignments both written and practical. Open to Home Economics students only. 3 credits.
Professor Jaques

* **426-300 CERAMICS III: GLAZES.** Chemistry of glazes, formation of slips, engobes and glaze. Firing and maintenance of kiln and equipment. 3 credits. (Prerequisite: 209.)
Professor Studham

* **426-304 PAINTING III.** Continuation of course 205 with emphasis on drawing and structure.
Professor Watling and Mr. G. Tondino

* **426-305 PAINTING IV.** Continuation of course 304 with emphasis on advanced composition.
Professor Watling and Mr. G. Tondino

* **426-309 CERAMICS IV.** Chemistry of glazes. Emphasis placed on lab work. Firing and maintenance of kiln and equipment. 3 credits. (Prerequisite: 426-300.)
Professor Studham

426-322 ART CURRICULUM AND INSTRUCTION – EARLY CHILDHOOD. The philosophy and psychology of child art. The teacher's role in the development of the child's visual awareness and creativity. 3 credits. (Prerequisite: 426-241 or equivalent).
Professors Benjamin & Jacques and Mr. G. Tondino

426-332 ART CURRICULUM AND INSTRUCTION – LATER CHILDHOOD. To prepare teachers to understand and guide the visual art of children from

nine to twelve years of age. 3 credits. (Prerequisite: 426-241 or equivalent.)
Professors Watling, Papke & Benjamin

426-342 ART CURRICULUM AND INSTRUCTION FOR ELEMENTARY SCHOOL ART MAJORS. Psychology and philosophy of child art; reading and written assignments, techniques of teaching and program planning. 3 credits.
Professor Jaques

* **426-394 GRAPHICS III.** Continuation of studies of graphic techniques. These may include variations of previously learned techniques, silk screen, viscosity printing, multiple plate work, etc. 3 credits. (Prerequisite: 426-207.)
Professor B. White

* **426-395 GRAPHICS IV.** Advanced studies in various graphic media. The student will be expected to be familiar with standard processes studied in the preceding courses. At this stage the student should begin to concentrate on developing a personal style, incorporating the necessary techniques to make his personal statement. 3 credits. (Prerequisite: 426-394.)
Professor B. White

* **426-396 DESIGN III.** Application of learning and skills to more sophisticated problems of design. Consideration of design in relation to practical aspects of visual communication. 3 credits. (Prerequisite: 426-297.)
Professor Watling

* **426-397 DESIGN IV.** Advanced work in the development of perception and aesthetic presentation. Through projects and assignments students will be encouraged to pursue problems of design pertinent to their own interests) 3 credits. (Prerequisite: 426-396.)
Professor Watling

* **426-398 EARLY CANADIAN ART.** The visual environment, European sources and influences as revealed through a comprehensive survey of architecture, painting and applied arts from 1600 to 1867, through lectures, field trips, visual and written assignments.
Professor Papke

* **426-399 CANADIAN ART II.** The growth of Canadian art as evidenced through the changing visual environment from 1867 to the present, through lectures, field trips, visual and written assignments. 3 credits. (Prerequisite: 426-398.) May not be used as a prerequisite for Methods.
Professor Papke

* **426-404 PAINTING V.** Major problems in graphic expression. A tutorial course where the student selects his instructor. Individual conferences and criticism leads the student to an independent approach to painting. 3 credits. (Prerequisite: 305.)
Professor Watling and Mr. G. Tondino

* **426-405 PAINTING VI.** The student will be required to work in a variety of sizes up to mural painting. Exploration of selected media and new dimensions of design. 3 credits. (Prerequisite: 404.)
Professor Tondino Watling and Mr. G. Tondino

* **426-408 CERAMICS V.** Advanced work in ceramics, exploration of individual problems in given medium on glaze enamelling and lustreware. 3 credits. (Prerequisite: 426-309.)
Professor Studham

* **426-409 CERAMICS VI.** Continuation of exploration of individual problems working all known media. 3 credits. (Prerequisite: 426-408.)
Professor Studham

426-473 ART CURRICULUM AND INSTRUCTION – SECONDARY SCHOOL. A preparatory course for teaching Art in the secondary school. A study of the problems and needs of the pupil and the development of art programs suitable for the adolescent. Course is integrated with field experience. (Prerequisite: 426-342 and Teaching in elementary schools). 3 credits.
Professor Jaques and Staff

* **426-494 GRAPHICS V.** An extension of skills learned in Graphics I-IV. Techniques explored may include engraving, silk screen, relief etching, intaglio, collagraphy, dry point, combinations of printing techniques. The student will be expected to explore those areas which most closely correspond to his particular graphics style. 3 credits. (Prerequisite: 426-394.)
Professor B. White

* **426-495 GRAPHICS VI.** A further extension of skills learned in Graphics V. The student is expected to have mastered basic graphic skills and be able to work independently. A competent development of personal style, experimentation with, and control over the chosen medium is expected. 3 credits.
Professor B. White

* **426-496 SCULPTURE I.** Designed for students individually to encourage and develop personal aptitudes; major problems of three-dimensional design in new and/or traditional materials. 3 credits. (Prerequisite: 426-297.)
Professor Jones

* **426-497 SCULPTURE II.** Continuation of Sculpture I. 3 credits.
Professor Jones

* **426-498 SCULPTURE III.** More advanced techniques in modelling and casting, greater emphasis on considerations of the total concept and aesthetic qualities of the work. Introduction of wood sculpture and other materials. (Prerequisite 426-497.)
Professor Jones

* **426-499 SCULPTURE IV.** Advanced techniques in sculpture, wood sculpture, polyester resins and experimental work with new materials.
Professor Jones

426-522 ART CURRICULUM AND INSTRUCTION – EARLY CHILDHOOD. A study of child art and the teacher's role in the art program of the primary grades – written and practical assignments related to classroom activities. 2 hours, 1 term.
Professors Benjamin & Jaques

426-532 ART CURRICULUM AND INSTRUCTION –LATER CHILDHOOD. A study of child art closely related to the work in the classroom. Activities in two and three dimensions acquaint the student with media and techniques suitable for children in the senior grades of elementary school. 2 hours, 1 term.
Professors Benjamin & Watling

426-572 ART CURRICULUM AND INSTRUCTION – SECONDARY SCHOOL. Program development, techniques and problems of teaching art in the secondary school. Work closely related to field experience and to the problems of the developing young pupil. 3 hours, 2 terms. ((Prerequisites: B.F.A. or equivalent. Interview and presentation of work.)
Professor Studham

426-573 ART CURRICULUM AND INSTRUCTION – ADVANCED – SECONDARY SCHOOL. An examination of the relationship of the visual arts to the secondary school curriculum and the development of the adolescent personality. 3 hours, 1 term. (Prerequisite: Must be registered in 572.)
Professor Jaques

NOTE: For other courses in Art History, see Faculty of Arts Announcement.

427 – Education in English

427-223 READING INSTRUCTION – EARLY CHILDHOOD. Methods and materials for the teaching of reading in the primary grades. 3 credits.

427-224 CORRECTIVE READING INSTRUCTION – EARLY CHILDHOOD. Reading problems at a readiness and basic decoding level presented in a practicum format covering classroom diagnosis and remediation. 3 credits.

427-233 READING INSTRUCTION – LATER CHILDHOOD. Methods and materials for the teaching of reading in the upper elementary grades. 3 credits.

427-234 CORRECTIVE READING INSTRUCTION – LATER CHILDHOOD. Reading problems beyond the readiness and basic decoding level presented in a practicum format covering classroom diagnosis and remediation. 3 credits.

427-291 OBSERVATION AND FAMILIARIZATION. Observation, individual tutoring, and small group work in a secondary or elementary school environment. Student activity to approximate 10 days in school setting; arrangements by Student Teaching Office in consultation with adviser. 1 credit.

† **427-305 EXPERIENCES IN COMMUNICATIONS.** Personal development of students as communicators; involvement of the imagination in individual and group projects in language and in another chosen medium of communication; analysis of experiences in projects in relation to general problems of communication. 3 credits. Limited enrolment.

* **427-344 CHILDREN'S LITERATURE.** Selection and use of literature suitable for children in the elementary school. 3 credits. Limited enrolment.

427-345 LITERATURE FOR YOUNG ADULTS. Selection and use of literature for the differing abilities and interests of high school students. 3 credits.

427-371 SECONDARY ENGLISH CURRICULUM & INSTRUCTION. Examination of appropriate materials related to the high school English programs; exploration of various techniques of teaching Literature, Drama, Film, and Language Arts. 3 credits.

† **427-374 LANGUAGE IN THE SECONDARY SCHOOL.** A study of language activity (English) among secondary school students: their growth in language competence; oral and written modes in relation to learning and to personal development *(Includes a field experience component)*. 3 credits. (Pre-requisite: An approved language or linguistics course.)

427-474 PERSPECTIVES ON SECONDARY ENGLISH EDUCATION. Seminar on special interest areas in the teaching of English in the light of contemporary theories and experiments for students who have completed a basic Curriculum and Instruction course and have had some classroom experience. 3 credits. (Prerequisite: 427-371).

427-490 SPECIAL PROJECT. An independent undertaking requiring the preparation, execution, and retrospective analysis of a project focussed on practical activities in a school setting. 2 credits.

427-505 EXPERIENCES IN COMMUNICATION. Writing, speaking and non-linguistic forms of communication are practised and analysed with a view to each student developing, through personal experience and study, a theory of communication applicable in teaching. 2 hours, 2 terms.

427-523 READING INSTRUCTION – HIGH SCHOOL: – Methods and materials for the teaching of developmental reading at the high school level. 3 credits.

427-533 INTEGRATED LANGUAGE ARTS PROGRAMS. Methods and materials for integrating reading, listening, writing, speaking aspects of communications instruction. 3 credits.

427-572 ENGLISH CURRICULUM AND INSTRUCTION – SECONDARY SCHOOL. An exploration of approaches to the teaching of language, literature, creative writing, and dramatics in the secondary school. 3 hours, 2 terms.

427-573 ENGLISH CURRICULUM DEVELOPMENT – ADVANCED. An investigation into the theoretical bases of English teaching and a study of recent research into high school English curriculum and instruction. 1 hour, 1 term.

† **427-576 READING IN THE CONTENT FIELDS.** An exploration of reading instruction in secondary programs in the content fields; survey of remedial and developmental reading instruction throughout the elementary and secondary schools, together with review of research in secondary reading. 3 credits.

427-577 CORRECTIVE READING INSTRUCTION AT THE HIGH SCHOOL LEVEL. Reading problems found in remedial classes at the high school level presented in a practicum format covering diagnosis and remediation appropriate for remedial classrooms. 3 credits.

427-594 CREATIVE DRAMATICS FOR THE CLASSROOM. A participatory course in creative drama and the use of improvisational techniques in the pursuit of child development. Limited enrolment. 3 hours, 1 term.

427-595 IMPROVISATION & THEATRE ARTS FOR THE CLASSROOM. A course beyond the introductory level to provide further perspectives on the teaching of drama and the teaching of improvisation. Instruction and practice in Play production will be included. 3 credits. (Prerequisite: 427-594).

428 – Education in Mathematics

* **428-241 BACKGROUND MATHEMATICS FOR ELEMENTARY SCHOOL TEACHERS.** A course specially designed for elementary school teachers to provide the basic foundations, insight and understanding of the Québec modern elementary mathematics programs. Recommended for all elementary school teachers – an elective. 3 credits.
Professors Modafferi and Purdy

428-243 BACKGROUND GEOMETRY FOR ELEMENTARY SCHOOL TEACHERS. A course specially designed for elementary school teachers to provide the basic foundations, insight and understanding of the geometry found in the Québec Modern Elementary Mathematics programs. 3 credits.

428-291 OBSERVATION AND FAMILIARIZATION. Observation, individual tutoring, and small group work in a secondary or elementary school environment. (Student activity to approximate 10 days in school setting; arrangements by Student Teaching Office in consultation with adviser. 1 credit.

428-322 CURRICULUM AND INSTRUCTION IN MATHEMATICS – EARLY CHILDHOOD. A study of curriculum trends in Early Childhood Mathematics including a survey of programs (local and international), resource materials, learning aids and evaluation procedures. Emphasis on projects and lab-type experiences. 3 credits.
Professor McNicol

428-332 CURRICULUM AND INSTRUCTION IN MATHEMATICS – LATER CHILDHOOD. A study of the curriculum trends in Later Childhood Mathematics in relation to current theories and strategies of teaching and learning. Methods of instruction, use of resource materials and teaching aids, evaluation procedures designed to prepare prospective teachers to implement the prescribed curriculum in Québec. 3 credits.
Professor Scott

428-372 SECONDARY MATHEMATICS CURRICULUM AND INSTRUCTION. This course relates to directed observations in secondary schools and includes the study of the general objectives and curriculum trends, as well as the learning problems, teaching strategies and mathematical concepts encountered in the High School curriculum. 3 credits. (Prerequisites: A minimum of 18 credits in Post Secondary Mathematics.)
Professor Modafferi

† **428-443 PERSPECTIVES ON ELEMENTARY MATHEMATICS EDUCATION.** A course to provide a deeper perspective of modern elementary mathematics education through a study of the active learning approach, use of structured materials, modern mathematics projects and research. Separate sections for early and later childhood if enrolment permits – an elective. 3 credits. (Prerequisite: 428-322 or 428-332 or equivalent.)

428-445 MATHEMATICAL DEVELOPMENT IN ELEMENTARY SCHOOL CHILDREN. A study, designed primarily for "free flow" teachers, of the development of mathematical thought in elementary school aged children. The sequencing of mathematical concepts is also analysed. All processes are evaluated with reference to contemporary elementary mathematics curricula including those approved for use in Québec. Pre-requisite: Introductory methodology course in teaching of elementary math. Sufficient background in math. 3 credits.

428-447 DIAGNOSTIC & REMEDIATION IN MATH FOR ELEMENTARY SCHOOL TEACHERS. An introductory analysis of procedures used for diagnosis and remediation in mathematics at the elementary school level. Attention is given to formal and informal techniques and practice is given in preparing tests and analyzing results. 3 credits. Prerequisite: 428-445.

* **428-471 BACKGROUND MATHEMATICS FOR SECONDARY TEACHERS.** A course on the nature of mathematics stressing the relationships in its basic structure and providing some of the historical, philosophical and logical bases of the mathematics of the secondary school. (Recommended to all students expecting to teach secondary mathematics.) 3 credits.
Professor Purdy

428-474 COMPUTING AND PROBLEM SOLVING FOR HIGH SCHOOL TEACHERS. The history and basic principles of digital computing for teachers, including computer systems, data storage, the use of various computer languages specially FORTRAN, methods for solving problems, computer assisted instruction, data processing, statistics and their uses for the teacher, practical experience with a time sharing system for a remote terminal. 6 credits.

428-490 SPECIAL PROJECT. An independent undertaking requiring the preparation, execution, and retrospective analysis of a project focussed on practical activities in a school setting. 2 credits.

428-522 MATHEMATICS CURRICULUM AND INSTRUCTION – EARLY CHILDHOOD. A study of curriculum trends in Early Childhood Mathematics including a survey of programs (local and international), resource materials, learning aids and evaluation procedures. Emphasis on projects and lab-type experiences. 2 hours, 1 term.
Professor McNicol

428-532 MATHEMATICS CURRICULUM AND INSTRUCTION – LATER CHILDHOOD. A study of the curriculum trends in Later Childhood Mathematics in relation to current theories and strategies of teaching and learning. Methods of instruction, use of resource materials and teaching aids, evaluation procedures designed to prepare prospective teachers to implement the prescribed curriculum in Québec. 2 hours, 1 term.
Professor Scott

428-572 MATHEMATICS CURRICULUM AND INSTRUCTION – SECONDARY SCHOOL. A study of the secondary mathematics curriculum in contemporary society with particular emphasis on the Québec curriculum. Teaching methods and strategies for instruction in mathematics secondary I to V. Objectives and evaluation in mathematics education. A term paper on a significant aspect of mathematics education is required.

Quasi-historical approach used throughout the course. Teaching practice in Montreal schools. 3 hours, 2 terms.
Professor Whitwell

428-573 MATHEMATICS CURRICULUM AND INSTRUCTION (ADVANCED) – SECONDARY SCHOOL. An advanced course in mathematics curriculum and instruction for students with mathematics as a single option. A study of individual student competency levels in mathematics with particular emphasis on criterion sampling in secondary school mathematics. Construction and use of hierarchially structured test-items designed to measure mathematical competency. Practice in preparing, administering and scoring tests. 3 hours, 1 term.
Professor Whitwell

429 – Education in Music

* **429-200 CLASS PIANO FOR CLASSROOM TEACHERS.** Keyboard experiences through group piano lessons utilizing the multiple key approach: transposition by ear; improvising simple chordal accompaniments for classroom singing, and sight reading. Lab course. Restricted enrolment. 1 credit.

* **429-201 BASIC MUSICIANSHIP FOR CLASSROOM TEACHERS I.** Introduction to the elements of music theory through techniques of aural training, sight singing, keyboard, and written applications to be presented as the classroom teacher should teach such elements of music to elementary school students. "Lab work at the keyboard". Restricted enrolment. 3 credits.

* **429-204 UKULELE FOR CLASSROOM TEACHERS.** Basic skills of ukulele playing (picking and strumming); ear training; development of basic music theory. Lab course. 1 credit.

* **429-205 RECORDER FOR CLASSROOM TEACHERS.** Basic skills on the recorder; tone production and musical expression; development of functional understanding of fundamental elements of music; preparation of simple descants to accompany classroom singing and other materials and techniques for the classroom teacher. Lab. course. 1 credit.

429-212 MUSIC FOR NURSERY-KINDERGARTEN TEACHERS. Contemporary methods in music education at the nursery school and kindergarten level; development of musical skills through groups and individual practice sessions. 3 credits.

* **429-301 BASIC MUSICIANSHIP FOR CLASSROOM TEACHERS II.** Advanced course in the study of the elements of music theory through techniques of aural training, sight singing, keyboard, and written applications to be presented as the classroom teacher should teach such elements of music to elementary school students. Prerequisites: 429-201 and permission of instructor. Restricted enrolment. 3 credits.

429-322 MUSIC CURRICULUM AND INSTRUCTION – EARLY CHILDHOOD. Understanding of the musical development of children at this level by class participation in listening, singing, playing instruments, creating and moving to music. Materials and methods of planning the above experiences. 3 credits.

429-332 MUSIC CURRICULUM AND INSTRUCTION – LATER CHILDHOOD. Materials, methods, planning and organizing of musical experiences for later childhood classes through class participation in singing, playing, moving, creating, reading music and listening activities. 3 credits.

* **429-341 CREATIVE APPROACHES TO MUSIC LISTENING FOR ELEMENTARY TEACHERS.** A course which concentrates on the form, structure and history of music; stresses a creative approach

to music listening in the elementary grades. Recordings appropriate for children are studied. Pre-requisite(s): 429-201 or permission of the department. 3 credits.

429-522 MUSIC CURRICULUM AND INSTRUCTION – EARLY CHILDHOOD. Understanding the musical development of children at this level by class participation in listening, singing, playing instruments, creating and moving to music. Materials and methods of planning the above experiences. 2 hours, 1 term.

429-532 MUSIC CURRICULUM AND INSTRUCTION – LATER CHILDHOOD. Materials, methods, planning, and organizing of musical experiences for later childhood classes through class participation in singing, playing, moving, creating, reading music, and listening activities. 2 hours, 1 term.

429-542 MUSIC CURRICULUM AND INSTRUCTION – ELEMENTARY. Materials and methods of teaching elementary music. Includes directed observation and videotaped class participation and teaching in an elementary school. 6 hours, 1 term.

429-572 MUSIC CURRICULUM AND INSTRUCTION – SECONDARY. Materials and methods of teaching music in the high school. Includes directed observation and micro-teaching in a high school situation. 6 hours, 1 term.

430 – Education in Social Sciences

430-291 OBSERVATION AND FAMILIARIZATION. Observation, individual tutoring, and small group work in a secondary or elementary school environment. (Student activity to approximate 10 days in school setting; arrangements by Student Teaching Office in consultation with adviser). 1 credit.

430-322 SOCIAL STUDIES CURRICULUM AND INSTRUCTION – EARLY CHILDHOOD. Theories and strategies of learning. Data and resource materials. Evaluation procedures as applied to the primary level. 3 credits.

430-332 LOCAL AND COMMUNITY STUDIES. The place and purpose of community studies in the Québec elementary social science curriculum. Practical experiences in designing teaching strategies which use the social and economic environment as a medium for learning. Pupil evaluation procedures. 3 credits.

430-333 COMPARATIVE SOCIAL STUDIES. Methods of teaching geographical and historical case studies as a means of deepening the elementary school child's understanding of the major human activities in his own social and economic environment. 3 credits. (Prerequisite: 430-332.)

430-372 GEOGRAPHY CURRICULUM AND INSTRUCTION – HIGH SCHOOL. The Québec high school geography curriculum. Syllabus structure. The development and practice of methods in geography teaching. 3 credits.

430-375 HISTORY CURRICULUM AND INSTRUCTION – HIGH SCHOOL. The Québec high school history curriculum. Theories of course structure. Development and practice of teaching strategies in history. 3 credits.

430-403 SIMULATION IN THE SOCIAL SCIENCES. A critical analysis of available simulations as strategies in the social sciences. Emphasis on the elements of simulation, the processes of decision-making, and affective learnings. The development of skills in creating, with students, simulations for use in elementary and high school classes. 3 credits. (Prerequisites: 430-322 or 332 or 372 or 375 or permission of Department).

430-404 VALUE ANALYSIS IN THE SOCIAL SCIENCES. An examination of the objectives of value analysis. Teaching strategies for valuing in the social sciences with particular reference to social issues and environmental problems. An education elective open to students in elementary and secondary options. 3 credits. (Prerequisites 430-322 or 430-332 or 430-372 or 430-375).

430-453 FIELDWORK IN SCHOOL GEOGRAPHY. Practical experience in developing and evaluating fieldwork assignments for use with high school geography classes in both rural and urban settings. 3 credits. (Prerequisites: 430-372 or permission of the department). *(Not offered 1977-78).*

430-473 IN-DEPTH STUDY OF CURRICULUM DEVELOPMENT IN GEOGRAPHY. An investigation into the theoretical bases of geography teaching and an exploration of recent research into high school geography curriculum and instruction. 3 credits. (Prerequisite: 430-372). *(Not offered 1977-78).*

430-476 IN-DEPTH STUDY OF CURRICULUM DEVELOPMENT IN HISTORY. An exploration of the theoretical bases of history teaching. Study and analysis of recent research in high school history curriculum and instruction. 3 credits. (Prerequisite: 430-375).

430-490 SPECIAL PROJECT. An independent undertaking requiring the preparation, execution, and retrospective analysis of a project focussed on practical activities in a school setting. 2 credits.

430-522 SOCIAL STUDIES CURRICULUM AND INSTRUCTION –EARLY CHILDHOOD. The nature and structure of social studies. Learning processes and teaching strategies. Data collection, resource materials and evaluation procedures. Throughout the course students will be encouraged to observe their own environment and to relate their findings to the social studies course. 2 hours, 1 term.

430-532 LOCAL AND COMMUNITY STUDIES – LATER CHILDHOOD. Objectives and structure of the Québec elementary social science curriculum. Development of instructional skills and learning strategies in environmental studies: systematic observation, interviewing, opinion polling, sample surveying and simple data analysis. Pupil evaluation procedures. 2 hours, 1 term.

430-533 COMPARATIVE SOCIAL STUDIES – LATER CHILDHOOD. The creative development of instructional skills and learning strategies in using historical and geographical comparative case studies as means of deepening the elementary school child's understanding of the major human activities in his/her own social and economic environment. 2 hours, 1 term. (Prerequisite: 430-532.)

430-569 ADVANCED SOCIAL STUDIES CURRICULUM AND INSTRUCTION. An in-depth study of aims and processes in social science education. Curriculum design and the development of teaching materials and strategies in the area of the student's specialization. Co-requisite: 430-579D. (Not offered 1977-78)

430-572 GEOGRAPHY CURRICULUM AND INSTRUCTION – HIGH SCHOOL. An examination of geography as a vehicle for education. Analysis of the Québec and other geography curricula. Methods and teaching strategies. The geography laboratory. Field studies. Evaluation. 3 hours, 2 terms.

430-573 IN-DEPTH STUDY OF CURRICULUM DEVELOPMENT IN GEOGRAPHY. An investigation into the theoretical bases of geography teaching and an exploration of recent research into high school geography curriculum and instruction. 3 hours, 1 term. (Co-requisite 430-572).

430-575 HISTORY CURRICULUM AND INSTRUCTION – HIGH SCHOOL. An analysis of the content of Québec and other high school history curricula. Development of skills and abilities in the teaching of history through class exercises and micro-teaching techniques. Practice in devising such teaching and learning strategies as exposition, discussion, group studies, independent studies, role playing, simulation and field work. 3 hours, 2 terms.

430-576 IN-DEPTH STUDY OF CURRICULUM DEVELOPMENT IN HISTORY. An investigation into the theoretical bases of history teaching and a study of recent research into high school history curriculum and instruction. 3 hours, 1 term. (Co-requisite: 430-575).

430-579 NEW PERSPECTIVES IN SOCIAL STUDIES CURRICULUM – HIGH SCHOOL. Foundations of "the new social studies". Theoretical course structures. Content and process in political, sociological and economics education. Modes of inquiry in the disciplines and the learner as researcher. The local community as a source of social science data and as a field of study. 3 hours, 2 terms (Prerequisite: Permission of the department).

431 – Education in Second Language

431-291 OBSERVATION AND FAMILIARIZATION. Observation, individual tutoring, and small group work in a secondary or elementary school environment. (Student activity to approximate 10 days in school setting; arrangements by Student Teaching Office in consultation with adviser). 1 credit.

431-301 LINGUISTICS APPLIED TO THE TEACHING OF FRENCH AS A SECOND LANGUAGE. Introduction to general linguistics; the nature and function of language; the relations of current linguistic theories to the selection, progression, presentation, and fixation of French Program content; examination and preparation of teaching and remedial materials related to French as a Second Language. (Prerequisites: fluency in French; permission of instructor). 3 credits.

431-302 MEASUREMENT & EVALUATION – TEACHING FRENCH AS A SECOND LANGUAGE. Principles of educational measurement applied to the teaching of French; types of French tests and examinations; analysis of commercially-prepared tests; practice in preparing, administrating, and scoring periodical examinations; qualities of good test items in French, from the point of view of short- and long-term objectives and levels of learning French. (Pre-requisites: Introductory course in general or applied linguistics; permission of instructor). 3 credits.

431-303 MEDIA AND SECOND LANGUAGE TEACHING. Language Laboratory and Audio-Visual Media: psychological and pedagogical rationale, assessment of potentialities and limitations in the process of second language teaching; manipulation of equipment, selection, adaptation and creation of materials; preparation of group and independent learning units, practice sessions. 3 credits.

431-304 CULTURAL CONTENT OF SECOND-LANGUAGE PROGRAMS. Introduction to general sociolinguistics and its implications in second-language teaching particularly in the use and preparation of teaching materials and the study of the local sociocultural scene and institutions. Planning and monitoring a cultural activity with school children. Course offered in French. 3 credits.

431-305 PSYCHOLINGUISTICS AND SECOND LANGUAGE TEACHING. Exploration of areas in psycholinguistics relevant to second language teaching: theories of language acquisition, relationship between first and second language learning, student motivation and individual differences in second language learning, problems of

meaning; various educational aspects of bilingualism. Prerequisites: Introductory course in general or applied linguistics; permission of instructor. 3 credits.

431-306 PHONOLOGY AND THE TEACHING OF FRENCH AS A SECOND LANGUAGE. Intensive study of phonological and phonetic features of French as they are relevant to audio-lingual approaches in teaching French as a second language; training in identifying and analyzing French phonological and phonetic difficulties or areas of interference; initiation to phonetic correction techniques. (Pre-requisites: One methods course in French and one basic course in general or applied linguistics;) *(Not offered in 1977-78).* 3 credits.

431-307 DIFFICULTIES ANTICIPATED IN SECOND-LANGUAGE TEACHING. Study of error-analysis; nature and sources of linguistic transfer and its implication for second language teaching; introduction to contrastive linguistics with special applications to the areas that are within the objectives of the various programs of the different school levels. Collection of samples of pupils' second language oral and written production, analysis of errors and planning relevant remedial exercises to be used with these pupils. Course offered in French. Pre-requisites: One basic course in general or applied linguistics). 3 credits.

† **431-311 LINGUISTICS APPLIED TO TEACHING ENGLISH AS A SECOND LANGUAGE.** Introduction to general linguistics: the nature and function of language; the relations of current linguistic theories to the selection, progression, presentation and fixation of English program content; examination and preparation of teaching, remedial and testing materials related to English as a Second Language. Prerequisite: permission of the instructor. 3 credits.

431-312 MEASUREMENT & EVALUATION AND TEACHING ENGLISH AS A SECOND LANGUAGE. Principles of educational measurement applied to the teaching of ESL; types of ESL tests and examinations; analysis of commercially-prepared tests; practice in preparing, administering, and scoring periodical examinations; qualities of good test items in ESL, from the point of view of short- and long-term objectives and levels of learning in ESL. (Pre-requisites: An introductory course in general or applied linguistics; permission of the instructor.) 3 credits.

431-316 PHONOLOGY AND THE TEACHING OF ENGLISH AS A SECOND LANGUAGE. Intensive study of phonological and phonetic features of ESL as they are relevant to audio-lingual approaches in teaching ESL; training in identifying and analyzing ESL phonological difficulties or areas of interference; initiation to phonetic correction techniques. (Pre-requisites: One methods course (ESL) and one course in general or applied linguistics.) *(Not offered in 1977-78).* 3 credits.

431-321 LINGUISTICS APPLIED TO TEACHING MODERN LANGUAGES. Introduction to general linguistics: the nature and function of language; the relations of current linguistic theories to the selection, progression, presentation and fixation of program content in Modern Languages; examination and preparation of teaching, remedial, and testing materials related to teaching Modern Languages. (Pre-requisites: Fluency in Spanish, German or Italian. Permission of instructor.) 3 credits.

431-322 TEACHING FRENCH AS A SECOND LANGUAGE – EARLY CHILDHOOD. For description see 431-522. (Pre-requisites: Adequate fluency in French and permission of instructor.) 3 credits.

431-332 TEACHING FRENCH AS A SECOND LANGUAGE – LATER CHILDHOOD. For description see 431-532. (Pre-requisites: Adequate fluency in French and permission of instructor.) 3 credits.

431-340 ANIMATION TECHNIQUES FOR SECOND LANGUAGE TEACHING. Exploration, demonstration of animating procedures and techniques for enlivening second language and for integrating it into the child's general development. Workshops conducted in cooperation with other departments; music, media, art, etc., Practical sessions in communication experience. With a group of school children, preparation of a special event, implying the use of special materials and techniques involved in the course. (Offered in French only). 3 credits.

431-344 TEACHING FRENCH AS A SECOND LANGUAGE – ELEMENTARY SCHOOL. Principles of second-language teaching and their application to the teaching of French as a second language at the elementary school; an intensive study of the curriculum: objectives and development; special second-language teaching strategies and techniques; examination and preparation of teaching and testing materials; lesson planning; exercises in micro-teaching situations. 3 credits.

† **431-345 THE BILINGUAL CLASS I.** A study of the various models of bilingual education programs at the elementary school; an examination of the methods and materials used in primary grades to teach French language arts and to impart in French the other components of the curriculum of this level, to pupils whose mother tongue is not French; planning teaching units; observation of bilingual classes and "French immersion classes." (Pre-requisites: a high degree of French fluency and a course in applied linguistics). 3 credits.

431-346 THE BILINGUAL CLASS II. A study of the various models of bilingual education programs for later childhood; an examination of the methods and materials used at that level to teach French language arts and to develop French language skills via the teaching of the other components of the curriculum to pupils whose mother tongue is not

French; planning teaching units; observation of various types of "French immersion classes". (Prerequisites: a high degree of French fluency and a course in applied linguistics). 3 credits.

431-347 TEACHING ENGLISH AS A SECOND LANGUAGE – ELEMENTARY SCHOOL. Objectives and curriculum; study of second-language teaching principles, methods and techniques; the use and preparation of classroom materials; tutoring in ESL situations. 3 credits.

431-358 TEACHING ENGLISH AS A SECOND LANGUAGE – SECONDARY SCHOOL. Principles of ESL teaching; objectives and curriculum; language skills at secondary level; examination and preparation of teaching and testing materials; lesson planning; exercises in micro-teaching situations. 3 credits.

431-360 SECOND LANGUAGE PRACTICUM. Supervised classroom teaching of a second language (English or French) during one year. Through visits, conferences and other appropriate forms of guidance, counsellors assist teachers to integrate acquired knowledge with classroom performance. 6 credits.

431-372 TEACHING FRENCH AS A SECOND LANGUAGE – SECONDARY SCHOOL. Principles of second language teaching; objectives and curriculum; language skills at secondary level; instructional strategies; examination and preparation of teaching and testing materials; the use of audio-visual aids; lesson planning; training in micro-teaching situations. 3 credits.

431-373 IN-DEPTH STUDY OF CURRICULUM DEVELOPMENT IN SECOND LANGUAGES. Guiding principles and current practices of individualized, programmed instruction team-teaching, continuous progress, modular approach independent study as applied to second language teaching; observation and critical study of new experimental approaches. 3 credits.

431-378 LATIN CURRICULUM AND INSTRUCTION – SECONDARY SCHOOL. Objectives and curriculum; instructional strategies; use of teaching materials; preparation of teaching and testing materials; lesson planning; training in micro-teaching situations. 3 credits.

431-379 MODERN LANGUAGE CURRICULUM AND INSTRUCTION (GERMAN, ITALIAN, SPANISH) – SECONDARY SCHOOL. Principles of modern-language teaching; objectives and curriculum; instructional techniques; use of audio-visual aids; preparation of teaching and testing materials; lesson planning; training in micro-teaching situations. 3 credits.

431-490 SPECIAL PROJECT. An independent undertaking requiring the preparation, execution, and retrospective analysis of a project focussed on practical activities in a school setting. 2 credits.

431-501 LINGUISTICS APPLIED TO SECOND LANGUAGE TEACHING. Can be taken for 431-573. An introduction to general and contrastive linguistics: the relations of current linguistic theories to the selection, progression, presentation and reinforcement of program content. Examination and preparation of teaching and remedial materials. 3 hours, 1 term or 1 1/2 hours, 2 terms.

431-504 CULTURAL CONTENT OF SECOND LANGUAGE PROGRAMS. Can be taken for 431-573. Introduction to general socio-linguistics; study of the local socio-cultural scene; contacts with local cultural and educational institutions; preparation of teaching materials related to the cultural objective of second language teaching. 3 hours, 1 term or 1 1/2 hours, 2 terms.

431-522 TEACHING FRENCH AS A SECOND LANGUAGE – EARLY CHILDHOOD. Principles of second language teaching; objectives and curriculum; teaching techniques and materials; lesson planning and practice. 2 hours, 1 term. (Pre-requisite: adequate fluency in French and permission of instructor.)

431-532 TEACHING FRENCH AS A SECOND LANGUAGE – LATER CHILDHOOD. 2 hours, 1 term. (Pre-requisite: adequate fluency in French and permission of instructor.)

431-540 ANIMATION TECHNIQUES. Exploration and demonstration of animating procedures; techniques to enliven second language learning and to integrate it into the child's general development. Workshops conducted in cooperation with other departments: music, media, art, etc. 1 hour, 1 term.

431-544 TEACHING FRENCH AS A SECOND LANGUAGE – ELEMENTARY SCHOOL. Principles of second language teaching. An intensive study of the curriculum: objectives and development; lesson planning, micro-teaching; second language teaching strategies and techniques. 2hours, 2 terms.

431-545 THE BILINGUAL CLASS. A study of the various models of bilingual education programs at the elementary school; an examination of the methods and materials used to teach French language arts and to develop French language skills via the teaching of the other components of the curriculum to pupils whose mother tongue is not French; planning teaching units; lesson planning. 2 hours, 1 term.

431-547 TEACHING ENGLISH AS A SECOND LANGUAGE – ELEMENTARY SCHOOL. Objectives and curriculum; study of modern English in a second language perspective; teaching techniques and materials; tutoring in ESL situations. 2 hours, 1 term.

431-548 TEACHING ENGLISH AS A SECOND LANGUAGE – ELEMENTARY SCHOOL. Principles of second language teaching and their application to TESL in Québec elementary schools; survey

of various approaches and techniques used in developing relevant second language skills; utilization of related teaching and testing materials; micro-teaching exercises. 6 credits.

431-558 TEACHING ENGLISH AS A SECOND LANGUAGE – SECONDARY SCHOOL. Principles of ESL teaching; objectives and curriculum; language skills at secondary level; examination and preparation of classroom materials; lesson planning; training in micro-teaching situations. 3 hours, 2 terms.

431-572 TEACHING FRENCH AS A SECOND LANGUAGE – SECONDARY SCHOOL. Principles of second language teaching; objectives and curriculum; language skills at secondary level: teaching and evaluation; examination and preparation of class materials; lesson planning; training in micro-teaching situations. 3 hours, 2 terms.

431-573 IN-DEPTH STUDY OF CURRICULUM DEVELOPMENT IN SECOND LANGUAGES. Examination of new experimental approaches to second-language teaching: immersion, individualized instruction, modular scheduling, team-teaching, programmed instruction, language laboratory, etc. Individual and group research projects. 3 hours, 1 term.

431-578 LATIN CURRICULUM AND INSTRUCTION – SECONDARY SCHOOL. Objectives and curriculum; examination of textbooks and materials; study of Roman Civilization. Latin poetry and Latin works in translation. 3 hours, 2 terms.

431-579 MODERN LANGUAGE CURRICULUM AND INSTRUCTION (GERMAN, ITALIAN, SPANISH) – SECONDARY SCHOOL. Principles of modern language teaching: objectives and curriculum; teaching techniques and materials; training in micro-teaching situations; lesson planning and testing. 3 hours, 2 terms.

432 – Educational Media

† **432-204 EDUCATIONAL MEDIA I.** An introduction to educational media in elementary and secondary school teaching and learning situations; rationale, and underlying principles, sources, selection, production, effective utilization and evaluation of media. Limited enrolment. 3 credits.

† **432-205 FILM PRODUCTION AND FILM CRITICISM.** A study of the educational uses of motion-pictures with an emphasis on Super 8mm film production and utilization. Limited enrolment. 3 credits.

432-209 MEDIA AND INSTRUCTIONAL DESIGN. The examination and application of the systematic planning techniques necessary in the design, development and validation of effective instructional materials. 3 credits.

432-303 PHOTOGRAPHY I. An introduction to the history, utilization, research, and principles of photography as it relates to education, with an emphasis on developing the visual literacy and basic photographic techniques of teachers. The course will consist of lectures, seminars and production exercises. Limited enrolment. 3 credits.

432-304 EDUCATIONAL MEDIA II. A continuation of the study of Educational Media in teaching and learning with an emphasis on more complex audio-visual productions. (Pre-requisite: 432-204) Limited enrolment. 3 credits.

† **432-306 EDUCATIONAL TELEVISION.** A survey of the development of educational television. Short productions using single camera and portable TV systems. Limited enrolment. 3 credits.

432-309 THE LIBRARY RESOURCE CENTRE. A study of the development of the library-resource centre and its potential in the school curriculum. Techniques of effective teacher and student utilization of resource centres. 3 credits.

432-403 PHOTOGRAPHY II. A continuation of the study and application of photography in education with an emphasis on the development of intermediate level photographic skills. (Pre-requisite: 432-303). Limited enrolment. 3 credits.

432-404 CONTEMPORARY DEVELOPMENTS IN EDUCATIONAL MEDIA. A critical examination of current trends in educational technology including educational television, simulation and gaming, computer-assisted instruction, systems analysis, programmed instruction, etc. 3 credits.

432-405 INDEPENDENT PROJECT. A major instructional media production undertaken by the student after consultation with the Director of the Educational Media Program. 6 credits.

432-406 MANAGEMENT OF EDUCATIONAL MEDIA SERVICES. An examination of the development and management of media services at the school and district level. The design of instructional facilities, the administration of materials, equipment and production services, budgeting, personnel management, and the promotion of effective media utilization will be studied. 3 credits.

432-409 SPECIAL TOPICS IN EDUCATIONAL MEDIA. Seminars and workshops which examine specific topics will be chosen to reflect current concerns in the field, to exploit the expertise of guest lecturers, or to meet the media needs of special interest groups, and will vary from year to year. 3 credits.

432-440 MEDIA CURRICULUM AND INSTRUCTION: ELEMENTARY. An examination of the effect of mass media on children and education, and the concepts and methods related to developing visual literacy. A materials centered workshop approach to teaching elementary school children how to utilize and produce media materials as part of their curricular and extra-curricular activities. 3 credits.

432-470 MEDIA CURRICULUM AND INSTRUCTION: SECONDARY. An examination of the content and methods of teaching media courses at the secondary school level; the means of developing visual literacy; a study of the effects of mass media on the adolescent and the school program; a materials centred workshop on student media production techniques. 3 credits.

433 – Elementary Education

433-221 READING & LANGUAGE ARTS CURRICULUM AND INSTRUCTION (EARLY CHILDHOOD) PART I. An examination of current theories and practices related to the speaking and writing aspects of communication. Resource materials and aids to teaching and evaluation relevant to the primary level will be discussed. 3 credits.

433-222 READING & LANGUAGE ARTS CURRICULUM AND INSTRUCTION (EARLY CHILDHOOD) PART II. An examination of current theories and practices related to the Reading and Listening aspects of communication. Resource materials and aids to teaching and evaluation relevant to the primary level will be discussed. Pre-requisite: 433-221. 3 credits.

433-231 READING & LANGUAGE ARTS CURRICULUM AND INSTRUCTION (LATER CHILDHOOD) PART I. An examination of current theories and practices related to the listening and reading aspects of communication. Resource materials and aids to teaching and evaluation relevant to the intermediate and upper elementary levels will be discussed. 3 credits.

433-232 READING AND LANGUAGE ARTS CURRICULUM AND INSTRUCTION (LATER CHILDHOOD) PART II. An examination of current theories and practices related to the speaking and writing aspects of communication. Resource materials and aids to teaching and evaluation relevant to the intermediate and upper elementary levels will be discussed. Pre-requisite: 433-231. 3 credits.

433-312 METHODS AND MATERIALS FOR THE KINDERGARTEN. Analysis of the kindergarten environment with emphasis on equipment, materials, and suggestions for their use. 3 credits.

433-322 CREATIVE PROGRAM SKILLS. An exploration of procedures to encourage imagination, invention and expression through movement, language, literature, art, science, music, drama. 3 credits. (Prerequisite: Background in Art, Music, or Movement recommended.)

433-327 CREATIVE DRAMATICS AND CHILDREN'S LITERATURE. Experiences in characterization, story making, story dramatization; an exploration of the elements of drama and dramatic literature at the kindergarten level. 3 credits. (Prerequisite: 427-328).

† **433-328 CREATIVE MOVEMENT AND DRAMATICS.** Experiences in creative drama and the dynamics of movement, improvisation, creative problem solving, control and release of emotional energy. 3 credits.

† **433-343 ADVANCED READING INSTRUCTION – ELEMENTARY SCHOOL.** A critical study of materials in Reading instruction with a view to the diagnostic prescriptive methodology of teaching. Techniques for classroom diagnosis and prescription. 3 credits. (Prerequisite: 433-221 and 222, or 433-231 and 232. (Co-requisite: 435-421 or 435-431).

433-411 PRE-SCHOOL CURRICULUM. A practicum related to field experience, designed to assist the student in planning and maintaining a learning environment for the pre-school child; emphasis on innovation in pre-school education, cooperation between home and school, selection and use of media and materials, and the individual needs of the child. 3 credits. (Co-requisite: 435-411).
Staff

433-412 NUTRITION AND HEALTH CARE IN PRE-SCHOOL EDUCATION. Consideration of the basic principles of nutrition and health with particular reference to the pre-school child; functions, requirements and sources of specific nutrients; signs of abnormal development and symptoms of childhood illness; principles of safety and First Aid. 3 credits.
Professor A. Smith-Henderson

433-421 ELEMENTARY CURRICULUM – EARLY CHILDHOOD. A practicum related to field experience, designed to assist the student in planning an integrated program; stress on activity centered instruction, provision for individual differences, use of media and materials, relationships between home and school, evaluation and professional development. 3 credits. (Co-requisite: 435-421).
Staff

433-431 ELEMENTARY CURRICULUM – LATER CHILDHOOD. A practicum related to field experience that will focus on the tactics involved in implementing continuous progress, individualizing instruction, developing heuristic projects for an integrated curriculum; use of media and materials, diagnostic-prescriptive teaching and evaluation. 3 credits. (Co-requisite: 435-431).
Staff

433-441 EDUCATION IN THE NORTH – INTRODUCTION. Study of Northern schools as unique pedagogical settings; review of physical, economic and human factors affecting curriculum needs in northern areas of the world, particularly remote and Arctic Québec. 3 credits.
Professor Cram

433-444 EDUCATION IN THE NORTH – CURRICULUM. A practicum designed to assist the student in planning and maintaining a learning environment

for children in isolated areas; emphasis on innovation in education, home and school co-operation, selection and use of materials. 3 credits.

† **433-499 PROCESSES IN READING.** Theories and research findings of the several disciplines which intersect in the process called reading, basic concepts from psychology (learning, perception, cognition, personality, attitude change) and in language (development and linguistics) – examined in relation to instructional procedures of reading programs. (Prerequisites: 200 level courses in reading methods and educational psychology.) 3 credits.

433-522 CURRICULUM AND INSTRUCTION IN READING AND LANGUAGE ARTS – EARLY CHILDHOOD. Reading and language arts curriculum studied in relation to current theories and strategies of learning. Resource materials and aids to teaching and evaluation at the primary level examined. 2 hours, 2 terms.

433-532 CURRICULUM AND INSTRUCTION IN READING AND LANGUAGE ARTS – LATER CHILDHOOD. Reading and language arts curriculum studied in relation to current theories and strategies of learning for the later years of the elementary school. Resource materials and aids to teaching and evaluation examined. 2 hours, 2 terms.

434 – Physical Education

* **434-203 INTRODUCTION TO PHYSICAL EDUCATION.** An introduction to the role of the physical educator within education and the community: physical growth and motor development principles with particular reference to their importance in teaching physical education: an analysis of the teaching styles that the physical educator may use in different programs. 3 credits.
Physical Education Staff

* **434-204 HEALTH EDUCATION.** This course is designed to help the prospective physical education teacher understand his/her role in the total school health program in the elementary and high school. A study of current issues pertaining to health and health education is made, including the problems facing the individual in today's complex and changing society. 3 credits.
Professor Nichol

* **434-205 BIOMECHANICS – STRUCTURAL ANALYSIS.** Skeletal, muscular and nervous system are examined anatomically and physiologically within the realm of how they interact to generate and apply the forces which permit man's mobility. Lab: Rhesus monkey dissection. 3 credits.
Professor Greenisen

* **434-206 BIOMECHANICS – KINEMATICAL ANALYSIS.** Analysis of fundamental human movement and the kinematic concepts which underlie each: Stability, agility, walking, running, jumping, throwing, absorbing forces, striking, kicking, spinning, twisting, aquatics and work positions. 3 credits.
Professor Greenisen

† **434-207 TESTS AND MEASUREMENT IN PHYSICAL EDUCATION.** The function of this course is to acquaint students with the selection, construction and use of tests designed to measure sports skills, motor abilities, physical fitness and related knowledge. It includes an introduction to elementary statistics as related to their use in the physical education teaching situation. 3 credits.
Professor Marisi

* **434-224 FOUNDATIONS OF MOVEMENT EDUCATION.** Personal and creative activity in manipulative, non-manipulative and expressive motor activity; the study of basic movement education concepts, principle of movement and the role of movement education in the life of the developing child. 3 credits.
Professor Wall

* **434-290 INTRODUCTION TO COMMUNITY RECREATION.** The need for, scope of, and problems associated with community recreation will be studied. The relationship between the organizational structure and programs offered by a recreation agency will be examined. Students will study the different types of recreation agencies within a community and consider means to coordinate their services. 3 credits.
Mr. Capelli

434-291 OBSERVATION AND FAMILIARIZATION. Observation individual tutoring, and small group work in a secondary environment. (Student activity to approximate 10 days in school setting; arrangements by Student Teaching Office in consultation with adviser). 1 credit.

434-292 RECREATION LEADERSHIP. Students will be guided to select, use, and evaluate different leadership techniques in a variety of recreation situations. Students will consider theoretical readings on leadership and examine the relationship between program content and leadership style in practical sessions. 3 credits.
Mr. Capelli

434-322 MOVEMENT EDUCATION – CURRICULUM AND INSTRUCTION – EARLY CHILDHOOD. 3 credits. (Offered to B.Ed. students with the exception of Physical Education majors).

* **434-331 INTRODUCTORY HOMEOSTATIC PHYSIOLOGY.** Introduction to the basic principles of physiological mechanisms which maintain homostasis of the mammalian organism during non-stress conditions: cell function, neural systems and conduction; kidney, blood, cardiovascular system; respiration and metabolism. 3 credits.
Professor Montgomery

434-332 PHYSICAL EDUCATION – CURRICULUM AND INSTRUCTION – LATER CHILDHOOD. 3 credits. (Offered to B.Ed. students with the exception of Physical Education majors).

434-342 PHYSICAL EDUCATION METHODS. This course is designed to enable the physical education teacher to provide a developmentally sound program of varied activities suitable to the needs of children K-11. Students will have opportunities to observe and interact with elementary children as well as planning, teaching and evaluating micro-lessons. 3 credits.
Physical Education Staff

* **434-391 ERGO-PHYSIOLOGY.** Emphasis is on human organic adaptability; acute and chronic adaptive mechanisms to exercise and other environmental stresses are analysed. A laboratory program is included to evaluate (measure and predict) adaptive capacity and assess factors affecting it. 3 credits. (Pre-requisite: 434-331A).
Professor Klissouras

434-480 FIELD EXPERIENCE – RECREATION EDUCATION. 3 week full-time experience in a selected recreation agency for those students seeking full-time employment in the field of recreation. Selection of the agency will be undertaken jointly by student and adviser. 3 credits.
Physical Education Staff

434-490 SPECIAL PROJECT. An independent undertaking requiring the preparation, execution, and retrospective analysis of a project focussed on practical activities in a school setting. 2 credits.

* **434-492 PSYCHOLOGY OF MOTOR PERFORMANCE.** This course is concerned with selected psychological factors in terms of their relationship to the acquisition of motor skills, that is, how they affect the skill acquisition of the individual and how the activity patterns of the individual affect the psychological factors. 3 credits.
Professor Marisi

† **434-493 ADMINISTRATION OF PHYSICAL EDUCATION.** Organization and administration of programs in Physical Education; emphasis on common problems encountered by physical educators in the instructional, intramural and interscholastic areas. 3 credits.
Professor Wilkinson

434-494 PRINCIPLES & CURRICULUM DEVELOPMENT IN PHYSICAL EDUCATION. Directed towards an understanding of the important principles which should be the foundation of a modern program in Physical Education; student's role in the development, implementation and evaluation of the Physical Education Curriculum. 3 credits.
Professor Riley

* **434-495 SCIENTIFIC PRINCIPLES OF ATHLETIC TRAINING.** Application of physiological and kinesiological principles in the selection, administration and evaluation of athletic conditioning programs; specific topics studied will include circulorespiratory training, intermittent training, isometric training, weight training, calisthenic principles and circuit training methods. In order that topics of special interest to women or men may be considered, separate sections will be scheduled. 3 credits. (Pre-requisites: 434-331 and 434-391).
Professors Montgomery and Walker

* **434-496 PHYSICAL EDUCATION FOR EXCEPTIONAL CHILDREN.** Identification, evaluation, and remediation techniques basic to the development of effective physical education programs for educable mentally retarded children and children with specific learning disabilities; Progressive motor learning experiences related to body image, spatial relations, eye-hand coordination, and balance will be developed, applied and evaluated. 3 credits. (Pre-requisites: 434-342 or consent of instructor).
Professor Reid

† **434-497 HISTORICAL AND COMPARATIVE ASPECTS OF PHYSICAL EDUCATION AND SPORT.** A historical study of the origins and development of physical education and sport, and a comparative study of physical education and sport practices of many nations. 3 credits.
Professor Riley

† **(434-498) SOCIAL-PSYCHOLOGY OF SPORT.** This course is concerned with the social and psychological aspects of participation in physical activity and sport. It examines the application of sociological and psychological knowledge and methodology within sport and the findings of such sport and related physical activity research. 3 credits. Prerequisite: 414-260 Intro to Ed. Psych.
Professor Neil

434-521 MOVEMENT EDUCATION – CURRICULUM AND INSTRUCTION – EARLY CHILDHOOD. (2 hours) Offered to Diploma in Education students.
Professors Hodge and Wall

434-531 PHYSICAL EDUCATION – CURRICULUM AND INSTRUCTION – LATER CHILDHOOD. 2 hours. Offered to Diploma in Education students.
Professor Reid

* **PHYSICAL EDUCATION SKILLS AND TECHNIQUES**

Physical Education majors must complete a minimum of 18 credits in techniques chosen from the list below. Eleven credits are required for men and ten for women. The balance are to be chosen from the optional list.

The following courses include personal skill development, teaching sequences and strategies specific to the course selected.

Required Physical Education Skills and Technique Courses

Men (11 credits)

434-210	Educational Gymnastics
434-211	First Aid
434-212	Folk Dance or Intro. Creative
or **220**	Dance
434-213	Intro. Aquatics
434-214	Intro. Basketball (Men)
434-216	Intro. Gymnastics
434-217	Intro. or Adv. Track & Field
434-218	Intro. Volleyball (Men)
434-221	Intro. Wrestling
434-222	Outdoor Education
434-223	Early Childhood Activities

Women (10 credits)

434-210	Educational Gymnastics
434-211	First Aid
434-212	Folk Dance
434-213	Intro. Aquatics
434-215	Intro. Basketball (Women)
or **219**	Intro. Volleyball (Women)
434-220	Intro. Creative Dance
434-216	Intro. Gymnastics
434-217	Intro. or Adv. Track & Field
434-222	Outdoor Education
434-223	Early Childhood Activities

Optional Physical Education Skills & Technique Courses

Men (min. of 7 credits)

434-313	Adv. Aquatics (Men)
434-314	Adv. Basketball (Men)
434-335	Adv. Football
434-316	Adv. Gymnastics (Men)
434-329	Adv. Ice Hockey
434-321	Adv. Wrestling
434-318	Adv. Volleyball (Men)
434-225	Archery/Golf
434-226	Badminton/Racquetball/Squash
434-227	Field Games
434-228	Intro. Football
434-229	Intro. Ice Hockey
434-230	Lacrosse
434-231	Martial Arts
434-311	Prevention & Care of Athletic Injuries
434-232	Skiing
434-233	Soccer
434-234	Team Handball
434-235	Tennis/Curling

Women (min. of 8 credits)

434-323	Adv. Aquatics (Women)
434-315	Adv. Basketball (Women)
434-320	Adv. Creative Dance
434-310	Adv. Educational Gymnastics
434-338	Adv. Field Hockey
434-326	Adv. Gymnastics (Women)
434-319	Adv. Volleyball (Women)
434-225	Archery/Golf
434-226	Badminton/Racquetball/Squash
434-236	Field Games I
434-336	Field Games II
434-237	Ice Activities
434-238	Intro. Field Hockey
434-219	Intro. Volleyball or Intro.
or **215**	Basketball
434-231	Martial Arts
434-311	Prevention & Care of Athletic Injuries
434-239	Rhythmic Gymnastics
434-232	Skiing
434-235	Tennis/Curling

Physical Education Staff

435 – Student Teaching

DIRECTED OBSERVATION Supervised field courses which provide an opportunity for the student to observe pupils in the school environment, the role and responsibilities of the teacher, the processes of teaching and learning, etc. Includes introductory conferences, seminars and some teaching experience. (Co-requisite: 448-305)

435-215 DIRECTED OBSERVATION – PRESCHOOL. 3 credits.

435-245 DIRECTED OBSERVATION – ELEMENTARY SCHOOL. 3 credits.

435-246 DIRECTED OBSERVATION – ELEMENTARY PHYSICAL EDUCATION. 3 credits.

435-295 DIRECTED OBSERVATION – ELEMENTARY & SECONDARY SCHOOLS. 3 credits.

435-375 DIRECTED OBSERVATION – SECONDARY SCHOOL. 3 credits.

FIELD EXPERIENCE Supervised field courses arranged by the Student Teaching Office with the cooperation of regional schools. Under the guidance of an assisting teacher, students work in a classroom over an extended period of time, teaching at the level and in the subject areas appropriate to their individual programs. In conjunction with this practical experience the faculty provides conferences and seminars in related methodologies as well as individual counselling and postpracticum evaluation.

435-235 FIELD EXPERIENCE – SECONDARY (Plan Directeur). 4 credits

435-344 SEMINAR PRACTICUM. Designed for U2 elementary students involving participation in real or simulated classroom situations with a view to providing experience in teaching strategies. Students will be expected to student teach at the level of their option. 3 credits. *(Prerequisite: Satisfactory completion of 435-245 & permission of instructor).*

435-346 FIELD EXPERIENCE – ELEMENTARY SCHOOL. 9 credits
435-347 FIELD EXPERIENCE – ELEMENTARY SCHOOL. 6 credits
435-374 FIELD EXPERIENCE – SECONDARY SCHOOL (1 subject). 3 credits
435-376 FIELD EXPERIENCE – SECONDARY SCHOOL (1 subject). 9 credits
435-377 FIELD EXPERIENCE – SECONDARY SCHOOL (2 subjects). 9 credits
435-394 FIELD EXPERIENCE – ELEMENTARY & SECONDARY SCHOOLS. 3 credits
435-395 FIELD EXPERIENCE ELEMENTARY & SECONDARY SCHOOLS. 6 credits
435-411 FIELD EXPERIENCE – NURSERY – KINDERGARTEN. 9 credits (Co-requisite 433-411)
435-421 FIELD EXPERIENCE – EARLY CHILDHOOD LEVEL. 9 credits (Co-requisite 433-421)
435-422 FIELD EXPERIENCE – EDUCATION IN THE NORTH. 6 credits
435-431 FIELD EXPERIENCE – LATER CHILDHOOD LEVEL. 9 credits (Co-requiste 433-431)
435-444 FIELD EXPERIENCE – ELEMENTARY SCHOOL. 3 credits
435-478 FIELD EXPERIENCE – SECONDARY (1 subject) 6 credits
435-496 FIELD EXPERIENCE – ELEMENTARY & SECONDARY SCHOOLS. 9 credits
435-544 CLASSROOM INTERNSHIP IN ELEMENTARY SCHOOLS.
Semester A: 2 days a week, Semester B: 3 days a week.
435-574 CLASSROOM STUDENT TEACHING – HIGH SCHOOL
Semester A: 2 days orientation, 3 weeks in classroom
Semester B: 2 days orientation, 5 weeks in classroom

436 – Technical-Vocational and Business Education

436-254 MATERIALS TESTING I Analysis of the properties of concrete, masonry, wood and composite materials through microscopic examination and destructive and non-destructive testing. Construction of small scale equipment designed to simulate these industrial testing procedures within the secondary school laboratory. 3 credits.

436-261 METHODS OF TEACHING SHORTHAND A study of instructional organization, methods and materials for teaching shorthand skills to high school pupils, development of evaluative techniques for the assessment of pupil progress. 3 credits. Pre-requisite: Proof of satisfactory standing in shorthand in a college level course or equivalent with a minimum speed of 100 words per minute.

436-266 BASIC INTEGRATED COURSE IN TECHNICAL VOCATIONAL EDUCATION (PLAN DIRECTEUR). An interdisciplinary approach to the theories and practices of teaching and learning in the area of Technical Vocational Education. 8 credits.

436-267 DEVELOPMENT OF VOCATIONAL EDUCATION IN QUEBEC. A study of the trends in Vocational Education in Québec with emphasis on the period since 1945. Consideration will be given to the effects of Federal and Provincial legislation and Ministry regulations as these relate to Vocational teachers. 2 credits.

436-268 INSTRUCTIONAL TECHNOLOGY IN VOCATIONAL EDUCATION. An integrated study of introductory concepts of media strategies, communications theory, and research and development in the teaching of vocational subjects. Emphasis will be placed on individual project development in each participating teacher's area of specialization. 6 credits.

436-269 INSTRUCTIONAL DESIGN IN VOCATIONAL EDUCATION. An integrated study of introductory concepts in the development and evaluation of instructional design in Vocational Education. Emphasis will be placed on individual project development in each student's teaching speciality. 4 credits.

436-277 ORIENTATION TO INDUSTRY. This course is a pre-requisite for 436-278. It provides a perspective of the participants' role as an observer through seminars and field trips. Management of human resources, the internal structure and operation of industry, the rate of technological change, and demands upon personnel will be studied. 2 credits.

436-278 INDUSTRIAL FIELD EXPERIENCE. Three weeks full-time observation on location in an industry or business followed by an extensive technical report. The work situation chosen by an individual should relate to his/her technical trade or business specialization as currently taught by that person at the secondary school level. 6 credits.

436-279 VEHICLE DESIGN. Design of passenger transportation vehicles through analysis of function and aerodynamics of shape. Study of vehicle body production through forming and shaping techniques. 3 credits.

436-296 MATERIALS PROCESSING I. Study of primary and secondary manufacturing processes including extrusion, lamination, stamping, forging, and casting of metallic materials. Methods of implementing similar processes in the mechanics sector of the technical curriculum. 3 credits.

436-354 TECHNOLOGY AND MAN. A survey of technical developments from Graeco-Roman times to the present day and their influences on socio-economic conditions. The implication of technological change for man's future welfare. 3 credits.

436-355 PRODUCT DEVELOPMENT. A survey of the design process used in industrial product development. Conceptualization and development of patentable ideas or products by class participants. Methods of stimulating the creativity of secondary school pupils. 3 credits.

436-361 METHODS OF TEACHING TRANSCRIPTION. Selection, organization, and presentation of materials to develop shorthand and machine transcription skills. Development of evaluative techniques used to determine instructional effectiveness in the field of transcription. 3 credits.

436-362 METHODS OF TEACHING TYPEWRITING. Techniques for teaching typewriting at the secondary school level. A study of special methods and devices used in lesson planning, presentation and evaluation. Pre-requisite: Proof of satisfactory standing in typewriting in a college-level course–minimum speed of 60 w.p.m.

436-363 METHODS OF TEACHING OFFICE PRACTICE AND OFFICE RELATED SUBJECTS. A study of materials and procedures in the teaching of office oriented subjects including the operation of major office machines, simulation through integrated projects and model office simulations, and the application of these to time block scheduling. 3 credits. (Pre-requisite: Proof of satisfactory standing in a college-level or equivalent course in Office Practice or Secretarial Practice.)

436-366 INTRODUCTION TO TECHNOLOGY. To prepare the Technical-Vocational teacher to teach the Secondary II course Introduction to Technology. The aim of this course is that the student should become aware of the technological world through manipulation, observation and design of technological objects. 6 credits.

436-375 APPROACHES TO TEACHING HOUSING AND DESIGN. An analysis of factors influencing the choice of housing and the selection of interior furnishings. Techniques to be used by teachers involved in the housing and design sector of the home economics curriculum. Pre-requisite: 370-341 is recommended. 3 credits.

436-378 FIELD EXPERIENCE IN BUSINESS AND INDUSTRY II. A work study experience selected in consultation with an adviser focusing on new equipment, techniques or practices recently introduced into industry or business. The course requirements will also include the preparation and submission of a technical report. 3 credits.

436-379 FIELD EXPERIENCE IN BUSINESS AND INDUSTRY II. 6 credits. For course description, see 436-378 above.

436-380 FIELD EXPERIENCE IN BUSINESS AND INDUSTRY II. 9 credits. For course description see 436-378 above.

436-390 SAFETY EDUCATION. Examination of industrial safety considerations in the secondary school; includes general machine design, facility layout, and other ergonomic factors which minimize accidents. Special attention given to high risk equipment, personal safety hazards, and teacher responsibility and liability within vocational education facilities. 3 credits.

436-395 PRINCIPLES AND FOUNDATIONS OF CANADIAN VOCATIONAL EDUCATION. A study of leaders, movements, legislation, events, and institutions that have contributed to the formation and development of vocational education. Special attention given to economic, social and philosophical factors. 3 credits.

436-396 PRE-VOCATIONAL BUSINESS EDUCATION. Development of methods and materials; organization of subject matter appropriate for teaching exploratory courses in Business Education at the high school level. 3 credits.

436-397 PRE-VOCATIONAL TECHNICAL EDUCATION. Development of methods and materials; organization of subject matter appropriate for teaching exploratory courses in Technical Education at the high school level. 3 credits.

436-398 SPECIAL PROJECT IN VOCATIONAL EDUCATION. A project related to the student's teaching concentration will be investigated, developed, produced, implemented, and/or evaluated, depending on the nature of the project. Students must identify the problem or topic to be investigated and obtain approval of the instructor. Includes preparation and submission of a written report. 3 credits.

436-456 INDUSTRIAL MANAGEMENT AND PRODUCTION CONTROL. Analysis of production methods, time and motion studies, plant layout and design, quality control, and management techniques in selected industrial enterprises. Simulation in the school setting of industrial production methods. 3 credits.

436-461 METHODS OF TEACHING ACCOUNTING. Organization of knowledge and learning activities to achieve instructional objectives. Development of evaluative techniques used in determining instructional effectiveness in the field of accounting. 3 credits. Pre-requisites: 271-501, 502, 311 and 312 or equivalent).

436-462 METHODS OF TEACHING DISTRIBUTIVE EDUCATION SUBJECTS. Organization of learning activities, the development of instructional materials, teaching strategies and evaluative techniques for the teacher of distributive education subjects. 3 credits. (Pre-requisites: 275-459 Retail Management, or 275-455 Sales Management).

436-463 METHODS OF TEACHING DATA PROCESSING. Techniques for teaching data processing at the secondary level. A study of special methods and devices used to interpret the fundamentals of data processing as currently used in the business world. (Pre-requisite: Management Info Systems I or Computer Systems).

436-478 FIELD EXPERIENCE IN BUSINESS AND INDUSTRY III. A work-study experience involving observation and evaluation of training techniques and pedagogical principles used by business or industry in the preparation of personnel for specified tasks. Includes preparation and submission of a technical report. 6 credits.

436-562 TEACHING METHODS IN BUSINESS EDUCATION. A course in general teaching principles which will include the teaching and learning process, lesson planning, unit planning, and techniques of instruction specific to: a) Accounting and Business Machines b) Typewriting and Shorthand. 3 hours, 2 terms.
Professor Hicks

436-564 ORGANIZATION AND ADMINISTRATION OF BUSINESS EDUCATION. A course designed to investigate the place of Business Education in the secondary school curriculum and to indicate to the beginning teacher the need for good planning and administration in the classroom routine and to develop an ability to evaluate various aids to the learning process. 3 hours, 2 terms.
Professor Hicks

436-572 METHODS IN TEACHING TECHNICAL AND VOCATIONAL SUBJECTS. Methods and techniques of instruction in vocational education subjects. Classroom management and administration. Lesson planning and use of instructional materials. Individual assignments, demonstrations and reports. Special problems of the teacher. 3 hours, 2 terms.
Professor Gradwell

436-574 ORGANIZATION AND ADMINISTRATION IN TECHNICAL-VOCATIONAL EDUCATION. This course deals with the principles of effective management, safe planning, architectural considerations, material and tool control, purchasing and maintenance of equipment, student personnel, and teacher responsibilities. The student will plan an instructional area in order to develop an understanding of the principles for producing the necessary two and three dimensional visual materials required for more effective lesson presentation and curriculum development. 3 hours, 2 terms.
Professor Young

436-575 CURRICULUM DEVELOPMENT IN TECHNICAL-VOCATIONAL EDUCATION. Curriculum organization of technical vocational education in harmony with the needs of contemporary society; readings, discussions, terminology, aims and objectives, analysis, instructional units, principles of course organization and planning of curricula for specific situations. 3 hours, 1 term.
Professor Gradwell

436-576 EDUCATION EVALUATION IN TECHNICAL-VOCATIONAL EDUCATION. Emphasis on student growth and progress in public education; appraisal of specialized techniques of evaluation, teacher made tests, and data analysis as specifically related to Technical-Vocational Education. 3 hours. 1 term.
Professor McWethy

Core Programs

446-504 ORIENTATION TO ELEMENTARY SCHOOL TEACHING. 1 hour, 2 terms.

446-505 ORIENTATION TO SECONDARY SCHOOL TEACHING. 1 hour, 2 terms.

448-305 AN INTEGRATED STUDY OF TEACHING AND LEARNING. An interdisciplinary course which introduces students to the theories and practices of teaching and learning, touching upon philosophy, psychology, sociology, history, research in education, the adoption of educational innovation and the discipline which form part of the school curriculum. 6 credits.

449 – Professional Development for College Teachers

449-580 COLLEGE EDUCATION IN QUEBEC. An identification and analysis of major issues in college education with specific reference to the development of the CEGEP within the framework of Québec society; a study of the current structures of the CEGEP and of the educational community it serves. 3 credits. *Not offered 1977-78.*

449-581 APPROACHES TO COLLEGIAL LEARNING AND TEACHING. Exploration of alternative modes of college-level learning arising from philosophy, psychology, sociology, and research in education; critical appraisal of traditional and innovative approaches to learning; application to and implementation of course design with specific reference to the needs of the participants. 3 credits. *Not offered 1977-78.*

449-582 EDUCATIONAL THEORY AND INSTRUCTIONAL STRATEGIES. A consideration of various instructional strategies and educational theory with particular emphasis on the selection of strategies relevant to the level and content of CEGEP programs. 3 credits. *Not offered 1977-78.*

449-583 DEVELOPMENT OF A TEACHING SCHEMA. Supervised development of a teaching schema relevant to the discipline taught: statement of course objectives, detailed outline of course content, description of teaching strategies, use of appropriate material and student assignments, and evaluation procedures. Sessions by seminar and/or tutorials. 3 credits. *Not offered 1977-78.*

449-584 LABORATORY TEACHING. An analysis of laboratory oriented teaching in the career sectors at the collegial level: Provincial and local regulations – safety, accident prevention, teacher responsibilities and legal implications; laboratory rules, equipment, report writing, student behaviour and attitudes; pedagogical objectives, teaching

methodology, subdivision of subject matter, student evaluation, standards of performance. 3 credits. *Not offered 1977-78.*

449-585 APPLICATION OF A TEACHING SCHEMA. A supervised practicum designed to improve, by methods of critical analysis, the ability to implement a teaching schema. This practicum will include seminars and personal counselling sessions. 6 credits. *Not offered 1977-78.*

449-586 FIELD PROJECT IN INDUSTRY. An independent study to provide participants with an opportunity to examine new techniques and training programs in industry in order to improve teaching skills and/or to initiate changes in course and program designs that will establish closer relationships between the training of CEGEP students and the needs of industry. 3 credits. *Not offered 1977-78.*

The following courses are offered to Faculty of Education students ONLY by the Department of Biology. Details may be obtained from the Faculty of Education Office or from the Core Curriculum Director, Room W4/8, Stewart Biology Building.

177-208 BIOLOGY OF ORGANISMS I. 3 credits.
177-209 BIOLOGY OF ORGANISMS II. 3 credits.
177-210 LABORATORY IN BIOLOGY OF ORGANISMS I. (2 credits).
177-211 LABORATORY IN BIOLOGY OF ORGANISMS II. (2 credits).
177-203 CELL AND MOLECULAR BIOLOGY I. (3 credits).
177-204 CELL AND MOLECULAR BIOLOGY II. (3 credits).

In addition to music courses listed in the *Announcement of the Faculties of Arts and Science* the following courses are available to B.Ed. students who have the required background in music studies. Students lacking the necessary prerequisites may take these courses with the permission of the instructor.

221-351 KODALY METHOD & WORKSHOP 2 credits
221-235 VOCAL TECHNIQUES 2 credits
223-250 GUITAR TECHNIQUES 2 credits
223-251 RECORDER TECHNIQUES 2 credits
223-355 SUZUKI METHOD & WORKSHOP 2 credits
222-356 KEYBOARD SKILLS I 1 credit
222-357 KEYBOARD SKILLS II 1 credit
222-456 KEYBOARD SKILLS III 1 credit
222-457 KEYBOARD SKILLS IV 1 credit

Ensemble courses are also available to B.Ed. students by audition under the same conditions that apply to Arts and Science students.

These courses are restricted, with priority being given to Faculty of Music students.

COURSES OPEN TO ARTS AND SCIENCE STUDENTS

The Arts, Science and Education Committee has approved the following list of courses which it feels might usefully serve as electives in an Arts or Science Program for the purpose of providing interested students with a taste of what teacher education is all about.

* indicates course with a field component arranged on an individual basis.

DEPARTMENT OF SOCIAL FOUNDATIONS (413)

*403A	The Education of Minorities in Canada	3 credits
405B	The Critical Spirit and Education	3 credits
407A	Education and Society in Québec	3 credits
408A & B	Human Values and Education	3 credits

DEPARTMENT OF EDUCATIONAL PSYCHOLOGY AND SOCIOLOGY (414)

*205A & B	Sociology of Education – An Overview	3 credits
*208A & B	The Development of Personality & Social Behaviour in the School Age Child	3 credits
308	Sociology of the Classroom	3 credits
*377A & B	Adolescence and the Process of Education	3 credits
*456A	Application of Psychological Principles to Educational Problems pre-requisite – permission of instructor	3 credits
492	Psychology and Instructional Design	3 credits

DEPARTMENT OF CATHOLIC STUDIES (415)

*398A & B	Philosophy of Catholic Education	3 credits

DEPARTMENT OF EDUCATION IN ENGLISH (427)

*374A & B	Language in the Secondary School pre-requisite: linguistics	3 credits

DEPARTMENT OF MATHEMATICS AND SCIENCES (428)

243B	Background Geometry for Elementary Sch. Teachers	3 credits
471B	Background Mathematics for Secondary Teachers	3 credits

DEPARTMENT OF EDUCATION IN MUSIC (429)

201A & B	Basic Musicianship	3 credits

DEPARTMENT OF PHYSICAL EDUCATION (434)

203A	Introduction to Physical Education	3 credits
224A	Foundations of Movement Education	3 credits

VOCATIONAL EDUCATION (436)

354	Technology of Man	3 credits
395	Principles and Foundations of Canadian Vocational Education	3 credits

6 FACULTY REGULATIONS

THE ACADEMIC YEAR

Generally speaking McGill's academic year is made up of two sessions, the fall/winter or regular session and the summer session. These are subdivided, where appropriate, into the fall term (September to December), the winter term (January to May) and the two parts of the summer session (mid-May to end of June and early July to mid-August).

ATTENDANCE

The pattern of attendance necessary to satisfy the requirements of course work will vary according to the nature of different subjects and the professors' approaches to them. A course constitutes a contractual and social obligation between the professor and the student. It is, therefore, the responsibility of the professor to make students aware of the unique requirements of a course and the manner in which they may be fulfilled, and the responsibility of the student to meet these requirements.

(The intention of the foregoing is to avoid the imposition of arbitrary and artificial attendance regulations. The absence of restrictions implies confidence in the maintenance of a state of good will, mutual trust and common sense among the parties concerned.)

STUDENT CATEGORIES AND COURSE LOADS

Full-time students

Full-time students in Satisfactory standing take a minimum of 12 credits per term.

Full-time students in Probationary standing take a maximum of 12 credits per term to which they may add a repeated course in which a grade of "D" was originally obtained. Students who have a GPA of 3.0 or higher may add to the normal load of 15 credits per term by enroling in up to 18 credits per term.

Part-time students

Part-time students take fewer than 12 credits per term.

Special Students

A special student takes regular credit courses, but is not working towards a degree or diploma. To qualify for this status a student must have a specific approved plan of study. Applications must be made at the Office of the Associate Dean (Student Affairs).

Visiting Students

A visiting student is one who is taking courses at McGill for credit at another university. Applications must be made at the Office of the Associate Dean, (Student Affairs).

CREDIT SYSTEM – B.ED. PROGRAMS.

Each course is assigned a credit rating reflecting the amount of effort it demands of the student. This usually represents the number of weekly contact hours the course requires. In general a 3 credit course indicates 3 hours of lectures (laboratory periods, conference, etc.) per week for one term. A minimum of 90 approved credits is required for the B.Ed. degree; at least 60 of these 90 approved credits must be taken at McGill.

The course promotion system is used to evaluate student progress. A grade point average (GPA) is calculated by multiplying the course credit value by the numeric value of the grade and dividing the sum of the grade points earned by the number of credits attempted.

Example	Credits Attempted	Grade	Numeric Value	Earned Grade Points
Course 1	6	A	= 4	24
Course 2	4	B	= 3	12
Course 3	3	C	= 2	6
Course 4	3	D	= 1	3
Course 5	3	F	= 0	0
Course 6	6	A	= 4	24
Course 7	6	B	= 3	18
	31			87

$$\text{Sessional GPA} = \frac{87}{31} = 2.81$$

Other letter grades and their impact on averages are explained below.

A cumulative grade point average (CGPA) will be calculated comprising the student's entire record at McGill in a degree program.

Grades of A, B and C are deemed to be satisfactory passes, D a conditional pass and F a failure. Certain courses have been approved for Pass/Fail (P/F) grading. In almost all programs, required or prerequisite courses must be passed with C standing or better. Grades of D and F continue to be used in the calculation of the CGPA even after a subsequent mark is submitted.

Standing will be determined by the grade point average achieved by the student.

Satisfactory Standing

A student enters the University in satisfactory standing and remains in this standing unless the GPA for any year drops below 2.0.

Probationary Standing

A student whose GPA drops to between 1.5 and 1.99, is placed in probationary standing.

A student in probationary standing must return to satisfactory standing within one year by obtaining a GPA of 2.5 or CGPA of 2.0, otherwise the student will be placed in unsatisfactory standing.

PROBATIONARY STANDING (Part-time students in B.Ed. for Certified Teachers program).

After the completion of 12 credits, a student whose G.P.A. falls between 1.5 and 1.99 is placed in probationary standing.

A student in probationary standing must return to satisfactory standing by the end of the next 12 credits; otherwise the student will be placed in unsatisfactory standing.

Definition of Letter Grades

All courses taken at McGill and all results obtained appear on the transcript. The following is an explanation of the letter grades used by the Faculty of Education.

A	80 - 100%	Satisfactory Pass	See Credit System above
B	65 - 79%		
C	55 - 64%		
D	45 - 54%	Conditional Pass	
F	0 - 44%	Failure	
P		Pass	
J		Absent	Included as F in average
K		Incomplete	No average calculated if "K" on record
KF		Incomplete Failed	Included as F in Average.
KK		Completion not required	Not counted in average.
K*		Incomplete – extension granted	No average calculated.
L		Deferred	Not included in average.
L*		Permitted to complete course.	No average calculated.
W		Withdrew	Not included in average.
WF		Withdrew failing	Not included in average.
WL		Permitted to withdraw from a deferred examination.	Not included in average.

Unsatisfactory Standing

A GPA of less than 1.5 places a student in unsatisfactory standing.

Students in unsatisfactory standing must withdraw. They may be readmitted to probationary standing upon appeal to the faculty. Students in unsatisfactory standing for the second time will be required to withdraw permanently.

[Cumulative grade point averages are restarted at zero when a student changes degree programs, e.g. B.A. to B.Ed.]

Course Changes

Students wishing to make changes to the courses for which they are registered (dropping a course, adding a course) must do so through the coordinator's office. Such changes should not introduce conflicts in the timetable nor destroy the required sequence of courses approved by the student's adviser.

Students must obtain the approval of the instructor and their adviser before adding courses. The Faculty offering the course sets deadlines for changes.

Withdrawal from Course

Withdrawal from a course after the change of course period will be allowed by the Associate Dean (Student Affairs) up to the date specified in the Faculty announcement. Students who have not officially withdrawn from courses they are no longer attending will have a failing grade ('J') recorded at the end of the session.

Withdrawal from the University

The responsibility for initiating withdrawal rests solely with the student. Neither notification of the course instructors nor discontinuance of class attendance will suffice. A student who wishes to withdraw officially from the University during the academic year must secure permission from the Office of the Associate Dean (Student Affairs). The appropriate form will be supplied. A student considering withdrawal is strongly urged to consult his Adviser before making a final decision. Fees for the term in which the student withdraws are refundable according to the regulations set out in the **General Announcement.** The student ID card must be attached to the withdrawal form.

EXAMINATIONS/INCOMPLETE COURSES

Examinations

Students may write term papers and their answers to examinations in English or French, except in the case of certain language and literature courses.

Class Tests

Members of the teaching staff may from time to time give interim class tests if they think them necessary.

Final Examinations

Final examinations are held during an examination period following the term in which the course is given. In some courses there is no final examination; standing in these courses is determined on the basis of term work and class tests.

Instructors are not permitted to grant any special treatment regarding examinations to any student. If a student believes there is some circumstance which might be legitimately taken into account in evaluating his performance, he should apply to the Associate Dean (Student Affairs).

Supplemental Examinations

There is a supplemental examination period during the month of August. A student may receive permission to write supplemental examinations in courses in which he obtained a D or an F. It should be noted that supplemental examinations are not necessarily available in all courses and that in fact no supplemental examinations are offered in Art, Music, Second Languages and Student Teaching. It is the student's responsibility to determine this by checking with the instructor, and to avail himself of this privilege at the time of the next supplemental examination period. His supplemental result will not erase the D or F originally obtained which was used in calculating his GPA. Both the original mark and the supplemental result will be calculated in the CGPA (i.e. the taking of supplemental examination has the same effect on a student's GPA as does repeating the course). Written application to write a supplemental examination must be received at the Associate Dean's Office. Special permission is required if a student wishes to write supplementals totaling more than 6 credits. A fee of $10.00 for each supplemental paper is payable to the Cashier as soon as the application has been approved. A student who does not intend to write the supplemental for which he is registered should officially withdraw, otherwise a grade of "J" (Absent) will be recorded ("J" counts as an F in CGPA calculations).

In certain cases, a student may be permitted to write one supplemental examination during the April-May examination period in a first term course in which he has obtained a D or an F, if the course is also given in the second term. No attempt is made to avoid conflict between this supplemental and the student's required final examinations, and in the case of such a timetable conflict the student will be required to write the final examination and postpone the supplemental to the August period.

Depending on the course, the supplemental result may or may not include the same proportion of class work as did the original grade. The instructor will announce the arrangements to be used for his course early in the term.

Deferred Examinations

A student who, for reasons such as illness or family affliction, has been unable to write one or more examinations, may receive permission to write deferred examinations in their stead which will normally be written in the next supplemental examination period. The Associate Dean's office must be informed within one week of the examination of the reasons for absences. An "L" will appear on the Report of Standing in place of a grade in such courses, and will be replaced by the grade obtained in the deferred examination after it has been written.

Reassessment of a Grade

Papers are marked and grades calculated and handled with considerable care. However, if a student wishes his marks checked or his examination paper re-read, he should apply in writing to the Office of the Associate Dean (Student Affairs). There is a fee of ten dollars which will be refunded if an error is found in the student's favour. If the result is a lower mark, the lower mark will stand and there will be no refund. Requests for reassessment of standing in more than one course will not be permitted.

Any request to have a term paper reassessed must be made directly to the professor concerned.

Incomplete Courses

If, in the instructor's opinion, there is sufficient reason to permit a delay in the submission of required term work, an extension of deadline of up to four months after the end of the course may be granted the student. In this case, the instructor will submit a grade of "K" (incomplete). If a new grade is submitted within the deadline by the instructor, this will appear on the student's Faculty reports and verification forms following the K and will replace the K on the student's official transcript.

If the required work is not completed before the deadline the grade of KF will be recorded in the same way as the grade above. (KF denotes a failed course and has the same effect on the GPA as an F.)

In exceptional circumstances, and with the approval of the Associate Dean (Student Affairs) the four month deadline may be extended further, in which case the grade of K* will appear.

A student who has not, without accepted excuse, participated or written the final examination in a course for which he has registered may be given a grade of J (absent).

Student Teaching

Satisfactory progress in the student's program is a pre-requisite for placement in the major student teaching experience.

If a student is evaluated as unsatisfactory in the field experiences of the program, he will be required to withdraw from the Faculty.

Supplemental examinations are not available in Student Teaching.

Students who, for reasons such as illness or family affliction, are unable to attend their school, must immediately inform the Student Teaching Office at 392-8830.

DRESS REGULATIONS

There are no specific dress regulations in force in the Faculty of Education but all students enrolled in Teacher Certification programs are advised that Regional School Boards and individual schools may have regulations concerning acceptable attire. Students are advised to adhere to any such regulations.

LANGUAGE REQUIREMENT

One of the Government requirements for teacher certification in the Province of Québec is a fluent command of the language of instruction. Education students who cannot demonstrate this fluency cannot be recommended for certification and will be required to withdraw from the Faculty. It is therefore very important that students whose mother tongue is not English or French should, if they have not already done so, obtain the approval of the Chairman of either the Department of Education in English (392-8844) or the Department of Second Languages (392-8861) as soon as possible and before registration. In addition, all applicants are reminded that the normal language of instruction at McGill is English. Candidates must therefore possess a good functional knowledge of English before commencing their studies.

SUMMER SCHOOL CREDITS

Students wishing to enrol in Summer School courses at McGill or elsewhere and who wish to have credits earned count towards their degree, must obtain the permission of the Associate Dean (Student Affairs) in advance and, if the course is taken elsewhere than at McGill, must arrange to have an official transcript of marks forwarded to the Office of the Associate Dean.

Transfer Credits

N.B. Credit in courses for which the lowest passing grade was received is not transferable.

Bachelor of Education Programs

Credit may be granted by the Faculty of Education for courses taken at recognized universities other than McGill but not more than 30 credits of this type will be allowed towards the B.Ed. degree. Students seeking advanced standing upon admission should clearly indicate on their Application Forms which courses they wish to have considered for this purpose. Students already enrolled in the program must obtain approval from the Associate Dean (Student Affairs) before embarking on such courses. Normally, such transfer credits should be taken in the early part of the degree program. Students should note that the actual marks or grades achieved in transfer-credit courses are not included in CGPA calculations.

McGill Diploma in Education and Certificate Programs

Transfer credit in these programs is not normally possible because of the Provincial requirement to complete a full-year of studies for scolarité purposes. However, students who can show proof of having taken equivalent courses over and above the requirements for their Degree or Diploma of Collegial Studies, should apply for credit transfer in the first instance to the Associate Dean (Student Affairs.)

B.Ed. – For Certified Teachers (Elementary Education)

Teachers enrolled in this program may transfer up to 30 credits from a recognized university other than McGill. In general, the same regulations apply as for the full-time B.Ed. degree program. A maximum of 45 Education course credits may be applied to the Degree from the Diploma programs in Kindergarten, Reading, Special Education, Educational Media and the Certificate in Second Languages. A maximum of 30 credits may be applied to the Degree from the McGill post-CEGEP Certificate in Education Elementary programs.

FACULTY PROGRAMS

Transfer credit in these programs is not normally advisable because of the Provincial requirement to complete 30 credits of study for scolarité purposes. However, where transfer credit is appropriate students should first obtain the recommendation of the Program Director concerned.

GRADUATION REQUIREMENTS

BACHELOR OF EDUCATION PROGRAMS

To be eligible for a degree, a student must have accumulated 90 approved course credits (i.e. passed courses whose credit total is 90), obtained a C grade or better in the teaching option(s) and related method(s) courses, and have a CGPA of at least 2.0.

A student must remain in a position to complete the degree requirements within five years of admission to a 90-credit program, otherwise the student reverts to unsatisfactory standing.

Mature students and others admitted to programs requiring the completion of 120 credits must complete degree requirements within six years. Students registered in the B.Ed. for Certified Teachers are allowed a maximum of 12 years in order to meet degree requirements.

McGILL DIPLOMA IN EDUCATION PROGRAMS

To obtain a clear Pass

(i) Students must have a satisfactory standing in student teaching.

(ii) Students in the secondary school option are permitted one D grade (exclusive of student teaching).

(iii) Students in the elementary option are permitted two D grades (exclusive of student teaching).
(iv) Students are not permitted any F grades.

Failed Standing

A student who fails more than two courses (either full or half course), fails the year. When a student's record includes one or more failures and one or more D's, so that the total number of failures and D's is more than two, the Committee on Admission, Standing and Promotion may recommend that such a student fails the year.

Supplemental Privileges

A student may be permitted to write a maximum of two supplemental examinations (either full or half course) in order to meet the criteria for a clear pass. In courses not evaluated by examination, a supplemental examination is not usually available. In such cases, it may be necessary for the student to repeat the course or to meet such other requirements as the Committee on Admission, Standing and Promotion may propose.

FACULTY PROGRAMS

Québec Diploma in Special Education
Québec Diploma in Reading Instruction
Québec Educational Media Diploma
Québec Kindergarten Diploma
Certificate in Second Language Teaching
Certificate in Technical-Vocational Education

Satisfactory completion of the 30 credit program will qualify the student to apply for the appropriate Certificate or Diploma. However, in cases where a Diploma is issued by the Québec Department of Education the student must also meet the pre-requisite qualifications as determined by Québec.

Time Limits

30-credit programs taken on a part-time basis must normally be completed within five years of admission to the program. Programs taken on a full-time basis must normally be completed within 28 months of admission to the program.

Student Teaching (Practicums)

In programs where there is a compulsory practicum (field experience/student teaching) a satisfactory Pass ('P' or 'C' grade or higher) is required. If a student fails this component of the program the student will be required to withdraw from the program, but may appeal for readmission to the Committee on Admission, Standing and Promotion. Satisfactory progress in the student's course work is a pre-requisite for placement in the Practicum.

Grading

Students are required to obtain a 'C' grade or higher in all compulsory core subjects and may not include more than one 'D' grade (not exceeding 4 credits) in the elective courses. Students who obtain no more than two 'D' or 'F' grades (not exceeding 8 credits) may be permitted to write supplemental examinations if they are offered and/or repeat the course. Students may repeat failed courses only once. Failures and inadmissible 'D' grades must normally be made up within 16 months of terminating the original course.

NOTE: Faculty Regulations lie within the jurisdiction of the Faculty Committee on Admission, Standing and Promotion. Inquiries concerning their meaning or application should be addressed to the Chairman of the Committee.

7 GENERAL INFORMATION

7.1 FEES AND OTHER EXPENSES

The University reserves the right to make changes without notice in the published scale of fees.

Fees are not refundable, except under special conditions. See "Regulations Concerning Withdrawal" below.

Tuition fees are based on a per credit charge were applicable and on the basis of equivalences where the credit system does not apply. The basic charge for tuition fees is $19.00 per credit and this fee will include all the regular charges of the University for registration, tuition, laboratories and libraries. Student Service Fees and Students' Societies Fees are separately assessed and are added to the total fees payable.

Students enrolled in the 1-year Diploma or Certificate programs are not assessed on a credit system but will be charged a total fee of $668.00 for the year ($570.00 for tuition plus $70.00 for student Services plus $28.00 for Student Societies.)

Students enrolled in the Bachelor of Education degree programs will be assessed according to the credit system. With a fee of $19.00 per credit, a student taking a normal academic load of 30 credits will pay $570.00 (30 ×$19.00) for tuition plus fees for Student Services and Student Societies. Students taking more or less than the normal 30 credit load will be assessed fees on a pro rata basis. Thus, a B.Ed. student enrolled in only 24 credits will pay $456.00 (24 × $19.00) for tuition plus the normal fees for Student Services and Student Societies. A B.Ed. student with permission to accelerate and enrolled in 36 credits will pay $684.00 (36 × $19.00) for tuition plus normal fees for Student Services and Student Societies.

SCHEDULE OF FEES

Application Fee (all students)	$15.00
Supplementary Examination Fee	$10.00
Graduation Fee (Degree students only)	$15.00
Special Fees and Penalties:	
See *General Announcement*	
Per Credit Tuition Fee	$19.00
Student Services Fee (all full-time students)	$75.00
Student Societies Fee	$28.00
	TUITION
McGill Diploma in Education	$570.00
Certificate in Education	570.00
B.Ed. (30 credits p.a.)	570.00

PART-TIME, SPECIAL AND VISITING STUDENTS

Where the credit system is applicable $19.00 per credit for tuition will be assessed. Otherwise the tuition fee will be $114.00 per full course and $57.00 per half course.

In addition, the following fees will be assessed **per term:**

a)If taking between 18 and 23:
Student Services $40.00
Students' Societies $14.00
(average fee, actual varies by Faculty)

b)If taking more than 9 but less than 18 credits:
Student Services $25.00*
Students' Societies ..... $ 5.00

c)If taking 9 or less credits:
Student Services $15.00*
Students' Societies ..... $ 5.00

*These students may use athletics facilities with the permission of the Director of Athletics and payment of an additional $35.

REGULATIONS FOR PAYMENT OF FEES

Students entering the University for the first time and those returning in Graduate Studies are required to pay their fees either by mail or in person at the Accounting Office within 10 days after registration. For students registering in September the second instalment is due by January 15.

Returning students from the previous year (except in Graduate Studies) must pay one half of the total required fee by mail or in person to the Accounting Office before August 19, otherwise they will not be permitted to register. Instructions for paying fees in advance will be mailed to all returning students, either with their Sessional Reports of Standing or a short time later. Students who have been notified by the University of the award of a scholarship, bursary or student loan, and who require this award for payment of the first instalment of fees, must obtain permission to delay payment of fees from the Student Aid Office.

The second instalment is due by January 15. A late payment fee is charged for payment after the specified dates.

LATE REGISTRATION

Students registering late must pay their fees at the time of registration, failing which they become subject to the late payment fee and the provisions of the following paragraph.

As soon as possible after the prescribed dates for the payment of fees, the Chief Accountant will send to the Registrar's Office a list of the registered students who have not paid their fees. Reports of standing, transcripts of records and diplomas will be withheld until

such time as the fees are paid or a satisfactory arrangement is made with the Chief Accountant.

REGULATIONS CONCERNING WITHDRAWAL

A student who wishes to withdraw from the University or from certain courses must secure the permission of the Associate Dean (Student Affairs). The Office of the Associate Dean will supply the necessary form which must be completed and submitted. Students withdrawing from all their courses must attach their Student Identity Card to the withdrawal form. A student considering withdrawal is strongly advised to consult his Adviser before making a final decision. Fees for the term in which the student withdraws are refundable under conditions outlined in the *General Announcement.*

PHYSICAL EDUCATION STUDENTS

An additional fee is charged to cover part of the costs of the Outdoor Education Course. Those students who elect curling or skiing are also required to pay additional fees.

BOOKS

Students should expect to spend about $75.00 a session for prescribed textbooks and for classroom and laboratory supplies, all of which may be purchased from the McGill University Bookstore at 1001 Sherbrooke St. W.

TRAVELLING EXPENSES

Students enrolled in programs leading to Québec Teacher Certification are required to participate in student-teaching and/or internship in the schools. Athough every effort will be made to place a student within reasonable travelling distance, this cannot be guaranteed in every case. Students are responsible for any travelling expenses which may be incurred.

BOARD AND RESIDENCE

See *General Announcement.*

ENTRANCE SCHOLARSHIPS

In general, the University's system of entrance scholarships is designed to enable good students from all parts of Canada to attend McGill. The policy of the University is to recognize and honour scholarship, and the University Scholarships Committee selects scholarship winners from among those students who have obtained or who expect to obtain a first class academic standing. See the *Undergraduate Scholarships and Awards Announcement for further details.*

AWARDS TO STUDENTS IN COURSE

See *Undergraduate Scholarships and Awards Announcement.*

FINANCIAL AID

Information concerning all matters relating to financial assistance whether University, Provincial or Federal, may be obtained from the Student Aid and Foreign Student Adviser Office. This office also deals with all matters which may affect non-Canadian students.

Location: 3465 Peel Street
General Information: 392-5256

Education students entering Technical-Vocational programs should apply directly to the Program Director, Technical-Vocational Education when they submit their applications.

7.2 HEALTH AND COUNSELLING SERVICES

UNIVERSITY HEALTH SERVICES

Location: 517 Pine Avenue West
Appointment and General Office: 392-5441
Mental Health Services: 392-5449

When students enroll at McGill University they have available to them a full range of medical service provided by the McGill University Health Service. Medical clinics operate daily, five days a week from 9:00 a.m. – 5:00 p.m. A physician is always on call at night and on weekends and can be contacted by dialing the Health Service number. There are both male and female physicians on staff as well as a competent staff of college health nurses.

The service is available to all full-time students, undergraduate and post-graduate. Students are asked to bring their Medicare cards or equivalent. All information is completely confidential and forms no part of any University record.

Please refer to the *General Announcement* for further details.

OFFICE OF THE DEAN OF STUDENTS

The Dean of Students has the responsibility for the provision of and the coordination of all student services and works closely with the Students' Society in the interests of all students. The Office of the Dean of Students maintains an "open-door" policy and students are invited to make use of these services at any time.

Location: 3465 Peel St.
General Information: 392-5364

STUDENT COUNSELLING SERVICE

This office provides a place where students of all faculties may discuss any problem confidentially. Among the services offered are individual and group counselling, human sexuality clinic, human awareness groups, psychological assessment, vocational testing, effective reading and study skills

courses, educational and career planning and the Career Information Library. The service is free to all McGill students.

Location: 522 Pine Avenue West
General Information: 392-5119
Hours: 9:00 a.m. – 5:00 p.m.

EDUCATION COUNSELLING CENTRE

Location: Room B-133
Faculty of Education
3700 McTavish Street
Telephone: 392-8889 or 392-8882

Open between the hours of 9:00 a.m. – 5:00 p.m. weekdays or in the evenings by special appointment.

The Department of Counsellor Education at McGill University provides free counselling services at their Counselling Centre. These services include educational and vocational counselling, counselling for social adjustment and emotional problems, group counselling, testing, and referral to other agencies.

The policy of the Counselling Centre is directed toward providing a place for individuals to discuss their vocational, personal, and educational problems in a confidential, understanding atmosphere. The director and his staff have the belief that any concern that one may have is worth listening to and discussing.

7.3 GRADUATE DEGREE PROGRAMS

(M.Ed., M.A., D.Ed., Ph.D.) Through the Faculty of Graduate Studies and Research, the University offers a number of graduate degrees in Education. Many of these programs may be taken through full-time or part-time study in the evenings and Saturday mornings, and/or during the Summer Session.

The M.A. degree provides opportunities for suitably qualified teachers to deepen their knowledge and to gain some facility in research in a major area of education. At present the areas in which students may elect to specialize are Educational Administration, Comparative Education, Educational Psychology, Counsellor Education, Physical Education, History and Philosophy of Education. Students complete their degree by presenting a thesis in the area of their specialization.

The structure of the M.Ed. degree is different since its purpose is to enable candidates to gain added competence in a professional field, e.g., in the teaching of a specific school subject or in counselling, administration, special education or reading. The courses leading to M.Ed. degrees in teaching subjects such as mathematics or geography are taken partly in the subject department concerned and partly in the Faculty of Education. There is no formal thesis in the M.Ed. degree programs but students may submit a paper or project-report as part of their work, or, in some cases, they may have a period of internship.

M.Ed. degrees are currently available in:

Counsellor Education
Educational Psychology
Educational Administration
Special Education
Teaching of Reading
" " Chemistry
" " Biology
" " Home Economics
" " Geography
" " History
" " Mathematics
" " Physics
" " French as a Second Language
" " English as a Second Language

(Other Teaching Subjects may be offered if demand so warrants)

Awaiting University approval is an M.Ed. degree in Elementary Education.

The Faculty has one formal doctoral program. This is a professional degree in Counsellor Education which is intended to enable selected students who have already attained the level of the M.Ed. in Counsellor Education to continue their studies in breadth and depth and to carry out a significant inquiry to be reported as a doctoral thesis.

At present the Faculty of Education does not offer a formal program leading to a Ph.D. However, under the Regulation set out in paragraph 21 of the **Announcement of the Faculty of Graduate Studies and Research** it is possible for exceptionally well qualified candidates to proceed to the degree of Ph.D. by making direct application to the Dean of the Faculty of Graduate Studies and Research. Such candidates should have a very clear idea at the outset of the area of their prospective research. Currently the Departments of Social Foundations of Education, Educational Psychology, Educational Administration and English (Reading) have doctoral students under this provision. (A Ph.D. in Comparative Education and a D.Ed. in Educational Administration, are in the developmental stage). A Ph.D. program in Educational Psychology is awaiting government approval.

The admission requirements for most M.A. and M.Ed. programs are that candidates must hold an undergraduate degree from a recognized university, with second class standing in at least one continuation subject, and also a Permanent Québec Teaching Diploma or its equivalent. However, teacher certification requirements may be waived for candidates applying for M.A. programs in Physical Education, Comparative Education, History of Education, Philosophy of Education, Educational Psychology, and for the M.A. and M.Ed. in Counsellor Education. Candidates are advised that the awarding of a Master's degree does not certify them to teach in the Québec public schools.

For the D.Ed. degree in Counsellor Education, candidates must hold the degree of M.Ed. in Counsellor Education of McGill University, or its equiva-

lent, and have maintained a good second class standing in the degree. In addition, applicants must supply certain personal and educational data, take certain tests, and submit to an interview procedure. For candidates who do not meet all of the above requirements, courses of qualifying study may be prescribed.

Further specific requirements for particular degrees, and other information, should be sought, before an application is made, from the

Director of Graduate Studies,
Faculty of Education
3700 McTavish Street
Montreal, PQ. H3A 1Y2
Canada.

NOTE I. Summer session and Winter session candidates in Counsellor Education and Educational Administration are required to apply by March 1. Other candidates applying for admission for the first time and wishing to start in the Summer Session must apply before April 1, and those interested in commencing studies in the Fall must apply by July 3. Application in some programs will close prior to these deadlines when all places have been filled.

NOTE 2. Admission to the Faculty of Graduate Studies and Research for graduate programs in Education is granted by the Dean of the Graduate Faculty on the basis of undergraduate record and satisfactory professional training. Admission to the appropriate courses is granted by the individual departments of the Faculty of Education, and, where appropriate, by the departments concerned in other Faculties in consultation with the Faculty of Education.

7.4 CENTRE FOR LEARNING AND DEVELOPMENT

The Centre is an independent University unit having the overall goal of helping to improve learning and teaching in higher education. Most of its academic staff are cross-appointed in the Faculty of Education. In addition to its service role to faculty and the University, the Centre can accommodate a small number of graduate students interested in making use of the Centre as a unique site for research in instructional development, evaluation, and educational innovation. Such arrangements are most often made through programs in Educational Psychology, but have been possible through other programs as well.

The Centre is located in the Macdonald Chemistry Building. For more information please telephone 392-5273.

7.5 MISCELLANEOUS

CERTIFIED TRANSCRIPTS OF STUDENT'S RECORD

Transcripts of academic results may be procured from the Registrar's Office on application. The charge for this service, which is payable in advance, is $2.00 for the first copy and .50 cents for each additional copy made at the same time.

QUEBEC TEACHER CERTIFICATION

(The following is provided for general information purposes only. To the best of our knowledge the information was correct as at press time but is subject to change. For comprehensive and further information please refer to the relevant Statutes.

Teacher Certification in Canada is a Provincial responsibility. McGill University offers approved programs which the Government of Québec accepts for initial Teacher Certification.

These programs are:

McGill Diploma in Education
Bachelor of Education

Upon satisfactory completion of one of the approved programs, the Government issues a "Permit to Teach" showing the level and area of concentration. This "Permit to Teach" is normally valid for five years. If the holder of such a Permit requires a permanent Teaching Diploma valid in Québec, he must complete two years of satisfactory teaching in Québec during the validity of the Permit. If the holder of such a Permit or of a permanent Diploma wishes to teach in another Province or in another country he must apply directly to the Teacher Certification Agency in the relevant Province or Country. Similarly, teachers from other Provinces or Countries who wish to teach in Québec must apply to the competent authorities in Québec:

Teacher Certification & Probation Service,
275 rue de l'Eglise
Québec, PQ. G1R 6G7

In order to be eligible for a "Permit to Teach" candidates must be either Canadian Citizens, or Landed Immigrants, or must possess a Work Permit. To be eligible for a permanent Québec Diploma it is necessary to be a Canadian Citizen.

In addition to meeting these requirements, candidates for Teacher Certification must be recommended by McGill University in each of the following areas:

1. Adjustment of the personality for teaching
2. Command of the language of instruction
3. Theoretical knowledge in the field of psychopedagogy
4. Aptitude as a classroom practitioner
5. Academic competency in the area of concentration
6. Understanding of the Québec educational system

Regulation No. 4 of the Québec Department of Education "Respecting the Permit and the Licence to Teach" was approved by an Order-in-Council

Number 592, March 30, 1966, and is reproduced below:

1. Authorization to teach at the levels of study governed by the regulations of the Minister of Education shall be awarded by the Minister and shall first be in the form of a permit to teach and later in the form of a licence to teach.
2. The permit to teach shall be awarded to every candidate who, after the thirteenth year of study or its equivalent, has successfully completed an approved training program at a recognized institution.

The duration and the nature of this program shall vary according to the level and the area of teaching selected by the candidate.

However, this program shall include, at the minimum, one year or the equivalent of psychology, teaching methods and classroom practice.

3. The permit shall be valid for a period of five years. It shall confer the right to teach during any two of these five years in an institution recognized for the purposes of the present regulation. Under exceptional circumstances, this right may be extended for one year.
4. The licence to teach shall be awarded to the holder of a permit who, having taught for two years in accordance with section 3, is deemed competent.
5. For the application of the present regulation, the Minister of Education shall appoint a Teacher Education Committee which he shall consult regarding the matters enumerated in section 6.

The members of the committee shall be appointed for a definite period. One-third of the members shall be appointed after consultation with the most representative of teachers' associations or organizations, one-third shall be appointed after consultation with institutions at which approved teacher-education programs are provided.

6. Subject to the provisions of section 28 of the Superior Council of Education Act, the Teacher Education Committee shall be responsible for recommending to the Minister criteria relative to the following matters:
   a) The recognition of institutions at which the holder of a permit may teach;
   b) The supervision of the teaching performance of the holder of a permit to teach;
   c) The competence which the holder of a permit must demonstrate in order to obtain a licence to teach and the manner of evaluation of this competence;
   d) The suspension or revalidation of a licence to teach;
   e) The approval of teacher-education programs;
   f) The recognition of institutions at which teacher-education programs are provided;
   g) Refresher courses for teachers and the upgrading of their qualifications.

The committee shall also be responsible for making recommendations concerning the nomenclature and terminology of permits and licences to teach.

7. The holder of a teaching diploma granted under former regulations shall retain the rights conferred by such diploma.
8. The present regulation shall come into force, in whole or in part, on the dates to be determined by the Minister.

LIBRARY AND CURRICULUM LABORATORY

The Education Library, located on the first floor of the Faculty of Education Building, has a collection of approximately 100,000 books, journals, microfilm and microfiche on Education and related subjects, as well as books on subjects taught in schools. The Curriculum Laboratory, adjoining the Library, has about 30,000 items including school text books, a collection of children's literature and audio-visual materials such as film strips, overhead transparencies, records, cassette tapes, kits, and pictures. A mini drop-in centre consisting of 24 carrels with a variety of audio visual equipment provide viewing, recording and listening facilities for modular courses. Previewing of teaching aids is also done in this section of the Lab.

There is a Physical Education library in the Currie Gymnasium stocking books and journals on games, calisthenics, health and other related topics.

Education Library Hours

Monday to Friday (8:30 a.m. – 10:00 p.m.)
Saturday (8:30 a.m. – 1:00 p.m.)

Curriculum Laboratory

Monday to Friday (9:00 a.m. – 5:00 p.m.)

Physical Education Library

Monday and Wednesday (8:00 a.m. – 8:00 p.m.)
Tuesday, Thursday and Friday (8:00 a.m. – 4:15 p.m.)

Education students may use the main Library, McLennan, the Redpath Undergraduate Library as well as other McGill branch libraries. However hours may differ, in different libraries. Refer to the *General Announcement* for further details.

EDUCATIONAL MEDIA CENTRE

The Educational Media Centre exists to serve both students and staff in their requirements for media service or instruction within the Faculty of Education. Service functions include: equipment distribution; preparation of instructional materials; television recording and playback; consultation. Teaching functions include: small group media workshops; equipment operation instruction; micro-teaching; and consultation. The Centre also offers credit courses which include: Introduction to Educational Media; Film Production; Educational Television. The Centre is located on the first floor of the Faculty of Education building.

READING CENTRE

The McGill Reading Centre is a training facility for the Faculty of Education Graduate Program in Reading Education. It is located on the B1 level of the Faculty of Education building. From October to March and during the summer session, the Centre serves the general community as a referral, diagnostic and remedial education facility. The Centre also provides college-level speed and study skills courses for McGill students (and others at fee). School personnel are welcomed as visitors. Visitation to schools for consulting on programs or specific problems may also be available.

During the summer, the Reading Centre operates a reading instruction program in a local elementary school. Information may be obtained by calling 392-8888.

STUDENT PLACEMENT – CANADA MANPOWER CENTRE

Location: 762 Sherbrooke St. W.
Telephone: 283-4411

The Student Placement Office, in cooperation with the School Boards wishing to participate, arranges for the distribution of application forms for teaching posts and also schedules an Interview Day, usually in April, when School Boards may interview prospective Education graduates. The office also distributes Registration Forms for the Québec Teacher Placement Bureau. A number of School Boards regularly inform the Placement Office of teaching vacancies. All potential and recent graduates are encouraged to make full use of the centre's services.

THE McGILL JOURNAL OF EDUCATION

The aims of the McGill Journal of Education, as expressed in its first editorial in 1966, are to "provide a useful service to the educational fraternity as a whole and especially to our colleagues in the Province of Québec", and "to serve as a stimulus for educational discussion, a forum for ideas, an outlet for theoreticians and those engaged..at all levels..in the practical business of teaching." The first issue of the Journal focussed on the concept of Activism, a key educational philosophy expressed in the Parent Report. Subsequent issues have continued to address ideas and developments relevant to Québec and to the educational community as a whole. For example, the Spring, 1975 issue was designed as an "Olympic" special and focussed on developments and research in the field of physical education; the Fall, 1976 issue addressed developments and research in the Social Studies; and the Spring, 1977 issue deals with "Educational Futuras", a topic of both provincial and international concern. The Journal is regularly published twice a year in the Spring and Fall. Additional issues may also be published during the year. Subscription rates for students: 3 years – $4.50, Single copies $2.50. Subscriptions, payable to the McGill Journal of Education, should be addressed to the Circulation Department, McGill Journal of Education, 3700 McTavish Street, Montreal, PQ H3A 1Y2, Canada.

EDUCATION UNDERGRADUATE SOCIETY

The Education Undergraduate Society, located beside the cafeteria, in room B185, is the students' voice within faculty. The Society's primary purpose is to serve and to inform the students. It also attempts unification of students through sponsorship of activities, such as:

the tutoring program (students teaching in under-privileged areas)
Teachers' Convention
Conference participation
Intramural athletics

and many more. We encourage you to get involved. Make your opinions known. Drop by B185 or call 392-4448.

POST GRADUATE STUDENTS' SOCIETY

David L. Thomson House is operated by the Post Graduate Students' Society as a social centre for students in the Faculty of Graduate Studies and Research, and for students in the One-Year Diploma Program in the Faculty of Education. It is situated just below the Education Building at 3650 McTavish Street.

STUDENT SERVICES

CALENDAR FOR SESSION 1977-78

1977

Sept. 6, Tues. and Sept. 7, Wed.	Pre-registration student counselling.
Sept. 8, Thurs.	Registration in the Faculty of Engineering. 8:30 a.m. – 12 noon, 1 p.m. – 5 p.m.
Sept. 12, Mon.	Lectures begin in the Faculties of Arts, Education, Engineering, Management and Science.
Sept. 27, Tues.	Late registration in all Faculties.
Sept. 30, Fri.	Last day for fall term course changes.
Oct. 10, Mon.	Thanksgiving. Lectures cancelled.
Nov. 8, Tues.	Fall Convocation.
Nov. 18, Fri.	Last day for withdrawal from A courses.
Dec. 9, Fri.	Last day of fall term lectures in the Faculty of Engineering.
Dec. 12, Mon. to Dec. 23, Fri.	Examinations in fall term courses in the Faculty of Engineering and Management.

1978

Jan. 3, Tues. to Jan. 13, Fri.	Examinations in fall term courses in all programs in Arts, Science and Education.
Jan. 13, Fri.	Winter term registration for new students in Arts, Education, Engineering, Management and Science.
Jan. 16, Mon.	Winter term lectures begin in the Faculties of Arts, Education, Engineering, Management and Science.
Feb. 3, Fri.	Last day for winter term course changes.
Feb. 10, Fri. and Feb. 11, Sat.	Mid-term weekend holiday (Montreal Campus) Lectures cancelled.
Mar. 23, Thurs.	Last day for withdrawal from B courses.
Mar. 24, Fri. to Mar. 27, Mon.	Easter. Administrative offices will be closed from 5:00 p.m. on Thursday, March 23, to 9:00 a.m., Tuesday, March 28.
Apr. 14, Fri.	Last day of lectures in the Faculty of Engineering.
Apr. 17, Mon. to May 5, Fri.	Examinations in all programs in the Faculties of Arts, Education, Engineering, Management and Science.
May 22, Mon.	Victoria Day. Administrative Offices will be closed.
June 6, Tues. and June 7, Wed.	Convocations.

The Faculty has renumbered most of the courses it offers as of July 1, 1976. A detailed list of old course numbers and the equivalent new numbers may be found in Section 7.

1 ADMINISTRATIVE OFFICERS AND FACULTY COMMITTEES

1.1 ADMINISTRATIVE OFFICERS

ROBERT E. BELL, C.C., B.A., M.A.(U.B.C.), Ph.D.(McG.), D.Sc.(U.N.B.,Laval,Montr.), LL.D.(Tor.), D.C.L.(Bishop's), F.R.S., F.R.S.C.
Principal and Vice-Chancellor

EIGIL PEDERSEN, B.A. (Sir G. Wms.), M.A.(McG.), Ed.D.(Harv.) **Vice-Principal (Academic)**

LEO YAFFE, B.Sc., M.Sc.(Man.), Ph.D.(McG.), F.C.I.C., F.A.P.S., F.R.S.C.
Vice-Principal (Administration)

ALLAN C. McCOLL, D.F.C., B.Com.(McG.), C.A.
Vice-Principal (Finance)

E.J. STANSBURY, M.A., Ph.D.(Tor.)
Vice-Principal (Planning)

W.F. HITSCHFELD, B.A.Sc.(Tor.), Ph.D.(McG.), F.R. Met.S. **Vice-Principal (Research)**

A.C. BLACKWOOD, B.Sc.,M.Sc.(Alta.), Ph.D.(Wis.), F.R.S.C. **Vice-Principal (Macdonald College)**

COLIN M. McDOUGALL, D.S.O., B.A.(McG.)
Secretary-General

JEAN-PAUL SCHULLER, B.A.(Ott.) **Registrar**

PEGGY SHEPPARD, B.Ed.(McG.), B.A.(Sir G. Wms.) **Director, Admissions Office**

1.2 MEMBERS OF FACULTY

GERALD W. FARNELL, B.A.Sc.(Tor.), S.M.(M.I.T.), Ph.D.(McG.), Eng., F.I.E.E.E. **Dean**

WILLIAM BRUCE, B.A.Sc., M.A.Sc.(Tor.), Eng., M.E.I.C., M.A.S.M.E.
Associate Dean, Student Affairs

WILLIAM G. DAVENPORT, B.A.Sc., M.A.Sc (U.B.C.), Ph.D.(Lond.), D.I.C., Eng., M.C.I.M.
Associate Dean, Academic

TOMAS J.F. PAVLASEK, B.Eng., M.Eng., Ph.D.(McG.), Eng., M.E.I.C., M.C.S.E.E., S.M.I.E.E.E. **Associate Dean, Planning and Development**

DEREK DRUMMOND, B.Arch(McG.), M.R.A.I.C.
Director, School of Architecture

GEORGE MARSAGLIA, B.Sc.(Colorado), Ph.D.(Ohio State)
Director, School of Computer Science

W.J. MURRAY DOUGLAS, B.Sc.(Qu.), M.S.E., Ph.D.(Mich.) M.C.S.Ch.E., F.C.I.C.
Chairman, Department of Chemical Engineering

RICHARD G. REDWOOD, B.Sc.(Eng.) (Bristol), M.A.Sc.(Tor.), Ph.D.(Bristol), Eng., M.I.C.E., F.I. Struct. E., M.C.S.C.E.
Chairman, Department of Civil Engineering and Applied Mechanics

PEET SILVESTER, B.S.(Carnegie), M.A.Sc.(Tor.), Ph.D.(McG), Eng., M.I.E.E.E., M.S.I.A.M.
Chairman, Department of Electrical Engineering

MICHEAL P. PAIDOUSSIS, B.Eng.(McG.), Ph.D.(Cantab.),Eng.
Acting Chairman, Department of Mechanical Engineering

WILLIAM M. WILLIAMS, B.Sc., M.Sc.(Bristol), Ph.D.(Tor.), Eng., M.C.I.M., M.I.M.
Chairman, Department of Mining and Metallurgical Engineering

P.J. HARRIS B.Eng.(Man.), M.Eng., Ph.D.(McG.), Eng. **Secretary of Faculty**

IDA GODEFROY
Administrative Assistant to the Faculty

1.2.1 Emeritus Professors

LOUIS JOSEPH ARCAND, B.Sc., M.Eng.(McG.), Eng., Q.L.S., M.C.I.S., M.A.S.P.
Emeritus Professor of Civil Engineering.

FREDERICK STANLEY HOWES, B.Sc., M.Sc.(McG.), Ph.D.(Lond.) D.I.C., Eng., F.I.R.E.
Emeritus Professor of Electrical Engineering.

JOSEPH L. deSTEIN, B.Sc.(Sask.), M.Eng.(McG.), Eng., M.E.I.C.
Emeritus Professor of Civil Engineering.

ROBERT G.K. MORRISON, B.A.Sc.(Tor.), Eng., M.C.I.M., M.A.I.M.E.
Emeritus Professor of Mining Engineering.

1.3 STANDING COMMITTEES OF THE FACULTY

ACADEMIC COMMITTEE

Associate Dean (Academic) (Chairman), Professors J.E. Gruzleski, M.R. Kamal, M.D. Levine, T.H. Merrett, M.P. Paidoussis, S.B. Savage, R. Zuk
Three undergraduate students, to be named.

COMMITTEE ON ADMISSION TO UNDERGRADUATE PROGRAMS

Associate Dean (Student Affairs) (Chairman), Professors D. Drummond, J.C. Osler

COMMITTEE ON ADVANCED STUDIES

Professor R.I. Guthrie (Chairman), Professors P. Bélanger, J.R. Grace, P.J. Harris, B. McCloskey, B.C. Paige, J. Provan. Two graduate students, to be named.

AGRICULTURAL ENGINEERING COMMITTEE

Professor J.R. Ogilvie (Chairman), Professors P.H. Schuepp, R.S. Broughton from the Faculty of Agriculture; Professors J.M. Forde, R.D. Japp, M.E. Weber from the Faculty of Engineering.

COMMITTEE ON COLLEGE AND SCHOOLS LIAISON

Professor M.E. Weber, (Chairman), Professors D.J. Burrage, C. Murphy, P. Sijpkes, F. Spitzer, G. Thomas, W.T. Thompson. The Associate Dean (Student Affairs) and the Director of College and Schools Liaison, ex-officio. Two undergraduate students, to be named.

HONORARY DEGREES COMMITTEE

The Dean (Chairman), Professors J. Bland, G.L. d'Ombrain, W.M. Telford. One undergraduate and one graduate student, to be named.

LIBRARY COMMITTEE

Professor S.B. Savage (Chairman), Professors T. Boyle, R. Collins, J.H. Lee, M.D. Levine, T.H. Merret, W.T. Thompson. Two undergraduate and one graduate student, to be named.

NOMINATING COMMITTEE

The Dean (Chairman), Professors B. Anderson, W. Bruce, J. Dealy, P.J. Harris, O.G. Jensen, M.D. Levine, C. Paige

COMMITTEE ON PHYSICAL PLANNING

Associate Dean (Planning and Development) (Chairman), Directors, Schools of Architecture and Computer Science, Chairman, Engineering Departments, or their delegates, two undergraduate students to be named. The Associate Dean (Academic), ex-officio.

COMMITTEE ON SCHOLARSHIPS, BURSARIES & LOANS

Professor G.W. Smith (Chairman), Professors W. Bruce, R.G. Redwood.

COMMITTEE ON STANDING

Associate Dean (Student Affairs) (Chairman), Director, School of Architecture, Chairmen, Engineering Departments, Senior Records Officer, (ex-officio).

2 THE FACULTY

2.1 HISTORICAL NOTE

The Faculty of Engineering celebrated its centenary during the 1971-72 session. It began operations as the Department of Practical and Applied Science in the Faculty of Arts offering degree programs in Civil Engineering and Surveying, Mining Engineering and Assaying, and Practical Chemistry. Diploma courses had been offered from 1859 and by 1871, the staff and enrolments had increased sufficiently to justify the creation of the Department. Continued growth led to the formation of the Faculty of Applied Science in 1878 and by 1910 there were ten degree programs offered, including Architecture and Railroad Engineering. Subsequent changes in the overall pattern of the University led to the creation in 1931 of the Faculty of Engineering with a departmental structure very similar in name to that which exists at the present time.

2.2 THE FACULTY TODAY

The current structure of the Faculty includes five engineering departments and two schools:

The Departments

Chemical Engineering
Civil Engineering and Applied Mechanics
Electrical Engineering
Mechanical Engineering
Mining and Metallurgical Engineering

The Schools

Architecture
Computer Science

The Faculty serves approximately 1400 undergraduate students and 400 graduate students with a wide variety of academic programs.

Undergraduate programs leading to professional bachelor degrees are offered in all segments except the School of Computer Science. These programs are designed to qualify the graduates for immediate employment in a wide range of industries and for membership in the appropriate professional bodies. Additionally, a non-professional degree is offered in the School of Architecture for those who plan to work in related fields not requiring professional qualification. The curricula are also structured to provide suitable preparation for those who plan to continue their education in post-graduate studies either at McGill or elsewhere.

The academic programs, which are described in detail in Section 5, are divided into a core and an elective section. The core programs emphasize those unchanging basic principles which permit our graduates to keep abreast of progress in

technology throughout their careers. Exposure to current technology is provided by the wide variety of technical elective courses which allow our students to pursue in depth a particular field of interest. Free electives provide the opportunity for study in non-technical fields. The Faculty recognizes the managerial functions of a large proportion of engineers and maintains a close liaison with the Faculty of Management. A Sub-program in Management has been established as described in Section 6.

Post-graduate programs leading to master's and doctoral degrees are offered in all sectors of the Faculty. Numerous areas of specialization are available in each of the departments and schools. All post-graduate programs are described in the Announcement of the Faculty of Graduate Studies and Research.

The School of Computer Science concerns itself with a broad range of activities associated with the design, operation and application of computer facilities. A variety of courses appropriate to these areas is available to undergraduates. Specialized degree programs are offered only at the post-graduate level following undergraduate studies in engineering, mathematics or certain branches of science. Guidance in the choice of Computer Science electives is given in Section 6.

2.3 SPECIAL FACILITIES AND RELATED PROGRAMS

2.3.1. McGill Computing Centre

The Computing Centre provides information processing facilities for McGill instructional, research and administrative purposes. Current equipment includes two IBM 370 Model 158 computers. One is utilized primarily as a time-sharing system with terminals at many locations on campus. The other computer is utilized primarily for batch processing with card input and printed output available at several locations on campus and at Macdonald College.

All engineering undergraduate students receive an introductory course in computing in the early stages of their studies and subsequently use the computer for the solution of engineering problems in other courses. Post-graduate students and staff use the facility extensively for research purposes.

2.3.2 Brace Research Institute

The Brace Research Institute of the Faculty of Engineering was founded in 1959 by the generosity of Major Brace to investigate ways of helping people in arid zone areas. The Institute has concentrated on problems affecting individuals and small communities. The Institute functions in two parts: research operations and field operations.

The research activity is aimed at developing technology which will utilize local resources of material and energy to improve living conditions in arid areas. The present areas of research are concerned principally with solar energy, wind energy and energy from biomass. Some examples of research activities are: evaluation of a solar-powered closed cycle engine for pumping water and generating electricity; investigations with the transformation and storage of solar energy as heat; and design of windmill and windmill-to-pump transmission systems. A study of biogas generation and storage has been initiated in collaboration with MacDonald College.

The Field Operation, with headquarters at the MacDonald campus, exists to advise governments and communities on how to best use the newly developed expertise of the Institute. This expertise currently relates mainly to water desalination plants, solar heaters, cookers and crop dryers; wind energy; storage of heat in solar ponds; and the design of greenhouses to conserve water and energy.

2.3.3 Mineral Industry Research Institute

This Institute which was established at Mont St. Hilaire by the Department of Mining and Metallurgical Engineering has excellent facilities for the study of noise, vibration, heat, cold, dusts, illumination and other physico-chemical agents encountered in the working environment. The program of research covers a wide range of activities and much of the work at the Institute is of an interdisciplinary nature.

2.3.4 Agricultural Engineering

The Faculty of Engineering cooperates with the Faculty of Agriculture in providing courses of instruction for a curriculum in Agricultural Engineering to *meet requirements for a degree awarded in the Faculty of Agriculture.* The first semester of the penultimate year of the program is given by the Faculty of Engineering on the Montreal campus. Details of the curriculum are given in the *Announcement of the Faculty of Agriculture.*

2.3.5 Biomedical Engineering Unit

Post-graduate training in Biomedical Engineering is supervised in two ways: (i) by the Biomedical Engineering Unit and (ii) by individual faculty members working in collaboration with their colleagues in the Faculty of Medicine.

The Biomedical Engineering Unit is in the Faculty of Medicine. Graduate students are registered through appropriate departments in the Faculty of Engineering and elsewhere. Research interests of the Unit fall into two main categories: experimental and theoretical studies of biological systems and computer applications in medicine and medical research. A computer network, linking laboratory computers in the Medical Faculty, is under development.

Individual staff projects with the Faculty of Engineering include such topics as ECG analysis, health care system modelling, pattern recognition applied to medical problems, and studies of biomechanics and biomaterials aspects of normal and prosthetic human joints.

Engineering undergraduates or graduates from any specialty who are motiviated towards the biomedical applications of engineering should contact the Chairman of their department or the Director of the Biomedical Engineering Unit.

2.3.6 School of Urban Planning

The School of Urban Planning, under the Faculty of Graduate Studies and Research, is located in the McConnell Engineering Building. The objective of the School is to produce qualified professional urban planners for the public and the private sector. Students are expected on completion of the two and one half year program of studies to have acquired basic planning skills, a broad view of urban studies and a field of specialization. To achieve these objectives, the teaching and research activities in the program are organized within the context of the broader urban studies and research effort at McGill. The degree offered is the Master of Urban Planning. Students from engineering who qualify for graduate level studies are encouraged to investigate this second professional degree program.

Director: David Farley, B. Arch.(McG.),M.C.P.,M.Arch.(Harv.)
Associate Professor: Jeanne M. Wolfe, B.Sc.(Lond.), M.Sc.(W.Ont.), M.A.(McG.)
Lecturer: Ian Skelton
Visiting Professor: Blanche L. Van Ginkel
Auxiliary Lecturers: Morris Charney; Jane M. Glenn; Lloyd Sankey; Dominique Achour; Glenn Drover; Mark London; James McGregor.

2.4 LIBRARY FACILITIES

The University has numerous libraries serving a wide variety of needs. Those specifically serving Engineering and Architecture are the Engineering Library, the Physical Sciences Library, and the Blackader Library of Architecture.

The Engineering Library is located on the Main Floor of the Macdonald Engineering Building. It contains over 33,600 volumes with 776 serial subscriptions. The library serves the Civil Engineering, Electrical Engineering, and Mechanical Engineering Departments, and the School of Computer Science. It has subject collections in Aeronautics, Applied Mathematics, Management, and Soil Mechanics. The Library is a depository for selected NASA and AGARD publications.

Material on Chemical, Mining and Metallurgical Engineering is available at the Physical Sciences Library which also serves the Departments of Chemistry, Geological Sciences, and Physics and is located in the Frank Dawson Adams Building.

The Blackader Library of Architecture, on the third floor of the Redpath Library, houses approximately 30,000 volumes. The subjects of this collection cover landscape architecture, town planning and urban design, history of architecture, architectural planning, building construction, housing, fine arts, and applied arts. The library subscribes to 210 periodicals in various languages. The Blackader Library has its own Rare Books Department with valuable first editions in the fields of architecture and the fine arts. On the fourth floor of the building is a unique collection of original drawings and photographs of old Canadian architecture.

More details on library services are given in the Engineering Library Handbook available at the Engineering Library circulation desk.

3 GENERAL INFORMATION

3.1 ADMISSION REQUIREMENTS

Admission to the Faculty's undergraduate programs occurs twice per year, at the start of the Fall semester and the start of the Winter semester. It is based on one of the following qualifications:

The diploma of Collegial Studies (DCS or DEC) in the Physical Sciences program at a CEGEP in the Province of Quebec.
or
Appropriate academic qualifications achieved elsewhere.

Canadian applicants from provinces other than Quebec who have completed Grade 12 (Grade 13 Ontario or first year university in Newfoundland) and who have a strong foundation in mathematics (including a course in trigonometry or functions), physics and chemistry may be granted admission to a four year (eight semester) Bachelor of Engineering program.

Enrolment in the School of Architecture is limited and the selection of applicants is based on academic standing. Applicants who are not accepted for Architecture and are qualified for Engineering will be offered admission to a Department of Engineering.

Students having taken courses at another University may apply for admission with advanced standing. A maximum of 40 credits may be allowed towards the B.Eng. degree, 40 credits towards the B.Sc.(Arch.), and 60 credits towards the B.Arch. degree.

Mature Student Admission

Residents of Canada who will be 23 years of age or older by September 1 (for admission to the Fall Session) or January 1 (for admission to the Winter Session) and who lack the academic background normally required for admission may apply for entrance as mature students.

Individuals interested in being considered for entrance under this policy should contact the Admissions Office for further information.

3.2 APPLICATION

Application should be made to the Director, Admissions Office, F. Cyril James Building, McGill University, 845 Sherbrooke Street, West, Montreal, Quebec, H3A 2T5

Applications for admission to the Fall semester should be received before March 1. Applications after this date will be considered only from Canadian residents and then only if places are available.

Applications for admission to the Winter semester must be received before November 1.

All students in the Faculties of Arts, Science and Management at McGill University and students at Macdonald College of McGill University are eligible to apply for a transfer to the Faculty of Engineering. These students should consult the Student Affairs Office of the Faculty of Engineering.

3.3 REGISTRATION

Registration and late registration dates will be announced; see the Calendar of Dates for the 1977-1978 session.

An additional fee of $25 is required for late registration. Applications for remission of this fee will be considered only in cases of illness or other family emergency. Students who are unable to register on the official date and must register late are required to report in person at the Student Affairs Office of the Faculty immediately they commence attending classes.

All students intending to register for elective courses in other Faculties should consult the particular department prior to registration to ensure a place when enrolment is limited, or to be assigned to an appropriate section when necessary.

Students taking courses in the Centre for Continuing Education for Credit must report to the Centre, presenting a completed form which is available at the Faculty Student Affairs Office or at the Centre.

Course Changes

A student may change a course for which he/she has registered provided this is done before the end of the third week of the semester.

Course Withdrawal

A student may withdraw from a course without academic penalty provided he/she accomplishes this before the end of the tenth week of the semester. Beyond this time his/her name will appear on the examination lists and, in the event of the student not taking the examination, he/she will be allocated a KF grade (see Section 4.3).

Course Verification

Accurate data is essential to the operation of the Student Record System since the preparation of examination lists and computation of academic standing are done automatically from these records. In the last resort, only the individual student knows if his/her course record is correct. Accordingly, there is a Course Verification Period each semester (usually the sixth and seventh weeks of the semester) during which each student must visit the Faculty Student Affairs Office to verify his/her record

3.4 COUNSELLING

New students are required to seek academic counselling about their programs prior to the registration date from the Department in which they plan to study. Additional information may be obtained by calling:

General	392-5860
	392-5878
	392-5880
Architecture	392-5409
Chemical Engineering	392-5432
Civil Engineering	392-5963
Computer Science	392-8275
Electrical Engineering	392-5415
Mechanical Engineering	392-5473
Metallurgical Engineering	392-5706
Mining Engineering	392-5430
Student Aid	392-5258

3.5 FEES

Fees are computed at the rate of $19.00 per credit plus the appropriate Student Services and Student Society's fees. Students should either consult the *General Announcement* or enquire at the Registrar's Office for details of special fees and penalties, graduation fee and regulations concerning withdrawal.

3.6 STUDENT ACTIVITIES

The campus offers a wide variety of extra-curricular activities for students. All are urged to participate in those of their choice and within the limits of their interests and abilities. Many of these are organized within the Faculty under the auspices of the Engineering Undergraduate Society, and/or the Architectural Undergraduate Society. Both of these organizations publish handbooks describing their operations and the activities of various clubs and

societies within the Faculty. All undergraduate students automatically become members of the EUS or the AUS, as appropriate.

Student Services

A variety of student services is available. For details see the *General Announcement.*

3.7 ACADEMIC CREDIT TRANSFER AGREEMENT

Regular full-time undergraduate students and regular graduate students registered at McGill may, with the written permission of the Dean of the Faculty, register for up to 40% of a full load in each academic year at any Quebec University. These courses, weighted, graded, and successfully completed according to the standards of the university giving the courses, will be fully recognized by McGill for the purpose of the degree for which the student is registered. Students wishing to take advantage of this agreement should consult the Associate Dean (Student Affairs) for details, and are informed that this agreement is subject to the following conditions:

(i) that courses in the core program must be taken at McGill;

(ii) that the other universities concerned may, at their discretion, refuse the registration of a student for any of their courses or programs;

(iii) that the obligation of the student to follow the curriculum laid down by McGill is not affected;

(iv) that the student is responsible for ensuring that his/her timetable at McGill permits him/her to take courses at any of the other universities concerned;

(v) that the universities concerned are not responsible for special arrangements in cases of examination timetable conflict.

Students may take advantage of this agreement by completing the TRANSFER CREDIT form available from the Registrar's Office. This form permits the student to collect the required academic authorizations and that of the Director of Finance; ensures automatic fee transferral from the home university to the host university; and ensures the automatic reporting of marks and credits to the home university.

NOTE: Transfer credits are not calculated in the GPA or CGPA and the grades are not entered on the student's McGill transcript.

3.8 TRANSFER FROM OTHER FACULTIES OR PROGRAMS

Students wishing to transfer from another faculty to the Engineering Faculty may do so after consulting the department in which the student wishes to study. In consultation with the student advisor, credit for certain courses taken in other faculties or in other programs in engineering may be transferred to the new program. The transfer is completed only when the appropriate forms are completed and approved by the Associate Dean (Student Affairs). A maximum of 40 credits may be allowed towards the B.Eng. and B.Sc.(Arch.) degrees, and 60 credits towards the B.Arch. degree.

3.9 SUMMER SESSION

The University operates a Summer Session on an extremely flexible basis to meet the special needs of students. Numerous Arts, Science and Management courses are available and are described in the Summer Session Announcement. The demand for Engineering courses is small so that few are given. These may be arranged to meet special needs and may be too late for insertion in the Summer Session Announcement. Students should, therefore, consult the Departments regarding possible courses.

4 ACADEMIC REQUIREMENTS

4.1 QUEBEC SYSTEM OF EDUCATION

Post-secondary education for students proceeding to university degrees in the Province of Quebec is divided into two distinct levels:

(i) a collegial program normally of two years' duration following secondary studies, and

(ii) a university program of a minimum of six semesters' duration following completion of the collegial program.

The programs of the Faculty for the 1977-78 session are presented in the following pages.

4.2 DEGREES AND REQUIREMENTS FOR PROFESSIONAL REGISTRATION

Professional
Bachelor of Architecture
Bachelor of Engineering
Bachelor of Engineering (Honours)

Non-Professional
Bachelor of Science (Architecture)

The B.Eng. programs are fully recognized by the Accreditation Board of the Canadian Council of Professional Engineers and fulfill the academic requirements for admission to the provincial professional organizations. The B. Arch. program is recognized in all provinces as fulfilling the educational requirements for entry to the architectural profession.

Language Requirement for Professions

Quebec law now requires that candidates seeking admission to provincially-recognized Quebec professional corporations must posess a working knowledge of the French language, i.e. be able to communicate verbally and in writing in that language.

To demonstrate this capability, a candidate will normally be required to pass an examination set by the Régie de la langue française, unless he or she can show that three years of instruction in a French post-primary school have been completed. The professional corporation will require this proof of attendance or of succesful completion of the Régie examination.

This examination shall test the candidate's mastery of oral and written comprehension and expression in French. The contents may vary in accordance with the current terminological requirements of the profession or professional group. Examinations will take place four times a year, and they may be attempted an unlimited number of times.

In special cases where the candidate can clearly demonstrate to the Régie by means of an interview that a true mastery of French exists, the examination requirement may be waived.

Information on the testing program of the Régie may be obtained by writing to: Régie de la langue française, 800, Place Victoria, 16 étage, Montréal, Québec, H4Z IG8, Telephone 873-6571.

Students who need to acquire a functional level of proficiency in French may register in courses at either the French Language Centre, 3438 McTavish Street, Telephone 392-5727, for courses during the day, or at the Centre for Continuing Education, 772 Sherbrooke Street West, Telephone 392-4901, for courses in the evening.

Students already proficient in French but who wish to keep up practice may register in courses at the Department of French Language and Literature, 3460 McTavish Street, Telephone 392-4577, or at the Centre d'études canadiennes-françaises, 3475 Peel Street.

*McGill degrees and diplomas currently give access to corporations regulating the activities of the following professional groups:

Advocates
Agronomists
Architects
Chartered Accountants
Chartered Administrators
Chartered Appraisers
Chemists
Dentists
Dieticians
Engineers
Industrial Administration Accountants
Industrial Relations Counsellors
Licensed General Accountants
Notaries
Nurses
Occupational Therapists
Physicians
Physiotherapists
Psychologists
Social Workers
Speech Therapists & Audiologists
Urbanists
Vocational Guidance Counsellors

4.3 STUDENT PROGRESS

The session is divided into two semesters with examinations and evaluation of student progress at the end of each. The course promotion system is employed. Students are allocated a letter grade for each course taken. Their grade point average is computed as described below from a combination of the grade and the credit assigned to a course.

The basic requirement for the B.Eng. degree is completion, with a cumulative grade point average of 2.00 or better, of a department program while registered as a degree candidate. The normal workload is 15 to 18 credits per semester. A minimum of six semesters is required for completion of any program.

The non-professional B.Sc.(Arch.) degree is similarly structured with similar requirements. The professional B.Arch. degree requires a minimum of two additional semesters to complete the program.

A student must successfully complete the B.Eng. or B.Sc.(Arch.) programs within five years of entry. Candidates admitted to a lengthened program, or to a shortened program because of advanced standing, will have a correspondingly greater or lesser period in which to complete. Candidates entering the B.Arch. program must complete the degree requirements within two years. Extensions may be granted by the Committee on Standings in cases of serious medical problems or where other similarly uncontrollable factors have affected a student's progress.

The language of instruction is English, but students may write examinations, reports and essays in French.

Electronic calculators are normally permitted in examinations. Pre-prepared programs may be permitted in certain examinations in which event it is the examiner's responsiblity to ensure that no undue advantage accrues to the student employing such programs. Only battery operated calculators are permitted in examinations. Power supplies cannot be provided and it is the student's responsibility to see that the batteries are adequate and that the calculator is in good working order. Noisy calculators, such as mechanical and electromechanical types, are not permitted.

Letter Grades

A	Very Good
B	Good
C	Satisfactory
D	Conditional Pass
F	Failed
J	Unexcused Absence
K	Incomplete
KF	Incomplete (failed)
L	Deferred

Grades, A, B and C are permanent grades clearly indicating satisfactory results. Grade D is a permanent grade indicating marginal results which may be acceptable for peripheral courses but not for core courses required by the program. The classification of a course as core or peripheral depends on the individual student's program and will be decided by his department. Grade F is a permanent grade indicating unsatisfactory results. Category J indicates an unexcused failure to submit assignments or an unexcused absence from an examination. It is equivalent to an F grade.

In addition, a student may be assigned categories K, KF and L. Category KF indicates a deficiency which the student must clear in order to receive credit and is calculated as a zero in the grade point average. Upon completion of the course, the KF is replaced by a K and the appropriate grade and the grade point average is recalculated. Category K indicates a delay granted in completion of the course. The L category indicates a deferred grade because of medical or other valid reason. Although the K or L does not influence the grade point average, it remains as part of the student's record though they do not appear on transcripts.

Other categories which may appear on the student's record are Q(course continued in following term), W(permitted to withdraw without penalty), &&(grade not yet available). These have no influence on the student's grade point average.

Course Credit

The credit assigned to a particular course reflects the amount of effort it demands of the student. One credit normally represents three hours total work per week. This is in general a combination of lecture hours, other contact hours such as laboratory periods, tutorials and problem periods and personal study. As a guide the average division of time for a course is indicated in hours in the course listing after the course credit. For example 3(3-0-6) indicates a credit of three units consisting of three lecture hours per week, no other contact hours and six hours of personal study per week.

Grade Point Averages

Letter grades are assigned grade points according to the scheme A = 4, B = 3, C = 2, D = 1, F = 0, J = 0, KF = 0. Categories K and L are excluded from the calculation of the grade point average which is defined by the ratio

$$\frac{\Sigma \text{ (course credit x grade points)}}{\Sigma \text{(course credits)}}$$

Summation over all courses taken in one semester gives the semestrial grade point average (SGPA) while summation over all courses taken since entry into the program gives the cumulative grade point average (CGPA). All results are included when courses are taken more than once. Any courses taken which lie outside the program are classified as extra and do not affect the grade point average.

Standings

A student's standing is based on his CGPA according to the following criteria.

Satisfactory standing:
2.00 or better

Probationary standing:
1.20-1.99 first semester
1.50-1.99 subsequent semesters

Unsatisfactory standing:
less than 1.20 first semester
less than 1.50 subsequent semesters

Candidates in satisfactory standing may proceed with the following conditions:

(i) All core courses in which D or F grades were obtained must either be repeated successfully (grades A, B or C) or be replaced by an alternative approved course which is completed successfully.

(ii) All other courses in which F grades were obtained must either be repeated (grades A, B, C or D) at some point before graduation or be replaced by some alternative approved course which is completed successfully before graduation.

Candidates in probationary standing may proceed for one semester under the same conditions noted above but, in addition, must reduce their load to a maximum of 13 credits per semester and must achieve at the end of the semester either a CGPA of 2.00 or better or an SGPA of 2.50 or better. A student whose SGPA is 2.50 or better but whose CGPA is less than 2.00 may continue on probationary standing. Failure to achieve either of these grade point averages after the probationary semester will result in unsatisfactory standing.

Candidates with unsatisfactory standing must withdraw for at least one semester, after which they

may be considered for readmission by the Committee on Standings.

Repeated Courses

A student who fails to achieve the required results in a course must successfully repeat either it or a substitute course approved by his department. For students who fail prerequisite courses which are offered in only one semester, the departments responsible may, in appropriate cases, arrange 'reading courses' during the other semester or during the summer months. Such courses taken during a regular semester constitute a normal part of the candidate's work load which must be reduced correspondingly in the rest of its content.

Reassessment of a Grade

A student may request the reassessment of a grade by completing, within three months after completing the course, an application form available from the Student Affairs Office. Payment of the $10 fee must be enclosed with the application. If the grade is improved as a result of the reassessment, the fee is refunded.

4.4 COURSE NUMBERING SYSTEM

Detailed curricula are listed in the next section under the appropriate school or department. In each case, the courses are grouped under four categories which are common to all programs:

(1) required courses in subjects taught outside the department
(2) required courses in subjects taught inside the department
(3) elective courses in technical subjects to be selected according to rules which vary somewhat from department to department, and
(4) elective courses of a general nature which permit the student to extend his education in areas of relevant personal interest.

A core program comprises all required courses. The course numbers indicate the department of origin by the first three digits as follows:

Engineering Departments

300 – Faculty (non-departmental)
301 – Architecture
302 – Chemical Engineering
303 – Civil Engineering and Applied Mechanics
304 – Electrical Engineering
305 – Mechanical Engineering
306 – Mining and Metallurgical Engineering
308 – Computer Science

Science Departments

180 – Chemistry
186 – Geology
189 – Mathematics
198 – Physics

The fourth digit in course numbers indicates the level of the course as follows:

OXX – Courses without credit
1XX – Pre-engineering level courses
2XX – Normally taken in the first year
3XX – Normally taken in the second year
4XX – Normally taken in the final year
5XX – Graduate level courses which may be taken as final year electives.

The terminal letters indicate the semester(s) in which the courses are given, i.e. A - Fall, B - Winter, C - Summer, D - Fall and Winter, X - Fall evening, Y - Winter evening

Where asterisks appear with a prerequisite, they have the following significance:

* a D grade is acceptable for prerequisite purposes

** under special circumstances, the Department may permit this course to be taken as a co-requisite.

• elective courses

The curricula and courses described in the following pages have been approved for the 1977/1978 session but the Faculty reserves the right to introduce changes as may be deemed necessary or desirable.

4.5 SCHOLARSHIPS

Undergraduate scholarships are made available to full time students in accordance with the selection policies of the University Scholarships Committee. For this purpose, a full time student is defined as a student completing a minimum of 27 credits of coursework, excluding summer session courses, during the past year. For details of specific awards, students should consult the Undergraduate Scholarships and Awards Announcement available at the Registrar's Office.

5 ACADEMIC PROGRAMS

5.1 THE FACULTY OF ENGINEERING

Dean
Gerald W. Farnell, B.A.Sc.(Tor.) S.M.(M.I.T.), Ph.D.(McG.), Eng., F.I.E.E.E.

Associate Deans
Student Affairs
William Bruce, B.A.Sc., M.A.Sc.(Tor.), Eng., M.E.I.C., M.A.S.M.E.

Academic
William G. Davenport, B.A.Sc., M.A.Sc.(U.B.C.), Ph.D.(Lond.), D.I.C., Eng., M.C.I.M.

Planning and Development
Tomas J.F. Pavlasek, B.Eng., M.Eng., Ph.D.(McG.), Eng., M.E.I.C., M.C.S.E.E., S.M.I.E.E.E.

Special Lecturer in Engineering Law
Nat Salomon, B.A., B.C.L.(McG.)

A number of faculty courses are offered. These courses are elective and are of a more general nature than the departmental courses.

300-211A ECONOMIC ENVIRONMENT 3(3-0-6). Theory of prices. Theory of the firm. Public finance. The banking system. National income. Employment. Labour relations. Inflation. Poverty. Economic growth. Regional economic problems. Engineering applications of micro-economics. Influence of micro-economics on engineering decisions.
Professor P. Davenport

300-220A ENGINEERING LAW 2(2-0-4). Definition of law; different branches of law; distinction between civil and criminal law and between civil and common law; statutes, orders in council, and by-laws; Canadian constitutional law and organization of courts; civil law including marriage, tutorship, minority, and interdiction, types of property, rights of ownership, successions, wills and succession duties, expropriation, servitudes, obligations, responsibility for negligence, Workmen's Compensation Act, privileges, hypothecs, registration, prescription, marriage contracts and rights of women, sale, lease and hire, mandate, engineering and architectural contracts. Responsibility of architect and builder; organization of engineering and architectural professions; patents, trademarks, industrial design and copyright; partnership and companies; mining; railways; expert evidence and evidence generally.
Mr. N. Salomon

300-230A ENVIRONMENTAL ASPECTS OF TECHNOLOGY 3(3-0-6). The purpose of this course is to examine the ways in which the application of advanced technology affects the environment in which we live. At the same time, attention will be given to ways in which technology can be applied to the amelioration of the environmental stresses on the urban environment which have resulted from the rapid growth of industry in this century. The course is intended for engineering and science students in their U-1 (or U-2) years. In a series of lectures, the subject is presented in outline form. Specific problems are studied in greater depth in seminar groups. Topics discussed are: the urban environment, water pollution and its control; air pollution; environmental effects of energy conversion. The course is given by a team of professors from the Engineering Faculty. The course coordinator is Professor Dealy.

300-310A,B ENGINEERING ECONOMY 3(3-0-6). Basic concepts of economic analysis. Accounting methods. Marginal analysis. Cash flow and time value. Investment opportunity analysis. Expected value analysis techniques. Risk analysis. Analysis of new plant investment opportunities. Economic analysis of research and development.
Professor Mackenzie, Mr. Bilodeau, Mr. White.

5.2 SCHOOL OF ARCHITECTURE

Director

Derek Drummond, B.Arch. (McG.) M.R.A.I.C., O.A.Q.

Professors

John Bland, B.Arch. (McG.), A.A. Dipl., D.Sc. (Carleton), R.C.A., F.R.A.I.C., R.I.B.A., O.A.Q.
Peter Collins, Dipl. Arch. (Leeds), M.A. (Manc.), L.L.M.(Qu.), F.R.A.I.C.
Norbert Schoenauer, B.Arch. (Bud.), M.Arch. (McG.), O.A.Q., C.U.Q.
Stuart Wilson, B.Arch. (McG.), R.I.B.A., O.A.Q.

Associate Professors

Bruce Anderson, B.Arch. (McG.), M.Arch. (Harv.), O.A.Q.
Brian McCloskey, B.Arch. (McG.), M.Arch.(U.D.) (Harv.), O.A.Q.
John Schreiber, B.Sc.Arch. (Glas.), M.L.A. (Harv.), R.I.B.A., O.A.Q., P.Q.L.A.
Radoslav Zuk, B.Arch. (McG.), M.Arch. (M.I.T.), M.R.A.I.C., O.A.Q.

Assistant Professors

Arthur Acheson, B.Sc.(Arch.) (Belfast), M.Arch.(McG.)
Witold Rybczynski, B.Arch., M.Arch. (McG.), O.A.Q.

Lecturers

Vikram Bhatt, B.Arch. (Abd.), M.Arch.(McG.)
Ross Hayes, B.Arch. (McG.), M.Arch. (U.D.), (Harv.), O.A.Q., C.P.U.Q., T.P.I.C.
Pieter Sijpkes, B.Sc. (Arch.), B.Arch. (McG.)

Auxiliary Professors

Raymond Affleck, Thomas Blood, Gordon Edwards.

Associate Member

David Bourke, B.Arch. (McG.), M.Arch. (Harv.), R.C.A., F.R.A.I.C., O.A.Q.

Sessional and Part-time Lecturers

Bruce Allan, Leslie Doelle, Christian Feise, Roy LeMoyne, Seymour Levine, Harry Mayerovitch, Arthur Mendel, Roger Richard, Gentile Tondino

The McGill architectural program is divided into two parts. The first leads to a non-professional degree, Bachelor of Science (Architecture), as a preparation for professional degrees related to Architecture. The second, consisting of a minimum of two semesters for those with the McGill B.Sc. (Arch.) degree, leads to the professional degree, Bachelor of Architecture, which has long been recognized by the Order of Architects of Quebec and the Royal Institute of British Architects as representing completion of their educational requirements for membership. The Bachelor of Architecture degree is also recognized by the Commonwealth Association of Architects. Candidates in the first part of the program who plan to go on to the professional degree in Architecture must follow the series of required and elective courses stipulated for professional studies and achieve an acceptable standing both in Design and Construction courses and in their cumulative grade point average. Students commencing their studies in 1975 and subsequently applying to the B.Arch. program must also have had a total of six months' related professional experience. Other students may make appropriate substitutions for certain of the required courses in order to improve their preparation for studies in associated areas.

ANCILLARY ACADEMIC FACILITIES

Laboratories

The Architectural Workshops – see course 301-303A, Design and Construction I and the course 301-304B, Design and Construction II: Mr. Deveault and Mr. Rondeau, technicians, under the direction of Professor Wilson.

The Communications Laboratory – see course 301-201A, Communication, Behaviour and Architecture: Spence Partlo, Technician, under the direction of Professor Anderson.

Collections

The Blackader Library, housing the architecture collection, is under the supervision of Mrs. Eva Doelle. The slide collection is maintained by Mlle. Lise Lusignan under the direction of Professor Collins.

CURRICULUM FOR THE B.Sc.(Arch.) DEGREE

REQUIRED COURSES — **COURSE CREDIT**

Non-Departmental Subjects

	303-205A,B	Mechanics 1	4	
	303-209B	Surveying	3	
	303-283B	Strength of Materials	4	
†	303-289A	Building Materials	2	
†	303-384A	Soil Mechanics and Foundations	2	
†	303-385A	Structural Steel Design	2	
†	303-388B	Reinforced Concrete Design	2	
†	303-492A	Structures	2	
	308-107A,B	Computers and Architecture	2	23

Architectural Subjects

301-201A	Communication, Behaviour and Architecture	6	
301-202B	Architectural Graphics and Design Elements	6	
301-217A	Freehand Drawing I	1	
301-218B	Freehand Drawing II	1	
301-231A	History of Architectural Theory I	3	
301-233B	History of Architectural Theory II	3	
301-303A	Design and Construction I	6	
301-304B	Design and Construction II	6	
301-321A	Freehand Drawing III	1	
301-322B	Freehand Drawing IV	1	
301-324A	Sketching School I	1	
301-327A	Summer Project I	1	
301-405A	Design and Construction 111	6	
301-428A	Summer Project 11	1	
301-446B	Mechanical Services	2	
301-447A	Electrical Services	2	
301-448B	Environmental Acoustics	2	
One of			
301-406B	Design and Construction IV	6	55
301-410B	Design and Construction V		
301-412B	Design and Construction VII		

† Candidates intending not to proceed to the B.Arch. degree may substitute other courses of equal total weight for any of these.

Elective Courses

To be selected from those offered by the School (listed below) and/or a sequence of approved courses from other departments.

Architectural Electives

301-371B	Standardization in Urban Spaces	2	
301-372B	History of Architecture in Canada	2	
301-373A	History of Housing	2	
301-375B	Landscape	2	
301-376A	Structure of Cities	2	
301-378A	Site Usage	2	
301-379C	Summer Course in Europe	4	
301-461B	Freehand Drawing and Sketching	1	
301-383B	Geometry, Architecture and Environment	2	
301-385A	Architectural Theory of the Italian Renaissance	2	
301-480A	Seminar on Architectural Judgement	2	
301-481A,B	Seminar on Architectural Theory in the 20th Century	2	
301-482B	Seminar on Legal Aspects of Environmental Control	2	
301-484B	Civic Design	2	20
Total			**98**

COURSES OFFERED BY THE SCHOOL

301-201A COMMUNICATION, BEHAVIOUR AND ARCHITECTURE 6(2-10-6). Design in relation to human communication and behaviour. Visual perception and architectural expression. Techniques of visual communication and graphic design. Modelling with wet materials. Shaping and forming dry materials. Models. Photographic methods of designing and recording. Basic printing methods including silkscreen. Orthographic projection, sketching and architectural drawing.

The Communications Laboratory, including the Photo Lab, is under the direction of Professor Bruce Anderson, (Spence Partlo, Technician).

Professors Anderson & Acheson

301-202B ARCHITECTURAL GRAPHICS AND ELEMENTS OF DESIGN 6(2-10-6). (Prerequisite: 301-201A.) Orthographic projections, measured drawings, perspective and other conventional representations of architectural elements with reference to their spatial qualities, effects of light, colour and texture. Diagrams and lettering.

Professors Drummond & Acheson

301-217A FREEHAND DRAWING I 1(0-3-0). Drawing in pencil and charcoal.

Mr. Tondino

301-218B FREEHAND DRAWING II 1(0-3-0). (Prerequisite: 301-217A*.) A continuation of course 301-217A.

Mr. Tondino

301-231A HISTORY OF ARCHITECTURAL THEORY I 3(3-0-6). An introduction to the study of architectural ideas.

Professor Collins

301-233B HISTORY OF ARCHITECTURAL THEORY II 3(3-0-6). (Prerequisite: 301-231A*.) A study of architectural ideals of the present century and of the technical and sociological developments which affected them.

Professor Collins

301-303A DESIGN AND CONSTRUCTION I 6(2-10-6). (Prerequisite: 301-202B.) A study of man's need for shelter and for humane environmental amenities. The characteristics of modern building materials and techniques of construction on open sites. Methods of building durable, agreeable and purposeful structures. Design methodology. Aspects of ecology related to architectural design.

The Architectural Workshop is under the direction of Professor Stuart Wilson (Gabriel Deveault and Raymond Rondeau, Technicians).

Professors Wilson & Rybczynski

301-304B DESIGN AND CONSTRUCTION II 6(2-10-6). (Prerequisite: 301-303A.) Instruction in the design of buildings with particular emphasis on considerations of construction, structural adequacy, weather and fire resistance, building codes and industrialized building systems. Working drawings and models.

The Architectural Workshop is under the direction of Professor Stuart Wilson (Gabriel Deveault and Raymond Rondeau, Technicians).

Professors Wilson & Rybczynski

301-321A FREEHAND DRAWING III 1(0-3-0). (Prerequisite: 301-218B*.) A continuation of course 301-218B.

Mr. Tondino

301-322B FREEHAND DRAWING IV 1(0-3-0). (Prerequisite: 301-321A*.) A continuation of course 301-321A.

Mr. Tondino

301-324A SKETCHING SCHOOL I 1(0-0-3). (Prerequisite: 301-218B.) A ten day supervised field trip in the late summer to sketch places or things having specific visual characteristics. Students are required to include Sketching School 1 in the B.Sc.(Arch.) program.

Professor Wilson & Mr. Tondino

301-327A SUMMER PROJECT I. 1(0-0-3). (Prerequisite: 301-202B.) These projects are assigned by staff members before the end of the session after discussion with the students in terms of objectives, techniques, etc.

Staff

• **301-371B STANDARDIZATION IN URBAN SPACES 2(2-0-4).** (Prerequisite: 301-233B.) A historical survey of tectonic theories related to the creation of orderly urban environments in the 16th,

17th and 18th centuries; the theories of standardization as applied to the classical "Orders" and their relevance to standardized building components today.
Professor Collins

- **301-372B HISTORY OF ARCHITECTURE IN CANADA 2(2-0-4).** (Prerequisite: 301-233B). French, British and American influences in the Maritime Provinces, Quebec and Ontario.
Professor Bland

- **301-373A HISTORY OF HOUSING 2(2-2-2).** (Prerequisite: 301-233B.) Indigenous housing both transient and permanent, from the standpoint of individual structure and pattern of settlements. The principal historic examples of houses including housing in the age of the industrial revolution and contemporary housing.
Professor Schoenauer

301-374B PHILOSOPHY OF STRUCTURE 2(2-0-4). (Prerequisite: Satisfactory completion of courses in the Civil Engineering program totalling 45 credits.) An inquiry into the principles and factors underlying the development and forms of structures, natural and man-made, and the application of these principles to current design problems.
Mr. Mayerovitch

- **301-375B LANDSCAPE 2(2-2-2).** (Prerequisite: 301-233B.) Land form, plant life, microclimate; land use and land preservation; elements and methods of landscape design.
Professor Schreiber

- **301-376A STRUCTURE OF CITIES 2(2-2-2).** (Prerequisite: 301-233B) Nature, pattern and life of modern cities. Urban networks, special areas, problems and prospects.
Professor Bland

- **301-378A SITE USAGE 2(2-2-2).** (Prerequisite: 301-202B.) Arrangement of building developments on the land. Composite patterns resulting from site planning decisions. Scale and distribution of open space. Utilization of space; relationship of private to public domain; spatial determinism and its effect on interaction and development; qualities of interaction and development; qualities of street-scale open space. Site conditions and restrictions. Site engineering, building layout, drainage and services. Regulatory mechanism; incentive and mandatory controls.
Professor Drummond

- **301-379C SUMMER COURSE IN EUROPE,** (4 credits, Prerequisite: 301-371A.) An eight week course consisting of a three week environmental design project supervised at an English university, a three week sequence of organized visits to buildings in Europe already studied in courses 301-233 and 371 and two research projects for which individual written reports must be submitted.
Professor Collins

301-383B GEOMETRY, ARCHITECTURE AND THE ENVIRONMENT 2(2-2-2). Geometry in the formal structure of design. Regular, semi-regular and partly irregular nets or grids, lattices, polygons and polyhedra. Evidence of the presence of these figures and structures in natural objects and natural phenomena. Graphical and physical models. Application to architecture and the human environment.
Professor Wilson

- **301-385A ARCHITECTURAL THEORY OF THE ITALIAN RENAISSANCE 2(2-0-4)** (Prerequisite: 301-233B) The elements and composition of Italian Renaissance buildings, studied in relation to the social and intellectual context of the age in which they were constructed.
Professor Collins

301-405A DESIGN AND CONSTRUCTION III 6(2-10-6). (Prerequisite: 301-304B.) A more developed study of the process of forming an architectural concept involving considerations of purpose, site, desirable spatial relationships, efficient lines of movement, appropriate choice of material, structure and methods of construction, all related to judgements concerning appearance, economy and human relevance. Diagrammatic plans, sections and rough models.
Professors Drummond & Zuk

301-406B DESIGN AND CONSTRUCTION IV 6(2-10-6). (Prerequisite: 301-405A.) A detailed study of the development of an architectural proposal for a comprehensive building involving a coherent initial concept and subsequent decisions as to the means of fulfilling the requirements skillfully and economically. Preliminary working drawings.
Professors Bland & Zuk

301-410B DESIGN AND CONSTRUCTION V 6(2-10-6). (Prerequisite: 301-405A.) A detailed study of the function and structure of the urban environment, including surveys of selected urban areas by recording and analysing specific environmental factors. Architectural and urban design with specific reference to their social implications. Urban renewal and rehabilitation by means of systematic design methods. Techniques of instructional publicity including documentary film-making.
Professor Anderson

301-411A,B DESIGN AND CONSTRUCTION VI 7(2-12-7). (Prerequisite: 301-406B, 301-410B or 301-412B.) A detailed study of the organization of multiple units in a problem involving the repetition of elements with appropriately integrated functional, structural and mechanical systems. Principles of problem analysis, programming, site planning, legal considerations, structural possibilities, feasibility and cost studies.
Professor McCloskey, Mr. Bhatt, Mr. Sijpkes

301-412B DESIGN AND CONSTRUCTION VII 6(2-10-6). (Prerequisite: 301-405A) A study of exceptional problems of architectural design in

terms of community needs but always involving specific environmental modifications of an actual place to achieve some physical or social betterment.
Staff

301-413A,B DESIGN AND CONSTRUCTION VIII 7(2-12-7). (Prerequisite: 301-406B or 301-410B.) A study of complex environmental problems involving conflicting requirements, severe restraints, optimization, adaptability to growth and change, and the integration of building systems. Development of systematic design methods leading to a comprehensive environmental form.
Professors Anderson, Bland & Visitors

301-428A SUMMER PROJECT II 1(0-0-3). (Prerequisite: 301-304B.) See course 301-327F.
Staff

301-429A SUMMER PROJECT III 1(0-0-3). (Prerequisites: 301-406B or 301-410B.) See course 301-327F.
Staff

301-430A SKETCHING SCHOOL II 1(0-0-3). (Prerequisite: 301-324F.) Students are required to include Sketching School II in the B.Arch. program.
Professor Wilson & Mr. Tondino

301-435A,B URBAN PLANNING I 2(2-2-2). (Prerequisite: 301-406B or 301-410B.) Theory and practice. An examination of different basic approaches to urban planning with examples.
Professor Wolfe

301-436A,B URBAN PLANNING II 2(2-2-2). (Prerequisite: 301-435A.) Theory and practice seminar. Detailed analysis of selected examples of the urban planning process, recent and from the past. Each student will be expected to prepare and present a case study.
Professor Farley

301-446B MECHANICAL SERVICES IN BUILDING 2(2-2-2). (Prerequisite: 301-304B.) Problems encountered in providing mechanical services in buildings. Physiological and environmental aspects of heat, ventilation and air conditions, estimation of heating and cooling loads and selection and specification of equipment. Sprinkler Systems and plumbing. Construction problems produced by installation of this equipment.
Mr. Levine

301-447A ELECTRICAL SERVICES 2(2-2-2). (Prerequisite: 301-304B.) Production, measurement and control of light; design of lighting systems; electrical distribution in residential and commercial buildings; Canadian Electrical Code.
Mr. Mendel

301-448B ENVIRONMENTAL ACOUSTICS 2(2-2-2). (Prerequisite: 301-304B.) Significance of acoustics in architectural design, and in environmental control of buildings. Acoustical requirements in the design of auditoria such as theatres, lecture halls, opera houses, concert halls, churches, motion picture theatres, studios, etc. Principles of noise and vibration control, sound insulating in building construction. Control of mechanical noises and vibrations. Practical noise control in various types of buildings.
Mr. Doelle

301-449A PROFESSIONAL PRACTICE 2(2-2-2). (Prerequisite: 301-406B or 301-410B.) The architect's relationship to his client; resporsibility; business conduct; supervision; arbitration; issuing of certificates; competitions; standard forms of contracts; payment; liens; servitudes; public health; building regulations; fees.
Mr. LeMoyne

301-450B SPECIFICATIONS 2(2-2-2). (Prerequisite: 301-406B or 301-410B.) Principles of writing architectural specifications; discussion of actual specifications; essays on common building materials and construction practices; practice in specifying for common trades.
Mr. Bourke

- **301-461B FREEHAND DRAWING AND SKETCHING 1(0-3-0)9** (Prerequisite: 301-324F.) Drawing and sketching in pencil, charcoal and other media both in the studio and out-of-doors.
Mr. Tondino

- **301-480A SEMINAR ON ARCHITECTURAL JUDGEMENT 2(2-0-4).** (Prerequisite: 301-304B*.) The investigation, by means of analogies with the judicial process in Law, of the criteria of architectural judgement.
Professor Collins

- **301-481A,B SEMINAR ON ARCHITECTURAL THEORY IN THE 20TH CENTURY 2(2-0-4).** (Prerequisite: 301-304B) Analysis and evaluation of significant 20th century projects with reference to contemporary architectural theories.
Professor Zuk.

- **301-482B SEMINAR ON LEGAL ASPECTS OF ENVIRONMENTAL CONTROL 2(2-0-4).** (Prerequisite: 301-480A.) A survey of those aspects of Canadian law which can protect or beneficially modify the environment in the interests of the community. Maximum of 12 students with preference given to students in architecture.
Professor Collins

- **301-484B CIVIC DESIGN 2(2-2-2).** (Prerequisite: 301-304B.) The elements of form in buildings and their siting design in the urban setting.
Professor Drummond

5.3 DEPARTMENT OF CHEMICAL ENGINEERING

Chairman
W.J.M. Douglas, B.Sc.(Qu.), M.S.E., Ph.D. (Mich.)

Professors
J.M. Dealy, B.S.(Kansas), M.S.E., Ph.D.(Mich.), Eng.
M.R. Kamal, B.S.(Ill.), M.S., Ph.D.(Carnegie-Mellon), Eng.
M.E. Weber, B.S.E.(Prin.), Sc.D.(M.I.T.)

Associate Professors
T.J. Boyle, B.S., M.S. Sc.D.(M.I.T.)
J.-M. Charrier, Dipl. Ing., E.N.S.A.M.(Paris), M.S., Ph.D.(Akron), Eng.
O.M. Fuller, B.Ch.E., Ph.D. (Georgia Inst. Tech.)
J.R. Grace, B.E.Sc. (W.Ont.), Ph.D.(Cantab.), Eng.
J.H. Vera, B.Mat. (Chile), Ing.Quim. (U.T.E.), M.S. (Berkeley), Dr. Ing. (Santa Maria)

Assistant Professors
A.S. Mujumdar, B.Ch.E. (Bombay), M.Eng., Ph.D. (McG.)
R.J. Munz, B.A.Sc., M.A.Sc.(W'loo), Ph.D.(McG.)
B. Volesky, M.Sc.(Czech. Tech. Univ.), Ph.D.(W.Ont.)

Associate Members
H.I. Bolker, B.Sc., M.Sc.(Qu.), Ph.D. (Yale)
J. Brunet, B.Sc.A.(Montr.), M.S., Ph.D.(Florida)
W.H. Gauvin, B.Eng., M.Eng., Ph.D.(McG.), Eng.
H.L. Goldsmith (Experimental Medicine), B.Sc., M.A. (Oxon.), Ph.D.(McG.)
J.L. Neal (Paediatrics), M.S. (Yale), Ph.D.(McG.)

Special Lecturers
M. Avedesian, N.E. Cooke, R.H. Crotogino, A. Rudzinski, A.R.P. van Heiningen, G. Wedlake, N. Wiseman

The central purpose of engineering is to pursue solutions to technological problems in order to satisfy the needs and desires of society. Chemical engineers are trained to solve the kinds of problems that are typically found in the "chemical process industries", which include the chemical manufacturing, plastics, pulp and paper, petroleum refining, and paint industries as well as substantial portions of the food processing, textile, nuclear energy, and pharmaceutical industries. The technological problems and opportunities in these industries are often closely linked to social and economic questions. For this reason, practitioners of chemical engineering often deal with these questions when they are working in management, pollution abatement, product development, marketing and equipment design.

The chemical engineering curriculum begins with a study of those aspects of chemistry, physics, and mathematics that are basic to a quantitative understanding of the process industries. Courses on the technical operations and economics of the process industries are added to this foundation. The core curriculum concludes with a course on cases from engineering practice and process design courses taught by practicing design engineers. Several courses are given in a modular, student-paced format that has proved to be both effective and popular with students. Problem-solving, experimenting, planning, and communicating skills are emphasized in courses distributed through the core curriculum.

By means of elective courses, students can also obtain breadth or depth in bodies of knowledge that are not taught in chemical engineering courses. Management, chemistry, metallurgical engineering, mechanical engineering, computer science, and the social sciences are popular choices among today's students. Chemical engineering can form a useful part of a larger educational program that continues with studies in business administration, law, and medicine. The versatility of chemical engineering graduates is a strength that is much appreciated by employers in industry and government.

ACADEMIC PROGRAM

The chemical engineering program comprises 94 credits as outlined below. Students who have passed Chemistry 202 or 302 at the CEGEP level are exempt from course 180-212 or 234, respectively (Introductory Organic Chemistry I and Selected Topics in Organic Chemistry) but still must obtain 94 credits in total, i.e. the corresponding credits are transferred from required courses to free electives.

Students must obtain a C grade or better in all core courses. For the Department of Chemical Engineering, core courses include all required courses (departmental and non-departmental) as well as restricted electives. A "D" grade is satisfactory only for general elective courses.

The required courses are listed below. Where a course which is nearly equivalent is available elsewhere in the Faculty, students who received a "D" in a Chemical Engineering course may take the "equivalent" course the second time around. These "equivalent" courses are:

Subject	Chem.Eng.Course	Equivalent Course
Fluid Mechanics	302-210B	305-330A,303-321B
Thermodynamics I	302-221A	305-240A,306-212A
Heat Transfer	302-311A	305-346A,B
Process Control	302-455B	305-417A

Where the number of credits for the equivalent course differs from the number in the department course, the difference must be made up in general elective credits (i.e. the total program still includes a minimum of 94 credits).

CURRICULUM FOR THE B.ENG. DEGREE IN CHEMICAL ENGINEERING

REQUIRED COURSES

		COURSE CREDIT	
Non-Departmental Courses			
180-212A,B	Introductory Organic Chemistry I	4	
180-233B	Selected Topics in Physical Chemistry	3	
180-234A,B	Selected Topics in Organic Chemistry	3	
189-261A,B	Linear Algebra and Differential Equations I	3	
189-262A,B	Linear Algebra and Differential Equations II	3	
189-263A,B	Advanced Calculus	3	
189-264A,B	Introduction to Boundary Value Problems	3	
300-310A,B	Engineering Economy	3	
308-208A,B	Computers in Engineering	2	27
Chemical Engineering Courses			
302-201A	Chemical Process Principles I	4	
302-210A	Fluid Mechanics	4	
302-221A	Chemical Engineering Thermodynamics I	3	
302-222B	Chemical Engineering Thermodynamics II	3	
302-291B	Instrumental Measurements Laboratory	2	
302-311A	Heat Transfer	4	
302-312B	Mass Transfer	3	
302-351A	Separation Processes	3	
302-360A	Technical Paper I	1	
302-392A	Chemical Engineering Laboratory I	4	
302-393B	Chemical Engineering Laboratory II	3	
302-402B	Chemical Process Principles II	3	
302-423A	Chemical Reaction Engineering	3	
302-453A	Process Design	3	
302-454B	Design Project	4	
302-455B	Process Control	3	
302-462A	Technical Paper II	1	51

ELECTIVE COURSES

Restricted Electives

Course to be selected from those approved by the Department. (See guidelines below). 7

General Electives

Approximately three courses. (See guidelines below). 9

Total **94**

For a student beginning in September, a typical 6 semester program leading to a B. Eng. in Chemical Engineering is shown below:

Semester 1		Credits	Semester 2		Credits
Lin.Alg. and Diff.Eq.I	(189-261A)	3	Organic Chemistry I	(180-212B)	4
Advanced Calculus	(189-263A)	3	Lin.Alg. and Diff.Eq.II	(189-262B)	3
Chem. Proc. Princ.I	(302-201A)	4	Fluid Mechanics	(302-210B)	4
Thermodynamics I	(302-221A)	3	Thermodynamics II	(302-222B)	3
Computers	(308-208A)	2	Instrumental Meas. Lab.	(302-291B)	2
		15			16

Semester 3

Heat Transfer	(302-311A)	4
Separation Processes	(302-351A)	3
Technical Paper	(302-360A)	1
Chem. Eng. Lab. I	(302-392A)	4
Engineering Economy	(300-310A)	3
		15

Semester 4

Chemistry	(180-233B)	3
Mathematics	(189-264B)	3
Mass Transfer	(302-312B)	3
Chem. Eng. Lab. II	(302-393B)	3
Elective		3
		15

Semester 5

Selected Topics in Org.Chem.	(180-234A)	3
Chem. Reaction Eng.	(302-423A)	3
Process Design	(302-453A)	3
Technical Paper	(302-462A)	1
Electives		6
		16

Semester 6

Chem. Proc. Princs. II	(302-402B)	3
Design Project	(302-454B)	4
Process Control	(302-455B)	3
Electives		7
		17

Of the 16 credits of electives, at least 7 must be chosen from a list drawn up by the Department, as indicated below.

Notes: 1) 301-455 can be taken in Term 4 if desired.
2) Most students who begin in January require 7 semesters to graduate.

RESTRICTED ELECTIVES

A minimum of 7 credits of the 94 credit total must be chosen from a list of Restricted Electives approved by the Department. The purpose of this requirement is to provide students with an area of specialization within the broad field of chemical engineering. Alternatively, some students use the restricted electives to increase the breadth of their chemical engineering training.

The Restricted Elective Courses currently approved by the department are as follows:

302-356A	Computer Methods in Chemical Engineering
302-373A	Introduction to Industrial Microbial Processes
302-452B	Particulate Systems
302-471B	Industrial Water Pollution Control
302-472A	Industrial Air Pollution Control
302-481A	Polymer Engineering
302-483B	Industrial Rheology
302-486B	Textile Technology
302-594B	Fermentation Engineering

Courses 481A, 483B, and 486B comprise a **Polymeric Materials** sequence. Additional courses in this area may be taken as general electives in the Chemistry department (e.g. 180-455B) or at the graduate level (302-682A, 302-783A). The department has considerable expertise in the polymer area. An agreement has recently been worked out with the Canadian Association of Textile Colourists and Chemists which is cooperating with course 486B.

Courses 373A, 483B and 594B make up a sequence in **Food and Fermentation Processes.** Students interested in this area are strongly advised to consider taking additional courses in this area as general electives, particularly those offered by the School of Food Science of the Faculty of Agriculture, the Faculty of Medicine and courses in biochemistry and microbiology (e.g. 362-442A, 377-200A, 376-413B, 336-320A, 336-321B, 336-322B). The food, beverages and pharmaceutical industries are large industries in the Montreal area and these courses help make our students attractive to employers in these areas.

The third area in which there is a sequence of courses is **Pollution Control.** The department offers two courses in this area 302-471B and 302-472A, for the areas of water and air pollution control, respectively. As some water pollution control problems are solved by microbial processes, course 302-373A is in part relevant to the pollution control area. Likewise as the solution to pollution problems frequently involves removal of particulate matter from gaseous or liquid streams, the course 302-452B is also relevant. Finally, a large number of additional courses in this area are listed elsewhere in this Announcement under the sections entitled Pollution Control and Environmental Studies.

Note that many of the restricted electives will be offered only in alternate years. Students should therefore plan their electives as far ahead as possible. With the approval of the instructor and faculty advisor, students may also take graduate courses as restricted electives.

GENERAL ELECTIVES

The general elective requirement enables our students to increase the breadth or depth of their education. University level courses may be chosen in

any field. Particular attention is drawn to the following:

1. Any credits, above 7 obtained from courses on the restricted elective list, count towards the general elective requirement.

2. Three general elective courses are offered by the department. Course 302-370B. Models of Socio-Technical Systems, is part of the university-wide network of courses designated as the Environmental Studies Program. Courses 302-363A,B and 302-464A,B, Projects in Chemical Engineering, grew out of student initiatives. I n these two courses students propose and work, individually or in small groups, on projects of their own choosing. A faculty member willing to act as advisor must be found for each project, but students must take the initiative. Successful projects have treated such areas as work attitudes of engineers, pollution and safety regulations, fermentation process development and product recovery, unemployment, and teaching methods.

3. The following outside areas should be looked at closely:

   a) French courses.
   b) Chemistry courses.
   c) Management courses.
   d) Courses in other branches of engineering to broaden the technical base of the student.
   e) Courses in the arts and social sciences to broaden the social and cultural background and to develop communications skills.
   f) Faculty courses in engineering.

4. The only restrictions on general electives are the following:

   a) A course must fit into the timetable without causing conflicts.
   b) A course may not be elected if it is essentially a repetition of material already covered in the curriculum (e.g. a second introductory computing course) or if the student has already mastered the material (e.g. introductory Spanish for a Spanish-speaking student).

5. General electives count into the grade point averages like any other course. The only difference in the way these courses are treated is that a "D" is sufficient to pass.

CURRICULUM COMMITTEE

The curriculum committee is composed of three students, elected by their classes, and three staff members. This committee provides a forum for all matters involving undergraduate student/staff interactions. While the primary concern is with matters of curriculum and courses (their content, evaluation, marking, scheduling, teaching methods, etc.), the committee has also taken up a number of other matters in recent years, e.g. working space, facilities (equipment and libraries), plant tours.

CANADIAN SOCIETY FOR CHEMICAL ENGINEERING

The Chemical Engineering Student Society has for many years been affiliated both with the CSChE (Canadian Society for Chemical Engineering) and with the AIChE (American Institute of Chemical Engineers). For a nominal fee of $3.00 per year, students receive "Chemistry in Canada", a monthly publication, and the AIChE Student Members Bulletin as well as other privileges of student membership in the two societies. Locally, the student chapter also organizes a series of social, educational and sporting events. For example, recent events have included student-professor banquets and Christmas parties, dances, speakers, broomball games and joint meetings with the Montreal Section of the CSChE. The latter gives students a chance to mix with practicing chemical engineers.

SCHOLARSHIPS AND BURSARIES

Certain bursaries and scholarships are open to students in the department. Students who are interested in bursaries and scholarships should consult the Undergraduate Scholarships and Awards Announcement available from the Registrar's Office. Prof. Kamal should be consulted regarding specific scholarships and bursaries.

COURSES OFFERED BY THE DEPARTMENT

302-201A CHEMICAL PROCESS PRINCIPLES 1 4(3-0-9). (Co-requisite: 189-261A) Solution of chemical engineering problems by the application of the laws of conservation of mass and energy. Applications in steady and transient processes. Self-paced, modular course.
Professor Weber

302-210B FLUID MECHANICS 4(3-1-8). (Co-requisite: 189-264B) Fluid properties; fluid statics; basic concepts and equations of fluid dynamics including the continuity and Navier-Stokes equations, Bernoulli's equation and application to flow measuring devices; dimensionless groups and similitude; momentum theorems, pumps; two dimensional potential flow; drag and boundary layers; pipe flow; losses in valves and fittings.
Dr. Avedesian

302-221A CHEMICAL ENGINEERING THERMODYNAMICS 1 3(3-0-6). (Co-requisite 189-263A). Work and mechanical energy, first and second laws of thermodynamics, use of property charts and tables, relationships between thermodynamic properties, mechanical energy balance, heat engines and refrigerators, use of equations of state, estimation of equilibrium properties, phase equilibrium ir

single component systems. Optional module on statistical thermodynamics. Self-paced, modular system of instruction.
Professor Dealy

302-222B CHEMICAL ENGINEERING THERMODYNAMICS II 3(3-0-6). (Prerequisite: 302-221A.) Thermodynamics of mixtures, phase equilibrium in multicomponent systems, chemical reaction equilibrium in homogeneous and heterogeneous systems.
Dr. Wiseman, Mr. Wedlake

302-291B INSTRUMENTAL MEASUREMENTS LABORATORY 2(0-3-3). (Prerequisite: 302-221A*. Co-requisite:302-210B.) Techniques for measurement of properties of solids, liquids and gases; application of these techniques in practice; selection of measurement techniques for engineering applications.
Professor Munz

302-311A HEAT TRANSFER 4(3-0-9). (Prerequisites: 302-221A*, 302-210B*, 189-264A,B*.) Transport of heat by conduction; transport by convection in free and forced flows; transport by radiation. Mathematical formulation and solution of heat transfer problems. Design of heat transfer equipment.
Professors Munz and Weber

302-312B MASS TRANSFER 3(3-0-6). (Prerequisites: 302-311A*, 302-351A.) Transport of matter by diffusion. Transport by convection in free and forced flows. Design of mass transfer equipment: distillation columns, packed bed contactors, etc.
Professor Douglas

302-351A SEPARATION PROCESSES 3(3-0-6). (Prerequisites: 308-208A,B, 302-201A*, 302-222B*.) Analysis of separation processes using macroscopic material and energy balances; applications to distillation and extraction; design of staged cascades; performance of real systems; selection of operating conditions and contacting equipment.
Dr. Avedesian

- **302-356A COMPUTER METHODS IN CHEMICAL ENGINEERING 3(2-0-7).** Application of scientific computers in process design, chemical engineering analysis and research. Process simulation; structure and design of general purpose programs; linear programming; numerical analysis. Batch and conversational computer modes are used. (Alternate years, next given 1977-78)
Professor Boyle

302-360A TECHNICAL PAPER I 1(0-0-3). A technical paper prepared according to instructions issued by the Department.
Professor Boyle

- **302-363A,B PROJECTS IN CHEMICAL ENGINEERING I 2(1-0-5).** (Prerequisite: 302-201A*.) Projects on social or technical aspects of chemical engineering practice. Students must suggest their own projects to be approved and supervised by a member of the staff.
Staff

- **302-370B MODELS OF SOCIO-TECHNICAL SYSTEMS 3(3-0-6).** Introduction to the use of computer simulation for the study of social system behaviour. Expression of theories in computer simulation form. Interpretation of simulation results. Comparison between simulation models and mental models. World models developed at M.I.T.
Professor Boyle

- **302-373A INTRODUCTION TO INDUSTRIAL MICROBIAL PROCESSES 3(3-1-5).** (Prerequisite: 180-212A,B.) Introduction to the fundamental principles of the microbial world, cell structure and growth. Comparative study of the morphology, biology and relationships of algae, fungi, bacteria and viruses. Energy transformations. Survey of selected industrial microbial processes of importance in producing food, antibiotics, organic acids, polymers, etc. Microbial leaching. Ecological aspects and waste-water treatment. Single-cell protein synthesis.
Professor Volesky

302-392A CHEMICAL ENGINEERING LABORATORY I 4(2-3-7). (Prerequisite: 302-291B.) Planning, execution, and evaluation of experimental projects; design of experiments; interpretation of experimental results; statistical analysis of experimental data; effective work in groups; selected laboratory exercises on chemical engineering topics.
Professor Fuller and Staff

302-393B CHEMICAL ENGINEERING LABORATORY II 3(1-3-5). (Prerequisite: 302-392A*.) Guided practice in planning and executing experimental projects on chemical engineering topics.
Professor Fuller and Staff

302-402B CHEMICAL PROCESS PRINCIPLES II 3(3-0-6). (Prerequisites: 302-201A, 180-250B*.) Applications of physical, organic and inorganic chemistry to case studies in chemical process contexts. The cases chosen emphasize process and product development in the Canadian chemical industry.
Professor Vera

302-403A CHEMICAL PROCESS ECONOMICS 3(3-0-6) (Prerequisites: 302-311A*, 302-351A*.) Quantitative analysis of economic problems relating to chemical processes. Evaluation of economic optima for operating plants. Methods of cost estimation for new plants. Interest and investment costs; depreciation; alternative investments.
Staff

302-423A CHEMICAL REACTION ENGINEERING 3(3-0-6). (Prerequisites: 302-201A, 180-250B*.) Application of kinetics of homogeneous chemical reactions in calculating reactor size, production rate, selectivity and yield; interaction between chemical reaction and heat transport; kinetics of

heterogeneous catalysis; catalyst properties; mass and heat transfer in heterogeneous reactions; reactor size and production rate for heterogeneous reactions.
Professor Fuller

- **302-452B PARTICULATE SYSTEMS 3(3-0-6).** (Prerequisites: 302-201A, 302-210B*.) Study of operations involving multiphase systems with one of the phases finely sub-divided as bubbles, drops or particles. Applications in evaporation, crystallization, fluidization etc. (Alternate years, next given 1978-79).
Professor Grace

302-453A PROCESS DESIGN 3(3-0-6). (Prerequisites: 302-311A*, 302-312B*, 302-351A**.) Integration of unit operations and chemical engineering science in the design of chemical plants. The evaluation of the optimum combination of the purchase price and operating costs is emphasized.
Mr. Rudzinski

302-454B DESIGN PROJECT 4(2-0-10). (Prerequisite: 302-453A.) Process design brief will be prepared for an industrial system involving heat and mass transfer operations. The topic will be assigned to give sufficient scope for selecting design alternatives.
Dr. Cooke & Mr. Rudzinski

302-455B PROCESS CONTROL 3(3-0-6). (Prerequisites: 302-311A*, 302-351A*.) Linear incremental models of processes; development and representation of control strategies; measurement and interpretation of transient response; controller tuning; feedforward and cascade control systems. Assignments use an instrumented process laboratory, analog, computer, and minicomputer control systems.
Professor Boyle

302-462A TECHNICAL PAPER II 1(0-0-3). (Prerequisite: 302-360A.) A technical paper prepared according to instructions issued by the Department.
Dr. Crotogino

- **302-464A,B PROJECTS IN CHEMICAL ENGINEERING II 2(1-0-5).** (Prerequisite: 302-363A,B.) Projects on social or technical aspects of chemical engineering practice. Students must suggest their own projects to be approved and supervised by a member of the staff.
Staff

- **302-471B INDUSTRIAL WATER POLLUTION CONTROL.** (Prerequisite: 302-210B) Water quality standards; water surveys; process design considerations; physical, chemical and biological treatment of aqueous effluents from industrial plants; case studies in the Canadian context. (Alternate years, next given 1977-78).
Professor Volesky

- **302-472A INDUSTRIAL AIR POLLUTION CONTROL.** (Prerequisite: 302-210B.) Air quality standards, air surveys, process design considerations, dispersion theory and stack design; dust cleaning methods, design of scrubbers, case studies in the Canadian context. (Alternate years, next given 1978-79).
Dr. Cooke

- **302-481A POLYMER ENGINEERING 3(3-0-6).** (Prerequisites: 302-210B, 180-212A,B.) The application of engineering fundamentals to the preparation and processing of polymers. Classification and characterization of polymers, reaction media and kinetics of polymerization, reactor design, mechanical behaviour of polymers, visco-elasticity and rheology, processing techniques; extrusion, molding, etc.
Professor Kamal

- **302-483B INDUSTRIAL RHEOLOGY 2(1-1-4).** (Prerequisites: 302-210B or equivalent.) An introduction to the basis of mechanical testing of viscous liquids and pastes in the process industries. Topics include: fundamentals of rheology; classification of material responses; instrumentation for rheological measurements; applications to the petroleum, plastics, food processing and pharmaceuticals industries. (Alternate years, next given 1977-78).
Professor Dealy

- **302-486B TEXTILE TECHNOLOGY 3(3-0-6).** (Prerequiste: 302-210B or equivalent.) Application of engineering principles to the following topics: chemical constitution and properties of fibre-forming polymers, theories of fibre structure; relations between molecular structure and properties of natural and man-made fibres; staple and filament yarns; blending of fibres; effect of operating variables on yarn properties; weaving and knitting technology; finishing of fibres, textile testing.
Staff

- **302-494A,B,F RESEARCH PROJECT AND SEMINAR 3(1-6-2).** (Prerequisite: 302-393B.) Independent study and experimental work on a topic chosen by consultation between the student and the Departmental staff.
Staff

- **302-495A,B,F RESEARCH PROJECT AND SEMINAR 4(1-9-2).** (Prerequisite: 302-494A.) Independent study and experimental work on a topic chosen by consultation between the students and the Departmental staff.
Staff

- **302-594B FOOD AND FERMENTATION ENGINEERING 3(3-0-6)** (Prerequisite: 302-373A or equivalent.) Engineering aspects of biochemical and microbial processes, selected unit operations of food processing. Agitation and aeration, related mass transfer, design and scale-up of fermentation equipment. Enzyme technology, sterilization techniques, separation processes. Contemporary, food and fermentation technology. Instrumentation.
Professor Volesky

5.4 DEPARTMENT OF CIVIL ENGINEERING AND APPLIED MECHANICS

Chairman

R.G. Redwood, B. Sc. (Eng.) (Bristol), M.A.Sc (Tor.), Ph.D. (Bristol), Eng.

Professors

P.J. Harris, B.Sc.(Man.), M.Eng., Ph.D. (McG.),Eng.

B. Stafford Smith, B.Sc. (Manchester), Ph.D. (Bristol) D.Sc.(Southampton).

R.N. Yong, B.A.(Wash. & Jeff.), B.S.C.E.(M.I.T.), M.S.C.E.(Purdue), M.Eng., Ph.D.(McG.), Eng.

Associate Professors

V.H. Chu, B.S.Eng.(Taiwan), M.A.Sc. (Tor.), Ph.D.(M.I.T.), Eng.

R.G. Cox, B.A., Ph.D. (Cantab.), Eng.

R.D. Japp, B.Eng., M.Eng., Ph.D.(McG.) Eng.

M.S. Mirza, B.Eng.(Karachi), M.Eng., Ph.D. (McG.), Eng.

J.C. Osler, B.Eng.(McG.), S.M.(Harv.), Eng.

A. Pakalnins, D.Eng.Sc.(Latvia), Eng.

S.B. Savage, B.Eng.(McG.), M.Sc.(Cal.Tech.), Ph.D.(McG.)

D.A. Selby, B.Eng., M.Eng.(McG.), Eng.

C.J. Turkstra, B.Sc.(Qu.), M.S.(Ill.), Ph.D.(Wat.), Eng.

Assistant Professors

F.L. Hart, B.S.E., M.S., Ph.D.(Conn.)

D. Mitchell, B.A.Sc., M.A.Sc., Ph.D.(Tor.), P.Eng.

D. Panagiotakopoulos, B.E.(C.C.N.Y.). Ph.D.(Cornell)

G.R. Thomas, B.Sc.(Imp.Coll.), M.E., Ph.D. (Cornell)

Visiting Assistant Professors

S.K. Gupta, B.Sc.(Eng.) (Ranchi), M.Eng. (Roorkee), Ph.D.(Waterloo)

S.C. Shrivastava, B.Sc.(Eng.) (Vikram), M.C.E. (Delaware), Eng. Sc.D. (Columbia)

Associate Member

G. Cavadias, B.Eng. (Athens), M.Sc.(McG.), Faculty of Management.

Special Lecturers and Part-Time Staff

L.J. Arcand, J.L. deStein, N.W.E. Lee, R.J. Lindsay, L.A. Rivard

Civil Engineering can be defined as that branch of engineering which deals with systems of constructed facilities. Responsibilities of Civil Engineers thus include the planning, development, and construction of transportation systems, urban services, resource development projects, waterways, and structures varying from skyscrapers to rocket vehicles. Applied mechanics refers to branches of science and analysis upon which the practice of civil engineering is based.

As with all other branches of engineering, rapidly expanding knowledge in science and mathematics coupled with the development of computers has led to great changes in the practice of civil engineering. The curriculum of this Department fully reflects these changes, and the foundation provided will enable graduates to cope with further changes in the future.

The required courses ensure a sound scientific and analytical basis for professional studies through courses in mechanics, solid mechanics, fluid mechanics, soil mechanics, structural analysis, systems analysis and mathematics. Fundamental concepts are applied to various fields of practice in both required and elective courses.

By a suitable choice of elective courses, a student can attain advanced levels of technical knowledge in particular specialized areas. After completing such a program he will then be well prepared for a professional career or for graduate studies at any prominent university in North America or abroad. In professional practice the civil engineer may be concerned with detailed design, or with planning and project management, both requiring the technical understanding provided by his engineering studies; he may be concerned with projects varying in size from those costing multi-millions of dollars to small schemes costing several thousands of dollars. Diverse professional careers may be followed in either the private or public sectors.

Alternatively, a student can elect to develop his interests in a more general way by combining courses within the department with courses from other departments or faculties. Such a general program of studies in civil engineering has proven to be an excellent basis for careers in urban government and business management.

CURRICULUM FOR THE B.ENG. DEGREE IN CIVIL ENGINEERING AND APPLIED MECHANICS

REQUIRED COURSES		COURSE CREDIT	
Non-Departmental Subjects			
186-221A	General Geology	3	
189-261A,B	Linear Algebra and Differential Equations I	3	
189-262A,B	Linear Algebra and Differential Equations II	3	
189-263A,B	Advanced Calculus	3	
189-264A,B	Introduction to Boundary Value Problems	3	
300-310A,B	Engineering Economy	3	
305-290A	Graphics	2	
308-208A,B	Computers in Engineering	2	
And one of			
304-281B	Electric Power	3	
306-212A	Engineering Thermodynamics		25
Civil Engineering Subjects			
303-201B	Structural Materials	2	
303-202A	Probabilistic Systems	3	
303-203A	Technical Reporting	1	
303-205A,B	Mechanics I	4	
303-206B	Mechanics II	3	
303-207A,B	Solid Mechanics	4	
303-208B	Deterministic Systems	3	
303-209B	Surveying	3	
303-220F	Technical Papers	1	
303-310B	Sanitary Engineering	3	
303-312B	Soil Mechanics	4	
303-313A	Structural Analysis	3	
303-314A	Structural Design I	3	
303-315B	Structural Design II	3	
303-319B	Transportation Engineering	3	
303-321A	Fluid Mechanics and Hydraulics I	3

COURSES OFFERED BY THE DEPARTMENT

303-201B STRUCTURAL MATERIALS 2(2-2-2). Study of structural materials from the point of view of microscopic phenomena and the relationship to mechanical behaviour. Study of metals, concrete and polymeric materials.
Professor Japp

303-202A PROBABILISTIC SYSTEMS 3(3-1-5). An introduction to probability, statistics and decision theory with applications to Civil Engineering design. Descriptive statistics, common probabilistic models, principles of parameter estimation,elementary bayesian analysis.
Professor Shrivastava

303-203A TECHNICAL REPORTING 1(1-0-2). Students will be encouraged to communicate ideas and factual data, either verbally, visually or in writing, relating to various situations encountered in engineering practice. Formal assignments will be limited to four short written submissions, including one group assignment, while the remainder of the course will emphasize active participation in class.
Professors Osler and Thomas

303-205A,B MECHANICS I 4(4-2-6). Systems of forces and couples, resultants, equilibrium. Frames and beams, reactions, shear forces, bending moments. Centroids, centre of gravity, distributed forces, moment of inertia. Friction, limiting equilibrium, screws, belts. Kinematics and kinetics of particles and systems, coordinates, mass-acceleration, work-energy, impulse-momentum. Orbital motion of particles.
Professors Japp, Selby & Shrivastava

303-206B MECHANICS II 3(3-2-4). (Prerequisite: 303-205A,B: 189-261A,B. Co-requisite: 189-263A,B.) Particle kinematics, moving coordinate systems, rigid body kinematics, moments of inertia. Rigid body kinetics, mass-acceleration, work-energy, impulse momentum. Euler's equations. Lagrange's equations, Hamilton's principle, vibrations of single degree of freedom systems.
Professor Cox

303-207A,B SOLID MECHANICS 4(3-2-7). † (Prerequisite: 303-205A,B*, 308-208A,B**.) Stress-strain relationships; elastic and inelastic behaviour; performance criteria. Elementary and compound stress states, Mohr's circle. Shear strains, torsion. Bending and shear stresses in flexural members. Deflections of beams. Statistically indeterminate systems under flexural and axial loads. Columns. Dynamic loading.
† Two-hour laboratory periods and problem periods, alternate weeks.
Professors Savage, Stafford Smith, Thomas & Staff

303-208B DETERMINISTIC SYSTEMS 3(3-1-5). (Prerequisite: 189-261A,B**.) Introduction to the systems approach and optimisation techniques; applications of linear programming; critical path scheduling; marginal and sensitivity analysis; evaluation of projects and choosing among alternatives; integration of technological and social aspects in engineering projects.
Professor Panagiotakopoulos

303-209B SURVEYING 3(2-3-4). (Prerequisite: 308-208A,B**.) The construction and use of modern survey instruments; transit, level, etc.; linear and angular measurements and errors; types and magnitudes; probability; significant figures; units of measurements; simple circular curve; theory and use of the Polar Planimeter; engineering and architectural applications of surveying measurements. A field school must be attended after completion of the lecture course.
Professor Selby and Mr. Lindsay

303-220F TECHNICAL PAPERS 1(0-0-3). Two technical papers are to be presented, one in the U2 year and one in U3. These are normally prepared during the summer months, and are to be on a technical topic, related, if possible, to the student's summer employment. Detailed instructions are provided in the spring, and papers may be submitted either in early September or early January. Registration in this course should be in the semester in which the second paper is submitted.

303-281A ANALYTICAL MECHANICS 3(3-1-5). (Corequisites: 189-261 and 189-263.) Kinematics of particles, dynamics of particles, Newton's laws of motion. Work, conservative forces, potential energy, principle of virtual work. General three dimensional and constrained motion of particles. Relative motion and general moving frames of reference, d'Alembert's principle. Angular momentum of particles, central force fields and orbits. Dynamics of a system of particles, kinetic energy and angular momentum, collisions and impulse bodies of variable mass. General motion of rigid bodies, moments and products of inertia, principal axes, angular momentum and kinetic energy of rigid bodies, gyroscopic precession. Generalized coordinates and forces, Lagrange's equations, Hamilton's principle and Hamilton's equations.
Professors Cox and Mitchell

303-282B VIBRATIONS AND WAVES 3(3-0-6). (Prerequisite: 303-281A; Corequisite: 189-264B.) Vibrations of mechanical and electrical systems of single and multiple degrees of freedom, normal modes and normal co-ordinates. Standing waves of stretched strings, Fourier series. Standing waves on circular and rectangular membranes. Forced vibrations and resonance. Progressive waves on continuous strings and electrical transmission lines. Phase and group velocities, energy and momentum transport. Modulations, pulses and wave packets, Fourier integral. Reflection and transmission of waves, impedance

concepts, selective wave transmission. Electromagnetic waves and polarization. Interference and diffraction.
Professor Chu

303-283B STRENGTH OF MATERIALS 4(3-3-6). (Prerequisite: 303-205A,B*.) Structural behaviour, trusses, statically determinate beams, frames, and arches; moments of inertia, stress, strain, properties of materials; bending and shearing stresses; torsion; fixed and continuous beams; reinforced concrete beams; columns; combined stresses; Mohr's circle.
Professor Selby

303-287B DYNAMICS 3(3-1-5). (Prerequisite: 303-281A; Corequisites: 189-267, 189-269.) Free, forced and damped vibrations of single and multiple degree of freedom linear systems. Nonlinear vibrations and stability, phase plane and singular points, subharmonic response, limit cycle. Derivation of wave equation for various systems by Hamilton's principle, reflection and transmission, damping of waves, dispersion, formation of discontinuities. Theory of elasticity, stress and strain tensors, equations of motion, elastic surface waves.
Professor Cox

303-289A BUILDING MATERIALS 2(2-2-2). Microscopic and macroscopic considerations of metals, Portland cement, concrete and polymers at an introductory level.
Dr. Sethi

303-290A,B MECHANICS I 4(4-1-7). Introduction to Mechanics. Fundamental quantities. Conservation of mass. Kinematics, momentum and force; conservation of momentum; Newton's Laws; concepts of force and impulse; angular momentum and its conservation; central force motion; various classes of forces (electrostatic, friction, gravity, etc.) and pseudo-forces; relative motion. Energy: kinetic, potential and other mechanical forms; work. Static equilibrium; statics, electrostatics, hydrostatics and elastostatics. Centre of mass and moment of inertia. Rigid-body dynamics. Connection of mechanics with other branches of engineering.
Professor Lee

303-291A,B MECHANICS II 3(3-1-5). (Prerequisite: 303-290A.) Classification of mechanics. Coordinate systems and relative motion. Degrees of freedom, generalized coordinates and constraints. Newtonian, Lagrangian and Hamiltonian formulations of mechanics. Solution of equations of motion for simple systems. Rigid-body dynamics; Euler's equations. Energy methods; stability and the phase plane. Transition from discrete to continuous, deformable systems. Wave propagation.
Professor Paidoussis

303-293B MECHANICS II HONOURS 3(3-1-5). (Prerequisite: 303-290A.) Same topics as covered in Mechanics II, but in a manner and with the stress appropriate for honours students.
Professor Paidoussis

303-310B SANITARY ENGINEERING 3(3-3-3). Introduction to the fundamental principles of municipal water supply and wastewater disposal; transportation, storage, pumping, characteristics, and examination of water and wastewater; physical, chemical and biological operations and processes of water and wastewater treatment systems.
Professor Hart

303-312B SOIL MECHANICS 4(3-3-6). (Prerequisite: 303-207A,B*.; Co-requisite: 186-221A.) Soil properties and characteristics of soils, foundation types, soil behaviour, classification, yield and failure, general considerations of stability.
Professor Yong

303-313A STRUCTURAL ANALYSIS I 3(3-1-5). (Prerequisite: 303-207A,B.) Virtual work and energy methods; statically indeterminate systems, continuous beams and frames; slope deflection and moment distribution methods; influence lines; matrix methods; elementary plastic analysis.
Professor Turkstra

303-314A STRUCTURAL DESIGN I 3(3-1-5). (Prerequisite: 303-207A,B*.) Design in steel and timber. Properties of structural steels, classification and behaviour of steel structures. Allowable stress and plastic design. Members in axial tension and compression; flexure, with and without lateral support; reinforced beams, unstiffened plate girders. Introduction to beam-columns. Connections. Truss design. Fabrication and erection. Properties of timber, timber beams, columns and connections.
Professor Selby

303-315B STRUCTURAL DESIGN II 3(3-1-5). (Prerequisite: 303-207A,B*.) A study of the physical properties and characteristics of concrete; the design process; the mechanics of reinforced concrete in bending; shear and diagonal tension; bond and anchorage; structural systems; continuous beams and slabs; columns under axial load.
Professor Mirza

303-319B TRANSPORTATION ENGINEERING 3(3-1-5). Prerequisites; 303-202A, 303-208B, 308-208A,B.) Operating characteristics of highway, guided-ground, air, water-borne, and pipeline transport modes; land use/transportation interaction; travel demand analysis; transportation planning methodology; analysis of transportation alternatives; highway design; human factors and safety in highway transportation; location, planning, and design of airports.
Professor Gupta

303-321A FLUID MECHANICS AND HYDRAULICS I 3(2-3-4). (Prerequisite: 303-205A,B; Co-requisite: 189-264A,B.) Fluid statics, kinematics of flow, conservation-equations, control volume, dimensional analysis and similitude, hydraulic machinery steady flow in pipes, steady open channel flow.
Professor Savage

303-322B FLUID MECHANICS AND HYDRAULICS II 3(2-3-4). (Prerequisite: 303-321A.) Open channel transitions and controls, hydraulic structures, ideal fluid flow theory, boundary layers, surface waves, coastal hydraulics, hydraulic transients, water hammer, surge tanks.
Professor Chu

303-384A SOIL MECHANICS AND FOUNDATIONS 2(2-3-1). (Prerequisites: 303-283B* or 303-207A,B*.) Nature of soils, identification and classification. Physical properties of soils, permeability, compressibility, shear strength, principle of effective stresses, stress strain behaviour. Seepage, frost action. Field exploration of soil conditions. Foundations, shallow and deep. Earth pressures and retaining structures, stability of earth masses.
Professor Japp

303-385A STRUCTURAL STEEL DESIGN 2(2-2-2). (Prerequisite: 303-283B; Co-requisite: 303-289A.) A study of the characteristics of structural steel frames in building construction. Included is the detailed design of axially loaded members, trusses, beams and girders, and the overall framing of buildings. Also a consideration of structural loads, code requirements and design procedures. In addition the principles of structural timber design are studied.
Professor Turkstra

303-388B REINFORCED CONCRETE DESIGN 2(2-2-2). (Prerequisite: 303-283B; Co-requisite: 303-289A.) A study of elementary reinforced concrete building systems including a consideration of their characteristics. Also the working stress design of simple and continuous span beams, and the design of columns. An introduction to ultimate strength designs is also given.
Professor Mitchell

- **303-416B TRANSPORTATION ECONOMICS 2(2-1-3).** (Prerequisites: 303-202A*, 303-208B*.) Transportation economics. Treatment of highway and other transportation problems, drawing from statistical and probabilistic analysis as well as from economics.

303-417A FOUNDATIONS 3(3-1-5). (Prerequisite: 303-312B*.) Site investigation, engineering properties of soils for design. Plastic equilibrium, bearing capacity theory. Design of footing and rafts, differential settlement, coefficient of subgrade reaction. Earth pressures, design of retaining walls and bulk heads. Piles, soil-structure interaction, estimates of the bearing capacity of single piles, group action.
Professor Osler

303-418A,B PROJECT 3(0-4-5). (Prerequisite: Completion of an approved set of required and technical elective courses.) The project consists of a study or design topic in any of the branches of Civil Engineering. The project may be analytical or experimental, and may combine various branches in the discipline. The topic can be chosen in consultation with a staff member, whose approval is necessary. Guidance will be provided by Department staff and by practising engineers. The project is normally carried out in a student's last semester.
Professors Chu, Hart, and Staff

- **303-430A MUNICIPAL SYSTEMS 3(3-2-4).** (Prerequisite: 303-310B.) Design construction and economics of water supply and wastewater disposal systems, including process and control engineering, and industrial waste disposal.
Professor Pakalnins

- **303-431A STREAM POLLUTION AND CONTROL 3(3-0-6).** (Prerequisite: 303-310B**.) Sources and types of pollution; effects of pollution; thermal pollution; oil pollution; pollution from farmland; eutrophication; stream self-purification; pollution surveys and water quality standards.
Professor Hart

- **303-432B HYDROLOGY 3(3-2-4).** (Prerequisites: 303-202A, 303-208B**.) Physical background to hydrology; climate variations; water balance, seepage and groundwater, evapo-transpiration, runoff; methods of collecting data and statistical treatment. Elements of flood routing; reservoir design.
Professor Gupta

- **303-433B URBAN PLANNING 2(2-2-2).** (Prerequisite: 308-208A,B*.) City in history; master plans of land use and communications; traffic and transportation systems; planning and design of residential subdivisions.
Professor Pakalnins

- **303-435A GEOMETRONICS 2(2-3-1).** (Prerequisite: 303-209B.) Surveys for engineering projects; altimetry – trigonometric and barometric; underground surveys; hydrographic surveying – bathymetry; discharge of streams, electronic radio location; electronic distance measuring – tellurometer – geodimeter – use of the laser – airborne profile recording; elements of geodetic surveying; simple cartography.

- **303-439B PHOTOGRAMMETRY AND INTERPRETATION 3(3-3-3).** (Prerequisite: 303-209B.) Construction of planimetric and topographic maps, determination of space position of objects from photographs; preparation of composite pictures of the ground; aerial cameras and equipment. Vertical aerial photographs are used to evaluate, analyse, classify and interpret images of objects seen on the

photographs; laboratory use of stereoscopes and a Multiplex projector, and field visits, are included.
Professor Arcand and Mr. Lee

- **303-440A TRAFFIC ENGINEERING 3(3-2-4).** (Prerequisite: 303-319B*.) Driver, vehicle and traffic flow characteristics; origin-destination studies, traffic studies and analysis, accident studies, queueing theory applications, gap acceptance, simulation, highway capacity, traffic regulations and control measures, intersection control.

- **303-445A CONSTRUCTION PROJECT MANAGEMENT 3(3-2-4).** (Prerequisites: 303-202A, 303-208B, 303-314A or 303-315B.) Planning, operation, and control construction projects using systems analysis methods, economics, modern management techniques, and statistical analysis; linear graph modeling, PERT, precedence networks; scheduling of operations, manpower, and equipment, resource levelling; progress monitoring and reporting; the rate of work method; time-cost trade-offs; cost estimation; evaluation of contract bidding; risk analysis; methods improvement in construction management.
Professor Panagiotakopoulos

- **303-450A SOIL BEHAVIOUR 3(3-0-6).** (Prerequisite: 303-312B.) Soil-water interaction in relation to soil properties, environmental considerations, volume changes, infiltration and diffusion. Soil freezing, soil strength parameters, time-deformation characteristics, stability and yield.
Professor Yong

- **303-451B HIGHWAY AND AIRPORT DESIGN 2(2-2-2).** (Prerequisite: 303-312B*.) Design and construction of subgrades; fill selection, compaction, compaction control, soil stabilization, frost action. Stability of cuts and embankments. Design of rigid and flexible pavements and bases, stresses in layered systems, evaluation of design parameters, current methods of design, evaluation and strengthening of existing pavements.
Professor Osler

- **303-460A STRUCTURAL ANALYSIS II 3(3-2-4).** (Prerequisite: 303-313A.) Computer structural analysis, direct stiffness applied to two and three dimensional frames and trusses, matrix force method, nonlinear problems, cables and arches, approximate analyses, energy methods, buckling of trusses and frames, dynamic analysis of frames.
Professor Thomas

- **303-461B STRUCTURAL MECHANICS 3(3-2-4).** (Prerequisite: 303-207A,B.) Transformation of stress and strain in three dimensions, basic equations of elasticity, stress concentrations, theories of failure, unsymmetrical bending of beams, shear centres, torsion of structural sections, elementary analysis of plates and shells.
Professor Harris

- **303-462A DESIGN IN METALS 3(3-3-3).** (Prerequisites: 303-313A, 303-314A.) A study of structural systems; recent developments and trends in structural steel such as cantilever construction, castellated beams, composite construction, continuity, etc.; economic factors and cost studies; compression members by elastic and inelastic theory; miscellaneous details with high strength bolts and welds.
Professor Redwood

- **303-463A DESIGN IN CONCRETE 3(3-3-3).** (Prerequisites: 303-313A, 303-315B.) Ultimate strength design of reinforced concrete beams, slabs, columns, retaining walls and footings. Floor systems and building frames. Yield line theory of slabs. Composite construction, design of pressed concrete beams.
Professor Harris

- **303-464B EXPERIMENTAL STRESS ANALYSIS 2(2-3-1).** (Prerequisite: 303-313A.) Two dimensional stress and strain equations, Mohr's circle of strain, strain rosettes and graphical solutions; extensometers; electric train gauges, circuitry for static and dynamic measurement, transducers. Two dimensional photoelasticity, photostress; brittle coatings, dimensional analysis and structural models.
Professor Harris

- **303-470A RESEARCH PROJECT 3(0-1-8).** (Prerequisite: 60 credits in the Civil Engineering and Applied Mechanics program.) This course is open only to those students with a high cumulative grade point average. A research project must be carried out and a technical paper prepared under the supervision of a member of staff. The nature of the project must be established with the consent of the Staff Supervisor, and must be approved by the Department before registration. This course is to be taken in conjunction with the required course 303-418B, and the project therefore can be carried out through two semesters.
Staff

303-492A STRUCTURES 2(2-2-2). (Prerequisite: 303-385A; Co-requisite: 303-388B.) A study of structural systems in concrete, steel, timber; a philosophy of structure; choice of structure; economic factors in design; recent developments and trends in structure; lateral stability by frame action, bracing sheer walls; mechanics of certain structural forms.
Professor Stafford Smith

PROGRAMS IN CIVIL ENGINEERING

Considerable freedom exists for students to influence the nature of the program of study which they follow in the Department of Civil Engineering and Applied Mechanics. The Department offers a variety of advanced elective courses in three main groupings: Geotechnical Engineering, Structural Engineering, and a broad area which may be called Environmental Systems. The last of these is wide in

scope, and embraces studies in urban systems engineering, transportation, hydrology, environmental and municipal engineering, hydraulics, photogrammetry and air photograph interpretation and pollution studies.

In order to complete a program in the minimum time, the need to satisfy prerequisites limits the choice of courses in the first and second semesters. September entrants into UI are advised to register in the following courses in the first semester:

189-261A	Lin. Algebra and Diff. Eqns. I
189-263A	Advanced Calculus
300-310A	Engineering Economy
303-203A	Technical Reporting
303-205A	Mechanics I
305-290A	Graphics
308-208A	Computers in Engineering

In the second semester, the following courses are advised:

189-262B	Lin. Algebra and Diff. Eqns. II
303-201B	Structural Materials
303-206B	Mechanics II
303-207B	Solid Mechanics
303-208B	Deterministic Systems
303-209B	Surveying

January entrants into UI are advised to register in the following courses in the first semester:

189-261B	Lin. Algebra and Diff. Eqns. I
189-263B	Advanced Calculus
303-201B	Structural Materials
303-205B	Mechanics I
303-209B	Surveying
308-208B	Computers in Engineering

In the second semester, the following courses are advised:

186-221A	General Geology
189-262A	Lin. Algebra and Diff. Eqns. I
300-310A	Engineering Economy
303-203A	Technical Reporting
303-207A	Solid Mechanics
305-290A	Graphics

Students wishing to take lighter loads than those outlined above may do so after consultation with their adviser.

Courses taken in Semester 3 or later are very much dependent upon a student's interests and ability. Information and advice concerning different possibilities are made available in the Department prior to registration. All programs require the approval of a Staff Adviser. Programs for students transferring into the Department with advanced standing will be dependent upon the academic credit previously achieved, and such a program will be established only after consultation with a Staff Adviser.

The General Elective requirements of five credits may be satisfied by taking approved courses, at the appropriate level, given anywhere within the University.

Technical Elective courses must amount to 15 out of a total of 100 credits, and most of these electives will be selected from those offered in the Department. Providing good grades have been maintained, and with the instructor's approval, the courses elected may include certain ones normally provided for graduate students. Permission may be granted for a student to take a coherent group of elective courses from outside of the Department, subject to the overall requirement that the emphasis of these elective courses is compatible with the professional orientation of a civil engineer. Such a grouping of courses is the Sub-program in Management, which is particularly relevant to students interested in careers in construction or business management.

Four credits of the technical elective requirements will be considered as satisfied by completion of the courses of the Sub-program, listed in Section 6. Civil Engineering students are also exempt from course 280-373A,B Operations Research, because of their required courses 303-202A and 303-208B. With the five General Elective credits considered as part of this Sub-program, this normally means that a minimum of 106 credits are required for the B.Eng. degree in Civil Engineering and Applied Mechanics with the Sub-Program in Management.

In addition to courses described in Section 6, the following courses given by other Departments are particularly relevant for civil engineering students:

301-374B	Philosophy of Structures
301-435A	Urban Planning I
301-436B	Urban Planning II
301-446B	Mechanical Services in Buildings
301-448B	Environmental Acoustics
306-230B	Geophysical Exploration
306-321B	Behaviour of Rock Structures
306-422A	Applied Explosives
308-350A,B	Numerical Analysis

In some cases enrolment may be limited, and in others the instructor's permission should be obtained before registration.

5.5 DEPARTMENT OF ELECTRICAL ENGINEERING

Chairman

P. Silvester, B.S. (Carnegie). M.A.Sc.(Tor.), Ph.D.(McG.), Eng.

Professors

E.L. Adler, M.A.Sc.(Tor.), Ph.D. (McG.), Eng.
P.R.Bélanger, S.M., Ph.D. (M.I.T.), Eng.
M..L. Blostein, M.Eng.(McG.), Ph.D.(Ill.), Eng.
R.P. Comsa, M.Sc.(Zurich), M.Eng.(McG.), Eng.
G.L. d'Ombrain, B.Sc.Eng., Ph.D.(Lond.), Eng.
G.W. Farnell, S.M.(M.I.T.), Ph.D.(McG.), F.I.E.E.E., Eng.
T.J.F. Pavlasek, B.Eng., M.Eng., Ph.D.(McG.), Eng.
G.D.Zames, B.Eng.(McG.), Sc.D.(M.I.T.)

Associate Professors

C.H. Champness, M.Sc.(Lond.), Ph.D.(McG.)
M. Fukada, M.S.E.E.(Tokyo), Ph.D.(Calif.)
F.D. Galiana, S.M., Ph.D.(M.I.T.).
A.A. Gundjian, B.Sc.(Alexandria), Ph.D.(Penn.)
M.D. Levine, M.Eng.(McG.), Ph.D.(Lond.), Eng.
A.S. Malowany, B.Eng., Ph.D.(McG.), Eng.
B.T.Ooi, S.M.(M.I.T.) Ph.D. (McG)
N. Rumin, M.Sc., Ph.D.(McG.), Eng.
F. Spitzer, B.Sc., Ph.D.(Lond.), Eng.
G.L. Yip, M.Sc.(Qu.), Ph.D.(Tor.)

Assistant Professors

P. Kabal, M.A.Sc., Ph.D.(Toronto)
W. Kinsner, M.Sc.(Pol.), Ph.D.(McM.).
R. Kwong, S.M., Ph.D.(M.I.T.)
H.C. Lee, B.Sc.(Man.), Ph.D.(McG.)
S. Zucker, M.S., Ph.D.(Drex.).

Lecturers

K.L. Fraser, B.Eng.(McG.), Eng.

Associate Member

J.S. Outerbridge, Ph.D., M.D.C.M. (McG.)

Auxilliary Professors

C.W. Bradley, D. Crevier, B. Gevay, M. Kaplan, G. Karady, E. Kisak, K.J. Koiste, S. Kubina, M.A. Marin, H.L. Nakra, S. Rauch, F.M. Reza, P.K. Sen, L. Snider, A. Turgeon

Looking back from the year 2000, historians of electrical engineering will probably consider the twentieth century to be divisible into three equal periods. The first period witnessed a rapid and exciting growth in the sophistication of electromechanical devices, while the second was marked by a startling growth in electronic communications. It is probably safe to forecast that the present era will be the age of digital computer systems and computer communications.

Since a digital computer is essentially a large-scale electronic system, it is quite natural for the growing importance of the computer to be reflected in the ever evolving curriculum of the Department of Electrical Engineering. Thus a substantial portion of the Department's activity centers on the electronic devices and circuits which form the building blocks of electronic computers. An equally great amount of effort is devoted to the structure and organization of computers. The physical make-up of computers, however, forms only a portion of the broader picture. An important part of the electrical engineer's work has always been, and probably always will be, the design of electrical devices and systems. Computer-aided design thus falls well within the province of the electrical engineer. So do problems of man-machine and computer-computer communications, since the effective use of electronic communication technologies as well as the efficient distribution of electrical energy require rapid movement and processing of data. At the same time, small special-purpose computers are being incorporated as functional sub-units into virtually every conceivable variety of electrical system.

While the Department recognizes the importance of the computer revolution, it has not neglected in its program such important areas as communications, control systems, electromagnetic propagation, electro-optical systems, power engineering, and electron devices and circuits.

The Department currently offers a regular and an honours option leading to the professionally accredited degrees of, respectively, B.Eng. and B.Eng. (Honours). Suitably qualified and motivated students can complete either program in six semesters (three years) of post-collegial studies. Both courses provide the student with a strong background in mathematics, networks, electronics, computer engineering and electromagnetics. These provide the fundamental tools for further studies. Because of the diversity of the field it is not possible to become expert in everything, but it is considered important for the student to obtain an exposure to a diverse subset of the important areas. In order to promote this breadth, the student is required to choose from a selected set of courses. Finally, there is a large group of technical electives which allow considerable freedom to specialize in specific areas, or to obtain a broad perspective of the field. Six major areas of specialization are defined: Communication Systems; Computer Engineering; Control Systems; Electromagnetics and Waves; Solid State Devices and Electronics; Power Engineering.

In addition to technical elective requirements, the student must also satisfy a general elective requirement. Although it is possible to take technical courses to satisfy this requirement, students are urged to use this freedom to study in some depth a field entirely outside electical engineering. The Faculty is defining course packages that study a certain field in sufficient depth to be called a minor. With judicious use of general electives and the occasional additional course, a student in the regular course should be able to take a faculty minor.

The Honours curriculum is designed to produce a stronger background in the mathematical and

physical bases of electrical engineering with the goal of an in-depth study of certain areas of the field. As a result, the required courses stress a more fundamental and analytical approach to the subject matter. The technical electives must be chosen to provide coherent study of certain well-defined areas and should serve as a basis for future study either in graduate school or industry. Students in this curriculum normally benefit from smaller classes and more personal attention on the part of the staff.

Laboratories for both teaching and research work are good, and growing. Because much of the Department's teaching is organized on a project basis, it is occasionally difficult to draw a clear line between graduate and undergraduate activities. In the laboratories, investigative work is often carried out by advanced undergraduate students as well as graduates; in the classroom, graduate and undergraduate courses frequently overlap. The facilities of the Department include several digital computer installations, as well as analog computers. In addition, the new Louis Herdt coherent optics laboratory, semiconductor devices laboratory, acoustics laboratory, and various others provide challenging opportunities for project work as well as research.

In recent years, an advanced degree has become increasingly necessary for electrical engineers interested in pursuing technically oriented careers. More than one-third of McGill Electrical Engineering graduates currently continue to a Master's degree or beyond. While the computer-oriented bias evident in the undergraduate program is also reflected in graduate course offerings, project and thesis work is usually planned on a highly individual basis and hence covers a very broad spectrum.

CURRICULUM FOR THE B.ENG. DEGREE IN ELECTRICAL ENGINEERING (REGULAR)

REQUIRED COURSES		COURSE CREDIT	
Non – Departmental Subjects			
189-261A,B	Linear Algebra and Differential Equations I	3	
189-262A,B	Linear Algebra and Differential Equations II	3	
189-263A,B	Advanced Calculus	3	
189-264A,B	Introduction to Boundary Value Problems	3	
189-381A	Functions of a Complex Variable	3	
198-321A	Modern Physics	3	
303-281A	Analytical Mechanics	3	
303-282B	Vibrations and Waves	3	24
Electrical Engineering Subjects			
304-201A,B	Introductory Circuit Theory	3	
304-221A,B	Introduction to Computers	3	
304-231A,B	Introductory Electronics	3	
304-291A,B	Electrical Laboratory I	3	
304-302A,B	Network Analysis	3	
304-333A,B	Electronic Circuits	3	
304-351A,B	Electromagnetic Fields	3	
304-352B	Electromagnetic Waves	3	
304-392A,B	Electrical Laboratory II	3	
304-470A,B	Technical Paper	2	
304-493A,B	Electrical Laboratory III (See Note 3)	3	
304-494A,B	Electrical Laboratory IV (See Note 3)	3	35
Electrical Engineering Breadth Subjects			
	Choose 12 credits from the list below		
304-303A,B	Signals and Systems	3	
304-305B	Random Signals and Noise	3	
304-322A,B	Digital System Design	3	
304-332B	Properties of Solids	3	
304-361A,B	Electromechanical Energy Conversion I	3	
308-350A,B	Numerical Analysis	3	12

ELECTIVE COURSES

Technical Electives

Eighteen credits chosen from 300, 400, 500, or 600 level courses given by the department. Courses contained in the breadth list but not used for that requirement may also be chosen. Subject to departmental approval up to six credits may be taken from outside the department. 18

General Electives

Six credits selected in accordance with departmental regulations. The regulations concerning general electives and a list of approved courses appear in a separate section below. 6

Total **95**

TYPICAL REGULAR PROGRAM

A typical organization of the six semester study leading to a B.Eng. in Electrical Engineering is given below:

	Semester 1 (Fall)			**Semester 2 (Winter)**	
189-261A	Diff. Eq. I	3	189-262B	Diff. Eq. II	3
189-263A	Advanced Calculus	3	189-264B	Boundary Value Problems	3
303-281A	Analytical Mechanics	3	303-282B	Vibration and Waves	3
304-201A	Circuits	3	304-231B	Electronics	3
304-221A	Intro. to Computers	3		General Elective	3
		15			15
	Semester 3 (Fall)			**Semester 4 (Winter)**	
189-381A	Complex Variables	3	304-333B	Electronics	3
198-321A	Modern Physics	3	304-352B	Electromagnetic Waves	3
304-291A	Elect. Lab I	3	304-392B	Elect. Lab II	3
304-302A	Networks	3		Required breadth courses	6
304-351A	Electromagnetic Fields	3			
	Required breadth course	3			
		18			15
	Semester 5 (Fall)			**Semester 6 (Winter)**	
304-470F	Technical Paper	2	304-494B	Elect. Lab IV	3
304-493A	Elect. Lab III	3		Technical Electives	9
	Technical Electives	9		General Elective	3
	Required breadth course	3			
		17			15

NOTES:

1) 304-322, Digital System Design, is a prerequisite to several computer oriented courses. It is therefore recommended that students electing to take this course do so in Semester 3 or Semester 4.

2) A core course is the same as a required course and necessitates a C or better for acceptable credit.

3) 304-490, Digital Electronics Laboratory may be taken in place of 304-493 or 304-494.

CURRICULUM FOR THE B.ENG. DEGREE IN ELECTRICAL ENGINEERING (HONOURS)

REQUIRED COURSES **COURSE CREDIT**

Non-Departmental Subjects

189-261A,B	Linear Algebra and Differential Equations I	3	
189-263A,B	Advanced Calculus	3	
189-267B	Linear Algebra and Differential Equations II	3	
189-269B	Introduction to Boundary Value Problems	3	
189-384B	Probability	3	
189-385A	Complex Variables	3	
198-271B	Quantum Physics	3	
303-281A	Analytical Mechanics	3	
303-287B	Dynamics	3	27

Electrical Engineering Subjects

304-201A,B	Introductory Circuit Theory	3	
304-221A,B	Introduction to Computers	3	
304-236B	Introductory Electronics	3	
304-291A,B	Electrical Laboratory I	3	
304-307A	Network Analysis	3	
304-308A	Signals and Systems	3	
304-337B	Electronic Properties of Solids	3	
304-338B	Electronic Circuits	3	
304-356A	Electromagnetic Fields	3	
304-357B	Electromagnetic Waves	3	
304-376A	Thermal Physics	3	
304-392A,B	Electrical Laboratory II	3	
304-470A,B	Technical Paper	2	
304-493A,B	Electrical Laboratory III (See Note 3)	3	
304-499A,B	Electrical Laboratory IV (See Note 3)	3	44

ELECTIVE COURSES

Technical Electives

Twenty-one credits must be selected from graduate and undergraduate courses. At least twelve credits of 500 or 600 level courses in Electrical Engineering, of which at least six but not more than nine credits must be selected in one area, as defined in this Announcement (Computer Engineering, Communication Systems, Control Systems, Power Engineering, Electromagnetics and Waves, Electronic Devices and Circuits). Course selections are subject to the approval of the department. Subject to departmental approval up to six credits may be taken from outside the department. 21

General Electives

Six credits selected in accordance with departmental regulations. The regulations concerning general electives and a list of approved courses appear in a separate section below. 6

Total **98**

TYPICAL HONOURS PROGRAM

A typical organization for six semesters of study leading to a B.Eng. (Hon.) is given below. Entry into Honours Program is based on the results of first semester examinations.

	Semester 1 (Fall)			**Semester 2 (Winter)**	
189-261A	Diff. Eq. I	3	189-267B	Diff. Eq. II	3
189-263A	Advanced Calculus	3	189-269B	Boundary Value Problems	3
303-281A	Analytical Mechanics	3	198-271B	Quantum Physics	3
304-201A	Circuits	3	303-287B	Dynamics	3
304-221A	Intro. to computers	3	304-236B	Electronics	3
				General Elective	3
		15			18

	Semester 3 (Fall)			Semester 4 (Winter)	
189-385A	Complex Variables	3	189-384B	Probability	3
304-291A	Elect. Lab. I	3	304-338B	Electronics	3
304-307A	Networks	3	304-337B	Electronic Properties of Solids	3
304-308A	Signals and Systems	3			
304-356A	Electromagnetic Fields	3	304-357B	Electromagnetic Waves	3
304-376A	Thermal Physics	3	304-392B	Elect. Lab II	3
		18			15

	Semester 5 (Fall)			Semester 6 (Winter)	
304-470F	Technical Paper	2	304-499B	Elect. Lab IV	3
304-493A	Elect. Lab III	3		Technical Electives	12
	Technical Electives	9			
	General Elective	3			
		17			15

Notes:

1) 304-322, Digital System Design, is a prerequisite to several computer-oriented courses. It is recommended that the student take this as the elective in Semester 3 or Semester 4.

2) A core course is the same as a required course and necessitates a C or better for acceptable credit.

3) 304-490, Digital Electronics Laboratory, may be taken in the place of 304-493 or 304-499.

PROGRAMS IN ELECTRICAL ENGINEERING

Our course of study allows considerable flexibility. By an appropriate choice of courses the student can obtain concentrated study in computer engineering, power systems, electromagnetics and waves, electronic devices and integrated circuits, communications or control systems. Alternatively a student may mix courses from these areas to obtain a broad technological base in Electrical Engineering. Some suitable combinations of electives are listed below. These combinations are not exclusive, others can be planned with the assistance of the student's faculty advisor.

COMPUTER ENGINEERING

Computer engineering at McGill emphasizes the structure, design, and role of computers in modern systems. Modern communication, control, and power systems all have mini-computers deeply imbedded within them. In order to obtain the best system, the computer engineer needs a thorough understanding of both hardware and software. A combination of required courses and technical electives satisfy this aim.

Required Course		**Credits**
304-221A,B	Introduction to Computers	3
Required Breadth Courses		
304-322A,B	Digital System Design	3
308-350A,B	Numerical Analysis	3
Technical Electives (Electrical Engineering)		
304-424A	Small Computer Systems	3
304-425B	Computer Organization and Architecture	3
304-490A,B	Digital Electronics Laboratory	3
304-529A	Image Processing and Communication	3
304-531B	Real Time Systems	3
304-532A	Computer Graphics	3
304-533B	Computerized Text Processing	3

Other Electives

189-417A	Mathematical Programming	3
280-373A	Operations Research I	3
308-300A,B	Programming Languages	3
308-310B	Computer Systems and Organization	3
308-315A	Information Structures	3
308-320B	Files and Data Bases	3

In addition to the above there are projects involving computing, digital system design, computer interfacing and applications in the required electrical laboratories.

COMMUNICATION SYSTEMS

Required Breadth Courses

304-303A,B	Signals and Systems	3
304-305B	Random Signals and Noise	3

Technical Electives

304-411A	Communication Systems	3
304-424A	Small Computer Systems	3
304-472B	Communications Technology	3
304-512B	Digital Signal Processing	3
304-521B	Digital Communications	3
304-522A	Statistical Communication Theory	3
304-529A	Image Processing and Communication	3
304-531B	Real Time Systems	3
304-593B	Antennas and Propagation	3

In addition to the above, courses describing some of the components used in communication systems are available. A strong background in antennas, microwaves, solid state electronics and computer structure is recommended. Finally the system ideas embodied in control system theory can be quite useful.

CONTROL SYSTEMS

Required Breadth Courses

304-303A,B	Signals and Systems	3
304-305B	Random Signals and Noise	3

Technical Electives

304-404A	Control Systems	3
304-424A	Small Computer Systems	3
304-464A	Power Systems Analysis	3
304-501A	Frequency Design of Linear Control Systems	3
304-502B	State Space Methods in Linear Systems	3
304-512B	Digital Signal Processing	3
304-531B	Real Time Systems	3

To obtain sufficient breadth to design complex control systems, additional knowledge of computer structure, communications, electronics and mathematical programming is desirable.

POWER ENGINEERING

Required Breadth Courses

304-361A,B	Electromechanical Energy Conversion I	3

Technical Electives

304-462B	Electromechanical Conversion II	3
304-463A	High Voltage Engineering	3
304-464B	Power System Analysis	3
304-501A	Frequency Design of Linear Control Systems	3
304-502B	State Space Methods in Linear Systems	3
304-531B	Real Time Systems	3
304-562A	Continuum Electromechanics	3
304-565B	Inverter and Chopper Circuits	3

The above courses together with relevant options from the systems, circuits, control, electromagnetics and computer areas form a strong foundation for power engineers.

ELECTROMAGNETICS AND WAVES

Technical Electives

304-471B	Acoustics	3
304-543B	Numerical Methods in Electromagnetics	3
304-562A	Continuum Electromechanics	3
304-573B	Microwave Devices and Circuits	3
304-575B	Optical and Magnetic Properties of Solids	3
304-592A	Microwave Theory and Techniques	3
304-593B	Antennas and Propagation	3
304-596B	Coherent Wave Optics	3

These courses along with the required electromagnetics courses serve as a basis for further work in electromagnetic phenomena and as an introduction to microwave devices for all electrical engineers.

ELECTRONIC DEVICES AND CIRCUITS

Required Breadth Courses

304-322A,B	Digital System Design	3
304-332B	Properties of Solids	3
304-303A,B	Signals and Systems	3

Technical Electives

304-443A	Integrated Circuit Technology	3
304-474B	Electronic Design	3
304-490A,B	Digital Electronics Laboratory	3
304-572A	Laser Electronics	3
304-573B	Microwave Devices and Circuits	3
304-575B	Optical and Magnetic Properties of Solids	3
304-579A	Semiconductor Devices and Models	3
304-596B	Coherent Wave Optics	3

In addition to the above, the required courses give a firm basis in both the physics of electronic devices and linear and digital electronics. The required laboratories include extensive experimentation using modern integrated and discrete electronics components, a small scale integrated circuit fabrication laboratory and a laser communications and holography facility.

REGULATIONS CONCERNING GENERAL ELECTIVES

All Electrical Engineering students must take Economic Environment 300-211 and at least three credits selected from the following list:

Engineering Economy, Law and Management

300-220, -230, -310

Social Sciences

All two, three, and four hundred level courses in the departments of Economics, Political Science, Psychology and Sociology with the exception of 154-317, 154-357, 166-350, 204-204, 204-305, 204-307.

Management and Administrative Sciences

280-211,-221,-222,-323,-341,-352,-373,-393, All courses prefixed 272,274,275,276,278,279

COURSES OFFERED BY THE DEPARTMENT

304-201A,B (Formerly 304-001) INTRODUCTORY CIRCUIT THEORY 3(3-1-5). (Co-requisite: 189-261A,B.) KVL and KCL laws, branch constitutive relations, response of simple circuits to suddenly applied excitations, impulse response, steady-state response to sinusoidal excitations, power and energy, elementary loop and nodal analysis network theorems.

304-221A,B (Formerly 304-021) INTRODUCTION TO COMPUTERS 3(3-1-5). Introduction to digital systems, information and arithmetic; elementary combinational and sequential logic; stored program control and simple machine language programs; introduction to assemblers and compilers. The student will also experience both simulations and the use of a small (PDP-8) computer. FORTRAN will be used for simulation and computational excercises.

304-231A,B (Formerly 304-131) INTRODUCTORY ELECTRONICS 3(3-1-5). (Prerequisite: 304-201A,B*.) Semiconductor junctions and transistor characteristics, bipolar and field-effect transistors. Digital circuits: logic gates, and flip flops. Transistor circuits and biasing. Frequency response of small-signal amplifiers. Integrated circuit fabrication.

304-236B (Formerly 304-136) INTRODUCTORY ELECTRONICS 3(3-1-5). (Prerequisite: 304-201A,B*.) Honours section of 304-231; similar in content to 304-231 but taught in greater depth.

304-281A,B (Formerly 304-181) ELECTRIC POWER 3(3-0-6). (Prerequisite: 189-261A,B.) Electrical circuit theory; distribution of electric power, electrical power utilization, electrical machines, transformers, controlled rectifiers. Not open to electrical engineering students.

304-291A,B (Formerly 304-191) ELECTRICAL LABORATORY I 3(1-5-4). (Co-requisite: 304-231A,B or 304-236B.) Operating principles and limitations of basic electrical and electronic laboratory measurements and techniques including meter, oscilloscopes, generators and bridges.

304-302A,B (Formerly 304-202) NETWORK ANALYSIS 3(3-1-5). (Prerequisite: 304-201A,B. Co-requisite: 189-381A.) Formulation of network equilibrium equations, transform solution techniques, network functions, two-port analysis, network theorems, pole-zero design techniques.

304-303A,B SIGNALS AND SYSTEMS 3(3-1-5). (Co-requisite: 304-302A,B or 304-307A.) Inputs, outputs, states. Linearity, time-invariance. Analysis of linear system in state form. Convolution and transfer functions. Signal space, orthogonal expansions, Fourier series. Fourier transforms and applications to modulation and sampling. Feedback, the Routh-Hurwitz criterion, the root locus and the Nyquist stability criterion.

304-305B RANDOM SIGNALS AND NOISE 3(3-0-6). (Prerequisite: 304-303A,B or 304-308A.) Introduction to probability, engineering applications and heuristic basis, axioms and sets, conditional probability, independence; random variables, definitions, functions, moments, vector and scalar, characteristic functions; random processes, noise model, stationarity, ergodicity, correlation and power spectrum, spectrum measurements; response of linear systems to random inputs, cross spectral densities, narrow band noise; introduction to discrete time and space processes, Markov chains and elementary queues.

304-307A (Formerly 304-207) NETWORK ANALYSIS 3(3-1-5). (Prerequisite: 304-201A,B. Co-requisite: 189-381B or 189-385B.) Honours section of 304-302; similar in content to 304-302 but taught in greater depth.

304-308A SIGNALS AND SYSTEMS 3(3-1-5). (Co-requisite: 304-307A or 304-302A,B.) Honours section of 304-303; similar in content to 304-303 but taught in greater depth.

304-322A,B (Formerly 304-222) DIGITAL SYSTEM DESIGN 3(3-0-6). (Prerequisite: 304-221A,B; 304-231A,B** or 304-236B**.) Information representation and manipulation, coding, logic functions, Boolean algebra, graphical and algorithmic methods of synthesis and minimization of combinational circuits, finite state machines, synthesis of synchronous sequential networks, asynchronous sequential logic.

304-332B PROPERTIES OF SOLIDS 3(3-0-6). (Prerequisite: 198-321A.) Statistical properties of materials. Electrons in metals and semiconductors, free electron theory of metals, energy bands. Conduction processes in semiconductors. Theory of the pn junction and bipolar transistor.

304-333A,B ELECTRONIC CIRCUITS 3(3-0-6). (Prerequisites: 304-231A,B or 304-236B, 304-302A,B* or 304-307A*. Recommended co-requisite: 304-303A,B or 304-308A.) Small-signal transistor amplifiers. Operational amplifiers. Resistive feedback and frequency compensation. Applications of operational amplifiers. Combinational logic circuits. Latches and flip-flops. Counters and registers. Applications of digital and analog integrated circuits.

304-337B ELECTRONIC PROPERTIES OF SOLIDS 3(3-0-6). (Prerequisites: 198-321A or 198-271B, 304-231A,B or 304-236B.) Review of kinetic theory of gases, crystal lattices, X-ray diffraction, electrons in metals, drift velocity, mobility, free electron theory, density of states, Fermi energy, Kronig Penney model, energy bands, Brillouin zones, intrinsic semiconductor, extrinsic semiconductor, recombination, drift mobility determination, continuity equation, capacitance of pn junction, diode equation, bipolar transistor.

304-338B ELECTRONIC CIRCUITS 3(3-0-6). (Prerequisites: 304-236B or 304-231A,B, 304-307A or 304-302A,B. Recommended co-requisite: 304-308B.) Honours section of 304-333; similar in content to 304-333 but taught in greater depth.

304-351A,B (Formerly 304-251) ELECTROMAGNETIC FIELDS 3(3-0-6). (Prerequisites: 304-201A,B*, 304-221A,B, 189-263A,B and 189-264A,B, or 189-269A,B.) Electrostatics and electric potential; kinematics, electrodynamics and Maxwell's equations; magnetostatics and magnetic vector potential; energy and power; time-varying fields; applications to engineering problems.

304-352B ELECTROMAGNETIC WAVES 3(3-0-6). (Prerequisites: 304-351A or 304-356A, 303-282B or 303-287B.) Steady-state and transient analysis of wave propagation in uniformly distributed systems; energy and power transfer; models, scattering parameters and the Smith chart; measurements on distributed systems; dispersion, periodically distributed systems and the ω-β diagram.

304-356A (Formerly 304-256) ELECTROMAGNETIC FIELDS 3(3-0-6). (Prerequisites; 304-201-A,B, 189-263A,B and 189-264A,B, or 189-269A,B.) Honours section of 304-351; similar in content to 304-351 but taught in greater depth.

304-357B ELECTROMAGNETIC WAVES 3(3-0-6). Prerequisites: 304-356A, 303-282B or 303-287B.) Honours section of 304-352; similar in content to 304-352 but taught in greater depth.

304-361A,B (Formerly 304-261) ELECTROMECHANICAL ENERGY CONVERSION I 3(3-0-6). (Co-requisite: 304-302A,B or 304-307A.) Basic electromechanical energy conversion processes. Simple electromechanical transducers. Transformers. Machine models. Characteristics of commutator, induction and synchronous machines.

304-376A (Formerly 304-276) THERMAL PHYSICS 3(3-0-6). (prerequisites: 198-271B, 303-287B.) Definition of thermodynamics; equilibrium thermodynamics; potentials as Legendre transforms of internal energy; concept of thermodynamic energies; equilibrium and non-equilibrium properties of matter; heat and current flow; statistical mechanical foundation of thermodynamics; distribution functions, application to material properties.

304-383A,B (Formerly 304-283) ELECTRONIC INSTRUMENTATION 3(3-0-6). (Prerequisite: 304-281A.) Linear electronic devices, amplifiers and feedback, switching circuits, digital and logic circuits, instrumentation measurement transducers, modulation and transmission of signals. Not open to electrical engineering students.

304-392A,B (Formerly 304-292) ELECTRICAL LABORATORY II 3(3-5-4). (Prerequisite: 304-291A,B. Co-requisite: 304-302A or 304-307A.) Advanced instrumentation and measurement techniques with applications to electronic circuit design.

304-404A CONTROL SYSTEMS 3(3-0-6). (Prerequisites: 304-303A,B and 304-305B; or 304-308A and 189-384B.) Frequency response design: gain and phase margins, Nichols chart; lead, lag, and PID controllers. Discrete and sampled-data systems: convolution sum, the z-transform, transfer function, state space description; stability; bilinear transformation and design. Controllability and observability. Linear regulator problem: quadratic performance indices. Matrix Lyapunov equation and Riccati equation. Linear observers. Optimum feedback control of linear systems subject to stochastic disturbances. Stationary Kalman filter, separation theorem.

304-411A COMMUNICATION SYSTEMS 3(3-0-6). (Prerequisites: 304-303A,B or 304-308A, 304-305B or 189-384B). Review of power spectral analysis and auto correlation; amplitude, single side-band modulation and demodulation; frequency and phase modulation, modulators and demodulators; stereo FM, pulse modulation, pulse width amplitude and position modulation; time and frequency multiplexing; pulse code modulation (PCM); quantization; phase shift and frequency shift keying; noise performance of various modulation schemes; representation of noise; threshold effects in PCM and FM; probability of error for pulse systems; concept of channel capacity.

304-424A (Formerly 304-324) SMALL COMPUTER SYSTEMS 3(3-0-6). (Prerequisite: 304-221A,B or 308-210A,B. Recommended: 304-322A,B.) Basic machine structure, software specification, order code specification, assembly languages, branching mechanisms, subroutine

organization, interrupt systems and interrupt programming, program statistics, peripheral device servicing, A/D and D/A programming, simple scheduling mechanisms, real-time operating system functions.

304-425B COMPUTER ORGANIZATION AND ARCHITECTURE 3(3-0-6). (Prerequisite: 304-322A,B.) Recommended: 304-424A. Components, basic computer subassemblies. Minicomputer design, microprogramming, execution control. CPU memory timing problems, look ahead systems and pipeline computers. Array processors. Special features. Virtual memory organization. I/O Architecture. Case studies of advanced computer system organization.

304-443A INTEGRATED CIRCUIT TECHNOLOGY 3(3-0-6). (Prerequisite: 304-333A,B.) Alloyed contacts, diffusion techniques, diffusion theory, four point probe, epitaxial growth, silicon dioxide formation, photolithography, window opening, selected metallization, diode and transistor fabrication, junction depth determination, junction capacitance for general profile, fabrication of monolithic integrated circuits, isolation, junction capacitors, diffused resistors, mask making, device mounting, thin film passive components, thick film components, integrated circuit layout, theory of pnpn devices and unijunction transistors, theory of field effect transistor.

304-462B ELECTROMECHANICAL ENERGY CONVERSION II 3(3-0-6). (Prerequisite: 304-361A,B.) Fractional horse power motors. Solid-state motor control. The structure of machines including saliency, saturation and winding harmonics. Electromechanical transients and stability analysis.

304-463A HIGH VOLTAGE ENGINEERING 3(3-0-6). (Prerequisite: 304-351A,B or 304-356A.) Introduction to high voltage engineering. Gas discharges in uniform and non-uniform fields. Disruptive and corona discharges. Surface flashover and surface corona. Gases of high dielectric strength. Applications to basic problems of extra-high-voltage and ultra-high-voltage transmission. Corona in bundle conductors. Interference, audible noise and corona losses. Voltage distribution along insulator strings. Compact metal clad SF_6 substations. Modern high voltage laboratories. Testing techniques.

304-464B POWER SYSTEM ANALYSIS 3(3-0-6) (Prerequisite: 304-361A,B.) Steady-state and transient characteristics of three phase system components; steady-state load flow calculations in three phase networks, load distribution; faults; stability calculations in two machine systems including effects of faults and switching operations; techniques for improving stability limits.

304-470A,B TECHNICAL PAPER 2(0-0-6). After completion of four semesters of work, each student should consult his staff adviser for guidance in the selection of a suitable topic for a technical paper based on the student's non-university-course experience. The papers are due at the latest on entering the final semester.

304-471B ACOUSTICS 3(3-0-6). (Prerequisites: 304-302A,B, 304-352B or 304-357B.) This course is divided into three main topics: (1) TRANSDUCER DESIGN: wave fundamentals, directivity patterns, resonators and filters (muffler design), microphones and loudspeakers. (2) ENVIRONMENTAL ACOUSTICS: effects of noise on man, criteria for noise control, building acoustics, noise control outdoors. (3) UNDERWATER ACOUSTICS: communication in the sea, refraction, interference, sound channels, sonar, masking by noise.

304-472B COMMUNICATIONS TECHNOLOGY 3(3-0-6). (Prerequisite: 304-303A,B or 304-308A.) Theoretical and practical aspects of communications technology will be examined through the study of existing systems which are representative of the state of the art. Case-studies will be selected from areas such as satellite communications, radio astronomy, microwave systems, radar, television and sonar.

304-474B ELECTRONIC DESIGN 3(3-0-6). (Prerequisites: 304-322A,B, 304-303A,B or 304-308A, 304-333A,B or 304-338B. Recommended: 304-352B, 304-411A.) Analysis of complex electronic systems from the system design viewpoint. Factors affecting the choice of subsystem hardware; reliability, availability, cost of design and assembly. Identification of critical components and subsystems. The principles of electronic system design will be illustrated with examples drawn from the areas of instrumentation, television, radar, navigation and direction finding, broadband communication links, computers, and supervisory and control systems.

304-490A,B DIGITAL ELECTRONICS LABORATORY 3(1-5-3) (Prerequisite: 304-322A,B, 304-333A,B or 304-338B, 304-392A,B). Operating characteristics and limitations of digital integrated circuits. Design of small systems on the gate and register levels. Digital system major project. This course may be taken in the place of 304-493A,B, 304-494A,B or 304-499A,B.

304-493A,B ELECTRICAL LABORATORY III 3(0-5-4). (Prerequisite: 304-392A,B. Co-requisite: 304-333A,B or 304-338B.) Each student selects a program in an area offered by the department. This program may be in the nature of a series of experiments covering some aspects of the area or a term-long project. The group size is usually two students and each student is required to present a seminar and contribute to a group technical report on a chosen topic. The director(s) of the area involved may require additional prerequisites and co-requisites by some, if not all, members of the group.

304-494A,B ELECTRICAL LABORATORY IV 3(0-5-4). (Prerequisite: 304-493A,B.) Similar to 304-493A,B. The material to be covered may be of a more open-ended nature than 304-493A,B. For diversification on the part of the student the area program chosen must be different from that of 304-493A,B.

304-499A,B ELECTRICAL LABORATORY IV 3(0-5-4). (Prerequisite: 304-392A,B; 304-333A,B.) Honours section of 304-494; similar in content to 304-494 but involving more challenging assignments.

304-501A FREQUENCY DESIGN OF LINEAR CONTROL SYSTEMS 3(3-0-6). (Prerequisite: 304-303A,B or 304-308A.) Frequency response design of linear control systems. Compensators, error constants. Sensitivity, two-degree-of-freedom design. Cascade and other multiloop designs. Feed-forward. Frequency response design of multivariable linear control systems. Decoupling. Discrete systems, sequences, convolution, difference equations. The z-transform. Sampled-data systems and their design by frequency-domain techniques.

304-502B STATE SPACE METHODS IN LINEAR SYSTEMS 3(3-0-6). (Prerequisite: 304-501A.) State representation of linear systems. The state transition matrix. System modes and Jordan forms. Controllability and observability. Transfer functions and minimal representations. State representation of discrete and sampled-data systems. Canonical forms. Modal control and pole placement by state feedback. Quadratic performance index, the Lyapunov matrix equation. Stability and Lyapunov functions. The optimal regulator problem. Dead-beat controllers. Disturbance compensation, feedforward. Linear state observers. Optimization of output-feedback controllers for min-max eigenvalue placement or minimization of a quadratic performance index.

304-512B DIGITAL SIGNAL PROCESSING 3(1-0-6). (Prerequisite: 304-303A,B or 304-308A.) Discrete-time linear systems theory, digital filter synthesis techniques, quantization effects in digital filters, discrete Fourier transforms including FFT algorithms, high-speed convolution and correlation techniques.

304-521B DIGITAL COMMUNICATION 3(3-0-6). (Prerequisites: 304-305B or 189-384B, 304-303A,B or 304-308A.) Introduction to digital transmission, digital data and performance criteria, discussion of digital transmission facilities; basic definitions; coding and framing formats; baseband pulse modulation, pulse amplitude and pulse frequency modulation, phase shift keying; signal spectra; demodulation techniques noting problems of framing and synchronization; performance on Gaussian channel, bandlimited channel characterization, pulse dispersion, adaptive and non-adaptive equalization, Gaussian and impulsive-noise, pulse jitter, repeaters and analysis; introduction to error control, parity checking, error detection, automatic repeat request performance estimates.

304-522A STATISTICAL COMMUNICATION THEORY 3(3-0-6). (Prerequisites: 304-305B or 189-384B, 304-303A,B or 304-308A.) Optimum receiver principles; vector channels and decision regions, matched filters, error evaluation for various signal sets; channel capacity, important channel models, non-white Gaussian noise, bandpass channels, random amplitude and phase, linear (amplitude, single side-band double side-band) modulation, twisted modulation, frequency modulation, phase modulation, band-width and weak noise suppression, phase-lock loop.

304-529A IMAGE PROCESSING AND COMMUNICATIONS 3(3-0-6). (Prerequisites: 304-221A,B, 304-303A,B or 304-308A.) Psychophysics of vision, properties of images; sampling, digitizing, and displaying images; geometric and algebraic processing, spatial filtering, image coding and transmission; binary image analysis, segmentation, descriptions of lines and shapes; representation, linguistic methods, software and hardware systems, applications; scene analysis.

304-531B REAL-TIME SYSTEMS 3(3-3-3). (Prerequisite: 304-322A,B, and 304-424A.) Real-time engineering applications of computers to online control communication systems and data acquisition. This course is concerned with aspects of hardware, software, the hardware-software interface and their integration into a completed system. The course requires the completion of individual or group projects using one of the department's mini- or micro-computers.

304-532A COMPUTER GRAPHICS 3(3-3-3). (Prerequisite: 304-424A.) Introduction to computer graphics systems and display devices: core or disc refreshed, storage tube, scan conversion systems; graphical input and interactive graphical techniques – light pen, joystick, Rand tablet; display files: graphics languages and data structures; 2D transformations; 3D computer graphics, hidden line removal and shading graphics system design; applications. The course will consist of lecture material as well as a laboratory project involving the preparation and running of graphics programs on the PDP-15 and IBM 360 systems. (Alternate years, next given 77/78.)

304-533B COMPUTERIZED TEXT PROCESSING 3(3-0-6). (Prerequisite: 304-424A.) Data editing by batch and online entry; manipulation of text and data. Concepts of type design and typography. Typesetting practice and technology. Production technique in printing industry as applied to letter, book and journal publication. Applications of numerical control techniques and computerized

decision making to printing, particularly typesetting. (Alternate years, next given 78/79.)

304-543B NUMERICAL METHODS IN ELECTROMAGNETICS 3(3-0-6). (Prerequisite: 304-351A,B or 304-356A.) Mathematical representation of fields. Discrete approximations for continuous differential and integral operators. Methods for solving deterministic and eigenvalue problems by direct and iterative means.

304-561A ELECTRIC MACHINE DESIGN 3(3-0-6). (Prerequisite: 304-361A,B.) The output equations of electromagnetic apparatus. Specific electric and magnetic loading. Magnetic circuits. Time constants and power gain. Windings including pole amplitude modulation. Leakage inductances. Commutation interpoles and compensation. Per-unit values. (Alternate years, next given 77/78.)

304-562A. CONTINUUM ELECTROMECHANICS 3(3-0-6). (Prerequisite: 304-351A,B or 304-356A.) Quasi-static electromagnetic field equations. Field transformation in moving co-ordinate systems. Boundary conditions and constitutive relations for moving media. Magnetic diffusion and charge relaxation in moving media. Maxwell's stress tensor for the evaluation of force densities. Electromechanics of elastic solids and Newtonian fluids. Application of theories to magneto-hydrodynamics, electro-hydrodynamics, magnetic pumps, linear induction motor and magnetic levitation. (Alternate years, next given 78/79.)

304-564B CONTROL RECTIFIER CIRCUITS 3(3-0-6). (Prerequisite: 304-333A,B or 304-338B.) Simple polyphase rectifiers. Thyristor characteristics. Fully and semi-controlled bridges. Interphase transformers. Commutation, regulation and equivalent circuits. Harmonic content. Active loads. Cycloconverters. (Alternate years, next given 77/78.)

304-565B INVERTERS AND CHOPPER CIRCUITS 3(3-0-6). (Prerequisite: 304-333A,B or 304-338B.) Properties of circuits employing the forced commutation of thyristors to perform a switching function. Static and dynamic properties of thyristors and diodes. Constant voltage and constant current inverters, three phase inverters. Choppers. Motor loads. (Alternate years, next given 78/79.)

304-572A LASER ELECTRONICS 3(3-0-6). (Prerequisites: 198-271B, 304-332B or 304-337B.) Review of quantum mechanical and statistical mechanical concepts and techniques. Principle of amplification by stimulated emission of radiation; analysis of resonant cavity and travelling wave maser amplifiers; coherence, stability and noise; characteristics of gaseous, solid state and semiconductor junction lasers. Nonlinear effects for modulation and detection of laser beams; applications to communication, measurements, signal processing and other fields as time permits.

304-573B MICROWAVE DEVICES AND CIRCUITS 3(3-0-6). (Prerequisites: 304-592A, 304-332B or 304-337B.) Gunn diodes. LSA mode operation; Gunn oscillators. Tunnel diodes, IMPATT and TRAPATT oscillators. Parasitics in tunnel diode circuits; noise, microwave transistors: models; scattering parameter design of distributed amplifiers. High frequency diodes: limitations in sensitivity, noise figure and dynamic range. Varactor multipliers. Parametric amplifiers: noise in uncooled amplifiers; use of circulators in parametric amplifiers. (Alternate years, next given 78/79.)

304-575B OPTICAL AND MAGNETIC PROPERTIES OF SOLIDS 3(3-0-6). (Prerequisites: 304-352B or 304-357B, 304-332B.) Classical and quantum theories of polarization. Band theory of solids. Dispersion relations. Tensor description of anisotropic materials. The ray ellipsoid. Double refractions, birefringence dichroism, piezoelectricity, ferroelectricity. Classical and quantum theories of magnetization. Diamagnetism, paramagnetism, ferro- and ferri-magnetism. Magnetic domains. Ferrites and Garnets. Non-reciprocal microwave devices and magneto-optic devices which exploit crystal anisotropy. (Alternate years, next given 78/79.)

304-579A SEMICONDUCTOR DEVICES AND MODELS 3(3-0-6). (Prerequisite: 304-333A,B or 304-338B.) Systematic methods for obtaining useful models which relate device physics to terminal behaviour. The pn junction diode, junction-gate and MOS field-effect transistors, bipolar transistor: idealized devices, practical device geometries, applications. The transistor switch. Determination of model parameters by measurement. (Alternate years, next given 78/79.)

304-592A MICROWAVE THEORY AND TECHNIQUES 3(3-0-6). (Prerequisite: 304-352B or 304-357B.) Transmission lines and waveguides, surface waveguides, microwave circuit theory, impedance matching and transformation, passive microwave devices, resonators, periodic structures and filters, microwave antennas.

304-593B ANTENNAS AND PROPAGATION 3(3-0-6). (Prerequisite: 304-352B or 304-357B.) Near and far field behaviour or radiators; antennas as a boundary value problem; practical antenna parameters; wire antennas, antenna arrays, aperture methods of antenna analysis; measurement of input impedance, field patterns, gain and noise; point-to-point propagation, fading beyond horizon and long distance propagation, ionospheric, atmospheric and earth's surface considerations; tropospheric scatter.

304-596B COHERENT WAVE OPTICS 3(3-0-6). (Prerequisite: 304-352B or 304-357B.) Introduction to wave optics. Diffraction theory and geometrical optics including the Kirchoff-Huygens diffraction

integral, Fermat's principle and Hamiltonian Formulations of Ray Optics. Lenses and lens waveguides. Optical Fourier transform and spatial filtering. Gaussian beams. Holography. Propagation characteristics of optical fibres and dielectric waveguides. Thin film (or slab) optical waveguides. Discussion of optical communication systems. (Alternate years, next given 77/78.)

304-602A OPTIMAL CONTROL THEORY 4(3-0-9). (Prerequisite: 304-404A or 304-502B.) Basic concepts of static optimization. Variational solutions for discrete – and continuous-time control problems. Pontryagin's maximum principle. Dynamic programming. Computational algorithms. Singular control problems. The linear regulator problem.

304-603B ESTIMATION AND STOCHASTIC CONTROL 4(3-0-9). (Prerequisites: 304-612A, 304-502B.) Properties of estimators; linear regression. The innovations process. Innovations approach to optimal linear filtering for continuous time and discrete-time processes. Smoothing and prediction. Properties of the Kalman filter. Optimal stochastic control of linear systems with direct state measurements. The certainty equivalence principle. Minimum-variance control. Estimation and control of discrete linear systems described by ARMA models. Stochastic control of nonlinear systems.

304-604A PARAMETER IDENTIFICATION AND ADAPTIVE CONTROL 4(3-0-9). (Prerequisite: 304-603B.) Least-squares, maximum likelihood and Bayesian estimates. Hypothesis testing. Identification of discrete systems described by ARMA models using least-squares and maximum likelihood. Instrumental variable methods. Stochastic approximation. Use of the extended Kalman filter. Bayesian estimation of systems taken from a finite population. Estimation of noise covariances. Adaptive control of discrete systems using one-step-ahead control laws, enforced separation and open-loop-feedback-optimal control (OLFO) laws. Use of specially-designed inputs. (Alternate years, next given 78/79.)

304-612A RANDOM PROCESSES 4(3-0-9). (Prerequisite: 304-305B or 189-384B.) Markov processes, Markov chains, correlation functions and spectra, renewal processes, queues, queuing networks.

304-613B COMPUTER-AIDED NETWORK ANALYSIS AND DESIGN 4(3-0-9). (Prerequisite: 304-303A,B or 304-308A.) Computer-aided techniques for the DC, transient and frequency-domain analysis of linear and nonlinear electronic networks; methods of sensitivity analysis; elementary concepts in optimization theory; application of optimization techniques to circuit design. (Alternate years, next given 77/78.)

304-614A NETWORK SYNTHESIS 4(3-0-9). (Prerequisite: 304-303A,B or 304-308A.) Properties of positive real functions; determination of system functions; synthesis of driving-point functions; synthesis of lossless two-ports and RC two-ports; approximation problems; synthesis of active networks. (Alternate years, next given 77/78.)

304-620A INFORMATION THEORY AND CODING 4(3-0-9). (Prerequisite: 304-305B or 189-384B.) Measure of information, limitations of measure, characterization of noisy channels, channel coding and capacity. Estimates for some real channels, source coding revisited (rate distortion), error coding techniques – real and imaginary, feedback and automatic repeat request channels. This course is intended to give the student an insight into the concepts and limitations of Information Theory along with a survey of current practice in error-correcting coding. (Alternate years, next given 77/78.)

304-622B ADVANCED COMMUNICATIONS SYSTEMS ANALYSIS 4(3-0-9). (Prerequisite: 304-522A.) This course will allow the student to study the foundations required for modelling advanced communication systems. Analysis of specific classes of systems such as telephone, satellite, troposcatter, microwave for both analog and digital data. (Alternate years, next given 77/78.)

304-625B ARTIFICIAL INTELLIGENCE 4(3-0-9). (Prerequisite: 304-529A.) Definition, models for an artificial intelligence, data structures, heuristic programming, learning, pattern recognition, man-machine interaction, practical applications and study of selected research topics. (Alternate years, next given 77/78.)

304-628B COMPUTER COMMUNICATIONS NETWORKS 4(3-0-9). (Prerequisites: 304-411A and 304-424A, or 304-521B.) Classification of networks, voices, data, line-switching, message switching, packets; characterization of information sources; computer interface, terminal interface, network interface, queueing models, queueing networks, capacity versus delay; network system components, multiplexers, concentrators; topological design problems and algorithms; network control and characterization; tree networks, reliability; non-tree network designs. (Alternate years, next given 78/79.)

304-636B REAL-TIME OPERATING SYSTEM DESIGN 4(3-0-9). (Prerequisite: 304-531B.) This course is intended for students interested in real-time applications of small computers. The course includes a study of three existing real-time operating systems as well as a design project. The course content includes the following: Task scheduling mechanisms, I/O organization, bulk storage organization, incorporation of service routines. Intercomputer communication, task co-ordination, multiple

computer operating systems. (Alternate years, next given 78/79.)

304-637B COMPUTER SYSTEMS ANALYSIS 4(3-0-9). (Prerequisite: 304-531B.) Computer system specification, hardware-software trade-offs, selection of hardware components, problem solutions using interconnected computers, choice of programming languages, structured programming, technical organization and management. The course includes three case studies and a design project. (Alternate years, next given 77/78.)

304-638A ADVANCED COMPUTER DESIGN 4(3-0-9). (Prerequisite: 304-531B.) This course is intended for graduate students with a good knowledge of computer organization, structure and architecture and some knowledge of microprogramming. Topics in hardware technology include functional logic building blocks, arithmetic and non-arithmetic processors, memory utilization and storage management, sequencing subsystems, transmission and exchange. Determination of expected performance by simulation; computer-aided design. Specific examples of solutions to computer design problems. Selected topics on novel computer organizations such as array, cellular and variable-structure computers. (Alternate years, next given 78/79.)

304-641A APPLIED ELECTROMAGNETIC THEORY 4(3-0-9). (Prerequisite: 304-592A or 304-593B.) Mathematical techniques, analytical and numerical, for solving E. M. boundary value problems. Maxwell's equations, wave dispersion, waves in gyrotropic media, Huygen's principle and Fresnel diffraction, Babinet's principle; Green's functions and integral equations, angular spectrum of plane waves, cylindrical and spherical wave functions, perturbational and variational techniques. Waveguide, antenna, scattering and diffraction problems. (Alternate years, next given 78/79.)

304-647A FINITE ELEMENTS IN ELECTROMAGNETICS 4(3-0-9). (Prerequisite: 304-543B.) Finite elements for the Helmholtz equation in the plane and in space. Elements for axisymmetric problems. Isoparametric and curvilinear elements; elements for nonlinear problems. Integral equations and the solution of antenna problems. Finite elements in parabolic problems. (Alternate years, next given 77/78.)

304-662A ELECTRIC MACHINE DYNAMICS 4(3-0-9). (Prerequisites: 304-361A,B, 304-502B.) Review of electric machine models. State-space formulation of nonlinear differential equations. Solutions through numerical integration, constant speed linearization. Models of control elements, loads, prime-movers, voltage regulators, transmission networks. State equations of integrated power system. Modal analysis of multimachine power system. Operating point stability. Transient stability analysis. Electromechanical resonance. (Alternate years, next given 77/78.)

304-663X HVAC POWER TRANSMISSION. 4 Credits. Design considerations of EHV and UHV power transmission systems: audible noise, radio interference, environmental aspects of transmission lines. Coordination of system over-voltages with external and internal insulation strengths leading to economic insulation structures based on quantitative evaluation of reliability.

304-664Y HVDC POWER TRANSMISSION. 4 Credits. Principles of HVDC power, transmission: HVDC transmission circuits, bridge convertor operation, thyristor valve developments, control of HVDC systems, protection of lines and converter stations, harmonic filtering, modelling techniques for performance studies.

304-665X SUBSTATION APPARATUS. 4 Credits. Description and analysis of major apparatus used in modern power systems: circuit breakers, switches, bushings. Electrical connection of substations; principles of equipment selection based on stresses, reliability and economic requirements. Substation protection. Physical arrangement of substations.

304-666Y POWER SYSTEM OPERATION. 4 Credits. Power system optimality criteria: economic, environmental, reliability factors. Short and long-term load forecasting; simulation of river flows; econmic operations of hydroelectric thermal and hydro-steam systems. Planning of additional equipment by the global and marginal approaches. Siting of new plants. Planning of interconnections; maintenance scheduling.

304-667Y MODERN TECHNIQUES FOR POWER SYSTEM ANALYSIS. 4 Credits. Mathematical descriptions of power systems suitable for computer analysis, and solutions algorithms. Topics will include: matrix algebra, incidence and network matrices, sparse matrix techniques, phase and component representation, short circuit studies, Diakoptics, load flow studies, transient and dynamic stability studies, contingency analysis, state estimation, system identification.

304-677A,B EXPERIMENTAL TECHNIQUES IN SOLID STATE 4(0-6-6). (Prerequisite: 304-332B or 304-337B.) Experimental laboratory project in solid state involving the following. Techniques of laboratory preparation, fabrication and orientation of solid state samples and structures for experimental study. Use of special laboratory research apparatus. Measurement of electronic, optical and structural properties of samples and structures. Evaluation and analysis of electronic behaviour and performance. Interpretation of relevant physical processes and phenomena.

304-678A SPECIAL TOPICS IN SOLIDS I 4(3-0-9). (Prerequisite: 304-332B or 304-337B.) Discussion of topics in semiconductor electronics and electronic properties of materials in areas of current research to the department.

304-679B SPECIAL TOPICS IN SOLIDS II 4(3-0-9). (Prerequisite: 304-332B or 304-337B.) Dielectric properties and molecular structure of solids and liquids. Dielectric theory and applications.

304-681A,B COLLOQUIUM IN ELECRICAL ENGINEERING, 4 credits. Directed reading, seminar and discussion course in various subjects of current interest in electrical engineering research.

304-685B HIGH VOLTAGE ENGINEERING 4(3-0-9). (Prerequisite: 304-351A,B or 304-356A.) Electrical discharges in gases; uniform and nonuniform fields; corona discharges; the spark mechanism. Generation and measurement of high direct, alternating and impulse voltages. (Alternate years, next given 77/78.)

304-688A,B 304-689A,B RECENT ADVANCES IN ELECTRICAL ENGINEERING, 4 credits. Course content suited to the area of specialization of the lecturer.

5.6 DEPARTMENT OF MECHANICAL ENGINEERING

Acting Chairman
M.P. Paidoussis, B.Eng.(McG.), PH.D. (Cantab.), Eng.

Professors
D.R. Axelrad, M.Eng., (Sydney), D.Eng.Sc. (Tech. U. Vienna), Eng.
W. Bruce, M.A.Sc.(Tor.), Eng.
J.H.S. Lee, M.Sc.(M.I.T.), Ph.D.(McG.), Eng.
B.G. Newman, M.A.(Cantab), Ph.D.(Sydney), Eng.

Associate Professors
A.M. Ahmed, B.Sc.(Dacca), Ph.D.(McG.), Eng.
G.G. Bach, Ph.D.(McG.)
J.C. Cherna, Dipl.Eng.(Swiss Fed. Inst.), Eng.
G.I. Fekete, M.Eng., Ph.D.(McG.), Eng.
J.M. Forde, B.Eng., M.Eng.(McG.), Eng.
R. Knystautas, M.Eng., Ph.D.(McG.)
L. Kops, D.Sc.Eng. (Krakow Tech. U.), Eng.
C.L. Murphy, M.Eng., Ph.D. (McG.), Eng.
J.D. Pfeiffer, B.E.E.(Cornell), Eng.
J.W. Provan, B.Sc.(Strathclyde), M.Sc., Ph.D.(Colo.), Eng.
A.L. Thompson, B.A.(Bishop's), Ph.D.(McG.)
J.H.T. Wu, M.A.Sc.(Tor.), Ph.D.(McG.), Eng.
P.J. Zsombor-Murray, M.Eng., Ph.D.(McG.), Eng.

Assistant Professors,
C. Guirao, M.Sc.(Paris), Ph.D.,(Calif.)
R. Hoffman, M.A.Sc.(Tor.), Ph.D.(Sask.), Eng.

Special Lecturers and Laboratory Superintendents
V. Fangor, J. Kelly, O. Muehling, L. Vroomen

Associate Members
D. Atack, B.Sc., Ph.D.(Leeds)
G.V. Bull, Ph.D., Eng., Space Research Corporation
D. Burke, B.Eng., M.D., Montreal General Hospital
R.G. Edwards, Eng., Canadair Ltd.
H. Luckert, Ph.D., Space Research Corporation
J. Miller, M.D., Montreal General Hospital

Part-Time Staff
W.D. May, J. Rushbrook (Eng.)

The prospective student, when trying to decide which branch of engineering to enter, may often ask himself this question: For what sort of a career will a Mechanical Engineering degree prepare me?

This question can best be answered by looking at the positions which our graduates hold today, and it is very revealing to see the extremely broad range of occupations in which they are engaged.

Typically, the first jobs after graduation will be in the design office, often in the estimating department, of a corporation where the young graduate will get an apprenticeship in the practical aspects of engineering design, the importance of cost factors, etc.

As he gains experience he will gradually be given more responsibility, be put in charge of complete projects and supervise the work of junior engineers. Finally, if he has the ability, he may become a section head and gradually be promoted to plant manager, vice-president or to other executive positions. This is a typical progression of a successful engineer in a large corporation, but many of our graduates follow different routes.

Some elect to take graduate studies to prepare themselves for advanced work, usually in research establishments, in consulting firms or in companies which have their own research and development departments; a growing number become interested in bio-mechanical engineering (some even take a medical degree); others gravitate towards systems engineering with heavy reliance on computer applications; some, after a few years of experience, form their own companies, often as Consulting Mechanical Engineers for building services (heating, air conditioning). Fields of engineering in which Mechanical Engineering graduates work, apart from those traditionally associated with mechanical engineering, include aeronautics, aerodynamics and aerospace, nuclear engineering, heat transfer equipment, transportation, construction, computers, industrial engineering and many, many others.

One may ask how it is possible to devise a curriculum which will satisfy such diverse needs, and the only answer is that we must first of all put a heavy stress on the knowledge of fundamental disciplines such as mathematics, physics, mechanics and thermodynamics, and then teach the students the basic approach to the synthesis and application of this knowledge towards the solution of practical problems.

The latter is done in the sequence of design and experimental engineering courses, which include project work involving creative design, and also actual construction and testing of equipment built by the students.

A broad range of interests may be satisfied by selecting appropriate elective courses from among those offered with a specific subject concentration, such as management, industrial engineering, computer science, bio-engineering, aerodynamics, systems engineering, etc. Faculty advisers will assist the student in these selections and approve their individual programs.

The Department also offers an Honours Program which is particularly suitable for those with a high aptitude in mathematics and physics and which gives a thorough grounding in the basic engineering sciences. The electives in this program can be utilized to take courses with a more applied engineering orientation or, if preferred, to obtain even more advanced training in applied mathematical and physical sciences.

Our diverse and well equipped laboratories include the machine tool laboratory where students

learn modern production techniques and familiarize themselves with precision manufacturing equipment including numerically controlled machine tools; aerodynamics and gas dynamics laboratories containing several subsonic and supersonic wind-tunnels; dynamics and controls laboratory permitting study of dynamic behaviour and control of systems; energy transport and conversion laboratories which feature various types of engines and heat flow experiments; a laser laboratory where various applications and designs of lasers are studied; and finally a data-processing control computer (DATAC) laboratory to which much of the experimental equipment is connected, and in which students learn the most modern techniques of automatic data acquisition and processing, and computer graphics.

While the program is demanding, it still seems to leave time for many extra-curricular activities and our students are active in such professional societies as the CSME (Canadian Society for Mechanical Engineering, a constituent society of the Engineering Institute of Canada), the SAE (Society of Automotive Engineers) and in various campus organizations.

The relations between the Faculty staff and the students are extremely close and there are frequently organized social functions in which students and professors meet to exchange views and to get to know each other better.

CURRICULUM FOR THE B.ENG. DEGREE IN MECHANICAL ENGINEERING (REGULAR)

REQUIRED COURSES

		COURSE CREDIT	
Non-Departmental Subjects			
189-261A,B	Linear Algebra and Differential Equations I	3	
189-262A,B	Linear Algebra and Differential Equations II	3	
189-263A,B	Advanced Calculus	3	
189-264A,B	Introduction to Boundary Value Problems	3	
300-310A,B	Engineering Economy	3	
303-207A,B	Solid Mechanics	4	
303-290A,B	Mechanics I	4	
303-291A,B	Mechanics II	3	
304-281A,B	Electric Power	3	
304-383A,B	Electronics	3	
308-208A,B	Computers in Engineering	2	34
Mechanical Engineering Subjects			
305-240A	Thermodynamics I	3	
305-260A	Machine Tool Laboratory	2	
305-261B	Measurement Laboratory	2	
305-291A	Graphics	3	
305-292A,B	Design I	3	
305-305A	Engineering Statistics	2	
305-314B	Dynamics of Mechanisms	3	
305-315A,B	Dynamics of Engineering Systems I	3	
305-321B	Mechanics of Deformable Solids	3	
305-330A	Fluid Mechanics I	3	
305-341B	Thermodynamics II	3	
305-346A,B	Heat Transfer	3	
305-362B	Mechanical Laboratory I	2	
305-393B	Design II	3	
305-394A	Design III	3	
305-412A,B	Systems Control I	3	
305-463D,G	Mechanical Laboratory II	4	48

ELECTIVE COURSES

Technical Electives

305-316B	Dynamics of Engineering Systems II	3	
305-343A	Energy Conversion	3	
305-372A	Machining Processes	3	

305-413B	Systems Control II	3
305-418B	Measurement Engineering	3
305-419B	Engineering Applications of Lasers and Holography	3
305-431B	Gas Dynamics	3
305-434B	Turbomachinery	3
305-435A	Jet Propulsion	3
305-447A	Combustion	3
305-471A	Industrial Engineering	3
305-473B	Production Systems	3
305-474B	Operations Research	3
305-475A	Numerical Control of Machine Tools	3
305-495A	Design IVa	3
305-496B	Design IVb	3
305-497B	Value Engineering	3
305-515A	Industrial Aerodynamics	3
305-520B	Statistical Mechanics	3
305-527A	Computer-Aided Mechanical Design	3
305-533B	Aerodynamics: Ideal Fluid Theory	3
305-560B	Biomechanics of Tissues	3

Approximately five courses to be selected from those offered by the Department or from other suitable undergraduate or graduate courses. 15

General Electives

*One or two courses 3

Total **100**

*Students who have not taken a course in material science at the college level must include it in their university program as one of the general electives.

CURRICULUM FOR THE B.ENG. DEGREE IN MECHANICAL ENGINEERING (HONOURS)

REQUIRED COURSES **COURSE CREDIT**

Non-Departmental Subjects

189-261A,B	Linear Algebra and Differential Equations I	3	
189-263A,B	Advanced Calculus	3	
189-267A,B	Linear Algebra and Differential Equations II	3	
189-269A,B	Introduction to Boundary Value Problems	3	
189-385A	Complex Variables	3	
198-321A	Modern Physics	3	
300-310A,B	Engineering Economy	3	
303-290A,B	Mechanics I	4	
303-293B	Mechanics II H	3	
304-281A,B	Electric Power	3	
304-383A,B	Electronics	3	
308-208A,B	Computers in Engineering	2	
308-350A,B	Methods of Numerical Analysis	3	39

Mechanical Engineering Subjects

305-240A	Thermodynamics I	3
305-261B	Measurement Laboratory	2
305-319B	Mechanics of Systems	3
305-330A	Fluid Mechanics I	3
305-342A	Statistical Thermodynamics	3
305-364A	Mechanical Laboratory I H	2
305-365B	Mechanical Laboratory II H	2
305-403D	Thesis	6

305-404B	Thesis	3	
305-422A	Continuum Mechanics	3	
305-423B	Theory of Elasticity	3	
305-452A	Mathematical Methods in Engineering I	3	
305-453B	Mathematical Methods in Engineering II	3	39

ELECTIVE COURSES

Technical Electives

Five courses to be selected from those offered by the Department or from other suitable graduate or undergraduate courses. 15

General Electives

Two courses 6

Total **99**

COURSES OFFERED BY THE DEPARTMENT

305-240A THERMODYNAMICS I 3(3-1-5). Basic concepts: macroscopic vs. microscopic point of view; states and processes; conservation and transformation of energy. Phase equilibrium; equations of state; thermodynamic properties. Work and heat. First law of thermodynamics; energy equations; internal energy; enthalpy; specific heat of ideal gases. Thermodynamic processes: reversibility, polytropic processes, applications of first law. Second law of thermodynamics. Entropy changes in thermodynamic processes: principle of increase of entropy. Basic power and refrigeration cycles.
Professor Bruce

305-260A MACHINE TOOL LABORATORY 2(1-3-2). Basic machine tool laboratory measurements such as measurements of flatness, straightness, length, angle, surface texture, etc. Instruction and practice in the construction, operation and care of machine tools. Basic and advanced operating functions of lathes, shapers, drilling, milling and grinding machines. Making of small assemblies by individual students on machines tooled up for one-off jobs and for limited production runs. Introduction to numerical control.
Mr. Muehling and Staff

305-261B MEASUREMENT LABORATORY 2(2-3-1). (Co-requisite: Knowledge of Fortran programming.) Basic experimental laboratory measurements, such as measurement of temperature, pressure, force, torque, small time intervals, velocity, acceleration, flow. Criteria for selection of instruments. Introduction to automatic data acquisition and processing using the DATAC Computer Laboratory, real time programming.
Mr. Vroomen

305-290A GRAPHICS 2(2-2-2). Descriptive geometry, pictorial and working drawings and conventions, graphical statics. Computer graphics: simple plotting, auxiliary view and general perspective transformation, contour mapping and introduction to kinematic animation. Drafting room and computer laboratory exercises are assigned. This course is intended for Civil Engineering students.
Professor Zsombor-Murray

305-291A GRAPHICS 3(3-3-3). Descriptive geometry, pictorial and working drawings and conventions, graphical statics. Computer graphics: simple plotting, auxiliary view and general perspective transformation, contour mapping and introduction to kinematic animation. Drafting room and computer laboratory exercises are assigned.
Professor Zsombor-Murray

305-292A,B DESIGN I 3(1-3-5). (Pre- or co-requisite: 305-260A, 305-291A or equivalent.) Introduction to design. Problem formulation; idea conception; feasibility study; preliminary design; computer-aided design; optimal design; reliability; hardware, etc. Manufacturing methods and processes; engineering materials. The student's creative ability will be developed by having him participate in a number of design projects. Case-study methods will be used to analyse actual design projects.
Professor Fekete

305-305A ENGINEERING STATISTICS 2(2-1-3). (Prerequisite: 189-261A,B.) Combinatorial analysis. Concept of random variable; distribution function; mean; variance; correlation; Binomial, Poisson, Normal, Uniform, Student's T, and F distributions. Law of large numbers; central limit theorem. Point and interval estimation; method of maximum likelihood. Hypothesis testing; goodness of fit. Experimental design: analysis of variance; regression analysis. Stochastic processes.
Professor Bach

305-314A DYNAMICS OF MECHANISMS 3(3-1-5). (Prerequisite: 303-290A.) First principles of analysis; vector geometry; motion; position; displacement; velocity; acceleration; force; inertia and its effects. Kinematic and dynamic analysis of rigid bodies in pure rotation and in pin-connected systems; dynamic balance. The engine complex. Rigid bodies in rolling contact; planetary gear-trains. Bodies in sliding contact; lower and higher sliding pairs. Cam analysis. Emphasis will be placed on graphical methods of solution.
Professor Ahmed

305-315A,B DYNAMICS OF ENGINEERING SYSTEMS I 3(3-1-5). (Prerequisite: 303-291A,B.) Free and forced vibrations of linear, one degree of freedom, damped and undamped systems. Applications to vibration transmission and isolation, vibration of beams, whirling of shafts. Multi-degree of freedom systems, coupled vibrations, distributed systems. Modelling of dynamic systems, transfer functions, linearization and lumping, block diagrams.
Professor Forde

- **305-316B DYNAMICS OF ENGINEERING SYSTEMS II 3(3-1-5).** (Prerequisite: 305-215A,B.) More advanced topics in dynamics of mechanical systems, including non-linear systems, self-excited systems, etc. Application of analogue computer to the solution of problems in dynamics. A variety of cases, involving complete systems will be studied to illustrate the above material and to provide the student with some knowledge of the techniques of solution.
Professor Forde

305-319B MECHANICS OF SYSTEMS 3(3-1-5). (Prerequisite: 303-293B. Pre- or co-requisites: 189-269A,B and 308-350A,B.) Langrangian and Hamiltonian dynamics. Variational methods. Discrete linear systems; classical and numerical solutions for conservative and non-conservative systems; matric function methods. Electrical-mechanical-acoustical analogues. Stability considerations and closed-loop systems. Vibration of distributed parameter systems. Energy methods. Non-linear vibrations; the phase plane and other methods of solution.
Professor Paidoussis

305-321B MECHANICS OF DEFORMABLE SOLIDS 3(3-1-5). (Prerequisite: 303-207A,B.) Modern phenomenological theories of the behaviour of engineering materials. Stress and strain concepts and introduction to constitutive theory. Applications of theory of elasticity and thermoelasticity. Introduction to plasticity. Deviatoric stress and strain. Introduction to linear viscoelasticity. Simple mechanical models and the nature of viscoelastic behaviour.
Professor Provan

305-330A FLUID MECHANICS 3(3-1-5). (Co-requisite: 189-264A,B.) Review of relevant mechanics and thermodynamics: fluid properties; stress in a continuum; fluid kinematics; rates of strain, rotation. Control volume analysis; conservation of mass and of linear momentum; Euler and Bernoulli equations; introduction to Navier-Stokes equations. Dimensional analysis and dynamical similarity. Conservation of energy; compressible flow; speed of sound, flow with area change. Laminar and turbulent boundary layers. Turbulent jets, hydrodynamic lubrication.
Professor Newman

305-341B. THERMODYNAMICS II 3(3-1-5). (Prerequisite: 305-240A.) Irreversibility and availability, Gibbs and Helmholtz functions. Maxwell relations: generalized thermodynamic relations and charts; equations of state; Clapeyron equation, Joule-Thomson coefficient, volume expansivity and isothermal and adiabatic compressibility. Ideal and real gas and vapour mixtures, psychrometry and air-conditioning processes. Reactive mixtures, stoichiometry of fuels, flame temperatures, dissociation and chemical equilibrium. Modified and improved power and refrigeration cycles.
Professor Bruce

305-342A STATISTICAL THERMODYNAMICS 3(3-1-5). (Prerequisite: 305-240A.) Molecular interpretation of the laws of thermodynamics. Kinetic theory. Transport phenomena. Classical and quantum statistical mechanics. Phase space and Gibbsian ensembles. Thermodynamics of poly-atomic gases with kinetic, vibrational, rotational excitation; crystalline solids, photon gas, electron gas, vapors, dense gases, liquids and chemical systems.
Professor Knystautas

- **305-343B ENERGY CONVERSION 3(2-2-5).** (Prerequisite: 305-341B.) Principles of energy conversion; irreversible thermodynamics, unified conversion, plasma, electrochemical and semiconductor theory. Applications to thermoelectric, thermionic, photovoltaic, M.H.D., fuel cells and other conversion systems. Discussion of energy sources and conversion devices for particular applications, i.e.: isolated systems, power stations, transportation, etc.
Professor Murphy

305-346A,B HEAT TRANSFER 3(3-1-5). (Prerequisite: 189-264A,B.) Steady state conduction with and without heat generation, extended surfaces. Unsteady state conduction in plates, cylinders and spheres. Convective heat transfer, boundary layer equations, dimensionless parameters, analogy between momentum, heat and mass transfer. Natural convection. Heat exchangers. Radiant heat transfer, black and grey body radiation. Interchange factors.
Professor Murphy

305-362B MECHANICAL LABORATORY I 2(0-3-3). (Pre- or co-requisite:- 305-261B; 305-315A,B; 305-330A; 305-341B; 305-346A,B.) Experiments illustrating theory covered in courses on

thermodynamics, mechanics, fluid dynamics, heat transfer.
Professor Hoffman and Staff

305-364A MECHANICAL LABORATORY I H 2(0-3-3). (Prerequisite: 305-261B. Candidates must also have completed at least 30 credits worth of Mechanical Engineering Program). Selected laboratory assignments integrated with the respective lecture courses.
Professor Knystautas

305-365B MECHANICAL LABORATORY II H 2(0-3-3). (Prerequisite: 305-364A.) Continuation of 305-364A.
Professor Knystautas

- **305-372A MACHINING PROCESSES 3(2-2-5).** (Prerequisite: 305-260A.) Mechanics of metal cutting: chip formation, cutting forces and energy considerations; action of cutting fluids; thermal aspects of cutting; vibrations in cutting. Importance of the machine-tool. Machinability, tool wear and tool life, economical criterion for the selection of cutting parameters. Conventional machining operations; mechanics of grinding; other abrasive processes. Unconventional machining processes: elctro-discharge, electro-chemical, laser machining – their principles and areas of application. Effect of machining practice on surface integrity.
Professor Kops

305-393B DESIGN II 3(2-4-3). (Prerequisite: 305-292A,B. Pre- or co-requisite: 303-207A,B.) Continuation of Design I, introducing loading and stress calculations, component part design, friction, lubrication and wear, design using plastic materials, etc. Design projects will involve the application of knowledge acquired in the lectures and in the prerequisite courses to the solution of engineering design problems.
Professor Pfeiffer & Staff

305-394A DESIGN III 3(1-5-3). (Prerequisite: 305-393B.) Students will work in small groups on selected design projects with consultation by the staff. Lecture topics: use and selection of mechanical components, special purpose mechanisms, functional design of machine elements, power transmission and energy storage.
Professor Pfeiffer & Staff

305-403D THESIS (HONOURS) 6(0-6-12). (Prerequisite: Candidates must have completed courses in the Mechanical Engineering Program weighted at a minimum of 60 credits.) This course, together with course 305-404B, involves a research or design project undertaken by each student, encompassing interrelated aspects of engineering theory and requiring a theorectical and/or experimental investigation. The student will work under the supervision of one or more staff members; his completed work will be submitted in the form of a thesis. The grade awarded for this part of the course depends on the assessment of the quality of theoretical and/or experimental work undertaken by the student.
Professor Paidoussis and Staff

305-404B THESIS (HONOURS) 3(0-3-6). (Co-requisite: 305-403D.) This course is part of the same thesis project as for course 305-403D. The grade for this part of the course covers the orderly development and presentation of ideas, and their incorporation in the thesis.
Professor Paidoussis and Staff

305-412A,B SYSTEMS CONTROL I 3(3-1-5). (Prerequisite: 305-315A,B.) Analysis of single variable, linear, lumped-parameter, stationary, deterministic, continuous data, feedback control systems. Introduction to feedback control: open-loop vs. feedback control; history, examples, characteristics and cost of feedback control. Classical approach to initially-quiescent linear systems analysis. Generalized mathematical modelling of dynamic engineering systems. Transient, steady-state and frequency response and their inter-relationship in idealized feedback control systems. Time-domain and frequency-domain, absolute and relative stability analysis: Routh-Hurwitz criterion, root-locus method, Nyquist and Bode analysis, Nichols chart. Control action and compensation to improve performance. Examples of time-domain and frequency-domain design of compensators.
Professor Ahmed

- **305-413B SYSTEMS CONTROL II 3(3-1-5).** (Prerequisite: 305-412A.) Further topics in control systems engineering with emphasis on synthesis. Discrete-time systems, z-transforms. State-space representation of systems; controllability, observability, the state-transition matrix, design using modal analysis. Statistical methods. Survey of system modelling and process parameter estimation techniques. Introduction to optimal control systems. The role of computers in control systems.
Professor Hoffman

- **305-418B MEASUREMENT ENGINEERING 3(3-1-5).** (Prerequisite: 305-412A.) The aim of this course is to present in a unified manner the principles and techniques of gathering and "processing" valid and accurate "information". General principles of measurement, functional elements, transducers, systems. General performance characteristics of measurement elements and systems: sensitivity; linearity, loading effect, dynamic response, noise and feedback in measurement. General techniques of information processing, transmission and recording. Common measurement devices and their characteristics – motion, pressure, temperature, flow, heat flux measurement. Case studies. Principles developed in lectures will be illustrated by laboratory demonstrations.
Professor Ahmed

- **305-419B ENGINEERING APPLICATIONS OF LASERS AND HOLOGRAPHY 3(3-0-6).** (Prerequisite: 300-208A,B.) Wave optics, Fabry-Perot interferometer, Fresnel & Fraunhofer diffractions; laser physics, population inversion, frequency broadening, laser applications; holography principles, image position analysis, Fourier transform holograms, holography applications.
Professor Wu

305-422A CONTINUUM MECHANICS 3(2-2-5). (Prerequisite: 303-293B; Co-requisite: 189-385A.) Definition of a continuum. The Cauchy stress concept which gives the balance of forces within a material. Vector and tensor fields. Strains and kinematics of deformation. Equations of motion. Thermodynamics of continua. The basic laws for predicting the behaviour of the continuum.
Professor Axelrad

305-423B THEORY OF ELASTICITY 3(2-2-5). (Prerequisite: 305-422A.) Basic equations of elasticity and thermoelasticity. Methods of solution of two and three-dimensional problems. Dynamic problems and wave propagation in solids. Inelastic response behaviour of solids.
Professor Axelrad

- **305-431B GAS DYNAMICS 3(3-1-5).** (Prerequisite: 305-330A.) Motion of sound waves. Isentropic flow. Normal shocks. Flow in nozzles, wind tunnels and shock tubes. Oblique shocks. Prandtl Meyer Flow. Flow in inlets and over airfoils. Flow with friction and heat addition. Magnetogasdynamics. Real gas effects. Rarefied flow. Experimental methods.
Professor Guirao

- **305-434B TURBOMACHINERY 3(2-2-5).** (Prerequisite: 305-330A.) The course covers fundamental aspects of turbomachinery in a broad and general manner that will be useful to a wide range of mechanical engineering students and is designed to provide a firm base for more detailed study at graduate level. Topics will include: general concepts and definition of turbomachinery, generalized performance study by non-dimensional analysis, basic theories of energy transfer, fluid flow problems in turbomachinery, design problems, performance matching and stability, control, testing, general problem of propulsion.
Professor Murphy

- **305-435A JET PROPULSION 3(3-1-5).** (Prerequisite: 305-330A.) Thermodynamics of open cycles; internal aerodynamics; aerothermochemistry of propellants; nozzle designs and efficiency, aerodynamics of intake diffusers; problems associated with intake design.
Professor Wu

- **305-447A COMBUSTION 3(3-1-5).** Selected topics concerned principally with combustion in prime movers, e.g. steam plants and various kinds of engines. Fundamentals of chemical kinetics of combustion reactions. Stability limits and flame speeds of laminar and turbulent diffusion flames, theories of flame propagation. Some causes and possible methods of reduction or elimination of air pollution from prime movers including effects of the physical properties and chemical composition of various fuels, fuel-air ratio, quenching, also discussion of carbon or soot formation. Method of analysis of combustion products including mass spectroscopy and gas chromatography.
Professor Thompson

305-452A MATHEMATICAL METHODS IN ENGINEERING I 3(2-2-5). (Prerequisite: Candidates must have completed courses in the Mechanical Engineering Program weighted at 60 credits (minimum).) The underlying theory and application of mathematical methods in fluid dynamics, vibration, stress and strain analysis, heat transfer, etc. The eigenvalue problem, methods in analysis.
Professor Provan

305-453B MATHEMATICAL METHODS IN ENGINEERING II 3(2-2-5). (Prerequisite: 305-452A.) Continuation of the underlying theory and application of mathematical methods in fluid dynamics, vibration, stress and strain analysis, heat transfer, etc. Spherical and cylindrical harmonics, Laplace and Fourier series and transforms, variational perturbation techniques, introduction to theory of distributions and generalized functions.
Professor Provan

305-463D,G MECHANICAL LABORATORY II 4(0-4-2). (Prerequisite: 305-362B.) A selection of laboratory projects will be offered and carried out by students working in small groups.
Professor Knystautas & Staff

- **305-471A INDUSTRIAL ENGINEERING 3(3-1-5).** (Prerequisite: 305-305A.) Factory planning, plant location, layout and services, production line techniques, methods engineering, design of work systems, measurement of performance (time study, work sampling, synthetic time data), quality control systems, maintenance, safety.
Professor Cherna

- **305-473B PRODUCTION SYSTEMS 3(2-2-5).** (Pre- or Co-requisite: 305-349B.) Production function. Concepts of system approach in production. Analysis of product design. Value Engineering. Process planning. Network planning methods. Information systems and automation; NC machine tools. Scheduling and control of operations. Computer-aided manufacturing.
Professor Kops

- **305-474B SELECTED TOPICS IN OPERATIONS RESEARCH 3(3-1-5).** (Prerequisite: 305-305A.) Introduction to the general mathematical programming problem in the context of engineering design; linear programming, queueing theory, Monte Carlo simulation. The above techniques will be used to

study the optimization of engineering systems. The applications of linear programming in its various manifestations will be examined in depth.
Professor Zsombor-Murray

305-475A NUMERICAL CONTROL OF MACHINE TOOLS 3(3-2-4). (Prerequisite or co-requisites: 305-260A, 305-291A, 308-208A,B or equivalent). This course is intended to give the student as broad an exposure as possible to the technology of numerically controlled machines with emphasis on the software aspects. The student will be given a number of programming assignments some requiring him to actually machine a prototype on the NC machines in the department. The topics covered are: Introduction to NC systems. Manual programming, standard commands, canned cycles, paper tape formats. Computer aided programming (using APT), geometric definitions, programming of tool motions, loops and macros. The post processing function. NC tape verification techniques. Survey of NC hardware. Tooling and fixtures for NC. Selection of parts suitable for NC machining. Economic factors in justifying NC machines. NC and quality control. The future for NC.
Professor Hoffman and Staff

- **305-495A DESIGN IVa 3(0-6-3).** (Prequisite: 305-394A.) A design project course of one or two terms, with 305-496B Design IVb as the second (or first) term. Allows the completion of a project of greater complexity than Design II & III with emphasis on analytic solutions, stressing, planning for production. Weekly consultations are to be held with the instructors. Reports required: design proposal, feasibility study, mid-term report, final report in the form of an engineering paper, with supporting engineering drawings. Formal lectures are not scheduled, but instructors will assist students in retrieving design information on specific topics.
Professor Pfeiffer & Mr. Edwards

- **305-496B DESIGN IVb 3(0-6-3).** Continuation of Design IVa (or alternate term). See description above.
Professor Pfeiffer & Mr. Edwards

305-497B VALUE ENGINEERING 3(0-8-1). (Prerequisites: 305-260, 305-292 and completion of 45 credits.) Senior students from other departments may take this course by arrangement with the instructor. Value Engineering is an in-depth analysis of an industrial product or process with a view to improving its design and/or performance so that it can be produced, or perform its task, at a lower cost. This is a workshop type of course. Projects will be supplied by industrial firms and students will work together with industrial personnel, in teams of 5 or 6. Recommendations will be submitted to company executives to be considered for implementation.
Professor Pfeiffer & Staff

305-507X NUMERICAL ANALYSIS FOR COMPUTER USERS I. Various topics from numerical analysis are selected with an eye to computer usage. Review of finite differences, interpolation and quadrature, ordinary differential equations.
Professor Bach

305-515A. INDUSTRIAL AERODYNAMICS. Characteristics of the earth's boundary layer, flow patterns around buildings and structures, their effect on the dispersal of pollutants, modeling and model testing, wind tunnel corrections, shelter provided by buildings, pressure distribution over buildings providing data for the structural designer, wind-induced oscillations of buildings and structures.
Professor Fekete

305-520B STATISTICAL MECHANICS 3(3-1-5). (Prerequisite: 305-342A.) Classical mechanics, fundamental hypothesis, H-theorem, coarse graining and contraction, Liouville equation, perturbation theory of Bogoliubov, Frieman and Sandri, the kinetic equations of Boltzmann, Fokker-Planck, Vlasov and Lenard-Balescu, the hydro-dynamic equations and transport phenomena, stochastic processes, fluctuations, the Master equation, Onsager relations, Langevin equations and Brownian motion.
Professor Lee

305-527A COMPUTER-AIDED MECHANICAL DESIGN (Prerequisites: Knowledge of FORTRAN programming.) Program structuring for efficiency in computer use and programming time; achieving interactive computing; using the computer in the engineering design process. Assignments include an optimization problem, a seminar, and development of one original program. Lecture topics include computational methods, computer graphics, contouring, curve-fitting, surface-fitting, network analysis, lever and kinematic systems. Program and subroutine listings also supplement text material.
Professor Pfeiffer

305-533B AERODYNAMICS: IDEAL FLUID THEORY
3(3-1-5). (Prerequisite: 305-330A.) Subsonic aerodynamics. Kinematics; equations of motion, vorticity and circulation; solutions of Laplace's equation; conformal mapping; motion around simple bodies. Two-dimensional aerofoils. Three-dimensional flows; airscrews; low and high aspect ratio wings. Supplemented by demonstrations and experiments in the laboratory.
Professor Newman

305-560B BIOMECHANICS OF TISSUES 3(3-0-6). Tissue biomechanics is the study of the response of biological tissue to forces and deformations to which it is subjected. Tissues such as bone, tendon and ligament act to transmit load and together with the contractile ability of muscle, provide a means for locomotion. The course emphasizes the fundamentals of continuum mechanics in relation to the morphological classification of various tissues. Basic principles of viscoelasticity will

aid the student in understanding the rate sensitivity of biological materials. The stress-strain-time or constitutive equations for soft connective tissue components will be determined. The mechanical response of muscle tissue in the passive and stimulated states will also be examined.
Staff

305-603A,B or C. DESIGN PROJECT I
Staff

305-604A,B or C. DESIGN PROJECT II
Staff

305-608Y. NUMERICAL ANALYSIS FOR COMPUTER USERS II.
Professor Bach

305-609B,C. SEMINAR – candidates for Masters degree
Professor Provan

305-611B. STEADY COMPRESSIBLE AERODYNAMICS.
Professor Wu

305-612B. VISCOUS FLOW AND BOUNDARY LAYER THEORY.
Professor Newman

305-613A. UNSTEADY GAS DYNAMICS.
Professors Knystautas & Lee

305-621B. ADVANCED MACHINING PROCESSES.
Professor Kops

305-623A. MACHINE TOOL ENGINEERING.
Professor Cherna

305-624X. APPLIED PROCESS CONTROL.
Professor Zsombor-Murray & Mr. Vroomen

305-626B. ADVANCED CONCEPTS OF ENGINEERING DESIGN.

305-632A. ADVANCED STRESS ANALYSIS FOR ENGINEERS.
Professor Provan or Axelrad

305-633B. TRIBOLOGY.
Dr. Atack

305-642A. MECHANICS OF ENGINEERING SYSTEMS.
Professor Paidoussis

305-643B. VIBRATIONS IN ENGINEERING SYSTEMS.
Professor Paidoussis

305-650A HEAT TRANSFER

5.7 DEPARTMENT OF MINING AND METALLURGICAL ENGINEERING

Chairman

W.M. Williams, B.Sc., M.Sc. (Bristol), Ph.D.(Tor.), Eng.

Professors

W.G. Davenport, B.A.Sc., M.A.Sc., (U.B.C.), Ph.D., (Lond.), D.I.C., Eng.
J.J. Jonas, B.Eng.(McG.), Ph.D.(Cantab.)
B.W. Mackenzie, B.Eng.(McG.), M.Sc.(Rand.), Sc.D. (Col.)
T.M. Salman, B.Eng., M.Eng., Ph.D.(McG.), Eng.
W.M. Telford, B.Sc., M.Sc., Ph.D.(McG.)

Associate Professors

J.E. Gruzleski, B.Sc.(Eng.) M.Sc. (Qu.), Ph.D. (Tor.),Eng.
R.I.L. Guthrie, B.Sc., Ph.D.(Lond.), D.I.C., Eng.
O.G. Jensen, B.Sc., M.Sc., Ph.D.(U.B.C.)
R.R. MacLachlan, B.Eng. (McG.), M.Sc.(Qu.), Ph.D.(Qu.), Eng.
G.W. Smith, B.Eng., M.Eng., Ph.D. (McG.), Eng.
W.T. Thompson, B.A.Sc., M.A.Sc., Ph.D.(Tor.), Eng.
J.E. Udd, B.Eng., M.Eng., Ph.D.(McG.), Eng.

Assistant Professors

D.J. Crossley, B.Sc. (Newcastle-upon-Tyne), M.Sc., Ph.D. (U.B.C.)
P.A. Distin, B.Sc., Ph.D.(Lond.) D.I.C.
J.A. Finch, B.Sc.(Birm.), M.Eng., Ph.D.(McG.), Eng.

Lecturers

M. Bilodeau, B.Eng.(Ecole Poly.), M.Sc.(McG.), Eng.
O.T. Djamgouz, Dip. Min. (Istanbul Tech. Univ.), M.Eng. (McG.)
M. Firth, B.Sc. (Sheffield), M.Eng. (McG.), Eng.
D. Trotter, B.Sc.(Qu.), M.Eng.(McG.), Eng.
P. White, B.Sc. (Eng.)(Rand), M.Eng.(Penn State).

Special Lecturers

R.S. Boire, J.P. Drolet, T.E. Hawkins.

The Department of Mining and Metallurgical Engineering offers programs leading to the Bachelor of Engineering degree in Mining Engineering or in Metallurgical Engineering. Both curricula have been extensively redefined in recent years to take account of the new technology which has been developed both in the mining and the metallurgical industries. In addition to regular courses and laboratories, the curriculum includes seminars, colloquia, and student projects reinforced by field trips to metallurgical or mining operations throughout Ontario and Quebec.

The equipment operated by the Department is the best available. On the metallurgical side: an electron probe microanalyzer, and electron microscope; one of the largest university facilities in North America for melting and casting: computer facilities; x-ray diffraction machines; equipment for mechanical testing and deformation studies and a comprehensive range of analytical equipment. In mining: facilities for the testing of rocks under controlled conditions of temperature and humidity, a wide range of equipment for studying environmental factors of importance in mining (dust, illumination, ventilation, etc.), geophysical laboratories, and extensive facilities at Mont. St. Hilaire for mining research.

Metallurgical Engineering. Students of metallurgical engineering follow core courses in mineral processing, pyrometallurgy, hydrometallurgy, mechanical and physical metallurgy: these are supplemented by elective courses which provide a good choice of specialties to the graduating engineer. The course structure is reinforced with laboratory experiments, field trips and oral and written presentations in order to provide the most varied educational experience possible. The Department helps students in finding employment during the summer in order to complement their academic work with metallurgical practice. Graduates in Metallurgical Engineering find opportunities in the metal producing, metal processing or metal consuming industries and their jobs may involve them in research, development, operations or management.

Mining Engineering. McGill, which has provided a program in mining engineering for longer than any other university in Canada, has always been noted for the excellence of its mining courses and for the training it provides in mining technology, mineral economics and mining practice. The final year Mining Feasibility courses are an example of the advanced design which students are called upon to undertake as part of their training. Students are expected to obtain practical experience in the mining industry during the summer months and every aid is given to ensure this. Graduates in mining engineering are in demand not only in Canada but in other countries, particularly in Africa and Australia, which have large mining industries. Technical developments, e.g. in the operation of open pit mines and in under-ocean mining, have been rapid in recent years. These developments offer a challenge to the imaginative student with a strong engineering interest.

Applied Geophysics. Students wishing to specialize in geophysics must register for the B.Eng. (Mining Engineering) degree and take the sequence of elective courses in geophysics.

Scholarships. The Department makes available twenty Entrance Scholarships, valued at $1,000, each year; these scholarships are renewable. A substantial number of other scholarships and bursaries are awarded by the Department as well as by the Canadian Mineral Industry Education Foundation. Full details may be obtained from the Department Office.

CURRICULUM FOR THE B.ENG. DEGREE IN METALLURGICAL ENGINEERING

REQUIRED COURSES

		COURSE CREDIT	
Non-Departmental Subjects			
180-331A	Inorganic Chemistry of the Solid State	3	
189-261A,B	Linear Algebra and Differential Equations I	3	
189-262A,B	Linear Algebra and Differential Equations II	3	
189-263A,B	Advanced Calculus	3	
189-264A,B	Introduction to Boundary Value Problems	3	
300-310A,B	Engineering Economy	3	
303-205A,B	Mechanics I	4	
304-281A,B	Electric Power	3	
305-346A,B	Heat Transfer	3	
308-208A,B	Computers in Engineering	2	30
Metallurgical Engineering Subjects			
306-211A,B	Fundamentals of Metallurgical Engineering	3	
306-212A	Engineering Thermodynamics	3	
306-250B	Extractive Metallurgy I	3	
306-260B	Heat Treatment and Phase Transformations	3	
306-313A	Technical Report I	2	
306-317A	Instrumental Analysis	3	
306-340A	Applied Fluid Dynamics	3	
306-341B	Mineral Separation	3	
306-351B	Electrometallurgy	3	
306-352B	Hydrometallurgy	3	
306-353B	Extractive Metallurgy II	3	
306-361A	Solidification and Casting	3	
306-362B	Strengthening, Deformation and Fracture	3	
306-414B	Technical Report II	2	
306-416B	Metallurgical Design	3	
306-442A	Surface Chemistry of Mineral Separation	3	
306-455A	Process Engineering Metallurgy	3	49

ELECTIVE COURSES

Technical Electives

Four courses which must be selected from courses offered by the Department, including at least one Project.

306-443B	Mineral Separation Project	3	
306-444B	Concentrator Circuit Analysis	3	
306-454A	Metallurgical Thermodynamics	3	
306-456B	Steelmaking Processes	3	
306-457A	Process Metallurgy Project	3	
306-458A	Corrosion Principles	3	
306-463A	Advanced Physical Metallurgy	3	
306-464B	Physical Metallurgy Project	3	12

General Electives

Two courses 6

Total **97**

CURRICULUM FOR THE B.ENG. DEGREE IN MINING ENGINEERING AND APPLIED GEOPHYSICS

REQUIRED COURSES

		COURSE CREDIT	
Non-Departmental Subjects			
186-210B	Mineralogy	3	
186-221	General Geology	3	
186-232A	Structural Geology	3	
186-440B	Mineral Deposits	3	
189-261A,B	Linear Algebra and Differential Equations I	3	
189-262A,B	Linear Algebra and Differential Equations II	3	
189-263A,B	Advanced Calculus	3	
189-264A,B	Introduction to Boundary Value Problems	3	
300-310A,B	Engineering Economy	3	
303-205A,B	Mechanics I	4	
303-207A,B	Solid Mechanics	4	
304-281A,B	Electric Power	3	
308-208A,B	Computers in Engineering	2	40
Mining Engineering Courses			
306-201A	Introduction to the Mineral Industry	3	
306-216B	Mining Engineering Techniques	3	
306-230B	Geophysical Exploration	3	
306-321B	Behaviour of Rock Structures	3	
306-326B	Mathematical Applications in the Mineral Industry	3	
306-327A	Materials Handling	3	
306-328B	Mine Environments	3	
306-340	Applied Fluid Dynamics	3	
306-341B	Mineral Separation	3	
306-420A	Mining Feasibility Study I	3	
306-421B	Mining Feasibility Study II	3	
306-423A	Mineral Industry Economics I	3	
306-424B	Mineral Industry Economics II	3	
306-429D	Research Project	5	44

ELECTIVE COURSES

Technical Electives

Three courses to be chosen from those offered by the department or from other suitable graduate or undergraduate courses.

306-332A	Mathematical Applications in Geophysics	2	
306-334B	Potential Theory in Geophysics	2	
306-422A	Applied Explosives	3	
306-425B	Mine Planning	3	
306-431A	Advanced Exploration Geophysics I	3	
306-433B	Advanced Exploration Geophysics II	3	
306-435B	Advanced Exploration Geophysics III	3	
306-436A	Advanced Exploration Geophysics IV	3	
306-442A	Surface Chemistry of Mineral Separation	3	
306-443B	Mineral Separation Project	3	
306-444B	Concentrator Circuit Analysis	3	9

General Electives

One or two courses 4

Total **97**

For a student commencing studies in September, a typical six semester program leading to the degree of Bachelor of Engineering is outlined below:

METALLURGICAL ENGINEERING

	Semester 1 (Fall)	Credits		Semester 2 (Winter)	Credits
180-331A	Inorganic Chemistry	3	189-262B	Lin. Alg. and Diff. Eq. II	3
189-261A	Lin. Alg. and Diff. Eq. I	3	189-264B	Boundary Value Prob.	3
189-263A	Advanced Calculus	3	303-205B	Mechanics I	4
306-211A	Fund. of Metal. Eng.	3	306-250B	Extractive Metal. I.	3
306-212A	Eng. Thermodynamics	3	306-260B	Heat Treatment	3
308-208A	Computers for Eng.	2			
		17			16
	Semester 3 (Fall)			**Semester 4 (Winter)**	
304-281A	Electric Power	3	306-341B	Mineral Separation	3
305-346A	Heat Transfer	3	306-351B	Electrometallurgy	3
306-317A	Instrumental Analysis	3	306-352B	Hydrometallurgy	3
306-340A	Fluid Dynamics	3	306-353B	Extractive Metal. II	3
306-361A	Solidification	3	306-362B	Deformation	3
306-313A	Technical Report I	2			
		17			15
	Semester 5 (Fall)			**Semester 6 (Winter)**	
300-310A	Engineering Economy	3	306-416B	Metallurgical Design	2
306-442A	Surface Chem. of Flotation	3	306-414B	Technical Report II	3
306-455A	Process Eng. Metallurgy	3		Technical Electives	6
	Technical Electives	6		General Electives	6
		15			17

MINING ENGINEERING

	Semester 1 (Fall)	Credits		Semester 2 (Winter)	Credits
186-221A	General Geology	3	189-262B	Lin. Alg. and Diff. Eq. II	3
180-261A	Lin. Alg. and Diff. Eq. I	3	189-264B	Boundary Value Prob.	3
189-263A	Advanced Calculus	3	303-207B	Solid Mechanics	4
303-250A	Mechanics I	4	306-216B	Mining Techniques	3
306-201A	Intro. Mining Industry	3	306-230B	Geophysical Expl'n	3
308-208A	Computers for Eng.	2

Courses Offered By The Department

The courses in this department have been renumbered to conform with the following classification system. The first three numbers (i.e. 306) are the department code. The next digit is the level of instruction. The last two digits are classified as follows:

01 to 09	elementary mining courses.
10 to 19	elementary and general metallurgical courses.
20 to 29	general courses.
30 to 29	geophysics courses.
40 to 49	mineral processing courses.
50 to 59	extractive and process metallurgy courses.
60 to 69	physical metallurgy courses.
70 to 79	seminars.

306-201A INTRODUCTION TO THE MINERAL INDUSTRY 3(3-3-3). An introduction to the mineral industry in which the basic parameters are developed from a mining engineering viewpoint. The Canadian mineral industry, exploration methods, drilling theory and methods, explosives theory and application to underground and surface mining, introduction to fragmentation of materials, introduction to mining environmental control.
Professor Mackenzie & Staff

306-211A FUNDAMENTALS OF METALLURGICAL ENGINEERING 3(3-3-3). Introduction: scope and historical development, metals and the evolution of society, economic and geo-political factors, metals for tomorrow. *Mineral Processing.* minerals of economic importance (metallic and industrial). identification of ore and gangue minerals, ore deposits, exploration, discovery, valuation of mineral deposits, the role and economic analysis of concentration operations. *Extractive Metallurgy.* pyrometallurgy (fuels, ore treatment and furnace processes in the ferrous and non-ferrous industries), hydrometallurgy (leaching, metal recovery and electro-refining), halide metallurgy (chlorination and fused salt electrolysis processes). *Physical Metallurgy:* crystal structure (defects, diffusion and deformation), phase diagrams, phase reactions and alloy systems, examination techniques (preparation, light and electron microscopy, electron microprobe, X-ray diffraction and radiography).
Professor Davenport & Staff

306-212A ENGINEERING THERMODYNAMICS 3(3-1-5). Scope and nature of thermodynamics, classical versus microscopic approach. First Law, mechanical work and heat, applications to elastic deformation of solids, thermochemistry, elementary gaseous expansion processes. Second Law, Carnot cycle for ideal gas, Clausius inequality, application to simple power and refrigeration cycles. Helmholtz and Gibbs functions, application to simple chemical processes. Third Law and absolute entropy. Phase equilibrium for a pure substance. Chemical equilibrium, applications involving gaseous mixtures or ideal solutions.
Professor Thompson

306-215A,B MATERIALS SCIENCE 3(2-2-5). The economic significance of materials, their properties and limitations, methods of measurement of characteristic properties, importance of physical and mechanical properties in engineering applications, introduction to polymers and plastics, crystalline materials, metals, alloys and phase diagrams, solidification and subsequent thermal treatment of materials, heat treatment of iron-carbon alloys, industrial fabrication techniques such as rolling, extrusion, casting, forging, cold working.
Professors Gruzleski and Williams

306-216B MINING ENGINEERING TECHNIQUES 3(3-3-3). (Prerequisite: 306-201A.) A study of mining engineering techniques and their application to the development of extractive methods for the exploitation of mineral deposits. Principles of surface and underground mining methods, ground stress and support approaches, use of pillars and fill systems, unit type local support, stoping and development methods, notes on mine surveying, slope stability, waste disposal.
Professor MacLachlan

306-230B GEOPHYSICAL EXPLORATION 3(2-2-5). (Co-requisites: 189-261A,B, 189-263A,B or equivalents.) Applications of seismic, gravity, magnetic, electrical and radioactive methods in petroleum and mineral exploration.
Professor Jensen

306-250B EXTRACTIVE METALLURGY I 3(2-3-4). (Prerequisites: 306-211A, 308-208A,B.) An examination of some of the operations and processes of extractive metallurgy and the need for control through the application of chemical and thermodynamic principles; stoichiometry and materials balances – ores, gangue minerals, fluxes and slags; enthalpy and heat balances – fuels, flame temperatures, operating temperatures, heat losses, refractories; free energy and process equilibria – process variables and their interactions, optimum conditions.
Professor Smith

306-260B HEAT TREATMENT AND PHASE TRANSFORMATIONS 3(2-3-4). (Prerequisite: 306-211A*.) Precipitation, eutectoid reactions, austenite-martensite reaction, bainite formation, recovery, recrystallization, grain growth, secondary recrystallization. Industrial heat treatment of ferrous and non-ferrous metals based on these transformations.
Professor Williams

306-313A TECHNICAL REPORT I 2(0-0-6). A technical paper prepared in accordance with instructions from the Department.
Mr. Firth

306-317A INSTRUMENTAL ANALYSIS 3(2-3-4). (Prerequisite 180-331A**.) Methods of sample preparation, UV and visible spectrophotometry, infra-red spectrophotometry, flame and atomic absorption spectrophotometry, emission spectroscopy, electro-deposition and coulometry, polarography, potentiometric titrations, gas chromatography, Leco train analysis, X-ray diffraction and fluorescence spectroscopy, radiotracer techniques.
Professor Finch

306-321B BEHAVIOUR OF ROCK STRUCTURES 3(3-3-3). (Prerequisites: 303-207A,B 306-216B, Corequisite: 186-232A.) Summary of the contributions made by various disciplines to the field of rock mechanics, the state of present knowledge, application of basic principles to problems involving the design of competent structures in rock masses.
Professor Udd

306-326B MATHEMATICAL APPLICATIONS IN THE MINERAL INDUSTRY 3(3-0-6). (Prerequisites: 189-261A,B; 189-263A,B; 308-208A,B.) The application of mathematical analysis techniques for use by mining engineers, geological engineers and geologists. Statistical decision theory applied to exploration planning. Mineral occurrence models for regional resource appraisal. Grade and tonnage estimation; sampling theory, conventional methods, statistical analysis, introduction to geostatistical methods, economic applications. Operations research applications for the optimization of mining operations.
Mr. Bilodeau

306-327A MATERIALS HANDLING 3(3-3-3). (Prerequisite: 306-216B.) A study of the factors involved in the selection of methods for handling ores, raw materials, and other resources. Materials handling systems for underground and open cut mines, transportation of materials, comparative studies of alternative systems for selected cases, capital and operating costs of equipment. Candidates will prepare and present a colloquium on a selected topic.
Mr. Trotter

306-328B MINE ENVIRONMENTS 3(3-2-4). (Prerequisites: 306-201A, 306-340A.) The major elements of the course involve the characteristics of air contaminants, pathogenesis of pneumoconiosis, problems of noise and vibrations, principles of illumination and underground lighting, mine ventilation systems, and design features of dust control and make-up air supply systems. Candidates will prepare a technical paper on a selected topic.
Professor Djamgouz

- **306-332A MATHEMATICAL APPLICATIONS IN GEOPHYSICS 2(2-0-4).** (Prerequisites: 306-230B, 189-262A,B, 189-264A,B, or equivalents.) Applications of mathematical methods in geo-physics. Vector calculus, elementary tensors, Fourier analysis, differential equations of geo-physics, numerical methods.
Professor Crossley

- **306-334B POTENTIAL THEORY IN GEOPHYSICS 2(2-0-4).** (Prerequisite: 306-332A and/or consultation with instructor.) Applications of potential theory in gravity, magnetostatics, electrostatics, solution of Laplace's and Poisson's equations, the earth's gravity and magnetic fields.
Professor Crossley

306-340A APPLIED FLUID DYNAMICS 3(2-1-6). (Prerequisite: 303-205A,B**.) Total energy balance, mechanical energy balance, viscosity, friction, Newtonian and non-Newtonian flow. Pipes, valves and fittings, compressible flow, draft. Flow through stacks and ventilation ducting, compressors, fans and blowers. Measurement of flow and pressure. Flow of solids through fluids, slurry transport (settling and non-settling), classification, thickening, filtering, fluidization, cyclones.
Professor Smith

306-341B MINERAL SEPARATION 3(2-3-4). (Prerequisites: 306-201A or 306-211A.) General discussion of minerals and ores. Size reduction and liberation. Screening and particle size determination. Handling of solids and pulps. Fundamentals of mineral concentration. Gravity, chemical, electrical, magnetic, and electrostatic separations. Introduction to cyanidation and flotation.
Professor Finch

306-351B ELECTROMETALLURGY 3(2-3-4). (Prerequisite: 306-212A.) Coulometry. Conductance and transference in electrolytes. Thermodynamics of electrolyte solutions. Electrochemistry of reversible cells, electrode potentials. Pourbaix diagrams: application to corrosion, leaching and electrodeposition. Irreversible electrode processes: application to corrosion and electrodeposition.
Professor Thompson

306-352B HYDROMETALLURGY 3(2-3-4). (Prerequisite: 306-211A.) Unit processes in hydrometallurgy: acid, alkaline and pressure leaching methods. Thermodynamic and kinetic aspects. Purification of leach liquors by ion exchange, solvent extraction and selective precipitation operations. Solid-liquid separation techniques. Recovery of metal values by cementation, electrowinning, and hydrogen precipitation methods. Contemporary plant design incorporating the above principles.
Professor Distin

306-353B EXTRACTIVE METALLURGY II 3(2-3-4). (Prerequisite: 306-250B.) Equilibrium phase diagrams, phase separation. Non-equilibrium solidification, zone refining. Thermodynamics of metal reduction, roasting, refining processes, reaction efficiencies. Physical and chemical aspects of oxide slags and refractories. Analysis of developments in the production of lead, zinc, copper, and nickel. Metallurgy of the less common metals.
Professor Guthrie

306-361A SOLIDIFICATION AND CASTING 3(2-3-4). (Prerequisite: 306-211A*.) Nucleation and grain refinement, freezing of pure metals, solute redistribution during solidification, constitutional undercooling, dendritic freezing, segregation phenomena, the freezing of gray, white, and nodular cast iron, malleable iron, industrial casting techniques, ingot structures.
Professor Gruzleski

306-362B STRENGTHENING, DEFORMATION AND FRACTURE 3(2-3-4). (Prerequisite: 306-211A*.) Strengthening of metals by: work hardening, grain size refinement, sub-structure strengthening, solute, precipitate, dispersion, order and martensitic hardening. Practical implications. Service failure and prevention, mechanisms of brittle and ductile fracture, creep and fatigue. Industrial shaping and forming, theories and processes.
Professor Jonas

306-367B METALLURGY OF ENGINEERING MATERIALS 3(2-3-4). (Prerequisites: 306-215A,B or 303-291B.) Methods of measurement of metallurgical properties: X-ray methods, electron microscope and microprobe analysis. Alloy properties and designations. Property control in ferrous and non ferrous materials: heat treatment, work hardening. Surface hardening methods. Joining techniques: soldering, brazing, welding, weldability, weld inspection, weld defects. Casting methods, casting design. Hot working techniques. Cold forming methods, design considerations. Powder metallurgy. Corrosion: corrosion protection; case histories in corrosion. Failure analysis.
Mr. Firth

306-414B TECHNICAL REPORT II 3(0-0-9). (Prerequisite: 306-313F.) A technical paper prepared in accordance with instructions from the Department, together with oral presentation.
Mr. Firth

306-416B METALLURGICAL DESIGN 2(2-0-4). (Prerequisite: Satisfactory completion of the required courses in the relevant areas of the Metallurgical Engineering program. Departmental approval is necessary.) Design of new metallurgical plants, processes and products based on knowledge acquired in previous core courses. Material and heat balances, metal economics, design and optimization.
Professor Smith

306-420A MINING FEASIBILITY STUDY I 3(0-3-6). (Prerequisites: 186-232A, 306-341A, 306-327A, 306-326B, 306-328B.) The course is a case study exercise in application of the specialist skills developed in the mining engineering program. The purpose of the course is to combine these skills in carrying out an appraisal of the technical feasibility and economic attractiveness of developing a mineral deposit, based on the results of an exploration program, and to select the most attractive alternative. Staff members are available for individual consultations and for the presentation of seminars as required. Students are required to present seminars on aspects of the case study analysis. Final individual reports are to be prepared to professional standards. Individual interpretations are encouraged.
Professor Djamgouz and Staff

306-421B MINING FEASIBILITY STUDY II 3(0-3-6). (Prerequisite: 306-420A.) Based on the results of 306-420A, students are required to complete the preliminary design and feasibility study of the mining system. Staff members are available for individual consultations and for the presentation of seminars as required. Students are required to present seminars on aspects of the case study analysis. Final individual reports are to be prepared to professional standards. Individual interests are encouraged and wide latitude of content is permitted in the preparation of the reports.
Professor Djamgouz and Staff

- **306-422A APPLIED EXPLOSIVES 3(2-3-4).** The course is designed to introduce the engineering aspects of explosives relevant to their use in rock and ground excavation. The concepts of fuel-oxidizer mixes and the principles of various formulations such as dynamite slurries and dry mixes are reviewed. The concept of detonation and the physical factors related to detonation that govern the performance of many commercial explosive formulations are discussed. Initiation systems, blast damage and vibration control, blasting frozen ground, tunnelling and other topics are included. Basic concepts in drilling and blast patterns are presented. Legislation regarding explosives transport, handling, and storage is reviewed. The course is reinforced by special field trips to selected laboratories and work sites.
Professor MacLachlan

306-423A MINERAL INDUSTRY ECONOMICS I 3(3-0-6). (Prerequisite: 306-201A.) Incorporation procedures, company direction and directorships, cost accounting and controls, company law, financial statements, federal taxation.
Mr. Boire

306-424B MINERAL INDUSTRY ECONOMICS II 3(3-0-6). (Prerequisite: 306-423A.) Applications of economic analysis for corporate planning and the structuring of mineral policy in government organizations. The mineral conversion process, the mine in economic theory, Canadian mineral policy, case studies in mining company organization and planning.
Professor Mackenzie & Mr. Drolet

- **306-425B MINE PLANNING 3(3-3-3).** Planning for the exploitation of a mineral deposit: exploration; choice of mining method and mining rate; design of access and services; safety; scheduling and sequencing of mining procedures. Economic analysis.
Mr. Trotter

306-429A,D RESEARCH PROJECT 5(0-2-13). (Prerequisites: 306-327A, 306-328B, and others depending on the topic chosen.) To develop an understanding of independent study and research methods including problem definition, selection of approach, problem of solution and communication of results. Research topics, which may be principally experimental, theoretical or involve a critical review of the literature, will be chosen in consultation with individual staff members who will act in a supervisory capacity throughout the project.
Professor Mackenzie & Staff

- **306-431A ADVANCED EXPLORATION GEOPHYSICS I 3(2-3-4).** (Prerequisite: 306-230B.) Applications of gravity and magnetic methods in petroleum and mineral exploration with particular emphasis on instruments, field methods, and interpretation of results.
Professor Telford

- **306-433B ADVANCED EXPLORATION GEOPHYSICS II 3(2-3-4).** (Prerequisite: 306-431A and consultation with instructor.) Applications of electrical methods in petroleum and mineral exploration with particular emphasis on instruments, field operations and interpretation of results.
Professor Telford

- **306-435A ADVANCED EXPLORATION GEOPHYSICS III – SEISMOLOGY 3(2-3-4).** (Prerequisites: 306-332A or equivalents and consultation with instructor.) Seismic theory. Seismic methods in exploration: instrumentation, field techniques, data processing and interpretation.
Professor Jensen

- **306-436B ADVANCED EXPLORATION GEOPHYSICS IV 3(2-3-4).** (Prerequisite: 306-230B and consultation with instructor.) Seismic methods in mineral exploration and engineering geophysics. Radioactivity method, instrumentation and interpretation of results. Well logging techniques with particular emphasis on instrumentation, interpretation of petroleum well logs, applications in mineral exploration areas.
Professor Telford

306-442A SURFACE CHEMISTRY OF MINERAL SEPARATION 3(2-3-4). (Prerequisite: 306-341B.) Chemical and physical thermodynamic factors underlying surface and interfacial phenomena. Fundamentals of flotation operations. Adsorption mechanisms in relation to floatability. Collection, activation, depression of metallic and non-metallic minerals. Quantification of concentration operations. Principles of automation.
Professor Salman

- **306-443B MINERAL SEPARATION PROJECT 3(0-6-3).** (Prerequisites: 306-340A, 306-442A.) Ore samples will be given to groups of students to study possible methods of concentration. Open circuit feasibility tests and locked (or cycle) tests will be conducted to evaluate batch and continuous circuits. Economic feasibility of the ore deposit will have to be established and completed with a concentrator design.
Professor Salman & Staff

- **306-444B CONCENTRATOR CIRCUIT ANALYSIS 3(2-3-4).** (Prerequisite: 306-442A.) Preliminary mill design, flowsheet evaluation and concentration circuit analysis. Pulp density relationships, flow of pulp, flow of solids and liquids through a circuit. Design of unit operations in series and in parallel. Circuit controls. Tailings disposal in relation to pollution and environmental control.
Professor Salman

- **306-454A METALLURGICAL THERMODYNAMICS 3(2-3-4).** (Prerequisite: 306-212A.) Binary metallic solution: relationships between partial molar properties, limiting laws, regular solutions and microscopic interpretation of partial molar quantities. Heterogeneous equilibria in binary systems and activity data approximations from phase diagrams. Ternary phase diagrams in systems where only one phase has variable composition. Dilute ternary and multi-component systems, interaction paremeters. Concentrated ternary solutions, graphical Gibbs-Duhem integrations.
Professor Thompson

306-455A PROCESS ENGINEERING METALLURGY 3(3-1-5). (Prerequisites: 305-346A*, 306-212A.) Analysis of processes involved in the winning, refining and treatment of metals with special emphasis on transport phenomena. Fick's Laws, interfacial equilibria, single and multicomponent mass transfer operations. Convective systems. Topochemical reactions. Dimensional analysis, pilot plants and modelling. Characteristics of linear and well-mixed reactors, tracer techniques.
Professor Guthrie

- **306-456B STEELMAKING PROCESSES 3(2-2-5).** (Prerequisites: 306-353B*, 306-455A*.) Physicochemical, kinetic and economic aspects of the following: iron-making in blast furnaces, sintering operations, coke-making and steelmaking in electric, basic oxygen and open-hearth furnaces. Survey of associated pollution emissions and current abatement methods.
Professor Davenport

- **306-457A PROCESS METALLURGY PROJECT 3(0-6-3).** (Prerequisites: 306-351B, 306-352B, 306-353B. Co-requisite: 306-455A.) A wide variety of experimental projects in process metallurgy, covering the fields of hydo-, electro-, pyro-, and chemical metallurgy will be suggested by staff (or students) for detailed investigation and evaluation.
Professor Distin & Staff

- **306-458A CORROSION PRINCIPLES 3(2-3-4).** Review of principles of metal oxidation in aqueous and non-aqueous environments with special reference to corrosion. Structure, properties, kinetics and growth mechanisms of oxide films, stress corrosion, corrosion fatigue, hydrogen embrittlement, carbide precipitation, cavitation, anodic and cathodic protection, protective coatings. Use of non-metallic materials. Corrosion in industrial processes, soils, and marine environments. Corrosion testing methods. Corrosion as a factor in design and selection of materials.
  Professor Distin.

- **306-463A ADVANCED PHYSICAL METALLURGY 3(2-2-5).** (Prerequisites: 306-260B, 306-361A, 306-362B.) A lecture and discussion course dealing with the physical metallurgy, properties and applications of the less common metallic materials, e.g.: stainless steels, superalloys, refractory metals, high strength low alloy steels.
  Mr. Firth and staff

- **306-464B PHYSICAL METALLURGY PROJECT 3(0-6-3).** (Prerequisites: 306-260B, 306-361A, 306-362B.) An experimental or theoretical project, based partly on the student's interests, on some topic in physical metallurgy, e.g. in solidification, deformation, heat treatment, alloying, instrumentation, powder metallurgy, joining processes.
  Mr. Firth and staff

5.8 SCHOOL OF COMPUTER SCIENCE

Director
G. Marsaglia, B.Sc.(Colo. State), Ph.D.(Ohio State)

Acting Director
M.M. Newborn, B.E.E.(Renss.), Ph.D.(Ohio State)

Professors
W.D. Thorpe, M.A.(Cantab.)

Associate Professors
T.H. Merrett, B.Sc.(Qu.), D.Phil.(Oxon.)
C.C.Paige, B.Sc.(Sydney), Ph.D.(Lond.)
G.F.G. Ratzer, B.Sc.(Glas.), M.Sc.(McG.)

Assistant Professors
K. Anantha, B.A., Ph.D.(Madras)
D.J. Burrage, B.A.(Cantab.), M.Sc.(Brun.)
N. Friedman, B.A.(W.Ont.), Ph.D.(Tor.)
N. Horspool, B.A.(Cantab.), Ph.D.(Tor.)
S. Lam, B.Sc.(Chin.U.,H.K.), Ph.D.(Penn.State)
N.Marovac, M.Eng.(Belgrade), Ph.D.(Lond.)
G.T. Toussaint, B.Sc.(Tulsa), Ph.D.(U.B.C.)

Lecturers
Q. Bui-Duy, B.Sc.(Saigon), Ph.D.(Georgia Tech.)
M. Cohen, B.A.(Temple), M.Sc.(McG.)
A. Greenberg, B.Sc.(McG.), M.Sc.(McG.)
G. Klinesek, Ph.D. (McG.)

Computer science is less than 30 years old, and in this short time has become a field of broad practical and theoretical importance. The creators of electronic calculating machines during the last world war solved many scientific computational problems, and rapid growth of computational numerical analysis followed. Mathematical techniques found applications beyond scientific and engineering problems, creating the new field of operations research. Computers began to be put to uses of such complexity that describing the problems became more difficult than the computations themselves. Instructing the computer became the specialized discipline of programming. Programmers needed languages to communicate with the machine and operating systems to control it, and the field of software was born. The discovery of non-numerical uses of computers led to fields as diverse as large scale data processing, information retrieval and artificial intelligence. On the theoretical side, the problems and applications of computers have created areas of study in the theory of formal languages, the theory of automata and the theory of computation.

Undergraduate courses in the School of Computer Science provide the fundamentals necessary for careers in this field. Students with undergraduate training in Computer Science have available a wide range of job opportunities. They are needed, for example, to help automate libraries, the postal system, traffic flow, assembly line processes and medical record keeping. Training, aimed at preparing students for such diverse careers, is provided at McGill on the IBM 370/158 computers and on the smaller PDP 11/45 and PDP 11/20 belonging to the School of Computer Science.

Undergraduate courses also provide the background necessary for graduate study in Computer Science. Courses in the theoretical aspects of programming, data bases and information structures, computer systems architecture and organization, compiler theory and heuristic programming are available as electives for engineering students. Students interested in the Minor in Computer Science and in the program in Mathematics and Computer Science should consult the Announcement of the Faculty of Science.

COURSES OFFERED BY THE SCHOOL

N.B. All of the following courses are introductory and not more than one of them may be taken for credit:

308-100	Primarily for Arts students
308-107	Restricted to Architecture students
308-200	Primarily for students of Mathematics, Physics, Chemistry
308-208	Restricted to Engineering students
308-220	Primarily for students of Biology, Psychology and Social Sciences.

Note that continuation to other computer science courses is possible only from 308-200, 308-208, or 308-220.

308-100A,B INTRODUCTION TO COMPUTING 3(1-2-6). An introduction to applications and general concepts of computing; introduction to programming using a selection of features of the programming language FORTRAN. This course is not available to Engineering students.
Professor Toussaint

308-107A,B COMPUTERS AND ARCHITECTURE 2(1-2-3). A beginning course in computing designed to introduce general concepts in computing as well as a basic working knowledge of the programming language FORTRAN. Credit only for students in the School of Architecture. The course consists of 15 modules, containing videotape lectures, module booklets, interactive terminal sessions and assignments to be run on the computer.
Professor Toussaint

308-200A,B INTRODUCTION TO COMPUTER SCIENCE 3(2-0-7). (Prerequisite: 189-121 or equivalent.) Number systems; data representation; algorithm design; FORTRAN; computer methods including searching, sorting, solution of equations, numerical integration and matrix manipulation. This course is not normally available to Engineering students, who must take either 308-208 or 304-221A, depending on their departmental requirements.
Professor Anantha and Staff

308-208A,B COMPUTERS IN ENGINEERING 2(2-1-5). (Prerequisites: Differential and integral calculus. Co-requisite: linear algebra: determinants, vectors, matrix operations.) An introduction to computing and discussion of computing methods for engineering problems. Machine language; FORTRAN; numerical methods (roots of equations, quadrature, simultaneous linear equations, differential equations); use of library subroutines.
Professor Merrett

308-210A,B COMPUTER STRUCTURE AND ASSEMBLY LANGUAGE PROGRAMMING 3(2-0-7). (Prerequisite: 308-200 or 308-208.) Computer structure, machine language, instruction execution, addressing techniques, and digital representation of data. Symbolic coding and assembly systems, macro definition, program segmentation and linkage.
Professors Ratzer and Lam

308-220A,B DIGITAL COMPUTING FOR STATISTICAL ANALYSIS 3(3-0-6). (Prerequisite: 166-350A, 189-231A, 204-204A, or equivalent.) The course introduces the student to computers and to their uses in the solution of statistical problems. Number systems, data representation, characteristics of a high-level programming language (FORTRAN). Methods of computer solution of statistical problems, random numbers, games of chance, simulation.
Mr. Cohen

308-230A,B COMPUTERS IN DATA PROCESSING 3(2-0-7). (Prerequisite: 308-200 or equivalent.) Uses of computers for data processing, COBOL; job control language; system utility programs; file processing; comparison of languages in business-oriented applications.
Professor Burrage

308-300A,B PROGRAMMING LANGUAGES 3(2-0-7). (Prerequisite: 308-210 or 304-221A.) A study of programming languages including PL/1, and two of APL, LISP, or SNOBOL. Computer solution of non-numerical problems.
Professor Thorpe

308-305A COMPUTER SYSTEM ARCHITECTURE 3(3-0-6). (Prerequisite: 308-210.) A functional description of computer hardware. Hardware concepts and current technology. Memories, buffers, memory hierarchies and dynamic address translation. CPU characteristics, performance factors, overlap, parallel and pipeline systems. Microprogramming. Interrupt mechanism and clocks. Channels, control units, input devices including telecommunication equipment.
Mr. Greenberg

308-310B COMPUTER SYSTEMS AND ORGANIZATION 3(2-0-7). (Prerequisite: 308-305.) Control and scheduling of large information processing systems. Operating system software – resource allocation, dispatching, processors, access methods, job control languages, main storage management. Batch processing, multiprogramming, multiprocessing, time sharing.
Professor Horspool

308-315A INFORMATION STRUCTURES 3(2-1-6). (Prerequisite: 308-210 or 304-221, (Students with a high grade in 308-200 or 308-208 may be permitted to register.)) This course introduces the concepts of data storage and develops competence in data manipulation. The student is expected to write and run his own programs. The course discusses the basic types of data structures, their theoretical properties and some of their applications. Contents: storage of arrays, applications to special matrices and scientific computation; queues and stacks, applications to compiler writing; sorting and searching; introduction to list processing and symbolic manipulation.
Professor Anantha

308-320B FILES AND DATA BASES 3(2-0-7). (Prerequisites: 308-230 and 308-315.) PL/1 language essentials; data sets, files and job control language; sequential files; printing, sorting, updating, indexed sequential files; direct files; files of structured data; data bases.
Professor Marovac

308-350A,B NUMERICAL ANALYSIS 3(3-1-5). (Prerequisites: 189-262A,B or 189-267A,B, 308-208A,B or 308-200A,B.) Solution techniques for linear, simultaneous, algebraic equations; iterative methods for the solution of nonlinear equations, interpolation and curve fitting, numerical integration by interpolative and quadrature methods, numerical integration of systems of differential equations, including initial value and boundary-value problems, relationship of differential equations to the eigenvalue problem, the matrix eigenvalue problem and its solutions.
Professor Bach (Mechanical Engineering), Professor Burrage

308-415B PROGRAMMING LANGUAGE STRUCTURE AND COMPILERS 3(3-0-6). (Prerequisites: 308-210 and 308-315; Recommended: 308-300.) An introduction to the structure of programming languages and techniques of compilation. A study of various programming languages and their structures from the point of view of implementation. An introduction to compilers and compiler writing. The student is expected to acquaint himself with the languages discussed and with compilation techniques by writing and running programs and compiler segments.
Professor Friedman

308-425B HEURISTIC PROGRAMMING 3(3-0-6). (Prerequisite: 308-315). This course introduces heuristic as opposed to algorithmic concepts in problem solving, pattern recognition, learning and adaptation. The student is expected to write and run programs in the above areas. CONTENTS: Game trees; programs that play games; heuristic search procedures; programs that solve problems; learning programs; adaptive programs; question answering programs; pattern recognizing programs.
Professor Toussaint

308-520A DATABASE SYSTEMS 3(3-0-6). (Prerequisite: Permission of instructor. Recommended: 189-318, 308-320.) An introduction to abstract data structure and to techniques of database implementation. Topics: relational view of data, relational calculus, relational algebra, normalization; hierarchical and network views of data, implementation techniques, existing database systems (chosen from: ADABAS, DBTG, IMS, S2000, TOTAL); data security and integrity.
Professor Merritt

308-573A,B MINI-COMPUTERS 3(3-0-6). (Prerequisite: 308-210 and permission of instructor.) Characteristics and internal structure of micro and mini-computers. Theoretical concepts and properties of assemblers, loaders and simulators. Assembler and machine languages for small computers. System software. Applications for small computers. Students will be assigned "hands-on" projects.
Staff

308-610A INFORMATION STRUCTURES

308-611B DATA STRUCTURE AND LIST PROCESSING TECHNIQUES

308-614A COMPUTER METHODS IN SYSTEMS ANALYSIS I

308-615B COMPUTER METHODS IN SYSTEMS ANALYSIS II

308-620A PROGRAMMING LANGUAGES AND COMPILERS

308-621B THEORETICAL ASPECTS OF COMPILER CONSTRUCTION

308-624A HIGH-LEVEL COMPUTER LANGUAGES I

308-625B HIGH-LEVEL COMPUTER LANGUAGES II

308-630A FORMAL LANGUAGES

308-631B THEORY OF ALGORITHMS AND COMPUTATIONAL COMPLEXITY

308-640A NUMERICAL ALGORITHMS I

308-641B NUMERICAL ALGORITHMS II

308-644A PATTERN RECOGNITION I

308-645B PATTERN RECOGNITION II

308-650A COMBINATORIAL ALGORITHMS I

308-651B COMBINATORIAL ALGORITHMS II

308-660A COMPUTER METHODS IN OPTIMIZATION I

308-661B COMPUTER METHODS IN OPTIMIZATION II

308-666A COMPUTER METHODS IN OPERATIONS RESEARCH I

308-667B COMPUTER METHODS IN OPERATIONS RESEARCH II

308-671B COMPUTER SYSTEMS AND ORGANIZATION

308-690A COMPUTER METHODS IN PROBABILITY AND STATISTICS I

308-691B COMPUTER METHODS IN PROBABILITY AND STATISTICS II

308-698A MONTE CARLO AND SIMULATION I

308-699B MONTE CARLO AND SIMULATION II

308-760A ADVANCED TOPICS: THEORY I

308-761B ADVANCED TOPICS: THEORY II

308-762A ADVANCED TOPICS: PROGRAMMING I

308-763A ADVANCED TOPICS: PROGRAMMING II

308-764A ADVANCED TOPICS: SYSTEMS I

308-765B ADVANCED TOPICS: SYSTEMS II

308-766A ADVANCED TOPICS: APPLICATIONS I

308-767B ADVANCED TOPICS: APPLICATIONS II

6 CHOICE OF ELECTIVES AND SUB-PROGRAMS

Students of the Faculty have a considerable choice of electives divided into the categories of general and technical. The choice while wide is limited by timetable considerations and by departmental regulations although the Faculty tries to arrange its timetable to provide maximum choice. The departments publish, in this *Announcement* and in separate documents, information regarding the choice of courses. Students should also consult their course advisers. Some general information applicable to all students of the Faculty is given below. This mainly covers the area of management, a topic of considerable importance to engineers, but also gives information on environmentally oriented courses, computer science, and materials science.

COURSES IN MANAGEMENT FOR ENGINEERING STUDENTS

Many engineers begin to assume management functions within a few years of graduation. They can at this stage take up the study of economics, behavioural science and other management subjects. For students wishing to include studies in their undergraduate program, the University provides through our own Faculty and the Faculty of Management, a variety of suitable courses.

Two Faculty of Engineering courses are available: Engineering Economy 300-310, which introduces the concept of costs into evaluations of engineering projects and architectural proposals; and Economic Environment 300-211, which provides a course in general economics.

Seven courses are available, subject to timetable requirements, from the core program of the Faculty of Management. They are:

280-211A,B	Accounting I
280-222B	Intro. to Organization Behaviour
280-323A,B	Organization Theory
280-341A,B	Finance I
280-352A,B	Marketing Management
280-373A,B	Operations Research
280-393A,B	Managerial Economics

Other courses from the core have considerable overlap with our own courses and thus are not available to our students.

Five of the above list of Faculty of Management courses (one of which must be 280-211A,B) form an integrated sub-program in Management. Successful completion of this subprogram (a grade of C or better in all courses) is noted on a student's transcript.

An Engineering course deemed equivalent by the Faculty of Management may be substituted for course 280-373, Operations Research.

The content of the sub-program, 15 credits, exceeds the general elective allowance in Engineering, currently between 3 and 9 credits depending on the department. A department may be willing to accept one or more courses as technical electives but a student embarking on the sub-program must be prepared to take credits additional to the normal engineering program. Students considering this sub-program should consult their adviser.

ENVIRONMENTAL STUDIES

The term "Environmental Studies" usually denotes all studies concerned with the relationship of man to his natural and man-made environment. Thus the term is used to categorize courses and groups of courses concerned with topics as narrow as the technology of pollution-control or as broad as land-use planning; it also encompasses such diverse subjects as mathematical modelling of socio-economic systems as these affect the quality of human life as well as religious values governing the attitude of man towards nature. Because "Environmental Studies" is, by definition, man-centred, it often excludes courses and degree programs that deal with components of the human environment but that do not consider the human impact on degradation or perception of these components, be they the earth's atmosphere, forests, or waters. It also excludes ecological studies of plants and animals in natural settings unaffected by man. Environmental or ecological studies that are not focused on man and his impact have often been referred to as "Environmental Sciences". In this Announcement description, however, the distinction between "Environmental Studies" and "Environmental Sciences" has been overlooked in order to give students as complete a perspective as possible on the University's offerings in the broad area of teaching and research known as the "environment".

McGill University does not have a degree program in Environmental Studies per se because the subject is too broad to be covered adequately by any one undergraduate curriculum. An Environmental Studies "Minor" has also not proved feasible because it would have meant even greater dilution of the subject, particularly if only one "minor" were available for Arts, Science, and Engineering students. The University has, however, many conventional degree programs that are eminently "environmental" in scope and orientation, although they may deal with only one segment of the total area of environmental concern. The University offers, in addition, a number of courses, given by different departments, that stress the comprehensive nature of environmental problems, and hence the need to synthesize humanistic, institutional and scientific knowledge in order to understand these problems. These courses, which have few prerequisites, are available as electives to students in any degree program, and serve to place the student's field of specialization in the overall context of the environmental dilemma. Thus by choosing one of the "environmental" degree programs and by judicious selection of electives, a McGill student

should be able to meet the basic requirements of a sound "environmental" education to:

a) acquire the skills and intellectual discipline of an established field that deals with one environmental component or one aspect of man's relation to his environment; in order to be effective and employable after graduation, a student needs, in any case, to concentrate his efforts in one particular direction;
b) be able to see the relevance of one's own field of specialization to the overall environmental concern; at the same time, be able to understand complex cause-and-effect relationships that transcend traditional disciplines, and to think automatically of the consequences of altering the physical-human environment;
c) be able to communicate with specialists in related disciplines;
d) be aware of the basic institutional mechanisms for dealing with environmental problems (government, law, etc);
e) be aware that environmental problems, as well as the solution to these problems, ultimately stem from personal and societal values and attitudes.

The University's Committee on Environmental Studies has assembled a number of courses which have few prerequisites so as to be available to a wide cross-section of students. Among them are two Engineering courses, Environmental Aspects of Technology, 300-230, and Models of Socio-Technical Systems, 302-370. The leaflet produced by the Committee of Environmental Studies should be consulted for details.

POLLUTION CONTROL

The Faculty of Engineering offers an "area of concentration" in Pollution Control, which consists of about 15 engineering and non-engineering courses devoted to the technology of pollution control and broader topics related to pollution control. This "area of concentration" may be developed into a pollution-control "Minor" once sufficient courses specifically devoted to this subject are available.

While a basic engineering education is essential to professional work of this kind, students who are interested in orienting their program towards pollution control should note the following courses which are of direct relevance. These courses are divided into three groups; introductory, intermediate and advanced, which are respectively, in general, suitable for students in their first, second and third years. Since these courses are drawn from a wide spectrum of the Faculty, a student interested in pollution control may not have the stated prerequisite. In this case he should consult the professor in charge of the course regarding his suitability.

Introductory

300-230	The Environmental Aspects of Technology
302-370	Models of Socio-Technical Systems
303-310	Sanitary Engineering

Intermediate

302-471	Industrial Water Pollution Control
302-472	Industrial Air Pollution Control
303-430	Municipal Systems
303-431	Stream Pollution Control

Advanced

305-447	Combustion
306-328	Mine Environments

Non-engineering courses

154-425	Economics of Ecology
177-305	Environmental Biology
177-432	Limnology
180-307	Analytical Chemistry of Pollutants
495-471	Environment and the Law

A student wishing an overview of pollution control at a non-specialist level should take 300-230 and/or 302-370.

A student wishing to develop professional competence in the area should take either the sequence 302-471 and 472 or 303-310, 430 and 431. While there is significant overlap between the two sequences the viewpoints are different. The 302 series is considered from the point of view of the chemical engineer and the 303 series is considered from the point of view of the civil engineer. To these courses could well be added any of 305-447, 306-328 and 180-307. 305-447 is a guide to the processes which cause air pollution. 306-328, while having a specialized title, is valuable for all interested in hazardous atmospheres. 180-307 is a guide to the requirements and techniques of instrumentation. The other courses listed give insights into various aspects of pollution control which are covered by departments outside the Faculty.

Students wishing further advice should consult their adviser.

COMPUTER SCIENCE

McGill does not offer a first degree in Computer Science but offers an extensive range of courses for Engineering students interested in computers. The basic courses, given by the School of Computer Science, are:

308-107A,B	Computers in Architecture
308-208A,B	Computers in Engineering
308-210A,B	Computer Structure and Assembly Language Programming
308-230A,B	Computers in Data-Processing
308-315A	Information Structures
308-350A,B	Numerical Analysis

Additional courses with significant Computer Science and Computer Engineering content are:

302-356A	Computer Methods in Chemical Engineering
302-370B	Models of Socio-Technical Systems
302-455B	Process Control
303-208B	Deterministic Systems
303-445A	Construction Project Management
304-221A,B	Introduction to Computers
304-322A,B	Digital Systems Design
304-424A	Small Computer Systems
304-425B	Computer Organization and Architecture
304-490A,B	Digital Electronics Laboratory
304-512B	Digital Signal Processing
304-521B	Digital Communications
304-529A	Image Processing and Communications
304-531B	Real-Time Systems
304-532A	Computer Graphics
304-533B	Text Processing
304-543B	Numerical Methods in Electromagnetics
305-291A	Graphics
305-474B	Selected Topics in Operations Research
305-475B	Numerical Control of Machine Tools
308-300A,B	Programming Languages
308-305A	Computer Systems Architecture
308-310B	Computer Software Organization and Design
308-320B	Files and Data Bases
308-415A	Programming Language Structure and Compilers
308-425B	Heuristic Programming

As the course numbers indicate, these courses are offered in a variety of departments at a variety of levels. Some will be required courses in the student's ordinary program; some will be courses in other departments which can be taken as technical electives. The student should consult with his adviser about the possibility and advisability of taking specific courses.

The following categories are a guideline to the content of the courses:

Programming and Programming Languages
304-221, 304-424, 305-291, 308-107, 308-108, 308-210, 308-300

Software Design
304-221, 304-424, 304-425, 304-512, 304-521, 304-529, 304-532, 304-533, 308-305, 308-310, 308-315, 308-320, 308-415, 308-425.

Hardware Design
304-221, 304-322, 304-425, 304-490, 304-512, 304-521, 304-532

Real-Time Processes
302-455, 304-531, 305-475.

Operations Research
302-356, 303-208, 303-445, 305-474.

Numerical Analysis
302-356, 304-543, 308-350

MATERIALS SCIENCE

Materials such as structural steel and reinforced concrete, high-alloy heat-resistant steels, composites such as fibreglass, polymers such as polyethylene and highly refined exotic materials such as germanium and silicon are of vital importance to engineers. A survey of the properties and characteristics of a wide range of such materials is provided by the elective, Materials Science 306-215A,B, offered by the Department of Mining and Metallurgical Engineering. The course 303-201A, Structural Materials, offered by the Department of Civil Engineering, treats similar material from a somewhat different viewpoint. Both courses are especially suitable for students in their first year. Course 306-367B, Metallurgy of Engineering Materials, deals with the metallurgical aspects of design and materials selection, and will be of interest particularly to students of Mechanical and Civil Engineering. More advanced and specialized courses are provided by the departments and students should consult their departmental advisers regarding their choice.

6.1 OUTSIDE DEPARTMENTS OFFERING COURSES FOR THE ENGINEERING CURRICULA

DEPARTMENT OF CHEMISTRY

Chairman
T.F. Harrod

COURSES OFFERED BY THE DEPARTMENT

180-212A,B INTRODUCTORY ORGANIC CHEMISTRY I 4(3-3-6). (Prerequisites: 180-110A and 180-120B, or equivalent courses.) A survey of reactions to aliphatic and aromatic compounds including modern concepts of bonding, mechanisms, conformational analysis and spectra.
Professors Farrel & Ogilvie and Mrs. Heyge

180-213A,B INTRODUCTORY PHYSICAL CHEMISTRY I 3(3-0-6). (Prerequisites: 180-120B or equivalent; 189-120A,B and 189-121A,B or equivalent.) First law of thermodynamics, enthalpy, thermochemistry, bond energies. Second law of thermodynamics: the entropy and free energy functions. Chemical and thermodynamic equilibrium states. Phase rule. Colligative properties of ideal solutions. Electrochemistry, electrochemical cells. Liquid and liquid surfaces. Chemical kinetics.
Professors Eisenberg & Patterson

180-233B SELECTED TOPICS IN PHYSICAL CHEMISTRY 3(3-0-6). For Chemical Engineers only. Introduction to chemical kinetics, catalysis and electrochemistry. The topics to be discussed will be of particular interest to students in chemical engineering.

180-234A,B SELECTED TOPICS IN ORGANIC CHEMISTRY 3(3-0-6). (Prerequisite: 180-212A,B or equivalent.) For Chemical Engineers only. Modern spectroscopic techniques for structure determination. The chemistry of alkyl halides, alcohols, ethers, carbonyl compounds and amines with special attention to mechanistic aspects. Special topics.

180-331A INORGANIC CHEMISTRY OF THE SOLID STATE 3(3-0-6). (Prerequisites: 180-110A and 180-120B or equivalent) Primarily, but not exclusively, for engineers. Electronic structure and properties of elements in relation to the Periodic Table. The solid state: structure, bonding, magnetic properties of metals and alloys. Descriptive chemistry of the metals.
Professor Hogan

DEPARTMENT OF GEOLOGICAL SCIENCES

Chairman
R. Doig

COURSES OFFERED BY THE DEPARTMENT

186-210B INTRODUCTORY MINEROLOGY 3(2-3-4). Structures, composition and properties of the major rock-forming and ore minerals.
Professor Francis

186-221A GENERAL GEOLOGY 3(2-3-4). A survey course in physical geology with emphasis on economic and engineering aspects.
Professor Grice

186-232A STRUCTURAL GEOLOGY 3(2-3-4). (Prerequisite: 186-221A or equivalent.) A systematic survey of rock structures, their origins and practical importance.
Professor Eakins

186-440B. MINERAL DEPOSITS 3(2-3-4). (Prerequisites: 186-210B, 186-232A.) Nature, origin, mode of occurence and classification of deposits of metallic and non-metallic minerals; typical occurences; geographical distribution.
Professor MacLean

DEPARTMENT OF MATHEMATICS

Chairman
E. Rosenthall

COURSES OFFERED BY THE DEPARTMENT

189-261A,B LINEAR ALGEBRA AND DIFFERENTIAL EQUATIONS I 3(3-1-5). Matrices and determinants, solution of systems of linear algebraic equations, introduction to vector spaces, linear dependence and independence, linear operators; first order differential equations; theory of linear differential equations; complex functions of a real variable; solution methods for linear constant coefficient differential equations; series solutions of variable coefficient differential equations; special functions.

189-262A,B LINEAR ALGEBRA AND DIFFERENTIAL EQUATIONS II 3(3-1-5). (Prerequisite: 189-261. Co-requisite: 189-263.) Laplace transform techniques; similarity transformations, matrix diagonalization, solution techniques for systems of linear constant coefficient differential equations; nonlinear differential equations and stability; linear difference equations; numerical methods for solving ordinary differential equations.

189-263A,B ADVANCED CALCULUS 3(3-1-5). Improper integrals; sequences and series; partial derivatives, implicit functions, Jacobians; Taylor's theorem for one and several variables, approximations; minima and maxima of functions of several

variables, constrained extrema; arc lengths, curves; multiple integrals.

189-264A,B INTRODUCTION TO BOUNDARY VALUE PROBLEMS 3(3-1-5). (Prerequisites: 189-261 and 189-263.) Scalar and vector fields, vector differential operators, line integrals; divergence theorem, Stokes' theorem, Green's theorem; partial differential equations of mathematical physics; eigenvalue problems, Sturm-Liouville theory, Fourier expansions; solution of Laplace, diffusion and wave equations by separation of variables.

189-267B LINEAR ALGEBRA AND DIFFERENTIAL EQUATIONS II 3(3-1-5). (Prerequisite: 189-261. Co-requisite: 189-263.) Honours section of 189-262; similar in content, but taught in greater depth and with more challenging assignments.

189-269B INTRODUCTION TO BOUNDARY VALUE PROBLEMS 3(3-1-5). (Prerequisites: 189-261 and 189-263.) Honours section of 189-264; similar in content but taught in greater depth and with more challenging assignments.

189-381A FUNCTIONS OF A COMPLEX VARIABLE 3(3-0-6). Analytic functions, elementary functions, Cauchy-Goursat theorem and its consequences, power series, poles and residues, complex inversion theorem, conformal mapping, Schwartz-Christoffel Transformations, applications to problems in engineering and physics.

189-384B PROBABILITY 3(3-0-6). (Co-requisite: 189-267.) Discrete probability distributions and ramdom variables, probability densities and distribution functions, continuous random variables, expection, sums of random variables, sampling theory, introduction to stochastic processes.

189-385A COMPLEX VARIABLES 3(3-0-6). Analytic functions, Cauchy-Riemann equations, Cauchy's theorem, residue calculus, inversion integral for Laplace transforms, conformal mapping, Poisson's integral formula, analytic continuation, Riemann surfaces, complex variable and integral transform methods of solution to boundary value problems.

DEPARTMENT OF PHYSICS

Chairman
H.C.S. Lam

COURSES OFFERED BY THE DEPARTMENT

198-271B QUANTUM PHYSICS 3(3-0-6). Special Relativity. The observed properties of atoms and radiation from atoms. Electron waves. The Schroedinger Equation in one dimension. Quantum mechanics of the hydrogen atom. Angular momentum and spin. Quantum mechanics of many electron systems. The diatomic molecule. Basic ideas in nuclear and particle physics.

198-321A MODERN PHYSICS 3(3-0-6). (Prerequisite: 303-282 or 303-287.) The background to Modern Physics: Relativity, the energy-momentum invariant; black-body radiation; Compton effect; Rutherford-Bohr-Sommerfeld Atom. Concepts of Quantum Mechanics: Schroedinger equation, one dimensional problems; the hydrogen atom. Pauli Principle. Zeeman effect. Recent developments.

7 CHANGE OF COURSE NUMBERS

Most courses offered by the Faculty ofEngineering have changed number to conform to Senate regulations. For convenience, a list of old and new numbers is provided.

Course numbers which do not appearremain unchanged.

Old Number	New Number	Old Number	New Number
300-010	30)-310	302-198	302-462
300-011	30)-211	302-202	302-402
300-020	30)-220	302-204	302-370
300-030	30)-230	302-211	302-311
300-112	no given	302-212	302-312
301-001	30I-231	302-241	302-423

PROFESSEURS

WILLY DEMOUCELLE, Diplômé d'Ecole Normale; Diplômé de l'Institut Supérieur de Pédagogie (Belgique); M.A.(McG.). Professeur et Responsable des activités culturelles à la C.E.C.M. (Ecole Polyvalente Pierre-Dupuy, Montréal). Animateur de théâtre.

MAURICE DESCOTES, B.-ès-L., L.-ès-L., M.-ès-L., D.E.S.(Lyon); Agrégé de l'Université de France (Lettres); Docteur-ès-Lettres (Doctorat d'Etat) (Sorbonne). Conseiller culturel près l'Ambassade de France en Allemagne Fédérale.

CHARLES GERVAIS, B.A., B.Ph., L.Ph.(Montr.); Docteur en Philosophie(Louvain). Professeur au Collège de Maisonneuve (Montréal).

TERRANCE HUGHES, B.Ed.(Alta.), L.-ès.-L. (Montpellier). Assistant d'enseignement au Département de Langue et Littérature françaises de l'Université McGill.

ALAIN JULIEN, B.-ès-L., L. en Droit, D.E.S. en Science Politique (Montpellier). Professeur de cinéma au Département de Langue et Littérature françaises de l'Université McGill.

MIREILLE LAFLEUR, B.A., M.A.(Montr.), Docteur-ès-Lettres(Paris).

JEAN-CLAUDE LEMYZE, B.-ès-L.(Paris); L.-ès-L., M.A.(Linguistique)(Montr.). Assistant Professor, Université McGill, Directeur des Laboratoires de Langues de l'Université. **Directeur de l'Ecole**

ROGER MERCIER, O.P.A.; Ancien Elève de l'Ecole Normale Supérieure (Paris); Agrégé de l'Université de France; Docteur-ès-Lettres (Doctorat d'Etat). Professeur à l'Institut de Français de l'Université de Lille.

CLARISSE OLIVIER, D.U.E.L. (Laval), L.-ès-L., L.-ès-A., M.A.(Toulouse). Professeur au Centre de Recherches de la Fonction Publique du Canada.

MICHEL PARADIS, B.A.(Montr.), M.A., Ph.D.(McG.). Professeur au Département de Linguistique de l'Université McGill.

DAVID L. PARRIS, B.A., M.A.(Oxford), M.A.(Dublin), B.Litt.(Oxford). Lecturer, Université de Dublin.

JACQUES PICOTTE, B.A.(Montr.), M.A.(McG.). Professeur à la C.E.C.M.

LAURENT SANTERRE, B.A., L.-ès-L.(Laval); Docteur-ès-Lettres (Doctorat d'Etat) (Strasbourg). Professeur Agrégé de Linguistique à l'Université de Montréal.

EMILE SEUTIN, B.A., L.-ès-L.(Louvain); Docteur en Linguistique (Sorbonne). Professeur de Linguistique à l'Université de Montréal.

GILBERT C. TAGGART, B.A.(Colorado), D.E.F. (Lille), M.A.(Colorado), Ph.D.(Montr.). Directeur du Département de Français de l'Université Concordia.

ALAIN TICHOUX, B.A.(Paris), M.A., PhD.(McG.). Assistant Professor, Université McGill.

GENERAL INFORMATION

McGILL UNIVERSITY

McGill University was founded under a bequest of the Honourable James McGill, a wealthy Montreal merchant of Scottish descent.

The University was granted a Royal Charter in 1821. It is selective in its admission policy and internationally known for its high academic standards.

THE FRENCH SUMMER SCHOOL

The French Summer School is a coeducational school established in 1904.

It is an integral part of the *Faculty of Arts* which controls its administration; the M.A. studies are under the responsibility of the *Faculty of Graduate Studies and Research*. The *courses carry credits* toward McGill undergraduate and graduate

degrees; such credits are also *transferable* to North-American institutions of higher education.

THE DIVISION SYSTEM

French Summer School students are grouped into three Divisions: B (undergraduate level), C (graduate level), D (Master of Arts).

AIMS OF THE SCHOOL

English-speaking students and teachers who wish to attain real fluency in French and, at the same time, get acquainted with the literature, fine arts and civilization of French-speaking peoples, will find appropriate courses at both undergraduate and graduate levels.

French-speaking students and teachers will find many appropriate Language, Literature and Civilization courses at the graduate level.

The French Summer School program is especially built around the academic requirements of:

Undergraduates who have taken 4 semesters of French and who wish to improve their speaking (and writing) ability *(Division B)*

Those having obtained a B.A. degree or its equivalent with sufficient background in the French language who wish to take courses at the graduate level in Language, Literature and Civilization *(Division C)*

Graduates who are presently working towards an M.A. or a Ph.D. at universities other than McGill and who wish to transfer the credits earned at the French Summer School *(Division C)*

Teachers of French, at the Elementary or Secondary School, College or University level, who desire an effective "refresher" *(Division B or C)*

Graduates who wish to work towards an M.A. at McGill University by attending sessions at the French Summer School (M.A. without or with thesis) *(Division D)*

IMMERSION IN FRENCH

Linguistic fluency is effectively promoted by the *exclusive use of French* at all times during the session. The fact that half of the students are French-speaking helps to create a French atmosphere. All courses are taught in French, by experienced teachers who have graduated from and are teaching in French universities. The average student-professor ratio varies between 12 and 15 to one. The teaching staff is accommodated in the same residences as the students and associates freely with them at meals, in discussion groups and in the numerous cultural and social activities.

CULTURAL AND SOCIAL ACTIVITIES

These activities take place in the afternoon or evening. Their diversity allows for free choice according to availability of spare time, personal tastes or whims of the moment. These activities effectively complete the academic courses and allow students to experience thorough immersion in French during their stay at the School.

1. French Folk-songs;
2. Evening musical concerts;
3. Talent shows;
4. Films (short, educational and full-length features);
5. Selected T.V. programs;
6 Lectures, conferences, debates, discussion groups;
7. Varied sports: tennis, swimming, ping-pong, etc,;
8. French out-door café;
9. Dances;
10. Excursions;
11 Theatre; etc.

THE GET-ACQUAINTED-WITH-QUÉBEC-PROGRAM

The fact that it is held in Montréal explains in part the continued favour enjoyed by the McGill French Summer School. Montréal, the bilingual metropolis of Canada, is the cultural centre of the French-speaking Province of Québec.

This program has been organized in order to introduce students to the realities of present-day Québec.

The program includes:

(a) courses on the different aspects of Québec civilization and culture;
(b) cinema, folklore, songs;
(c) several informal outings to places of historical, social and cultural interest in and around Montréal;
- visits in Old Montréal;
- meetings with representatives of different social and professional groups;
- visits to Museums and Art Galleries;

(d) several excursions to places of interest such as Québec City and the Eastern Townships.

In addition, students will find in Montréal all they need in order to practise French. The French Summer School is located in the heart of the city whose various resources include French radio, T.V. and cinema, French-speaking churches, boutiques, book-shops, theatres and restaurants. At the beginning of the session, tourist information (maps, booklets, etc.) will be given to students. An information bulletin, l'"Aide Mémoire", printed daily by the French Summer School and distributed to students and professors each morning, contains suggestions on particularly interesting entertainments presented in the Montréal area.

LANGUAGE LABORATORY

One of the most effective teaching aids used at the French Summer School is the McGill University Language Laboratory. The excellence of its equipment makes it one of the best tools available for programmed and individual practice. The Tape Library places a considerable variety of audio material (readings in prose and verse by elocutionists and contemporary writers; plays, acted by the best French companies) at the disposal of French Summer School Students.

THE GENERAL ASSOCIATION OF FRENCH SUMMER SCHOOL STUDENTS

All the students of the School are grouped under a General Association. Every summer the M.A. students elect permanent delegates who carry out their duties throughout the year.

INFORMATION FOR PROSPECTIVE STUDENTS

STATUS OF STUDENTS IN THE SCHOOL

The School is a **residential School** which accepts *full-time resident students.* Students may be admitted as *non-residents,* provided they are living in Montréal during the year(1).

(1) However, students who can do so are strongly advised to reside at the school, as residence is for more beneficial to them.

APPLICATION FOR ADMISSION

DIVISION B AND C

Application to the School must be made on an Application form *(Demande d'admission)* available from the School Secretary.

The completed Application form, accompanied by a **Letter of Recommendation,** a **Transcript of academic records** and a **Deposit** of $50. in **Canadian currency** must reach, before June 15, the French Summer School Secretary's Office (Peterson Hall, 3460 McTavish St., Montreal, PQ, Canada, H3A 1X9). **Since the number of students admitted to the School is limited,** it is strongly advised that students apply as soon as possible. Accepted applicants will receive a **Letter of Admission** from the French Summer School.

DIVISION D

Application to the School must be made on an **Application for Admission to the Faculty of Graduate Studies and Research** form available from the School Secretary.

The completed Application form together with the required documents and an application fee of $15. in Canadian currency must reach, before June 15, the French Summer School Secretary's Office (Peterson Hall, 3460 McTavish St., Montreal, PQ, Canada, H3A 1X9). Students from the UNITED STATES must **also** submit Graduate Record Examination Scores.

The decision will be mailed directly to the applicant by the Faculty of Graduate Studies and Research.

Students who have not sent in by Registration Day an *official final transcript of their degree,* because they have just completed their senior year in June immediately preceding the Summer School session, must send this document in as soon as possible, and *not later than the 1st of August.*

N.B. Division D students having attended a previous session of the French Summer School must inform the School of their intention to register each subsequent year *before the 15 of June.*

ADMISSION REQUIREMENTS

Applicants for admission must meet specific requirements with respect to age, general education and proficiency in French. Admissions are selective.

AGE

minimum: 18, before January 1st, 1978.

GENERAL EDUCATION AND PROFICIENCY IN FRENCH

Division B: 2 years of French at CEGEP, College or University or having an equivalent knowledge of French.

Division C: Students should normally have graduated (or be graduating) with a Major in French or the equivalent. They should be able to speak with reasonable fluency (using an active vocabulary of at least 2,000 words), write correct French and experience no difficulty in reading French.

Division D: See "Réglementation de la Maîtrise", p. 15.

DATES AND REGISTRATION

The French Summer School will begin on Saturday, June 25 and end on Saturday, August 6.

Students in residence must arrive at the School before midnight on Saturday, June 25.

REGISTRATION will take place at the **Douglas Hall residence** (3851 University St.) on **Saturday, June 25 and Sunday, June 26.**

All non-resident students must present themselves on **Saturday afternoon, June 25,** in the following order: last names beginning with the letters.

ABC	at 2:00	MNOP	at 3:30
DEFG	at 2:30	QRS	at 4:00
HIJKL	at 3:00	T to Z	at 4:30

All resident students must present themselves on **Sunday afternoon, June 26,** in the following order: last names beginning with the letters

ABC	at 2:00	MNOP	at 3:30
DEFG	at 2:30	QRS	at 4:00
HIJKL	at 3:00	T to Z	at 4:30

Students will be given instructions concerning their registration. The professors will be at the students' disposal during Registration to provide them with complementary information on the content of courses, on the oral and written work requested in these courses, etc.

No resident student will be admitted to the School if he arrives later than Saturday, June 25.

Classes will begin on Monday morning, June 27.

Changes of courses can be made until Friday, July 1 (included), with the approval of the professor of the newly chosen course. No change can be effected after this date.

Classes will end on Friday, August 5.

The Closing Exercises will take place on Friday, August 5, at 7:30 p.m.

Students must have left the School by 4:00 p.m. on Sunday, August 7.

GRADING AND CREDIT SYSTEM

Courses are graded in percent with the following correspondences: A (80-100%); B (65-79%); C (55-64%); D (45-54%); F (0-44%).

All reports of standing, transcripts and other documents will show both letter grades and reported percentage grades.

Grades A, B, C are termed satisfactory passes, D a conditional pass and F a failure.

In Divisions C and D a mark under 65% is considered a failure.

Each course carries 2 credits. A double course carries 4 credits.

TUITION FEES AND RESIDENCE CHARGES

Tuition Fee
Division B ..... $300 (+ Deposit)
Divisions C, D ..... $400 (+ Deposit)
Residence (Single room and board) $450

Division D students: those attending their D5 or D6 session for the **M.A. without thesis** pay a tuition fee of $200.

This reduced fee is applicable only to those students having done their scholarity at the French Summer School from the beginning (Da or D1).

N.B.: In order to facilitate the Registration procedure, **students are strongly advised to mail the fees for Tuition and Residence in advance.** Cheques or Money Orders should be made payable to "McGill University" and sent to the Secretary of French Summer School (Peterson Hall. McGill University, 3460 McTavish St., Montreal, PQ, Canada, H3A 1X9).

Fees should be mailed in BEFORE June 14. After this date, students should not send their fees, but pay them after the Registration Day.

REFUNDS:

1. The Deposit fee of $50.00 is not refundable. Tuition fees and Residence charges are refundable any time before Registration Day.
2. After Registration Day, refund of Tuition fees only is possible provided students withdraw *before* Saturday July 2. From Saturday July 2 onwards, no refund will be made.

REPORTS OF STANDING AND TRANSCRIPTS

The Reports of Standing are issued and mailed to the students by the Registrar's Office within the four weeks following the end of the session.

Requests for transcripts should be addressed to the Registrar of the University (Registrar's Office, Transcripts Department, McGill University, F. Cyril James Building, 845 Sherbrooke St. West, Montreal, PQ, Canada, H3A 2T5), who will forward them on payment of a fee of $2.00 for the first copy and $0.50 for each additional copy made at the same time. **Students who intend to apply such credits towards a degree are recommended to obtain the consent of their own Institution or Department to the transfer of French Summer School credits before attending the School.**

RESIDENCES

The residences are DOUGLAS HALL (address: 3851 University St.) and McCONNELL HALL (address: 3905 University St.). (Please see "Plan de l'Université McGill", centerfold).

The two residences are situated on the wooded "mountain", and are surrounded by lawns, rock-gardens and playing fields. They adjoin the large public park of Mount-Royal.

Each student has a single study-room and there are spacious common rooms and game rooms.

All rooms are furnished. Linen and blankets are provided.

Each residence is equipped with complete laundry facilities.

Meals (breakfast, lunch and dinner) are served every day, except Saturday and Sunday, in the dining-room of Bishop Mountain Hall, which adjoins the residences.

The University tennis courts and swimming pool are open to French Summer School students.

Students in residence are entitled to the University Health Service (517 Pine Ave. West,

tel.: 392-5446) for counselling and guidance. For emergencies recourse can be had to the Royal Victoria Hospital clinic on University Street, close to the Residence (tel.: 842-1251, local 1885). Referral to a private physician for other treatment will be arranged but the School cannot assume any responsibility for medical treatment.

SCHOOL DISCIPLINE

On Registration Day, students will be given necessary information concerning residence and study. Rules have been kept to the minimum compatible with the efficient administration of a University School and the necessities of community life, in which normal discipline is the respect that each individual accords to the collective will of the group.

The rule at the French Summer School being that of *self-discipline*, each student must consider himself personally responsible for the smooth running of the School in general and for the respect of discipline by all.

a) *Telephones:* Telephone calls necessitating the use of English must be made outside the residences. Students would be well advised to request their parents not to call them at their residence except in an emergency.
b) *Visitors* cannot be entertained in the residences unless they can speak French.

Moreover, every student admitted to the French Summer School undertakes to follow these rules:

1° THE EXCLUSIVE USE OF FRENCH AT ALL TIMES, IN AND OUT OF CLASS, AND ESPECIALLY IN THE RESIDENCE. EVERY APPLICANT PLEDGES HIMSELF TO USE ONLY FRENCH DURING THE SESSION IN ALL CIRCUMSTANCES. THE SCHOOL EXPECTS EVERY STUDENT TO OBSERVE THIS RULE VERY STRICTLY, AS IT WAS INSTITUTED AT THE REQUEST OF THE STUDENTS AND IN THE INTEREST OF ALL.

2° EVERYONE'S FREEDOM IS LIMITED BY THAT OF THE OTHERS. CONSEQUENTLY, IN AND AROUND THE RESIDENCE, AND AT NIGHT ESPECIALLY, AVOID ANY NOISE THAT MIGHT DISTURB THOSE WORKING OR RESTING.

Any student who does not follow these rules puts himself in the position of being expelled immediately from the School; every student who applies to the French Summer School assents to the application of the School's rule concerning this last point(1).

TEXTBOOKS AND LIBRARY FACILITIES

Students are required to own a copy of all the "Manuels" and "Textes" listed for the courses they take.

They should bring with them the dictionaries and grammars which they use at home or at school.

Readings for courses are available in the Redpath and McLennan Libraries. The majority of books listed as "Lectures obligatoires" and "Lectures conseillées" are found in the Reserve section for the benefit of French Summer School students.

Guided visits (in French) and information on the cataloguing system of the Libraries will be arranged.

STUDENT AID & FOREIGN STUDENT ADVISER OFFICE

The Student Aid section of this office handles all matters relating to financial assistance, whether University, Provincial or Federal. Non-Canadian students requiring certification of registration and/or letters of advice to Foreign Exchange Control Boards obtain these from this office.

The Foreign Student Adviser section of this office deals with all matters which may affect non-Canadian students such as problems with the Canadian Department of Manpower and Immigration and information concerning the necessity of compulsory health insurance.

Location:	3465 Peel St.
General Information:	392-5256

BANKING ARRANGEMENTS

It is recommended to out-of-town students that they bring letters of credit or use traveller's cheques, rather than draw ordinary cheques on their home banks. The School has no facilities for cashing cheques.

(1) A student expelled from the School for disciplinary reasons cannot claim any reimbursement of fees.

Programme des cours de 1977

DIVISION B *(niveau sous-gradué)*

La Division B est réservée aux étudiants **sous-gradués non-francophones.**

Le programme normal est de quatre cours mais il est permis de suivre un ou deux cours en plus ou en moins. Chaque cours vaut 2 crédits.

Les étudiants plus avancés peuvent, après consultation avec le Directeur, suivre un cours gradué en Division C ou D

Programme des cours en Division B

Cours de langue

398-435c. Cours intensif de vocabulaire systématique et expressions usuelles. Cours quotidien de perfectionnement dans la pratique de la langue parlée (cinq heures par semaine).

Séances de conversation par classes de *huit* étudiants environ. Chaque séance se termine par un commentaire des principales difficultés grammaticales et lexicologiques rencontrées au cours de la conversation. *Tests de contrôle hebdomadaires.*

Manuel: J.C. Lemyze, *Par exemple* (Livre II et Dialogues II) (Centre Educatif et Culturel, Montréal).

Directeur du cours: Jean-Claude Lemyze

398-436c. Cours intensif de phonétique. Cours quotidien (cinq heures par semaine).

Exposé du système phonologique, des sons et des habitudes articulatoires du français en fonction des difficultés de prononciation que rencontrent les non-francophones.

Le laboratoire de langues sera ouvert aux étudiants du lundi au vendredi de 9h. à 17h. *Des cassettes individuelles seront mises à la disposition des étudiants qui apporteront leur magnétophone.*

Manuel: J.C. Lemyze, *A l'écoute du français* (en vente au Secrétariat de l'Ecole).

Jean-Claude Lemyze

398-437c. Grammaire et composition. Révision des règles fondamentales de la grammaire française. Exercices pratiques dans l'art d'écrire. Ce cours est destiné aux étudiants qui désirent perfectionner leur français écrit.

Jacques Picotte

398-438c. Stylistique pratique. Cours destiné à compléter la grammaire française par une étude des procédés courants de style et à familiariser l'étudiant avec les ressources du français.

Jacques Picotte

398-439c. Traduction. Ce cours a pour but d'initier les étudiants aux difficultés de la traduction (de l'anglais au français et vice versa) et sera essentiellement pratique.

Des textes polycopiés seront distribués aux étudiants au début de la session.

Terrance Hughes

398-440c. Théâtre en action. Ce cours s'adresse aux étudiants non-francophones qui désirent perfectionner leur français parlé en montant et en interprétant des poèmes et des textes tirés du théâtre moderne.

Les oeuvres à étudier seront choisies en collaboration avec les étudiants.

Willy Demoucelle

Cours de Litterature

398-441c. Poésie québécoise contemporaine. A travers une étude de différentes oeuvres marquantes de la poésie québécoise, on essaiera de découvrir les principales étapes de son évolution. Parmi les poètes qui seront étudiés, signalons Saint-Denys Garneau, Anne Hébert, Gaston Miron et Paul Chamberland.

Texte: J. Cotnam, *Poètes du Québec* (Fides, 1969, Montréal).

Terrance Hughes

398-442c. Albert Camus. A travers *l'Etranger* et *La Peste* nous étudierons les thèmes de l'absurdité et de l'espérance ainsi que l'importance de la plage algérienne dans l'oeuvre de Camus.

Textes: A. Camus, *L'Etranger, La Peste* (Livre de Poche).

Lectures conseillées: A. Camus, *Le mythe de Sisyphe* (Idées, no.1).

Willy Demoucelle

398-443c. Le roman québécois de 1945 à nos jours. Ce cours d'initiation cherche à dégager les principales caractéristiques de cette période du roman québécois dans une perspective d'approche globale de cette société.

Les exposés du professeur s'appuieront sur des commentaires de textes, des projections de films ou des auditions de documents sonores et laisseront une large place aux questions des étudiants.

Tout au long de la session, divers textes à caractère littéraire, historique et socio-culturel seront distribués aux étudiants.

Lors de l'inscription, on remettra à l'étudiant un plan détaillé concernant le contenu du cours et les travaux à faire.

Lectures conseillées: Marcel Rioux, *La question du Québec* (Segher, 1969, Paris), *Les Québécois* (Seuil, 1974, Paris) Marcel Rioux et Yves Martin. *La Société canadienne-française* (H.M.H., 1971, surtout les pages: 119 à 137, 173 à 211, 349 à 363, 389 à 401, Montréal); Guy Rocher, *Le Québec en mutation* (H.M.H., 1973, surtout les pages: 11 à 81 et 280 à 345, Montréal); Laurent Mailhot, *La littérature québécoise* (PUF, 1974, Coll. Que sais-je?, no. 1579).

Charles Gervais

398-444c. Les Caractères de La Bruyère. Le cours ne vise pas à l'érudition; il est conçu comme une initiation à la littérature des grands moralistes français et à La Bruyère en particulier.

L'étude à la fois historique, thématique et stylistique des *Caractères* sera constamment alimentée par une indispensable réflexion collective sur le terme "moraliste"..

De plus, l'étudiant aura l'occasion de préparer des séminaires et de participer à des ateliers de création littéraire.

La lecture des *Maximes* de La Rochefoucauld et des *Pensées* de Pascal avant le début du cours est souhaitable et constituerait une bonne préparation.

Texte: Les Caractères (Ed. de R. Garapon, Garnier, 1962) (avec notes et commentaires).

Lectures conseillées: M. Lange, *La Bruyère critique des conditions et des institutions sociales* (Hachette, 1909); L. Van Delft, *La Bruyère moraliste* (Droz, 1971); A. Stegmann, *Les Caractères de La Bruyère, bible de l'honnête homme* (Coll. "Thèmes et Textes", Larousse Université, 1972).
Jacques Picotte

398-445c. La littérature négro-africaine d'expression française. Pour les écrivains africains noirs, l'affirmation de soi a d'abord passé par la volonté de se montrer les égaux des blancs dans le maniement de la langue européenne qu'ils utilisaient pour atteindre à une audience internationale. Puis ils ont choisi, selon leur situation ou leur tempérament, soit la contestation idéologique et politique, soit l'appropriation personnelle des grands thèmes littéraires, soit plus récemment la représentation des difficultés nées de l'accession à l'indépendance, dans une langue où la correction académique fait parfois place à une énergie expressive originale.

Textes: Lilyan Kesteloot, *Anthologie négro-africaine* (Marabout-Université); Léopold Sedar Senghor, *Poèmes* (Seuil, coll. Points); Birago Diop, *Extraits* (Nathan, Coll. Classiques du Monde); Mongo Beti, *Perpétue* (Buchet-Chastel).

Lectures conseillées: Robert Cornevin, *Littératures d'Afrique noire de langue française* (PUF); Jacques Chevrier, *Littérature nègre* (U Prisme, Colin); Lilyan Kesteloot, *Les Ecrivains noirs de langue française: naissance d'une littérature* (Université libre de Bruxelles).
Roger Mercier

Cours de Civilisation

398-446c. Connaissance du Québec. Cours de langue et de civilisation qui permettra de perfectionner l'expression orale et écrite tout en prenant un contact direct avec la société québécoise d'aujourd'hui.

Sous la direction de moniteurs, les étudiants se rendront par petits groupes visiter des institutions, des industries, et assisteront également à une variété de manifestations culturelles (pièces de théâtre, films, concerts, etc.)

Ces activités auront lieu l'après-midi ou le soir et chaque étudiant devra en suivre un minimum de trois par semaine. Chacune des activités devra faire l'objet d'un compte rendu écrit d'environ deux pages avec double interligne.
Directeur du cours: Terrance Hughes

398-447c. Cinéma québécois. Après un rappel des origines du cinéma québécois, un examen de ses structures actuelles de production et de distribution, le cours mettra l'accent sur l'inventaire qualitatif du cinéma québécois contemporain.

Lectures conseillées: G. Marsolais, *Le cinéma canadien* (Ed. du Jour, 1968); E. Battie, *A. Handbook of Canadian Film* (Peter Martin Associates Ltd. in association with "Take One", 1973; J.P. Tadros, M. Couelle, C. Tadros, *Le cinéma au Québec: Bilan d'une industrie* (Ed. Cinéma Québec, 1975).
Alain Julien

398-448c. Parlottiers et Parlotterie au Québec. L'existence d'une tradition orale au Québec nous entraîne à remonter aux sources de sa tradition écrite avec les premiers récits des nouveaux québécois. A partir du Journal de Jacques Cartier, des écrits de Philippe Aubert de Gaspé, des relations des Jésuites, se tissent les fibres d'une qualité narrative originale où le conteur et le conte se poursuivent et se rattrapent au sein d'un même discours. Parole textuelle et texte parlé débouchent aujourd'hui sur la verve d'un Yvon Deschamps, d'une Clémence Desrochers, d'un Raoul Duguay, ou sur les éclats d'un Réjean Ducharme, les grincements d'une Antonine Maillet. La confrontation des deux paroles à partir de l'audition de disques et de la lecture de textes essaiera de cerner la spécificité du verbe québécois.

Des extraits des premiers récits québécois seront distribués au cours.

Pour Ducharme, on devra lire *l'Océantume* et pourra lire *La vallée des avalées* et le *Nez qui voque;* pour Antonine Maillet, *La Sagouine* et les *Belles-soeurs* de Tremblay.

Lectures conseillées: G. Tougas, *Les écrivains d'expression française et la France* (Denoel); P. de Grandpré, *Histoire de la littérature française du Québec* (Beauchemin).
Mireille Lafleur

398-449c. Civilisation québécoise de 1945 à nos jours. Ce cours d'initiation à la civilisation québécoise ne présuppose aucune connaissance de la matière. Différents aspects de la société québécoise, la vie sociale, économique et culturelle, seront étudiés à l'aide d'oeuvres littéraires et artistiques. L'accent sera mis sur la réflexion et les recherches collectives.

Textes: Marcel Rioux, *La question du Québec* (Seghers, 1969, Paris). *Les Québécois* (Seuil, 1974, Paris).

Ouvrages à consulter: M. Brunet, *Québec, Canada anglais, deux itinéraires, un affrontement* (H.M.H., 1969); J. Lacoursière et al, *Canada-Québec: synthèse historique* (Ed. du Renouveau Pédagogique, Montréal, 1973).
Terrance Hughes

Programme Special

398-301c. Cours accéléré de français parlé. (Accelerated learning of spoken French).

Daily and intensive pratice of spoken French by means of dialogues based on concrete and everyday situations with individual and collective exercises allowing students to improvise freely.

This course intended for *beginning students having no previous knowledge of French,,* is based on the work of Dr. G. Lozanov, Director of the Research Insitute of Suggestology in Sofia, Bulgaria, and on

the experiences of accelerated learning of living languages according to the Lozanov method as carried out since 1973 by the General Direction of the Staff Development Branch of the Canadian Government Public Service in Ottawa.

The objective of this course is to bring the participants to a level equal or superior to that of *Voix et Images de France I I* or *Dialogues Canada I*, and to enable the students to speak French with some degree of fluency by the end of this six week course.

The teaching consists of a *three-hour daily course* during six weeks (except Saturdays and Sundays) in groups composed of a *maximum of 12 students*.

Optional activities in the afternoon and evening, designed to progressively create *immersion* in French, both socially and culturally as well as linguistically, will be offered.

The course carries *eight undergraduate credits*.

Full-time residence at the school is not compulsory for residents of the Montréal region.

Texts will be available at the Office of the French Summer School at the beginning of the session.

Clarisse Olivier

DIVISION C *(niveau gradué)*

Les cours de Division C sont réservés aux étudiants gradués qui ne poursuivent pas de Maîtrise à l'Université McGill.

Les étudiants inscrits en Division C sont autorisés à suivre des cours de Division D.

Le programme normal est de quatre cours mais il est permis de suivre un ou deux cours en plus ou en moins. Il est toutefois fortement déconseillé de s'inscrire dans plus de deux cours de littérature par session.

Un cours simple vaut 2 crédits. Un cours double vaut 4 crédits.

N.B.: Les cours de Division C ne font pas partie du programme de Maîtrise. Cependant, les cours suivis en Division D pourront éventuellement être crédités en vue de la Maîtrise si l'étudiant satisfait aux critères d'admission.

Programme des cours en Division C

398-505c. Cours intensif de vocalulaire systématique et expressions usuelles. Cours quotidien de perfectionnement dans la pratique de la langue parlée (cinq heures par semaine).

Séances de conversation par classes de *huit* étudiants environ. Chaque séance se termine par un commentaire des principales difficultés grammaticales et lexicologiques rencontrées au cours de la conversation. *Tests de contrôle hebdomadaires.*

Manuel: J.C. Lemyze, *Par exemple* (Livre II et Dialogues II) (Centre Educatif et Culturel, Montréal).

Directeur du cours: Jean-Claude Lemyze

398-506c. Cours intensif de phonétique. Cours quotidien (cinq heures par semaine).

Exposé du système phonologique, des sons et des habitudes articulatoires du français en fonction des difficultés de prononciation que rencontrent les non-francophones.

Le laboratoire de langues sera ouvert aux étudiants du lundi au vendredi de 9h. à 17h. *Des cassettes individuelles seront mises à la disposition des étudiants qui apporteront leur magnétophone.*

Manuel: J.C. Lemyze, *A l'écoute du français* (En vente au Secrétariat de l'Ecole).

Jean-Claude Lemyze

398-507. Initiation aux problèmes de la dissertation française. Bien loin d'être une simple pratique de rhétorique scolaire, comme on le dit trop souvent, la «Dissertation» constitue en réalité un exercice de discipline intellectuelle qui tend non seulement à développer, chez celui qui le pratique, des qualités de méthode et de composition dans l'exposé, mais encore à mettre en oeuvre le sens critique et à favoriser une utilisation judicieuse des connaissances acquises.

Ce cours, évitant le plus possible les considérations générales et abstraites, prendra très largement la forme d'exercices pratiques, à partir d'exemples précis.

Maurice Descotes

398-508c. Grammaire (niveau avancé). Ce cours s'adresse à des étudiants ayant déjà une assez bonne connais de la grammaire française. Exercices variés et courtes traductions.

Jacques Picotte

398-509c. Introduction à la littérature québécoise. Le repli, l'errance, l'affirmation: tels sont les trois points de repère qui délimiteront le chemin à parcourir pour acquérir une vue d'ensemble de la littérature québécoise.

En plus de procéder à une analyse interne (structures spatio-temporelles et symboliques, thèmes, personnages) permettant d'accéder à un second niveau de lecture (polyvalence d'interprétation, sensibilisation à la fonction symbolique) l'étude des oeuvres choisies impliquera une constante "situation" de leurs fondements socio-historiques et idéologiques.

Tout en se rappelant la distance créée par la construction du texte entre le «réel» et le «littéraire», cette introduction à la littérature québécoise se veut donc en même temps une introduction à la société qui se dit en elle.

Lectures obligatoires: Ringuet, *Trente arpents* (Coll. Nénuphar, Fides, 1972, 306 p., Montréal); Anne Hébert, *Le Torrent* (Coll. L'Arbre, Vol. 1, Ed. H.M.H., 1974, 248 p., Montréal); Jacques Godbout, *Salut! Galarneau* (Le Seuil, 1967, 154 p., Paris).

Lecture complémentaire et obligatoire: Laurent Mailhot, *La Littérature québécoise* (PUF, 1974, 129 p., Paris) (Coll. Que sais-je?, no.: 1579)

Lectures conseillées: A- sur l'histoire du Québec– Rosario Bilodeau et Roger Léger, *Classes sociales et pouvoir politique au Québec: perspective historique* (Leméac, 1974, 133 p., Montreal). B – sur la Société Québécoise – Marcel Rioux, *Les Québécois* (Le Seuil, 1974, 188 p., Paris). C- sur la littérature québécoise – Gilles Marcotte, *Une littérature qui se fait* (Ed. H.M.H., 1968, 307 p., Montréal); J. Charles Falardeau, *Notre Société et son roman* (Ed. H.M.H., 1967, 234 p., Montréal).

Manuel: Pierre de Grandpré, *Histoire de la littérature française du Québec* (Beauchemin, 1967-1969, 4 tomes, Montréal).

Bibliographie : Jean-Pierre Tremblay, *Bibliographie Québécoise* (Ed. éduco-média. 1973, 252p.).

Tout au long de la session, divers textes d'accompagnement à caractère littéraire, historique et socio-culturel pourront être distribués aux étudiants.

Lors de l'inscription, on remettra à l'étudiant un plan détaillé concernant le contenu du cours et les travaux à faire.

Charles Gervais

DIVISION D *(Maîtrise avec ou sans thèse)*

Les cours de Division D sont ouverts à tous les étudiants gradués des Divisions C et D.

Remarque importante: En Division D le professeur prend pour acquis que les étudiants ont déjà lu et connaissent bien les« Textes » et les « Lectures obligatoires » du cours.

En règle générale, il est déconseillé de suivre plus de deux cours de littérature par session.

Dans la plupart des cours, le travail exigé représente 15 à 20 pages dactylographiées à double interligne.

Programme des cours en Division D

Cours de langue

398-705c.

398-706c. Lexicologie française. (cours double) Histoire du lexique français. La lexicologie historique. La lexicologie structurale. La lexicographie. Les dictionnaires français. Situation de la lexicologie par rapport aux grands courants de la linguistique.

Lectures obligatoires: R.L. Wagner, *Les vocabulaires français* (2 vol.); Revue *Langue française* (no. 2. *Le lexique); L'Etymologie* (Coll. Que sais-je?, no. 1122); *Les mots étrangers* (Coll. Que sais-je?, no. 1166); *La sémantique* (Coll. Que sais-je?, no. 655).

Documentation: A. Rey, *La Lexicologie;* J. et C. Dubois, *Introduction à la lexicographie: le dictionnaire;* Quémada, *Histoire des dictionnaires français.* L Guilbert, *La créativité lexicale* (Larousse, 1975).

Emile Seutin

398-707c.

398-708c. Introduction à la linguistique. (cours double) Etude des principes fondamentaux de la linguistique du XXe siècle et des trois grands courants historique, structural et générativiste.

Lecture obligatoire: Class et Tiffou, *Introduction aux études linguistiques* (Département de Linguistique et Philologie, Université de Montréal, 1975).

Lectures conseillées: A. Martinet, *Eléments de linguistique générale* (PUF, 1965); J. Lyons, *Linguistique générale, introduction à la linguistique théorique* (Larousse, 1970); N. Ruwet, *Introduction à la grammaire générative* (Plon, 1970); M. Leroy, *Les grands courants de la linguistique moderne* (PUF, 1964); W. von Wartburg, *Problèmes et méthodes de la linguistique* (PUF, 1963).

Emile Seutin

398-709c. Le français hors de France II. Etude des pays où le français n'est pas la langue maternelle, et spécialement les pays d'Afrique.

Emile Seutin

398-710c. Problèmes linguistiques du français canadien I. Phonèmes et variphones du français canadien. Réductions phonétiques et incidences morpho-syntaxiques. Niveaux de langage et sociolinguistique. Travaux pratiques à partir d'un corpus du montréalais.

N.B.: Les étudiants devront avoir suivi antérieurement au moins un cours d'introduction à la linguistique. Ceux qui ont suivi ce cours l'été dernier ne sont pas autorisés à le reprendre.

Laurent Santerre

398-711c. Problèmes linguistiques du français canadien II. Niveaux de langage: marques phonétiques, lexicales et syntaxiques. Importance sociolinguistique de la diphtongaison, de la chute des voyelles hautes, des fusions vocaliques, des réductions syllabiques. Quelques traits lexicaux et syntaxiques. Quel français enseigner comme langue maternelle et comme langue seconde.

N.B.: Les étudiants devront avoir suivi antérieurement 398-684c.: *Problèmes linguistiques du français canadien I.*

Laurent Santerre

398-712c. Méthodologie du commentaire des textes littéraires français. Lorsqui'il se trouve amené à commenter un texte littéraire français, l'étudiant (et souvent même le professeur) se trouve généralement fort embarrassé pour déterminer la manière dont il abordera et présentera cette étude de texte. Il n'existe sans doute pas, en cette matière, de "méthode" qui ait valeur de panacée. Il est néanmoins possible d'abord de préciser les difficultés inhérentes à ce genre d'exercices, ensuite de prendre en considération les différents modes de lectures applicables à un texte.

Ce cours aura donc un objectif éminemment pratique. A partir d'un certain nombre d'exemples choisis aussi diversement que possible (dans la littérature française des 19ème et 20ème siècles), il tendra à fournir un éventail de méthodes

appropriées aux différents types de textes qui peuvent être soumis à un commentaire.

Des textes seront distribués aux étudiants au début de la session.

Maurice Descotes

398-713c. Sémiotique: Une problématique de la recherche. La reconnaissance des principaux termes sémiotiques pour une analyse fonctionnelle de la manifestation discursive conduira à l'exploration directe de modèles descriptifs. Les problèmes relatifs à la segmentation, aux figures actantielles, à la mise en place d'isotopies élémentaires déboucheront sur une logique modale de la syntagmatique narrative. L'ensemble cherchera à rendre compte de la production de discours figuratifs et non-figuratifs où seront à tour de rôle analysés, selon les intérêts et les problèmes manifestés, différents types d'énoncés (folklorique, mythologique, biblique, littéraire, publicitaire, socio-politique, économique). L'étudiant pourra constituer un dossier personnel circulant de la composante théorique à l'exercice pratique. L'exigence de ces deux termes corrélés comme base d'analyse reflète la tonalité d'ensemble du cours où la définition animera sans cesse l'interrogation.

Lectures obligatoires: -Corpus d'analyse pratique- C. Perreault, *Cendrillon* (avoir une connaissance du conte; Mérimée, *Mateo Falconne;* Maupassant, *La ficelle* - Corpus théorique – V. Propp, *Morphologie du conte* (Poétique/Seuil); Greimas, *Sémantique structurale* (Larousse) et *Du sens* (Seuil); J-Cl. Coquet, *Sémiotique littéraire* (Mame); Revue *Langages* (no. 31, sept. 1973).

Lectures conseillées: T. Todorov, *Grammaire du Décaméron* (La Haye, Monton); C. Bremond, *Logique du récit* (Seuil)

Une bibliographie sera en outre distribuée et des articles conseillés pour la solution de problèmes plus particuliers soulevés au cours des séances.

Mireille Lafleur

398-714c. Fondements psycholinguistigues. des méthodes d'enseignement des langues Recherche des principes psychologiques. et linguistiques sous-jacents aux différentes caractéristiques des diverses méthodes d'enseignement des langues vivantes. Analyse et tentative de classification des types de méthodes. Etude des apports pratiques de la distinction psycholinguistique entre compétence et performance. Théories du bilinguisme et leurs implications pédagogiques.

Texte: Jean-Yvon Lanchec, *Psycholinguistique et pédagogie des langues* (Presses Universitaires de France, 1967).

Lectures conseillées: Charles Pierre Bouton, *L'acquisition d'une langue étrangère* (Ed. Klincksieck, 1974); Charles Pierre Bouton, *Le développement du langage. Aspects normaux et pathologiques* (Masson et les Presses de l'UNESCO, 1976). Quatrième partie: Les situations de bilinguisme et l'acquisition d'une langue seconde, pp. 245-259.

Michel Paradis.

398-715c. Traduction littéraire. Ce cours à pour but d'initier les étudiants aux problèmes théoriques de la traduction et de rattacher ceux-ci aux problèmes pratiques. Le cours comprend trois éléments: 1) la contribution des diverses écoles linguistiques du 20ème siècle à la théorie de la traduction; 2) des commentaires de traductions littéraires au cours desquels on essaiera de mettre en lumière les divers procédés stylistiques auxquels le traducteur peut avoir recours pour rendre le ton du texte de départ; 3) des traductions analogues, relativement simples, spécialement choisies pour permettre aux étudiants d'employer les procédés stylistiques préalablement étudiés.

Lectures obligatoires: J.P. Vinay et J. Darbelnet, *Stylistique comparée du français et de l'anglais* (Didier, 1967); G. Mounin, *Linguistique et traduction* (Dessart & Mardaga, 1976)

Lectures conseillées: M. Cressot *Le Style et ses techniques* (PUF, 1947).

Ouvrages de consultation: Le petit Robert, (Société du nouveau Littré, 1967); J. Hanse, *Dictionnaire des difficultés grammaticales et lexicologiques de la langue française* (Baude, Bruxelles, 1949).

David Parris

431-615c. Didactique instrumentale. (cours double) Revue des principes et des applications de la technologie en usage dans l'enseignement du français langue seconde.

Séances de travaux pratiques sur la préparation, la production et l'évaluation du matériel audio-visuel.

Gilbert Taggart

Ce cours est offert par la Faculté des Sciences de l'Education de l'Université McGill, Département des Langues secondes. Il est ouvert aux étudiants de Maîtrise de l'Ecole Française d'Eté.

COURS DE LITTERATURE

398-716c. Rabelais. Etude de l'oeuvre de Rabelais selon trois points de vue: linguistique, littéraire et philosophique. Le premier nous donnera l'occasion d'examiner la situation de la langue française à la veille de sa consécration comme langue nationale, et d'étudier les procédés d'invention verbale utilisés par Rabelais. Le deuxième nous permettra d'analyser les qualités de celui-ci en tant qu'observateur, conteur et amuseur. Le dernier enfin nous amènera à évoquer l'esprit humaniste qui caractèrise la Renaissarce, avec ses thèses nouvelles sur la nature humaine, auxquelles se rattachent les conceptions rabelaisiennes de l'éducation et de l'art de vivre en général.

Textes. Rabelais, *Gargantua, Pantagruel* (Oeuvres complètes, vol. 1, Classiques Garnier).

Lectures conseillées: L. Sainéan, *La langue de Rabelais;* J. Plattard, *Rabelais* (Com. des lettres); L.

Febvre, *Le Problème de l'incroyance au XVIème siècle; la religion de Rabelais* (A. Michel).
Alain Tichoux

398-717c. Actualité de La Fontaine. Au-delà de l'auteur de *Fables* pour enfants, on découvrira l'esprit le moins conformiste et le poète les plus original du XVIIème siècle.

Texte: Fables (Livres VII-XI, Ed. Garnier).

Lectures conseillées: P. Clarac, *La Fontaine, l'homme et l'oeuvre* (Hatier-Boivin, 1947); G. Couton, *La Politique de La Fontaine* (PUF, 1959), *Poétique de La Fontaine* (PUF, 1957); Gohin, *L'art de La Fontaine dans ses Fables* (Garnier, 1929); R. Bray, *Les Fables de La Fontaine* (Malfère, 1929); A. Adam, *Histoire de la littérature française au XVIIème siècle*, tome IV.
Maurice Descotes

398-718c. Les Encyclopédistes. Les Encyclopédies se multiplient dans notre dernier quart du XXème siècle. Leur nombre dissimule leur banalité. *L'Encyclopédie* de Diderot et d'Alenbert, au XVIIIème siècle, a été, pour ses adversaires comme pour ses admirateurs, l'occasion d'une prise de conscience et d'un choix entre le passé et l'avenir. Tout le monde moderne est né, sinon de l'oeuvre, trop volumineuse pour être vraiment lue, que du mouvement des esprits provoqué par les idées qui y étaient défendues.

Textes: Textes choisis de *l'Encyclopédie* (Ed. Sociales); Roland Desné, *Les Matérialistes français de 1750 à 1800* (Buchet-Chastel); Diderot, *Pensées sur l'interprétation de la nature* (Ed. Sociales), *Paradoxe sur le comédien* (Garnier-Flammarion).

Lectures conseillées: Jacques Proust, *L'Encyclopédie* (Coll. A.C., Colin), *Diderot et l'Encyclopédie* (Colin), *Lectures de Diderot* (U 2, Colin); Pierre Naville. *Paul Thiry d'Holbach et la philosophie matérialiste au XVIIIème siècle* (Gallimard).
Roger Mercier

398-719c. Voltaire et Pascal. Examen de la philosophie pascalienne telle qu'elle se dégage du manuscrit des *Pensées*, et de la critique qu'en a faite Voltaire. Cet épisode de la lutte qui a opposé réformistes et tradionalistes au XVIIIème siècle sera replacé dans le cadre plus général de la fluctuation entre des visions du monde antagonistes qui caractérise le développement de la pensée occidentale depuis l'antiquité jusqu'aux idéologies contemporaines.

Textes: Pascal, *Pensées* (Ed. Brunschwicg dans Livre de poche Classique); Voltaire, *Rerrarques sur Pascal* (Ed. Garnier donnée par A. Moand 1873-1883).

Lectures conseillées: J.R. Carré, *l'Ant-Pascal de Voltaire;* J. Mesnard, *Pascal* (Com. des lettres); R. Pomeau, *La religion de Voltaire* (Nizet); T. Besterman, *Le Dieu de Voltaire* (Studies on Voltaire T LV-Genève).
Alain Tichoux

398-720c. Drame romantique et théâtre vivant: Alfred de Musset. De toute l'abondante et tumultueuse production que le Romantisme a consacrée au théâtre, seule survit aujourd'hui l'oeuvre dramatique de Musset. A travers deux de ces pièces, on découvrira un auteur aux préoccupations étonnamment modernes en même temps qu'un dramaturge très en avance sur les techniques d'expression scénique de son époque.

Textes: Lorenzaccio; On ne badine pas avec l'amour.

Lectures conseillées: P. Gastinel, *Le Romantisme d'A. de Musset* (1933); Ph. Van Thieghem, *A. de Musset* (Hatier, 1944); L. Lafoscade, *Le Théâtre d'A. de Musset* (Rééd. Nizet, 1966); H. Lefebvre, *Musset* (L'Arche, 1955); M. Descotes, *Le Drame romantique et ses grands créateurs* (PUF, 1955); B. Masson, *Lorenzaccio ou la difficulté d'être* (Minard, 1970), *Musset et le théâtre intérieur* (1975).
Maurice Descotes

398-721c. Le Nouveau Roman. La technique du roman, les problèmes inhérents au genre romanesque, les déclarations théoriques des nouveaux romanciers sur ces problèmes et les diverses solutions qu'ils adoptent dans leurs romans. Les faiblesses du nouveau roman; son avenir.

Lectures obligatoires: A- romans – M. Butor, *La Modification* (10/18); A. Robbe Grillet, *Le Voyeur* (Folio, no. 412); N. Sarraute, *Planétarium* (Folio, no. 92). B- écrits théoriques – M. Butor, *Essais sur le roman* (Idées, no. 188, Gallimard); A. Robbe Grillet, *Pour un nouveau roman* (Idées, no. 45, Gallimard); N. Sarraute, *L'Ere du soupçon* (Idées, no. 42, Gallimard).

Lectures conseillées: M.R. Albérès, *Histoire du roman moderne* (Albin Michel, 1967); R. Barthes, *Le Degré zéro de l'écriture* (Seuil, 1953); ed Ricardou & van Rossum Guyon, *Le Nouveau roman, hier, aujourd'hui* (10/18, 2 volumes).
David Parris

398-722c. Jean Giraudoux. Un théâtre d'idées La tragédie grecque montrait comment l'homme, dans sa lutte pour réaliser toutes les possibilités de son être, se heurtait à la jalousie implacable des dieux. Giraudoux, dans une grande partie de son théâtre, a renouvelé les anciens mythes, dénonçant l'hostilité du monde à l'égard des grandes aspirations humaines, mais aussi la complicité que cette hostilité rencontre dans la lâcheté des hommes.

Textes: Giraudoux, *Amphitryon 38, La Guerre de Troie n'aura pas lieu, Electre* (Livre de poche).

Lectures conseillées: Georges Versini, *Le théâtre français depuis 1900* (PUF, Q.S.J.); R.M. Albérès, *Esthétique et morale chez Jean Giraudoux* (Nizet); M. Mercier-Campiche, *Le théâtre de Giraudoux et la condition humaine* (Domat); Charles Mauron, *Le Théâtre de Giraudoux, étude psychocritique* (J. Corti).
Roger Mercier

398-723c. Les éléments dans la poésie québécoise. Le feu, l'eau, la terre, l'air: la thématique des éléments matériels dont Bachelard s'est servi comme technique d'investigation de l'oeuvre littéraire nous servira de grille d'analyse pour dégager la signification et l'importance de l'imagination de la matière dans la poésie québécoise des années 40 à aujourd'hui.

Les textes à travailler seront distribués au début de la session. Lors de l'inscription, on remettra à l'étudiant un plan détaillé concernant le contenu de cours et les travaux à faire.

Lectures conseillées: Gaston Bachelard, *La psychanalyse du Feu* (Coll. Idées, no. 73, Gallimard, Paris), *La flamme d'une chandelle* (PUF, Paris), *L'eau et les rêves* (José Corti, Paris), *L'air et les songes* (José Corti, Paris), *La terre et les rêveries de la volonté* (José Corti, Paris), *La terre et les rêveries du repos* (José Corti, Paris); Richard Giguère, *D'un «équilibre impondérable» à une «violence élémentaire»* dans *Voix et images du pays* (P.U.Q. no. VII. 1973, pp. 51 à 90, Montréal); Pierre Châtillon, *La naissance du feu dans la jeune poésie du Québec,* dans *Archives des lettres canadiennes* (Fides, tome IV, 1969, pp. 255 à 284, Montréal).

Charles Gervais

398-724c. Le Roman du terroir en France et à l'étranger. Les origines intellectuelles du roman du terroir; sa place dans la littérature française, suisse et québécoise; ses implications politiques et sociologiques. Les thèmes du roman du terroir; la nature, la religion. Les problèmes stylistiques que doit résoudre l'auteur d'un roman du terroir.

Lectures obligatoires: L. Hémon, *Maria Chapdelaine* (Livre de poche, 685); C. P. Ramuz, *La grande peur dans la montagne* (Livre de poche, 2474); J. Giono, *Colline* (Livre de poche, 590); J. Giono, *Que ma joie demeure* (Nouveaux Classiques Larousse); Ringuet, *Trente arpents* (Coll. Nénuphar, Fides 1972, Montréal).

Lectures conseillées: A. McAndrew, *Louis Hémon, sa vie et son oeuvre* (Jouve, 1936); J. Michelfelder, *Jean Giono et les religions de la terre* (Gallimard, 1938); M. Nicod, *Du réalisme à la réalité. Evolution artistique et intinéraire spirituel de Ramuz* (Droz, 1966, Genève); C. Parsons, *La vision plastique de C.F. Ramuz* (Presses de l'Université Laval, 1964, Québec); M. Sarvais-Maquoi, *Le roman de la terre au Québec* (Presses de l'Université Laval, 1974, Québec); P. Vernois, *Le roman rustique de G. Sand à C.F. Ramuz* (Nizet, 1962).

Davis Parris

398-725c. L'écrivain québécois et son art. Qu'est-ce qu'écrire? Pourquoi écrit-on? Pour qui écrit-on?

Appliquant ce questionnement de Sartre à la littérature d'ici, nous tenterons - à travers les témoignages mêmes des écrivains sur leur art - d'esquisser une histoire de l'écriture québécoise tant au niveau de sa signification interne (aspect formel) qu'à celui de son rapport à la société qui s'exprime en elle (aspect idéologique).

Les textes à travailler seront distribués au début de la session.

Lors de l'inscription, on remettra à l'étudiant un plan détaillé concernant le contenu du cours et les travaux à faire.

Lectures conseillées: Témoignages des romanciers canadiens-français (pp. 265 à 374), dans *Archives des lettres canadiennes* (Fides, 1964, tome III, Montréal, Paris); *Témoignages sur la poésie canadienne-française contemporaine* (pp. 379 à 599), dans *Archives des lettres canadiennes* (Fides, 1969, tome IV, Montréal); J. Charles Falardeau, *Imaginaire social et littérature* (H.M.H., Coll. Reconnaissances, 1974, Montréal).

Ce cours peut compter, au choix, pour un cours de Littérature ou de Civilisation.

Charles Gervais

398-726c. L'exotisme romanesque. L'exotisme suppose un dehors et un dedans, un étranger, un "autre" posé en face de moi. Luttant contre l'égocentrisme ou l'ethnocentrisme, voyageurs et romanciers s'efforcent de saisir cet étranger dans son altérité radicale. Mais toujours revient l'illusion d'une unité essentielle et d'une histoire linéaire de la nature humaine, si bien que l'autre tantôt incarne un idéal dont la société européenne s'est écartée pour son malheur, tantôt représente, sur la route vers le progrès, une étape arriérée au vertige de laquelle le civilisé risque de succomber.

Textes: Bernardin de Saint-Pierre, *Paul et Virginie* (Garnier-Flammarion); Flaubert, *Salammbô* (Garnier-Flammarion); André Malraux, *La Voie royale* (Livre de poche).

Lectures conseillées: Claude Lévi-Strauss. *Tristes Tropiques* (Seuil); Roger Mathé, *L'Exotisme d'Homère à Le Clézio* (Bordas); Jean-Jacques Simon, *Bernardin de Saint-Pierre ou le Triomphe de Flore* (Nizet); Claude Digeon, *Flaubert* (Hatier); Gaétan Picon, *Malraux par lui-même* (Seuil).

Ce cours peut compter, au choix, pour un cours de Littérature (XVIIIème, XIXème ou XXème siècle) ou de Civilisation.

Roger Mercier

COURS DE CIVILISATION

398-727c. La Peinture romanesque de la Société française (de Balzac à Jules Romains.) Engels disait qu'il avait "plus appris dans Balzac que dans tous les livres des historiens, économistes et statisticiens professionnels réunis ensemble". Pourtant la fonction du romancier est de transposer et de recréer les réalités brutes observées par l'historien, l'économiste ou le statisticien. L'étude de certains romanciers qui ont évoqué l'évolution de la société française depuis le début du XIXème siècle devrait permettre de déterminer pourquoi et dans quelle mesure la fiction est plus proche de la vérité et plus suggestive que l'observation scientifique.

Seront pris en considération: Balzac, *La Comédie Humaine;* Eugène Sue, *Les Mystères de Paris;* Emile Zola, *Les Rougon-Macquart;* Romain Rolland, *Jean-Christophe;* Proust; R. Martin du Gard, *Les Thibault;* Georges Duhamel, *Chronique des Pasquier;* Jules Romains, *Les Hommes de Bonne Volonté.*

Parmi ces oeuvres, l'étudiant devra obligatoirement, *avant le début du cours,* avoir pris connaissance directe de *deux* auteurs, à son choix.

Ce cours peut compter, au choix, pour un cours de Littérature ou de Civilisation.

Maurice Descotes

398-728c. Les Indiens d'Amérique et l'opinion européenne au XVIIIe siècle. Les missionnaires, jésuites ou récollets, portaient sur les Indiens d'Amérique des jugements contradictoires, selon qu'ils paraissaient disposés ou non à accueillir les prédications chrétiennes. Les philosophes virent dans le "bon sauvage" l'antithèse de l'Européen, homme des villes, glissant déjà vers la société de consommation. La peinture de l'Indien devint un prétexte à la critique de la société et de la religion, à l'exaltation de la nature, de l'instinct et de la liberté opposés à la contrainte, du sentiment source de vérité et de bonheur.

Textes: La Hontan, *Dialogues avec un sauvage* (Editions Sociales); Voltaire, «*Candide*», «*L'Ingénu*», «*Histoire de Jenni*» *(Romans et contes,* Garnier-Flammarion); Chateaubriand, *Atala, René* (Garnier-Flammarion).

Lectures conseillées: Michèle Duchet, *Anthropologie et histoire au siècle des Lumières* (Maspero); René Gonnard, *La Légende du bon sauvage* (Libr. de Médicis); Gilbert Chinard, *L'Amérique et le rêve exotique dans la littérature française au XVIIe et au XVIIIe siècle* (Hachette-Droz), *L'Exotisme américain dans l'oeuvre de Chateaubriand* (Hachette).

Ce cours peut compter, au choix, pour un cours de Civilisation ou de Littérature (XVIIIème siècle).

Roger Mercier

398-729c. Société québécoise et violence Octobre 1970: le Québec - qualifié de «territoire le plus tranquille de ce continent» et connu pour sa« révolution tranquille» - manifeste subitement un comportement de violence.

Nous chercherons à comprendre le sens de ce comportement et ses implications pour la collectivité québécoise à travers les thèmes suivants:

1) la violence: problèmes de définition et de typologie.
2) présence et/ou absence de la violence dans l'histoire du Québec et dans sa littérature.
3) l'attitude du québécois face à la violence.
4) violence et tolérance au Québec: leur avenir.

Lors de l'inscription, on remettra à l'étudiant un plan détaillé concernant le contenu de cours et travaux à faire.

Lectures conseillées

Marc Laurendeau, *Les Québécois violents* (Québec, édit. du Boréal Express, 1974).

Pierre St-Germain, *Un Certain goût pour la violence,* dans *Une Certaine révolution tranquille* (Montréal, édit. La Presse, 1975, pp.59 à 77).

Fernand Ouellette, *Violence, révolution et terrorisme* (pp. 143 à 158) et *La Tolérance est-elle un mythe* (pp. 159 à 184), dans *Les Actes retrouvés* (Montréal, H.M.H., 1970).

Hubert Aquin, *Prochain épisode* (Montréal, Cercle du livre de France, 1965).

Réjean Ducharme, *La vallée des avalés* (Paris, Gallimard, 1969)

Ce cours peut compter, au choix, pour un cours de Civilisation ou de Littérature.

Charles Gervais

398-730c. Le classicisme français dans les Beaux-arts. Présentation des peintres et architectes français sous Louis XIV et Louis XV (1643-1774), c'est-à-dire pendant la période où les artistes créent en France un style qui affirme progressivement son indépendance vis-à-vis de ses maîtres italiens jusqu'à devenir lui-même, au XVIIème siècle, un modèle pour l'Europe entière

Lectures conseillées: Histoires générale de l'Art (Flammarion, chap. sur le XVIIème et le XVIIIème siècle français).

Les nombreux documents disponibles à la bibliothèque Blackader seront indiqués aux étudiants au début du cours.

Alain Tichoux

398-731c. Art roman et Art gothique. Etude de l'évolution qui, du Xème au XIIème siècle, a vu la France modifier d'une façon originale les modèles romano-byzantins dont est né l'art roman, puis donner naissance au XIIème siècle, à un art nouveau, purement français, l'*opus francigenum* (art gothique) qui, à sont tour a été imité à travers toute la chrétienté occidentale. Les principes de l'architecture religieuse (classification et structure des édifices, terminologie architecturale) seront passés en revue ainsi que les caractéristiques de la décoration peinte et sculptée. Si le temps le permet, l'art du vitrail sera également l'objet d'un ou deux exposés.

Lectures conseillées: R. Crozet, *L'Art Roman* (PUF); F. Salet, *L'Art Gothique* (PUF).

Alain Tichoux

RÉGLEMENTATION DE LA MAÎTRISE

Les études en vue de la Maîtrise en français à l'Ecole Française d'Eté s'effectuent sous la responsabilité de la Faculté des Etudes avancées de l'Université McGill en coordination avec le Département de Langue et Littérature Françaises.

MAÎTRISE SANS THÈSE

La scolarité totale est de 24 cours pour les étudiants admis à la session préliminaire (Da) et de 20 cours pour les étudiants admis en première année de Maîtrise (D1). Cette scolarité s'accomplit en quatre, cinq ou 6 sessions d'été, selon les modalités précisées plus bas; elle équivaut à deux années de scolarité à temps plein.

MAÎTRISE AVEC THÈSE

Les étudiants désireux de faire une Maîtrise avec thèse peuvent accomplir leur scolarité à l'Ecole Française d'Eté avant de s'inscrire au Département de Langue et Littérature Françaises de l'Université McGill. Cette scolarité s'accomplit en trois ou quatre sessions et comporte 12 ou 16 cours selon que l'étudiant est admis en D1 ou en Da.

Les deux Maîtrises (sans thèse et avec thèse) sont strictement équivalentes sur le plan académique et confèrent à leurs titulaires rigoureusement les mêmes droits. Toutefois, les étudiants qui envisagent de poursuivre des études de Doctorat au Département de Langue et Littérature Françaises de l'Université McGill devront obtenir une Maîtrise avec thèse.

Le choix entre la Maîtrise sans thèse ou avec thèse peut se faire en tout temps après la troisième année (D3).

CONDITIONS D'ADMISSION

Les admissions sont prononcées après examen des dossiers par le Comité d'admission. Les étudiants titulaires d'un B.A. Honours en français de l'Université McGill, d'un diplôme équivalent d'une autre université, d'une Licence ou d'un Baccalauréat spécialisé avec une concentration équivalente en français et des notes jugées satisfaisantes, sont admis directement en 1ère année de Maîtrise (D1), après examen de leur dossier.

Les étudiants titulaires d'un B.A. ou d'un diplôme équivalent et qui ne repondraient pas aux conditions précédentes pourront être admis à suivre une session préliminaire (Da).

RÉGIME DES ÉTUDES

Une session d'été comporte normalement quatre cours. A partir de D2, les étudiants pourront suivre cinq cours s'ils ont obtenu une moyenne de 77% calculée sur leurs quatre meilleurs résultats à la session précédente. Les étudiants admis en D1 de même que ceux qui ne répondraient pas à cette exigence de moyenne ne seront autorisés à suivre cinq cours par session qu'après examen de leur dossier.

L'attention des étudiants est cependant attirée sur le fait que suivre cinq cours par session constitue une scolarité lourde et que quatre cours doivent être considérés comme la norme.

Les étudiants de Maîtrise de l'Ecole Française d'Eté sont admis à la Faculté des Etudes avancées dès la première année (Da ou D1). Ils sont autorisés à suivre au Département de Langue et Littérature françaises de l'Université McGill l'équivalent de six cours d'été, c'est-à-dire deux cours d'année entière.

Les étudiants désireux de se prévaloir de cette disposition doivent choisir leurs cours en fonction des exigences de la Maîtrise et demander au Directeur de l'Ecole une autorisation écrite dans les premiers jours de septembre.

Tout au long de leur scolarité de Maîtrise les étudiants doivent se réinscrire à l'Ecole chaque année.

Echecs: toute note inférieure à B (65%) constitue un échec. Trois échecs au cours de la scolarité de Maîtrise entraînent l'élimination après examen du dossier.

SCOLARITÉ DE LA MAÎTRISE

SESSION PRÉLIMINAIRE (Da)

Les cours sont les mêmes que ceux des autres sessions.

Les étudiants doivent suivre quatre cours dont:

- un cours de Langue
- un cours de Littérature française
- un cours de Littérature québécoise
- un cours de Civilisation

N.B.: Les étudiants non-francophones devront satisfaire à un examen portant sur leur connaissance du français écrit et oral. Ce test sera administré en cours de la 1ère session et, en cas de résultats insuffisants, des cours de langue supplémentaires pourront être imposés.

MAÎTRISE SANS THÈSE

Les étudiants ayant accompli leur session préliminaire ou admis directement en 1ère année (D1) doivent suivre 20 cours de Division D en quatre ou cinq sessions.

- 5 cours de Langue
- 6 cours de Littérature, dont:
  - 1 cours de Littérature du Moyen-Age ou du 16ème s.
  - 1 cours de Littérature du 17ème s.
  - 1 cours de Littérature du 18ème s.
  - 1 cours de Littérature du 19ème s.
  - 1 cours de littérature québécoise du 20èmes.
  - 1 cours de Littérature française du 20èmes.
- 2 cours de Civilisation
- 7 cours au choix.

MAÎTRISE AVEC THÈSE

Les étudiants ayant accompli leur session préliminaire, ou admis directement en 1ère année (D1) doivent suivre 12 cours de Division D en trois sessions:

- 3 cours de Langue
- 6 cours de Littérature (même répartition que pour la Maîtrise sans thèse)

1 cours de Civilisation
2 cours au choix.

Après qu'il a suivi les 12 cours requis à l'Ecole Française d'Eté l'étudiant qui veut obtenir une Maîtrise avec thèse doit demander le transfert de son dossier au Département de Langue et Littérature Françaises. Il devient dès lors membre du Département et s'inscrit en M.A. II. Il doit alors suivre un demi-cours (de niveau 600) au Département, se choisir un Directeur de thèse, faire approuver son sujet de thèse par la Direction des Etudes Avancées du Département et rédiger sa thèse d'après les exigences du Département.

ANNÉES DE SCOLARITÉ

La Maîtrise en français accomplie à temps partiel en plusieurs sessions à l'Ecole Française d'Eté et terminée au complet (24 cours) est officiellement reconnue par le Ministère de l'Education du Québec comme équivalente à deux années de scolarité à temps plein. douze cours de maîtrise suivis et réussis à l'Ecole Française d'Eté sont officiellement reconnus pour une année de scolarité à temps plein.

FRAIS DE SCOLARITÉ.

Les étudiants doivent acquitter tous les frais de scolarité (Tuition Fees) à chacune des sessions d'été auxquelles ils s'inscrivent. En D5 (et éventuellement en D6), les étudiants bénéficient d'un tarif réduit (voir Tuition Fees and Residence Charges, p.6).

EMPLOI DU TEMPS

DIVISION B

Horaire	Lundi – mercredi – vendredi	Horaire	Mardi – jeudi
9h. à 10h.	437 **Grammaire** 439 **Traduction** 445 **Littérature négro-africaine**	9h. à 10h.30	438 **Stylistique** 443 **Roman québécois**
10h. à 11h.	442 **Camus** 444 **La Bruyère** 449 **Civilisation québécoise**	10h.30 è 12h.	441 **Poésie québécoise** 448 **Parlottiers**

CALENDAR FOR SESSION 1977-78

1977

June 1	Forms nominating examiners for students's theses for Fall Convocation are to be returned to the Thesis Office.
June 7 and 8	Convocations
July 4	Last day for submitting completed applications for admission.*
August 15	Last day for submitting Doctoral theses (in time for Fall Convocation).
August 22	Last day day for submitting Master's theses (in time for Fall Convocation).
September 6	Non-thesis forms to be returned to the Thesis Office for Fall Convocation.
September 7.	Registration begins. Registration forms are to be completed in the departments. It is recommended that new students report to their departments not later than this date.
September 12	Lectures begin, first term.
September 16	Last day for departments to return completed registration forms.
September 26	All thesis reports for Fall Convocation must be returned to the Thesis Office.
October 11	Last day for holding Doctoral Orals for Fall Convocation.
October 28	Last day for changes in first term and full session courses. (Some departments have earlier deadlines.)
November 8	Fall Convocation.
December 9	Lectures end, first term.

1978

January 13	Last day for: 1) changing academic status in current session 2) payment of Winter term fees 3) January registration.
January 16	Lectures begin, second term.
February 1	Last day for applying for graduate fellowships. Forms nominating examiners for students' theses for Spring Convocation are to be returned to the Thesis Office.
February 3	Last day for Winter term course changes.
March 13	Last day for submitting Doctoral theses (in time for Spring Convocation).
March 20	Last day for submitting Master's theses (in time for Spring Convocation).
April 1	Usual date for announcing fellowships and other awards.
April 14	Lectures end, second term.
April 24	All thesis reports for Spring Convocation must be returned to the Thesis Office.
May 5	Non-thesis forms to be returned to the Thesis Office for Spring Convocation.
May 15	Last day for holding Doctoral Orals for Spring Convocation.
June 6 and 7	Convocations

*Several departments follow a different rule. If you are in doubt, please inquire of the department in which you wish to study.

Mr. B. RIDDEL
Prof. R. SALISBURY
Prof. S. VAS

2 REGULATIONS

GENERAL STATEMENT CONCERNING HIGHER DEGREES

The Faculty of Graduate Studies and Research administers all programs leading to graduate diplomas and higher degrees. It is responsible for the admission of candidates, the supervision of their work and for recommending to Senate those who may receive the degrees and diplomas.

GRADUATE DIPLOMAS

Graduate Diplomas are programs of study under the academic supervision of the Faculty of Graduate Studies and Research. They have as a pre-requisite an undergraduate degree in the same discipline.

McGill University offers other diploma and certificate programs under the supervision of the relevant undergraduate faculties and their Announcements should be consulted for further details.

Graduate Diplomas are offered in:
Air and Space Law
Advanced Social Work Practice
Engineering Aspects of Arid Land Development
Mining Engineering
Epidemiology and Health
Geological Sciences

These programs consist of at least one year of full-time study or the equivalent.

All regulations of the Faculty apply to Diploma candidates.

DEGREES

Two categories of programs lead to higher degrees at McGill University: Master's programs and Doctoral programs.

The following degrees are offered:
Master of Architecture (M.Arch.)
Master of Arts (M.A.)
Master of Business Administration (M.B.A.)
Master of Civil Law (M.C.L.)
Master of Education (M.Ed.)
Master of Engineering (M.Eng.)
Master of Laws. (LL.M.)
Master of Library Science (M.L.S.)
Master of Music (M.Mus.)
Master of Science (M.Sc.)
Master of Science (Applied)(M.Sc.A.)
Master of Sacred Theology (S.T.M.)
Master of Social Work (M.S.W.)
Master of Urban Planning (M.U.P.)
Doctor of Civil Law (D.C.L.)
Doctor of Education (D.Ed.)
Doctor of Music (D.Mus.)
Doctor of Philosophy (Ph.D.)

Master's Degrees

Residence Requirements

Two full sessions of resident study at McGill University is the normal minimum requirement for a Master's degree. In exceptional circumstances some Master's programs may be completed in one full session; in such cases ALL components of the program must have been completed and evaluated before the commencement of the second session.

Course Work

The candidate is required to pass (with a mark of 65% or better) those courses which are indicated by the Department and are recorded on the approved Registration Form. A few additional courses may be taken, but it is then the responsibility of the student to see that these courses are clearly marked "not required" on the Registration Form. Some departments require the candidate to pass a general examination relevant to his or her area of specialization.

No specified number of course credits is required for research degrees. The Department concerned will examine the student's previous training and then decide how many of the available courses in the area of specialization or related fields are required to bring the candidate to the proper level for the Master's degree. Due account will be taken of relevant courses passed at any recognized university.

Non-research degrees, which are generally of an applied or professional character, normally specify the course program which the candidate must follow.

Research and Thesis

The candidate for a research degree must present a thesis based on his or her own research. The subject of the thesis should be entered on the registration form and the title, if not decided at the time of registration must be forwarded in writing through the chairman of the department concerned to the Dean's Office at least two months before the thesis is submitted to the Faculty. A thesis for the Master's degree, while not necessarily requiring an exhaustive review of work in the particular field of study, or a great deal of original scholarship, must show familiarity with previous work in the field and must demonstrate the ability to carry out research and to organize results, all of which must be presented in good literary style. The thesis will not normally exceed 100 pages; in some disciplines, shorter texts are preferred. **For further regulations regarding theses see page 17.**

Language Requirements

Most Master's degree programs do not contain language requirements but candidates who intend to proceed later to a Doctoral degree should take note of any language requirements and are strongly advised to take the examinations in at least one language while working for the Master's degree.

Teaching Skills

A program of activities specifically designed to enable graduate students to improve their teaching abilities is available in many departments or through the Centre for Learning and Development. Students should make arrangements to take such programs through their department.

The Degree of Master of Architecture

Instruction for the degree of Master of Architecture is given in either of the following fields of specialization.

Architectural Design
Housing

Pre-requisites: Bachelor of Architecture or equivalent professional degree.

See also Section "E".

The Degree of Master of Arts

Programs leading to the degree of Master of Arts are provided in the following areas:

Anthropology
Art History
Classics
Communications
Economics
Education
English
French
Geography
German
Hispanic Studies
History
Islamic Studies

McGILL UNIVERSITY LIBRARY

Italian
Linguistics
Mathematics
Music
Philosophy
Political Science
Psychology
Religious Studies
Russian
Sociology

Pre-requisites: Bachelor of Arts in the subject selected for graduate work.

A program in Comparative Literature has been presented and awaits full authorization.

See also Section "C".

The Degree of Master of Business Administration

Programs leading to the degree of Master of Business Administration are offered in the Faculty of Management.

Students may specialize in the following areas of concentration:

Accounting and Finance
Behavioural Science and Personnel
Finance
Industrial Relations
International Business
Management Information Systems
Management Science
Marketing
Policy and General Management

Pre-requisites: An undergraduate degree in Arts, Science, Commerce or Engineering plus satisfactory scores in the Princeton Tests for Graduate Studies in Business. Some business experience is preferred.

See Also Section "I".

Master's Degrees in the Faculty of Education

Two types of Master's degrees are offered: M.A. (with thesis) and M.Ed. (without thesis).

The M.A. may be taken in the following areas:

Counsellor Education
Comparative Education
Educational Administration
Educational Psychology
History of Education
Philosophy of Education
Physical Education

The M.Ed. may be taken in the following areas:

Counsellor Education
Educational Administration
Educational Psychology
Reading
Special Education
Teaching Subjects (Biology, Chemistry, French as a Second Language, Home Economics, English as a Second Language, Geography, History and Physics).

Pre-requisites: A Bachelor's degree with specialization related to the subject chosen for graduate work plus a Permanent Quebec Teaching Diploma or its equivalent.

See also Section "G".

Master's Degree in the Faculty of Engineering

Two types of programs lead to a Master of Engineering: "Option A" requiring a thesis and "Option B" not requiring a thesis. Both Options are offered in the following areas:

Chemical Engineering
Civil Engineering
Electrical Engineering
Mechanical Engineering

Candidates wishing to specialize in Mining and Metallurgical Engineering should consult Section "E" for regulations concerning the following degrees:

M.Eng. In Mining, Metallurgy and Applied Geophysics (thesis and non-thesis options)
M.Sc. in Mining and Metallurgy

Pre-requisites: Bachelor of Engineering or equivalent, with specialization appropriate for the subject selected for graduate study.

See also Section "E".

Master's Degrees in the Faculty of Law

The degree of Master of Laws is offered in:

Air and Space Law
Comparative Law

The degree of Master of Civil Law is offered by the Institute of Comparative Law.

Pre-requisites: An acceptable degree in Law or equivalent qualifications.

See also Section "F".

The Degree of Master of Library Science

The School of Library Science offers a two year professional program in the principles and skills of librarianship.

Pre-requisites: A Bachelor's degree in Science, Arts, etc. Specialization in the humanities, sciences, or social sciences are preferred. A knowledge of at least one language other than English is expected.

See also Section "H".

Master's Degrees in the Faculty of Music

Programs leading to a Master of Arts degree are offered in the following areas:

Composition
Musicology
Theory

The Master of Music in Performance is open to candidates who pass auditions in their specialty.

Pre-requisites: Bachelor of Music or Bachelor of Arts with concentration in the area selected for graduate study.

See also Section "C".

Master's Degrees in Nursing

The School of Nursing offers two programs leading to the degree of Master of Science (Applied) in Nursing: Option A, Clinical Nursing Practice and Option B, Research in Nursing and Health Care.

Pre-requisites: Preparation in nursing comparable to the Bachelor's degree offered at McGill and accomplishment and development as a nurse. A current nursing registration is required. Non-nurses with a Bachelor's degree may apply for entrance to a Qualifying Year.

See also the Announcement for the School of Nursing.

The Degree of Master of Science

Programs leading to the degree of Master of Science are provided in the following areas:

Agricultural Chemistry
Agricultural Engineering
Anatomy
Animal Science
Biochemistry
Biology
Chemistry
Computer Science
Crystallography
Electrical Communications
Entomology
Epidemiology and Health
Fluid Mechanics
Geography
Geological Sciences
Geophysics
Glaciology
Human Communication Disorders
Marine Sciences
Mathematics
Medicine, Experimental
Meteorology
Microbiology and Immunology
Microbiology (Macdonald College)
Mining and Metallurgical Engineering and Applied Geophysics
Neurology and Neurosurgery
Otolaryngology
Parasitology
Pathology
Pharmacology
Physics
Physiology
Plant Science
Psychiatry
Psychology
Radiology
Renewable Resources
Surgery, Experimental
Wildlife Biology

Pre-requisites: Bachelor of Science in the subject selected for graduate work.

Programs in Oral Surgery and also Prosthodontics and Restorative Dentistry have been presented and await full authorization.

See also Sections "A", "B", "D" and "E".

The Degree of Master of Science (Applied)

This degree was designed to provide postgraduate training of a professional and vocational character, with less emphasis on theoretical knowledge and research than in Master of Science programs, but with no lower standards either for admission or completion of requirements. Two years of full-time study or equivalent, is required with an emphasis on course work.

Programs are available in:

Computer Science
Geological Sciences
(Engineering Geology or Mineral Exploration)
Human Communication Disorders
Microbiology and Immunology
Nursing
Psychology

Pre-requisites: A Bachelor's degree in the subject selected for graduate work.

The following programs have been presented and await full authorization:

Medical Radiation Physics
Health Sciences (Rehabilitation).

See also Sections "B", "D", and "E" and the Announcements for the Schools of Nursing , Physical and Occupational Therapy and Medicine.

The Degree of Master of Social Work

The M.S.W. degree represents a second level of professional study in which students build competence in a chosen field of practice.

Pre-requisites: Bachelor's degree in Social Work including courses in statistics and social science research methods. See also the Announcement of the School of Social Work.

The Degree of Master of Sacred Theology

A program leading to the degree of Sanctae Theologiae Magister is given in the Faculty of Religious Studies. This degree is primarily for those who intend to enter the ministry of the Christian Church or another religious institution, or proceed to teaching in schools or to certain forms of social work.

Pre-requisites: B.A. with specialization in religious studies or theology.

See also the Announcement of the Faculty of Religious Studies.

The Degree of Master of Urban Planning

The program requires a minimum of two years residence and a 3 month internship with a member of a recognized planning association.

Pre-requisites: Bachelor's degree in any one of the following: Anthropolgy, Architecture, Economics, Civil Engineering, Geography, Law, Management, Political Science, Social Work, Sociology or Urban Planning, with adequate knowledge of quantitative techniques.

See also Section "E".

DOCTORAL DEGREES

The Degree of Doctor of Civil Law

Doctoral programs are offered by the Institute of Air and Space Law and the Institute of Comparative Law. Both are predominantly research degrees awarded on the basis of a thesis that represents an original contribution to the development of legal science.

Pre-requisites: B.C.L. or LL.B. and usually LL.M.

See also the Announcement of the Faculty of Law.

The Degree of Doctor of Education

A program leading to a doctorate in Education is offered by the Department of Counsellor Education. It is a professional program providing advanced training in one of three areas of specialization:

Elementary School Counselling
Secondary School Counselling
Student Personnel Counselling

A thesis is required.

Pre-requisites: M.Ed. in Counsellor Education

See also Section "G".

The Degree of Doctor of Music

The Doctor of Music degree is offered in Composition. The Doctoral thesis consists of a musical composition of major dimensions together with a written analysis of the work. The composition is presented by the candidate in concert. The regulations set forth for the Ph.D. generally apply also to the D.Mus.

Pre-requisite: M.A. in composition

See also Section "C".

The Degree of Doctor of Philosophy

Pre-requisites: An undergraduate degree relevant to the subject chosen for graduate work. Some departments require all Ph.D. candidates to hold a Master's degree in the same subject. Many departments will require candidates who do not already hold an appropriate Master's degree to register for such a degree rather than for the Ph.D. directly. They may later recommend to the Executive Committee of the Faculty that candidates of undoubted promise should be allowed to proceed directly to the Ph.D. degree without being required to submit a Master's thesis.

Programs leading to the degree of Doctor of Philosophy are offered in the following areas:

Agricultural Chemistry
Agricultural Engineering
Anatomy
Animal Science
Anthropology
Art History
Biochemistry
Biology
Chemical Engineering
Chemistry
Civil Engineering
Classics
Communications
Computer Science
Economics
Electrical Engineering
English
Entomology
Epidemiology and Health
French
Geography
Geological Sciences
German
History
Human Communication Disorders
Islamic Studies
Linguistics
Marine Sciences
Mathematics
Mechanical Engineering
Medicine, Experimental
Meteorology
Microbiology and Immunology
Microbiology (Macdonald College)
Mining and Metallurgical Engineering and Applied Geophysics
Neurology and Neurosurgery
Parasitology
Pathology
Pharmacology
Philosophy
Physics
Physiology
Plant Science
Political Science
Psychology
Religious Studies
Renewable Resources
Russian
Sociology
Surgery, Experimental

A program in Educational Psychology has been presented and awaits full authorization.

Residence Requirements

Candidates must follow a program of at least three years resident study at the University; this is a minimum requirement, and there is no guarantee that the work of the degree can be completed in this time.

It is the custom for candidates to spend the greater part of each summer in work upon the thesis problem, and those who do not do so are unlikely to complete a satisfactory thesis in the prescribed minimum time; in certain subjects, e.g. in Agricultural Sciences, summer researches are indispensable.

A student who has obtained a Master's degree at McGill University or at an approved institution elsewhere, and is proceeding **in the same subject** to a Ph.D. degree may, on the recommendation of the department, be permitted to count the work done for the former as the first year (Ph.D. 1) of resident study for the Doctor's degree.

The attention of students seeking admission on this basis is drawn to the language requirements for which they are advised to prepare themselves in advance.

Comprehensive Examinations

The first two years (Ph.D. 1 and 2) include instruction, training and direction in the candidate's field of study, with the object of providing thorough knowledge of the particular subject and its relation to cognate branches of learning; this period should also prepare the candidate for independent investigation. The comprehensive examination is normally held at the end of the second year, unless otherwise specified by departmental regulations approved by the Faculty. This examination covers all graduate work previously taken by the candidate, including prescribed reading, and may also include any work fundamental thereto. The candidate must show a good general knowledge of the whole branch of learning which has been selected as the major subject. The examination may be written or oral or both. The result of the examination determines whether the candidate is allowed to proceed with his or her candidature. The final years (Ph.D. 3 and others) are devoted chiefly to the preparation of the thesis, the research for which is normally begun in the first year.

The candidate is also required to pass (with a mark of 65% or better) the courses indicated by the department, and recorded on the approved Registration form, unless they have been marked "not required".

Language Requirements

Most departments in the Faculties of Agriculture, Education, Engineering, Management, Medicine and Science do not require a language examination. Students should enquire of their departments if there are any such requirements or whether any other requirements have been substituted for those relating to languages.

Departments in the Faculties of Arts, Music and Religious Studies usually require proficiency in one or two languages other than English. In all cases **students should consult departmental regulations concerning language requirements.**

Language requirements for the Ph.D. degree are met through demonstrated reading knowledge. The usual languages are French, German, or Russian, but in particular instances another language may be offered on the recommendation of the department and the authorization of the Associate Dean.

The normal examination requirements are:

i. One examination in each of two languages

OR

ii. two examinations in a single language. The first examination is comparable in difficulty with that indicated in (i) above; the second, normally written one year later, demands greater proficiency. **All** language requirements must be fulfilled and the marks reported to the Faculty Office **before** the Dean will accept the thesis.

Language Reading Proficiency Examinations in French, German or Russian will be conducted by the Departments offering instruction in those languages. Students may, however, demonstrate competence by a pass standing in two undergraduate language courses taken at McGill at a level deemed acceptable by the Associate Dean.

Some Departments require candidates to take the Language Examinations administered by the Educational Testing Service, Princeton.

Candidates are advised to discharge their language requirements as early in their program as possible.

The Departments of French, German and Russian offer courses open to Ph.D. candidates to help them acquire the necessary reading knowledge of the language.

Students expecting to enrol in Professional Corporations in the Province of Quebec are advised to become fluent in both spoken and written French.

Courses in French language are available at the Centre for Teaching French as a Second Language. The teaching is intensive and class sizes are kept small. While undergraduate students are given preference, graduate students who are certain they can devote sufficient time to the work may enrol.

Thesis

The thesis for the Ph.D. degree must display original scholarship expressed in satisfactory literary form and must be a distinct contribution to knowledge. The subject of this thesis must have been approved by the Chairman of the Department and entered on the Registration Form. The exact title must be submitted to the Thesis Office at least TWO months before thesis submission.

Seven copies of the thesis must be provided by the candidate. Of these, two copies will be retained by the University and five copies returned to the candidate. (Some Departments may require one or more additional copies.)

Special regulations for the Ph.D. degree in particular departments are stated in the entries of these departments.

Thesis Oral Examination

After the thesis has been received and approved, a final oral examination is held on the subject of the thesis and subjects intimately related to it. This is conducted in the presence of a Committee of at least five members approved by the Dean of the Faculty on behalf of the Executive Committee, and presided over by him or by a Pro-Dean nominated by him. The Chairman of the candidate's department and his or her Thesis Supervisor are regularly invited to be members of the Committee; at least one member of the Committee is appointed from outside the candidate's department.

MCGILL UNIVERSITY LIBRARY

Ad Hoc Programs

In special cases where a student wishes to take a Master's or a doctoral degree either in a department not currently authorized to offer one, or in an interdisciplinary area, direct application may be made to the Dean of the Faculty to authorize an **ad hoc** degree program. Guidelines pertaining to the admission and supervision of **ad hoc** degree candidates may be obtained from the Associate Dean.

GRADING SYSTEM

Classification of Marks:

A–80–100%
B–65–79%
F–0–64%

Some departments evaluate performance by the grades: Pass, Fail. This system of evaluation is usually restricted to seminar courses or group projects.

Students who obtain marks between 55 and 64% in courses not required for the degree sought may, on recommendation of the major department, be recorded as having "passed at the undergraduate level".

Students who have failed in required examinations are permitted to write supplemental examinations only on the recommendation of the department and with the permission of the Associate Dean.

A student who has failed in any required course and has not received permission to attempt a supplemental examination will be required to withdraw. Only under exceptional circumstance may permission be granted by the Associate Dean, on the recommendation of the department, for the student to repeat any such course. In such a case the student may be required to pay the fee charged to special students for the course in question.

Transcripts can be obtained on application to the Registrar's Office, F. Cyril James Building, or to the Centre for Continuing Education, 772 Sherbrooke Street West, where applicable.

ADMISSION

Admission Requirements

Applicants should be graduates of a university of recognized reputation and hold a Bachelor's degree equivalent to a McGill Honours degree in a subject closely related to the one selected for graduate work. This implies that about one third of all undergraduate courses should have been devoted to the subject itself and another third to cognate subjects. Some Major Programs (at McGill and elsewhere) contain the necessary amount of specialization and may qualify the applicant for consideration.

The applicant must present evidence of high academic achievement: a standing equivalent to a Cumulative Grade Point Average (CGPA) of 2.8 out of a possible 4. High grades are expected in courses considered by the Department to be preparatory to the graduate program.

Some departments impose additional requirements and even though the applicant may appear to satisfy the general admission requirements, acceptance into a graduate degree program is not guaranteed.

Graduate Record Examination

The attention of applicants for admission to the Faculty is directed to the Graduate Record Examination (Educational Testing Service, Princeton, N.J. 08540). This examination consists of a relatively advanced test in the candidate's specialty, and a general test of his or her attainments in the several basic fields of knowledge, for which no special preparation is required or recommended. It is offered at many centres, including Montreal, several times a year; the entire examination occupies some eight hours, and the total fee does not exceed $20.00. Applicants to the Graduate School of Business must submit scores on the Admission Tests for Graduate Studies in Business. Only some departments uniformly require applicants to write the examination, but any applicant who has written either the general aptitude or the advanced test is advised to submit the scores along with his/her other admission material.

This credential is of special importance in the case of applicants whose education has been interrupted, or has not led directly towards graduate study in the subject selected. In such cases the department has the right to insist on a report from the Graduate Record Examination or some similar test. High standing in this examination will not by itself guarantee admission. The Miller Analogies Test may be used similarly. Some departments of the Faculty of Education also require the taking of various tests.

In cases of doubt as to proficiency in English, an applicant may be required to submit the results of tests administered by the Educational Testing Service.

Admission to a Qualifying Year

Some applicants whose academic degrees and standing entitle them to serious consideration for admission to graduate studies, but who are considered inadequately prepared in the subject selected may, with the permission of the department concerned, and of the Associate Dean be admitted to one *"Qualifying Year"*. The courses to be taken in a **"Qualifying Year"** will be prescribed by the department concerned. "Qualifying students" are registered in the Graduate Faculty, **but not as candidates for a degree.** Only one qualifying year is permitted. In cases where a department recommends a change of registration from "Qualifying Year" to Master's Degree 1st Year" **this change must be made prior to January 15.** Completion of the work of the qualifying year does not automatically entitle

the student to proceed towards a degree. Students who are ineligible for a qualifying year, may apply to the appropriate undergraduate faculty for admission as regular or special students, and seek admission to the Graduate Faculty at a later date.

Admission to a Second Degree Program

A candidate with a given higher degree may apply for admission to a second degree program at the same level but **in a different subject.** The normal admission requirements must be met and all the usual procedures followed.

APPLICATION

Applications for admission should be made on special printed forms which may be obtained at the Dean's Office. Applicants (with some exceptions) who are **not** McGill graduates are required to ask two instructors familiar with their work to send letters of recommendation to the Dean. All applicants must themselves send, or ask the appropriate university authorities to send, two certified copies of their complete university-level academic record to date. For McGill graduates the appropriate authority is the Registrar.

Note: A fee of $15.00 in Canadian funds **must** accompany each application from a graduate of a university other than McGill, otherwise **it cannot be considered.** This sum must be in negotiable form, such as a bank draft or money order (but not in cash), at the current rate of exchange, and will not be refunded.

It is desirable to submit a list of the titles of courses taken in the major subject, since transcripts often give code numbers only. Transcripts written in a language other than English or French should be accompanied by a certified translation. An explanation of the grading system used by the applicant's University is helpful. The applicant should also indicate the branch of the major subject in which further study is desired.

Completed applications, with supporting documents, should reach the Dean's Office on or before July 1. (Note: **Several Departments set much earlier deadlines.)** Applications received after the prescribed dates may not be considered unless the concession is recommended by the Department concerned. Candidates will be notified of acceptance or refusal as speedily as possible.

The programs leading to master's degrees in Education normally begin with a Summer Session so that there are different dates for application and registration in this case. Candidates for higher degrees in Education should consult that Faculty beforehand as to application deadlines, date of commencement of courses and other details.

REGISTRATION

Regular Procedures

Approved candidates must consult the department in which they intend to study, with regard to choice of courses and subject of investigation. Formal application for permission to attend the courses selected, and for approval of the subject of investigation, must then be made on the appropriate Registration Forms available in the department. Language examinations should be entered on these forms, if required. These forms require the signature of the candidate, of the chairman of the department concerned, and of the professor appointed to act as director of the candidate's research or supervisor of his/her thesis, and are normally completed in consultation with the department; students are warned that it may take a week to arrange and complete such consultations. **Registration takes place in September.** The department may send the completed forms to the Dean's Office at any time but positively no later than September 16. Full instructions concerning registration will be supplied by each department. A delay in registration will involve a late fee penalty. Candidates should in any case be prepared to attend the regular courses of instruction, which begin on or shortly after September 12.

The Registration Forms will be scrutinized by the Associate Dean on behalf of the Executive Committee of the Faculty, and, if approval is given, the student's identity card will be validated at a time and place determined by the Registrar's Office. The student will be told what fees to pay and where to obtain a validated identity card when he/she registers. The student may meanwhile attend lectures, etc., on the assumption that the registration will be approved, but is not officially accepted into the program until final approval has been given. **The prescribed penalty for late registration is $10 between September 19 and September 30 and $25 thereafter.** Students may pay their fees in two instalments. However, a first payment must be made within ten days of the date of registration. **There is a penalty for late payment of fees.**

January Admission

In special circumstances, students may be admitted to commence their studies at the beginning of the second term. In such an event, registration must be completed by January 14.

Registration at the Centre for Continuing Education

Students registered in the Graduate Faculty who are taking evening courses for credit must also register with the Centre for Continuing Education at the

appropriate time, otherwise their marks will not be sent to the Graduate Faculty.

If such courses are required as part of the degree program their cost will be included in the regular tuition fee for the degree. Transfer forms, available at the Graduate Faculty Office, must be completed before registering at the Centre. The Graduate Faculty reserves the right to place limitations on the number of Continuing Education courses taken for any one program.

Procedures for Ad Hoc Programs

Before the Executive Committee of the Faculty will authorize the acceptance of a student into an *ad hoc* program, it must receive a favourable report from a committee constituted to examine the program in question. The candidate, through the Supervisor designated by the department most closely related to his/her research field must submit a research proposal and an outline of the course work needed to prepare him/her for a Comprehensive Examination in the relevant field.

Once the request has been approved, the candidate may register following all the regular procedures. It is customary for *ad hoc* Ph.D. or Master's degree candidates to be attached for administrative purposes to a department, but they are under the direct supervision of the Faculty of Graduate Studies and Research which receives annual reports from the candidates' Supervisory Committees.

Additional Sessions

Candidates who have completed their residence requirements may register for Additional Sessions following the regular registration procedures. It is expected that at this stage all the course work and Comprehensive Examinations will have been completed and the student will be engaged in thesis preparation. If a valid identity card is required, student services and Student Society fees must be paid as well as the Additional Session fee.

All students must register annually and if they have not so registered at the beginning of the academic year they are not eligible to receive their degrees at the following Convocation.

Time Limitations

For students who commenced Master's degree programs during or after the 1974-75 session, the following regulation applies:

Candidates for Master's degrees must complete the degree **within four years of initial registration.** If the degree is pursued on a less than full-time basis it must be completed within five years of initial registration. Thereafter, students may register for **one more year only** provided the Department concerned so recommends to the Faculty, in writing, giving reasons and suggesting the imposition of such conditions as may seem desirable. After this extension no further registration will be permitted and the student must withdraw from the University.

In exceptional cases, a student who wishes to submit a thesis, or to complete outstanding degree requirements, after this withdrawal may do so only on the recommendation of the Department concerned. A fee of $100.00 will be charged for re-registration in addition to any other fees required.

For all Doctoral candidates and for those students who first registered for Master's programs before the 1974-75 session the following regulation applies:

By annual registration, as above, candidates may maintain their connection with the University **for five years** after completing their residence requirements; thereafter, they may re-register only if the department concerned so recommends, in writing, suggesting the imposition of such conditions as may seem desirable.

The object of these regulations is to encourage candidates to complete their theses and qualify for their degrees without undue delay.

Withdrawal From a Degree Program

Candidates who fail to register in any year of their studies are automatically considered to have withdrawn.

Candidates whose work is considered by the Department to be unsatisfactory may be asked to withdraw.

Any student who decides to withdraw must complete a Withdrawal Form available from the Faculty Office. Fees will then be refunded according to the conditions outlined in the Fees Section of the Announcement.

Reinstatement

Candidates who have severed their connection with the University can be reinstated only (1) if the department concerned so recommends, in writing, suggesting the imposition of such conditions as seem desirable, and (2) after paying a fee of $40.00 for each session during which they were not registered (up to a maximum of $100). This readmission fee is in addition to the fees due for the session into which the student has been readmitted.

Non-Resident Status

1. Departments, with the approval of the Executive Committee, may permit or require candidates to spend one session at another institution; it is understood that this session must be one of fulltime work, and that the institution selected must be able to provide expert supervision and facilities for research appropriate to the candidate, in the field selected.

Permission to spend a required year of residence at another university must be obtained **before** the beginning of the session in which the student will be absent. A program of the work projected and particulars of the institution selected should be sent, accompanied by a letter from the Chairman of the Department, to the Associate Dean of the Faculty who will forward the request to the Executive Committee for approval. Permission is generally only granted to students who have already completed one full session at McGill.

The student will be required to pay the normal McGill tuition fee less any tuition fee payable to the host institution (up to a maximum of $530.00). Student services fees are not levied and the I.D. card is not validated.

2. Students who wish to take a leave of absence from the University for one year before returning to complete their residence requirements should first obtain permission to do so both from their departments and the Associate Dean.

The student **must register as a Non-Resident student,** and pay the non-resident fee. Student services fees are not levied and the I.D. card is not validated.

Registration for Two Degree Programs Concurrently

No student may be registered in two degree programs or in two departments or faculties concurrently without special permission granted by the Executive Committee of the Faculty. Letters of recommendation, including details of the proportions of time that the student intends to allot to each program, must be received from the Chairman of each department concerned.

GRADUATION AND CONVOCATION

Graduate Diplomas, Master's degrees and Doctoral degrees are granted by Senate to those students recommended for graduation by the Faculty of Graduate Studies and Research. Names of candidates who have completed all their program requirements are presented to Senate on three occasions during the year: January, May and October. Transcripts of successful candidates will indicate the date on which the degree or diploma was granted and this is the official date of graduation.

Convocation ceremonies are held in June and November at which time the degree or diploma is conferred by the Chancellor of the University.

CLASSES OF STUDENTS

Regular Students

"Regular Students" are those students who are proceeding to a degree and who in any given session are attending classes or receiving regular guidance or consultation relevant to their programs from any member of the staff, who wish to write examinations or who are making use of the university's libraries or laboratories or other facilities.

Half-Time Students

In some departments, "Regular Students" are permitted to proceed towards a degree on a half time basis. It is expected that "Half-time Students" will spend 50% of their time in the department participating in course work, seminars, discussions, etc., with the staff and the full-time regular students.

Part-Time Students

Certain degree programs are designated as Part-time and Regular Students may proceed towards the degree at their own pace. "Part-time Students" may enrol in day time courses in the Fall, Winter and Summer sessions and in some Continuing Education courses where indicated by the Department.

"Part-time Students" are reminded that they must complete the degree within the time limitations imposed by the Faculty.

Qualifying Students

Students admitted to a Qualifying Year are known as "Qualifying Students". They are registered in the Graduate Faculty but have not yet been admitted to a degree program. These students take a full load primarily of undergraduate courses as indicated by the Department. A Qualifying Year may not be taken on a half-time or part-time basis.

Special Students

Students who meet the minimum entrance Requirements of the Faculty and wish to take one, or at most two, courses in the Graduate Faculty without intention of proceeding to a degree or diploma awarded by this Faculty are termed "Special Students" of the Graduate Faculty.

In the same category are included students carrying on research in McGill laboratories, without intention of proceeding to a degree. If graduate "special students" subsequently become candidates for higher degrees, they may receive academic credit for relevant graduate courses taken as special students. Students who wish to take further undergraduate courses only, should register as "special students" in the undergraduate Faculty concerned, even if they already hold degrees.

Non-Resident Students

Students who interrupt their residence at McGill for a period elsewhere are known as "Non-Resident Students". They must have obtained permission

UNIVERSITY LIBRARY

both from their departments and from the Executive Committee of the Faculty to spend a required year of residence at another university *or* have obtained permission from the Associate Dean of the Faculty to take a leave of absence from McGill.

Medical Interns

Interns, residents and fellows on the staffs of teaching hospitals, associated with the University, and candidates for diplomas in anaesthesia and psychiatry, are considered graduate students.

Visiting Students

"Visiting students" are those students who are registered in a degree program at another university and who have obtained written permission from both universities to take a course(s) for credit towards that degree program. Students studying in the Province of Quebec who are in this category are eligible for a transfer of fees as well as a transfer of credit if the required permission is obtained on special forms. These forms are available from the Graduate Faculty Records Office or the Registrar's Office.

Full-Time McGill Staff

Members of the teaching staff of the University up to and including the rank of lecturer may enroll as candidates for a degree or diploma. If their teaching duties are designated as full-time, they may only enrol as half-time students.

A reduction in fees is granted to full-time lecturers enrolled in degree or diploma programs and forms are available for this purpose at the Graduate Faculty Office. Normal registration procedures must be followed each year.

NOTE: No staff member above the rank of lecturer may be a candidate for a degree at the University.

Similar regulations also apply to non-academic staff and these may be obtained from the Personnel Office.

FEES

The University reserves the right to change any fee without notice. No degree or diploma will be released until all fees are paid in full.

Tuition Fees

Full-time. The tuition fee for a full-time session of resident study in a degree program (e.g. the first required year for a Master's degree or each of the three required years for a doctoral degree) is $570.00.

The second year of a Master's program is $285.00. Dentistry students in Oral Surgery must pay $570.00 in the second year, and $285.00 in the third year.

Half-time. The tuition fee for a half session of full-time study or for a session of half-time study in a degree program is $285.00.

Part time. Students registered in degree programs specifically designated "part-time" by the Faculty and who are taking less than a full course load, may be permitted to pay tuition fees on a per course basis. The per course fee varies according to each course. A full course is **approximately** $114.00 and a half course is **approximately** $57.00.

Additional session. Candidates requiring an additional session beyond the required years for the Master's degree or the three required years for a doctoral degree must pay a registration fee of $40.00.

Non-resident. The registration fee is usually $40.00 unless otherwise specified by the Executive Committee or the Associate Dean of the Faculty.

Special. A "special student" is not enrolled for any degree program and tuition fees are assessed on a per course basis. A full course is **approximately** $114.00 and a half course is **approximately** $57.00 though the fees vary according to each course. A special student carrying on research in McGill laboratories, but not taking courses, will normally pay the cost of one full course per session (Approximately $114.00).

Tuition Fee for a Qualifying Year

The Qualifying Year constitutes one full year of study and the tuition fee is $570.00.

Tuition Fee for a Master's Degree

The minimum tuition fee for a Master's degree is $855.00. ($570.00 for the first residence year and $285.00 for the second.) This minimum must have been paid by the time of graduation in addition to any fees incurred for a Qualifying Year or Additional Sessions or Non-resident years. Candidates, even those who register in January or are eligible to graduate early, please note that there are only two exceptions to this regulation:

i) A candidate who has earned a diploma in the same subject may, in some departments, be admitted into the second year of a Master's program. The minimum tuition fee in such a case is $570.00.

ii) A candidate who has already completed all the requirements for a Master's degree may request permission from the Associate Dean to be exempted from the second year of residence. The minimum tuition fee in such a case is $570.00.

Exemptions for half a year of residence are never granted.

Tuition Fee for a Doctoral Degree

The minimum tuition fee for a Doctoral degree is $1,710. This minimum must have been paid by the time of graduation in addition to any fees incurred for Additional Sessions or Non-resident years.

There is only one exception to this regulation:

A candidate who has obtained a Master's degree **in the same subject** may be admitted to the second year of the Doctoral program. The minimum tuition fee in such a case is $1,140.00.

Candidates who complete all the components of their degree in a shorter period of time than is specified for the residence period may apply to the Associate Dean for permission to graduate early but must still pay the minimum tuition fee.

Fees for Staff Candidates

Full time lecturers who qualify for the reduced fees pay $25.00 per year.

A staff candidate on deposition of a thesis is required to pay a thesis examination fee: $75.00 for a Master's thesis and $100.00 for a Doctoral thesis.

Student's Societies and Student Services Fees

All students, with the exception of those classed as "non-resident" students or "additional session" students who do not wish to hold a valid Identity card, **are required to pay fees for students' societies and student services in addition to any tuition fees.** The University, on behalf of the Students' Societies and Student Services, collects the following fees: $29.50 for student societies and $70.00 for student services for a full-time year of study (This includes Visiting students taking a full-time year of study at McGill.); $29.50 for students' societies and $35.00 for student services for a half-time year of study and for the second year of a Master's program; students in programs designated "part-time" special and visiting students, pay according to the number of courses taken. The minimum for "part-time" students is $15.00 for students' societies and $20.00 for student services (excluding Athletics but at the discretion of the Director of Athletics, a student may participate in the Athletics program upon payment of an additional $30.00).

Macdonald College student society fees are $34.00. The Student Services fees will remain as above.

Any questions concerning the above student fees should be directed to the Dean of Students.

Upon payment of the fees required for student services and student societies, graduate students are entitled to the following:

a) Medical examination (compulsory); daily consultation service and hospital treatment.

b) Access to the gymnasium, swimming pool, and tennis courts.

c) Opportunities for exercise with various athletic clubs and eligibility for intercollegiate and other teams.

d) Admission (by identity card) to the students' section at all intercollegiate games played at McGill.

e) At Macdonald College slightly different rules apply. Here, graduate students are entitled to medical attendance, . major operations excepted, on the same basis as other students. Graduate students at Macdonald College are entitled to participate in the activities of the various organizations under the Students' Council and to have one representative on the Students' Council. Graduate students at Macdonald College are required to pay an additional Students' Activities Fee.

Summary of Student Tuition and Student Societies and Services Fees†

DEGREE PROGRAM	FEE
Diploma	
Full-time	$669.50
Master's	
Qualifying	$669.50
Year 1	
Full-time	$669.50
Half-time	$349.50
Year 2	$349.50
Year 3 and later	$104.50
Doctoral	
Years 1, 2 & 3	
Full-time	$669.50
Half-time	$349.50
Year 4 and later	$104.50

†Please refer to the detailed discussion of these fees for the exceptions.

Graduation Fee

A $15.00 fee will be charged to all students when they graduate. This fee covers all expenses in connection with graduation including academic dress and/or *in absentia* charges.

Re-Submission Fee

A candidate whose thesis is judged unsatisfactory by the examiners may be permitted by the Faculty to present a revised thesis, for a subsequent Convocation, upon payment of the following re-submission fees:

Master's degree $75.00
Doctoral degree $100.00

If a new session of study is entered the student will be required to pay the normal fees for that session in addition to the re-submission fees.

Supplemental Examination Fee

Fees for supplemental examinations, granted under special circumstances by permission of the Dean on the recommendation of the department, are payable in advance at $10.00 per paper ($15.00 for examinations written at the Centre for Continuing Education).

Payment

All fees are payable in Canadian currency.

Fees are due and payable at the Cashier's Office, F. Cyril James Building, within ten days of registration. (Macdonald College students must pay their fees at the Cashier's Office at Macdonald College.) If paid in instalments the second is due on January 15.

Students who have not paid their fees will have their registration cancelled and no credit will be given for work done during that period.

Late fees are also charged as follows:

Registration, after September 16 ..... $10.00
Registration, after September 27 ..... $25.00
Payment of fees, after 10 days after registration, up to 30 days $10.00
Payment of fees, after 30 days $25.00

Withdrawal Policy

Students who wish to withdraw from a course(s)* or who wish to withdraw entirely from the University must complete the necessary form and submit it to the Records Office of the Faculty of Graduate Studies and Research as soon as possible. The effective date for refunds will be the date on which the official withdrawal form was completed. NOTE: Dates of notification of the course instructors, of research supervisors, of departmental offices or of discontinuance of class attendance will not suffice. Only the tuition portion of the fee is subject to the refund policy.

The dates for refunds for students paying **per course** or **withdrawing from the University** for 1977-78 are as follows:

Fall Term	Winter Term	Refunds
Up to October 21	Up to February 17	100% **(minimum charge of $50.00 in case of complete withdrawal)**
October 22–31	February 18–28	50%
November 1–18	March 1–17	25%
After November 18	After March 17	No refund

No refund of the student's societies and student services fees will be made after October 21 for the Fall Term or February 17 for the Winter Term.

*Course change forms for withdrawing or adding courses are available in Departmental Offices or in the Records Office of the Faculty of Graduate Studies and Research. Please note that course changes must be made with the approval of the Departmental Chairman or his Deputy.

FELLOWSHIPS, SCHOLARSHIPS, AND PRIZES

Fellowships, scholarships and prizes are awarded competitively on the basis of academic merit. Details of the fellowships and other awards available to postgraduate students are found in "POST-GRADUATE FELLOWSHIPS, BURSARIES, AND PRIZES", a booklet which can be obtained from the Registrar or from the Graduate Faculty Fellowships Office. The booklet also describes exchange programs which provide money for students who want to study abroad.

A student who applies to the Graduate Faculty for a fellowship is considered for every fellowship or award for which he/she may be eligible. These range up to a maximum value of $5,300.

Applications can be obtained from

Graduate Faculty Fellowships Office
Room 311, Dawson Hall
McGill University
853 Sherbrooke Street, West
Montreal, PQ, Canada H3A 2T6

The completed application, plus at least 3 letters of recommendation and complete transcrips of post-secondary education, must be received in the same office by **1 February** before the Fall term in which the student hopes to receive a fellowship. Candidates will be notified on 1 April.

Some awards are administered by McGill departments or institutes. They are listed in the fellowships booklet described above. Values, application procedures and due dates vary widely, and are separately described for each award.

A third type of award is offered by private institutions and public agencies. The Government of Canada, through the Canada Council, the National Research Council and the Medical Research Council, offers fellowships which range in value from $5,520 to $11,200. These programs require special application forms and procedures which are described in the fellowships booklet. Application dates for these fellowships are very early in the Fall term of the year before the fellowship is to be held. The Government of Quebec offers postgraduate fellowships to residents of Quebec; they range in value from $4,500 to $10,200. Applications are due in early February. Other similar programs are described in the Postgraduate Fellowships booklet.

Canadian citizens or landed immigrants who have been resident in one province for more than a year are eligible to apply for loans, guaranteed by the federal government, which are awarded on the basis of need and which need not be repaid while the recipient is a full-time student in good standing. Some provinces also award non-repayable bursaries on the basis of financial need. The addresses of the provincial loan agencies are listed in the Postgraduate Fellowships booklet.

Foreign students admitted at McGill should have financial support before coming to Montreal. Non-Canadians on student visas cannot work in Canada, and there are no fellowships or loans available after arrival. The chances of winning a fellowship or obtaining any new support while here are almost nil.

TEACHING ASSISTANTSHIPS AND DEMONSTRATORSHIPS

Many departments require the services of some graduate students as teaching assistants or demonstrators. These may be employed up to 12 hours weekly during the session without losing status as full-time graduate students.

In some departments Research Assistantships deriving from special research funds are also available. In most though not all cases the research in question can be used by the student for his/her thesis.

In all cases the appointment is recommended by the Chairman of the department concerned on the basis of the documents supplied along with the application for admission.

It is not the general policy of the University to waive tuition or other fees for Demonstrators, Assistants, or Fellows, though in some cases provision is made for a basic stipend plus the amount of the fees, while certain graduate scholarships cover the cost of fees only. Generally speaking, assistantships, demonstratorships and fellowships provide subsistence throughout the academic session only, while research assistantships may run throughout the calendar year (though some are available in the summer months only); in no case are the funds adequate to defray the cost of coming from or returning to a distant country.

GENERAL INFORMATION FOR NON-CANADIAN STUDENTS

A pamphlet describing immigration regulations in detail and containing notes and guidance to students from other countries is available from Canadian immigration offices, Canadian Embassies and British Consular offices, or from the Immigration Branch, Department of Citizenship and Immigration, Ottawa, Canada. Local immigration officers will be ready to give advice and help.

A useful handbook entitled **University Study in Canada** can be obtained from Canadian Embassies, Consulates, and the office of High Commissioners and Trade Commissioners. A leaflet entitled **Notes for Foreign Students Who Wish to Attend a Canadian University** may be obtained from the Association of Universities and Colleges of Canada, 151 Slater St., Ottawa, Ontario K1P 5N1.

Further information may also be found in the McGill University **General Announcement,** available from the Registrar's Office.

Notice to all resident students and to all those accepted to enter the Faculty WHO ARE NOT CANADIAN CITIZENS AND WHO ARE NOT LANDED IMMIGRANTS:

In the Province of Quebec, holders of student visas cannot establish legal residence in the Province and therefore do not qualify for inclusion in the Quebec Health Insurance Plan. As a result, such students who need hospitalization may find themselves facing very heavy financial charges. Senate has therefore ruled that from September 1, 1967, all non-Canadian students will be required to enter into the Health Insurance Plan operated by the Canadian Premier Life Insurance Company.

Students must make arrangements to pay the premium through the Student Aid Office.

A descriptive leaflet is available from the Dean's Office or the Student Aid Office. For additional information apply to the office of the Insurance Company.

Post-doctoral Fellows registered with the University also come under the same insurance provisions.

SUMMER SESSION

Graduate courses are available in some areas during the summer and the Summer Session Announcement should be consulted for a complete listing of undergraduate and graduate level courses.

Students taking graduate work in Education are strongly advised to enroll in the Summer Session

and many programs can only be completed by participation in Summer Session studies.

Registration for students in the Faculty of Graduate Studies and Research takes place through this Faculty Office. It is the responsibility of the student to obtain a Registration Form from the Faculty Office, have the completed form authorized by the Department and return it to the Faculty Office.

If the Summer Session courses are REQUIRED as part of the degree program and the student has already paid full-time tuition fees ($285 per term – flat rate) no further tuition fees are levied for Summer Session courses.

Part-time students (or students paying on a per course basis) must pay the full tuition fee for Summer Session courses at the time of registration (A Bank Draft or Money Order is required).

Many Summer Session courses have a limited enrollment and students are advised to reserve a place in such courses as early as possible. Graduate students intending to take restricted undergraduate courses MUST come IN PERSON to the Graduate Faculty Office where arrangements will be made with the Summer Session Office to reserve a place in the class.

The Summer Session is divided into two parts and each part is subdivided into two "terms" as follows:

Part 1	1st Term	May 9 – May 27
(L courses)	2nd Term	May 31 – June 17
Part 11	1st Term	July 4 – July 22
(C courses)	2nd Term	July 26 – Aug. 12

FRENCH SUMMER SCHOOL

The French Summer School is a residential program offering cultural activities, undergraduate courses and graduate level courses leading to a Master's degree, with or without thesis.

The same admission standards are required for acceptance into the M.A. (French Summer School) as for the M.A. in the French Department. A Qualifying Session may be necessary before acceptance into the Master's program. All the regulations of the Graduate Faculty apply to candidates for the M.A. (French Summer School).

Fees for the qualifying session and each of the four following sessions are $50.00 deposit plus $400.00 for Canadian students, $50.00 deposit plus $450.00 for non-Canadian students. These include participation in the cultural and social activities of the School. Fees for the sixth session (required of candidates proceeding without thesis) are $185.00 for Canadian students, $215.00 for non-Canadian. If the submission of a thesis is delayed beyond the normal date, the candidate must pay an additional registration fee of $40.00 at the beginning of each session until the thesis has been accepted.

Further details may be obtained from the French Summer School Announcement or by writing to:

The Director of the French Summer School
Peterson Hall
McGill University
3460 McTavish Street
Montreal, PQ, H3A 1X9

REGULATIONS CONCERNING THESES

Dates of Deposition

For graduation at the Spring Convocation, the deadline for deposition of theses is near the end of March, for Fall convocation near the end of August. For the exact dates, the "Calendar of Dates" should be consulted. The deadline for doctoral thesis deposition is always one week earlier than for master's theses.

Due to unforeseen delays with Examiners, an absolute guarantee cannot be given that all procedures will be complete in time for Convocation, even where the deadlines are met. Every effort will be made, however, and incidents of this kind of delay are rare.

Procedures After Deposition

After a *doctoral* thesis has been handed in, it is submitted to the Examiners. The final oral examination is not held until after the Examiners have reported favourably, usually about four weeks after deposition. After all the requirements have been met, and if the next convocation is some time away, the Dean will issue (on request) a certificate stating that the candidate will be recommended to Faculty Council for the award of the degree at the next convocation.

Guidelines for the disposition of Examiners' reports and the organisation and conduct of Oral Examinations may be obtained from the Thesis Office. At any stage during the procedures, candidates have the right of appeal to the Dean or Associate Dean.

The procedures are similar but simpler for the *master's* thesis and there is no final Oral Examination.

Registration and Fees

A thesis can only be submitted by a candidate, i.e., a student registered for the degree in question. In order to remain a candidate, a student must remain registered. If all requirements are met, including deposition of the thesis by the registration date in September, then no fee will be charged. Otherwise either a $40.00 registration or the appropriate tuition fee will be assessed. Candidates should note also that a fee of $15.00 for graduation will be charged. (Full information on fees is given above).

Notice of Deposition of Thesis

Formal notice of the title of a thesis to be deposited must be filed in the Thesis Office by the Departmental Chairman, together with the Nomination of Examiners, by 1 June (for Fall convocation) or by 1 February (for Spring convocation). No subsequent change of title, whether originated by the candidate or any other source, will be accepted unless the change is officially requested by the Department, at least one month before the thesis is deposited. The notice should be the result of consultation between the candidate, the thesis supervisor and the chairman. All three share the responsibility for the prompt completion of this important formality.

The appointment of the Examiners, and communication with them, is the duty and the privilege of the Dean.

Originality and Historical Introduction

a) The candidate should clearly indicate in the preface, or by a separate statement at the beginning or end of the thesis, what elements in the thesis he/she considers to be contributions to original knowledge. This requirement is mandatory for a doctoral thesis and is recommended in other cases. Theses should also contain an appropriate historical statement of previous relevant work or investigation: "appropriate" does *not* necessarily mean long or exhaustive.

b) The candidate is required to declare *generally* in the preface, and *specifically* in the text, the extent to which assistance has been given by members of the staff, fellow-students, technicians, or others, in the collection of the material, the design and construction of apparatus, the performance of experiments, and the preparation of the thesis in general. This regulation does not apply to the normal supervision and advice given by the thesis supervisor.

Typographical and Other Specifications

Approved theses for higher degrees are later bound and placed in the Library and are made available to the National Library of Canada. Candidates for such degrees are therefore advised that the Faculty of Graduate Studies and Research requires theses to be prepared in accordance with the following specifications. **Theses not so prepared will not be accepted unless the Executive Committee of Council has given its agreement in advance.**

a) Three copies of a master's thesis and seven copies of a doctoral thesis must be submitted; in each instance two of these will be retained by the University. Copy 1 will be preserved in the University Library.

Departments desiring copies for other collections should arrange for these with the candidate. One copy of the master's thesis and five of a doctoral thesis will be returned to the candidate.

b) The thesis may be typed with double, or one and one-half spacing, with lines about 6 1/2 inches wide, or in two single spaced parallel columns. Offset or xerographic reproduction of all copies is permissible, but copies 1 and 2 especially must be of high quality. Coated paper will not be accepted.

Diagrams should be drawn with India ink on rag paper or reproduced by photographic, offset or xerographic processes, Diagrams, numerical or summary tables, and parts of the Table of Contents, may appear on left-hand pages (on the back of other material) where this aids in the layout and the general readability of the text. In such cases it may be desirable not to number these left-hand pages, but to identify them as opposite stated page number.

c) The left-hand margin must have a uniform width of not less than 1 1/2 inches; this rule also applies to diagrams, etc. The right-hand margin need not be aligned but it should be well-defined at approximately a half-inch width. Drawings, maps, plates, etc., if larger than the prescribed page, may be folded so that the flap is not larger than 7 x 11 inches. Larger drawings maps, etc., must be folded down to not more than 7 x 10 inches, so that they may be placed pockets in the binding

d) Footnotes may be placed either at the bottom of each page or collected at the end of each chapter.

e) The pages constituting each copy of the thesis should be assembled in approved binders. The pages should be perforated near the left-hand edge with punch holes approximately 8 1/2 inches between centres, and should then be assembled and firmly bound, by means of the holes between stiff covers for protection. The 8 1/2" x 11" "Acco-press" binders sold at the University Bookstore are recommended. Spring binders will not be accepted. On the outside of each binder must be written clearly the name of the candidate, full title of thesis, department, degree sought, date and copy number. The candidate should also affix to the spine of each copy a label showing clearly his/her surname and the degree for which he/she is a candidate, together with the copy number.

f) The thesis must be free from typographical and other errors. If copies are deficient in the above respects they will be returned for correction. If these corrections are very numerous the granting of the degree may be delayed on this account.

g) Every thesis should have an adequate table of contents and thorough bibliography of the

subject. Immediately following the title page, there should be an Abstract giving a summary of the thesis, not exceeding 150 words. The rules above regarding format margins, etc., should be observed with regard to the abstract. Every copy of the thesis must have an English and French abstract. When the language of the thesis is neither English nor French, an English version is required as well as a version in that language and a French version is invited. It is understood that the thesis supervisor has approved the text of the abstract.

h) The student has the option*, subject to the approval of the Department, of producing the thesis in the form of an original paper, or papers, suitable for submission to learned journals for publication. In this case the thesis must still conform to the requirements previously mentioned in the paragraph on "Typographical and other Specifications" and in the paragraph concerning "Supplementary Documents". In such a case, a full introduction and other material (e.g. experimental data or details of equipment and experimental design) may need to be provided in addition.If more than one manuscript is included, connecting text and joint summary-conclusions are required. A mere collection of manuscripts is not acceptable; nor can reprints of published papers be accepted. The present regulations on "Supplementary Documents" should be cited in the introduction.

Candidates are warned that the preparation of the typescript always takes longer than is expected and that sufficient time for checking the typescript carefully for errors before the thesis is deposited must be allowed.

The use of the metric system for Master's and Ph.D. theses is strongly recommended. Where such units are not presently in common usage, the first time a unit is used, the metric equivalent should be stated in a footnote.

It is a Faculty objective that the use of the metric system in theses be mandatory by the academic year 1979-80.

*This option is extended to 1977.

Supplementary Documents

At the time of deposition of the thesis, the following additional documents must accompany the thesis.

a) Two waiver forms for the University Library; one for the National Library. (Obtainable from the Thesis Office).

b) On separate sheets of paper, a short title of the thesis, of less than 56 characters including spaces, which will appear along the spine of bound copies. (This only applies if the thesis title is longer than 56 characters).

c) Two additional copies of each Abstract, as described under "Typographical and other Specifications". These copies should show the title of the thesis, the name of the author, the name of the department and of the degree sought.

d) Two copies of A List of Descriptors (Key Words). The forms, with instructions for the selection of Descriptors obtainable from the Thesis Office.

e) For doctoral theses, the form required by Dissertation Abstracts (obtainable from the Thesis Office) together with another copy of the Abstract and of the title page of the thesis.

Unless there is a specific arrangement to the contrary previously approved by the Dean, copies of accepted theses are deposited in the University Library and a microfilm of the original is placed in the National Library at Ottawa. These Libraries are authorized to make the thesis available for consultation or to distribute microfilm or other copies. The waiver forms are to provide for this arrangement. Unless these documents accompany the thesis, it will not be accepted.

Abstracts are bound into volumes which are filed for reference in the University Library and in the Thesis Office.

Resubmission

If a thesis is failed it cannot be submitted again in revised form without the permission of Faculty Council. A fee of $75.00 is required for the resubmission of a Master's thesis and $100.00 for a Doctoral thesis. These fees partially cover the cost to the University of having the thesis re-examined. More details about resubmission procedures are contained in the *Guidelines for the disposition of Examiner's Reports.*

3 LIBRARIES

All resident graduate students have access to the McGill University Library system. This comprises twenty-two libraries, grouped by subject into five administrative Area Libraries, with an overall collection of approximately two million volumes.

The main collection of the Humanities-Social Sciences Area is housed in the McLennan Library, which also has the McGill Union Catalogue of the holdings of all the system libraries, a large government documents collection and the rare books department. Other associated libraries of this Area are the Blackader/Lauterman Library of Architecture and Fine Arts, the Education Library (including

the Curriculum Lab and Physical Education collection), the Howard Ross Library of Management, and the Islamic Studies, Library Science, Music, Religious Studies and Social Work Libraries.

Constituting the Life Sciences Area are the Blacker/Wood Library of Zoology and Ornithology, the Botany/Genetics, Dentistry, Macdonald College (agricultural sciences), Medical and Nursing Libraries and the Osler Library of the History of Medicine.

The Engineering, Physical Sciences and Mathematics Libraries form the third Area, while the Law and Undergraduate Area Libraries bring the total to five.

Most of the libraries produce detailed guides to their services and hours, etc. and an overview may be obtained from the *Area Libraries Directory*, available on request either from one of the libraries or the Office of the Director on the main floor of McLennan Library.

There are, in addition, a number of affiliated collections in various specialist departments, and students registered for Master's level and Ph.D. programs may also obtain borrowing privileges at other Quebec and Ontario university libraries on presentation of an introduction card available from the Director of Libraries.

4 RESEARCH POLICY, PATENTS, FELLOWS, ASSOCIATES

RESEARCH POLICY STATEMENT

General

Research in the University is relevant for the general benefit of man, as well as for a host of specific purposes. We are convinced that research flourishes only in a climate of liberty. Since the conditions for good research in our many disciplines are quite different, we have eschewed detailed regulations or attempts to cover all eventualities with blanket rules. Instead, individual investigators must to a large extent assume direct responsibility for the intellectual and ethical quality of their work.

The Vice-Principal (Research), acting on behalf of the Principal, has an overriding responsibility, but it is recognized that he is not in a position to examine applications, study progress reports, and monitor research activity, in sufficient detail to be able to detect any possible departure from acceptable standards in the work of our colleagues. Even if elaborate and expensive means could be found to enable administrative officers to exercise such detailed surveillance, it would be foolish to engage in such practice. In a community of responsible scholars, guidance is appropriate; censure may be appropriate after the event; but the detailed investigation of colleagues' intentions is not.

Much research, sponsored through contracts or otherwise, has some orientation to a mission, with the consequence that the sponsor may have priority interests in the result and may wish to impose restrictions either on the use of the data or the results, or both. Some of the restrictions asked for may be reasonable, but some are not.

It is the purpose of this document to establish some guidelines for all in the University, staff and students in the pursuit of their research. A particular purpose is to protect research workers against committing themselves to unreasonable restrictions and to other conditions which may run counter to our accepted notions of the integrity of university research.

A serious social responsibility rests on the individual members of the community who are best equipped through special knowledge to remain aware of the consequences of research activity, and the possibility of malign application must be balanced by them against potential benefits.

"Defence contracts"

The University does not allow its professors, students or facilities to be engaged in secret military research sponsored by civilian or military agencies. There is but one exception to this restriction. We are prepared, in principle, to consider applications for the prosecution of research concerned with the defence of Canada and sponsored by Canadian agencies. If such a project is brought forward, and when the Vice-Principal (Research) is satisfied that it is Canadian and defensive in character, he will refer it to the Executive Committee, and if the Executive Committee approves, the application will be allowed to stand. If the project is then initiated, the Vice-Principal and the Executive Committee will report its existence to Faculty Council, though restricted details will not be divulged at that time.

Official secrecy based on constitutional or public policy grounds

Certain kinds of research data in the custody of governments and other agencies are covered by restrictions to protect the privacy of individuals or business firms. These restrictions may make it necessary to limit the use or publication of data to comply with law or policy on confidential personal data. There may also be constitutional restrictions on the disclosure of findings, until they have been made public in the proper manner, through tabling in Parliament for example. Similarly, research done for commissions or committees of inquiry may be protected from premature disclosure.

If the restriction is not such as to prevent the eventual use of the material by students or staff researchers for thesis use or publication, these restrictions are not unreasonable, though the question of the

time limits is subject to clearly defined university policy described below. If the research cannot be freely used by students, it is not, generally speaking, appropriate for thesis research.

We will not accept unqualified secrecy rules; nor will we accept requests for delays in publication in excess of one year, though the Executive Committee has the right to accede to requests to three years in exceptional cases.

Commercial Contracts

In some kinds of work, at least limited commercial security is necessary to protect commercial application by the sponsor. Since in many areas we should not turn down all involvements with commercial sponsors, careful distinctions become necessary. Those contracts in which all or a major portion of the activity is concerned with the application of available knowledge to the solution of a problem, fall under the guidelines of the next section (5). In those contracts which are predominantly concerned with fundamental research, we refuse contracts with unconditional secrecy clauses, but accept contracts where we obtain agreement regarding at least the following elements:

(a) the interests of students involved, especially with respect to the examination of their theses, must not be jeopardized;
(b) the investigators' rights to publish the non-commercial aspects of the work must not be restricted
(c) where the commercial aspects of the work are intimately intertwined with the basic findings, only limited periods of delay in the right to publication can be accepted.

Consulting

Consulting may often be an academically worthwhile pursuit, particularly in professional faculties. Society often requires assistance which only the university has the expertise to provide. The professor should select his/her consulting work so that it enhances his/her research and teaching activities. The collection of information and perhaps some measure of control may be necessary by the professor's academic supervisor who should request information annually from the professor concerning the nature of his/her consulting work, the amount of time spent and money earned.

There are several types of consulting, but for the purposes of research policy, only those types need be considered which involve the employment of students, the use of University facilities or are undertaken within a contract to which the University is party. When graduate students are used, graduate Faculty is involved. If the student is employed on routine work separate from his/her academic program, the amount of time spent and money earned is of concern. If the work is an integral part of his/her academic program, the student must be given adequate freedom to pursue a worthwhile piece of research and, at the same time, the work performed must be a product of the student's own efforts and not those of his/her colleagues. The University is opposed to students deriving their basic financial support from the private consulting contracts of faculty members. If University facilities are used, then the University should be apprised through the academic supervisor, and recompensed for the use of these facilities.

The University endeavours to obtain, in contracts for consulting, freedom to publish the academically interesting aspects of the work within a definite time limitation which is usually two years. The University should only agree to assign patent rights arising specifically out of work done for the sponsor and then only when the sponsor undertakes to complete the application for the patent within, say, two years. Professors should also endeavour in their private consulting agreements to follow the same guidelines.

The delay of publication

Occasions arise where delays to the publication of the results of research may be justified. Instances of this, and the procedures to be followed, have already been mentioned. In connection with theses submitted by graduate students, circulation of the thesis through the University library or the National Archives may be stopped at the student's request for a period up to one year, if a patent application is pending, or if the premature disclosure is otherwise likely to jeopardize subsequent research; in such cases, the Executive Committee of the Faculty reviews the request and, if it approves, subsequently reports it to Faculty Council.

Procedures to obtain research support

When a member of the University staff wishes to undertake research involving the use of the University's facilities, or when the funds are to be used to support activities in which students or post-doctoral fellows are to be engaged as part of their educational experience, the University considers the activity to be part of its pattern of research and the following procedures apply:

All applications to external agencies for support of University research must, in the first place, be submitted to the chairman of the applicant's department for endorsement. In some faculties, the Dean's signature is also to be solicited, in others not; applicants should inform themselves on this point. Applications are then to be routed to either the Research Grants Office or the Research Contracts Office for review and signature by the Vice-Principal (Research).

If an award is subsequently made, it will be made to the University to administer. An account will be opened by the Special Funds Accountant

for the investigator to draw upon. All such funds will be accounted for as part of the University's research income and will be reported by the Chief Accountant in the normal way.

(The above is an abbreviation of "Elements of a Research Policy for McGill University". Copies of the complete document are available in the Faculty's Research Grants and Research Contracts Offices.)

GUIDELINES FOR NON-MEDICAL RESEARCH WITH HUMAN SUBJECTS

The University should insure that the welfare of human subjects who participate in research carried out by professors, students, and staff be safeguarded. This responsibility is complemented by our obligation to respect the law as it applies to privacy and human rights. Award-granting agencies require that the University protect subjects participating in funded research; ethical and possibly legal considerations require that we supervise all other research in this area as well.

Professional associations and learned societies have established ethical principles for research with human subjects. These standards specify the rights and the treatment which research subjects may expect. They deal with topics like privacy, the confidentiality of research information, the right of subjects to information about experimental procedures, the use of control groups, respect for subjects' psychological well-being, and respect for social stability.

The conscience of each investigator in applying these principles is the single most important protection for the welfare of human subjects. But the university, which also has a responsibility for their welfare, must assure that each investigator's ethical decisions have been confirmed or modified by the informed and dispassionate advice of peers who are not directly involved in the research.

The following committees and tasks are proposed as the means of exercising the University's responsibility. Since the Faculty of Medicine has already established a comprehensive research review procedure, this proposal is limited to the review of non-medical research.

a) Graduate Faculty Committee on Ethical Principles

A committee consisting of a chairman and four members chosen to represent, as widely as possible, the community involved in biosocial research. The purposes of this committee are:

i. to assert the University's concern with adherence to ethical standards in the conduct of all research;
ii. to receive recommendations from the local committees on their decisions on particular research projects;
iii. to review current and previous practice and recommend changes;
iv. to arbitrate, when requested by local committees, when a decision cannot be made about a particular research.

b) Faculty and Departmental Committees on Ethical Principles

These are *ad hoc* local committees convened for specific research projects by the department chairman, or, where the Faculty is recognized as an academic unit (as for example in Education), by the Dean. While it is the researcher's responsibility to request the formation of a review committee, it is the chairman's or dean's right to establish a committee on his/her own initiative, to review research in his/her jurisdiction. Each committee should consist of five people, at least one of whom should come from outside the department or faculty concerned. The chairman is the departmental chairman, or, where appropriate, the dean, or their nominees.

Each committee will:

i. acquaint itself with the details of the proposed research;
ii. ensure that the research conforms to acceptable ethical standards;
iii. issue a certificate to the effect that the proposed research has been evaluated and conforms to acceptable ethical standards;
iv. submit to the Graduate Faculty Committee on Ethical Principles a copy of the certificate of approval, referred to in iii above;
v. in case of difficulty, seek the advice of the Graduate Faculty Committee on Ethical Principles.

PATENTS

University Patent Policy

Principles and Objectives

The University recognizes as a fundamental principle that it should maintain complete freedom of research and the unrestricted dissemination of information. Research done solely in anticipation of profit is incompatible with the aims of the University. Nevertheless, it is recognized that in the course of its research activities, ideas or processes may be developed on which, in the public interest, patents should be sought. The University and the inventor have a responsibility to promote the effective development and utilization of such discoveries, and to insure that they will not be restricted in their use in a way which is detrimental to the public interest.

It is also recognized that the effective development of patents based on their research activities

have occasionally provided Universities with revenues which have made possible the encouragement of further research both in the field in which the patent was developed and the University as a whole.

Rights of the University, the Inventor, and Supporting Agencies

(1) The University affirms its interest in all patentable discoveries or inventions of members of its academic, technical or administrative staff, or by students registered in its Faculties, or by other personnel engaged in its teaching or investigative programs, which are made in the course of the performance of their duties within or without the University, or which are made possible by a measure of University support.

(2) The University affirms that it will provide recognition to inventors through a share in the proceeds from their inventions in the following ways:

i) The inventor and his/her academic associates will profit indirectly, through the allotment by the University of at least a portion of its income from the invention to their research programs.

ii) A modest fraction of the profit should be given to the inventor himself/herself, in order to encourage him/her to bring his/her invention to the patentable stage and to patent it under the auspices of the University, and to provide him/her with a measure of direct reward that does not depend upon his/her continuing employment at the University.

iii) The desires of the inventor with respect to the use of any surplus of revenues derived from his/her patents will be considered.

(3) The University affirms the principle that revenues from patentable inventions should normally be devoted to the further support of research.

(4) Under the terms of certain contracts and agreements undertaken by the University on behalf of members of the University with various agencies of government or other supporting bodies, the University and the grantee may be required to assign patent rights to the granting or contracting agency. The University recognizes the equity of outside sponsors of research with respect to patentable discoveries made under such grants, and retains the right to enter into such agreements when they do not conflict with its basic objectives.

(5) Notwithstanding the above, the University does not consider that it has an interest in the exploitation of the work of members of the University undertaken in their capacity as consultants to outside bodies, nor in cases in which the invention results from the demonstrably private research of the University member.

(6) The University affirms that nothing in this policy statement has reference to revenue derived from royalties from copyrights on work which has been published.

(7) Acceptance of this policy is a condition of employment by the University, and of registration as a student, and of being accepted in any capacity in any University controlled laboratory or program, and it is understood that no member of the University will enter into any patent negotiations without informing the University by writing to the Dean of Graduate Studies and Research that he/she is doing so.

(8) Procedures for implementing this Policy are deposited with the Secretary of the Board of Governors and the Dean of the Faculty of Graduate Studies and Research, from whom copies may be obtained. Representations relating to this Policy and its implementation should be made to the Dean for the consideration of the University Patents Committee.

University Patent Procedures

a) The evaluation and development of inventions and discoveries involves time, expense and specialized knowledge which the University cannot normally provide. It will therefore enter into non-exclusive agreements with outside bodies which provide these services, when the aims of these bodies are consistent with the University's objectives. In particular, such agreements will be negotiated with non-profit organizations specialized in this field such as Canadian Patents and Development Limited in Ottawa, and the Research Corporation in New York City.

b) A Patents Committee exists to implement the University's Patent Policy, as set out in the Statutes, to advise personnel on procedure for dealing with patent matters, and to act as the University's agent in dealing with those bodies with which it has contracted for the exploitation of patents. The Committee consists of a chairman appointed by the Principal from the academic staff of the University, the Dean of the Faculty of Graduate Studies and Research or someone delegated by him to represent that Faculty, a member designated by the Board of Governors, and one other faculty member selected by the Executive Committee of the Graduate Faculty. The member designated by the Board of Governors is a member *ex officio* and the University Research Grants Officer acts as non-voting Secretary to the Committee. The inventor or a representative chosen by him/her and the Dean of his/her Faculty, are also non-voting members of the Committee when it is considering a particular invention.

c) The University member shall notify the Dean of the Faculty of Graduate Studies and Research and through him the Patents Committee of any inventions or discoveries made by him/her in the course of his/her university duties which seem to him/her to be of a patentable nature. He/she shall, when required, submit to the

Patents Committee all information needed for the evaluation of the discovery and the application for patent rights, and give the University permission to disclose that information, under such safeguards as the Patents Committee may determine, to other qualified and interested persons.

d) The Patents Committee shall decide whether or not to submit any given invention or discoveries to one of the agencies representing the patent interests of the University. If no action is taken on the part of the University within a period of six months, or such lesser period as the inventor may show is necessary to protect his/her rights, full title to the invention and to any revenue which may be subsequently derived from it will revert to the inventor who may proceed on his/her own account if he/she so desires.

e) In those cases in which the agency (such as Canadian Patents Development Limited or Research Corporation) to which the University, on the recommendation of its Patents Committee, has submitted an invention for development, decides that it does not wish to proceed with a patent application, the Committee may in consultation with the inventor, consult other technical experts for advice, to decide whether to recommend that the University undertake the patent application on its own initiative.

f) A faculty member, student or other person to whom these procedures may apply, shall have the right to appeal to the Principal decisions of the Patents Committee which he/she considers unjust. In the instance where the matter at issue is whether the University has interest in the invention, the faculty member, student or other person shall accept the findings of an arbitrator acceptable to, and appointed by himself/herself and the university, the cost of such arbitration being shared equally by the two parties to the arbitration. In the event that the University and the inventor fail to agree upon an arbitrator, within thirty days of a formal invitation to do so, either party may request the appointment of an arbitrator from the President of the Montreal Board of Trade who shall appoint the arbitrator forthwith.

g) The University's agreements with the corporations charged with developing its patents will follow the normal pattern of agreements made between these corporations and universities. The inventor or inventors shall normally receive 15% of the gross proceeds of the invention; the remainder, will be divided between the University and the Corporations in accordance with the terms of the agreements. In the case in which there is more than one inventor, the distribution of the inventors' share shall be made on the recommendation of the co-inventors or, in the absence of such a recommendation, by the Patents Committee. The University's share shall normally be devoted to the support of research, special recognition being given to the laboratory, department or faculty in which the discovery was made. In general, at least one-half of the University's share shall be so allocated, provided that such a distribution is consistent with general University budgetary policies. The proportion may, however, vary with the magnitude of the benefit derived from the patent.

h) If an invention that appears to be patentable is made by a student registered in the University and using University facilities, he/she shall in consultation with his/her Director or the Chairman of his/her department submit it to the Patents Committee for consideration. His/her submission will then be dealt with in the same way as applications by staff members.

POST-DOCTORAL FELLOWS

Post-doctoral fellows are junior Ph.D. graduates engaged by a member of the University's academic staff to assist him/her in his/her research. Medical post-doctoral fellows possess the M.D. degree. Post-doctoral fellows may register with the Faculty through the Dean's Office (or in the case of medical post-doctoral fellows, through the Office of the Dean of Medicine) and receive thereby a university identity card, library and other staff privileges. They become liable to the provisions of the Health Insurance Plan.

RESEARCH ASSOCIATES

This title is intended to provide recognition and status on the University records for senior investigators who are neither candidates for a degree nor members of the regular teaching staff of McGill University, but are attached temporarily to a department because their assistance is required in the interests of a current program of research.

A Research Associate will normally hold the Ph.D. degree or an equivalent qualification.

Any grant which a Research Associate may receive must be either from McGill University or from some other institution promoting the advancement of learning, and must be paid solely for the furtherance of the research that he/she is pursuing and not for instruction or demonstration. A Research Associate may, however, with the permission of the Faculty, act as a director of research for graduate students associated with him/her.

OFFICE OF INDUSTRIAL RESEARCH

The Office of Industrial Research, an organization supported by the Federal Government exists to promote interactions and to negotiate research contracts between industry and the University.

McGILL UNIVERSITY LIBRARY

A1 DEPARTMENT OF AGRICULTURAL CHEMISTRY AND PHYSICS

Macdonald Campus
Ste. Anne de Bellevue, P.Q.
Canada H0A 1C0

STAFF

Professors – P.A. ANASTASSIADIS; B.E. BAKER; R.H. DOUGLAS
Professors Emeritus – R.H. COMMON; W. ROWLES
Associate Professors – M.A. FANOUS *(Chairman)*; N.N. BARTHAKUR; G.O. HENNEBERRY; P.H. SCHUEPP
Assistant Professor – H.J. HUECKEL
Associate Member – H.J.T. BEVERIDGE

The Department has laboratory and library facilities for research leading to the degrees of Master of Science and Doctor of Philosphy in Agricultural Chemistry.

Current research projects are in the areas of biochemistry, food chemistry and environmental pollution; and in areas of physics related to the interactions of bio-organisms with the atmospheric environment.

The Department also offers courses for graduate students in Physics which may be taken by students in other departments.

REQUIREMENTS

Requirements for the M.Sc. Degree

(1) Candidates are required to have the B.Sc. (Agr.) degree with honours standing or an equivalent qualification. Students holding a B.Sc. degree may be accepted if they have appropriate undergraduate work in chemistry with sufficient biology; otherwise a qualifying year will be required.
(2) Candidates for the M.Sc. degree are required to take the examinations in two courses for higher degrees given in the Department.
(3) Candidates may be required to take the examination in one of the cognate courses listed below.
Either Statistical Methods II, 360-610A,B, or Isotopic Tracer Techniques, 338-602B, or Advanced Animal Biochemistry (Department of Animal Science 342-650D) or Reproductive Physiology (Department of Animal Science 342-422B) *or* Digital Computing (Mathematics 360-203A).
(4) Candidates are required to complete an acceptable research project and to submit an acceptable thesis on their research.

Requirements for the Ph.D. Degree

Candidates will be judged principally by their ability in research. Course work will be arranged with other departments at Macdonald College to meet individual needs. Special arrangements for course work may be made with the McGill Departments of Chemistry, Biochemistry and Experimental Medicine. Candidates should normally be prepared to take the Comprehensive Preliminary Examination by the end of the first year in which they are candidates for the Ph.D. degree. Candidates are required to pass an examination in Technical French (354-300A,B). Candidates *may* be required to pass a similar examination in a second language.

Requirements for the M.A. and Ph.D. Degrees (Physics)

Accepted candidates for higher degrees in Physics are required to follow a program of study and research which is designed on an individual *ad hoc* basis, and approved by the Faculty of Graduate Studies and Research.

COURSES FOR HIGHER DEGREES

332-651A FOOD ANALYSIS I. (2 lectures and one laboratory period). Proximate analysis. Chemical examination of sugars, starches, cereals, oil seeds, fat and fat products, fruits, dairy and meat products. Vitamins, food colours, flavours. Contaminants. Physiochemical methods used in food analysis.
Professor Anastassiadis

332-652B FOOD ANALYSIS II. (2 lectures and one laboratory period). A specialized course on the principal analytical techniques used for analysis of carbohydrate, lipid, protein and vitamin constituents of foods and feedstuffs, and for detection and determination of chemical additives and contaminants.
Professor Beveridge

332-663B INDUSTRIAL UTILIZATION OF FARM PRODUCTS. (2 lectures, second term). The composition and structure of food systems including meat, milk, wheat and vegetable oils; the chemistry involved in certain industrial processes that utilize these farm products.
Professors Baker and Anastassiadis

332-664D GRADUATE SEMINAR. (1 hour).
Professor Baker and Staff

332-700D COMPREHENSIVE PRELIMINARY EXAMINATION. (See Faculty Regulations).
Staff

338-602B ISOTOPIC TRACER TECHNIQUES. (2 lectures and 1 four-hour laboratory, second term; Prerequisite: 338-303A or equivalent). An advanced practical course designed to introduce qualified students to laboratory equipment and techniques required for tracer experiments. The theory and use

of end-window and windowless G.M. counter, proportional counters, scintillation counters both solid and liquid types, and a Nier type mass spectrometer will be studied.
Professor Barthakur

360-610A,B STATISTICAL METHODS II. (3 hours lectures and 2 hours laboratory; Prerequisite: 360-201A or equivalent). Multiple, curvilinear and stepwise regression; partial and multiple linear correlation; simple analysis of covariance; cross and nested classifications; analysis of variance of disproportionate data: split-plot techniques; orthogonal comparisons; transformations.
Professor Fanous

360-612B MATHEMATICAL METHODS. (3 hours lectures; Prerequisite: 360-205B, Differential Equations, or equivalent). Partial differential equations and boundary-value problems; Fourier analysis and series solutions; Laplace Transforms; numerical methods; special topics.
Professors Schuepp and Kok

360-613B TECHNIQUES OF STATISTICAL ANALYSIS. (3 hours lectures; Prerequisite: 360-610A or equivalent). Non-parametric methods; multiple analysis of covariance; multivariate methods; sensitivity testing.
Professor Fanous

A2 DEPARTMENT OF AGRICULTURAL ENGINEERING

Macdonald Campus
Ste. Anne de Bellevue, PQ,
Canada H0A 1C0

STAFF

Professor – R.S. BROUGHTON
Associate Professors – E. McKYES; E.R. NORRIS
Assistant Professors – R. KOK
Research Associates – R. MURPHY; S. NEGI; V. RAGHAVAN

The Department offers facilities for research work in the areas of water control, agricultural structures, plant and animal environment, engineering properties of agricultural products, agricultural waste management, agricultural machinery and food engineering leading to the degrees of Master of Science and Doctor of Philosophy.

Candidates for M.Sc. and Ph.D. degrees should indicate in some detail their fields of special interest when making application for admission.

REQUIREMENTS

Language Requirements

Fluency in one of the official Canadian languages and a reading ability in the other is a requirement for an advanced degree. This requirement will be waived for non-Canadian students who can demonstrate a fluency in one of the official Canadian languages and a reading ability in any other language in which there is significant literature in their field of research. The two official languages in Canada are English and French. Suitable courses are available on both campuses.

Requirements for the M.Sc. Degree

The program for candidates for the M.Sc. degree will be developed in consultation with the candidate's research director and will normally include a minimum of eight term courses plus a thesis submitted in accordance with the rules of the Faculty. Courses will be selected from those offered in the Agricultural Engineering Department and those in such other departments as Agronomy, Animal Science, Civil Engineering, Mathematics, Mechanical Engineering, Renewable Resources and Economics.

Requirements for the Ph.D. Degree

(1) Candidates for the Ph.D. degree will normally register for the M.Sc. degree in the first instance. In cases where the research work is proceeding very satisfactorily, or where the equivalent of the M.Sc. degree has been completed at another university, candidates may be permitted to proceed directly to the Ph.D. degree.
(2) Courses of study selected for a Ph.D. program will depend on the existing academic qualifications of the candidate and on those needed for effective prosecution of research. Candidates are encouraged to undertake an additional course of study of their own choice in some field of the humanities, sciences or engineering not directly related to their research. The program will be established by consultation of the candidate with a committee that will include the research director and at least one other professor. Normally from six to twelve term courses will be required beyond the M.Sc. degree.
(3) Students who take their B.Sc. and M.Sc. at McGill University may be required to spend one session in study at another university.
(4) A comprehensive examination, Agricultural Engineering 336-701D, will be taken either late in the Ph.D. 2, or early in the Ph.D. 3 registration year, to qualify to proceed to the completion of the Ph.D. degree.

COURSES FOR HIGHER DEGREES

* **336-504B INSTRUMENTATION AND CONTROL.** (3 lectures and 2 hours laboratory, even numbered years). Prerequisite: Circuit analysis 336-312A. Principles and operation of instrument systems used in measurement and control in agricultural processes and research.
Professor Norris

* **336-511B AGRICULTURAL AND EARTHMOVING POWER MACHINERY.** (2 lectures and 2 hours laboratory, odd-numbered years). An advanced treatment of off-road vehicle design. Topics include performance characteristics, internal combustion engines, analysis of power transmission devices, distribution of stresses between wheeled or tracked vehicles and soil, mobility and pull efficiency, soil cutting, earthmoving, plowing, ripping and transport, wheel and track, steering geometries, vehicle morphology.
Professor McKyes

336-602A ENVIRONMENT CONTROL IN AGRICULTURAL STRUCTURES. (3 lectures, 2 hour laboratory). A study of the environmental effects of housing on stored crops and animals. The production, maintenance, and control of the environment. The effects of the interior environment on structural components.

336-603D GRADUATE SEMINAR. (1 hour).
Staff

* **336-605B FUNCTIONAL ANALYSIS OF AGRICULTURAL MACHINES.** (2 lectures, odd numbered years). Theoretical analysis of unit operations to be performed by various tillage and harvesting machines. These analyses will consider the physical and biological properties of the materials affected by the machines.
Professor Norris

336-606A LAND DRAINAGE ENGINEERING. (3 lectures, odd-numbered years). Land drainage in relation to soils and crops. Design of regional drainage systems, stability of ditches, ice problems. Design of subsurface drainage systems. Theories of flow into drain tubes. Hydraulics of wells. Drainage of irrigated lands. Water table control.
Professor Broughton

* **336-607B ENGINEERING ASPECTS OF PLANT ENVIRONMENT.** (3 lectures, even-numbered years). The energy budget of the earth's surface. Laminar and turbulent flow in the air layer near plant-covered ground. Evaporation and transpiration. Artificial protection against advection and radiation frosts. The use of artificial means to improve the environment of plants. Control of environment in plant growth structures.

336-608A,B SPECIAL PROBLEMS IN AGRICULTURAL ENGINEERING. (2 conferences, either term). Laboratory, field and library studies and reports on special problems related to Agricultural Engineering that are not covered in the regular course work.
Professor Norris and Staff

* **336-609A HYDROLOGY.** (2 lectures, even-numbered years). A fundamental course in Hydrology. Topics covered include: the inter-relationships between precipitation, interception, infiltration, evapo-transpiration, and surface runoff; analysis of precipitation and streamflow data; use of hydrographs; hydraulics of groundwater and wells; use and replenishment of groundwater; evaporation and transpiration; irrigation water requirements.
Professor Broughton

336-610D TECHNOLOGY OF FERMENTED FOOD PRODUCTION. (3 lectures, offered in alternate years, given in 1978-79). Engineering aspects such as heat generation and transfer, fermentation vessel design, scale up and control instrumentation are considered as well as specific processes. Microbiological topics include artificial mutant induction, laboratory culture maintenance and phage contamination and control.
Professors Kok and Idziak

336-701D COMPREHENSIVE EXAMINATION IN AGRICULTURAL ENGINEERING.
Staff

A3 DEPARTMENT OF ANIMAL SCIENCE

Macdonald Campus
Ste. Anne de Bellevue, P.Q.
Canada H0A 1C0

STAFF

Professors – E. DONEFER *(Nutrition)*; F.A. FARMER *(Nutrition)*; J.E. MOXLEY *(Animal Genetics)*; S. TOUCHBURN *(Chairman) (Nutrition)*
Associate Professors – R.B. BUCKLAND *(Animal Genetics and Physiology)*; B.W. KENNEDY *(Animal Genetics)*; P.C. LAGUE *(Physiology)*
Assistant Professors – T. HARTSOCK *(Nutrition)*; H.J. HUECKEL *(Nutrition)*; P.A. MARTIN *(Physiology)*
Lecturer – H. GARINO *(Nutrition)*
Auxiliary Professor – L. LATRILLE *(Nutrition)*

The department provides laboratory and library facilities for research work leading to the degrees of Master of Science and Doctor of Philosophy in each of the following diciplines:

Animal Genetics
Animal Physiology
Nutrition

REQUIREMENTS FOR ADVANCED DEGREES

Candidates are required to have either a Bachelor's degree in Agriculture or a B.Sc. degree with specialization in biology, biochemistry or food science with honours standing or its equivalent.

Undergraduate Courses

A candidate will be required to complete undergraduate courses in Animal Science or in the basic sciences when his background in his elected discipline is inadequate.

342-301B PRINCIPLES OF ANIMAL BREEDING.

342-311B ANIMAL PATHOLOGY.

342-323A MAMMALIAN PHYSIOLOGY.

342-422B REPRODUCTIVE PHYSIOLOGY.

342-330A FUNDAMENTALS OF NUTRITION.

342-331B FUNDAMENTALS OF HUMAN NUTRITION.

342-332B APPLIED ANIMAL NUTRITION.

342-424B METABOLIC ENDOCRINOLOGY AND GASTROINTESTINAL PHYSIOLOGY.

342-432A ADVANCED ANIMAL NUTRITION.

Candidates may be required to take one or more of the following courses on the Montreal campus:

516-602A ADVANCED ENDOCRINOLOGY – STEROID HORMONES.

516-603B ADVANCED ENDOCRINOLOGY – NITROGEN CONTAINING HOROMONES.

Course Requirements by Department

In addition to the departmental courses indicated below, all candidates will be required to complete any cognate courses prescribed by their director of research. The completion of an acceptable thesis based upon the candidate's own research will be required.

Animal Genetics

(a) M.Sc. PROGRAM – At least two of the following courses (342-603A, 342-604A, 342-605B, 342-606B,) plus 342-690D and at least 3 additional one-semester equivalent courses selected in consultation with director of research.

(b) Ph.D. PROGRAM – At least three of the following courses (342-603A, 342-604A, 342-605B, 342-606B, 342-722D) or their equivalent, plus 342-690D and 342-701D and at least 3 additional one-semester equivalent courses selected in consultation with director of research.

Animal Physiology

(a) M.Sc. PROGRAM – Courses 342-621D, 342-650D and 342-690D plus at least one additional course selected in consultation with director of research.

(b) Ph.D. PROGRAM – 342-621D, 342-650D or their equivalents and 342-690D and 342-701D and at least two additional courses selected in consultation with director of research.

Nutrition

(a) PROGRAM – Courses 342-631D, 342-632D, 342-650D, 342-690D and at least one additional course selected in consultation with research director.

(b) Ph.D. PROGRAM – Required courses for M.Sc. program or their equivalent plus 342-690D, 342-701D and at least two additional courses selected in consultation with research director.

Graduate Courses

* **342-603A PHYSIOLOGICAL GENETICS OF DOMESTIC ANIMALS.** (2 lectures). A consideration of biochemical and physiological variation in domestic animals as related to productive traits.
Professor Buckland

342-604A POPULATION GENETICS. (2 lectures). A consideration of the problems involved in the improvement of animals and the application of genetics in their solution.
Professor Moxley

* **342-605B ESTIMATION OF GENETIC PARAMETERS** (2 lectures). General methods for the estimation of components of variance and co-variance are considered, with specific emphasis given to their application to heritability, repeatability and genetic correlation estimation.
Professor Kennedy

342-606B SELECTION INDEX AND ANIMAL IMPROVEMENT (2 lectures). Selection index principles and their application to livestock improvement are considered, with emphasis on the estimation of genetic breeding values for single and multi-trait selection.
Professor Kennedy

342-607A LINEAR MODELS IN AGRICULTURAL RESEARCH. (3 lectures). The theory and application of linear models to agricultural research is considered. Special emphasis is given to the analysis of experimental and survey data with unequal subclass numbers.
Professor Kennedy

342-621D ADVANCED PHYSIOLOGY OF ANIMALS. (2 lectures, 1 laboratory). Studies on the organization and function of animal systems, from the viewpoint of cellular and mammalian physiology. An experimental approach is used to investigate

major areas of physiology such as nervous integration, circulation of body fluids, muscle contraction, intermediary metabolism, temperature regulation, and hormoral co-ordination.
Physiology Staff

342-631D EXPERIMENTAL TECHNIQUES IN NUTRITION. (1 lecture, 1 laboratory). A series of lectures and laboratories of nutritional experimentation and surveys. Emphasis will be placed on the design and conduct of nutrition studies, selection of experimental animals, chemical and biological assays, statistical analysis, interpretation of data and preparation of technical reports.
Nutrition Staff

* **342-632D ADVANCED NUTRITION.** (2 lectures). A series of lectures and discussions on subjects of current interest in nutrition, with special reference to energy, amino acids, vitamins and minerals, their quantitative requirements and metabolic interrelationships.
Nutrition Staff

342-650D ADVANCED ANIMAL BIOCHEMISTRY. (2 lectures). Enzymology and biological oxidation; intermediary metabolism of carbohydrates, lipids, proteins and other compounds of nitrogen; endocrinological aspects of metabolism; metabolic roles of inorganic ions, vitamins and growth factors.
Professors Touchburn and Hueckel

342-691D SPECIAL PROJECTS IN ANIMAL SCIENCE. For students who undertake a research or library project not offered in other courses.
Staff

342-695D, -696D, 697D and 698D SEMINAR (1 hour)
ProfessorKennedy

342-701D DOCTORAL COMPREHENSIVE EXAMINATIONS. (See Faculty Regulations).

342-730D COLLOQUIUM IN NUTRITION. (1 lecture; Prerequisite: Animal Science 342-632D). The student will prepare two scholarly, well-documented written reports on recent developments in nutrition other than those of the thesis or seminars. They will form the basis of oral presentations to the staff and graduate sudents in nutrition.
Nutrition Staff

342-731D ADVANCED RUMINANT NUTRITION. (2 lectures; Prerequisites: Animal Science 342-424B and 342-650D or equivalent). A series of discussions on the organization and function of the ruminant digestive system, methods of study and factors which influence digestion and utilization of feeds.
Professors Donefer and Latrille

A4 DEPARTMENT OF BIOLOGY

Stewart Biology Building
1205 McGregor St.
Montreal, P.Q.
Canada H3A 1B1

Course Given at Macdonald College

* **177-675B STATISTICAL METHODS IN GENETICS.** Discussions of methods of analysing genetic changes in plant and animal populations. Dialled cross techniques are examined in some detail, but the choice of topics is by no means rigid. The course is open to graduate students from both Macdonald College and the Biology Department, McGill.
Professor Tyson and Dr. Fieldes

A5 DEPARTMENT OF ENTOMOLOGY AND LYMAN ENTOMOLOGICAL MUSEUM AND RESEARCH LABORATORY

Macdonald Campus
Ste. Anne de Bellevue, P.Q.
Canada H0A 1C0

STAFF

Professors – E.M. DuPORTE *(Emeritus)*; D.K. McE. Kevan *(Director, Lyman Entomological Museum and Research Laboratory)*; J.E. McFARLANE; R.K. STEWART *(Chairman)*; V.R. VICKERY *(Curator, Lyman Entomological Museum and Research Laboratory)*
Associate Professor – W.N. YULE
Assistant Professors – F.E.A. ALIKHAN; S.B. HILL
Associate Members of Department – Professors E. MEEROVITCH *(Institute of Parasitology)* and J.R. BIDER *(Wildlife Biology)*
Guest Lecturers – H.F. HOWDEN; E.J. LeROUX; E.E. LINDQUIST; J.F. McALPINE and R.R.M. MASON *(Biosystematics Research Institute, Ottawa)*

A liberal interpretation is put on the term Entomology. Excellent laboratory and library facilities are available for the courses listed below and for research.

By an informal arrangement, part of a student's research may be done at the Biosystematics Research Institute, including the National Insect Collection, Ottawa, within reasonable distance of the Department. Students may be recommended to

take undergraduate courses or courses offered by other departments of the University, either as part of their major work or as cognate subjects. All members of the graduate school are expected to take an active part in all departmental seminars and to address at least one seminar meeting per year. For those with credit in 350-695D, this may take the form of a Research Report.

The Lyman Entomological Museum and Research Laboratory, although integrated with it, is not administratively a part of the Department of Entomology, but it is academically staffed by, and all its students are registered in, that department. It provides excellent facilities for students of taxonomy.

REQUIREMENTS

Requirements for the M.Sc. Degree

Candidates for admission must have had (1) satisfactory previous training in mathematics, physical sciences and biology; and (2) have achieved a high academic standing in a Bachelor's degree in Zoology or Entomology. For students who satisfy these conditions the minimum period of study is two years. Students whose equivalent courses are deficient in Entomology may be required to take advanced undergraduate courses sufficient to ensure a good general knowledge of Entomology.

In addition to presenting a thesis the student shall take such courses and write such examinations as are deemed necessary by the Chairman of the Department in consultation with the candidate's research director. Normally this amounts to a minimum of two full graduate courses (or their equivalent) in addition to 350-695D.

The candidate will normally be expected to spend at least one summer session in full-time research on the Macdonald Campus or, under suitable direction, at some other approved institution. Preliminary studies may begin before the opening of the academic year.

Requirements for the Ph.D. Degree

Students who have obtained a high standing in the M.Sc. degree in Entomology or its equivalent (including the M.Sc. degree in Zoology, with a sound entomological background), may proceed to the Ph.D. degree in two additional years. Under certain circumstances students holding a Bachelor's degree of high standing may change their registration from the M.Sc. degree to the Ph.D. degree with the consent of the Chairman of the Department and the Faculty of Graduate Studies and Research. However, before these students are allowed to enter third year, they must pass an examination to determine their fitness to proceed. This will normally take the form of the comprehensive examination (350-701D) taken by all Ph.D. candidates before proceeding to a second year of residence on the Macdonald Campus. Three years of residence are required of such students.

In addition to presenting a thesis the candidate may be required to take such courses and pass such examinations as are decided upon in consultation with the Chairman of the Department and the director of his research. Normally no course work (other than a Seminar) will be required during the final year and not usually more than one full course (or its equivalent) during the preceding year for candidates already possessing an M.Sc. degree from McGill University or its equivalent. Candidates may, however, be advised or required to attend courses bearing on their research work, or to make up deficiencies, at any time during their period of resident study.

Participation in seminars will be taken into consideration in the final assessment of the candidate. Language requirements are in accordance with Faculty regulations. Two languages, other than English, will normally be required (selected from French 125-790D, German 129-790D and Russian 141-790D).

Ph.D. candidates may be permitted to spend one of their years of full-time study at an approved university or research institution other than McGill University, provided that they spend at least two academic sessions in residence at McGill University. The candidate may be required to spend the equivalent of two summer sessions in fulltime research on the Macdonald Campus or, under suitable direction, at some other approved institution. Preliminary studies may begin before the opening of the academic year.

Candidates for M.Sc. or Ph.D. degrees should indicate in some detail their fields of special interest when making application for admission. Facilities are available for research in most branches of entomology and in related fields, but candidates with special problems should consult the Chairman of the Department in advance.

COURSES FOR HIGHER DEGREES

350-610D ADVANCED TAXONOMY AND ZOOGEOGRAPHY.
Professors Kevan and Vickery

350-625A GENERAL INSECT ECOLOGY.
Professor Stewart
(Normally taken in conjunction with 350-726B)

350-631A SOIL FAUNA.
Professors Hill and Kevan
(Normally taken in conjunction with 350-632B)

350-632B SOIL ECOLOGY.
Professors Hill and Kevan
(Normally taken in conjunction with 350-631A).

350-635B AQUATIC ENTOMOLOGY.
Professor Ali Khan

350-640D ADVANCED ECONOMIC ENTOMOLOGY.
Professor Yule

350-660A,B EARLY HISTORY OF ENTOMOLOGY. (Reading knowledge of German required).
Professor Kevan

350-695D SEMINAR AND RESEARCH REVIEW. (Two meetings weekly).
Professor Hill and Staff

350-701D Ph.D. COMPREHENSIVE EXAMINATION.
Entomology Staff and Others

350-715D ADVANCED INSECT MORPHOLOGY
Professors Kevan, Ali-Khan and DuPorte

350-720D ADVANCED INSECT PHYSIOLOGY.
Professor McFarlane

350-726B INSECT POPULATION DYNAMICS.
Professor Stewart
(normally taken in conjunction with 350-625A).

350-750A,B VETERINARY AND MEDICAL ENTOMOLOGY. (Given only irregularly by special arrangement when demand sufficient).
Professor Kevan, assisted by Professors Meerovitch and Ali Khan

366-680A NEMATOLOGY.
Professor Estey

366-681B NEMATODE DISEASES OF PLANTS
Professor Estey

374-605D WILDLIFE ECOLOGY.
Professor Bider

391-640C APPLIED PARASITOLOGY.
Professor Meerovitch

A6 DEPARTMENT OF MICROBIOLOGY

Macdonald Campus
Ste. Anne de Bellevue, PQ,
Canada H0A 1C0

STAFF

Professors – A.C. BLACKWOOD; R. KNOWLES; R.A. MacLEOD *(Chairman)*;
Associate Professors – I.W. DeVOE; E.S. IDZIAK; J.M. INGRAM
Associate Members – R. KOK *(Agricultural Engineering)*; H.M. SCHULMAN *(Lady Davis Institute)* C.E. TANNER *(Parasitology)*

Adequate laboratory and library facilities are available for courses leading to higher degrees, and for research. Candidates for the higher degree must meet the course requirements satisfactorily but are judged principally by their research ability. Normally in this Department the research problem will be on microbial physiology and bio-chemistry or on microbiological aspects of soil, food or water.

REQUIREMENTS

Requirements for the M.Sc. Degree

Candidates are required to have the B.Sc. degree in the Biological Sciences, preferably with a Major in Microbiology or its equivalent. Students with a B.Sc. degree in other disciplines or majors who lack sufficient training will be required to take either a qualifying year or undergraduate courses sufficient to ensure a good general knowledge of microbiology. Students with sufficient training and graduate level standing (B or higher) will be required to take part in Graduate Seminars as well as pass examinations in graduate courses selected in consultation with the Thesis Supervisor and the Department Chairman. The candidate must present a satisfactory thesis based on his own research.

Requirements for the Ph.D. Degree

Candidates, normally, are required to have received an M.Sc. degree or its equivalent. The candidate must demonstrate a sound critical approach to and a capacity for research and must complete an original problem and present a satisfactory thesis based on his/her research. In addition, the candidate will be required to take examinations in courses given by this department or in cognate subjects given at Macdonald College or at the Montreal Campus and to take part in the Graduate Seminar in each year of residence. The candidate will be required to take an oral or written comprehensive examination (Course 362-701D) no later than the end of the Ph.D. 2 year. An examination in languages other than English is not required.

COURSES FOR HIGHER DEGREES

* **362-760D PHYSIOLOGY OF MICROORGANISMS.** (2 hours, offered in alternate years, next given in 1978-79). Selected topics on physiological mechanism associated with the life and growth of microbial cells; biosynthetic pathways and intermediary metabolism of carbohydrates, fats and proteins. Special emphasis is placed on the inter-regulation of these pathways.
Professor Ingram

* **362-761D SOIL MICROBIOLOGY.** (2 hours offered in alternate years, next given in 1978-79). A consideration of recent advances in selected aspects of soil microbiology; autotrophs, nitrogen relationships, microfauna, soil-borne pathogens, antibiotics in soil, degradation of recalcitrant molecules, etc.
Professor Knowles

362-762D MICROBIAL BIOCHEMISTRY. (2 hours offered in alterrate years, given in 1977-78). A topic course concerned principally with recent developments in the study of metabolic regulation, electron transport, energy transducing systems, the biochemistry and biosynthesis of bacterial cell wall polymers and mechanisms of membrane transport.
Professor MacLeod

362-763D INVITATION LECTURES IN MICROBIOLOGY. (1 hour). Prominent scientists, actively engaged in research will be invited to present a series of lectures in the field of their research interest. The speakers and their topics will be chosen to complement the offerings of the permanent staff.

362-764A. READING AND CONFERENCE. (2 hours, offered in alternate years, given in 1977-78). A course in which student presentations, taken from current literature, are concerned with various aspects of a central topic chosen for the term. Such presentations are designed to be informal and to generate student discussions. The central topic will change from lerm to term depending on the Staff coordinator and the students.
Staff

362-765B. READING AND CONFERENCE. (2 hours, offered in alternate years, given in 1977-78). Description as for 362-764A).
Staff

* **362-766A. READING AND CONFERENCE.** (2 hours, offered in alternate years, next given 1978-79). Description as for 362-764A.
Staff

* **362-767B. READING AND CONFERENCE.** (2 hours, offered in alternate years, next given 1978-79). Description as for 362-764A.
Staff

362-769D GRADUATE SEMINAR. (1 hour). All graduate students are required to present seminars on selected topics and to prepare and discuss reports from the current literature.
Staff

362-701D COMPREHENSIVE EXAMINATION. (See Faculty Regulations).
Staff

A7 INSTITUTE OF PARASITOLOGY

Macdonald Campus
St. Anne de Bellevue, PQ,
Canada H0A 1C0

STAFF

Professors - NEIL A CROLL *(Director)*; EUGENE MEEROVITCH; CHARLES E. TANNER
Associate Professor – ROBERT P. HARPUR
Assistant Professors – GAETAN M. FAUBERT; MANFRED E. RAU
Lecturer – MARK A. CURTIS
Research Associate – M.M. GOIL

The Institute has full animal, laboratory and library facilities to conduct research into all aspects of Animal Parasitology. Candidates for either the M.Sc. or the Ph.D. degree should possess an honours degree in a biological subject, or in medicine or veterinary science. Previous experience in Parasitology is less important than a sound background in experimental biology.

REQUIREMENTS

Requirements for the M.Sc. Degree

Candidates with insufficient background will be required to spend a qualifying year of study. Those already at an acceptable standard may proceed to 391-600D. Candidates will be required to write a full research proposal and demonstrate an understanding of research techniques, and to successfully perform in an oral examination within the first 6 months of their registration, to fulfil the requirements of 391-600D. While the emphasis is on research, evidence of satisfactory completion of 391-600D and 391-603D is compulsory before submission of the thesis together with any other course in related subjects which may be required. While in the Institute all students are required to participate in Seminar course 391-605D. A minimum of two years is needed to complete all the requirements, although in exceptional circumstances it may be one year.

Requirements for the Ph.D. Degree

Candidates will normally hold a Master's degree in a biological science, but in exceptional circumstances very well qualified students may proceed directly to a Ph.D. registration. Candidates will be required, as soon as they are ready, but always within 6 months, to proceed to 391-700D. For this, a full research proposal and an understanding of experimental techniques must be successfully demonstrated in an oral examination. Course 391-703D is compulsory thereafter, together with any other course in related subjects which may be required. Evidence of satisfactory completion of 391-700D and 391-703D is compulsory before submission of the thesis. While in the Institute, all students are required to participate in the (Institutional) seminars (391-605D). A minimum of three years residence is necessary to complete the requirements.

COURSES FOR HIGHER DEGREES

391-504L APPLIED PARASITOLOGY. An intensive course lasting three weeks, usually offered a the end of regular lectures in the spring. This course is also given to laboratory assistants from Provincial

laboratories as part of the role of the Institute as National Reference Centre for Parasitology.
Professor Meerovitch

391-600D PRELIMINARY ORAL EXAMINATION FOR M.Sc. CANDIDATES.
Supervisor and All Staff

391-603D ADVANCED PARASITOLOGY. Lectures, field work and laboratory work with assigned reading on selected topics in Parasitology and related fields.
Professor Harpur and Staff

391-605D PARASITOLOGY SEMINAR. A course of informal discussion on current problems and concepts in Parasitology and related fields. All students are required to participate throughout their time at the Institute.

391-700D PRELIMINARY ORAL EXAMINATION FOR Ph.D. CANDIDATES.
Supervisor and Staff

391-703D COMPREHENSIVE COURSE FOR Ph.D. CANDIDATES. A course of reading, essays, and tutorials, designed to fit the needs of individual candidates.
Staff

A8 DEPARTMENT OF PLANT SCIENCE

Macdonald Campus
Ste. Anne de Bellevue, PQ,
Canada H0A 1C0

STAFF

Professors – J. DAVID: R.H. ESTEY; W.F. GRANT; H.R. KLINCK; R.L. PELLETIER; W.E. SACKSTON; H.A. STEPPLER *(Chairman)*
Associate Professors – B.B. BIBLE; N.C. LAWSON; C.D. TAPER
Assistant Professors – B.E. COULMAN; G. GENDRON; J.F. PETERSON; M.A. VISWANATHAN; A.K. WATSON; D.W. WOODLAND

The Department of Plant Science provides for study in Agronomy, Horticulture, Plant Pathology and Genetics. Within these broad areas, research facilities - both field and laboratory - are available for investigations in plant breeding, crop physiology, crop management, processing of fruit and vegetable crops, plant ecology, the epidemiology and biology of plant diseases, the physiology of diseased plants, plant virology, cytogenetics, biosystematics, nematology, mycology, and weed biology.

An advisory committee is named for each student, having the responsibility for developing the program of study appropriate to the student's background and area of specialization.

REQUIREMENTS

Requirements for the M.Sc. Degree

Candidates are required to have a B.Sc. (Agr.) degree with high standing or an equivaent qualification. The candidate must complete the course and research program established by his/her advisory committee. The program will normally consist of:

1. five single term courses or their equivalent;
2. one seminar course to be taken ineach year of resident study;
3. the invitational seminar 367-690D
4. the presentation of a thesis.

Those whose background is deemed iradequate for their chosen field of specialization may, in addition, be required to take selected undergraduate courses.

Plant Science research programs normally require two years for completion.

Requirements for the Ph.D. Degree

The student should have an M.Sc. degree in an area related to the chosen field of specialization for the Ph.D. program. The student will follow the program of study established by his/her advisory committee. This program will consist of:

1. one seminar course to be taken ineach year of required residence;
2. the invitational seminar 367-690D;
3. the Ph.D. Comprehensive examnation, 367-701D, which must be passed before registering in Ph.D. 3;
4. the presentation of a thesis;
5. other courses deemed necessary for the chosen area of specialization.

Students who have taken their M.Sc degrees at McGill University may be required to spend one term in study at another university.

COURSES FOR HIGHER DEGREES

367-602B FORAGE CROP EXPERIMENTATION. The conduct of forage experiments and methods of estimating parameters; current literature used as basis for discussion.
Professors Steppler and Coulman

367-603D POMOLOGY. The biology of pomological species, and the technology of orchard and small fruit production; major aspects, significant research, recent advances.
Professor Taper

367-604D VEGETABLE CROPS. Discussion and reading assignments on the application of plant physiology and other sciences to the production of vegetable crops.
Professor Bible

367-610A CYTOLOGY. An intensive study of the cell with emphasis on the nucleus, nuclear division, chromosome morphology, chromosome aberrations, euploidy and aneuploidy, and chromosome behaviour in hybrids.
Professor Grant

367-611B CYTOGENETICS. A study of cytological and genetical topics at an advanced level including polyploidy, apomixis and parthenogenesis, chromosome and gene replication, sex determination, and karyotype analysis.
Professor Grant

367-612B MICROBIAL GENETICS. An analysis of recent progress in the genetics of microorganisms including viruses, bacteria, yeasts, paramecia, algae and fungi.
Professor Grant

367-613A MUTAGENESIS AND RADIATION BIOLOGY. A study of the nature of mutations and the genetic effects of radiation and chemical mutagens on plants and animals and in crop improvement.
Professor Grant

367-614A ADVANCED PLANT BREEDING. The principles and practices of plant breeding with consideration of modern theoretical approaches and with special emphasis on the application of methods to cross-pollinated crop species.
Professor Lawson

367-615B CEREAL CROP IMPROVEMENT. A consideration of methods of improving productivity in self-pollinated crops with emphasis on cereal species. Attention is given to principles and practices in the development of improved cultivars, production management systems, genotype-environment interactions, physiological and nutritional aspects of cultivar improvement, and plant breeders' rights.
Professor Klinck

367-620A CROP PHYSIOLOGY; GROWTH AND DEVELOPMENT. A study of plant growth and development as related to the improvement of agronomic and horticultural crops, with emphasis on plant hormones, phytochrome, germination, growth, flowering, fruit development, and senescence. These topics will be reviewed in discussion sessions with each student contributing both oral and written presentations.
Professor Bible

367-621B CROP PHYSIOLOGY: PLANT PROCESSES. A study of plant metabolic phenomena as related to the improvement of agronomic and horticultural crops, with emphasis on plant mineral nutrition, translocation, water relations, photosynthesis and respiration. (Course format as stated under course 367-620A).
Professor Bible

* **367-622B BIOLOGICAL CONTROL OF UNDESIRABLE VEGETATION.** Directed reading and discussion on the use of plant-feeding organisms and disease to reduce the density of undesirable vegetation in favour of more useful plant species. (Alternate years, not offered in 1977-78).
Professor Watson

367-623B BIOCHEMISTRY AND PHYSIOLOGY OF HERBICIDES. Mechanisms of penetration, translocation, selectivity and modes of action of herbicides and their interactions with the environment. (Alternate years, offered in 1977-78).
Professor Watson

367-624D FRUIT AND VEGETABLE PRESERVATION. Lectures and reading assignments on the fundamental processes and recent developments in the techniques of fruit and vegetable preservation.
Professor David

367-630B DISEASES OF FIELD AND FOREST CROPS. (Alternate years, offered in 1977-78). The distribution, economic importance, symptoms, causes, and principles underlying control of diseases of major field and forest crops.
Professor Viswanathan

* **367-631B DISEASES OF HORTICULTURAL CROPS.** (Alternate years, not offered in 1977-78). The distribution, economic importance, symptoms, causes, and principles underlying control of diseases of major horticultural crops.
Professor Viswanathan

367-632B PLANT VIRUS DISEASES. A consideration of the major groups of viral plant pathogens, viroids, and mycoplasma-like organisms, their modes of transmission, and virus-vector relationships.
Professor Peterson

367-633A ADVANCED MYCOLOGY. Selected topics and recent advances in those aspects of mycology that have not been adequately covered in other courses. In addition to the lectures, there will be reading assignments, reports and seminar-type discussions.
Professor Estey

367-634A NEMATOLOGY. A study of the morphology, anatomy, behaviour, distribution and taxonomy of nematodes from agricultural soils. Laboratory exercises and assignments are important components of this course.
Professor Estey

367-635B NEMATODE DISEASES OF PLANTS. Nematodes and their environment, with emphasis on their biotic environment in relation to plants, plant diseases and plant disease control. This is a non-laboratory course which includes reading assignments, reports and term papers.
Professor Estey

367-636D ADVANCED PLANT PATHOLOGY. The assessment and economics of crop losses due to disease. The epidemiology of infectious plant diseases. This includes mathematical analysis and modeling and a study of the host, pathogen, and environmental factors involved in epidemics. Lectures, reading assignments, and term papers.
Professor Pelletier

367-637D PRINCIPLES OF PLANT PATHOLOGY. The histology and physiology of the interactions between host plants and their pathogens. Lectures, reading assignments, and term papers.
Professor Pelletier

367-638A or B HISTORY OF PLANT PATHOLOGY. A survey of the major events leading to a recognition of the cause and the control of plant diseases, together with a commentary on some of the effects of plant diseases on human society in the Middle East, Europe and North America.
Professor Estey

367-650D ADVANCED SYSTEMATIC BOTANY. This course deals with the literature and philosophy of plant classification, processes of speciation in higher plants, sources and interpretation of data, biosystematic methods and plant nomenclature.
Professor Woodland

367-660B DESIGN OF EXPERIMENTS. (Prerequisite: Mathematics 360-610A or equivalent). The design and analysis of experiments, with particular reference to agricultural research; factorials, incomplete block and lattice designs.
Professor Steppler

367-661C METHODS OF AGRONOMIC RESEARCH. A summer course to acquaint the student with the techniques of agronomic research in use in the experimental field.
Professor Steppler

367-662A or B PLANT PATHOLOGY RESEARCH METHODS. Preparation of culture media. Sterilization of media, glassware, equipment, etc. Methods of isolation, culture, and preservation of pathogens. Methods of inoculation, growth chamber techniques, etc.
Professor Pelletier

367-663E PLANT VIROLOGY METHODS. A laboratory course, dealing with methods and techniques of virus characterization.
Professor Peterson

367-664D ADVANCES IN AGRONOMY. One-hour weekly discussion by students and staff on technical topics of current interest in agronomy. The organization of agronomic research and agronomic groups will be considered.
Professor Steppler

367-670D SPECIAL TOPICS I. Prescribed reading, conference and practical work on selected topics in the student's area of specialization.
Staff

367-671D, -672D, -673D, -674D SEMINAR IN AGRONOMY. One-hour weekly meetings; each student will present at least one seminar each term.
Professor Klinck

367-675D, -676D, -677D, -678D SEMINAR IN HORTICULTURE. One-hour weekly meetings; each student will present at least one seminar each term.
Professor Bible

367-679D, -680D, -681D, -682D SEMINAR IN PLANT PATHOLOGY. One-hour weekly meetings; each student will present at least one seminar each term.
Professor Pelletier

367-683D, -684D, -685D, -686D, SEMINAR IN BOTANY AND GENETICS. One-hour weekly meetings; each student will present at least one seminar each term.
Professors Grant and Woodland

367-690D, -691D RESEARCH HORIZONS IN PLANT SCIENCE. A series of seminars presented by invited speakers, staff and senior graduate students. The topics are selected to integrate the many fields of plant science.
Professor Steppler and Staff

367-701D DOCTORAL COMPREHENSIVE EXAMINATION

367-770D SPECIAL TOPICS II. Prescribed reading, conference and practical work on selected topics in the student's area of specialization.
Staff

A9 DEPARTMENT OF RENEWABLE RESOURCES

Macdonald Campus
Ste. Anne de Bellevue, PQ,
Canada H0A 1C0

STAFF

Professors – J.R. BIDER; H.G. DION; *(on leave)* A.F. MacKENZIE; B.P. WARKENTIN
Associate Professors – A.R.C. JONES; J.D. MacARTHUR; J.F.G. MILLETTE
Assistant Professors – M. CHEVRIER; J. GEROLS; R. TITMAN; M. VAN LIEROP

The Department offers research facilities for studies in Soil Science and Wildlife Biology leading to the

degrees of Master of Science and Doctor of Philosophy. Studies in community resource development are possible under special arrangements.

REQUIREMENTS

Requirements for the M.Sc. Degree

Candidates are required to have a Bachelor's degree with a sufficient background in the appropriate basic sciences. Students will be required to make up undergraduate courses in soils, wildlife biology or the basic sciences when their background work is considered inadequate.

The degree work will include course requirements, satisfactory performance in examinations as required by the Department, and presentation of a thesis based upon the candidate's own research work.

Requirements for the Ph.D. Degree

Candidates are normally required to hold and M.Sc. degree. The candidates will be judged primarily on ability to conduct an original and independent research study.

The work for the degree will include course work as required by the research problem and the candidate's background, satisfactory performance in examinations including the comprehensive examination, and satisfactory completion of research work and the thesis.

COURSES FOR HIGHER DEGREES

* **372-602D CHEMISTRY AND FERTILITY OF SOILS.** (2 lectures per week, one term). Discussion of significant research in chemistry, movement and uptake of plant nutrients; composition and properties of soil organic matter; analytical techniques.
Professor MacKenzie

372-610D PEDOLOGY. (2 lectures per week, one term). Processes of profile development, principles of classification, comparative taxonomy, land utilization.
Professor Millette

372-620D PHYSICAL PROPERTIES OF SOILS. (2 lectures per week, one term). Structure and fabric, water retention and movement in soils, diffusion of gases, heat transfer. Applications to soil strength, infiltration and evaporation of water, soil temperature and freezing.
Professor Warkentin

* **372-630D SOIL MINERALOGY.** (2 lectures per week, one term). Structure and identification of minerals, weathering, properties of clay surfaces, adsorption on clays, ion exchange.
Professors MacKenzie and Warkentin

372-640D GRADUATE SEMINAR. (1 hour per week). Discussions of selected topics in soil science. Reports to be prepared and presented by students.
Staff

372-700D Ph.D. PRELIMINARY EXAMINATION.
Staff and Others

372-701D Ph.D. COMPREHENSIVE EXAMINATION.
Staff and Others

374-602B CONSERVATION ECOLOGY. (3 lectures per week, one term). Discussion of ecological principles which relate to resources used, conservation practices and the development of a conservation ethic.
Professor Bider

374-605B WILDLIFE ECOLOGY. (2 class hours per week, one term). Discussion of problems in wildlife ecology with special reference to the research interests of staff and students involved.
Professors Bider and Titman

B1 BELLAIRS RESEARCH INSTITUTE

The Bellairs Research Institute is situated on the St. James coast of the Island of Barbados. The Institute was established through the donation of the late Commander Carlyon Bellairs who left his estate on the island in trust to the University for the support of a research institute. The Institute emphasizes Marine Biology (see under Marine Sciences Centre) and Tropical Climatology (see under Geography). It also holds every other year a field course in Tropical Marine Ecology. Information relating to the Institute and its activities may be obtained from the Director , The Bellairs Research Institute, St. James, Barbados, West Indies, or from the Director of the Marine Sciences Centre.

B2 DEPARTMENT OF BIOCHEMISTRY

McIntyre Medical Sciences Building
3655 Drummond Street
Montreal, PQ
Canada H3G 1Y6

STAFF

Professors – M.J. FRASER; A.F. GRAHAM *(Chairman) (on leave);* E.A. HOSEIN; D. RUBINSTEIN; S. SOLOMON; T.L. SOURKES; J.H. SPENCER; L.S. WOLFE
Emeritus Professor – K.A.C. ELLIOTT
Associate Professors – R. BLOSTEIN; P.E. BRAUN; D.T. DENHARDT; R.M. JOHNSTONE; R.E. MACKENZIE; E.A. MEIGHEN; S. MILLWARD; A.R. WASSERMAN
Assistant Professors – P.J. DOLPHIN; E.M. HARPUR; W. MUSHYNSKI
Lecturer – E. VADAS
Research Associates – K. HARBERS
Associate Members – M.K. BIRMINGHAM *(Psychiatry)* – L.F. CONGOTE *(Exp. Medicine);* J. DUPRE *(Exp. Medicine);* D. EDWARD *(Exp. Surgery);* W.C. GALLEY *(Chemistry);* L. GOODFRIEND *(Exp. Medicine);* H. PAPPIUS *(Exp. Neurochemistry);* J.F. PERDUE *(Lady Davis Institute);* C. SCRIVER *(Pediatrics);* J. SHUSTER *(Exp. Medicine)*

REQUIREMENTS

Students must submit with their applications for admission the results of the Graduate Record Examination (aptitude test, and achievement test in Biology or Chemistry), three letters of recommendation and a brief resumé indicating in as much detail as possible their particular field of interest for graduate study.

Students who have satisfactorily completed an Honours course in Biochemistry and who have been accepted as research students by the Department and by a research director approved by the Department may register for the M.Sc. degree which usually involves a two-year program. Following completion of one year of study in the Department, suitable candidates may be allowed to proceed directly to the Ph.D. degree depending on the ability they display in research and course work.

A program of courses for each student is determined by the individual research director in consultation with the Chairman of the Department's Graduate Advisory Committee. Students who have not obtained a suitable Honours degree or its equivalent will be required to take a qualifying year or otherwise make up for deficiencies.

Candidates who have obtained the M.Sc. degree with satisfactory standing from this department or who have completed an acceptable M.Sc. program at another university, enter the graduate program at the Ph.D. level.

Research projects deal with the biochemistry of erythrocytes, liver, brain, muscle, chloroplasts, endocrine organs, nucleic acids, peptides, lipids, and transport phenomena. These projects are conducted in departmental laboratories, the Biochemistry Laboratories of the Allan Memorial Institute of Psychiatry, the Laboratory of Experimental Neurochemistry of the Montreal Neurological Institute, the University Clinics of the Montreal General and the Royal Victoria Hospitals and in certain other laboratories.

There is no second language requirement for Ph.D. students, except where individual research directors wish to make such a requirement for their own students. Students whose mother tongue is not English must be proficient in English and may be required to take a remedial English course if the research director deems this necessary.

COURSES FOR HIGHER DEGREES

Graduate Courses

507-503A IMMUNOCHEMISTRY. (Admission by permission of instructor only).
Professor Shuster
(University Clinic, Montreal General Hospital;)

507-602B TOPICS IN MOLECULAR BIOLOGY. (Admission by permission of instructor only).
Professor Millward

507-623B IMMUNOCHEMISTRY. (Admission by permission of instructor only).
Professor Shuster

Advanced Undergraduate Courses

507-311A CARBOHYDRATE AND LIPID METABOLISM. (Prerequisites: Biology 177-201D; Corequisites: Biology 177-301A, 177-302B).
Professor Rubinstein

507-312B REGULATION OF NITROGEN METABOLISM. (Prerequistes: Biology 177-201D, Biochemistry 507-311A).
Professor Johnstone

507-404B BIOPHYSICAL CHEMISTRY. (Prerequisites: Chemistry 180-204A, 214B or 213A, 223B required; Chemistry 180-313A recommended. This course is also listedas Chemistry 180-404B).
Professors Meighen and Galley (Chemistry)

507-450B PROTEN STRUCTURE AND FUNCTION. (Prerequisites: Biochemistry 507-311A, 312B and/or sufficient organic chemistry).
Professors Fraserand Meighen

507-454A NUCLEC ACIDS. (Prerequisite: Biochemistry 507-311A, 312B or permission of the instructor).
Professors Denhardt and Spencer

507-455B NEUROCHEMISTRY. (Prerequisite: Biochemistry 507-311A, 312B).
Professors Sourkes, Wolfe and Staff

* **507-456B BIOCHEMISTRY OF MEMBRANES** (Prerequisites: Biochemistry 507-311A, 312B Chemistry 180-214B or equivalent, or by consent of the instructors).
Professors Braunand Blostein

SEMINARS

There are three series of seminars. The *Research Seminar* consists of a presentation by the student of the background, experimental approach, and significance of his or her proposed research. This seminar is required of all M.Sc. students in the department who plan to proceed to the Ph.D. degree as well as by students entering at the Ph.D. level. The *Thesis Seminar* consists of a presentation by every third or later year Ph.D. candidate on his or her research. *Departmental Seminars* consist of presentations by members of the staff and visiting scientists outlining their work with their collaborators. Graduate students are required to attend all the above seminars and certain informal seminars, and are encouraged to attend relevant scientific meetings.

B3 DEPARTMENT OF BIOLOGY

Stewart Biology Building
1205 McGregor Avenue
Montreal, PQ
Canada H3A 1B1

STAFF

Professors – W.G. BOLL; E.R. BOOTHROYD; P.S.B. DIGBY; F.C. FRASER; S.P. GIBBS; P.R. GRANT; E. KAFER-BOOTHROYD; J. KALFF; G.A. MACLACHLAN; J. MARSDEN; J.D. METRAKOS *(on leave)*; B.B. MUKHERJEE; F. RIGLER *(Chairman)*; C.M. WILSON

Associate Professors – A.N. AUCLAIR; A.H. BUSSEY; R. CHASE *(on leave)*; D. FROMSON; M.E. GOLDSTEIN; W.C. LEGGETT; R.E. LEMON; G.A.MANLEY; W. OECHEL; V. PASZTOR; R.J. POOLE; R. SATTLER; R. SINCLAIR *(on leave)*; K. SITTMANN; J.L. SOUTHIN; D. TRASLER; H. TYSON *(on leave)*;

Assistant Professors – B. BRANDHORST; D. KRAMER; M. LECHOWICZ; R. LEVINE; R. PETERS; D.P.S. VERMA

OTHER McGILL STAFF WITH GRADUATE STUDENTS OR TEACHING RESPONSIBILITIES IN THE BIOLOGY DEPARTMENT

Professors – R. CARROLL *(Redpath Museum)*; M.J. DUNBAR *(Marine Sciences)*; *(on leave)*; W. GRANT *(Agriculture)*; J. LEWIS *(Redpath Museum)*; R.A. MACLEOD *(Microbiology)*; J.E. McFARLANE *(Entomology)*

Associate Professors – C. LALLI *(Marine Sciences)*; C.R. SCRIVER *(Montreal Children's Hospital)*

Assistant Professors – F. GLORIEUX *(Shriner's Hospital)*; P. HECHTMAN *(Montreal Children's Hospital)*; E. MITCHELL *(Fisheries Research Board)*; L. PINSKY *(Jewish General Hospital)*; H. REISWIG *(Redpath Museum)*;

The Department of Biology has available a brochure describing the admission and degree requirements for the M.Sc. and Ph.D. in Biology. A summary of the research interests of each staff member is included. Enquiries concerning admission should be directed to the Secretary of the Graduate Training Program, Department of Biology, 1205 McGregor St., Montreal, PQ, H3A 1B1

The research interests of the department are focussed on four main areas, namely: Human Genetics, Ecology, Cell, Molecular and Developmental Biology, and Neurobiology and Behaviour. There are also individual staff members whose work lies outside these areas. Courses available include specialized senior undergraduate courses (see Science Faculty Announcement) as well as those restricted to graduate students.

COURSES FOR HIGHER DEGREES

General Courses

177-650, 177-651, 177-652 (A,B or C). RECENT ADVANCES IN BIOLOGY. Directed reading, seminar and discussion courses in various subjects of current interest in biological research.

177-655, 177-656 (A,B or C). LABORATORY PROJECTS AND TECHNIQUES. Directed training in selected methods used in various areas of current interest in biological research.

177-700D DOCTORAL QUALIFYING EXAMINATION. This will be an oral qualifying examination arranged by members of the candidate's Supervisory Committee within 15 months of registration.

177-702D Ph.D. SEMINAR. Doctoral candidates are required to give a public oral presentation of their major results before submitting a thesis.

LANGUAGE EXAMINATIONS. At the discretion of their Supervisory Committee doctoral candidates may be required to demonstrate facility in a foreign language.

Specific Courses

177-500C ADVANCED TECHNIQUES IN CELL AND MOLECULAR BIOLOGY. (1 lecture and 6-8 laboratory hours per day, during a 3-4 week summer session; Prerequisites: 177-301A, 302B and permission of the instructor). This course is intended for selected cell and molecular biology honours and graduate students. Techniques used are those involved in molecular studies of transcriptional and translational regulation in eucaryotic cells, e.g. nucleic acid and protein synthesis *in vitro, de novo* synthesis of enzymes, nucleic acid hybridization, cell fractionation and analytical methods, etc.
Professor Verma

177-522B TOPICS IN GENETIC REGULATION (AND RECOMBINATION). (Irregular schedule of seminars or conferences; Prerequisite: 177-422A or permission of instructor). Investigation and discussion of recent advances in molecular genetics including genetic regulation of protein synthesis, DNA-repair, recombination, etc., and their relevance to studies in higher organisms including man.
Professor Kafer-Boothroyd

* **177-524B MOLECULAR BIOLOGY OF DEVELOPMENT.** (Prerequisites: 177-201D, 303A, 320B; or permission of instructors). An advanced seminar course covering the most recent research in molecular biology of development. Examples from both plant and animal systems will be examined. Students will prepare and present seminars covering topics related to the regulation of gene expression in developing eucaryotic organisms.
Professors Brandhorst, Fromson and Verma

177-575A ADVANCES IN POPULATION GENETICS. (2 lectures, 1 conference; Prerequisites: 177-373A, 177-325A or 177-372B). Discussion of recent advances in genetics relevant to population biologists in ecology and human genetics.
Professors Sittmann and Tyson

177-587B DEVELOPMENTAL NEUROBIOLOGY. (2 seminar hours or 2 lecture hours; Prerequisites: 177-303A, 386A or 204-308D). Discussion of and lectures on current research in the field. Topics encompass all aspects of development from neuroembryology to neural regeneration in adult animals. Critical analysis of presented material is encouraged.
Professors Levine and Marsden

177-588A ADVANCED NEUROBIOLOGY. (2 hours seminar; Prerequisite: 177-386A or permission of instructor). Discussion primarily of important current research. Topics emphasize cellular neurophysiology and the functional organization of nervous systems. Includes both vertebrate and invertebrate material.
Staff

* **177-595A ADVANCED SEMINAR IN BEHAVIOUR.** (2 hour seminars; Prerequisites: 177-391A or 392B or equivalent and permission of instructor). A graduate and advanced undergraduate seminar concerned with mechanisms in animal behaviour. Selected topics include sensory mechanisms of communication, social behaviour and organization, animal orientation, physiological correlates of behaviour, and the sequential and temporal organization of behaviour. The emphasis will be on studies having a zoological perspective.
Professor Lemon

177-596A SEMINAR IN BEHAVIOURAL ECOLOGY. (Prerequisite: permission of instructors). A seminar course for graduate and advanced undergraduate students concerned with ecological and evolutionary perspectives on behaviour. Potential topics include aspects of altruism, grouping, mating systems, feeding strategies, antipredator behaviour and habitat selection.
Professors Kramer and P. Grant

177-617A DEVELOPMENTAL MAMMALIAN GENETICS. (3 hours; lectures and seminars; Prerequisites: 180-204A, 180-222A,B, 177-274A or 177-202B, 177-303A, 177-310B; 177-372B recommended; and permission of instructor required). An advanced course for final year students where the main emphasis will be on experiments where gene differences altering development or environmentally-induced differences in embryonic development throw light on the processes of normal mammalian development. Graduate students will be given additional assignments.
Professor Trasier

177-627A ECOSYSTEMS. (2 hour lectures, 3 hours laboratory; Prerequisite: 177-305A). A comparative

study of North American ecosystems including arctic tundra, grassland, and coniferous, deciduous, and tropical rain forests. Emphasis is given to functional attributes such as energy and nutrient flux, system regulation, productivity, and efficiency. Systems analysis and the relevance of these properties to management of individual eco-systems will be discussed. A special reading assignment will be required of graduate students.
Professor Auclair

* **177-629B PHYSIOLOGICAL PLANT ECOLOGY.** (2 hour lectures, 3 hours laboratory; Field trips; Prerequisite: 177-305A). A consideration of physiological responses and adaptations of plants to their environment. Contemporary approaches to the measurement and study of relevant physiological and micro-environmental parameters in diverse habitats will be presented. In addition to the regular requirements graduate students will carry out an independent research project.
Professor Oechel

177-632A LIMNOLOGY. (2 hour lectures, 3 hours laboratory; Prerequisite: 177-305A). A study of the physical, chemical and biological characteristics of fresh-water, with emphasis on the role of the plankton in the economy of lakes. Undergraduate students prepare one literature review while two are required of graduate students.
Professor Kalff

177-642D BIOLOGICAL OCEANOGRAPHY. (3 hour lectures, several 3 hour laboratory periods; Pre- or Corerequisites: 177-305A, 348D). An introduction to the physical and chemical factors of the marine environment, the ecological divisions of the ocean, history and methods of marine research. An ecological account of marine populations in relation to their physical and chemical environment; marine plankton and production processes, marine pollution. Additional assignments will be required of graduate students.
Professors Dunbar, Lalli and Lewis

* **177-665B TOPICS IN PLANT BIOCHEMISTRY.** (3 hours; Lectures and discussion; Prerequisites: 177-201D; 177-303A, 507-352D recommended). A review by lectures, seminars and discussion of important advances in recent years, e.g. molecular structures of macromolecules, biosynthetic processes, mechanisms of hormone action, metabolic regulation. Graduate students enrolled in this course will be expected to take more responsibility for discussion and review than undergraduates.
Professor Maclachlan

177-676B HUMAN BIOCHEMICAL GENETICS. (3 hour lectures with some student participation; Prerequisites: 177-201D, 177-274A or 177-202B, 180-302A,B, 189-231A,B). An up-to-date and comprehensive account of the biochemical aspects of human genetics, and relationship of this knowledge to broader questions including evolution, eugenics and treatment of genetic disease. Graduate students will be required to submit a hypothetical grant application.
Staff

177-680C TECHNIQUES IN ELECTRON MICROSCOPY. (5 hours laboratory; Prerequisite: Permission of instructor). An intensive course in the techniques of electron microscopy for students who intend to do research on cell ultrastructure.
Professor Gibbs

177-693B ADVANCES IN ANIMAL BEHAVIOUR. (2 hours seminar; Prerequisite: Permission of instructor). A senior course considering in depth topics of current interest, which may range from physiological to ecological aspects of behaviour according to the interests of the class.
Professor Kramer and Staff

Course Given at Macdonald College

* **177-675B STATISTICAL METHODS IN GENETICS.** Discussions of methods of analysing genetic changes in plant and animal populations. Diallel cross techniques are examined in some detail, but the choice of topics is by no means rigid. The course is open to graduate students from both Macdonald College and the Biology Department, McGill.
Professor Tyson and Dr. Fieldes

B4 MARINE SCIENCES CENTRE

Strathcona Hall
772 Sherbrooke Street West
Montreal, PQ
Canada H3A 1G1

STAFF

Professors – M.J. DUNBAR *(Biology) (Chairman)*; M.P. LANGLEBEN *(Physics)*; G. LAROCHE; J.B. LEWIS *(Director, Redpath Museum)*; E.R. POUNDER *(Physics) (Vice-Chairman)*;
Associate Professors – B.F. d'ANGLEJAN; C.M. LALLI; R.G. INGRAM
Assistant Professors – F. SANDER *(Director, Bellairs Research Institute)*; D.C. MacLELLAN
Associate Members – SVENN ORVIG *(Meteorology)*; M.E. GOLDSTEIN *(Biology)*; R.A. MACLEOD *(Microbiology)*; S.B. SAVAGE *(Civil Eng.)*; ROGER KNOWLES *(Microbiology)*; E.W. MOUNTJOY *(Geological Sciences)*; H.M. REISWIG *(Redpath Museum)*; R. HESSE *(Geological Sciences)*

Graduate students will take such courses, including cognate courses in other departments, as are considered necessary for their training and for the development of their particular fields of

specialization. All students are expected to take courses 177-442D, 395-660D, and 198-309A, or equivalent. Primary emphasis for both the M.Sc. and Ph.D. degrees is placed upon research and thesis presentation. The comprehensive examination for Ph.D. candidates usually takes place at the end of the second year of study; it covers the whole field of marine science but allows for the specialized interests and training of each student in Botany, Zoology, Microbiology, Physics or Geology.

Students are accepted on the basis of a 3.0 Cumulative Grade Point Average in an appropriate subject, or high standing in general science; a qualifying year in addition to the minimum degree requirement may be necessary, at the discretion of the Chairman or Vice-Chairman.

The Marine Sciences Centre is inter-departmental in scope, emphasizing the essential inter-disciplinary nature of the science of Oceanography. Excellent laboratory and library facilities are available for research, and opportunities for field work exist in the Arctic, the estuary of the St. Lawrence river, the Gulf of St. Lawrence, the Canadian Eastern Seaboard, and at the Bellairs Research Institute in Barbados. The special research interests of the Centre include the physics of sea ice, the energy exchange between atmosphere and hydrosphere, marine climatology, the dynamics of estuaries, marine bacteria, growth and life cycles of marine organisms, marine productivity, marine biogeography and sedimentation.

The Radpath Museum of McGill University offers teaching and research facilities in marine biology and keeps extensive plankton collections.

COURSES FOR HIGHER DEGREES

Advanced Undergraduate Courses

198-309A DESCRIPTIVE OCEANOGRAPHY. (3 hours). Major physical and chemical properties of sea water; methods of measurements, space and time distribution. The geostraphic approximation and the dynamic method. General features of the oceanic circulation.
Professor d'Anglejan

198-319B INTRODUCTION TO DYNAMIC OCEANOGRAPHY. (3 hours). Equations of motion. Geostrophy. Boundary layers. Horizontal wind-driven circulation. Waves and tides.
Professor Ingram

177-442D BIOLOGICAL OCEANOGRAPHY. (3 hour lectures and labs.). Physical and chemical parameters of the environment and their influence on marine life; ecological divisions of the ocean; descriptions of marine life; plankton biology and biogeography; history and methods of marine research; ecology of benthic organisms; primary and secondary production in the ocean; marine fisheries; marine microbiology; pollution; migration.
Professors Lewis and Lalli

Graduate Courses

395-537B ADVANCED INVERTEBRATE ZOOLOGY (3 hours). Descriptions of selected marine invertebrate taxa. Functional morphology, ecology and evolution. Feeding mechanisms; reproductive patterns; interactions with other marine organisms; laboratory techniques.
Professors Lalli and Reiswig

395-545A WATER POLLUTION: BIOLOGICAL ASPECTS. (2 hours). Aspects of freshwater and saltwater uses, with emphasis on marine environments, critical definitions of water quality, means of assessing water quality, the role and importance of biological responses in the identification and evaluation of water pollution, and a review of water treatment techniques, the biological impact of pollution on coastal areas, estuaries, rivers and lakes. Marine pollution is also discussed from the global point of view as a worldwide phenomenon.
Professor LaRoche

395-639A TROPICAL MARINE ECOLOGY. (2 hour lectures and labs.). The ecology of marine organisms and marine communities of tropical oceans.
Professor Lewis

395-660D SEMINAR IN GENERAL OCEANOGRAPHY. (2 hours). Advanced seminar course on research in salt water environments, with emphasis on contemporary work. Discussion of the original literature, recent advances and basic theory.
Staff

395-691D ADVANCED MARINE ECOLOGY. (2 hour seminar). Primary and secondary production; physiological ecology, population dynamics, distribution analysis, and diversity of marine organisms.
Professor Lalli

* **395-692A ESTUARIES.** (3 hours). Classification of estuaries; mixing processes in stratified fluids; salt balance; dynamic balance; flushing; circulation theories; application to the distribution of other water properties, such as nutrient, suspended matter and polutants; measurement techniques.
Professor Ingram

395-696A SEMINAR COURSE IN PHYSICAL OCEANOGRAPHY. (2 hours). Theoretical aspects of oceanic, estuarine and near-shore dynamics.
Professor Ingram

395-697B MARINE GEOLOGY AND GEOCHEMISTRY. (3 hours). Geochemistry of pelagic deposits in relation to terrigenous sources, life processes and sea water composition. Deep sea stratigraphy; methods of correlation; the sedimentary record.
Professor d'Anglejan

395-698B TOPICS IN OCEANOGRAPHY. (3 hours). Interdisciplinary studies of selected topics, including: waves and tides, estuaries, short and long term cycles, factors controlling the vertical distribution of organisms, particulate matter and sedimentation.
Staff

395-721D SEDIMENTS AND MARINE GEOLOGY. (2 hour seminar lectures and assignments). Classical and recent research concerning principles of sedimentation, sedimentary environments including deltas, tidal flats, continental shelf and slope, geosynclines, ocean basins, submarine canyons, ocean currents, turbidity currents, sediment geochemistry, reefs, ocean structure.
Professors d'Anglejan, Hesse and Mountjoy

B5 DEPARTMENT OF MICROBIOLOGY AND IMMUNOLOGY

3775 University Street
Montreal, PQ
Canada H3A 2B4

STAFF

Professors – B.H. MATHESON; S.I. VAS *(Chairman)*; W. YAPHE
Associate Professors – Z. ALI-KHAN; C.A. BUTAS; E.C.S. CHAN; J. de VRIES; P. GILL; R. HAND; L. KAPICA; C.H. PAI; G.K. RICHARDS; H.G. ROBSON; R. SIBOO
Assistant Professors – A.F. DOSS; J.E. FEIN; I.B. FABRIKANT; J. GORDON; E. MANKIEWICZ; M. MARKS; L. MARTINEZ; J.L. MEAKINS; J. MENDELSON
Lecturer – M. BLANC; S. NOMMIK
Demonstrator – C. SHAW
Associated Members – R.D. GUTTMANN (Medicine); C.K. OSTERLAND (Medicine)

REQUIREMENTS

Candidates are required to hold a B.Sc. degree with a concentration in Microbiology and Immunology equivalent to a McGill Honours degree and a C.G.P.A. of at least 2.8. or the M.D. degree with high standing in Microbiology, Biochemistry and Pathology.

Those who do not meet the above qualifications may be required to take a qualifying year.

The clinical laboratory services in bacteriology, virology and mycology are available to candidates as a means of instruction and as a source of material for study.

Requirements for the M.Sc. Degree

The following requirements must be satisfied.
(1) Presentation of a satisfactory thesis.
(2) Attendance at courses 528-602D and 528-703D and presentation of at least two seminar topics during the year.
(3) Formal courses with examination where needed (528-501D, 528-525B, 528-527B – see below).

Requirements for the M.Sc. (Applied) Degree

This is a new program first offered by the Department in the 1975-76 session. The principal aim of the program is to provide specialized training in APPLIED Medical Microbiology and Immunology to those who might be expected to function as assistants to the directors of hospital clinical diagnostic laboratories and public health laboratories including units concerned with pollution control insofar as they relate to microbial activities. It is also to be hoped that the program will enable graduates to adapt more readily to a career in the pharmaceutical industries and related industries of some significance in the health field than does the present conventional M.Sc. program in Microbiology and Immunology.

Candidates must satisfy the general requirements noted above for the conventional M.Sc. degree except that the minimum in-residence requirement is two full academic sessions. In addition to one year of bench training in diagnostic medical microbiology and formal course work, including seminars (see below), a research project of a practical nature will form an important part of the overall program and a comprehensive research report must be presented. A detailed brochure describing the M.Sc. (A.) program is available, upon request, from the Department of Microbiology and Immunology.

Requirements for the Ph.D. Degree

Following satisfactory completion of the work for the M.Sc. degree candidates may present themselves for examination for the Ph.D. degree after not less than two full years of research and the presentation of a satisfactory thesis. However, certain other requirements must also be fulfilled:
(1) Attendance at courses 528-702D and 528-703D with the presentation of at least two seminar topics each year.
(2) A comprehensive examination in Microbiology and Immunology (Course 528-701D) must be passed. It is held during the final year of study and at a time not later than six months before submission of the thesis.

COURSES FOR HIGHER DEGREES

Advanced Undergraduate Courses

528-313B PARASITOLOGY.

* **528-315B THE PATHOGENIC FUNGI.**

528-421A SYSTEMATIC BACTERIOLOGY.

528-422A PATHOGENIC BACTERIA.

528-423A MICROBIAL PHYSIOLOGY.

528-424A FUNDAMENTAL VIROLOGY.

Graduate Courses

528-501D ADVANCED MICROBIOLOGICAL TECHNIQUES.

528-525B PATHOGENIC VIRUSES.

528-527B INFECTIOUS IMMUNOLOGY.

526-602D GRADUATE SEMINAR. M.Sc. LEVEL.

528-603H PRACTICAL DIAGNOSTIC MICROBIOLOGY AND IMMUNOLOGY (Bench Training) (Offered only to M.Sc. (A.) applicants).

528-604D INDEPENDENT RESEARCH PROJECT IN APPLIED MICROBIOLOGY AND IMMUNOLOGY (M.Sc. (A.) Program).

528-605D ADVANCED INDEPENDENT RESEARCH PROJECT IN APPLIED MICROBIOLOGY AND IMMUNOLOGY (M.Sc. (A.) Program).

528-606D ADVANCED VIROLOGY (M.Sc. (A.) Program).

528-701D COMPREHENSIVE EXAMINATION FOR Ph.D. CANDIDATES.

526-702D GRADUATE SEMINAR. Ph.D. LEVEL. (Lectures and discussions. All graduate students are required to participate).

528-703D CURRENT TOPICS IN MICROBIOLOGY AND IMMUNOLOGY. (Discussion groups).

ROSSIGNOL *(Univ. of Montreal, Medicine)*; J.F. SEELY *(Medicine)*.

ADMISSION

Students who have completed an Honours Program in Physiology or some other appropriate undergraduate program and who have been accepted by a research director and by the Department may register for the M.Sc. degree. After one year of study in the Department those M.Sc. students who display a high standard in research and course work may be permitted to proceed directly to the Ph.D. degree. Those students who do not enter the Ph.D. program at the end of M.Sc. 1 may be permitted to write an M.Sc. thesis. Students who obtain an M.Sc. degree may apply for entrance into the Ph.D. program.

COURSE REQUIREMENTS

Research Seminars – M.Sc. students are required to give at least one seminar before submission of their thesis or before being permitted to enter a Ph.D. program. Ph.D. students are required to give a seminar at least once every two years. **Comprehensive Examination in Physiology** – required for the M.Sc. and/or the Ph.D. degree to show broad knowledge of Physiology and the capacity to integrate this knowledge at the intermediate level. **Other Course Work** – Students are usually expected to complete at least two of the Department's advanced or graduate courses in their first year. Other course requirements will depend on their field of study.

COURSES FOR HIGHER DEGREES

552-502A EXERCISE PHYSIOLOGY. Offered in conjunction with the Faculty of Education.
Professor Klissouras

552-508A ADVANCED RENAL PHYSIOLOGY. Offered in conjunction with the Department of Medicine, Division of Experimental Medicine. Admission by permission of the instructor.
Professor Levy

552-513B CELLULAR IMMUNOLOGY. Offered in conjunction with the Department of Medicine, Division of Experimental Medicine.
Professors Lapp and Gold

552-515A PHYSIOLOGY OF BLOOD I. Offered in conjunction with the Department of Medicine, Division of Experimental Medicine.
Professor Cooper

552-516B PHYSIOLOGY OF BLOOD II. Offered in conjunction with the Department of Medicine, Division of Experimental Medicine.
Professor Cooper

552-517B PHYSIOLOGICAL SUPPORT SYSTEMS.
Professor Chang

552-610B BIOPHYSICS.
Professor Mackey

552-631B SELECTED TOPICS IN APPLIED IMMUNOLOGY. Offered in those years when there is sufficient demand.
Professor Kongshavn

516-502A ADVANCED ENDOCRINOLOGY. See Department of Medicine, Division of Experimental Medicine.

516-503B ADVANCED ENDOCRINOLOGY. See Department of Medicine, Division of Experimental Medicine.

516-507D ADVANCED APPLIED RESPIRATORY PHYSIOLOGY. See Department of Medicine, Division of Experimental Medicine.

Graduate work in the Department of Psychology follows two main lines; experimental-theoretical and applied. Work in experimental-theoretical psychology leads to the M.A., M.Sc. and Ph.D. degrees in the psychology of human perception, cognition, learning and language, physiological, personality, social, child, psycholinguistics and quantitative psychology. Work in applied psychology leads to the Ph.D. degree in clinical psychology, and, under special circumstances the M.Sc. (Applied) degree program is sometimes awarded.

Facilities for advanced research in a variety of fields are available within the Department itself. In addition, arrangements with the Departments of Psychology at the Allan Memorial Institute, Montreal Children's Hospital, Queen Mary Veterans' Hospital, the Douglas Hospital, and Jewish General Hospital, permit graduate students to undertake research in a hospital setting.

For full information about all programs, financial aid, and for application forms, contact the Graduate Admissions Secretary, Department of Psychology, McGill University, Stewart Biology Building, 1205

McGregor Street, Montreal, PQ, Canada, H3A 1B1. Telephone 392-5742.

REQUIREMENTS

Admission to graduate work will depend on an evaluation of the student's research interests and aptitude for original contributions to knowledge or for professional contributions in the applied field. The usual requirement for admission is an honours or major degree (B.A. or B.Sc.) in Psychology. This includes an introductory course plus six full courses (each equivalent to six semester hours). Experimental psychology, the theoretical development of modern ideas in psychology, and statistical methods as applied to psychological problems (equivalent to an introductory course) are essential. A knowledge of elementary physiology, physics or chemistry, and modern developments in other related biological or social sciences is desirable. An applicant who holds a Bachelor's degree but who has not met these usual requirements should consult a faculty member in his or her area of interest to determine which (if any) courses must be completed before an application can be considered. A student with insufficient preparation for graduate work may register as a special student in the Faculty of Arts or the Faculty of Science, and follow an appropriate course of study. Such registration requires the permission of the Department but carries no advantage with respect to a student's eventual admission to graduate studies.

NOTE: Applicants must submit to the Graduate Admissions Secretary by February 1: a completed application form, two copies of the personal academic background form, two copies of all university transcripts, two or more letters of recommendation, Miller Analogies and/or Graduate Record Examination scores, and a personal letter, outlining their experience, interests and objectives in psychology. Applicants should note that the deadline for many scholarships and fellowships is two to three months earlier than the February deadline.

Requirements for M.A. and M.Sc. Degrees

Candidates must demonstrate a sound knowledge of modern theory, of its historical development, and of the logic of statistical methods as used in psychological experiments. They will be expected to have an understanding of the main lines of current work in other than their own particular field of specialization.

All candidates must take courses 204-650A, 204-651B and 204-660D and in addition any other course specified by the Department. The primary concern of the candidate, however, is the thesis. For this the exploratory work, at least, should get under way early in the year. A general comprehensive written and oral examination will be held which, in conjunction with the thesis, will determine the candidate's final standing for the degree.

Requirements for the Ph.D. Degree

The candidate for the Ph.D. degree in the theoretical-experimental program must demonstrate a broad scholarship, mastery of current theoretical issues in psychology and their historical development, and a detailed knowledge of his or her special field. A special comprehensive examination is written in one of the following: comparative and physiological psychology, learning and perception, social psychology and personality, measurement, developmental psychology or any other appropriate area.

Candidates for the Ph.D. degree in clinical psychology must demonstrate a high standard of scholarship in psychology and aptitude for the professional application of psychological knowledge. The clinical program is designed primarily to train senior personnel for work in hospitals and clinics. A number of avenues of specialization are, however, possible. Some students may wish to prepare themselves for careers in university teaching or clinical research; others may have an interest in behaviour disorders in the fields of developmental or educational psychology. The minimum time necessary to attain the degree is four years beyond the B.A. or B.Sc. degrees. No intermediate or terminal M.A. or M.Sc. degrees are awarded to students in the Ph.D. clinical program. All students are required to write a thesis and demonstrate research capabilities.

The Department of Psychology does not ordinarily require an examination in a foreign language. It should be noted, however, that all students planning to practice in the province of Québec will be examined on their proficiency in French before being admitted to the professional association.

COURSES AND SEMINARS FOR HIGHER DEGREES

204-455D RESEARCH METHODS IN PSYCHOLINGUISTICS.

204-601D Reference number for comprehensive examination written by candidates for the M.A., M.Sc., or M.Sc. (A.) degree.

204-615A DIAGNOSTIC METHODS (CHILDREN).

204-616A PRACTICUM – CHILD DIAGNOSTICS.

204-617B DIAGNOSTIC METHODS (ADULTS).

204-618B PRACTICUM – ADULT DIAGNOSTICS.

204-630A PSYCHOPATHOLOGY.

* **204-635D ADVANCED EDUCATIONAL PSYCHOLOGY.**

204-641D BEHAVIOUR DEVIATIONS. Appraisal and Modification.

204-650A ADVANCED STATISTICS I. A course in advanced statistics with specialization in experimental design.

204-651A ADVANCED STATISTICS II. A course in advanced statistics with specialization in regression techniques.

204-670D RESEARCH PROBLEMS IN CLINICAL PSYCHOLOGY.

204-690D COMPUTERIZED LABORATORY METHODS IN PSYCHOLOGY.

204-701D Reference number for comprehensive preliminary Ph.D. examinations.

204-702F SUMMER INTERNSHIP – JUNIOR.

204-703F SUMMER INTERNSHIP – SENIOR.

204-704D ADVANCED INTERNSHIP.

204-705D Reference number for research project of M.Sc. (A.) students.

204-710 to 715 COMPARATIVE AND PHYSIOLOGICAL PSYCHOLOGY.

204-716 to 721 LEARNING AND MOTIVATION.

204-722 to 727 PERSONALITY AND SOCIAL PSYCHOLOGY.

204-728 to 733 CLINICAL PSYCHOLOGY.

204-734 to 739 DEVELOPMENT AND LANGUAGE.

204-740 to 745 PERCEPTION AND COGNITION.

204-746 to 751 QUANTITATIVE AND INDIVIDUAL DIFFERENCES.

204-752D PSYCHOTHERAPY AND BEHAVIOUR CHANGE. A practice-oriented course. Staff and students discuss current cases being treated with a variety of psychotherapeutic and behavioural change techniques.

B8 WILDLIFE BIOLOGY

Qualified students interested in undertaking graduate studies in the area of Wildlife Biology should consult the Chairman, and/or Professor J.R. Bider, Department of Renewable Resources, Macdonald College, Ste. Anne de Bellevue, PQ, H0A 1C0. Special programs of study are available to such students.

McGill University

C1 DEPARTMENT OF ART HISTORY

Arts Building
853 Sherbrooke St. West
Montreal, PQ
Canada H3A 2T6

STAFF

Professors – W. O. JUDKINS *(Chairman)*; GEORGE GALAVARIS *(on leave)*
Associate Professors – ROSEMARIE BERGMANN; R. N. BERTOS *(Acting Director of Graduate Studies)*
Assistant Professor T. GLEN

REQUIREMENTS

Admission

For admission to the M.A. or Ph.D. programs, candidates are normally expected to have a B.A. degree with Honours, either in Art History alone or in Art History and one other related subject – or the equivalent, i.e. one-third to one-half of the candidate's undergraduate courses in an integrated program, passed with appropriate standing. For candidates from institutions not offering such undergraduate programs, provision is made for preliminary studies qualifying the candidate for admission to graduate work. Courses in studio practice do not count. Please see, also, the language requirements given under the degree programs below. Applications and supporting documents should be submitted by January 31.

Requirements for the M.A. Degree

1) Ten half-courses approved by the Department, six in the first graduate year.
2) Written *general* examination on the History of Art.
3) Oral examination on one of the following five fields to which the proposed thesis topic belongs: Ancient, Mediaeval, Renaissance, Baroque – to 1750, Modern – from 1750.
4) Thesis on a topic approved by the Department from the candidate's chosen field of specialization.

Language requirements for the M.A. degree: reading knowledge of English and French and a minimum of one additional approved classical or modern language, before admission to the second year of the M.A. program.

Requirements for the Ph.D. Degree

Normally, the first year of the Ph.D. program will be spent fulfilling the first-year requirements of the M.A. degree. In appropriate cases the Department may, at the end of the first year, advise the student to bypass the M.A., enter the second year of the Ph.D. program and proceed to the Ph.D. qualifying examinations, consisting of, 1) a written *comprehensive* examination on the History of Art, and 2) an oral examination on one of the following five fields of specialization chosen by the candidate: Ancient, Mediaeval, Renaissance, Baroque – to 1750, Modern – from 1750. These are normally taken at the end of the second year.

The candidate may be permitted or advised to spend one of the three resident years required by Graduate Faculty regulation at another approved university.

Only with the permission of the Department can those holding the M.A. degree proceed to the Ph.D. qualifying examinations, and those who have passed the Ph.D. qualifying examinations, or their equivalent, proceed to the doctorate.

Language requirements for the Ph.D. degree: reading knowledge of three modern languages and at least one classical language, approved by the Department.

The requirements for the Ph.D. degree are fulfilled with the completion of the dissertation and its successful oral defence. The Department is prepared to direct dissertations in the following fields: Ancient, Byzantine, Mediaeval, Renaissance (Italian and Northern) and others, by special arrangement, wherein adequate supervision and resources can be provided.

COURSES FOR HIGHER DEGREES

Graduate Courses

* **123-642A or B GREEK AND ROMAN ARCHAEOLOGY.**

123-645A or B MEDIAEVAL ART AND ARCHAEOLOGY.

123-648A or B ART OF THE ITALIAN RENAISSANCE.

123-651A or B NORTHERN RENAISSANCE ART.

* **123-654A or B BAROQUE ART AND ARCHITECTURE.**

* **123-657A or B 19TH CENTURY PAINTING AND SCULPTURE.**

* **123-660A or B CONTEMPORARY ART AND CRITICISM.**

123-674A or B RENAISSANCE AND POST-RENAISSANCE STUDIES I.

123-677A or B RENAISSANCE AND POST-RENAISSANCE STUDIES II.

* **123-680A or B STUDIES IN GREEK AND ROMAN SCULPTURE.**

* **123-683A or B SEMINAR IN THE ART OF BYZANTIUM.**

* **123-686A or B PROBLEMS IN WESTERN MEDIAEVAL ARCHITECTURE AND SCULPTURE.**
* **123-689A or B STUDIES IN MANUSCRIPT ILLUMINATION.**
* **123-692A or B ARTISTIC THEORY IN THE RENAISSANCE**

  123-695A or B GREEK MYTHOLOGY IN ITALIAN RENAISSANCE ART.
* **123-712A or B STUDIES IN THE GRAPHIC ARTS.**
* **123-714A or B RESEARCH IN MODERN ARCHITECTURE: – 1750 TO THE PRESENT.**
* **123-718A or B SEMINAR IN URBAN PLANNING AND TOPOGRAPHY.**

  123-721A or B STUDIES OF DRAWINGS.
* **123-724A or B PROBLEMS IN THE HISTORY OF TASTE AND CRITICISM.**

Fourth Year Undergraduate Courses for Which Graduate Credit is Given

123-414D WESTERN MEDIAEVAL PAINTING.

123-430A or B EVOLVING CONCEPTS OF THE DISCIPLINE OF ART HISTORY.

123-440D THE VISUAL LANGUAGE OF ARTISTIC EXPRESSION.

C2 DEPARTMENT OF CLASSICS

Stephen Leacock Building
855 Sherbrooke St. West
Montreal, PQ
Canada H3A 2T7

STAFF

Professors – P. F. McCULLAGH; A. SCHACHTER
Associate Professors –A. FARMAKIDES; J. M. FOSSEY; M. J. SILVERTHORNE; P.VALERI TOMASZUK; P. VIVANTE; G. M. WOLOCH *(on leave)*
Assistant Professor – T.W. RICHARDSON; G.L. SNIDER *(Chairman)*

NOTE: For detailed information concerning the M.A. and Ph.D. Degrees in Classics, please inquire of the Department of Classics.

GRADUATE COURSES IN CLASSICS

A limited number of courses and seminars is offered each year. Course content is, generally speaking, fitted to the requirements of individual students.

Numbering System for Courses

The second digit after the dash (–) signifies the content of the courses:

1 – Greek Poetry, 2 – Greek Prose, 3 – Latin Poetry, 4 – Latin Prose, 5 – Non-literary, 6 – Non-literary, 7 – Reading Course, 8 – Reading Course.

The third digit signifies the session in which the course is offered, viz. 7 signifies 1977-78

The following numbers have been reserved for 1977-78. From them the courses to be given in 1977-78 will be chosen. Note that the numbers of courses which are actually given will be followed by the letters A, B, or D, depending on whether they are half or full courses.

114-617 and 717 GREEK POETRY (e.g. drama, lyric).

114-627 and 727 GREEK PROSE (e.g. historians, orators, philosophers).

114-637 and 737 LATIN POETRY (e.g. drama, elegy, epic).

114-647 and 747 LATIN PROSE (e.g. historians, orators, philosophers).

114-657 and 757 NON-LITERARY SUBJECTS (e.g. archaeology, epigraphy, history, religion, philosophy).

114-667 and 767 NON-LITERARY SUBJECTS (e.g. archaeology, epigraphy, history, religion, philosophy).

114-677 and 777 INTENSIVE READING COURSES.

114-687 and 787 INTENSIVE READING COURSES.

In addition, certain courses listed in the Faculty of Arts Announcement may be taken by graduate students, with the permission of the Department.

C3 COMMUNICATIONS PROGRAM

Arts Building
853 Sherbrooke St. West
Montreal, PQ
Canada H3A 2T6

STAFF

Professors – H.A. McPHERSON *(English)*; P. OHLIN; D. SUVIN *(English)*; D.F. THEALL *(Director)*; D.C. THOMSON *(Political Science)*

Associate Professors – M. BRISTOL; I. GOPNIK *(English);* M. GOPNIK *(Linguistics);* W.P. HILL-GARTNER *(Instructional Communications Centre);* C.E. PASCAL *(Centre for Learning and Development);* G.J. ROBINSON *(Associate Director);* G.H. SZANTO *(Comparative Literature Program);* W.C. WEES *(English)*
Assistant Professors – I. BELLERT; D.C. CROWLEY; M.A. LAFON; J. LANGUIRAND *(English)*
Lecturer – Y. LAMONDE *(French Canada Studies Program)*

The Graduate Program in Communications offers courses and directs project research in preparation for the M.A. and Ph.D. in Communications.

The Program is concerned with the study of communications phenomena through an interdisciplinary activity that includes both theoretical and practical considerations of the various modes and media of communication. The Program does not provide the purely technical training which can be more appropriately carried out by institutions of technology and communication arts, rather the focus is on broadening the understanding of the interplay between practical needs and theoretical perspectives. The special theoretical interest of the Program centres on the nature and scope of human communications as they emphasize the relationship of cognitive, social and aesthetic problems. Degree candidates are encouraged to explore these aspects of communication studies by drawing upon the resources of the various departments throughout the university with whom the Program has established close working relations.

Requirements for the M.A. Degree

An Honours Bachelor's degree or equivalent is required of applicants for the M.A. Program. In any case the transcript must show breadth or depth in related areas of study. Two years of residence are normally necessary to fulfill the Master's degree. Course work and a thesis are required together with a demonstrated competence in French as a second language.

Requirements for the Ph.D. Degree

Applicants for the Ph.D. program are expected to have completed the equivalent of an M.A. in Communications or an alternative acceptable to the Program. Admission will be based on academic achievement and evidence of talent and strong motivation in communications studies.

In some cases candidates may be admitted into Phase II of the doctoral program at the discretion of the Program and the Faculty of Graduate Studies and Research, thereby gaining accreditation of one year of resident study. Three years of residence are normally required for the Doctoral degree. The program of study is comprised of three or more projects, the fulfilment of a language requirement and a written dissertation.

Admission

Inquiries regarding the Program should be addressed to the Director, Graduate Program in Communications, McGill University, Arts Building, 853 Sherbrooke St. West, Montreal, PQ H3A 2T6

Courses for the M.A. Degree

109-610D THEORIES OF COMMUNICATION. Examination of a variety of human communication theories including cybernetic models, social interactionist models, semiotic and symbolic forms of analysis, with particular emphasis on the explanation of how theories are linked to various forms of practice and how these, in turn, relate to a general understanding of communication phenomena.

109-615D STAFF-STUDENT COLLOQUIUM. The Staff-Student Colloquium is concerned with modes, configurations, and the broad procedures of communication studies. Each semester a major theoretical issue is examined through papers, lectures and discussions in relation to communication practices and to the development of the field.

Details of related courses, and further information on the Program are available from the Program Office.

C4 COMPARATIVE LITERATURE PROGRAM

3495 Peel Street
Montreal, PQ
Canada H3A 1W7

STAFF

Professor – D. SUVIN *(on leave)*
Associate Professors –M. ANGENOT *(French and Comparative Literature);* G. SZANTO *(Director of Program)*
Assistant Professor – Y. LINDEMAN *(English and Comparative Literature)*

Comparative Literature is the integrated study of literary history and theory across national and linguistic boundaries. As a discipline, comparative literature recognizes that the language in which a text is written is only one of the determinants of the content of that text. Similarities between texts of different nations or national sub-groups are often more relevant than the language differences that divide the audiences of these texts.

REQUIREMENTS

Admission

Candidates should as a rule hold a Bachelor of Arts with Honours or its equivalent in a literature, or joint Honours in two literatures, or in one literature and another Arts subject. Candidates must be competent in three languages. Admission is competitive, in part based on the admission committee's assessment of a statement by the candidate explaining his or her desire to study Comparative Literature, and in part on the committee's assessment of an example of the candidate's written work.

Requirements for the M.A. Degree

In most instances the student takes the equivalent of six full year courses or seminars and writes an M.A. thesis. Of these six seminars or courses, three are normally chosen from the course offerings of the program itself and include the Pro-Seminar in Comparative Literature, and three are chosen from those given by other departments (including those courses that are cross-listed with the program). Normally, two of the courses taken outside the program are in the literature of specialization and one is in another area or literature.

The thesis, which usually runs between 80 and 120 pages in length, integrates the candidate's study of specific literatures with his or her other studies of literary theory.

COURSES FOR HIGHER DEGREES

102-610D PRO-SEMINAR IN COMPARATIVE LITERATURE. Introduction to Comparative Literary Studies. A reading and discussion of basic Comparative Literature methodologies from Baldensberger to the present. In addition, the Pro-Seminar will examine a series of literary texts within the context of the historical and theoretical methodologies studied.

102-620D STUDIES IN NARRATIVE. The topic will vary from year to year, and will include an examination of fiction from two or more national literatures as well as readings from the history and theory of fiction. (Possible topics: Narrative Impressionism; Proust and Joyce; the Bildungsroman; etc.)

* **102-630D STUDIES IN DRAMATURGY.** The topic will vary from year to year, and will include both an examination of plays from two or more national literatures and readings from the history and theory of dramatic literature. (Possible topics: Romantic Dramaturgy; Dramaturgy of the European Twenties; Marlowe and Schiller, etc.)

102-640D SOCIOLOGY OF LITERATURE. The topic will vary from year to year. The content of the seminar will include both an examination of various theories of the sociology of literature, and the application of such theories to a series of literary texts. Each member of the seminar will create a methodology suitable to the literary problems with which he or she is dealing.

102-680D INDIVIDUAL TUTORIAL. Individualized work with a specific instructor in areas not otherwise covered by course offerings at McGill. Usually not available in first year of residence. May be taken only once.

For further information, please contact Professor G. Szanto, Comparative Literature Program, 3495 Peel Street, Montreal. (392-5452).

C5 DEPARTMENT OF ENGLISH

Arts Building
853 Sherbrooke St. West
Montreal, PQ
Canada H3A 2T6

STAFF

Professors – C.D. CECIL; L. DUDEK; J. HEMLOW; A. HEUSER; S. KLIMA; A. LUCAS; H. MacLENNAN; A.E. MALLOCH; H.A. McPHERSON; P.H. OHLIN *(Chairman)*; D. SUVIN *(on leave)*; D.F. THEALL

Associate Professors – H. ANDERSON; B. BLAISE; D.F. BOUCHARD; M. BRISTOL *(on leave)*; M. BRUCE; D. COLE *(on leave)*; M. DAVISON *(on leave)*; M. DORSINVILLE *(on leave)*; L.T. DUER; D.C. FRYE *(on leave)*; I. GOPNIK; P.H. PIEHLER; M. PUHVEL; R. REICHERTZ; J. RIPLEY; B. ROBINSON; J. RONSLEY; B.F. WEEMS; W.C. WEES; D. WILLIAMS

Assistant Professors – I. BELLERT; W.T. BOOTH *(Assistant to the Chairman)*; A. CONWAY; D. CROWLEY; L.T. ELLIOTT *(on leave)*; A. GODFREY; C.A.E. HEPPNER; W.P. HILLGARTNER; L. LIEBLEIN; Y. LINDEMAN; D.S. RUBIN; M. SIMON; M. STENBAEK-LAFON; L.E. TROIDE

Special Lecturer – J. LANGUIRAND

REQUIREMENTS

Applications

Letters of recommendation are required of *all* applicants. Applications close March 31. Completed applications and supporting material for persons seeking Teaching Fellowships should reach the Department by January 31.

The M.A. Degree

Admission to the M.A. program requires an Honours degree in English or its equivalent. Candidates with insufficient background may be required to take a Qualifying Year.

The basic requirements for the M.A. are 2½ courses and a thesis of 80-100 pages written under supervision. Under the standard residence requirements the courses are completed in the first year and the thesis in the second year. However, well prepared students are encouraged to complete the degree in one year.

The Ph.D. Degree

The number of entrants to the doctoral program is severely limited. Highly qualified applicants are admitted to the first year from an Honours Program in English (or its equivalent). Qualified applicants who have already completed a Master's degree in English are admitted to the second year of the program. Two years are normally devoted to preparation of a comprehensive examination, and a third year to research. The language requirement must be fulfilled before comprehensives may be undertaken.

It is the policy of the Department to urge candidates to complete the Ph.D. program within four years. A candidate intending to submit the thesis to meet the deadline for Spring Convocation must give notice of this intention before January 1. A candidate intending to meet the deadline for Fall Convocation must give such notice before May 1. A detailed description of the program may be obtained from the departmental office; see also the *General Information and Faculty Regulations* section of the Faculty of Graduate Studies and Research Announcement.

COURSES FOR HIGHER DEGREES

The following is a list of courses offered on a rotational basis. A list of courses to be given in 1977-78 will be available from the departmental office.

110-447D CROSSCURRENTS IN 18TH CENTURY ENGLISH AND EUROPEAN LITERATURES. (Prerequisite: A reading knowledge of French).

For 500 level courses, please see the Faculty of Arts Announcement.

110-602A BIBLIOGRAPHY.

110-604A OLD ENGLISH LANGUAGE AND PROSE LITERATURE.

110-605B OLD ENGLISH HEROIC POETRY. Open to students who have taken English 110-604A, or its equivalent elsewhere.

110-606A INTRODUCTION TO MIDDLE ENGLISH LITERATURE.

110-607B MIDDLE ENGLISH LITERATURE.

110-608A CHAUCER. The Canterbury Tales.

110-609B CHAUCER Troilus and Criseyde, and other poems.

110-610A,B DEVOTIONAL LITERATURE.

110-612D THE TRANSITION FROM THE MIDDLE AGES TO THE RENAISSANCE.

110-615D SHAKESPEARE.

110-616D ELIZABETHAN AND JACOBEAN DRAMA.

110-640D THE AMERICAN NOVEL.

110-650D 19TH CENTURY LITERATURE AND THOUGHT.

110-659A,B STUDIES IN SCIENCE FICTION.

110-660D STUDIES IN SCIENCE FICTION.

110-661A,B SEMNAR OF SPECIAL STUDIES.

110-662A,B SEMNAR OF SPECIAL STUDIES.

110-665A,B STUDIES IN AMERICAN LITERATURE AND INTELLECTUAL HISTORY.

110-670D COMPARATIVE LITERARY STUDIES.

110-671A,B DESIGNING EFFECTIVE COMMUNICATION.

110-675D LITERARY CRITICISM.

110-680D CANADIAN LITERATURE.

110-687D RESEARCH SEMINAR.

110-688A,B STUDIES IN DRAMATIC FORM.

110-689D RESEARCH SEMINAR.

110-690D SEMINAR OF SPECIAL STUDIES.

110-707A,B THE ARTHURIAN LEGEND.

110-708A,B STUDIES IN A LITERARY FORM.

110-710D RENAISSANCE STUDIES.

110-712A,B RENAISSANCE TRAGEDY.

110-714A,B RENAISSANCE POETRY.

110-716A,B SPECIAL STUDIES IN SHAKESPEARE.

110-718A,B RENAISSANCE COMEDY.

110-722D MILTON.

110-724A,B COMEDY.

110-726A,B NARRATIVE PROSE OF THE 18TH CENTURY.

110-727A,B AUGUSTAN POETRY.

110-728A,B THE LATER 18TH CENTURY.

110-730A,B ROMANTIC THEORY AND POETRY.

110-731D 19TH CENTURY STUDIES.

110-732A,B POETRY AND POETICS.

110-733A,B THE VICTORIAN NOVEL.

110-734A,B STUDES IN FICTION.

110-735D SPECIAL STUDIES IN CRITICISM.

110-736D MODERN POETRY.

110-737A,B MODERN NORTH AMERICAN DRAMA.

110-740D STUDIES IN SYMBOLISM.

110-746A,B THE 19TH CENTURY.

110-756D DRAMA OF THE 20TH CENTURY.

110-757A,B MODERN DRAMA.

110-760A,B STUDIES IN ANGLO-IRISH LITERATURE.

110-761D 20TH CENTURY NOVELISTS.

110-765D THEORY AND PRACTICE OF TRANSLATION.

110-770D STUDIES IN AMERICAN LITERATURE.

110-775D RECENT AMERICAN AND CANADIAN LITERATURE.

110-776A,B FILM THEORY.

110-780D STUDIES IN LITERARY FORMS.

110-781D STUDIES IN COMMUNICATIONS.

110-784D LANGUAGE, LINGUISTICS AND LITERATURE.

110-785A,B STUDIES IN LITERARY THEORY.

Professors – G.P. COLLET; J. ETHIER-BLAIS; EVA KUSHNER *(Chairman)*; J.E.L. LAUNAY *(on leave Winter term)*; J.-C. MORISOT

Associate Professors – M. ANGENOT; M.T. CARTWRIGHT; YVONNE CHAMPIGNEUL *(on leave)*; J.-P. BOUCHER; G. DI STEFANO; J.-P. DUQUETTE; F. FURLAN; H.C. JONES *(on leave)*; R.G. McGILLIVRAY; M. RABOTIN; F. RICARD *(on leave)*; D.W. STEEDMAN *(on leave)*; J. TERRASSE; L.C. VAN DELFT

Assistant Professors – ISIDA CREMONA *(on leave)*; J.-C. LEMYZE; A. MAUGEY; GABRIELLE PASCAL-SMITH; Y. RIVARD *(on leave)*; A. SMITH; IRÈNE STAROSTA *(on leave)*; A. TICHOUX

REQUIREMENTS

Admission

PROPÉDEUTIQUE

Peuvent être admis en Propédeutique les étudiants titulaires d'un B.A. avec concentration en études françaises ou québécoises (''Major''). Ils sont tenus de s'inscrire à temps complet à un programme de 4 cours (ou l'équivalent en demi-cours), établi lors de leur inscription.

Graduate Record Examination (G.R.E.)

Tous les candidats venant d'un Collège ou d'une Université américaine doivent soumettre leur ''Graduate Record Examination Scores''. Les dossiers de demande d'admission ne seront pas étudiés sans cette pièce.

Epreuve d'anglais

Tous les étudiants de M.A. et de Ph.D. doivent subir, avant la remise de leur mémoire ou de leur thèse, une épreuve destinée à vérifier leur connaissance de la langue anglaise.

M.A.

Le programme de maîtrise est à la fois un programme complet en soi et une première étape vers le Ph.D. Il vise deux objectifs également importants:

1– Permettre à l'étudiant titulaire d'un B.A. avec spécialisation en français (''Honours'') de compléter et d'approfondir ses connaissances sur l'ensemble du domaine littéraire grâce à un programme raisonné de cours portant sur l'histoire des littératures française et québécoise de

même que sur une variété de sujets connexes: littératures comparées, genres littéraires, histoire de la langue, civilisation, etc.

2– Favoriser l'apprentissage de la recherche et un début de spécialisation de la part de l'étudiant qui suit un cours d'initiation aux méthodes en recherche littéraire, et surtout rédige un mémoire sous la direction d'un professeur du Département.

La durée des études de maîtrise est de deux ans: un an pour la scolarité (M.A.I), et un an pour la rédaction du mémoire (M.A.II).

Pour être admis directement en M.A. I, le candidat doit être titulaire d'un B.A. avec spécialisation en français ("Honours"), ou d'un B.A. avec double spécialisation ("Joint-Honours"). Le B.A. ne donne pas automatiquement droit à l'admission. Le candidat doit également présenter un bon dossier de 1er cycle.

SCOLARITÉ – (M.A.I)

La première année de maîtrise est consacrée à la scolarité. L'étudiant doit suivre l'équivalent de 8 demi-cours, soit 4 par trimestre s'il est inscrit à temps complet, ou 4 demi-cours, soit 2 par trimestre, s'il est inscrit à mi-temps et obtenir une note d'au moins 65% pour chaque cours. Ces cours sont ainsi répartis:

- 1 demi-cours obligatoire intitulé *Recherches et méthodes critiques* (125-595A);
- 1 cours (ou 2 demi-cours) portant sur la littérature française ou la civilisation avant 1800 (littérature médiévale, XVIe, XVIIe, ou XVIIIe siècle);
- 1 cours (ou 2 demi-cours) portant sur la littérature ou la civilisation française ou québécoise depuis 1800 (XIXe ou XXe siècle);
- l'autre cours et demi (ou 3 demi-cours) est optionnel. L'étudiant choisira de préférence ses cours optionnels dans le domaine sur lequel il compte faire porter son mémoire. Le programme choisi par l'étudiant doit être approuvé par le directeur des études au moment des inscriptions.

Un cours optionnel (ou 2 demi-cours) peut être suivi dans un autre département de McGill figurant à la Section C ("Humanities") de l'annuaire de la Faculté des études avancées et de la recherche, ou à une autre université, pourvu qu'il soit de même niveau que les cours 600 offerts par le Département. Dans tous les cas, l'étudiant doit obtenir l'autorisation du comité des études de 2e et 3e cycles, qui ne sera accordée que si le cours en question cadre avec le programme d'études du candidat.

Le mémoire (M.A.II)

La deuxième année de maîtrise est consacrée à la rédaction du mémoire. Une fois qu'il aura délimité son domaine de recherche, le candidat doit choisir lui-même un directeur parmi les professeurs du Département. Le candidat prend contact avec son directeur et définit avec lui le sujet de son mémoire et le fait approuver par le Comité des études de 2e et 3e cycles. Le mémoire est déposé normalement un an (et au plus tard trois ans) après la fin de la scolarité.

Ph.D.

Pour être admis au programme de Ph.D. le candidat doit remplir les conditions suivantes:

1) Etre titulaire du M.A. en français de l'Université McGill, ou l'équivalent; avoir obtenu au cours de sa scolarité de maîtrise une moyenne d'au moins 75%; avoir rédigé un mémoire qui ait mérité deux mentions "bien" ou au-dessus.

2) Présenter, en plus du formulaire officiel de demande d'admission accompagné de 2 lettres de recommandation et de ses *relevés de notes officiels,* une lettre exposant les raisons qui motivent l'étudiant à demander son admission au Département, ainsi qu'un projet d'étude indiquant avec une certaine précision sur quel domaine et dans quelle optique il compte entreprendre ses recherches de Ph.D. Ce document ne constitue pas nécessairement un engagement formel de la part du candidat qui pourra modifier son sujet une fois engagé dans ses études. Mais la commission des admissions sera mieux à même de juger, d'après ce projet, du sérieux du candidat et de ses aptitudes à la recherche littéraire avancée.

Programme

Le programme de Ph.D. comporte 3 parties:

- Cours et séminaires
- Examens général et spécialisé
- Thèse

Comité-conseil

Dès le début de ses études de Ph.D. l'étudiant a déjà, en principe, une idée relativement précise du domaine sur lequel il compte poursuivre ses recherches. Il devra, le plus tôt possible au cours de son année de Ph.D. II, choisir un directeur de recherche parmi les professeurs réguliers du Département. Une liste des professeurs ainsi que leurs domaines de spécialisation est disponible au secrétariat des études. Avec son directeur, l'étudiant devra, au cours de l'année de Ph.D. II, définir plus précisément son domaine de spécialisation et l'optique dans laquelle il compte travailler, de manière à pouvoir soumettre son projet de thèse à la fin du second trimestre de Ph.D. II.

Une fois le projet de thèse du candidat approuvé par le comité des études de 2e et 3e cycles, un comité-conseil est formé. Son rôle est de suivre d'aussi près que possible le travail du candidat, de discuter avec lui de l'orientation de ses recherches, ainsi que de la conduite de sa préparation à la

thèse, et d'agir comme jury aux examens général et spécialisé. Ce comité est formé du directeur de recherche de l'étudiant et de deux autres professeurs du Département, spécialistes dans le domaine de recherche du candidat ou dans un domaine connexe.

Cours et séminaires:

Ph.D.I – Même programme que pour l'année de M.A.I, sauf que l'étudiant est tenu de s'inscrire au cours 125-601D: *Travaux dirigés.*

Ph.D.II – Les etudiants n'ayant pas suivi le cours 601D au niveau de la maîtrise, ou un cours analogue dans une autre université, doivent s'inscrire à ce cours et à 4 autres demi-cours ou séminaires, dont le cours réservé aux étudiants de Ph.D. (125-633B *Les moralistes du XVIIe siècle)*, de même qu'au séminaire de doctorat (125-710D).

Ph.D.III – Seminaire de doctorat (125-711D). Ce séminaire, de type informel, est réservé aux étudiants de Ph.D. Il s'agit de rencontres bi-mensuelles, où les étudiants présentent à tour de rôle un état de leurs travaux. Ce seminaire se poursuit toute l'année.

Examens:

Examen général – Cette épreuve consiste à préparer 3 travaux portant sur les domaines choisis, et suivis, pour chacun d'eux, d'une interrogation orale. Les sujets sont établis en fonction du profil de la scolarité du candidat et portent sur des questions d'ensemble (par exemple: sujet d'histoire littéraire, de genre, d'école, de période, de thème, de structure; théorie et pratique d'une méthode critique; problème en rapport avec la langue et la linguistique, etc.). Les 3 sujets ainsi délimités doivent être soumis au Comité des études de 2e et 3e cycles pour approbation.

Examen Spécialisé – Cette ultime épreuve ne peut avoir lieu avant que les 3 étapes de l'examen général aient été réussies. Le candidat doit préparer un texte portant sur le domaine de recherche qu'il a choisi pour sa thèse, accompagné d'une bibliographie critique.

Thèse:

Une fois réussies les épreuves générale et spécialisée, l'étudiant dispose de 5 ans pour déposer sa thèse. Dès que les examinateurs ont fait parvenir à la Faculté des rapports favorables à l'acceptation de la thèse, le candidat est appelé à la soutenir.

La soutenance a lieu devant un jury d'au moins 5 personnes. Il est présidé par un représentant du doyen. Font également partie du jury le comité-conseil de l'étudiant de même que le Directeur du Département ou son représentant, et un universitaire étranger au Département ou à l'Université.

COURS POUR LES CANDIDATS DE DEUXIÈME ET TROISIÈME CYCLES

Selon les règlements du département

125-511A TRADUCTION LITTERAIRE.
Professor Launay

125-520D ÉVOLUTION DE LA LANGUE FRANÇAISE AU CANADA.
Professor Rabotin

125-550A LECTURES GUIDÉES I.
Staff

125-551B LECTURES GUIDÉES II.
Staff

125-595A RECHERCHE ET MÉTHODES CRITIQUES. Éclaircissements sur la notion de "texte littéraire". Historique des diverses tentatives pour constituer une "science du texte" (rhétorique, poétique, histoire littéraire, sociologie de la littérature, etc.). On partira des problèmes généraux de l'*interprétation* des textes et documents, tels qu'ils se posent aussi dans d'autres domaines des sciences humaines, pour en venir à cerner dans sa spécificité le problème de l'interprétation des textes littéraires, et pour saisir les relations mutuelles entre "objet" et "méthode". Questions de terminologie critique. Éléments de bibliographie.
Professor Morisot

124-601D TRAVAUX DIRIGÉS. Etablissement d'un programme individuel de lectures (les bibliographies proposées aux étudiants seront établies avec la collaboration de collègues spécialisés des domaines retenus). Les programmes individuels seront tracés: 1. sur examen du dossier de chaque étudiant (cours suivis, etc.), 2. après entrevue avec chaque étudiant.
Professor Tichoux

125-618A VILLON: "LE LAIS".
Professor Di Stefano

125-620B DU BELLAY.
Professor Kushner

125-632A LE CLASSICISME FRANÇAIS.
Professor McGillivray

125-633B LES MORALISTES DU 17e SIÈCLE.
(Cours réservé aux étudiants de Ph.D. – éventuellement ouvert aux étudiants de M.A.)
Professor van Delft

125-644B LA LITTÉRATURE FANTASTIQUE.
Professor Furlan

125-646B LE MATÉRIALISME AU 18e SIÈCLE.
Professor Terrasse

125-647A DIDEROT.
Professor Cartwright

125-659B FLAUBERT.
Professor Duquette

125-664A LOUIS-FERDINAND CÉLINE.
Professor Smith

125-665A GIDE.
Professor Collet

125-666D RÉCEPTION DE RIMBAUD.
Professor Morisot

125-680B POÉSIE QUÉBECOISE.
Professor Maugey

125-686B LE RÉALISME DANS LE ROMAN QUÉBECOIS.
Professor Pascal-Smith

125-687A BORDUAS.
Professor Ethier-Blais

125-688A L'ÉCOLE LITTÉRAIRE DE MONTRÉAL.
Professor Boucher

125-700D ÉPREUVE GÉNÉRALE. L'épreuve consiste en la préparation de trois travaux portant sur les domaines choisis, et suivis, pour chacun, d'une interrogation orale.

125-701D ÉPREUVE SPÉCIALISÉE. Le candidat doit préparer un texte portant sur son domaine de recherche et accompagné d'une bibliographie critique. Une fois son texte soumis aux trois membres de son comité-conseil, le candidat est interrogé oralement sur le contenu de ce texte. L'évaluation tiendra aussi bien compte de la qualité de ce travail que des réponses du candidat lors de la discussion.

125-710D/711D SÉMINAIRE DE DOCTORAT. Mise en commun par les étudiants en cours de thèse des problèmes théoriques et méthodologiques reliant leurs recherches particulières aux problèmes généraux des études littéraires françaises et québécoises.
Professor Kushner

Ph.D. Language Tests

For Ph.D. candidates in other departments who require French for research and in satisfaction of the language requirement the following course is offered:

125-004D FRENCH READING COURSE (2 HOURS THROUGHOUT SESSION).
Professor Rabotin

C7 DEPARTMENT OF GERMAN

Samuel Bronfman Building
1001 Sherbrooke St West
Montreal, PQ
Canada H3A 1G5

STAFF

Professor – A. ARNOLD *(on leave);*
Associate Professors – M. BIRCHER; V.R. BLOCK; E. GALLATI; T. GOLDSMITH-REBER *(on leave);* A. HSIA; H.J. MAITRE; H. RICHTER *(Acting Chairman);* J. SCHMIDT; I. SCHUSTER

REQUIREMENTS

In order to be admitted to graduate work in German the candidate must have a B.A. degree with Honours or Joint Honours in German from McGill University, or hold an equivalent degree from another college or university of recognized standing, or have completed a course of studies of equivalent value at such an institution.

Candidates who do not possess these prerequisites may, with special permission, enter the department as qualifying students for the purpose of completing these preliminary studies. In order to be admitted to graduate work in German, the candidate must have

a) considerable fluency in German (all lectures are in German),
b) a good knowledge of German literature from the Baroque period to the 20th century,
c) a good knowledge of the History of the German Language. Students may satisfy this requirement by completing German 129-500A, 129-501B and/or 125-510A, 129-511B during their first graduate year at McGill.

Graduate students holding a Teaching Assistantship or who are otherwise employed will normally not be allowed to take more than four half courses a year. Teaching Assistants are required to attend a seminar on Teaching Methods. If a student's knowledge of English is judged inadequate, he may be required to attend an approved course in that language. All graduate students are required to attend, each session, the staff-student colloquium on special problems.

Requirements for the M.A. Degree

At least the equivalent of four full courses must be taken. Students are encouraged to complete one quarter of their course load in another discipline.

Students are not, as a rule, able to earn the M.A. degree in less than two years. They are expected to begin work on their thesis after the end of the first session. The thesis should be roughly 80 to 100 pages in length, should reveal ability to organize the material under discussion, and should be succinct and relevant. After the session in which they complete their course work, students are required to pass a comprehensive examination.

Requirements for the Ph.D. Degree

After completing the B.A. degree with Honours or the equivalent, a student will normally take the equivalent of eight full courses. After completing the

M.A. degree or its equivalent, a student must take at least the equivalent of four full courses. Students are encouraged to complete one quarter of their course load in another discipline.

After the session in which the course work is completed, a candidate will be required to pass a comprehensive examination. Candidates will be required to pass a reading test in one language other than English and German. Usually this language is French, but for those specializing in German Literature before 1600 the test may be in Latin.

Original research leading to new insights is a prerequisite for the acceptance of a Ph.D. thesis. After acceptance of the thesis, the candidate has to defend his thesis before a committee.

As a rule, it will take a candidate at least four years after the B.A. degree to complete the requirements for the Ph.D. degree. Students who have not spent an appreciable length of time in a German speaking country are advised to spend one year at a university in such a country, for which credit may be given in the above program.

COURSES FOR HIGHER DEGREES

Courses are normally given in the form of seminars, and may be rated as full or half courses. Each year, the Department publishes a list of those offerings which will be available in the ensuing session. These lists are available from the departmental Secretary or from the Graduate Faculty office, normally in the month of May.

Each year the Department offers courses in some of the following areas:

129-605-09, 705-09A,B MEDIAEVAL GERMAN LITERATURE.

129-610-14, 710-14A,B GERMAN LITERATURE IN THE AGE OF THE RENAISSANCE AND THE REFORMATION.

129-615-19, 715-19A,B GERMAN LITERATURE OF THE BAROQUE AND ROCOCO.

129-620-24, 720-24A,B GERMAN LITERATURE OF THE ENLIGHTENMENT.

129-625-29, 725-29A,B GERMAN LITERATURE OF THE STURM AND DRANG PERIOD.

129-630-34, 730-34A, B GERMAN CLASSICISM.

129-635-39, 735-39A,B GERMAN ROMANTICISM.

129-640-44, 740-44A,B GERMAN REALISM AND EARLY NATURALISM.

129-645-49, 745-49A,B GERMAN LITERATURE IN THE 20TH CENTURY.

129-650-54, 750-54A,B GERMAN LINGUISTICS AND PHILOLOGY.

129-655-59, 755-59A, B LITERARY THEORY AND CRITICISM.

129-660-64, 760-64A,B COMPARATIVE LITERATURE STUDIES.

129-665-69, 765-69A,B SEMINAR ON TEACHING METHODS.

129-670-74, 770-74A,B STAFF-STUDENT SEMINAR ON LITERARY PROBLEMS.

129-675A,B RESEARCH SEMINAR.

Ph.D. Language Tests

For Ph.D. candidates who are required to pass a reading test in German the following course is offered.

129-004D GERMAN. READING COURSE. (2 hours; *Text:* H. Jannach; *German for Reading Knowledge;* 2nd edition. Van – Nostrand – Reinhold Co.). Method and Practice of Translation. This course is intended for students preparing to fulfil the language requirement for the Ph.D. degree.
Professor Block

C8 DEPARTMENT OF HISPANIC STUDIES

Samuel Bronfman Building
1001 Sherbrooke St. West

Assistant Professor – K.M. SIBBALD

Requirements for the M.A. Degree

In order to be admitted to graduate work in Spanish, the candidate must fulfil the following prerequisites:

a) Candidates must possess a B.A. degree with Honours or in certain cases Joint Honours in Spanish from McGill University, or an equivalent degree from another college or university of recognized standing.
b) Candidates who do not possess the above prerequisites may, with special permission, enter the Department as qualifying students for the purpose of completing these preliminary studies.

Graduate students holding a Teaching Assistantship or who are otherwise employed wil normally not be allowed to take more than two full courses a year. If a student's knowledge of English is deemed inadequate, he may be required to attend an approved course in that language.

Candidates must take the equivalent of four full courses which will be chosen, in consultation with the Department, from the categories listed below. It is strongly recommended that the half course on

Methods of Literary Analysis be taken in the first year. The other courses may be spread over a period of not more than two years.

Within six months after completion of course work, candidates will normally be expected to pass a comprehensive examination, after which they will present a thesis of 80 to 100 pages. (See *Faculty Regulations* for deadlines).

Courses for the M.A. Degree

144-601D M.A. COMPREHENSIVE EXAMINATION

144-602A METHODS OF LITERARY ANALYSIS. Professor Martinez

144-605-609A,B PROBLEMS OF LITERARY THEORY AND CRITICISM.

144-610-614A,B SPANISH LINGUISTICS AND PHILOLOGY.

144-620-624A,B SPANISH LITERATURE OF THE MIDDLE AGES.

144-625-629A,B SPANISH THEATRE OF THE GOLDEN AGE.

144-630-634A,B SPANISH POETRY OF THE GOLDEN AGE.

144-635-639A,B SPANISH PROSE OF THE GOLDEN AGE.

144-640-644A,B CERVANTES.

144-645-649A,B SPANISH NEOCLASSICISM AND ROMANTICISM.

144-650-654A,B SPANISH REALISM AND NATURALISM.

144-655-659A,B SPANISH LITERATURE FROM 1898 TO 1936.

144-660-664A,B SPANISH LITERATURE SINCE THE CIVIL WAR.

144-665-669A,B SPANISH AMERICAN LITERATURE OF THE COLONIAL PERIOD.

144-670-674A,B SPANISH AMERICAN THEATRE.

144-675-679A,B SPANISH AMERICAN POETRY.

144-680-689A,B SPANISH AMERICAN PROSE.

144-690-694A,B SPECIAL TOPICS.

144-790D Ph.D. LANGUAGE REQUIREMENT. (For students in other departments).

*Qualified students wishing to pursue their studies towards a Ph.D. in Spanish should consult the chairman of the Department.

C9 INSTITUTE OF ISLAMIC STUDIES

Stephen Leacock Building
855 Sherbrooke St. West
Montreal, PQ
Canada H3A 2T7

STAFF

Professors – C.J. ADAMS *(Director)*, AHMAD ABU-HAKIMA; A. BIJLEFELD; H. LANDOLT; DONALD P. LITTLE *(Assistant Director)*
Associate Professors – ISSA J. BOULLATA; WADI HADDAD; RICHARD N. VERDERY
Assistant Professor – UNER TURGAY
Research Associate – MEHDI MUHAQQIQ
Specialist Librarians – JERZY GUTKOWSKI; JAN WERYHO

The Institute offers courses, and undertakes to direct research in preparation for the M.A. and Ph.D. degrees in Islamic Studies. Two years of resident study are normally required for the M.A. degree, five for the Ph.D. degree.

The Institute is concerned with the faith of Muslims, and with the Islamic tradition involving the society and the civilization to which it gave rise and to which it is currently related. The Institute's special emphasis is on the faith as a contemporary and living force; and on the major changes through which the civilization and society are currently going. It would seek such understanding as will enable outsiders to observe those changes intelligently, Muslims to participate in them intelligently, and both to communicate.

From September 1975, a joint cooperative program became effective between the Duncan Black Macdonald Center for the Study of Islam and Christian-Muslim Relations of the Hartford Seminary Foundation, and the Institute of Islamic Studies. The program is conducted on the McGill campus. Three faculty members from the Hartford Seminary Foundation joined the staff of the Institute.

Candidates for degrees in Islamic Studies may, with the consent of those departments, be permitted or required to take relevant courses offered by the Departments of History, Economics and Political Science, Philosophy, Comparative Religion, etc. In special cases these departments also recognize participation in relevant courses offered by the Institute as contributing to their own advanced degrees. Such participation by students from other departments is welcomed by the Institute.

The Institute stresses competence in language. At the Master's level, two years, or the equivalent, of one Islamic language is required, normally Arabic; each student is expected to complete a total of *five* courses (including one seminar) and a research thesis within a two-year period. For the doctorate, two additional years of residence and five additional courses are required. All Ph.D. candidates must

have a reading knowledge of *either* French or German, preferably both (for access to Western scholarship on Islam) *and* two years, or the equivalent, of a second Islamic language.

COURSES FOR HIGHER DEGREES

* **397-602D SURVEY OF ISLAMIC PHILOSOPHY.** (3 hours). A history of the attempts of Muslim thinkers to adapt Greek philosophy to Islamic revelation; study of the Translation Movement, the Mu'tazila, and the rise of Kalam; readings in al-Kindi, al-Farabi, Ibn Sina, Ibn Rushd, al-Razi, and other important Muslim philosophers.

* **397-603B INTRODUCTION TO RESEARCH MATERIALS FOR ISLAMIC STUDIES.** (1 hour). A practical introduction to the materials academically available for these studies. Some preliminary discussion of research methods, of the preparation of reports and essays; documentation; transliteration. Particular attention is given to the special reference books and serials used in the field.

397-604D INTRODUCTION TO THE ISLAMIC TRADITION. (3 hours). A course to introduce the uninitiated student to major aspects of the Islamic tradition: Jahiliyah times, the Prophet, Qur'an, Hadith, Kalam, Shari'ah, Falsafah, Tasawwuf, Shi'ah and the sects, Institutions, and Modern Developments. Emphasis is given to the principal Islamic and Western sources in each of these areas.
Professor Adams

* **397-605D ARABIC LITERATURE: A.D. c500-1970s.** (3 hours). A survey of the literature of the Arabs in pre-Islamic times with special emphasis on the *mu'allaqat*. Developments following the rise of Islam and its influence on literary production in prose and poetry, emphasizing selected poets and writers and considering new themes, genres, and thought in the Umayyad and the 'Abbasid periods. A condensed treatment of Arabic literature between the fall of Baghdad in 1258 and the Napoleonic war in the Middle East, and a more detailed study of the Arab literary renaissance in the nineteenth century and the development of fiction, drama, and poetry in the twentieth century. No knowledge of Arabic is required for this course. Use will be made of available English translations.

397-610D HISTORY OF ISLAMIC CIVILIZATION: THE CLASSICAL PERIOD. (3 hours). The origins of the early Islamic state in Arabia and the Umawi Caliphate. The growth of an Islamic civilization, and the 'Abbasi Empire until the Seljuk period. The rise of the Fatimis. The Caliphate of Cordoba.
Professors Little and Verdery

* **397-611D HISTORY OF ISLAMIC CIVILIZATION: THE MEDIAEVAL PERIOD.** (3 hours). The Seljuks, and the mediaeval synthesis. The Moors in Spain and North Africa. The Crusades. The Mongols and the destruction of the Baghdad Caliphate. The Mamluk, Persian, Turkish and Indian Empires until 1700.
Professor Little

* **397-613D HISTORY OF ISLAMIC CIVILIZATION: THE LATER ISLAMIC EMPIRES.** The rise and growth of the Ottoman, Safavid and Mughal Empires. Their intellectual and cultural life. Relevant successor states to the end of the 18th century.

397-614D THE HISTORY OF ISLAMIC INDIA. The Arabs in India; the establishment of the Delhi Sultanate; the interaction of Islam and Hinduism. The Mughals: political history; social, intellectual, and religious trends. The fall of the Mughals and the end of Muslim rule in India.

397-615B HISTORY OF THE ISLAMIC EAST (1256-1700). (Seminar, 2 hours). A survey of the development of Islamic civilization in Iran, Iraq, Anatolia, and Central Asia after the Mongol invasions until the collapse of the Safavid dynasty: the Ilkhanid, Timurid, and Safavid dynasties.

397-621D INTRODUCTORY ARABIC.

397-622D LOWER INTERMEDIATE ARABIC.

397-623D HIGHER INTERMEDIATE ARABIC.

397-625D ADVANCED ARABIC. (3 hours). Critical reading of texts in a particular field; for example, readings in the historians, or in the theologians, in connection with Islamics 702 below, or the legists, in connection with Islamics 706. As the content may vary, this course may be repeated for credit.

397-631D INTRODUCTORY TURKISH.

397-632D LOWER INTERMEDIATE TURKISH.

397-633D HIGHER INTERMEDIATE TURKISH.

397-634D ADVANCED TURKISH. (This course will normally be related to Islamics 722 below; Prerequisite: Islamics 397-622D or 397-641D).

397-641D INTRODUCTORY PERSIAN.

397-642D LOWER INTERMEDIATE PERSIAN.

397-643D HIGHER INTERMEDIATE PERSIAN.

397-644D ADVANCED PERSIAN. (Prerequisite: Islamics 397-622D).

397-651D INTRODUCTORY URDU.

397-652D LOWER INTERMEDIATE URDU.

397-653D HIGHER INTERMEDIATE URDU.

* **397-654D ADVANCED URDU.** (Prerequisite: Islamics 397-622D or 397-641D).

* **397-670D ISLAMIC ART AND ARCHITECTURE.** Study of the development of Islamic art and architecture as related to the principles of Islam as a religion and regional traditions.

397-700D Ph.D. PRELIMINARY EXAMINATION IN ISLAMICS. RESEARCH SEMINAR. For all students writing theses and all others engaged in research. (Seminar 2 hours).
Professor Adams and Staff

Several of the following seminars will be given each year.

397-702D ISLAMIC THEOLOGY: SEMINAR ON A SPECIAL QUESTION. (2 hours). The problem considered will vary from year to year. The course may, therefore, be repeated for credit.

* **397-703D READING IN CLASSICAL ARABIC PHILOSOPHERS.** (Seminar 2 hours). Consideration of the development of philosophic thought among the Muslims, and its relation to the late Greek background; with special reference to Ibn Sina (Avicenna). Some of his writings, especially the *Kitab al-Najat*, or al-Ghazzali's *Tahafut*, will be read in Arabic. The role of *falsafah* in classical Islamic culture and thought.

* **397-704D ISLAMIC THEOLOGY.** (Seminar, 2 hours). A study of significant aspects of the Muslims' attempt to give intellectual expression to their faith in different periods in the past.
Professor Haddad

* **397-705D THE SOCIAL INSTITUTIONS OF ISLAM I.** Government and State. (Seminar 2 hours). A survey of the evolution of the various patterns and concrete manifestations of Muslim political theory and practice through the classical and mediaeval periods of Islamic history. The rise of modern states and political problems in various Muslim countries.

* **397-706D THE SOCIAL INSTITUTIONS OF ISLAM II.** Law. (Seminar 2 hours). The role of law in Islamic thought and society, considered historically in terms of its theological, political, and sociological aspects. The impact of modern legal systems and ideas, contemporary movements of codification, and the problems of legislation.

397-707D SEMANTICS OF THE QUR'ĀN. (Seminar, 2 hours). An analytical study of Qur'ān vocabulary. By applying the methods of analysis that are being developed in structural and field semantics to the verses of the Qur'ān, the aim is to isolate the general conceptual scheme that underlies the *Weltanschauung* of the sacred book of Islam.
Professor Bijlefeld

397–708D QUR'ĀN EXEGESIS (Seminar, 2 hours). A study of two or three suras taken as units, and of a number of Qur'ānic passages and key works. Attention will be given to issues of style, form and chronology, as well as to the content matter; the latter including a consideration of the history of the interpretation of these sections. The suras and passages considered will vary from year to year.
Professor Bijlefeld

* **397-710D SHI'AH THOUGHT.** (Seminar 2 hours). A history of thought among the Shi'ah with consideration of important thinkers, movements and books.

* **397-721D ISLAMIC DEVELOPMENTS IN THE MODERN ARAB WORLD.** (Seminar 2 hours). Internal reform movements and responses to external pressure, 1800 to the present.

397-722D THE DEVELOPMENT OF SECULARISM IN MODERN TURKEY. (Seminar 2 hours). An analysis of the transition from Ottoman institutions and ideas to those of contemporary Turkey. After considering the 18th century attempts at reform, attention is given to the changes during the *Tanzimat*, "Young Turk", and Republican periods, as a preparation for an understanding of contemporary problems raised by secularization.
Professor Turgay

* **397-723D ISLAMIC DEVELOPMENTS IN MODERN INDIA AND PAKISTAN.** (Seminar 2 hours). Significant movements in Islamic thought and political action, since the Mughul downfall. The influence of Sirhindi; Waliyullah and his school; the Mujahidin; 1857. De'oband; Aligarh; Azad and Muslim participation in Indian nationalism; Iqbal; Pakistan. The Munir Report; Pakistan constitutional and ideological issues; Muslims in India since partition.

* **397-724D DEVELOPMENT OF THE ISLAMIC TRADITION IN INDONESIA.** (2 hours). Pre-Islamic background. The arrival of the Islamic tradition; Javanese elements in its development, and Hukum Adat. Muslim states versus the Dutch company; the Padri war. Islamic policy of the Dutch. Recent Islamic movements and political parties (Sarekat Islam, Muhammadijah, Masjumi, Nahdatul Ulama, Persatuan Islam, M.I.A.I., etc.). Nationalism.

* **397-725D THE ISLAMIC HISTORY OF WEST AFRICA.** (2 hours). A study of the Islamic role in the development of institutions and ideas in the western and central Sudan, from the 11th century to the present day with special reference to (i) relations with the wider Muslim World, (ii) sources, literary and archaeological, for a study of this area.

* **397-726D ISLAMIC DEVELOPMENTS IN MODERN IRAN.** (2 hours).

397-727D MODERN HISTORY OF THE GULF STATES. The history of the Arabian Peninsula in modern times with special emphasis on the Gulf States. Concentration will be on Saudi Arabia, Kuwait, Bahrain, Qatar, the Union of the Arab Amirates, and 'Uman from the 18th century to the present.
Professor A. Abu-Hakima

* **397-728D ISLAMIC DEVELOPMENTS IN MODERN NORTH AFRICA.** The relationship of the Maghrib to the Muslim East and Europe in mediaeval and modern times. Religious developments in North Africa before and after European conquest. The growth of nationalism in Libya, Tunisia, Algeria and Morocco. The interaction of Arab and French culture and its effect on Islam.

* **397-729D ISLAM AND THE WEST.** (Seminar, 2 hours). Muslim views of the 'West' – especially Christianity – and the 'Western' views of Islam from the ninth until the nineteenth century, with particular attention to extant primary sources.
Professor Haddad

* **397-730B THE STUDY OF ISLAM IN EUROPE AND NORTH AMERICA SINCE THE EARLY 19TH CENTURY.** (2 hours). A critical study of the extent to which cultural and ideological trends in the West since the early 19th century are reflected in and have influenced Western academic descriptions and interpretations of Islam.

* **397-731D ISLAM IN THE MODERN WORLD.** (Seminar 2 hours). A conspectus of the Islamic world's response to the internal decline in the eighteenth century and external encroachment in the nineteenth. A comparative study of constitutional developments, religious reform movements, nationalism, etc.

397-735B SPECIAL TOPICS

397-747D THE MYSTICAL TRADITION OF ISLAM (SUFISM). (Seminar 2 hours). An historical and analytical study of great Sufis, their writings and their central problems. Emphasis will be laid upon reading Sufi texts in Arabic and Persian. As the content of the course will vary, this course may be repeated for credit.
Professor Landolt

* **397-750D SOCIAL AND ECONOMIC DEVELOPMENT IN MUSLIM COUNTRIES.** (Seminar, 2 hours). A study of development problems in the light of a historical survey of various reform policies in different countries; contemporary ideas of, and policy towards, development as shown in economic, technical, political and educational measures; with emphasis on the relevance of Islamic values to development problems.

397-760D MUSLIM HISTORIOGRAPHY. (Seminar 2 hours). Readings in historical writings and consideration of the critical problems arising from the use of such materials.
Professor Little

* **397-761D IRAN FROM THE MONGOLS TO THE SAFAVIDS.** (Seminar 2 hours). Historical developments in Iran, Iraq and Anatolia after 1258. The Ilkhanids and post-Mongol successor "states". The Turkman dynasties: Qara-Qoyunlu. Shi'ism, Sufism, and the rise of the Safavids in 1500.

* **397-762D MODERN ARABIC LITERATURE.** (Seminar, 2 hours). A study of the trends in Arabic poetry since the beginning of the modern Arab literary renaissance, with special attention to selected poets from the neo-classical, the romantic, and the realist schools of the twentieth century, and a consideration of changes in poetic form leading from traditional metric designs to free verse and prose-poems. An examination of the development of the Arabic novel and short story in the twentieth century, with attention to fictional techniques and to selected themes as expressions of the social and ideological change in the modern Arab world. A knowledge of Higher Intermediate or Advanced Arabic is required.
Professor Boullata

* **397-777A ISLAMIC PHILOSOPHY.** (Seminar, 3 hours). Consideration of the development of philosophic thought among the Muslims. Classical Arabic writings will be used.

397-778A THE QUR'ĀN AND ARABIC STYLISTICS. (Seminar, 2 hours). The excellencies of the inimitable Qur'ānic style will be analyzed in a critical reading of Dala'il al'I'jaz by 'Abd al-Qahir al-Jurjani (d.471 A.H./1078 A.D.).
Professor Boullata

C10 DEPARTMENT OF ITALIAN LANGUAGE AND LITERATURE

Samuel Bronfman Building
1001 Sherbrooke St. West
Montreal, PQ
Canada H3A 1G5

STAFF

Professor – A.D'ANDREA
Associate Professors – MICHELANGELO PICONE, PAMELA D. STEWART *(Acting Chairman)*

REQUIREMENTS

The B.A. degree with Honours or Joint Honours in Italian as granted by McGill University or its equivalent constitutes the minimum requirement. Applicants who do not have this prerequisite may be accepted for a Qualifying Year.

Requirements for the M.A. Degree

The Faculty regulations concerning the M.A. degree, as stated in the *General Information and Faculty Regulations* Section of the Faculty of Graduate Studies and Research Announcement, apply.

One year of course work and a thesis are required. As a rule, students must take at least three full approved courses, of which one will be Italian 132-680D (Seminar on Literary Problems). After they have completed their course work, students are required to pass a comprehensive examination (132-601D).

Course work, the comprehensive examination and the thesis must show that students have an unquestionably sound knowledge of the language, that they are familiar with all periods of the literature and have a first-hand knowledge of the major literary works, and that they have developed the skills necessary to carry out scholarly research.

Courses for the M.A. Degree†

132-360D SEMINAR ON ITALIAN STYLISTICS AND COMPOSITION.

132-451A BOCCACCIO AND THE ITALIAN NOVELLA.

132-461A DANTE: The Divine Comedy.

132-462B PETRARCH AND PETRARCHISM.

132-464B MACHIAVELLI: The Prince.

132-601D M.A. COMPREHENSIVE EXAMINATION.

132-605B HISTORY OF THE ITALIAN LANGUAGE. Origins and development of the Italian language with a discussion of relevant texts.

132-610A BIBLIOGRAPHY OF ITALIAN LITERATURE. An introduction to the methods of research in the study of Italian Literature with a survey of the basic bibliographic apparatus. A half course, generally required of all students.

132-620A HISTORY OF LITERARY CRITICISM. Major trends in Italian literary criticism with a discussion of outstanding works of criticism.

132-630A PROBLEMS IN TEXTUAL CRITICISM. An introduction to the methods of establishing a critical text with examples taken from Italian literature.

132-640A ITALIAN LITERATURE AND THE WESTERN CULTURAL TRADITION. A study of certain aspects of Italian literature in relation to the literatures of other Western countries.

132-680D SEMINAR ON LITERARY PROBLEMS. Staff-Student discussions of particularly important and difficult texts. A full course, compulsory for all students.

†Qualified students wishing to pursue their studies towards a Ph.D. in Italian should consult the Chairman of the Department.

C11 DEPARTMENT OF LINGUISTICS

Samuel Bronfman Building
1001 Sherbrooke St. West
Montreal, PQ
Canada H3A 1G5

STAFF

Professors – C.D. ELLIS ; A.A. RIGAULT
Associate Professors – MYRNA GOPNIK; D. LIGHTFOOT; M. PARADIS
Assistant Professors – G.L. PIGGOTT; I. BELLERT; N. DOMINGUE
Sessional Lecturers – A. FORD; P. LIGHTBOWN

REQUIREMENTS

Admission

Candidates must hold a B.A. degree with Honours or Joint Honours in Linguistics as granted by McGill University, or its equivalent. Applicants may be required to submit to an examination in order to determine their competence. If in the judgment of the department the student has not reached the expected level of competence, he may be required to take a Qualifying Year and/or attend a summer institute of linguistics. The final date for acceptance by the Department of applications for graduate study is March 1.

Requirements for the M.A. and Ph.D. Degrees

1. **Degree of Master of Arts.** The M.A. degree requires one year of course work of not less than three approved full* courses, a comprehensive evaluation covering two areas of the field not covered in course work (see below 104-601D) and a thesis. Minimum admission requirement is normally a first degree equivalent to a McGill B.A. degree with Honours in Linguistics. Promising candidates with gaps in their preparation may be admitted to a *Qualifying Year* and/or advised to attend a summer institute of linguistics.

2. **Degree of Doctor of Philosophy:**
   a) Candidates holding a B.A. degree with Honours in Linguistics will, upon admission, follow a program of at least three years. This will include three full courses and Comprehensive Evaluation I (see below 104-601D) to be completed before the beginning of the second year, two further full courses and Comprehensive Evaluation II (see below 104-701D) to be completed before the beginning of the third year and a doctoral thesis, research for which will normally occupy the third year.
   b) Candidates holding a McGill M.A. in Linguistics and who, in the judgment of the Department, possess the qualifications of Ph.D. candidates will follow a further two-year program approved on an individual basis by the Department. This will include not less than two approved, full courses, a second comprehensive evaluation (see below 104-701D), to be successfully completed before beginning work on the thesis, and a doctoral thesis, research for which will normally occupy the second of the two years required for the program.
   c) Candidates holding an M.A. in Linguistics from a recognized university upon admission to McGill must follow a program of at least two years, including not less than three approved full courses, Comprehensive Evaluation II (see below 104-701D) and a doctoral thesis, research for which will normally occupy the second of the two years required for the program. (Two half courses may be counted as the equivalent of one full course in paragraphs a) b) and c) above.

**A full course is normally a D course extending through two semesters: i.e., a full academic year. For purposes of course requirements an A or B course, covering one semester only, is counted as a half course.*

COURSES FOR HIGHER DEGREES

Graduate Courses

104-601D M.A. COMPREHENSIVE EVALUATION. (Two presentations).

104-610D EXPERIMENTAL PHONETICS. Speech as a motor behaviour and as an acoustical phenomenon. Speech perception. Experimentation in the Phonetics Research Laboratory.
Professor Rigault

104-620A TOPICS IN SOCIOLINGUISTICS I. An examination of some major areas in sociolinguistic research. Topics will be selected yearly from the following: the ethnography of speaking, sociocultural aspects of multilingualism, pidgins and creoles, studies in variation.

104-621B TOPICS IN SOCIOLINGUISTICS II. Further investigation of issues in sociolinguistics. Topics will be selected from among the following: problems of relationships between languages, variation and language change, linguistic and sociolinguistic theories, applied sociolinguistics (bidialectalism in the classroom, language policies).
Professor Domingue

* **104-630A GENERATIVE PHONOLOGY.** A critical appraisal of the standard theory of generative phonology, underlining the strength and weakness of this theory.
Professor Piggott

* **104-631B ISSUES IN GENERATIVE PHONOLOGY.** An examination of some important issues in phonological theory and some proposals for major modifications to the standard generative model. Evaluation of some theories proposed as alternatives to the standard model.
Professor Piggott

104-640A PROBLEMS IN HISTORICAL LINGUISTICS. This seminar is devoted to an in-depth study of selected topics in historical linguistics. Topics will be selected primarily from Indo-European but will not necessarily be restricted to this language family. Topics will deal with either phonological or syntactic change and may vary from year to year. Each participant in the seminar will be expected to give a presentation on some aspect of the topic under study.
Professor Piggott

104-641B ISSUES IN HISTORICAL LINGUISTICS. Implications of historical change for formal synchronic grammars.
Professor Piggott

* **104-660D PROBLEMS IN THE THEORY OF SEMANTICS.** An investigation of various theories of semantics (e.g., those of Frege, Tarski, Wittgenstein, Austin, Chomsky, Katz, Lakoff) with particular attention to the assumptions each theory makes about what it must explain and the kinds of evidence which it accepts.
Professor Gopnik

104-680D THEORETICAL FOUNDATIONS OF LANGUAGE TEACHING METHODS. A critical analysis of the various competing methods, an investigation of the implicit principles behind each, and an examination of whether and/or how the explicit principles are implemented. A look at the basic assumptions shared by some or all, and an identification of the specific characteristics of each.
Professor Paradis

104-701D Ph.D. COMPREHENSIVE EVALUATION.

* **104-750D LINGUISTIC THEORY.** A study of the metatheoretical bases of theories. We will look at what constitutes evidence and explanation in linguistics and the criteria which can be used for deciding among alternate hypotheses and alternate theories. In addition we will try to establish the kinds of evidence which could count as a refutation of a hypothesis or a theory and the types of revision which various theories allow. We will also look at the ways in which formalisms interact with evidence and the ways in which competing theories can interact.
Professor Gopnik

104-760A SYNTAX AND SEMANTICS I. Developments in lexicalist syntax and semantic interpretation rules. Particular emphasis on trace theory' and the notion of enriching surface structure to make it the sole basis for semantic interpretation rules.
Professor Lightfoot

104-761B SYNTAX AND SEMANTICS II. Historical change in syntactic systems, viewed from a transformational generative perspective. Implications for linguistic theory. Particular emphasis on changes in the base component and evidence for a syntactic 'transparency principle' predicting such changes.
Professor Lightfoot

* **104-770D PROBLEMS OF LANGUAGE CONTACT.** The influence of one language on another in the performance of individuals and in the history of speech communities. The sociocultural setting for bilingualism, the measurement of bilingual behaviour and national language planning.
Professor Domingue

104-780A SELECTED TOPICS I.

104-781B SELECTED TOPICS II.

104-782A SELECTED TOPICS III.

104-783B SELECTED TOPICS IV.

104-784D SELECTED TOPICS V.

104-786D SELECTED TOPICS VI.

RELATED COURSES

PSYCHOLOGY 204-455D RESEARCH METHODS IN PSYCHOLINGUISTICS. This course may be taken for graduate credit by students in linguistics.

Advanced Undergraduate Courses

Students deficient in certain areas may be required to take some of the following *undergraduate courses* in addition to full graduate courses.

104-350A GENERAL PHONETICS.

104-351B PHONOLOGY I.

104-355B MORPHOLOGY

104-360A SYNTAX I

104-361B SYNTAX II

104-400A THEORY AND METHODS OF HISTORICAL LINGUISTICS.

104-401B SEMINAR IN HISTORICAL LINGUISTICS.

104-450A PHONOLOGY II

104-461B ADVANCED SYNTAX.

104-471B FIELD METHODS OF LINGUISTICS.

104-482D FIELD OR RESEARCH PROJECT.

104-490A SEMINAR IN LINGUISTIC THEORY.

104-491B ADVANCED SEMINAR IN LINGUISTIC THEORY.

C12 MUSIC

Strathcona Music Building
555 Sherbrooke St. West
Montreal, PQ
Canada H3A 1E3

STAFF

Professors – A. BROTT; M. DUCHOW; B. HAMBRAEUS; K. JONES
Associate Professors – B. CHERNEY; R. GIBSON; P. HELMER; A. LANZA; R. LAWTON; B. MATHER; B. MINORGAN *(Chairman, Committee on Graduate Studies)*; D. MORTON; P. PEDERSEN (Dean)
Assistant Professors – M. CYR; J. GREW; P. MARKS; E. PLAWUTSKY; J. REA; J. SCHMALFELDT; J. SIMONS
Visiting Professor – M. SHINOHARA

PROGRAMS

The Master of Arts degree (M.A.) is available in Musicology and Theory, and the Master of Music degree (M.Mus.) in Composition and Performance. The Doctor of Music degree (D.Mus.) is offered in Composition. Interdisciplinary studies involving Musicology or Theory are encouraged. A limited number of teaching assistantships are available in theory, ear training and performance. Inquiries in theory and ear training should be directed to the Chairman, Department of Theory, Faculty of Music. Those in performance should be directed to the Chairman, Department of Performance, Faculty of Music.

ADMISSION

Applicants for the Master's degree must hold a B.Mus. in the area of specialization or a B.A. degree with major or honours in music including considerable work done in the area of specialization. Applicants to the Composition, Musicology, and Theory programs are requested to submit samples of work done in their special area. They may also be required to take placement tests in Analysis, History, and Theory. Applicants found to be deficient in any area may be required to take certain undergraduate courses. A reading knowledge of German is strongly recommended as a prerequisite for graduate work in Musicology. All applicants to the Performance program who do not hold the Honours degree in Performance from this University will be required to pass an Entrance Audition. Only those applicants who clearly demonstrate the potential to become professional performers on their instruments will be admitted to the program.

Applicants for the D.Mus. degree must hold a M.Mus. degree in composition, or its equivalent, and must submit scores and/or tapes of their compositions at the time of application.

REQUIREMENTS FOR THE MASTERS DEGREES

In all programs a minimum number of formal courses are prescribed. The student's major work is expected to be thesis research, composition or performance which will be done under the supervision of an adviser. This work, as well as any additional courses and/or individual study which the department considers necessary, constitutes the central part of this program.

The Masters degrees normally require one year for applicants who have the equivalent of this University's B.Mus. with Honours in the area of specialization.

Composition

(a) 219-631A and 219-632B. Seminar in Twentieth Century Music.
(b) One approved full course elective.
(c) Language reading examination in one of: French, German, or Italian.
(d) Thesis Composition. The candidate will be required to attend regular composition tutorials.

Musicology

(a) 219-680A and 219-681B. Seminar in Musicology.
(b) Language reading examinations in German and one additional language related to the candidate's field of research.
(c) The candidate will be required to attend regular tutorials.
(d) Thesis. The candidate will undertake supervised research leading to a thesis which will be an investigation in depth in some specialized field of musicology.

Performance

(a) 219-690A and 219-691B. Seminar in Performance Practice.
(b) 219-697A and 219-698B. Performance Tutorial.
(c) One full graduate course elective: to be selected from those offered by the Faculty of Music.
(d) Requirements for Keyboard and Guitar Performers: 219-660D. Solo Recital; 219-661D. Chamber Music Recital.
(e) Requirements for Orchestral Instrument Performers: 219-662D. Solo and Chamber Music Recital; 219-663A/B. Orchestra; 219-664A/B. Chamber Music Ensemble.
(f) Requirements for Singers: 219-665D. Voice Recital I; 219-666D. Voice Recital II.

Theory

(a) 219-654A and 219-655B. Seminar in Music Theory.
(b) Language reading examination in one of: French, German, or Italian.
(c) The candidate will be required to attend regular tutorials.
(d) Thesis. The candidate will undertake supervised research leading to a thesis which will be an in-depth investigation in some specialized field of music theory.

REQUIREMENTS FOR THE D.MUS. DEGREE

(a) 219-722D. Doctoral Composition Tutorial (for two years).
(b) Two approved full course electives.
(c) 219-701D and 219-702D. Comprehensive Examinations.
(d) Composition Performance. The candidate must present a concert of his/her compositions.
(e) Thesis. A musical composition of major dimensions together with a written analysis of the work. The thesis must be defended in an oral examination.

Details concerning the comprehensive examinations, composition performance, thesis, and academic regulations are available from the Administrative Assistant (Admissions), or Secretary, Department of Theory, Faculty of Music.

A minimum of two years' residence is required beyond the M.Mus. in composition, or its equivalent.

C13 DEPARTMENT OF PHILOSOPHY

Samuel Bronfman Building
1001 Sherbrooke St. West
Montreal, PQ
Canada H3A 1G5

STAFF

Professors – H.M. BRACKEN; M. BUNGE; A.T. McKINNON *(Chairman)*; J.A. TRENTMAN
Associate Professors – R. STORRS McCALL; D.F. NORTON; J. ROBINSON; W. SHEA; J.D.B. WALKER
Assistant Professors – G. DI GIOVANNI *(on leave)*; ANIL K. GUPTA; WARREN HARVEY *(on leave)*; J. McGILVRAY

REQUIREMENTS

Admission

Before entering upon a course of graduate studies, a student will normally have completed an Honours B.A. in Philosophy, or its equivalent, that is, a degree for which he or she has devoted one third to one half of his curriculum to philosophy.

The applicant's competence in the subject should include the following:

(1) A general knowledge of the history of Western philosophy, Greek, Mediaeval, Modern.
(2) A systematic knowledge of the main philosophical disciplines in their contemporary as well as historical contexts: logic, ethics, epistemology, and metaphysics.
(3) An ability to present, in written form, clear and substantial reconstruction and analysis of the materials normally studied in the areas mentioned in (1) and (2).

To demonstrate their competence in these areas applicants must submit transcripts of academic work, three letters of recommendation from persons with whom they have studied, and at least one substantial example (approximately 15-20 typewritten

pages) of their written philosophical work. In addition, applicants whose first language is English are required to submit scores (Aptitude Test only) of the Graduate Record Examination. Applications and supporting documents should be submitted by March 15.

Requirements for the M.A. Degree

A program consistent with the requirements specified in the Faculty Regulation will be arranged for each student. This will include at least three full courses, or the equivalent, during the first year.

Requirements for the Ph.D. Degree

Students entering the Ph.D. program will follow a course of studies decided upon in consultation with their Advisory Committees. Each Ph.D. student will complete courses on diverse aspects of philosophy, and prepare for Comprehensive Examinations in 1) Epistemology and Metaphysics; 2) Some area to be decided in consultation with the student's Advisory Committee and 3) History of Philosophy. Competence in Logic must also be demonstrated, either by written examination or by completion, with a grade of 'B' or higher, of a course approved by the Department. These examinations are to be taken at the beginning of the student's third year in the program.

The special interests of each student will be taken into account when his or her course of studies is decided, and examination papers are decided upon. In addition, all candidates must pass reading examinations in two (approved) languages other than their mother tongue. As soon as the Comprehensive Examinations are passed, the student will begin work on a dissertation. Dissertation topics must be selected within the research areas in which the Department can provide proper supervision, and within the linguistic competence of the student.

Students who enter the program without an M.A. degree or previous graduate work may be expected to complete such a degree before being advanced to the Ph.D. program.

COURSES FOR HIGHER DEGREES

The Department of Philosophy has renumbered many of its courses. To avoid possible confusion old numbers are shown in brackets.

107-210A INTRODUCTION TO DEDUCTIVE LOGIC. (3 hours). Propositional and predicate logic: formalization of arguments, truth tables, natural deduction and related topics.
Professor Gupta

107-210B INTRODUCTION TO DEDUCTIVE LOGIC.
Professor McCall

* **107-500A (107-581A) METAPHYSICS, DIALECTICS, LOGIC AND EPISTEMOLOGY.**

* **107-501B (107-582B) METAPHYSICS, DIALECTICS, LOGIC AND EPISTEMOLOGY.**

107-502A (107-585A) METAPHYSICS I. A systematic analysis of the concepts of substance, form, thing, possibility, change, space, and time. Relations with both metaphysical tradition, contemporary science, and general system theories.
Professor Bunge

107-503B (107-586B) METAPHYSICS II. A systematic analysis of the concepts of system, novelty, biosystem, mind, and social system. Relations with the metaphysical tradition, comtemporary science, and general system theories.
Professor Bunge

* **107-504A (107-517D) PROBLEMS IN SEMANTICS I.**

* **107-505B (101-517D) PROBLEMS IN SEMANTICS II.**

107-510B INTERMEDIATE LOGIC. Metatheory of propositional and predicate logic; deduction theorem, completeness theorem, etc. Elementary number theory; Gödel's incompleteness theorem (if time permits).
Professor Gupta

* **107-511D MEDIAEVAL LOGIC AND GRAMMAR.**

* **107-520D METHODOLOGY AND PHILOSOPHY OF SCIENCE.**

* **107-522A (107-523A) FORMAL METHODS IN PHILOSOPHY AND SOCIAL SCIENCE I.**

107-538A SEMINAR IN THE HISTORY OF ETHICS I. Topic for 1977-78: Morality and alienation in Hegel's earlier work.
Professor Robinson

107-539B SEMINAR IN THE HISTORY OF ETHICS II. Topic for 1977-78: Liberation and Redemption in Hegel, Marx and Aquinas.
Professor Robinson

107-548A LEGAL AND MORAL PHILOSOPHY OF THE JEWISH TRADITION I.
Professor Harvey

107-549B LEGAL AND MORAL PHILOSOPHY OF THE JEWISH TRADITION II.

107-550A (107-541A) SEMINAR IN ANCIENT PHILOSOPHY

107-551A (107-542B) SEMINAR IN ANCIENT PHILOSOPHY. Topic for 1977-78: Aristotle: *De Anima*.
Professor Trentman

107-552D THEMES IN THE HISTORY OF JEWISH PHILOSOPHY.

107-560B (107-555A) SEMINAR IN 17TH AND 18TH CENTURY PHILOSOPHY. Subject for 1977-78: Descartes and the Cartesians.
Professor Bracken

107-561B (107-556B) SEMINAR IN 17TH AND 18TH CENTURY PHILOSOPHY.

107-562D (107-544D) SEMINAR IN THE HISTORY OF PHILOSOPHY. Topic for 1977-78: David Hume and the Scottish Philosophers.
Professor Norton

107-564A (107-565D) SEMINAR IN KANT I.
Professor DiGiovanni

107-565B (107-565D) SEMINAR IN KANT II.

107-566D (107-558D) SEMINAR IN HEGEL

107-568D (107-563D) SEMINAR IN KIERKEGAARD.

107-570A (107-513A) RECENT AND CONTEMPORARY BRITISH PHILOSOPHY

107-571B (107-514B) RECENT AND CONTEMPORARY BRITISH PHILOSOPHY

107-580A (107-587A) SEMINAR IN PROBLEMS OF PHILOSOPHY. Topic for 1977-78: Truth and Paradox.
Professor Gupta

107-581B (107-588B) SEMINAR IN PROBLEMS OF PHILOSOPHY. Topic for 1977-78: Modal semantics: semantics for modal logic, deontic logic (the logic of obligation and permission) tension logic, and the logic of events.
Professor McCall

107-588A (107-583A) SEMINAR IN SYSTEMATIC PHILOSOPHY.

107-589B (107-584B) SEMINAR IN SYSTEMATIC PHILOSOPHY. Topic for 1977-78: Language and Metaphysics: Mind-brain identity thesis. To be discussed: materialism, eliminative materialism, neutral monism; reduction, compatibilism, dualism, thing-identity and event-identity, sensations, perception and thought.
Professor McGilvray

107-590A (107-593A) SEMINAR IN PHILOSOPHY.

107-591B (107-594B) SEMINAR IN PHILOSOPHY.

107-699D GRADUATE SEMINAR (3 credits). An advanced graduate seminar for Ph.D. and M.A. students writing their dissertations.
Professor McGilvray

107-705A GUIDED RESEARCH IN ETHICS.

107-706B GUIDED RESEARCH IN ETHICS.

107-710A GUIDED RESEARCH IN LOGIC.

107-711B GUIDED RESEARCH IN LOGIC.

107-720A GUIDED RESEARCH IN PHILOSOPHY OF SCIENCE.

107-721B GUIDED RESEARCH IN PHILOSOPHY OF SCIENCE.

107-730A GUIDED RESEARCH IN PHILOSOPHY OF RELIGION.

107-731B GUIDED RESEARCH IN PHILOSOPHY OF RELIGION.

107-740A GUIDED RESEARCH IN ANCIENT PHILOSOPHY.

107-741B GUIDED RESEARCH IN ANCIENT PHILOSOPHY.

107-750A GUIDED RESEARCH IN MEDIAEVAL PHILOSOPHY.

107-751B GUIDED RESEARCH IN MEDIAEVAL PHILOSOPHY.

107-760A GUIDED RESEARCH IN HISTORY OF PHILOSOPHY.

107-761B GUIDED RESEARCH IN HISTORY OF PHILOSOPHY.

107-770A/771B GUIDED RESEARCH IN PHILOSOPHY OF POLITICS.

107-780A/781B GUIDED RESEARCH IN EPISTEMOLOGY AND METAPHYSICS

Several courses primarily philosophical in content are available in other departments. Note in particular the offerings in Classics, Jewish Studies, and the Islamic Institute.

C14 RELIGIOUS STUDIES

3520 University Street
Montreal, PQ

STAFF

Professors – J.C. McLELLAND *(Dean)*; C.J. ADAMS; S.B. FROST; G. JOHNSTON; J.C. KIRBY
Associate Professors – J.A. BOORMAN; R.C. CULLEY; D.J. HALL; D.N. MacMILLAN; H.K. MARKELL; M. PEASTON; D.R. RUNNALLS; R.W. STEVENSON
Assistant Professor – K.K. YOUNG
Visiting Lecturer: – A. HEJIB

REQUIREMENTS

Requirements for admission to the courses leading to the degrees of M.A., S.T.M. and Ph.D. are stated in the General Information and Faculty Regulations section. Further information is given in the *Announcement of the Faculty of Religious Studies.*

COURSES FOR HIGHER DEGREES

The staff offers each session a selection from the following list of courses, and is prepared to guide students in thesis research on approved topics, within any of the following fields: Old Testament language and literature; New Testament language and literature; Church History; Comparative Study; Christian Theology, including Theological Ethics; Philosophy and Psychology of Religion. To each approved student appropriate courses will be assigned, on occasion including courses offered by other Departments such as Education (Catholic Theology), Art History, Philosophy, History, Classics, Jewish Studies, or Islamic Studies. Graduate students in these Departments may be permitted or required to take courses currently offered in Religious Studies.

Adequate library facilities are available in the William and Henry Birks Building and elsewhere in the University for the courses listed, and for research.

All are half-courses unless otherwise noted.

A course may not be offered if fewer than six students register.

Area A (Biblical)

† **260-510A FIRST PETER.** Critical problems of the Epistle. Exegesis of the text. Its importance for early Christian theology and history.
Professor Johnston

* **260-520A AREA STUDIES (BIBLICAL).** A survey course on Biblical Studies for S.T.M. students. Individual reading, tutorials and a research project may be included.
Staff

* **260-604B THE ROOTS OF EARLY JUDAISM.**
Professor Runnalls

* **260-605B INTERPRETERS OF THE RELIGION AND FAITH OF ANCIENT ISRAEL.**
Professor Culley

* **260-607A STUDIES IN THE BIBLICAL NARRATIVE TRADITIONS.**
Professor Culley

260-609A OLD TESTAMENT WISDOM WRITINGS. The tradition of wisdom literature in the ancient Near East with particular reference to the wisdom writings in the Psalter, the Book of Job, and the Apocrypha.
Professor Frost

* **260-610A RECENT INTERPRETATIONS OF MARK**
Professor Kirby

260-612A THE PASSION NARRATIVE IN THE FOUR GOSPELS. A comparative study of the Crucifixion narratives in the four canonical gospels, together with a consideration of the theology that underlies each of them.
Professor Kirby

* **260-614B THE GOSPEL OF JOHN.**
Professor Johnston

* **260-615B THE HOLY SPIRIT IN THE NEW TESTAMENT.**
Professor Johnston

* **260-616A LES PARABOLES DE JESUS.**
Professor Kirby

260-619B THE RESURRECTION IN THE NEW TESTAMENT. Exegesis of the relevant passages, and discussion of modern theories and doctrines concerning Resurrection. If there are a sufficient number of bilingual students, this seminar will be held in French.
Professor Kirby

† **260-710B THE EPISTLE TO THE HEBREWS:** Exegesis of the text with special reference to Christology and Soteriology, exploration of the author's use of the O.T. and understanding of the relationship between old and new dispensations.
M. Isaacs

Area B (Historical)

260-530B AREA STUDIES (Historical-Theological Studies). A survey course on Historical-Theological Studies for S.T.M. students. Individual reading, tutorials and a research project may be included.
Staff

* **260-620A WORSHIP IN THE NEW TESTAMENT.**
Professor Kirby

260-621A ROMAN CATHOLICISM FROM 1870 TO THE PRESENT. A study of major developments within the Roman Catholic Church since Vatican

Council I. Extensive use will be made of primary source materials.
Professor Markell

260-622B THE MODERN LITURGICAL MOVEMENT.
Professor Kirby

260-623A THE ECUMENICAL MOVEMENT.
Professor Markell

260-624B THE CHURCH AND THE CITY IN THE ANGLO-AMERICAN WORLD SINCE 1850. An examination of the impact upon organized Christianity of urban-industrial society, with emphasis on the initial response of the Churches in Britain and North America to the challenge of the city.
Professor Markell

260-628B ANGLICANS AND NONCONFORMISTS IN NINETEENTH CENTURY ENGLAND.
Professor Markell

260-630B PHILOSOPHY AND THEOLOGY.
Professor McLelland

260-631A THE THEOLOGY OF THE CROSS.
Professor Hall

260-632B THE THOUGHT OF REINHOLD NIEBUHR. The seminar examines the theological and ethical thought of Niebuhr in the light of its cultural, social and political context.
Professor Hall

260-645A RELIGION AND THE ARTS.
Professor McLelland

260-730A SEMINAR IN PATRISTIC THEOLOGY. 1977-78: Alexandrian Philosophical Theology (Philo, Clement, Origen).
Professor McLelland

260-731A,B SEMINAR IN MEDIAEVAL THEOLOGY.
Staff

260-732A,B SEMINAR IN REFORMATION THEOLOGY.
Staff

Area C (Religion and Culture)

260-540A AREA STUDIES (RELIGION AND CULTURE). A survey course for S.T.M. students. Individual reading, tutorials and a research project may be included.
Staff

260-641B MODERN PHILOSOPHY OF RELIGION. A comparison of major types of philosophy of religion on the modern scene. Introductory lectures followed by student research on selected topics.
Professor McLelland

260-643A PROBLEMS IN PHILOSOPHY OF RELIGION.
Professor McLelland

* **260-644A THE MEANING AND BASIS OF RELIGIOUS BELIEF.**
Professors McLelland and McKinnon

260-648A SOCIOLOGY AND RELIGION. Religion and alienation – the interaction of sociological and theological analyses of contemporary culture.
G. Baum

* **260-660B DIMENSIONS OF THE PERSON.** Studies in Erikson, Fromm, Horney and Jung.
Professor Peaston

260-661A HUMAN NATURE IN THEOLOGICAL AND PSYCHOLOGICAL PERSPECTIVE. Theology (Niebuhr) and Psychotherapy (Freud, Sullivan, Maslow) are studied as interpreters of man, his freedom, conflicts and renewal.
Professor Peaston

* **260-663A BEHAVIOUR CHANGE AND PERSONAL GROWTH.**
Professor Peaston

260-664B ANXIETY AND FAITH. An examination of some existentialist, psychiatric and religious approaches to the study of man.
Professor Peaston

260-670A REPRESENTATIVE SOCIAL THOUGHT IN THE TWENTIETH CENTURY. An examination and evaluation of the dominant forms of social thought in the twentieth century. Representatives of both religious and secular ethics will be studied.
Professor Boorman

260-671B CHRISTIAN SOCIAL RESPONSIBILITY: SOME MAJOR ISSUES. Major social and ethical problems of today will be identified and analysed. Each student will devote his/her particular attention to one such issue presenting to the seminar his/her research dealing with the causes and nature of the problem, the kinds of solutions being sought and their moral justification.
Professor Boorman

* **260-672A CONTEMPORARY VALUE SYSTEMS IN CHRISTIAN PERSPECTIVE.**
Professor Boorman

* **260-673B INTERPRETERS OF CHRISTIAN VALUES IN THE MODERN WORLD.**
Professor Boorman

* **260-745B MEANING AND INTERPRETATION.** An interdisciplinary seminar on hermeneutical problems.
Professors Culley, Kirby and McLelland.

Area D (Comparative Study)

260-550B AREA STUDIES (COMPARATIVE STUDY). A survey course on Comparative Studies for S.T.M. students. Individual reading, tutorials and a research project may be included.
Staff

260-650D RELIGIONSWISSENSCHAFT: THE HISTORY OF THE DISCIPLINE.
Professor Bijlefeld

260-656A STUDIES IN THE BHAGAVADGITA. An investigation into and comparison of various commentaries on the poem. The attitudes, objectives and interpretive theories of the commentators as well as their understanding of major doctrines in the Gita are included.
Professor Stevenson

397-604D THE ISLAMIC TRADITION.
Professor Adams

397-654D ADVANCED URDU.

397-704D ISLAMIC THEOLOGY.
Professor Haddad

SPECIAL STUDIES

260-680A/680B/690D OLD TESTAMENT.

260-681A/681B/691D NEW TESTAMENT.

260-682A/682B/692D HISTORY OF CHRISTIANITY.

260-683A/683B/693D CHRISTIAN THEOLOGY.

260-684A/684B/694D PHILOSOPHY OF RELIGION.

260-685A/685B/695D ETHICAL PROBLEMS.

260-686A/686B/696D RELIGIOUS PSYCHOLOGY.

260-687A/687B/697D COMPARATIVE RELIGION.

These are tutorial courses designed to meet the research needs of individual students at Master's or Doctor's level in the various disciplines.

† Courses awaiting approval

ELECTIVE COURSES IN OTHER DEPARTMENTS

With the consent of the Dean of Religious Studies and the instructor concerned, graduate students may choose related courses in any other Department of the University. They may also take 40% of their courses in other Québec universities. See the *Academic Credit Transfer Agreement* Section in the Faculty of Graduate Studies and Research Announcement.

C15 DEPARTMENT OF RUSSIAN AND SLAVIC STUDIES

Samuel Bronfman Building
1001 Sherbrooke St. West
Montreal, PQ
Canada H3A 1G5

STAFF

Professor – J.G. NICHOLSON *(on leave 1977-78)*
Visiting Professor – R.V. PLETNEV
Associate Professors – P.M. AUSTIN; A.V. FODOR *(Chairman)*
Assistant Professors – L. BAUER; I. PAVILANIS

REQUIREMENTS

Original research work and the scholarly qualities of the thesis are the principal criteria for conferring a graduate degree in Russian. Two distinct fields of graduate work are recognized – Russian language and Russian literature respectively. It is expected that most students will enter the literary field with a minority showing research interest in philology and linguistics. However, both groups are appropriately provided for.

The general rules of the Faculty apply and are outlined in the *General Information and Faculty Regulations* Section of the Announcement. The minimum academic requirement is normally a high standing in Honours Russian. Further, the Department must be convinced that the candidate for admission has an aptitude for research work and will be able to make an original contribution to knowledge. The Department will usually require candidates to demonstrate a useful reading knowledge, for research purposes, of at least one other Slavic language. In addition a knowledge of French and, preferably, also German, is desirable. Any necessary preparation to fulfil these requirements will be offered within the Department or elsewhere at McGill. On a reciprocal basis certain graduate courses may be taken by arrangement at the Université de Montréal.

Requirements for the M.A. and Ph.D. Degrees

Details of the requirements for the M.A. and Ph.D. degrees may be obtained by applying directly to the Chairman of the Department.

COURSES FOR HIGHER DEGREES

141-601D M.A. COMPREHENSIVE EXAMINATION.
Staff

141-610D CHURCH SLAVONIC
Professor Pavilanis and Staff

141-620D SECOND SLAVIC LANGUAGE AND CIVILIZATION.
Professor Nicholson and Staff

141-630D EARLY HISTORY OF THE SLAVIC LANGUAGES.
Professor Nicholson

141-640D THE BALTO-SLAVIC HYPOTHESIS.
Professor Pavilanis

141-650D HISTORY OF THE RUSSIAN LANGUAGE
Professor Nicholson

141-660D PRE-PETRINE RUSSIAN LITERATURE.
Professor Pletnev

141-670D RUSSIAN LITERATURE OF THE 18TH CENTURY.
Professor Pletnev

141-680D SEMINAR ON SPECIAL AUTHORS OF THE 19TH CENTURY.
Professor Pavilanis and Staff

141-681D SEMINAR ON RUSSIAN ROMANTICISM.
Professor Austin and Staff

141-690D DEVELOPMENT OF RUSSIAN LITERARY CRITICISM.
Professor Fodor and Staff

141-700D Ph.D. PRELIMINARY EXAMINATION.
Staff

141-701D Ph.D. COMPREHENSIVE EXAMINATION.
Professor Nicholson and Staff

141-710D SEMINAR ON THE Ph.D. COMPREHENSIVE EXAMINATION.
Professor Fodor and Staff

141-720D FIRST SEMINAR ON SPECIAL TOPICS.
Professor Nicholson

141-721D SECOND SEMINAR ON SPECIAL TOPICS.
Professor Fodor and Staff

141-722D THIRD SEMINAR ON SPECIAL TOPICS.
Professor Pavilanis and Staff

Ph.D. Language Tests

For Ph.D. candidates in other departments who require Russian for research and in satisfaction of the language requirement the following courses are offered.

141-212D RUSSIAN READING COURSE. (3 hours, both terms). This course enables the student to use written Russian as a useful research tool.
Staff

141-790 RUSSIAN AS A LANGUAGE REQUIREMENT FOR THE Ph.D. See "Ph.D. Language Tests" and consult the Department.

McGILL UNIVERSITY · LIBRARY

GRADUATE STUDIES AND RESEARCH IN THE MEDICAL SCIENCES

1. Departments wholly located in the Faculty of Medicine may accept as candidates for research degrees those who have received the M.D. or equivalent degree. A candidate who does not have the M.D. or equivalent degree may be accepted if a suitable schedule of course work is included as part of his or her graduate education program. Departments located partly in the Medical and partly in the Arts and Science Faculties may accept as candidates for basic science research degrees students who have an Honours or major Bachelor's degree or its equivalent.

2. A candidate for a research degree in a clinical department will be required to give evidence of above-average ability.

3. A candidate for the M.Sc. research degree in a clinical department will be recommended to the Graduate Faculty by the Dean of the Faculty of Medicine. This recommendation will be based on a review of proposals of candidates by the Graduate Study Committee of the appropriate clinical departments. The candidate must fulfil his or her program of course work and present a thesis acceptable to the Graduate Faculty.

4. A candidate for the Ph.D research degree in a clinical department will be recommended to the Graduate Faculty by the Dean of the Faculty of Medicine. This recommendation will be based on a review of proposals of candidates by the Graduate Study Committee of the appropriate clinical departments. If, in addition to the M.D. degree, he or she possesses the M.Sc. degree of this University or its equivalent, he or she will be required to spend two years in the Graduate Faculty in academic residence. He or she must fulfil his or her program of course work and present a thesis acceptable to the Graduate Faculty.

Inquiries concerning research in the clinical aspects of medicine may be in the first instance directed to:

Associate Dean for Graduate Studies and Research
The Faculty of Medicine
McGill University
3655 Drummond Street
Montréal, PQ, H3G 1Y6

5. Inquiries concerning research and higher degrees in Dentistry should be directed to: The Dean, Faculty of Dentistry, Strathcona Anatomy and Dentistry Building, McGill University, 3640 University Street, Montréal, P.Q. H3A 2B2.

D1 DEPARTMENT OF ANATOMY

Strathcona Anatomy and Dentistry Building
3640 University Street
Montréal, PQ,
Canada, H3A 2B2

STAFF

Professors – Y.W. CLERMONT *(Chairman)*; C.P. LEBLOND; D.G. OSMOND
Associate Professors – B.M. KOPRIWA; P.K. LALA; D. LAWRENCE; N.J. NADLER; H. WARSHAWSKY
Assistant Professors – G.C. BENNETT; J.J.M. BERGERON; J.R. BRAWER; E. DANIELS; M.F. LALLI; H.J. MONIÉ; C.E. SMITH; M. WEINSTOCK; W.E. WILSON
Lecturers – W.C. LIM; S. SAUNDERS

REQUIREMENTS

The Department offers programs leading to the degrees of Master of Science and Doctor of Philosophy in Anatomy. The aim of the program is to train individuals to be teachers and research workers in the Anatomical Sciences, including Human Anatomy, Histology, Embryology and Neuro-Anatomy. The research facilities offered by the Department include all aspects of anatomy with emphasis on microscopic anatomy and cell biology.

For registration as a graduate student, the candidate must hold a B.Sc., D.D.S. or M.D. degree or any equivalent degree, as judged by the Faculty, and must have displayed general proficiency in biological studies. Letters of recommendation are required for all applicants.

For M.Sc. and Ph.D. degrees, the student must complete a series of courses, selected to suit individual requirements. In addition, Ph.D. candidates will write a comprehensive examination after the end of the first year. Ph.D. candidates are also required to pass reading examinations in one, or two, languages other than English, as prescribed by the Departmental Chairman upon registration. For both degrees, the major emphasis is placed on the conduct of original research and the preparation of a thesis.

The Departmental Program includes:

504-462D DYNAMIC HISTOLOGY. An advanced course to cover topics such as cell cycle, cell population kinetics and turnover of cell components.

504-481B HUMAN EMBRYOLOGY AND DEVELOPMENT. A comprehensive study of human developmental anatomy.

504-533D EXPERIMENTAL MORPHOLOGY. A lecture and practical course on the use of experimental techniques applicable to morphological research. This course stresses methods currently used in the Department, such as radioisotopic tracers, radioautography, light and electron microscopy.

504-614D HUMAN ANATOMY. A complete dissection of the human body is integrated with a course of lectures, tutorials and audiovisual presentations. This course includes developmental, surface and radiological anatomy.

504-622B NEURO-ANATOMY. This is part of a joint course including Neuro-anatomy, Neuro-physiology and Neuro-chemistry.

504-663D HISTOLOGY. The study of the cytology and structure of tissues and organ. Course designed for medical students.

504-701D Ph.D. COMPREHENSIVE EXAMINATION.

504-723D ADVANCED NEURO-ANATOMY. Seminar course at the Montreal Neurological Institute.

Medicine);* H. PAPPIUS *(Exp. Neurochemistry);* J.F. PERDUE *(Lady Davis Institute);* C. SCRIVER *(Paediatrics);* J. SHUSTER *(Exp. Medicine)*

REQUIREMENTS

Students must submit with their application for admission the results of the Graduate Record Examination (aptitude test, and achievement test in Biology or Chemistry), three letters of recommendation and a brief resumé indicating their particular field of interest for graduate study.

Students who have satisfactorily completed an Honours course in Biochemistry and who have been accepted as research students by the Department and by a research director approved by the Department may register for the M.Sc. degree, which usually involves a two-year program. Following completion of one year of study in the Department, suitable cnadidates may be allowed to proceed directly to the Ph.D. degree, depending on the ability they display in research and course work.

The program of courses for each student is determined by the individual research director in consultation with the Chairman of the Department's Graduate Advisory Committee. Students who have not obtained a suitable Honours degree or its equivalent will be required to take a qualifying year or otherwise make up for deficiencies.

Candidates who have obtained the M.Sc. degree with satisfactory standing from this department or who have completed an acceptable M.Sc. program at another university enter the graduate program at the Ph.D level.

Research work is carried on in the Department laboratories where projects deal with the biochemistry of erythrocytes, liver, brain, muscle, chloroplasts, endocrine organs, nucleic acids, peptides, lipids, and transport phenomena. These projects are conducted in departmental laboratories, the Biochemistry Laboratories of the Allan Memorial Institute of Psychiatry, the Laboratory of Experimental Neurochemistry of the Montreal Neurological Institute, the University Clincs of the Montreal General and the Royal Victoria Hospitals and in certain other laboratories.

There is no second language requirement for Ph.D. students, except where individual research directors wish to make such a requirement for their own students. Students whose mother tongue is not English must be proficient in English and may be required to take a remedial English course if the research director deems this necessary.

COURSES FOR HIGHER DEGREES

Graduate Level Courses

507-503A IMMUNOCHEMISTRY. (Admission by permission of instructor only).
Professor Shuster

507-602A TOPICS IN MOLECULAR BIOLOGY. (Admission by permission of instructor only).
Professor Millward

McGILL UNIVERSITY LIBRARY

507-623B IMMUNOCHEMISTRY (Admission by permission of instructor only).
Professor Shuster

Advanced Undergraduate Courses

507-311A CARBOHYDRATE AND LIPID METABOLISM. (Prerequisites: Biology 177-201D; Corequisites: Biology 177-301A, 177-302B).
Professor Rubinstein

507-312B REGULATION OF NITROGEN METABOLISM. (Prerequisites: Biology 177-201D, Biochemistry 507-311A).
Professor Johnstone

507-404B BIOPHYSICAL CHEMISTRY. (Prerequisites: Chemistry 180-204A, 214B or 213A, 223B required; Chemistry 180-313A recommended. This course is also listed as Chemistry 180-404B).
Professors Meighen and Galley (Chemistry)

507-450A PROTEIN STRUCTURE AND FUNCTION. (Prerequisites: Biochemistry 507-311A, 312B and/or sufficient organic chemistry.
Professors Fraser and Meighen

507-454A NUCLEIC ACIDS. (Prerequisite: Biochemistry 507-311A, 312B or permission of the instructor.
Professors Denhardt and Spencer

507-455B NEUROCHEMISTRY. (Prerequisite: Biochemistry 507-311A, 312B
Professors Sourkes, Wolfe and Staff

507-456B BIOCHEMISTRY OF MEMBRANES. (Prerequisites: Biochemistry 507-311A, 312B Chemistry 180-214B or equivalent, or by consent of the instructors).
Professors Braun and Blostein

SEMINARS

There are three series of seminars. The *Research Seminar* consists of a presentation by the student of the background, experimental approach, and significance of his or her proposed research. This seminar is required of all M.Sc. students in the department who plan to proceed to the Ph.D. degree as well as by students entering at the Ph.D. level. The *Thesis Seminar* consists of a presentation by every third or later year Ph.D. candidate on his or her research. *Departmental Seminars* consist of presentations by members of the staff and visiting scientists outlining their work with their collaborators. Graduate students are required to attend all the above seminars and certain informal seminars, and are encouraged to attend relevant scientific meetings.

D3 BIOMEDICAL ENGINEERING UNIT

McIntyre Medical Sciences Building
3655 Drummond Street
Montréal, PQ,
Canada, H3G 1Y6

STAFF

Associate Professors – H.K. CHANG *(Physiology)* ; L. GLASS *(Physiology)*; M.C. MACKEY *(Physiology)*; J.S. OUTERBRIDGE *(Otolaryngology, Physiology) (Director)*
Assistant Professors – T.R.FENTON *(Experimental Medicine)*; W.R.J. FUNNELL *(Otolaryngology)*; H.C. LEE *(Electrical Engineering)*; J.L. NEAL *(Pediatrics)*
Lecturers – J.R. IVES *(Neurology & Neurosurgery)*; R.S. POULSEN *(Pathology)* ; C.J. THOMPSON *(Neurology & Neurosurgery)*

The BioMedical Engineering Unit provides instruction and opportunities for interdisciplinary research in the application of engineering, mathematics and the physical sciences to problems in medicine and the life sciences. Courses are offered for graduate students in the life sciences and in engineering and the physical sciences. Graduate students working in the Unit are registered through appropriate departments in Medicine, Science and Engineering, and must fulfil the requirements for advanced degrees imposed by their respective departments. In addition each student is required, through course work and independent study, to achieve a degree of interdisciplinary competence appropriate to their area of specialization.

Excellent facilities for research are available in the Unit's laboratories and those of individual staff members elsewhere in the Medical Faculty and affiliated hospitals. A PDP-11/40 laboratory computer is available for experimental work in the Unit's laboratories. A larger, multi-user, PDP-11/70 computer system operated by the Unit, is available to medical research users throughout the Faculty, and serves as host for a developing network of laboratory computers.

Current research interests of Unit staff include neuromuscular control (posture, eye movement), vestibular and auditory systems, mechano-receptors, neural communication, tumor morphogenesis, non-linear oscillations in respiratory control and leuko-cyte production, respiratory fluid mechanics and mass transfer, measurement of cardiac wall motion, signal processing in otology, encephalography and electrocardiography, patient monitoring, medical image processing, medical information systems, clinical laboratory automation, enzyme defects in cystic fibrosis.

Computer development work in the Unit, involving a staff of four professionals, is primarily

concerned with providing support for medical research. Current areas of concern are: software and hardware for laboratory mini and micro computers; computer network development; interactive software for graphics, simulation, data acquisition and signal processing.

COURSES FOR HIGHER DEGREES

Advanced Undergraduate Courses

399-302B INTRODUCTION TO BIOMEDICAL ENGINEERING. (2 hours lecture, 2 hours laboratory/demonstration). A practical introduction for life science students, to aspects of biomedical engineering practice and research. Fundamentals and operation of commonly-used instrumentation; transducers; electrical safety; instrumentation development; aspects of current biomedical engineering research.
Professor Fenton

Graduate Level Courses

399-551B FLUID MECHANICAL ASPECTS OF RESPIRATORY PHYSIOLOGY. (3 hours lecture). Review of basic concepts in respiratory physiology; air flow patterns and particle deposition in the tracheobronchial tree; airway dynamics and flow limitation; convective and diffusive mixing in the lung; mathematical modeling of pulmonary gas exchange; pulmonary microcirculation and pulmonary edema; pulmonary vascular mechanics.
Professor Chang

399-611A BIOLOGICAL CONTROL SYSTEMS. (3 hours lecture). Survey of mathematical models of biological systems, with emphasis on physiological systems, for students with background in control and system theory.
Staff

399-613B NERVOUS SYSTEM THEORY. (3 hours lecture). Mathematical models of neurons, receptors and synapses; neuromines; neural networks; neural coding; neural signal transmission and information processing; multi-unit, multipath neural systems; sensory systems. For students with adequate background in differential equations and system theory, and in basic neurophysiology.
Professor Lee

399-621A ENGINEERING BIOPHYSICS. (3 hours lecture). Biochemical thermodynamics; criteria for equilibrium; phase equilibrium; chemical reaction equilibrium; the equilibrium constant, electro-chemical cell potentials, ATP degradation; chemical kinetics; fluid flow; mass transfer; biological role of water; bio-macromolecules; proteins, nucleic acids, polysaccarides, polyelectrolytes; biological effects of ionizing radiation; buffers, osmotic pressure, acid-base balance.
Professor Neal

399-631B BIOMEDICAL ENGINEERING TECHNIQUES AND INSTRUMENTATION. (3 hours lecture). Selected topics in the application of system theory, signal analysis and instrumentation to medicine and biological research. Statistical and spectral analysis of continuous and point process signals, estimation, parameter identification, compartmental systems and tracer kinetics, biomedical transducers, electrodes and instrumentation. Presentation assumes adequate background in differential equations, transform methods, probability, basic electronics and computer programming.
Professor Lee

399-632A BIOMEDICAL COMPUTER APPLICATIONS. (3 hours lecture). Survey of selected computer applications in medicine and life sciences, emphasizing aspects peculiar to these disciplines, for students with adequate background in computers and mathematics. Data acquisition and anlysis (e.g., EKG, EEG, images); laboratory computer systems; modeling and simulation; information retrieval; interactive systems; graphics.
Professor Funnell

399-650A DYNAMICS AND CONTROL IN PHYSIOLOGICAL SYSTEMS. (3 hours lecture). For life science graduate students. Mathematical modeling of dynamic physiological systems, emphasizing techniques and applications of basic control and system theory.
Professor Outerbridge

399-660D LABORATORY COMPUTER METHODS IN THE LIFE SCIENCES. (1 hour lecture, 1 hour laboratory). For life science graduate students. Laboratory computer architecture, peripherals, programming and operating systems, emphasizing the PDP-11 computer. Techniques for data acquisition, display and analysis, and for control of experiments. Students are required to do a computer project related to their own area of research. Previous computer experience is not required.
Mr. Bernstein

399-661B BIOMEDICAL COMPUTER SIMULATION AND SIGNAL ANALYSIS TECHNIQUES. (2 hours lecture, 3 hours laboratory). For life science graduate students. Computer simulation of dynamic biological systems; basic theory and practical aspects of biological signal analysis; elementary parameter identification techniques; assigned exercises in laboratory and time-sharing computer usage.
Professor Outerbridge

D4 DENTISTRY

Strathcona Anatomy and Dentistry Building
3640 University Street
Montréal, PQ,
Canada, H3A 2B2

STAFF

Professors – K.C. BENTLEY *(Director – Oral Surgery)*; J. deVRIES; H. ROSEN *(Director – Prosthodontics)*.
Associate Professors – R.F.HARVEY; R.G. JONES; D. KEPRON; J.J. McCARTHY; E.P. MILLAR; B. SEDLEZKY; J.W. STAMM; J.D. TOWNSEND.
Assistant Professors – N. DIBAI; G.L. FREEDMAN; D.S. SHAPIRO

REQUIREMENTS

Admission

Candidates for admission into the M.Sc. program must hold a D.D.S. or D.M.D. or its equivalent from an accredited institution and will normally be graduates of above average ability. In addition, those seeking admission must be eligible as training candidates in a hospital dental department as set down by the Order of Dentists of Québec.

Diploma (Restorative Dentistry)

This program provides the student with a year of valuable experience in selected phases of restorative dentistry but does not prepare him/her for the practice of a specialty. This 12 month program begins in September and consists of lectures, seminars, case presentations and the supervised treatment of clinical cases. Direct enquiries to Dr. H. Rosen, Faculty of Dentistry.

N.B. The following programs are awaiting full authorization and candidates may be admitted on an *ad hoc* basis only.

M.Sc. (Oral Surgery)

A residency training program in Oral Surgery has been developed to provide students with a comprehensive background for the practice of Oral Surgery as a specialty. During the three years of the program the candidate will serve as a first year resident, second year resident and third year resident. During this time he/she will be given increasing responsibility for the care of in-patients and out-patients, as well as being required to fulfill certain basic science courses and other assignments. A research project must be commenced in the second year of the program and continued throughout the third year, followed by a Master's thesis.

The program commences July 1 and comprises three years. One candidate per year may be admitted. Direct enquiries to Dr. K.C. Bentley, Faculty of Dentistry.

M.Sc. (Prosthodontics)

The program provides the candidate with advanced training sufficient for the practice of a specialty. Courses are designed to cover the following disciplines: Operative dentistry, fixed and removable prosthodontics, occlusion and gnathology, endodontics, periodontics, and relevant basic sciences. Comprehensive case documentation and treatment planning form the basis of the selected clinical treatment which is carried out under the supervision of the staff. The program incorporates a research component which must be completed and presented in the form of a master's thesis prior to the awarding of the degree. The program commences July 1 and comprises a minimum of 26 months. Direct enquiries to Dr. H. Rosen, Faculty of Dentistry.

COURSES FOR HIGHER DEGREES

590-602D ADVANCED RESTORATIVE DENTISTRY I.

590-603D ADVANCED RESTORATIVE DENTISTRY II.

590-604D OCCLUSION & CLINICAL GNATHOLOGY.

590-605A STATISTICAL METHODS & PROTOCOL FORMULATION IN DENTAL RESEARCH.

590-606D GRADUATE DENTISTRY SEMINARS.

590-607D BASIC SCIENCE TOPICS.

D5 DEPARTMENT OF EPIDEMIOLOGY AND HEALTH

3755 University Street
Montréal, PQ,
Canada, H3A 2B4

STAFF

Professors – M.R. BECKLAKE; S.S. LEE; F.D.K. LIDDELL; A.D. McDONALD; R.O. OSEASOHN *(Chairman)*; W.O. SPITZER
Associate Professors – M. ARHIRII; D.G. BATES; D.D. DAUPHINEE; L. DAVIGNON; G.W. GIBBS; A.S. MACPHERSON; P.V. PELNAR; I.B. PLESS; J.W. STAMM; N. STEINMETZ; T. TAYLOR
Assistant Professors – G. EYSSEN; F.R. FENTON; R. FLETCHER; S. FLETCHER; J. HOEY; J. E. HOFFMANN; I. HOROWITZ; A.K. PATERSON; S.H. SHAPIRO; R.F. SPENGLER; D.C. THOMAS
Lecturers – D.C. BEWS; H. GHEZZO; B. POLLAK; R. WEST; F.M. WHITE
Associate Members – C. DIXON; J. LELLA

REQUIREMENTS

Admission

Candidates should either be medical or dental graduates or hold a bachelor's degree in a relevant subject. M.Sc. candidates must hold at least a B.Sc.

with second class Honours or equivalent, and those for the Ph.D. must hold an acceptable Master's degree or equivalent.

Diploma

A course of study in community health sciences of one academic year. Students must complete at a satisfactory level (or be exempted from) eight half courses. In addition, each student is expected to undertake a project investigation and write a report on it.

M.Sc.

Candidates must pass examinations in (or be exempted from) 8 approved half courses or otherwise pass a comprehensive general examination. The student must thereafter submit a thesis on an approved subject of research in epidemiology, community health, environmental health, occupational health, health care evaluation or medical statistics.

Ph.D.

After at least one year's instruction, training and direction, the student must satisfy the Department of his or her knowledge of the particular subject studied and of the general field of epidemiology. To this end, students may be required to take some or all of the courses listed below. The candidate must submit no earlier than a year after this comprehensive examination, a thesis on an approved subject in epidemiology, community health, environmental health, occupational health, health care evaluation or medical statistics.

COURSES FOR HIGHER DEGREES AND DIPLOMA

* **513-010D PRINCIPLES OF DATA PROCESSING IN HEALTH SCIENCES.** Lectures, demonstrations and supervised practical work covering: basic data handling on unit-record devices, use of statistical packages, McGill computing resources and procedures and introduction to programming and basic systems analysis, and discussion of wider applications of computers in medicine.

* **513-602A PRINCIPLES OF HEALTH STATISTICS.** An introductory course concerned with measures of population, health and health service utilization; standardization; life tables and survivorship; cohorts and competing risks; and comparative health statistics.

513-604D GRADUATE SEMINARS. Scientific meetings and seminars of departmental interest.

513-605D. COURSE FOR M.Sc. AND Ph.D. CANDIDATES. Prescribed course of study to meet a candidate's particular requirements.

513-606A EPIDEMIOLOGY. A course covering: the epidemiological approach in medicine and the uses of epidemiology; epidemiologic procedures in cross-sectional and cohort surveys, case-control studies and clinical trials; and causal factors in disease. The course includes study of the epidemiology of some diseases chosen from the main disease groups.

513-607A PRINCIPLES OF INFERENTIAL STATISTICS IN MEDICINE. An introductory course covering the following topics: variability and the need for statistics; confidence and significance; decisions; some basic statistical techniques; recognition of problems where these techniques are and are not applicable; study design in relation to available tools of analysis; the elements of data processing.

513-608B ADVANCED EPIDEMIOLOGY. During this course a small number of selected topics within epidemiology or health care research are reviewed by the students. A tutor is available for each topic and students are asked to review the present state of knowledge and suggest practical lines for further investigation. The course provides much time for personal study and requires participation in seminars and written presentation.

* **513-609B PRINCIPLES OF MEASUREMENT IN EPIDEMIOLOGIC SURVEY.** Lectures, discussions and demonstrations to examine, with experts from different fields, principles in the measurement of man and his environment for epidemiologic purposes. Each student will be required to design and conduct a project employing the principles of measurement.

513-611B HEALTH CARE RESEARCH METHODS. Detailed study through seminars, guided reading, etc. of the application of methods used by epidemiologists, clinical researchers and social scientists in the assessment of demand, need, efficiency and effectiveness in relation to health services.

513-612A OCCUPATIONAL HEALTH. A course providing opportunity for detailed study by seminars, guided reading, visits and assignments, to acquaint the student with principles of assessment of interactions between man and his occupational environment and with principles and organization of prevention of damage to health.

513-613B SPECIAL TOPICS IN EPIDEMIOLOGY AND HEALTH: ELECTIVE. A course providing opportunity for detailed study by seminars, guided reading, visits, practicals, assignments, etc. of an elected and approved topic of epidemiological importance.

513-614B PUBLIC POLICY IN THE HEALTH FIELD. A multidisciplinary course, examining, in seminars, through guided reading, etc., the evolution of public policy in the health field and its implementation, particularly in Québec. The roles

of various faculties and departments of McGill are placed in the context of existing Federal and Provincial policy, statutes and regulations.

513-616B OCCUPATIONAL HYGIENE. The course will consist of lecture/ seminars, field visits and practical work designed to provide students with the necessary skills to identify and measure hazardous agents in the work environment as well as knowledge of toxicology and environmental control.

513-617B OCCUPATIONAL DISEASES. A course of lectures, seminars, case demonstrations, field visits and guided reading to provide a basic knowledge of the diagnosis, treatment and medical prevention of occupational diseases and poisonings, and of assessment of disability for the purpose of workman's compensation.

513-621A STATISTICAL PROCEDURES IN MEDICINE. Lectures, discussion and guided practical work in the statistical procedures required in epidemiology, clinical research and health care studies, including univariate and multivariate parametric and non-parametric techniques.

513-622B SEMINAR ON THE APPLICATIONS OF STATISTICS IN THE HEALTH SCIENCES. Two overlapping series of seminars. In one, the students will be taught about the statistical problems arising in a wide range of current projects in the Faculty of Medicine; in the other, the students will make presentations providing solutions to these problems.

513-623B PROTOCOL FORMULATION IN HEALTH SCIENCES RESEARCH. Lectures and discussion, including student presentations, covering: scientific method; basic design; sampling and stratification; patient allocation and matching; bias and error; degrees of freedom and trial size; missing values; development of further hypotheses.

513-624A ORGANIZATION OF HEALTH SERVICES. The course reviews in lectures and seminars the evolution and present nature of health-related services in Canada and Québec. This is compared with the situation of other countries at various stages of economic development. The capacity of private and governmental health and social services to meet needs for prevention, treatment and after-care in the general community and special groups, is examined. Manpower and economic implications are considered.

513-625A COMMUNICABLE DISEASES. A course of lectures, discussions and field visits designed to provide an understanding of agent-host-environment interactions in the realm of infection and of principles of communicable disease control. In addition, it demonstrates the use of the laboratory tools used in the study of infectious disease epidemiology.

D6 SCHOOL OF HUMAN COMMUNICATION DISORDERS

Beatty Hall
1266 Pine Avenue West
Montréal, PQ,
Canada, H3G 1A8

STAFF

Professor – D.G. DOEHRING *(Research Director)*; D. LING
Associate Professor – K.K.CHARAN *(Director)*
Assistant Professors – B. BRYANS; A.H. LING; J.C. McNUTT
Part-time teaching staff – Assistant Professors – N. CHAN; H. ILECKI; A. KATSARKAS; D. LECKIE; S. MATTINGLY; C. REED
Sessional lecturers – H. FISHMAN; S. SCHWARTZ; N. SHEERAN; R. SHENKAR

The School of Human Communication Disorders accepts selected applicants into two professional programs, one leading to an M.Sc. (Applied) degree in Human Communication Disorders (Audiology or Speech Pathology) and the other leading to an M.Sc. (Applied) degree in Auditory-Oral Rehabilitation and Education of Children with Hearing Impairment. The latter is offered in collaboration with the Department of Educational Psychology. Selected applicants are also accepted into research programs leading to an M.Sc. or Ph.D. degree. When submitting application, students should specify which of these four programs they wish to enter. *Because of limited enrollment, applications completed after March 31st cannot usually be considered for the next academic year.*

PROFESSIONAL PROGRAMS

An application to a professional program should be preceded by a serious and informed decision regarding the program selected and the field of specialization. Prospective applicants are urged to contact a speech pathologist, an audiologist and a teacher of hearing-impaired children and discuss with them the relative merits, problems and potentials of their professions.

Both professional programs involve two academic years of full-time study and related practical work followed by a summer internship. No thesis is required. In order to prepare students to function as creative professionals, these programs emphasize the understanding of fundamental principles and their present or potential clinical applications rather than the teaching of specific diagnostic, therapy or educational techniques. Active participation in the learning process is encouraged throughout both programs.

M.Sc.A. Degree in Human Communication Disorders

When applying for this degree, students must indicate whether they wish to specialize in Audiology and Aural Rehabilitation or in Speech and Language Pathology. Applicants must have undergraduate degrees with a B average (3.0 on a 4.0 point scale) or better in areas relevant to their selected field of specialization. Specific prerequisites are a course in statistics (preferably offered by a psychology department) and three psychology courses. Knowledge of physiology, phonetics, linguistics and other social sciences is desirable and for those wishing to specialize in Audiology a background in mathematics, physics and electronics is particularly helpful. Applicants having undergraduate degrees in Audiology or Speech Pathology cannot be integrated into this program.

Courses from the following list will be taken according to the area of specialization. Each course is subdivided in several sections which may be taught by different instructors.

401-610D BASIC SCIENCE OF HUMAN COMMUNICATION.

401-611D AUDIOLOGY AND AURAL REHABILITATION.

401-612D PHYSIOLOGY OF SPEECH AND HEARING.

401-613D SPEECH AND LANGUAGE PATHOLOGY.

401-620D ADVANCED LANGUAGE PATHOLOGY.

401-621D ADVANCED AUDIOLOGY.

401-622D ADVANCED SPEECH PATHOLOGY.

401-623D REHABILITATION OF THE AURALLY HANDICAPPED.

401-630D PRACTICUM.

401-640D RESEARCH METHODS.

401-641D INDEPENDENT PROJECT.

401-650D SEMINAR IN HUMAN COMMUNICATION DISORDERS.

401-660D LECTURES AND RESEARCH ON SELECTED ADVANCED TOPICS.

M.Sc.A. Degree in Auditory-Oral Rehabilitation and Education of Children with Hearing-Impairment

Candidates must have an undergraduate degree with at least a B average and preferably hold a teaching qualification. A half course in statistics is required. Recommended courses include those relating to normal infant and child development, the teaching of normal and exceptional children, and the management of behavior disorders. Applicants should be mature individuals, capable of offering leadership. Priority will be given to suitable candidates who have fluency in French. Practicum will be available in francophone settings.

Students will follow essentially the same core curriculum as students in speech pathology and audiology, but with intensive specialization in auditory-oral rehabilitation and education of hearing-impaired children.

The following courses are taken by all students. Each course is subdivided into several sections which may be taught by different instructors.

401-611D AUDIOLOGY AND AURAL REHABILITATION.

401-613D SPEECH AND LANGUAGE PATHOLOGY.

401-615D BASIC SCIENCES FOR AURAL REHABILITATION.

401-625D CHILD AUDIOLOGY.

401-626A,B INDEPENDENT STUDY PROJECT.

414-630D HISTORY, PHILOSOPHY, PSYCHOLOGY AND RESEARCH METHODS RELATING TO THE HEARING-IMPAIRED

414-631D AUDITORY-ORAL COMMUNICATION FOR THE HEARING-IMPAIRED.

414-632D LANGUAGE ACQUISITION BY THE HEARING-IMPAIRED.

414-633A,B INTEGRATION OF HEARING-IMPAIRED CHILDREN INTO REGULAR SCHOOLS.

(Offered in conjunction with the Department of Educational Psychology and Sociology).

RESEARCH PROGRAMS

Selected candidates may be accepted for a program of studies leading to the M.Sc. and Ph.D. research degrees. Applicants should have prior professional training to the Master's level in human communication disorders or education of the hearing impaired. The student will usually be required to complete the M.Sc. research degree before proceeding to the Ph.D. if a research thesis was not completed as part of the previous professional training. The majority of the student's time is devoted to research, with course work determined by individual needs. No professional courses are given at the Ph.D. level, but Ph.D. candidates must complete an advanced statistics course. An examination in a foreign language is not required. Applicants should indicate their main area of research interest.

UNIVERSITY LIBRARY

D7 DEPARTMENT OF MEDICINE [Division of experimental medicine]

Montreal General Hospital
1650 Cedar Avenue
Montréal, PQ,
Canada, H3G 1A4

STAFF

Professors –D.G. CAMERON *(Chairman, Dept. of Medicine);* H.L. GOLDSMITH *(Director, Division of Experimental Medicine);* M. BECKLAKE; J. BURGESS; T. CHANG; B. COOPER; S. FREEDMAN; C. GIROUD; P. Lecturers – B. MURPHY

Associate Members Université de Montréal – R. BOUCHER; A. BARBEAU; M. CHRETIEN; J. DAVIGNON; J. GENEST; C. MORIN; S. PANDE; J. ROJO-ORTEGA; T. SANDOR

ADMISSION

Admission to the Department is restricted to students who wish to register for the Ph.D. degree. Candidates must hold a Major or Honours B.Sc. degree, or an M.D. degree.

In addition to the documentation currently required by the Faculty of Graduate Studies, a letter from the candidate's research director outlining the Ph.D. project is necessary.

REQUIREMENTS

Comprehensive Examination

All students must take the Comprehensive Oral Examination, listed as course 516-701D, at the end of the first year or the beginning of the second year of the Ph.D. This examination will determine if the student's work is progressing satisfactorily and is of sufficiently high calibre to warrant continuation in the program. The student should also demonstrate a broad knowledge of his or her field of research and related areas of knowledge.

Course Work

A minimum of 3 full courses is required; the following courses are compulsory: 516-610A (Biochemical Methods in Medical Research) or 516-612A (Physical Methods in Medical Research) and 516-604D (Cellular Biology).

After consultation with their research supervisor and the Director of the Division, students may choose the remaining courses from those offered by Experimental Medicine, Physiology, Biochemistry as well as other graduate and advanced undergraduate courses in the medical and allied sciences. Where necessary, students may enroll for credit in courses offered in the physical and mathematical sciences.

COURSES FOR HIGHER DEGREES

516-502A ADVANCED ENDOCRINOLOGY – PART I.
Professor Mulay and Staff

516-503B ADVANCED ENDOCRINOLOGY – PART II.
Professor Mulay and Staff

516-507D ADVANCED APPLIED RESPIRATORY PHYSIOLOGY. (Offered in conjunction with the Department of Physiology).
Professor Engel

516-512A PHYSICAL METHODS IN BIOLOGICAL RESEARCH.
Mr. Murphy and Staff

516-604D CELLULAR BIOLOGY.
Staff

516-606B ADVANCED APPLIED CARDIOVASCULAR PHYSIOLOGY.
Professor Goldsmith and Staff

516-610B BIOCHEMICAL METHODS IN MEDICAL RESEARCH.
Professors Gordon and Powell

516-701D COMPREHENSIVE EXAMINATION

552-508A ADVANCED RENAL AND ELECTROLYTE PHYSIOLOGY. (Offered in conjunction with the Department of Physiology).

552-512A INTRODUCTION TO IMMUNOCHEMISTRY. (Offered in conjunction with the Department of Physiology).
Professors Lapp and Gold

552-513B CELLULAR IMMUNOLOGY. (Offered in conjunction with the Department of Physiology).
Professors Lapp and Gold

552-515A PHYSIOLOGY OF BLOOD – PART I. (Offered in conjunction with the Dept. of Physiology).
Professor Cooper

552-516B PHYSIOLOGY OF BLOOD – PART II. (Offered in conjunction with the Department of Physiology).
Professor Cooper

552-517B PHYSIOLOGICAL SUPPORT SYSTEMS. (Offered in conjunction with the Department of Physiology).

D8 DEPARTMENT OF MICROBIOLOGY AND IMMUNOLOGY

3775 University Street
Montréal, PQ,
Canada, H3A 2B4

STAFF

Professors – B. H. MATHESON; S.I. VAS *(Chairman)*; W. YAPHE
Associate Professors – Z. ALI-KHAN; C.A. BUTAS; E.C.S. CHAN; J. deVRIES; P. GILL; R. HAND; L. KAPICA; C.H. PAI; G.K. RICHARDS; H.G. ROBSON; R. SIBOO
Assistant Professors – A.F. DOSS; J.E. FEIN; I.B. FABRIKANT; J. GORDON; E. MANKIEWICZ; M. MARKS; L. MARTINEZ; J.L. MEAKINS; J. MENDELSON
Lecturers – M. BLANC; S. NOMMIK
Demonstrator – C. SHAW
Associated Members – R.D. GUTTMANN *(Medicine)*; C.K. OSTERLAND *(Medicine)*

REQUIREMENTS

Candidates are required to hold a B.Sc. degree with a concentration in Microbiology and Immunology equivalent to a McGill Honours degree and a C.G.P.A. of at least 2.8, or the M.D. degree with high standing in Microbiology, Biochemistry and Pathology.

Those who do not meet the above qualifications may be required to take a qualifiying year.

Requirements for the M.Sc. Degree

The following requirements must be satisfied:

(1) Attendance at courses 528-602D and 528-703D and presentation of at least two seminar topics during the year.
(2) Formal courses with examination where required (528-501D, 528-525B, 528-527B– see below).
(3) Presentation of a satisfactory thesis.

Requirements for the M.Sc.A. Degree

This is a new program first offered by the Department in the 1975-76 session. The principal aim of the program is to provide specialized training in APPLIED Medical Microbiology and Immunology to those who might be expected to function as assistants to the directors of hospital clinical diagonostic laboratories and public health laboratories including units concerned with pollution control insofar as they relate to microbial activities. It is also to be hoped that the program

McGILL UNIVERSITY LIBRARY

will enable graduates to adapt more readily to a career in the pharmaceutical industries and related industries of some significance in the health field than does the present conventional M.Sc. program in Microbiology and Immunology.

Candidates must satisfy the general requirements noted above for the conventional M.Sc. degree except that the minimum in-residence requirement is two full academic sessions. In addition to one year of bench training in diagnostic medical microbiology and formal course work, including seminars (see below), a research project of a practical nature will form an important part of the overall program and a comprehensive research report must be presented. A detailed brochure describing the M.Sc.A. program is available, upon request, from the Department of Microbiology and Immunology.

Requirements for the Ph.D Degree

Following satisfactory completion of the work for the M.Sc. degree candidates may present themselves for examination for the Ph.D degree after not less than two full years of research. The candidate will be judged principally on his or her research ability and on the presentation of a satisfactory thesis. However, certain other requirements must also be fulfilled: (1) Attendance of Courses 528-702D and 528-703D with the presentation of at least two seminar topics each year. (2) A comprehensive examination in Microbiology and Immunology (Course 528-701D) must be passed. It is held during the final year of study and not later than six months before submission of the thesis.

COURSES FOR HIGHER DEGREES

SPECIAL FACILITIES: The clinical laboratory services in bacteriology, virology and mycology are available to candidates as a means of instruction and as a source of material for study.

Advanced Undergraduate Courses

528-313B PARASITOLOGY.

528-315B THE PATHOGENIC FUNGI.

528-422A PATHOGENIC BACTERIA.

528-423A MICROBIAL PHYSIOLOGY.

528-424A FUNDAMENTAL VIROLOGY.

Graduate Courses

528-501D ADVANCED MICROBIOLOGICAL TECHNIQUES.

528-525B PATHOGENIC VIRUSES.

528-527B INFECTIOUS IMMUNOLOGY.

528-602D GRADUATE SEMINAR – MASTER'S LEVEL.

528-603H PRACTICAL DIAGNOSTIC MICROBIOLOGY AND IMMUNOLOGY (Bench Training) (Offered only to M.Sc.A. applicants)

528-604D INDEPENDENT RESEARCH PROJECT IN APPLIED MICROBIOLOGY AND IMMUNOLOGY (M.Sc.A. Program)

528-605D ADVANCED INDEPENDENT RESEARCH PROJECT IN APPLIED MICROBIOLOGY AND IMMUNOLOGY (M.Sc.A. Program)

528-606D ADVANCED VIROLOGY M.Sc.A. Program)

528-701D COMPREHENSIVE EXAMINATION FOR Ph.D. CANDIDATES.

528-702D GRADUATE SEMINAR – Ph.D. LEVEL. Lectures and discussions. All graduate students are required to participate.

528-703D CURRENT TOPICS IN MICROBIOLOGY AND IMMUNOLOGY. (Discussion groups with guest speakers)

D9 DEPARTMENT OF NEUROLOGY AND NEUROSURGERY

Montreal Neurological Hospital
3801 University Street
Montréal, PQ,
Canada, H3A 2B4

STAFF

Professors – D. BAXTER; G. BERTRAND; W.H. FEINDEL *(Chairman)*; R. GILBERT; P. GLOOR; F.L. McNAUGHTON; J. MARTIN; B. MILNER; T.B. RASMUSSEN; J.P. ROBB; J. STRATFORD; L. WOLFE

Associate Professors – A. AGUAYO; G. BRAY; F. ANDERMANN; J. BLUNDELL; A.A EISEN; S. CARPENTER; J.B.R. COSGROVE; R. ETHIER; R. HANSEBOUT; I. HELLER; G. KARPATI; T. KIRKHAM; D. LAWRENCE; I. LIBMAN; G. MATHIESON; A. OLIVIER; H. PAPPIUS; A. L. SHERWIN; D. TROP; G. WATTERS; L. YAMAMOTO

Assistant Professors – M. AUBE; E. ANDERMANN; P. BRAZEAU; R. CATCHLOVE; C. DILA; M.H. FINLAYSON; R. FORD; B. GRAHAM; R. HOLLENBERG; P. HUMPHREYS; J. LITTLE; D. MELANÇON; K. METRAKOS; M. MORRIS; A. MORTON; M. RASMINSKY; L. RENAUD; W. SHEREMATA; W.F.T. TATLOW; J. WOODS

Lecturers – G. BELANGER; S. BEKHOR; L. CUADRADO; J.R. IVES, M. LECHTER; C. MELMED; W. OLANOW; S.J. ROTHMAN; C. STRAUSS; L. TAYLOR; C. THOMPSON

REQUIREMENTS

Admission

Candidates for graduate degrees must first meet the general qualifications and requirements for admission to the Graduate Faculty. (See the General Information and Faculty Regulations Section). A candidate must advise his or her prospective Research Director of his or her intent to enrol in a graduate study program leading to either an M.Sc. or a Ph.D. degree by May 15. The candidate's study program must be approved by 1) the direcotor of the candidate's research and 2) by the Committee of Graduate Studies of the Department of Neurology and Neurosurgery. Registration as a graduate student cannot take place without the approval of this Committee.

The M.Sc. program is a two-year program. In exceptional cases, upon recommendation by the Committee of Graduate Studies of the Department of Neurology and Neurosurgery, this requirement may be reduced to a one-year program for students who spend one full year of laboratory research.

The Ph.D. Program is a three-year program. For M.D.s it is not necessary to obtain an M.Sc. first.

COURSE REQUIREMENTS

a) NEUROSCIENCES SEMINAR. (Course 531-602H) for two years with satisfactory examination at the end of each year. This seminar represents the "core program" of the graduate studies program of the Department of Neurology and Neurosurgery. The complete course extends over two years.

b) SELECTED BASIC SCIENCE COURSES from undergraduate or graduate programs in other departments or special courses in subdepartments within the Department of Neurology and Neurosurgery. The courses will be selected at the beginning of the student's Graduate Program after discussion with the candidate's Research Director and the Committee of Graduate Studies of the Department of Neurology and Neurosurgery. The courses will be selected to fill in or complement the student's background in the particular specialty of his or her graduate studies. Satisfactory credit for these courses has to be obtained. The method whereby the candidate is to be given credit is left to the discretion of the course directors involved and of the Director of the candidate's research, and will require some form of examination or an acceptable substitute.

c) SPECIALTY DISCUSSION GROUP AND SEMINARS. These seminars will be given informally in the various subdepartments and laboratories of the Department of Neurology and Neurosurgery. Recent developments and ideas will be reviewed with particular emphasis on critical discussion of current literature and experimental designs. No formal credit is required except for a reasonably regular record of attendance and active participation in seminar work.

d) PRESENTATION OF A THESIS. The final draft of the thesis has to be submitted to the candidate's Research Director at least 60 days before the deadline for submission of the final copy to the Faculty of Graduate Studies and Research.

GRADUATE COURSES

Neurosciences Seminar

531-602H This is a course of weekly seminars, given during the academic year, designed to present over a 2-year period a concise, up-to-date review of the basic neurological disciplines. Mondays, 4:30 – 6:00 p.m.
Professors Gloor, Wolfe, Feindel, and other members of the Department of Neurology and Neurosurgery, and related McGill Departments.

Neurophysiology

531-610A Lectures, together with undergraduate Neurology and Neurosurgery Course 2A "Anatomy and Physiology of the Central Nervous System".

531-611A Seminars and group discussions in Neurophysiology.
Professor Gloor

Neuroanatomy

531-621A Seminars and group discussions in neuroanatomy. By special arrangement.
Professor Lawrence

Clinical Conferences

531-630H Colloquium in clinical and basic aspects of the nervous system. Mondays, 9:00 a.m., weekly during the academic year.
Staff and Visiting Lecturers

531-631H Seizure and EEG conference – alternate Thursdays 4:30 p.m.
Professors Gloor, Andermann, Rasmussen, Milner and Ethier

Neurochemistry

531-640H Seminars in Neurochemistry in addition to that provided in Course 531-602H. By special arrangement.
Professors Wolfe and Pappius

MCGILL UNIVERSITY LIBRARY

Neuropathology

531-650H Six or twelve months laboratory work in Neuropathology.

531-651H Conference in Neuropathology, alternate Thursdays, 4:30 – 5:30 p.m.

531-652A Neurological histopathology, an introduction. Ten sessions of 2 hours, course limited to 8 participants. Time to be arranged.
Professor Mathieson

Neuroradiology

531-660H Practical instruction in techniques and interpretation.

531-661A Lecture demonstration (3 months in the fall), Mondays 4:30 – 5:30 p.m.
Professors Ethier and Melançon.

Electroencephalography and Clinical Neurophysiology

531-670H Laboratory work in Electroencephalography (minimum-6 months with active participation, seminars and clinical conferences).
Professor Gloor

Neuropsychology

531-680H Training and research methods for selected graduate students.
Professors Milner and Staff

D10 DEPARTMENT OF OTOLARYNGOLOGY

Royal Victoria Hospital
687 Pine Avenue West
Montréal, PQ,
Canada, H3A 1A1

STAFF

Professors – J.D. BAXTER *(Chairman);* D.G. DOEHRING; D. LING
Associate Professors – K.K. CHARAN; R.H. McCOY; J.S. OUTERBRIDGE; E.J. SMITH
Assistant Professors – E. ATTIA; M.J. BLACK; B. BRYANS; H. CAPLAN; A. COHEN; A. GROSSMAN; H.J. ILECKI; A. KATSARKAS; R. LAFLEUR ; M.N. LEVITT; A. LING; J.C. McNUTT; M. MENDELSOHN; W.H. NOVICK; C. REED; M.D. SCHLOSS; R. SHAPIRO; G. SHIMO
Lecturers – S. FRENKIEL; I. FRIED; R. W. McMILLAN; G.M. SINCLAIR; J. SINGH

REQUIREMENTS FOR THE M.Sc. DEGREE

Students must hold an M.D. degree with appropriate prerequisites.

The major part of the student's time will be spent in research and a thesis covering this work will be the major requirement for the degree. In addition the student will be required to attend certain courses given in the Department and in cooperating departments.

GRADUATE COURSES

540-602D ADVANCED COURSE IN PHYSIOLOGY, HISTOPATHOLOGY AND CLINICAL OTOLARYNGOLOGY.

540-603D LECTURES IN BASIC SCIENCES OF OTOLARYNGOLOGY.

Each student will be required to take certain courses in cognate subjects, such as Neuroanatomy, Neurophysiology, Medical Statistics and Physiology Instrumentation. The courses to be taken will depend upon the candidate's background and the research problem being studied.

D11 DEPARTMENT OF PATHOLOGY

3775 University Street
Montréal, PQ,
Canada, H3A 2B4

STAFF

Professors – R. BOLANDE; W.P. DUGID; J.C. HOGG; S.N. HUANG; D.S. KAHN; J.P.A. LATOUR; M.G. LEWIS; R.H. MORE; J.B. RICHARDSON *(Chairman)* G. RONA; H. SHELDON; G. TREMBLAY; F.W. WIGLESWORTH
Associate Professors – M.N. AHMED; S.H. CARPENTER; A. FERENCZY; M.H. FINLAYSON; E. HOSEIN; I. HUTTNER; M.E. KIRK; J. KLASSEN; J. KNAACK; J.R.C. LACHANCE; J.O. LOUGH; K.G. MARSHALL; G. MATHIESON; D.R. MURPHY; D. MURRAY; E. ROSENMANN; G. ROWDEN; T.A. SEEMAYER; N.S. WANG; B.I. WEIGENSBERG
Assistant Professors – B. ARTINIAN; J.BELAND; G. BERRY; S. BROWNSTEIN; M.L. de CHAMPLAIN; R.D.C. FORBES; W. HAUSER; D. HAEGERT; S. INOUE; D. KALOUSEK; M. MANDAVIA; R. MICHEL; MOINUDDIN; A. RONA; P. SCHOPFLOCHER; J. VILORIA; J.L. WEBB
Lecturers – J.P. de CHADAREVIAN; L. DESORMEAU; J. EMOND; B. MANASC; K. MEAGHER-VILLEMURE; P. PATEL; Y. ROBITAILLE; H. SROLOVITZ; B. SUPERVILLE-SOVAK; B.M. WOLANSKYJ

REQUIREMENTS

Ordinarily candidates for a graduate degree in Pathology should have received an M.D., D.V.M. or D.D.S. Students who have obtained a B.A. or B.Sc. or other degree may be considered for postgraduate training. At the end of the first postgraduate year, the candidate must demonstrate a satisfactory knowledge of general and special pathology, and of the methodology in his or her field of interest. Work published or accepted for publication during enrolment in the doctorate program is suitable for partial fulfilment of these requirements. Three years residence is normally required of a Ph.D. candidate. There is no language requirement for a doctorate in Pathology.

COURSES FOR HIGHER DEGREES

546-121J PATHOLOGY. This course is largely a self preparation program taught in seminars. It covers the principles of general pathology and their relationship to commonly encountered diseases.
Professor Kahn

524-221J BIOLOGY OF DISEASE
Professor Richardson

546-300A PRINCIPLES OF DISEASE. This course is an introduction to the study of disease. It is concerned with changes in normal structure and function and their causes at the host, tissue and cellular level. It considers the concepts of health and disease, and uses examples drawn from history, animal experiments and human experience in medicine. It is suitable for all students in biology. Students in U3 and graduate students will receive preference. There are no laboratories but a major paper is required.
Professor Sheldon

546-621B HEMATOPATHOLOGY.
Professors Manasc and Moinuddin

546-701D COMPREHENSIVE EXAMINATION FOR Ph.D. CANDIDATES.
Supervisor and Staff

Scheduled Graduate Seminars (Pathology Institute)

The student may be expected to attend certain scheduled Departmental Seminars.

546-610D AUTOPSY REVIEW CONFERENCE. (2 hours/week).
Professor Sheldon

546-611D SURGICAL REVIEW CONFERENCE. (2 hours/week).
Professor Knaack

546-612D COMPLETED CASE CONFERENCE. (1 hour/week).
Professors Knaack and Sheldon

546-613D DEPARTMENTAL RESEARCH SEMINAR. (1 hour/week).
Professor Forbes

D12 DEPARTMENT OF PHARMACOLOGY AND THERAPEUTICS

McIntyre Medical Sciences Building
3655 Drummond Street
Montréal, PQ,
Canada, H3G 1Y6

STAFF

Professors – B.G. BENFEY; D. ECOBICHON; J. LOWENTHAL; M. NICKERSON; J.R. RUEDY *(Chairman);*
Associate Professors – R. CAPEK; B. COLLIER; N.R. EADE; A.H. NEIMS; R.I. OGILVIE; B.I. SASYNIUK; A.M. TENENHOUSE; J.M. TRIFARO; D. VARMA
Assistant Professors – F.Y. AOKI; J. ARANDA; L.W.K. CHUNG; B. ESPLIN; E. KOVACS; J. KREEFT; G. KUNOS; P.J. McLEOD; A. PADJEN; R.E. RANGNO; J.B. RICHARDSON; B. ROBAIRE; D.S. SITAR; M.S. YONG
Lecturers – D.S.R. EAST

The department offers work leading to the M.Sc. and Ph.D. degrees for students who have completed the B.Sc., M.Sc., M.D. or an equivalent degree with high academic standing. Applicants may be required to take the Graduate Record Examination Aptitude Test and to have letters of recommendation. Except for certain students holding the M.D. degree, the M.Sc. in pharmacology is not recommended as a primary objective. In addition to work in this department, students may be required to make up deficiencies in ancillary subjects such as biochemistry and physiology. Facilities are available for work in neuropharmacology, cardiovascular pharmacology, autonomic pharmacology, biochemical pharmacology, drug metabolism, toxicology and clinical pharmacology. A student may undertake studies in several of these areas before selecting one for his or her thesis work.

Inquiries relating to all aspects of graduate study should be directed to the Director of Graduate Studies, Department of Pharmacology and Therapeutics as early as possible in each academic year.

COURSES FOR HIGHER DEGREES

A basic course in Pharmacology is required for graduate students who have not previously taken an

equivalent course. This is usually 549-461D (GENERAL PHARMACOLOGY) which includes consideration of the effects and mechanism of action of the more important groups of drugs.

The following courses are designed primarily for graduate students, but may be attended by others under special circumstances. These courses are given in a variable sequence depending on the interests and requirements of graduate students enrolled in the department.

549-702B BIOCHEMICAL PHARMACOLOGY. Interaction of natural and synthetic chemicals with subcellular or molecular entities in living systems.

549-703A NEUROPHARMACOLOGY. The basic actions of drugs affecting axonal conduction and synaptic transmission, with particular emphasis on the central nervous system.

549-704B DRUG DISTRIBUTION, METABOLISM AND EXCRETION. Mechanisms by which the body handles endogenous and foreign chemicals and the effects of these processes on the characteristics of drug action.

* **549-705B CARDIOVASCULAR REGULATION AND DRUG ACTION.** Homeostatic regulation of cardiovascular function and its modification by drugs.

549-706A CHEMICAL MEDIATORS AND AUTONOMIC DRUGS. Interactions of drugs and chemical mediators to mimic, augment or inhibit responses to peripheral nerve activity.

* **549-707A MOLECULAR PHARMACOLOGY.** Actions of drugs on specific tissue receptors; relationship of physical and chemical properties to the characteristics of drug action.

D13 SCHOOL OF PHYSICAL AND OCCUPATIONAL THERAPY

27/78

Montréal, PQ,
Canada, H3G 1Y5

STAFF

Associate Professor – HELEN M. GAULT *(Director)*
Assistant Professors – ANNE-MARIE van DAELE; CAROL RICHARDS

M.Sc.A. Program

Enquiries concerning an M.Sc.A. program in Health Sciences (Medical Rehabilitation) should be addressed to Professor van Daele, School of Physical and Occupational Therapy.

D14 DEPARTMENT OF PHYSIOLOGY

McIntyre Medical Sciences Building
3655 Drummond Street
Montréal, PQ,
Canada, H3G 1Y6

STAFF

Professors – R.I. BIRKS; T.M.S. CHANG; B.A. COOPER; P. GOLD; K. KRNJEVIC; F.C. MacINTOSH; G. MELVILL-JONES; J. MILIC-EMILI *(Chairman);*
Associate Professors – H.K. CHANG; M.W. COHEN; M.M. FROJMOVIC *(on leave 1977-78);* L. GLASS; V. KLISSOURAS; W.S. LAPP (on *leave 1977-78)* ; M. LEVY; M.C. MACKEY; G. MANDL; G. MISEROCCHI: J. OUTERBRIDGE: C. POLOSA; P. SEKELJ; A. WECHSLER; R.L. WILLIAMS.
Assistant Professors – A.W. CHAWLA; P.A.L. KONGSHAVN; K. LUKOWIAK; P. NOBLE; S. POTASHNER; D.G.D. WATT; P. WELDON.
Lecturers – E. CHIRITO; G. TOLIS; C. COLE.
Associate Members – J. CHALLIS *(Obstetrics and Gynaecology);* R.F.P. CRONIN *(Medicine);* B. DUBROVSKY *(Psychiatry);* L. ENGEL *(Medicine)* ; H.L. GOLDSMITH *(Medicine);* C.A. GORESKY *(Medicine);* A. GRASSINO *(Univ. of Montreal, Medicine);* D. HORROBIN *(Univ. of Montreal, Medicine)* ; P.T. MACKLEM *(Medicine);* J.M. McKENZIE *(Medicine);* M.M. MORRIS *(Anaesthesia);* S. ROSSIGNOL *(University of Montreal, Medicine);* J.F. SEELY *(Medicine).*

Admission

Students who have completed an Honours Program in Physiology or some other appropriate undergraduate program and who have been accepted by a research director and by the Department may register for the M.Sc. degree. After one year of study in the Department those M.Sc. students who display a high standard in research and course work may be permitted to proceed directly to the Ph.D. degree. Those students who do not enter the Ph.D. program at the end of M.Sc. 1 may be permitted to write an M.Sc. thesis. Students who obtain an M.Sc. degree may apply for entrance into the Ph.D. program.

Course Requirements

Research Seminars – M. Sc. students are required to give at least one seminar before submission of their thesis or before being permitted to enter a Ph.D. program. Ph.D. students are required to give a seminar at least once every two years. *Comprehensive Examination in Physiology* – required for the M.Sc. and/or the Ph.D. degree to show broad knowledge of Physiology and the capacity to integrate this knowledge at the intermediate level. *Other Course Work* – Students are usually expected to complete at least two of the Department's advanced

or graduate courses in their first year. Other course requirements will depend on their field of study.

The main research interests of the Department are at present the chemical and electrical behaviour of the nervous system, electron microscopy and muscle physiology, the release of physiologically active substances from tissues, transplantation reactions and tissue specificity, respiratory mechanics and control of ventilation, studies of sodium excretion in experimental edema, the biophysics of the muscle and of mechanoreceptors, labyrinthine responses to acceleration, enzyme technology, artificial kidneys, the study of the effects of air pollutants on the human lung, hemostasis, fetal and neonatal circulation.

COURSES FOR HIGHER DEGREES

552-502A EXERCISE PHYSIOLOGY. Offered in conjunction with the Faculty of Education.
Professor Klissouras

552-508A ADVANCED RENAL PHYSIOLOGY. Offered in conjunction with the Department of Medicine, Division of Experimental Medicine. Admission by permission of the instructor.
Professor Levy

552-513D CELLULAR IMMUNOLOGY. Offered in conjunction with the Department of Medicine, Division of Experimental Medicine.
Professors Lapp and Gold

552-515A PHYSIOLOGY OF BLOOD I. Offered in conjunction with the Department of Medicine, Division of Experimental Medicine.
Professor Cooper

552-516B PHYSIOLOGY OF BLOOD II. Offered in conjunction with the Department of Medicine, Division of Experimental Medicine.
Professor Cooper

552-517B PHYSIOLOGICAL SUPPORT SYSTEMS.
Professor Chang

552-610B BIOPHYSICS.
Professor Mackey

552-631B SELECTED TOPICS IN APPLIED IMMUNOLOGY. Offered in those years when there is sufficient demand.
Professor Kongshavn

516-502A ADVANCED ENDOCRINOLOGY. See Department of Medicine, Division of Experimental Medicine.

516-503B ADVANCED ENDOCRINOLOGY. See Department of Medicine, Division of Experimental Medicine.

516-507D ADVANCED APPLIED RESPIRATORY PHYSIOLOGY. See Department of Medicine, of Experimental Medicine.

516-512A PHYSICAL METHODS IN BIOLOGICAL RESEARCH. See Department of Medicine, Division of Experimental Medicine.

516-606B ADVANCED APPLIED CARDIOVASCULAR PHYSIOLOGY. See Department of Medicine, Division of Experimental Medicine.

399-551B FLUID MECHANICAL ASPECTS OF RESPIRATORY PHYSIOLOGY. See BioMedical Engineering.

399-650A DYNAMICS AND CONTROL IN PHYSIOLOGICAL SYSTEMS. See BioMedical Engineering.

NOWLIS; J. PARIS; J.C. PECKNOLD; I. REBNER; N. ROGERS; M. ROMER; P.D.L. ROPER; M. SALIB; P.D. SCULLY; R.W. SHEPARD; S.P. SIMONS; F.A. SMITH; R.M. SMITH; A.A. SURKIS; G. TAHTA; D. TSANG; D.J. WOOD; P. ZUARDI

REQUIREMENTS FOR THE M.Sc. DEGREE

Admission is restricted to candidates who hold an M.D. degree with good standing from an approved institution, and who have had not less than three years postgraduate training in Psychiatry in an approved centre.

The degree usually requires two years, but, under special circumstances, may be accomplished in one, spent wholly in research. The thesis topic and research subject must be approved beforehand by a committee headed by the Chairman of the Department of Psychiatry, and by the Dean of the Faculty of Graduate Studies and Research. The problem studied may belong to a clinical field, but a rigorous investigative approach must be utilized.

Adequate library and laboratory facilities are available within the Department of Psychiatry's network of teaching hospital facilities.

Cognate Subjects

Each student will be required to take certain courses in cognate subjects, such as Biochemistry, Endocrinology, Neurophysiology, Psychology, Sociology or Statistics. These will be determined upon the basis of the special field of Psychiatry in which the candidate's research work is being carried out.

GRADUATE PROGRAM IN TRANSCULTURAL PSYCHIATRY

I. The purposes of this program are:
   (a) to train researchers from psychiatry, anthropology and related disciplines for work in the borderland between cultural anthropology and international psychiatry;
   (b) to orient mental health practitioners and administrators from underdeveloped countries towards the need to consider the cultural backgrounds of their peoples; and to assist them in doing so.
2. The needs of trainees in this field being so varied, and also so influenced by their own backgrounds, the main emphasis in this program is on individual instruction and on the selection of courses in different departments to strengthen areas of knowledge and experience relevant to the individual's needs. Field experience under supervision is arranged as necessary, and core courses are provided.
3. The M.Sc. in Psychiatry will be granted to suitably trained medical graduates upon the completion of an approved thesis.
4. For non-medical graduates the rogram can usually be taken in part fulfilment of the requirements for a Ph.D. or other higher degree, subject to the normal regulations of the departments concerned.

Courses

555-711D CULTURE, PERSONALITY AND PSYCHOPATHOLOGY. (This course is given in cooperation with the University of Montréal, and an ability to follow presentations in both French and English is required.)
Professor Murphy and Staff

D16 DEPARTMENT OF DIAGNOSTIC RADIOLOGY

Montreal General Hospital
1650 Cedar Ave.
Montréal, PQ,
Canada, H3G 1A4

STAFF

Professors – J.I. FABRIKANT

Application for admission as candidates for the M.Sc. degree will be considered from graduates in Medicine, Dentistry or Veterinary Medicine, whose interests are directly concerned with the application of ionizing radiation in investigation and diagnosis. The normal admission standards of the Faculty will apply.

Two years may be required to complete qualification for the degree in order to include adequate knowledge of the fundamental radiological sciences. Certain arrangements may be made with the Division of Medical Physics to develop the research candidate's program in the area of diagnostic radiological imaging. It may be possible, upon successful completion of the M.Sc. degree with high standing, to be accepted to develop a fundamental research program in a basic science related to radiology in a Ph.D. degree program in the University.

DEPARTMENT OF THERAPEUTIC RADIOLOGY

Section of Radiological Physics

Montreal General Hospital
1650 Cedar Avenue
Montreal, PQ,
Canada, H3G 1A4

STAFF

Professor – M. COHEN *(Director)*
Assistant Professor – E.B. PODGORSAK
Lecturer – E.P. CYTACKI

The Section of Radiological Physics is a recently created Unit concerned with the application of physics to medical radiology, including radiotherapy, diagnostic radiology, nuclear medicine and ultrasound. Research interests include solid state dosimetry, acquisition and processing of patient data for radiotherapy treatment planning and various aspects of medical imaging.

M.Sc.A. IN MEDICAL RADIATION PHYSICS

This is a two-year program in Medical Radiation Physics offered for the first time in 1977-78, subject to the approval of the Québec Ministry of Education. At this time, students may be admitted only on an ad hoc basis.

The program will provide a comprehensive introduction to the subject, both its academic and its practical aspects, and will be conducted in co-operation with the Departments of Physics, Therapeutic Radiology and Diagnostic Radiology. Staff from all three departments, as well as those listed above, will participate in the program. Much of the practical and laboratory work will take place in the Montreal General Hospital.

REQUIREMENTS

Admission

Candidates must normally hold a B.Sc. degree with Honours in Physics or Engineering, but candidates with degrees in the biological sciences, including medicine, will also be considered. Students with a Physics (or similar) degree will be expected to take a course on the biological background of medical physics during the first year while an alternative introductory course on nuclear and radiation physics will be provided for students from the life sciences.

Requirements for the M.Sc.A. Degree

The main program will comprise
– (i) courses in medical radiology, radiation dosimetry, medical electronics and instrumentation, medical statistics and computing, physics of medical imaging, radiation hazards and protection, and radiobiology
– (ii) specialized laboratory work
– (iii) practical instruction within a radiological department or departments of a hospital
– (iv) a small individual research project

REQUIREMENTS

Residents in Surgery in the teaching hospitals are eligible to enter the graduate program. Other applicants outside the surgical training program, who possess an M.D. or B.Sc. degree or equivalent may be admitted by special arrangement. The minimum full-time residence for a Master's degree for those in the surgical training program is one year for others it is two years. The minimum full-time residence for a Ph.D. program is three years for all candidates. All candidates registering for a degree must have a research director approved by the Chairman of the Department, or by his opposite in the other teaching hospitals.

McGILL UNIVERSITY LIBRARY

The main research interests in the Department are at present; transplantation, experimental carcinogenesis, cardiovascular surgery, gastroenterology, shock water and electrolyte metabolism, and the effects of thermal injury. In addition, several research projects are conducted in surgical specialities In view of these varied interests, only one seminar course is made compulsory for all candidates; two others are recommended.

Additional courses are to be selected on the basis of each candidate's field of research, in consultation with his or her research director.

COURSES RECOMMENDED

519-602D SURGICAL ANATOMY. 1 hour weekly and demonstrations in anatomy laboratory to undergraduate medical students or an equivalent course in another basic science department.

177-373A BIOMETRY. 2 hours lectures, 2 hours laboratory. *(See Faculty of Science Announcement Under Biology).*

COMPULSORY COURSE

519-603D SEMINAR

THE ROYAL VICTORIA HOSPITAL
(1 hour per week)

CARDIOVASCULAR-THORACIC CONFERENCE.
ACCIDENT SURGERY SEMINAR.
GENERAL SURGERY SEMINAR.
NEOPLASTIC SEMINAR.
COMBINED MEDICAL-SURGICAL GASTRO INTESTINAL CONFERENCE.
SURGICAL LITERATURE SEMINAR (RECENT ADVANCES).
TRANSPLANTATION CONFERENCE.
ORTHOPAEDIC CONFERENCE.
PLASTIC SURGERY SEMINAR.
SURGICAL GRAND ROUNDS.

THE MONTREAL GENERAL HOSPITAL
(1 hour per week, or in some cases alternate week)

RESEARCH SEMINARS' UNIVERSITY SURGICAL CLINIC.
GASTROENTEROLOGY CONFERENCE. †
OPHTHALMOLOGY CONFERENCE.
CARDIOVASCULAR-THORACIC CONFERENCE.
GENITO-URINARY CONFERENCE.
NEUROSURGERY CONFERENCE.
TUMOUR BOARD CONFERENCE.
COMBINED MEDICAL-SURGICAL CONFERENCE.†
TRAUMA CONFERENCE.
COMBINED SURGICAL CONFERENCE.†
ORTHOPAEDIC CONFERENCE.
CARDIAC CONFERENCE.†
GENERAL SURGERY SEMINARS.

†In conjunction with Experimental Medicine.

STAFF

Professors – JOHN BLAND; PETER COLLINS; NORBERT SCHOENAUER; STUART WILSON
Associate Professors – BRUCE ANDERSON; DEREK DRUMMOND *(Director)*; JOHN SCHREIBER; RADOSLAV ZUK
Assistant Professors – ARTHUR ACHESON; WITOLD RYBCZYNSKI; GENTILE TONDINO
Lecturers – VIKRAM BHATT; PIETER SIJPKES

REQUIREMENTS FOR THE M.Arch. DEGREE

The Master of Architecture degree is a post-professional degree and is offered in the areas of Architectural Design and Housing. Students holding the McGill B.Arch. degree or equivalent professional qualification with a Cumulative Grade Point Average of at least 3.0 are eligible to proceed to the M.Arch. degree.

N.B. Information concerning duration of program, documents required of applicants, etc. may be obtained from the Secretary of the School of Architecture. The application deadline is March 15.

COURSES

ARCHITECTURAL DESIGN

Students in Architectural Design are required to complete 30 credits of course work which must include Architectural Design I and II, Graduate Seminar I and II and additional courses to be approved by the thesis adviser. In addition they are required to submit a thesis approved by the Director of the School and by the Faculty.

HOUSING

Students in Housing are required to complete 30 credits of course work which must include either Urban Housing I and II or Minimum Cost Housing I and II, as well as the Graduate Seminar I and II and additional courses to be approved by the thesis adviser. In addition, they are required to submit a thesis approved by the Director of the School and by the Faculty.

301-205A HISTORY OF HOUSING. (2 hours).
Professor Schoenauer

301-610A, 301-611B ARCHITECTURAL DESIGN I, II. (2 hours tutorial and studio work).
Professors Bland, Zuk and Staff

301-615A, 301-616B GRADUATE SEMINAR I, II. (2 hours).

Staff and Visitors

301-620A, 301-621B URBAN HOUSING I, II, (2 hours tutorial and studio work).
Professor Schoenauer

301-625B HOUSING THEORY (2 hours).
Professor Schoenauer

301-630A, 301-631B MINIMUM COST HOUSING I, II. (2 hours tutorial and studio work.)
Professors Acheson, Rybczynski, Mr. Bhatt

301-632A, 301-633B LOW IMPACT TECHNOLOGY IN HOUSING I, II (2hours).
Professor Rybczynski

* **301-640A, 301-641B SHELTER SYSTEMS FOR DEVELOPING SOCIETIES I, II.** (2 hours tutorial and studio work).

301-644C SHELTER FIELD OPERATIONS. (Supervised field work).

301-650A, 301-651B COMMUNITY DESIGN WORKSHOP I, II. (2 hours tutorial and studio work).

STAFF

Associate Professors – H.K. CHANG *(Physiology)*; L. GLASS *(Physiology)* M.C. MACKEY *(Physiology)*; J.S. OUTERBRIDGE *(Otolaryngology, Physiology), (Director)*
Assistant Professors – T.R. FENTON *(Experimental Medicine)*; W.R.J. FUNNELL *(Otolaryngology)*; H.C. LEE *(Electrical Engineering)*; J.L. NEAL *(Pediatrics)*.
Lecturers – J.R. IVES *(Neurology & Neurosurgery)*; R.S. POULSEN *(Pathology)*; C.J. THOMPSON *(Neurology & Neurosurgery)*

The BioMedical Engineerng Unit provides instruction and opportunities for interdisciplinary research in the application of engineering, mathematics and the physical sciences to problems in medicine and the life sciences. Courses are offered for graduate students in the life sciences and in engineering and the physical sciences. Graduate students working in the Unit are registered through appropriate departments in Medicine, Science and Engineering, and must fulfil the requirements for advanced degrees

imposed by their respective departments. In addition each student is required, through course work and independent study, to achieve a degree of interdisciplinary competence appropriate to their area of specialization.

Excellent facilities for research are available in the Unit's laboratories and those of individual staff members elsewhere in the Medical Faculty and affiliated hospitals. A PDP-11/40 laboratory computer is available for experimental work in the Unit's laboratories. A larger, multi-user, PDP-11/70 computer system operated by the Unit, is available to medical research users throughout the Faculty, and serves as host for a developing network of laboratory computers.

Current research interests of Unit staff include neuromuscular control (posture, eye movement), vestibular and auditory systems, mechano-receptors, neural communication, tumor morphogenesis, non-linear oscillations in respiratory control and leukocyte production, respiratory fluid mechanics and mass transfer, measurement of cardiac wall motion, signal processing in otology, encephalography and electrocardiography, patient monitoring, medical image processing, medical information systems, clinical laboratory automation, enzyme defects in cystic fibrosis.

Computer development work in the Unit, involving a staff of four professionals, is primarily concerned with providing support for medical research. Current areas of concern are: software and hardware for laboratory mini and micro computers; computer network development; interactive software for graphics, simulation, data acquisition and signal processing.

COURSES FOR HIGHER DEGREES

Advanced Undergraduate Courses

399-302B INTRODUCTION TO BIOMEDICAL ENGINEERING. (2 hours lecture, 2 hrs. laboratory/demonstration). A practical introduction for life science students, to aspects of biomedical engineering practise and research. Fundamentals and operation of commonly-used instrumentation; transducers; electrical safety; instrumentation development; aspects of current biomedical engineering research.
Professor Fenton

399-551B FLUID MECHANICAL ASPECTS OF RESPIRATORY PHYSIOLOGY. (3 hours lecture). Review of basic concepts in respiratory physiology; air flow patterns and particle deposition in the tracheobronchial tree; airway dynamics and flow limitation; convective and diffusive mixing in the lung; methematical modeling of pulmonary gas exchange; pulmonary micro-circulation and pulmonary edema; pulmonary vascular mechanics.
Professor Chang

Graduate Courses

399-611A BIOLOGICAL CONTROL SYSTEMS. (3 hours lecture). Survey of mathematical models of biological systems, with emphasis on physiological systems, for students with background in control and system theory.
Staff

399-613B NERVOUS SYSTEM THEORY. (3 hours lecture). Mathematical models of neurons, receptors and synapses; neuromines; neural networks; neural coding; neural signal transmission and information processing; multi-unit, multipath neural systems; sensory systems. For students with adequate background in differential equations and system theory, and in basic neurophysiology.
Professor Lee

399-621A ENGINEERING BIOPHYSICS. (3 hours lectures). Biochemical thermodynamics; criteria for equilibrium; phase equilibrium; chemical reaction equilibrium; the equilibrium constant, electro-chemical cell potentials, ATP degradation; chemical kinetics; fluid flow; mass transfer; biological role of water; bio-macromolecules; proteins, nucleic acids, polysaccarides, polyelectrolytes; biological effects of ionizing radiation; buffers, osmotic pressure, acid-base balance.
Professor Neal
Staff

399-631B BIOMEDICAL ENGINEERING TECHNIQUES AND INSTRUMENTATION. (3 hours lecture). Selected topics in the application of system theory, signal analysis and instrumentation to medicine and biological research. Statistical and spectral analysis of continuous and point process signals, estimation, parameter identification, compartmental systems and tracer kinetics, biomedical transducers, electrodes and instrumentation. Presentation assumes adequate background in differential equations, transform methods, probability, basic electronics and computer programming.
Professor Lee

399-632A BIOMEDICAL COMPUTER APPLICATIONS. (3 hours lecture). Survey of selected computer applications in medicine and life sciences, emphasizing aspects peculiar to these disciplines, for students with adequate background in computers and mathematics. Data acquisition and analysis (e.g., EKG, EEG, images); laboratory computer systems; modelling and simulation; information retrieval; interactive systems; graphics.
Professor Funnell

399-650A DYNAMICS AND CONTROL IN PHYSIOLOGICAL SYSTEMS. (3 hours lecture). For life science graduate students. Mathematical modelling of dynamic physiological systems, emphasizing techniques and applications of basic control and system theory.
Professor Outerbridge

McGILL UNIVERSITY LIBRARY

399-660D LABORATORY COMPUTER METHODS IN THE LIFE SCIENCES. (1 hour lecture, 1 hour laboratory). For life science graduate students. Laboratory computer architecture, peripherals, programming and operating systems, emphasizing the PDP-11 computer. Techniques for data acquisition, display and analysis, and for control of experiments. Students are required to do a computer project related to their own area of research. Previous computer experience is not required.
Mr. Bernstein

399-661B BIOMEDICAL COMPUTER SIMULATION AND SIGNAL ANALYSIS TECHNIQUES. (2 hours lecture, 3 hours laboratory). For life science graduate students. Computer simulation of dynamic biological systems; basic theory and practical aspects of biological signal analysis; elementary parameter identification techniques; assigned exercises in laboratory and time-sharing computer usage.
Professor Outerbridge

STAFF

Professors – J.M. DEALY; W.J.M. DOUGLAS *(Chairman)*; M.R. KAMAL; M.E. WEBER
Associate Professors – T.J. BOYLE; J.M. CHARRIER; O.M. FULLER; J.R. GRACE; *(on leave)*; J.H. VERA;
Assistant Professors – A.S. MUJUMDAR; R.J. MUNZ; B. VOLESKY
Auxiliary Professors – M. AVEDESIAN; N.E. COOKE; R.H. CROTOGINO; R. KOLB; A. RUDZINSKI; A. van HEININGEN; G.D. WEDLAKE; N. WISEMAN
Visiting Professors – I. PATTERSON; H. de LASA
Senior Research Associate – W.H. GAUVIN
Research Associate – J. BRUNET; H.I. BOLKER
Associate Members – H.L. GOLDSMITH *(Experimental Medicine)*, J.L. NEAL *(Paediatrics)*

ADMISSION

Advanced courses and laboratory facilities are available for graduate study leading to the M.Eng. and Ph.D. degrees in Chemical Engineering. Before making formal application for admission to the Dean, applicants should write to the Chairman of the Admissions Committee of the Department, from whom additional information on Departmental research and on financial support is available. Applications for September admission are normally received in February and, in most cases, decisions are made on admissions in April.

REQUIREMENTS

M.Eng. Degree

A student may satisfy the requirements for the degree by completing one of the following options:

A) 45 credits including a minimum of 15 credits in courses of which at least 12 credits are graduate chemical engineering courses. The balance of the requirements should be devoted to a research project leading to the submission of a thesis.

B) 45 credits including at least 24 credits of graduate chemical engineering courses and at least three approved courses outside the Department of Chemical Engineering selected in one area to constitute a "minor". The student is required to devote 6 to 12 credits to a chemical engineering design or research project leading to a project report. At least one full session (or two half sessions) of resident study at McGill University is required for this degree. This is a minimum requirement, and it will usually require more than this period to complete the work for the degree.

Ph.D. Degree

Candidates with a bachelor's degree in chemical engineering normally register for the M.Eng. degree in the first instance.

Candidates with an acceptable master's degree or equivalent from another university will normally proceed directly to the Ph.D. degree. The course work undertaken by a Ph.D. candidate will be decided in the light of the student's academic qualifications, research requirements and interests.

Minimum time requirement is two years beyond the M.Eng. (or equivalent) degree.

General

Academic activities for graduate students are coordinated by the Graduate Studies Advisory Committee (GSAC), composed of three staff members appointed by the Department Chairman and three graduate students elected by the students. This committee provides a forum for all matters involving graduate student/staff interactions.

There is no foreign language requirement for either degree. All students must demonstrate proficiency in digital computer programming and give one or more research colloquia.

RESEARCH

Research may be undertaken in many branches of Chemical Engineering and related fields. Current

research projects are in the following areas: fluid and particle dynamics including fluidization and particulate removal from gases and liquids; heat transfer; mass transfer; coupled transport processes including spray drying; thermodynamics and transport properties; chemical reaction engineering; plasma reactor studies; simulation and control; environmental, biochemical and biomedical engineering; polymer engineering and rheology.

The Department has two professionally-staffed workshops, one specializing in mechanical construction, the other in electronics. In addition, a student shop and a dark-room are available. Among the special-purpose laboratories are two constant-temperature rooms.

Specialized equipment in the Department includes: a horizontal and a vertical wind tunnel, turbulence measurement and analysis equipment, a laser doppler anemometer system, a Mach-Zender interferometer, d.c. arc and r.f. induction plasma generators and reactors, thermal diffusivity apparatus, differential scanning calorimeter, thermogravimetric analyser, Instron capillary rheometer cone-and-plate viscometer, Instron mechanical tester, Rheometrics Mechanical Spectrometer, injection molding machine, extruder, high speed cine camera photo-optical data analyser, particle counter, continuous dilution calorimeter and total pressure apparatus for thermodynamic measurements, fermenters with automatic control modules, Total Organic Carbon Analyser, sterilizerautoclave. The department has a complete range of analytical equipment including UV, IR and atomic absorption spectrometers and a variety of gas chromatography apparatus.

A General Electric GEPAC 4020 Computer is used for data logging and data processing. This computer can accept many analog signals simultaneously from experiments in the laboratories. An analog computer and a real-time minicomputer are available in the Department.

COURSES FOR HIGHER DEGREES

302-594B FOOD AND FERMENTATION ENGINEERING. 3(2-0-7). Engineering aspects of biochemical and microbial processes, selected unit operations of food processing. Agitation and aeration, related mass transfer, design and scale-up of fermentation equipment. Enzyme technology, sterilization techniques, separation processes. Contemporary food and fermentation technology. Instrumentation.
Professor Volesky

302-611A HEAT, MASS AND MOMENTUM TRANSPORT. 3(2-0-7). Unified treatment of the transport of mass, momentum and energy.
Professor Mujumdar

302-614C APPLIED TRANSPORT PHENOMENA. 3(2-0-7). Transport phenomena strategy, formulation of physical and mathematical models; analytic, numerical and approximate solutions; application to problems from a range of industries.
Professor Mujumdar

302-621B THERMODYNAMICS. 4(3-0-9). Review of thermodynamics principles. Foundations of thermodynamics with application of its methodology in the field of multicomponent, multiphase, multireaction systems. Detailed study of equilibrium and stability of thermodynamic systems.
Professor Vera

302-631A FOUNDATIONS OF FLUID MECHANICS. 4(3-0-9). Review of basic concepts and equations; flow of inviscid fluids including conformal mapping and axisymmetric flows; creeping flows; empirical and statistical approaches to the study of turbulence; boundary layer theory.
Professor Grace

302-641B CHEMICAL REACTION ENGINEERING. 3(2-0-7). Interpretation of chemical reaction data, especially for heterogeneous systems. Residence time, complete segregation, maximum mixedness, other advanced concepts. Reactor design.
Professor de Lasa

302-652A,B DRYING: PRINCIPLES AND PRACTICE. 3(2-0-7). Fundamentals of drying. Psychrometry; absorption; transport phenomena in porous media; heat transfer to particles, beds and surfaces; evaporation from drops and surfaces; simultaneous heat and mass transfer; drying characteristics for batch and continuous drying. Industrial drying: applications to such areas as drying of paper, pharmaceuticals, food products, spray drying, freeze drying, fluidized bed drying. Design project.
Professor Mujumdar

302-653C ADVANCED PROCESS DESIGN. 3(2-0-7). Advanced techniques and concepts in the design of chemical processing plant and equipment.
Dr. Cooke

302-654B ADVANCED SEPARATION PROCESSES. 3(2-0-7). Generation of separation schemes; equilibrium stages, real stages and continous contacting models. Solution of the model equations on the computer and ensuring convergence. Examples chosen from among evaporation, distillation, absorption, adsorption and extraction. Fortran programming required.
Professor Weber

302-661A MATHEMATICAL METHODS IN CHEMICAL ENGINEERING. 4(3-0-9). Calculus of variations, Pontryagin's, maximum principle, approximate solutions to differential equations, discrete maximum principle, selected applications.
Staff

302-662A COMPUTATIONAL METHODS IN CHEMICAL ENGINEERING. 3(2-0-7). Selected topics of value in chemical engineering including integration and solution of sets of differential equations, curve fitting and optimum-seeking methods.
Professor Mujumdar

302-663A,B SIMILITUDE, MODELS AND SCALING. 3(2-0-7). Determination of similarity criteria by dimensional and inspectional analysis; the regime concept, distorted models, quasi-similar models, analog modelling and differential scaling. These concepts and methods will be applied in cases that relate to boundary value problems in research and to scale-up of industrial processes.
Professor Fuller

302-681A POLYMER CHEMICAL ENGINEERING. 4(3-0-9). Application of chemical engineering fundamentals to the preparation and processing of polymers. Classification and characterization of polymers, reaction media and kinetics of polimerization, reactor design, viscoelasticity and rheology, processing techniques, extrusion, molding, composite formation, adhesion.
Professor Kamal

302-682B ENGINEERING PROPERTIES OF POLYMERIC MATERIALS. 4(3-0-9). Mechanical and transport properties of non-crystallizing and crystallizing thermoplastics, rigid thermosets, fibers, films, elastometers and composites with particle and fiber einforcement. Elasticity, visco-elasticity, ultimate properties, diffusion of liquids and gases, thermal and electrical properties.
Professor Charrier

302-684B POLYMER PROCESSING. 3(2-0-7). Survey of engineering properties of polymers and processing operations, degradation of polymers, extrusion, injection molding, fiber spinning, film blowing, blow molding, thermoforming, miscellaneous other processes. Lectures, plant visits, problem assignments.
Professors Charrier, Dealy, Kamal and Paterson

302-691D SELECTED TOPICS IN CHEMICAL ENGINEERING.
Staff

302-695A,B,C PROJECT IN CHEMICAL ENGINEERING. (6). Independent work under the general direction of a full-time staff member of the Chemical Engineering Department, on a problem of industrially-oriented design or research. The work must lead to a comprehensive project report.
Staff

302-696A,B,C EXTENDED PROJECT. (6). Extended independent work on a problem of industrially-oriented design or research, leading to a comprehensive project report.
Staff

302-712B HEAT TRANSFER. 3(2-0-7). Advanced treatment of heat transfer in convection, boiling and in particulate systems. Application of numerical methods and correlation of data.
Professor Weber

302-713B MASS TRANSFER. 3(2-0-7). Study of diffusive and convective mass transfer across interfaces. Turbulent transport and the transport of ions. Film and penetration theories and methods of predicting mass transfer rates for bubbles, drops and plane surfaces.
Professor Weber

302-732B RHEOLOGY OF LIQUIDS. Rational mechanics, formulation of rheological models, purely viscous fluids, linear and nonlinear viscoelasticity, viscometric flows, extensional flows, experimental methods; laboratory demonstrations.
Professor Dealy

302-733B MIXING. 3(2-0-7). Basic definitions and concepts; molecular, eddy and bulk diffusion; solids mixing, macromixing and micromixing and their influence on conversion and selectivity in chemical reactors; reactor models; mixing of viscous liquids; turbulent mixing in stirred tanks.
Professor Grace

302-742A INTRODUCTION TO CATALYTIC PROCESSES. 3(2-0-7). Physical structures of solid catalysts, effects of structure on selectivity and activity, catalyst life and regeneration, standard methods of catalyst preparation, special preparation methods, properties of catalysts for homogeneous reactions, examples of solid catalysis in the chemical industry.
Professor Fuller

302-751B FLUIDIZATION. 3(2-0-7). Incipient fluidization. Equations of continuity and motion. Regimes of fluidization. Liquid-fluidized beds. Bubble phenomena. Mixing. Heat and mass transfer. Elutriation. Chemical reactor models. Design and scale-up. Applications. Spouted and three-phase systems.
Professor Grace

302-771A PROCESS DYNAMICS AND CONTROL. 3(2-0-7). Mathematical modelling of industrial processes. Dynamic characteristics of models and real processes. Modal analysis and control of processes.
Professor Boyle

302-783A SPECIAL TOPICS IN POLYMER ENGINEERING. Seminars and discussion on selected advanced problems of polymer engineering.
Professors Kamal, Charrier and Dealy

302-793A,B BUBBLES, DROPS AND PARTICLES. 3(2-0-7). Mechanics and transfer processes of gas bubbles, liquid drops and solid particles in motion through fluids. Analogies and important differences between the three types of particle. Motion and transfer processes at low and high Reynolds

and Peclet numbers, wall effects, influence of surface active impurities, and other interfacial effects, turbulence effects, unsteady motion, effects of transpiration.
Professors Grace and Weber

ADMISSION

The minimum academic standard for admission is normally a high second class standing. Applicants from other institutions should have an academic background equivalent to that of a McGill graduate in honours chemistry or major in chemistry. If possible candidates should specify the field of research in which they are interested.

All inquiries concerning graduate work in the Department of Chemistry should be addressed to the Chairman of the Admissions Committee, Department of Chemistry.

REQUIREMENTS

M.Sc. and Ph.D. Degrees

1. Students must take such examinations as may be required in (a) assigned courses given in the Department of Chemistry, (b) assigned cognate courses given in other departments, (c) assigned foreign languages. Courses are assigned after taking into consideration the student's previous training and research interest.
2. Students must complete successfully a research project and submit an acceptable thesis thereon.
3. Students must satisfy the examiners in an oral examination on the thesis and related subjects (required only of candidates for the Ph.D. degree).
4. All the usual requirements of the Faculty of Graduate Studies and Research must be satisfied.

FINANCIAL ASSISTANCE

Financial assistance for accepted graduate students who do not hold fellowships or scholarships is normally available in the form of laboratory demonstratorships/assistantships, and occasionally by payment from research funds. Graduate students are expected to devote between 6-8 contact hours per week during the academic session to their teaching duties. Financial assistance during the four summer months is provided from research funds.

EXAMINATIONS IN CHEMISTRY

1. Examinations in assigned courses are normally taken by the candidates in January and May. In special circumstances, and with the permission of the Department and the Faculty, they may be taken in September.
2. A candidate for the Ph.D. degree shall pass all such examinations, other than those in certain special courses, before the final year, except in special circumstances and then only with the approval of the Department.

RESEARCH IN CHEMISTRY

Members of the Department of Chemistry are active in directing research in the following fields:

Analytical

Molecular complexes; solvation and polymerization in non-aqueous solutions; complex ions; metal ion separations; hydration and solvation in solvent extraction; kinetic processes in analytical chemistry; specific ion electrodes.

Bio-organic

Enzyme chemistry; protein and nucleic acid structure and function; active site stereochemistry; molecular basis of regulation and pharmacological action.

Biophysical

Excited electronic states of proteins and nucleic acids; spectroscopic probes of biopolymer conformation; sensitized photochemistry in biopolymers; dynamics of protein and nucleic acid conformations.

Colloid and Polymer

Monomolecular layers; solution properties of high polymers; molecular morphology; electrokinetics; absorption; rheology and stability of dispersions; phase transitions in polymers; polymer reinforcement; radiation effects and solid-state polymerization; mechanisms of polymerization reactions; wetting and spreading; the glass transition; molecular dynamics and polymer properties; ionic polymers; cellulose and paper; carbohydrate biopolymers; pollution abatement; polymer melt rheology; synthetic latices; rheo- and electro-optical phenomena.

Inorganic

Germanium and silicon chemistry; coordination of Group III, IV and V halides; inorganic polymers; I.R. laser Raman, N.M.R., N.Q.R., and mass spectra of inorganic and organometallic complexes; inorganic reaction mechanisms; catalysis.

Organic

Synthesis and structure of heterocyclic compounds; steroids; natural products; carbohydrates; cellulose; lignin; reactions in strong acids; photo-chemistry; plant-growth regulators; organic sulphur, phosphorus, and silicon chemistry; stereochemistry; $_{13}C$ NMR; reaction mechanisms; charge transfer complexes; new synthetic methods; conformational analysis; solvation effects; substituent effects; polymer supports.

Physical

Molecular beams; laser excited elementary reactions; matrix isolation of radicals; high resolution and "wide line" N.M.R.; Mössbauer Effect spectroscopy; nuclear quadrupole resonance; electron spin resonance; emission and absorption spectroscopy; addition agents in the electrodeposition of metals.

Radiochemistry and Nuclear Chemistry

Elucidation of nuclear reactions using the McGill synchrocyclotron and Chalk River nuclear reactors; fission and spallation reactions; decay scheme studies; characteristation of new radioactive species.

Theoretical

Ab initio and semi-empirical molecular orbital theory; d-orbitals; population analysis; self-consistent coulomb and overlap integral calculations; atom and molecule scattering theory; theory of transport processes; chemical kinetics in gases and liquids.

COURSES FOR HIGHER DEGREES

Advanced Undergraduate Courses

Any of the following courses may be required of a student who is admitted to the Graduate Faculty if the equivalent has not been taken previously. Descriptions of these courses may be found in the Faculty of Science Announcement.

180-352B STRUCTURAL ORGANIC CHEMISTRY. (3 lectures).

I80-353A SURFACE CHEMISTRY. (1 lecture).

180-356A INTRODUCTORY QUANTUM CHEMISTRY. (2 lectures).

180-372B SYNTHETIC ORGANIC CHEMISTRY. (3 lectures).

180-373B MOLECULAR SPECTROSCOPY. (2 lectures).

180-381A CHEMISTRY OF THE TRANSITION ELEMENTS. (3 lectures).

180-383B INTRODUCTORY STATISTICAL MECHANICS. (1 lecture).

180-387D ANALYTICAL CHEMISTRY. (1 lecture and 3 hours laboratory).

180-392D INTEGRATED INORGANIC/ORGANIC LABORATORY. (4 hours).

180-404B PHYSICAL CHEMISTRY OF BIOPOLYMERS.

180-452A PHYSICAL ORGANIC CHEMISTRY.

180-455B INTRODUCTORY POLYMER CHEMISTRY.

180-457B INSTRUMENTAL METHODS OF ANALYSIS.

180-475A CHEMICAL KINETICS.

180-481A,B MODERN TOPICS IN INORGANIC CHEMISTRY.

180-482A ADVANCED ORGANIC CHEMISTRY.

180-485A SURFACE AND COLLOID CHEMISTRY.

180-487A SELECTED TOPICS IN MODERN ANALYTICAL CHEMISTRY.

180-493A INTRODUCTION TO STATISTICAL THERMODYNAMICS.

180-497B ANALYTICAL SPECTROSCOPY.

Graduate Courses

180-577A ELECTROANALYTICAL CHEMISTRY. The application of electroanalytical techniques including polarography, coulometry and chronopotentiometry to inorganic, organic and biochemical analysis.
Professor Purdy

180-602A NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY. A general survey of nuclear magnetic resonance spectroscopy. The analysis of first and second order spectra. Theory of chemical shifts and coupling constants. Applications of n.m.r. in various areas of chemistry will be discussed.
Professor Gilson

180-603B INFRARED AND RAMAN SPECTROSCOPY. Applications of group theory to vibrational spectroscopy; theory of molecular vibrations; determination of molecular structures and vibrational assignments; instrumental design and experimental techniques; "group" frequencies; recent developments.
Professor Butler

180-605B ELECTRONIC SPECTROSCOPY. Theory of electronic spectra of molecules including organic molecules and inorganic complexes. Energy levels, molecular symmetry and selection rules; vibrational interactions with electronic states. A discussion of current experimental techniques including absorption, fluorescence, phosphorescence, circular dichroism, magnetic circular dichroism, and photo electron spectroscopy.

180-621A RECENT ADVANCES IN ORGANIC CHEMISTRY. A systematic survey of the mechanisms of the most common organic reactions from studies of reactions in the current literature.
Professor Chan

* **180-622A HETEROCYCLIC COMPOUNDS.** The properties and reactions of heterocyclic compounds, especially aromatic derivatives, and considerations of the mechanisms of their reactions. The spectroscopy of heteroaromatic compounds.
Staff

* **180-623B ORGANIC STEREOCHEMISTRY.** Recent advances in conformational analysis, with particular reference to steroids, alkaloids, and carbohydrates, application of optical rotation, rotary dispersion, u.v., i.r., and n.m.r. spectroscopy to conformational problems.
Professors Edward and Perlin

180-624B SPECIAL TOPICS IN ORGANIC CHEMISTRY. An advanced course in mechanistic and/or structural organic chemistry, together with detailed consideration of special topics; these topics will be decided just prior to the session and may include photo-chemistry, organic chemistry of sulphur and phosphorus, mass spectrometry, etc. Further details may be obtained from the instructor.
Professor Farrell and Staff

180-625B ORGANOMETALLIC CHEMISTRY. The course covers topics of current interest in the field. Intended for advanced graduate students who are doing research in organometallic chemistry.
Professor Chan and Staff

180-626A THE FUNDAMENTALS OF MEDICINAL CHEMISTRY. Topics of current interest in medicinal chemistry; molecular pharmacology; the chemical synthesis and mode of action of drugs; receptor chemistry; drug design; chemotherapy; active site chemistry.
Professor Belleau and Staff

180-627B SPECIAL TOPICS II. An advanced course on subjects of current interest in chemistry (e.g. electroorganic chemistry, molecular orbital theory, organic synthesis, etc.).
Staff

180-628B RECENT ADVANCES IN THE ORGANIC CHEMISTRY OF BIOLOGICAL COMPOUNDS. The main emphasis will be on the current research of organic chemists on compounds of biological interest. This might include terpenes, alkaloids, steroids, prostoglandins, carbohydrates, protiens, lipids and nucleic acids.
Staff

180-631D SELECTED TOPICS IN ANALYTICAL CHEMISTRY. A directed reading course with individual student-professor conferences, and intended mainly for students specializing in analytical chemistry. Topics are chosen to meet the individual needs of each student.
Professors Cave, Fresco and Purdy

180-645A QUANTUM MECHANICS. Brief review of solvable problems in nonrelativistic quantum mechanics; perturbation theories, time-dependent and time-independent; angular momentum, spin and rotation group; semiclassical theory of radiation; light scattering. Rayleigh and Raman; theory of scattering; second quantization; theory of many-electron systems and its application to molecules and atoms.
Professor Whitehead

180-646A,B STATISTICAL MECHANICS. Fundamental hypotheses; microcanonical, canonical, grand canonical ensembles; ideal gases, monatomic, diatomic, and polyatomic; chemical equilibria; Mayer's theory of cluster expansion; distribution functions for liquids; lattice statistics; quantum statistics.
Professor Eu

180-666D SPECIAL TOPICS. Critical and original essays are required on various subjects of current interest in chemistry.
Staff

180-671A ORGANIC CHEMISTRY OF SYNTHETIC AND NATURAL POLYMERS. A survey presenting an integral view of polymer chemistry with equal emphasis on both natural and synthetic polymers. All biopolymers are included: polysaccharides, proteins, nucleic acids, rubbers, and lignins.
Dr. Bolker

* **180-672A THE POLYMER SOLID STATE.** Melting and crystallization phenomena in linear high polymers; crystal structure, defects, and morphology in macromolecular crystals.
Dr. Manley

* **180-673B POLYMERS IN SOLUTIONS.** Thermodynamics of regular and of polymer solutions; osmotic pressure; phase separations; polymer configurations; light scattering; ultracentrifugation; viscometry; gel permeation chromatography; polyelectrolytes.
Dr. Goring and Professor Patterson

180-674B INTRODUCTORY PHYSICAL CHEMISTRY OF POLYMERS. A survey course on the structure of polymers; kinetics and mechanisms of polymer synthesis; molecular weight distributions; polymer configurations and the thermodynamics of polymer solutions; rubber, elasticity, osmometry and viscosity.
Professor St. Pierre

180-675B MECHANICAL PROPERTIES AND RHEOLOGY OF POLYMERS. Mechanical properties of polymers; glass transition, visco-elasticity, rubber elasticity, failure. Relation to molecular properties mechanical spectroscopy, dielectric properties, birefringence.
Dr. Robertson and Professor Eisenberg

180-681A SELECTED TOPICS IN RADIOCHEMISTRY. This course is intended for graduate students who may be using radio-active tracers in their future work. The fundamentals of radioactivity are discussed, types of radiations which are encountered, methods of measurement of these radiations, radio-chemical separations, design of radio-chemical laboratories and health precautions to be taken. In addition to this, some lectures will be devoted to selected topics such as activation analysis 14C dating, determination of the age of the earth by radioactive methods, energy production in the sun and stars, etc.
Professor Yaffe

180-682D NUCLEAR CHEMISTRY. Radioactivity; nuclear models; liquid drop, shell, Nilsson, and Fermi gas; a-decay; b-decay; y-decay; nuclear reactions, nuclear fission.
Professor Hogan

180-720D COLLOQUIUM. Each student is required to participate in Research Colloquia which are held regularly in the department. These involve the presentation and discussion of papers dealing either with the student's own research or with recent research publications.

E5 DEPARTMENT OF CIVIL ENGINEERING AND APPLIED MECHANICS

MacDonald Engineering Building
817 Sherbrooke Street West
Montreal, PQ,
Canada H3A 2K6

STAFF

Professors – P.J. HARRIS; R.G. REDWOOD *(Chairman);* B. STAFFORD SMITH; R.N. YONG
Associate Professors – V.H. CHU; R.G. COX; R.D. JAPP; M.S. MIRZA; J.C. OSLER; A. PAKALNINS; S.B. SAVAGE; D.A. SELBY; C.J. TURKSTRA
Assistant Professors – S.K. GUPTA; F.L. HART; D. MITCHELL; D. PANAGIOTAKOPOULOS; S.C. SHRIVASTAVA; G.R. THOMAS

Advanced courses of instruction and laboratory facilities are available for engineering graduate students desiring to proceed to the degrees of M.Eng. and Ph.D.

Graduate studies and research are at present being conducted in the fields of structures and structural mechanics, fluid mechanics and hydraulics, soil behaviour, soil mechanics and foundations, traffic and transportation engineering, sanitary and municipal engineering, and urban and environmental systems engineering.

ADMISSION

The general rules of the Faculty apply and are detailed in the *General Information and Faculty Regulations* section. The minimum academic standard for admission is normally a cumulative Grade Point Average of 3.0 or better.

REQUIREMENTS

M.Eng. Degree

Candidates may satisfy the requirements for this degree by following one of two options; in Option A, 30 credits of course work are normally required, plus a research thesis; in Option B, a total of 45 credits are required, consisting of 36 to 40 credits of course work, plus a project. All 600 level courses have a weight of 4 credits, with the exception of 303-664A, which is weighted at 5 credits. It is usually required that a student take a course in mathematical methods appropriate to his or her intersts, and other courses must be determined in consultation with the candidate's director of studies or research. In Option A a thesis describing the candi-

date's research is to be submitted in accordance with the rules of the Faculty of Graduate Studies and Research. At least one full session (or two half sessions) of resident study at McGill University is required for the degree. This is a minimum requirement, and usually a longer period will be necessary.

Ph.D. Degree

Candidates normally register for the M.Eng. degree, Option A, in the first instance. However, candidates who have a Master's degree acceptable to the Department may be considered for direct registration for the Ph.D. degree. The Ph.D. program consists of a research project and courses as required to develop the candidate's background. Candidates are expected to take a comprehensive preliminary oral examination within the first year of their Ph.D. registration. They must fulfil the requirements outlined in the general rules of the Faculty. There is no foreign language requirement.

COURSES FOR HIGHER DEGREES

Not all of the courses listed below are given each year; most courses are offered every two years. A list of courses to be offered is made available in the Department prior to each term.

303-540A URBAN TRANSPORTATION PLANNING. Urban travel demand characteristics; transportation goals and objectives; planning, design and co-ordination of street systems, mass transit networks, and parking facilities; economic and environmental issues; urban goods movement; development and evaluation of transport alternatives.
Mr. Archambault

303-602B FINITE ELEMENT ANALYSIS. (Prerequisite: 303-608A). Development of simple and high order two and three dimensional, plate bending and shell elements. Displacement models, stress and hybrid models. Applications with emphasis on the static solution of two and three dimensional solids.
Professor Thomas

303-603B STRUCTURAL DYNAMICS. General theory of structural response to periodic and aperiodic forces. Spectrum methods. Numerical methods. Earthquake analysis.
Professors Mitchell and Thomas

303-604B THEORY OF PLATES AND SHELLS. Analysis of stress and deformation of plates bent by transverse loads. Plates on elastic supports. Energy and approximate methods of solution. Anisotropic plates. Membrane theory of shells. General theory of cylindrical shells. Symmetrical bending of shells of revolution. Applications of theory to plate and shell structures.
Professor Turkstra

303-605A STABILITY OF STRUCTURES. Beams subject to axial and lateral loads. Columns with various end conditions. Buckling of frames. Buckling beyond the proportional limit. Columns of variable cross section. Latticed columns. Lateral buckling of beams. Buckling of plates and shells.
Professor Harris

303-606B PLASTIC STRUCTURAL ANALYSIS. Basic theorems. Limit analysis and elastic-plastic deflections of frames. Frame instability and strain hardening effects. Non-proportional loading. Minimum weight design.
Professor Redwood

303-607B DESIGN IN METALS. Physical properties of metals, residual stresses, design concepts. Column theories, column strength, beam-column design, structural frames. Plastic design concepts, ultimate strength, axial forces with bending, shear forces with bending. Economic design considerations.
Professor Redwood

303-608A ADVANCED STRUCTURAL ANALYSIS. Advanced topics in matrix analysis, substructures, transfer matrices, rank technique, mixed methods, finite differences applied to continua, computation methods, structural optimization, fully stressed design, minimum weight design by mathematical programming.
Professor Thomas

303-609A STRUCTURAL SAFETY. Structural safety analysis and code formulation based on probabilistic models and decision concepts. Elementary reliability analysis – classical and approximate solutions. System reliability. Formulations suitable for implementation in codes. Applications in modern building codes.
Professor Turkstra

303-610B SPECIAL TOPICS IN STRUCTURAL MECHANICS. Special problems in the theory and design of structures. These may include topics in the theories of elasticity and plasticity and advanced theories of shell structures.

303-611B ANALYSIS AND DESIGN OF HIGH-RISE STRUCTURES. Historical review, factors governing structural form. Loading, approximate analysis of braced and rigid frames, structural idealization, associated techniques of matrix analysis, diaphragm analysis, link-connected walls, beam-connected walls, connected walls and frames, core-supported structures, three-dimensional frames and walls. Design project.
Professor Stafford Smith

303-618A DESIGN IN CONCRETE I. Concrete physical properties, creep, shrinkage; review of ultimate strength design; combined loadings design of frames and flat plates limit design, yield line theory; prestressed concrete, partial prestressing and load balancing. The course will include group projects.
Professor Mirza

303-619B DESIGN IN CONCRETE II. Design topics will be selected from among the following: shear walls and deep beams, slender members, applications of probabilistic concepts to structural concrete design, analysis and design of folded plates, cylindrical shells, tanks, arches and bridges, special topics in prestressed concrete.
Professors Harris and Mirza

303-620B STRUCTURAL MODELS. Structural models; direct and indirect models; demonstration models; theory, similitude and dimensional analysis; materials, fabrication, loading and instrumentation techniques; confidence levels; research projects to illustrate the use of qualitative and quantitative models to study structural behaviour.
Professor Mirza

303-621A BEHAVIOUR OF CONCRETE STRUCTURES. Behaviour of reinforced and prestressed concrete members in flexure, shear, torsion and combined modes of loading. Forces at steel-concrete interface. Crack propagation and failure.
Professor Mirza

303-642B TRANSPORTATION SYSTEMS ANALYSIS. Quantitative analysis and forecasting of urban and regional travel demand; trip generation, trip distribution, Modal split analysis, trip assignment, and transport-related land use models; design and synthesis of transportation systems.

303-645B TRAFFIC FLOW AND CONTROL. (Prerequisite: a course in probability and statistics). Characteristics of traffic flow, microscopic and macroscopic flow theories, theory and application of traffic control techniques, traffic signal systems, expressway surveillance and control.

303-650B DISTRIBUTION AND COLLECTION SYSTEMS. Principles and practice of water transmission, distribution and storage design. Surface drainage and wastewater collection systems. Analysis, reinforcing and modification of existing systems. Economic aspects of systems and transmission.
Professor Pakalnins

303-651B THEORY OF WATER TREATMENT. Physical, chemical and microbiological aspects of surface, ground and treated waters. Gravimetric, volumetric and instrumental analysis of water samples. Principles of conventional and advanced water treatment methods for public water supplies. Water conditioning for industrial uses. Synthesis of treatment operation to produce water of a specific gravity.
Professor Hart

303-652B THEORY OF WASTEWATER TREATMENT. Waste surveys, wastewater characteristics and laboratory analyses. Ecology metabolism and population kinetics of micro-organisms, and their role in the various waste treatment processes. Conventional and advanced physical, chemical and biological processes of domestic and industrial waste treatment.
Professor Hart

303-653A STREAM POLLUTION AND CONTROL. Physical and chemical pollution and bacterial contamination of surface and groundwaters. Environmental health aspects of pollution. Planning and practice of pollution surveys. Data analysis and reports. Analysis of stream water quality and waste discharge standards in North America and Europe. Correlation and control of the discharge conditions and the degree of water and wastewater treatment, domestic and industrial.
Professor Pakalnins

303-654A SANITARY ENGINEERING DESIGN. Complete problems in site selection, layout and design of water and wastewater treatment plants. Control and economic aspects of primary, secondary and tertiary plant operation.
Professor Hart

303-655A WATER RESOURCES ENGINEERING. Legal, economic, conservational and technological aspects of the use of water resources. The concept of existing supplies and resource allocation. Planning factors and related problems of land use. Analysis of water quality management in North America and abroad.
Professor Pakalnins

303-656A SYSTEMS ANALYSIS ENGINEERING. Introduction to systems analysis and mathematical optimization; structuring and solution of mathematical programming models with emphasis on linear and dynamic programming; sensitivity analysis and trade-off among design factors; application of systems analysis techniques to the solution of complex problems in the private and public sectors.
Professor Panagiotakopoulos

303-664A MATHEMATICAL METHODS IN ENGINEERING RESEARCH. Vectors, tensors, and matrices and applications in engineering research; potential theory. Boundary value problems, integral transforms, asymptotic and similar solutions. Variational methods.
Professor Savage and Staff

303-665A APPLIED ELASTICITY AND TENSOR CALCULUS. Scalars, vectors and tensors; second order symmetric tensors, principal axes, eigenvectors and eigenvalues; the stress and strain tensors; homogeneous isotropic materials; plane stress and plane strain; stress functions in cartesian and polar coordinates; complex variable methods in two dimensional elasticity; torsion of non-circular sections; strain energy methods; theories of elastic breakdown.
Professor Harris

303-666B URBAN AND ENVIRONMENTAL ENGINEERING SYSTEMS (Prerequisite: 303-656A and probability theory). Advanced topics in the application of mathematical programming techniques and probability theory to the solution of urban and environmental engineering problems.
Professor Panagiotakopoulos

303-667A PLASTICITY. Criteria for yielding; Ideal behaviour, elastic-plastic, ideal plastic, rigid plastic; Non-ideal behaviour, work hardening, strain hardening; Physics of plastic behaviour, yield and failure; Principal stress space, ideal and non-ideal; Yield surfaces; Stability Postulates; Plastic Potential; St. Venant's Postulate; Plastic stress-strain relations, Levy-Mises, Prandtl-Reuss; Uniqueness; Limite Theorems.
Professor Yong

303-670B WATER WAVES AND ALLIED MOTIONS. Motions of seas and rivers and their interaction with bottom and shore; deep and shallow water surface waves of all types, dispersion and non-linearity; conservation equations, wave interaction; internal waves; inertial waves.
Professor Savage

303-672A HYDRAULICS I. Design of channels for non-uniform flow; computation of backwater curves, effect of ice and obstructions. Computations of unsteady flow in open channels; abrupt waves, flood waves, tidal propagation. Navigation locks: manifold design. Water intakes.
Professor Savage

303-673B HYDRAULICS II. Water hammer in pipe systems. Surge tanks: purpose, types and design. Turbines and turbine governing: design of hydraulic turbines; governing stability and response. Cavitation.
Professor Chu

303-674A FLUID MECHANICS OF POLLUTION I. Application of fluid mechanics to problems in water pollution control; Mixing, dilution and dispersion of pollutants discharged into lakes, rivers, estuaries, and oceans; Salinity intrusion in estuaries and its effects on dispersion; Biochemical oxygen demand and dissolved oxygen as water quality indicators; Mixing in stratified flow; Thermal Pollution; Sewage disposal in the ocean outfall; Oceanic diffusion processes; Oil pollution.
Professor Chu

303-675A FLUID MECHANICS OF POLLUTION II. Application of fluid mechanics to problems of air pollution; Properties and sources of air pollution; Atmospheric turbulent diffusion; Characteristics of atmosphere boundary layers; Stable and unstable atmosphere; Aerodynamics of plumes; Wind tunnel modelling and similitude; Coagulation and setting of particles; Visibility and pollution.
Professor Cox

303-680A FUNDAMENTALS OF SOIL BEHAVIOUR. Physical and chemical properties of clays; clay-water interaction, soil structure, soil-water potential. Infiltration and diffusion, volume changes. Soil strength parameters, pore water pressures and parameters.
Professor Yong

303-681B ENGINEERING ASPECTS OF SOIL BEHAVIOUR. (Prerequisite: 303-680A). Consolidation phenomenon, shear strength of cohesive soils, granular soil strength, soil freezing, soil dynamics, creep properties. Equilibrium and compatibility. Yield Criteria.
Professor Yong

303-682A APPLIED SOIL MECHANICS. Composition and properties of natural soils and rock; geologic processes of formation and alteration, site investigations, evaluation of engineering properties for design applications. Case records involving influence of in-situ properties on predicted versus actual performance. Compaction, statistical compaction control. Improvement of soil and rock properties.
Professor Osler

303-683B ADVANCED FOUNDATION DESIGN. Design of shallow foundations, bearing capacity and settlement, combined footings and rafts; eccentric and inclined loads, footings in slopes, machine foundations. Deep foundations; caissons and piers, piles, pile groups, tension piles. Tunnels and tunnel linings, flexible culverts. Earth pressures, retaining walls, sheeting and bracing, cofferdams. Case records of foundation performance including failures.
Professor Osler

303-684B GROUNDWATER AND SEEPAGE. Flow of incompressible fluids through porous media, fundamentals of groundwater flow, confined and unconfined flow, conformal mapping, graphical flow nets and the use of analogs, flow through earth structures, transient flow surfaces, numerical solutions by means of digital computers.
Professor Japp

303-685B DRAINAGE ENGINEERING. Hydraulics of wells, pumping tests, theories of flow into auger holes and drain tubes, seepage from canals and ditches, seepage control in earth structures, soil stabilization by drainage, relief wells, sand drains, foundation drainage and construction de-watering. Surface drainage problems and unsaturated flow.
Professor Japp

303-686A EARTHWORK ENGINEERING. Design and construction of earth and rock fills, stability, improvement of stability with berms, etc.; techniques of fill placement over soft ground, induced pore pressures during fill placement. Stability of cuts in soil and rock, techniques of analysis, influence of pore pressures on stability. Interaction between embankments and adjoining structures, such as abutments. Case records of embankment performance and failures.
Professor Osler

McGILL UNIVERSITY LIBRARY

303-687B PAVEMENT DESIGN. Types and properties of bituminous materials, laboratory testing; design of bituminous concrete mixes, construction control. Analysis of rigid and flexible pavement systems using elastic and viscoelastic theory. Design of airfield and highway pavements. Moisture content changes beneath pavements, frost action and frost susceptibility of soils, soil stabilization. Pavement evaluation and strengthtening.
Professor Osler

303-688A SOIL DYNAMICS. Basic system dynamics, wave propagation in solids, wave propagation in soils, constitutive relations, dynamic equilibrium and stability, yielding, strain-rate effects, behaviour of soils subjected to cyclic and impulsive loadings.
Professor Japp

303-689B DYNAMICS OF FOUNDATIONS AND EARTH STRUCTURES. Design of foundations subjected to vibratory and impulsive loadings, evaluation of dynamic soil properties, lumped mass analogies, earthquake effects in slope stability and earth-work structures.
Professor Japp

303-690D RESEARCH PROJECT. This project relates to the M.Eng. degree, Option B.

303-724B ADVANCED TOPICS IN CONCRETE STRUCTURES. Seminar approach to current research topics in the field of concrete structures.

303-771B SPECIAL TOPICS IN FLUID MECHANICS. After the development of the general equations of motion, emphasis will be placed on various mathematical methods applied to problems in fluid mechanics. Similarity methods; singular perturbation analysis; method of characteristics; integral methods. Examples will be chosen from various fields.
Professor Savage

303-791A PHYSICS AND CHEMISTRY OF SOILS I. Crystallographic structure of soil particles, clay-water electrolyse systems, X-Ray and D.T.A. studies, concepts of soil water, potentials in soil-water systems.
Professor Yong

303-792A MECHANICS OF PARTICULATE MEDIA. (Prerequisite 303-667B). Properties of particulate media, contact theory, equilibrium and compatibility, elastic-plastic problems, single phase and two phase systems. Yield criteria, critical state analyses, micro and macro analysis, stress distribution, arching effects, bulk flow problems.
Professor Yong

303-793B PHYSICS AND CHEMISTRY OF SOILS II. (Prerequisite: 303-791A). Thermodynamics of clay-water interaction, soil freezing, ion and base exchange, clay-water interaction and environmental effects in relation to engineering properties.
Professor Yong

303-794A SPECIAL TOPICS IN SOIL MECHANICS. Special problems in research, theory, application and design related to Soil Mechanics.
Professor Yong

E6 SCHOOL OF COMPUTER SCIENCE

Burnside Hall
805 Sherbrooke Street West
Montreal, PQ,
Canada H3A 2K6

STAFF

Professors – G. MARSAGLIA *(Director)*; W.D. THORPE
Associate Professors – T.H. MERRETT; M.M. NEWBORN; C.C. PAIGE; G.F.G. RATZER
Assistant Professors – K. ANANTHA; D.J. BURRAGE; N. FRIEDMAN; V. HORSPOOL; S. LAM; N. MAROVAC; G.T. TOUSSAINT
Lecturers – M. COHEN R. GOVINDARAJAN; A. GREENBERG; T. KLINCSEK; Q. BUI-DUY

The School of Computer Science provides instruction and research at the graduate level in theory and applications of computer science. Its programs are based on close cooperation with computer science activities in other departments of the University. It offers programs leading to the degrees M.Sc., M.Sc. (Applied) and Ph.D. in Computer Science, with courses predominantly from those outlined below, augmented by courses in other departments, and with research activities directed either by the staff of the School or members of associated Faculties for candidates interested in particular computer applications.

ADMISSION

M.Sc. Degrees

The normal requirement for admission is a bachelor's degree (C.G.P.A. 2.3 or better, or equivalent) with a significant component of course work in Computer Science; however candidates with a good background in mathematics and experience in computer programming may be admitted.

Two programs are offered, leading respectively to the degrees of M.Sc. and M.Sc. (Applied).

Ph.D. Degree

Candidates who possess a Master's degree acceptable to the School may be considered for direct registration for the Ph.D. program. Other candidates will usually first register for the M.Sc. degree, but can apply for transfer to the Ph.D. program after one year.

The deadline for applications for financial assistance is 1 April for all programs.

REQUIREMENTS

M.Sc. Degree

Normal requirements are a thesis and six half-year courses. Courses will be chosen with guidance by the candidates' adviser, subject to approval by the staff of the School.

M.Sc. (Applied) Degree

This is a two-year program, normal requirements for which are nine half-year courses and three computer applications projects. The projects are to be supervised by different faculty members. Candidates may obtain approval of the staff of the School to combine two or all three projects into an enlarged project. Courses will be chosen with guidance by the candidates' adviser subject to approval by the staff of the School.

Ph.D. Degree

Candidates must fulfil the requirements outlined in the general rules of the Faculty. They must successfully complete the comprehensive examinations and submit a Ph.D. thesis. There is no language requirement.

COURSES FOR HIGHER DEGREES

308-520A DATABASE SYSTEMS (3 hours). An introduction to abstract data structure and to techniques of database implementation. Topics: review of sentential and predicate logic, relational view of data, relational calculus, relational algebra, normalization; hierarchial and network views of data, implementation techniques, existing database systems (chosen from: ADABAS, DBTG, IMS, S2000, TOTAL); data security and integrity.
Professor Merrett

308-573A,B MINI-COMPUTERS. (3 hours). Characteristics of mini computers; their internal structure. Assembler and machine language programming with emphasis on PDP11. Assemblers, loaders and simulators for several machines. Manufacturers' supplied software including operating system. Mini computer applications. Students will be assigned "hands-on" projects.
Professors Marovac and Ratzer

308-610A INFORMATION STRUCTURES I. (3 hours). Basic concepts for the analysis of algorithms, a study of the properties of linear lists, stacks, queues, sequential allocation, linked allocation, circular lists, doubly linked lists, arrays and orthogonal lists.
Professor Newborn

308-611B INFORMATION STRUCTURES II. (3 hours). Properties of data stored in tree structures. Topics include traversing binary trees, binary tree representation of trees, mathematical properties of trees, lists, garbage collection techniques and dynamic storage allocation techniques.
Professor Newborn

308-614A COMPUTER METHODS IN SYSTEMS ANALYSIS I. (3 hours). This half-course is intended for those who wish to develop an analytical approach to economic, commercial and industrial problems which involve complex systems of highly interactive components. The emphasis on computer simulation will be complemented by discussion of the underlying theory. Topics: discrete simulation – queuing theory, inventory theory, applications to operating systems, continuous simulation. Special languages and application packages: GPSS, GASP II, CSMP.
Professor Merrett

308-615B COMPUTER METHODS IN SYSTEMS ANALYSIS II. (3 hours). This half-course is concerned with the structure, organization and retrieval of information with emphasis on computer and data base techniques. Applications to commercial problems and library science are discussed. Topics: Dictionaries. Logical, statistical and syntactical analysis of information. Retrieval. File organization. Data base retrieval systems. Evaluation of computer methods. Applications.
Professors Merrett and Burrage

308-620A PROGRAMMING LANGUAGES AND COMPILERS. (3 hours). A practical introduction to compiler design. Two high-level programming languages are introduced and used as a source of examples. The parsing, semantic analysis and generated code for these example constructs will be discussed.
Professor Horspool

308-621B ADVANCED TOPICS IN COMPILER CONSTRUCTION. (3 hours). An in-depth treatment of several topics in compilation, chosen from amongst: deterministic parsing, attribute grammars, translator writing systems, code optimization, interpreters, automatic formatting, error recovery and diagnostic aids. In addition, the class will participate in a compiler construction project.
Professor Horspool

308-624A HIGH-LEVEL COMPUTER LANGUAGES I. (3 hours). The structures, properties and advanced concepts in high-level programming languages. Comparative studies of most common high-level programming languages with particular emphasis on FORTRAN, ALGOL 60, PL/I, PASCAL, SNOBOL 4, APL and LISP.
Professor Marovac

308-625B HIGH-LEVEL COMPUTER LANGUAGES II. (3 hours) Recent developments in high-level languages with particular emphasis on new concepts and implementations. Concurrent

programming languages. Problem oriented languages. Relation of high-level programming languages to advanced programming methodologies.
Professor Marovac

308-630A FORMAL LANGUAGES AND AUTOMATA THEORY. (3 hours). Languages, phrase structure grammars. The Chomsky hierachy: regular, context-free, context-sensitive and type O languages and their corresponding recognition devices. Reductions on grammars; normal forms; operations on languages; closure properties and decidability results. Applications to programming languages.
Professor Friedman

308-631B THEORY OF ALGORITHMS AND COMPUTATIONAL COMPLEXITY. (3 hours). Algorithms of Markov. The universal algorithm. Turing machines. Computability: recursive functions and Church's thesis. Post correspondence problem and other undecidable problems. Computational complexity; machine-based complexity; time and space requirements for various computations. Random access machines and other models for digital computers. Efficiency of algorithms.
Professor Friedman

308-640A NUMERICAL ALGORITHMS I. (3 hours). Computers are unable to represent all real numbers exactly, and as a result many computed answers differ drastically from their true mathematical results. This course explains how this can occur, and how we can avoid such disasters. Many of the important algorithms in computational linear algebra will be covered, including those for solution of equations, least squares, eigenvalues, singular values, generalized inverses, and linear programming. The emphasis will be on numerical stability of algorithms and efficient usage of the computer.
Professor Paige

308-641B NUMERICAL ALGORITHMS II. (3 hours). The study and use of computational algorithms for solving mathematical problems. Topics: non-linear algebraic equations in one and in several variables; approximation using polynomials, splines, and Fourier series; fast transforms; ordinary and partial differential equations. Important computational properties such as numerical stability of algorithms and economy of computer time and storage will be considered. Required background includes a previous numerical course and FORTRAN programming.
Professor Burrage

308-644A PATTERN RECOGNITION I. (3 hours). Feature extraction methods in organisms and machines. Preprocessing techniques. Trainable pattern classifiers. Discriminant functions and their implementation via parametric and non-parametric training. Threshold logic units and perceptrons. The statistical approach to pattern recognition. Sequential classification. The approximation of probability distributions in classifier structure design. Estimation of density functions. Experimental methodology and applications.
Professor Toussaint

308-645B PATTERN RECOGNITION II. (Prerequisite 308-644A). Design and analysis of pattern recognition experiments. Estimation of misclassification. Nonparametric techniques in classification and density estimation. Sequential classification. Automatic feature evaluation and selection. Unsupervised learning and clustering. Compound decision theory and the use of context. Applications.
Professor Toussaint

308-650A COMBINATORIAL ALGORITHMS I. (3 hours). Network Flows: Maximal flows, solution by the labelling method, capacitated nodes, flows in undirected or mixed networks. Relation to linear programming. Shortest paths and minimal cost algorithms, with application to the transportation problems, the optimal assignment problem, the warehousing problem. Multiterminal networks. Equivalent networks. Computer solution of large problems.
Professor Newborn

308-651B COMBINATORIAL ALGORITHMS II. (3 hours). Topics in constructive graph theory including various algorithms for determining isomorphism, planarity and connectivity of graphs, finding longest paths; generation procedures for various classes of graphs. This course is a continuation of 308-650A.
Staff

308-660A NUMERICAL METHODS IN OPTIMIZATION I. (3 hours). The use of computers in solving unconstrained and constrained optimization problems. Direct search, gradient, Newton and quasi-Newton techniques. Extensions to constrained problems. Discussion of several available computer programs. A numerical approach will be taken and students will need a knowledge of programming and some matrix computations.
Professor Paige

308-661B NUMERICAL METHODS IN OPTIMIZATION II. (3 hours). The use of computers in solving large or complex optimization problems. Emphasis on recently developed techniques. Problems with special structure. The treatment of some problems arising in specific areas, such as engineering and statistics. A numerical approach will be taken, and students will need a knowledge of matrix computations and programming.
Professor Paige

308-666A COMPUTER METHODS IN OPERATIONS RESEARCH I. (3 hours). Use of the computer in solving probabilistic problems in operations research. Mathematical and computer modelling. Markov chains, Markovian decision processes. Reliability: theory and applications. Inventory problems, queueing problems, simulation.
Professor Paige

308-667B COMPUTER MEHTODS IN OPERATIONS RESEARCH II. (3 hours). Use of the computer in solving deterministic problems in operations research. Networkproblems. Applications of the linear programming and its extensions. Fast and accurate implementations of the simple method. Integer programming. Dyramic programming.
Professor Paige

308-671B COMPUTER SYSTEMS AND ORGANIZATION. (3 hours. Control and scheduling of large information processing systems. Operating system software – resource allocation, dispatching, processors, access nethods, job control language, main storage management. Batch processing, multiprogramming, multiprocessing, time sharing. Single and multiple vitual memory operating systems.
Professor Lam

308-690A COMPUTER METHODS IN PROBABILITY AND STATISTICS I. (3 hours). The use of random numbers in dstribution theory, goodness of fit, power and robustness of tests, geometric probability. Algorithms andprograms for analysis of data.
Professor Marsaglia

308-691B COMPUTER METHODS IN PROBABILITY AND STATISTICS II. (3 hours; prerequisite 308-690A). A coninuation of 690A. Algorithms and programs for statstical analysis, particularly multivariate analysis, tme series and the estimation of distribution and density functions.
Professor Marsaglia

308-698A MONTE CARLO AND SIMULATION I. (3 hours). Randon numbers and how to get them, decide if they are any good and what to do with them.
Professor Marsaglia

308-699B MONTE CARLO AND SIMULATION II. (3 hours; prerequsite: 308-698A). A continuation of 698A. Applications of Monte Carlo (computer programs that use random numbers) to simulation problems, statistcs, probability and operations research.
Professor Marsaglia

* **308-730D THE COMPUTER IN MATHEMATICAL RESEARCH.** (3 hours). Examples of computer aided research in pure mathematics; number theory, combinatoria theory, finite geometries and configurations, group theory, graph theory, probability and mathematical statistics. Conversely, recent trends in pure mathematics arising from developments in compute science.

E7 CRYSTALLOGRAPHY

Frank Dawson Adams Building
3450 University Street
Montreal, PQ,
Canada H3A 2A7

Students wishing to undertake graduate studies in Crystallography should submit their application to G. Donnay, Professor of Crystallography. Applications will be assessed by an interdisciplinary committee, appointed for the purpose, and if the application is accepted an appropriate program of study and research will be arranged.

GRADUATE COURSES

186-502B CRYSTAL-STRUCTURE ANALYSIS. (2 lectures). Elements of crystallography and diffraction physics basic to structure determination. Choice of crystal, principles underlying photographic and counter methods of collecting intensity data. Data reduction. F^2 synthesis. The phase problem. Trial and error methods, heavy-atom techniques, direct methods. Electron-density calculation. Refinement of structure.
Professor Donnay

186-503D CRYSTAL-STRUCTURE DETERMINATION. (6 hours laboratory; Prerequisite 186-211A, or 502B). Techniques of structure determination applied to a research problem.
Professor Donnay

186-504B CRYSTAL SYMMETRY. (2 lectures). Derivation of the 32 crystallographic point groups (the geometric crystal classes), 14 translation groups (the Bravais lattices), 73 arithmetic crystal classes (isomorphic with symmorphic space groups) and 230 space groups. Atomic site symmetry vs crystal-structure symmetry. Effect of solid solutions on crystal symmetry. Symmetry information to be gained from X-ray diffraction: powder diagrams vs single-crystal patterns. Generalized symmetry applied to twinning and magnetic structures.
Professor Donnay

E8 DEPARTMENT OF ELECTRICAL ENGINEERING

McConnell Engineering Building
3480 University Street
Montreal, PQ,
Canada H3A 2A7

STAFF

Professors – E.L. ADLER; P.R. BÉLANGER; M.L. BLOSTEIN; R.P. COMSA; G.L. d'OMBRIAN; G.W. FARNELL; T.J.F. PAVLASEK; P. SILVESTER *(Chairman)*; G. ZAMES

Associate Professors – C.H. CHAMPNESS; C. FENGLER; M. FUKADA; F. GALIANA; A.A. GUNDJIAN; M.D. LEVINE; A.S. MALOWANY; B.T. OOI; N. RUMIN; E. SIGURDSON; F. SPITZER; G.L. YIP

Assistant Professors – P. KABAL; R. KWONG; H.C. LEE

Lecturer – K.L. FRASER

Sessional, Special and Part-Time Staff – C.W. BRADLEY; D. CREVIER; P.J. FENWICK; B. GEVAY; B.A. HOWARTH; M. KAPLAN; G. KARADY; K.J. KOISTE; M.A. MARIN; H.L. NAKRA; S. RAUCH; F.M. REZA; P.K. SEN; L. SNIDER; A. TURGEON

The department is excellently equipped for research and has special interests in the following areas: control engineering, communications, computers, microwave optics, solid state electronics, dynamics of machines and power modulators, high voltage phenomena, network theory, acoustics and surge voltage phenomena. The Department has six minicomputers: an HP 2100 used in the electric machines laboratory, plus three PDP-8's, one PDP-15, and a PDP-11 used primarily for computer graphics and image processing. Some of these machines are connected to one of the University's two IBM 370/158 systems.

Facilities for study in the microwave area include two anechoic chambers with automatic field intensity and phase plotters. Vacuum deposition and r-f sputtering apparatus are used for the fabrication of solid state devices, as are electromagnets for measurements of the electrical and magnetic properties of solids. Cryogenic facilities are also available. There is a fully equipped laboratory for the study of electric machine dynamics, and also laboratory facilities for high-voltage phenomena.

ADMISSION AND REQUIREMENTS

Applications for September admission are normally processed in March, with decisions announced in early April. Decisions are normally made in early November for January admissions.

M.Eng Degree

Candidates who fulfil the general requirements of the Faculty of Graduate Studies and Research and who possess an appropriate first degree may be accepted for a course of study leading to the M.Eng. degree. A student may satisfy the requirements for the degree by completing one of the following options:

Option A: A minimum of six appropriate graduate courses, at least four of which are in Electrical Engineering, plus a research project leading to a Master's thesis.

Option B: A minimum of nine appropriate graduate courses, at least six of which are in Electrical Engineering, plus a research or design project leading to an internally-examined report.

Ph.D. Degree

Candidates who fulfil the general requirements of the Faculty of Graduate Studies and Research and who possess a Master's degree may be accepted for a course of study leading to the Ph.D. degree in Electrical Engineering. The minimum time taken to complete the requirements is two years. In exceptional circumstances a candidate may be accepted for the Ph.D. degree who does not possess a Master's degree but he or she will be registered first as a Master's candidate.

COURSES FOR HIGHER DEGREES

Not all of these courses are given every year.

304-501A FREQUENCY DESIGN OF LINEAR CONTROL SYSTEMS. 3(3-0-6). (Prerequisite: 304-303A,B or 304-308B). Frequency response design of linear control systems. Compensators, error constants. Sensitivity, tow-degree-of-freedom design. Cascade and other multiloop designs. Feed-forward. Frequency response design of multivariable linear control systems. Decoupling. Discrete systems, sequences, convolution, difference equations. The z-transform. Sampled-data systems and their design by frequency-domain techniques.

304-502B STATE SPACE METHODS IN LINEAR SYSTEMS. 3(3-0-6). (Prerequisites: 304-501A). State representation of linear systems. The state transition matrix. System modes and Jordan forms. Controllability and observability. Transfer functions and minimal representations. State representation of discrete and sampled-data systems. Canonical forms. Modal control and pole placement by state feedback. Quadratic performance index, the Lyapunov matrix equation. Stability and Lyapunov functions. The optimal regulator problem. Dead-beat controllers. Disturbance compensation, feedforward. Linear state observers. Optimization of output-feedback controllers for minmax eigenvalue

placement of minimization of a quadratic performance index.

304-512B DIGITAL SIGNAL PROCESSING. 3(3-0-6). (Prerequisite: 304-303A,B or 304-308B). Discrete-time linear systems theory, digital filter synthesis techniques, quantization effects in digital filters, discrete Fourier transforms including FFT algorithms, high-speed convolution and correlation techniques.

304-521A DIGITAL COMMUNICATION. 3(3-0-6). (Prerequisites: 304-305B or 189-384B, 304-303A,B or 304-308B). Introduction to digital transmission, digital data and performance criteria, discussion of digital transmission facilities; basic definitions; coding and framing formats; baseband pulse modulation, pulse amplitude and pulse frequency modulation; phase shift keying; signal spectra; demodulation techniques noting problems of framing and synchronization; performance on Gaussian channel, band limited channel characterization, pulse dispersion, adaptive and non-adaptive equalization, Gaussian and impulsive-noise, pulse jitter, repeaters and analysis; introduction to error control, parity checking, error detection, automatic repeat request performance estimates.

304-552B STATISTICAL COMMUNICATION THEORY. 3(3-0-6). (Prerequisites: 304-305B or 189-384B, 304-303A,B or 304-308B). Optimum receiver principles; vector channels and decision regions, matched filters, error evaluation for various signal sets; channel capacity, important channel models, non-white Gaussian noise, bandpass channels, random amplitude and phase, linear (amplitude, single side-band double side-band) modulation, twisted modulation, frequency modulation, phase modulation, bandwidth and weak noise suppression, phase-lock loop.

304-529A IMAGE PROCESSING AND COMMUNICATIONS. 3(3-0-6). (Prerequisites: 304-021A,B 304-303A,B or 304-308B). Psychophysics of vision, properties of images; sampling, digitizing, and displaying images; geometric and algebraic processing, spatial filtering, image coding and transmission; binary image analysis, segmentation, descriptions of lines and shapes; representation, linguistic methods, software and hardware systems, applications; scene analysis.

304-531B REAL-TIME SYSTEMS. 3(3-3-3). (Prerequisite: 304-222A,B or 304-324A). Real-time engineering applications of computers to on-line control communication systems and data acquisition. This course is concerned with aspects of hardware, software, the hardware-software interface and their integration into a completed system. The course required the completion of individual or group projects using one of the department's mini or micro-computers.

304-532A COMPUTER GRAPHICS. 3(3-3-3). (Prerequisite: 304-324A). Introduction to computer graphics systems and display devices: core or disc refreshed, storage tube, scan conversion systems; graphical input and interactive graphical techniques – light pen, joystick, Rand tablet; display files: graphics languages and data structures; 2D transformations; 3D computer graphics, hidden line removal and shading; graphics system design; applications. The course will consist of lecture material as well as a laboratory project involving the preparation and running of graphics programs on the PDP-15 and IBM 360 systems. (Alternate years, next given 77/78).

* **304-533B COMPUTERIZED TEXT PROCESSING. 3(3-0-6).** (Prerequisite: 304-324A). Data editing by batch and online entry; manipulation of text and data. Concepts of type design and typography. Typesetting practice and technology. Production technique in printing industry as applied to letter, book and journal publication. Applications of numerical control techniques and computerized decision making to printing, particularly typesetting. (Alternate years, next given 78/79).

304-543B NUMERICAL METHODS IN ELECTROMAGNETICS. 3(3-0-6). (Prerequisite: 304-251A,B or 304-256A). Mathematical representation of fields. Discrete approximations for continuous differential and integral operators. Methods for solving deterministic and eigenvalue problems by direct and iterative means.

304-561A ELECTRIC MACHINE DESIGN. 3(3-0-6). (Prerequisite: 304-261A,B). The output equations of electromagnetic apparatus. Specific electric and magnetic loading. Magnetic circuits. Time constants and power gain. Windings including pole amplitude modulation. Leakage inductances. Commutation interpoles and compensation. Per unit values. (Alternate years, next given 77/78).

* **304-562A CONTINUUM ELECTROMECHANICS. 3(3-0-6).** (Prerequisite: 304-251A,B or 304-256A). Quasi-static electromagnetic field equations. Field transformation in moving co-ordinate systems. Boundary conditions and constitutive relations for moving media. Magnetic diffusion and charge relaxation in moving media. Maxwell's stress tensor for the evaluation of force densities. Electromechanics of elastic solids and Newtonian fluids. Application of theories to magneto-hydrodynamics, electro-hydrodynamics, magnetic pumps, linear induction motor and magnetic levitation. (Alternate years, next given 78/79).

304-564B CONTROL RECTIFIER CIRCUITS. 3(3-0-6). (Prerequisite: 304-333A,B or 304-338B). Simple polyphase rectifiers. Thyristor characteristics. Fully and semi-controlled bridges. Interphase transformers. Commutation, regulation and equivalent circuits. Harmonic content. Active loads. Cycloconverters. (Alternate years, next given 77/78).

* **304-565B INVERTERS AND COPPER CIRCUITS. 3(3-0-6).** (Prerequisite: 304-333A,B or 304-338B). Properties of circuits employing the forced commu-

tation of thyristors to perform a switching function. Static and dynamic properties of thyristors and diodes. Constant voltage and constant current inverters, three phase inverters. Choppers. Motor loads. (Alternate years, next given 78/79).

304-572A LASER ELECTRONICS. 3(3-0-6). (Prerequisites: 198-271B, 304-332B or 304-337B). Review of quantum mechanical and statistical mechanical concepts and techniques. Principle of amplification by stimulated emission of radiation; analysis of resonant cavity and travelling wave maser amplifiers; coherence, stability and noise; characteristics of gaseous, solid state and semiconductor junction lasers. Nonlinear effects for modulation and detection of laser beams; applications to communication, measurements, signal processing and other fields as time permits.

* **304-573B MICROWAVE DEVICES AND CIRCUITS. 3(3-0-6).** (Prerequisites: 304-592A, 304-332B or 304-337B). Gunn diodes. LSA mode operation; Gun oscillators. Tunnel diodes, IMPATT and TRAPATT oscillators. Parasitics in tunnel diode circuits; noise, microwave transistors; models; scattering parameter design of distributed amplifiers. High frequency diodes: limitations in sensitivity, noise figure and dynamic range. Varactor multipliers. Parametric amplifiers: noise in uncooled amplifiers; use of circulators in parametric amplifiers. (Alternate years, next given 78/79).

* **304-575B OPTICAL AND MAGNETIC PROPERTIES OF SOLIDS. 3(3-0-6).** (Prerequisites: 304-352B or 304-357B, 304-332B). Classical and quantum theories of polarization. Band theory of solids. Dispersion relations. Tensor description of anisotropic materials. The ray ellipsoid. Double refractions, birefringence dichroism, piezoelectricity, ferroelectricity. Classical and quantum theories of magnetization. Diamagnetism, paramagnetism, ferro- and ferri-magnetism. Magnetic domains. Ferrites and Garnets. Non-reciprocal microwave devices and magneto-optic devices which exploit crystal anisotropy. (Alternate years, next given 78/79).

* **304-579A SEMICONDUCTOR DEVICES AND MODELS. 3(3-0-6).** (Prerequisite: 304-333A,B or 304-338B). Systematic methods for obtaining useful models which relate device physics to terminal behaviour. The pn junction diode, junction-gate and MOS field-effect transistors, bipolar transistor: idealized devices, practical device geometries, applications. The transistor switch. Determination of model parameters by measurement. (Alternate years, next given 78/79).

304-592A MICROWAVE THEORY AND TECHNIQUES. 3(3-0-6). (Prerequisite: 304-352B or 304-357B). Transmission lines and waveguides, surface waveguides, microwave circuit theory, impedance matching and transformation, passive microwave devices, resonators, periodic structures and filters, microwave antennas.

304-593B ANTENNAS AND PROPAGATION. 3(3-0-6). (Prerequisite: 304-352B or 304-357B). Near and far field behaviour of radiators; antennas as a boundary value problem; practical antenna parameters; wire antennas, antenna arrays, aperture methods of antenna analysis; measurement of input impedance, field patterns, gain and noise; point-to-point propagation, fading beyond horizon and long distance propagation, ionospheric, atmospheric and earth's surface considerations; tropospheric scatter.

304-596B COHERENT WAVE OPTICS. 3(3-0-6). (Prerequisite: 304-352B or 304-357B). Introduction to wave optics. Diffraction theory and geometrical optics including the Kirchoff-Huygens diffraction integral, Fermat's principle and Hamiltonian Formulations of Ray Optics. Lenses and lens waveguides. Optical Fourier transform and spatial filtering. Gaussian beams. Holography. Propagation characteristics of optical fibres and dieletric waveguides. Thin film (or slab) optical waveguides. Discussion of optical communication systems. (Alternate years, next given 77/78).

304-602A OPTIMAL CONTROL THEORY. 4(3-0-9). (Prerequisite: 304-404A or 304-502B). Basic concepts of static optimization. Variational solutions for discrete and continuous-time control problems. Pontryagin's maximum principle. Dynamic programming. Computational algorithms. Singular control problems. The linear regulator problem.

304-603B ESTIMATION AND STOCHASTIC CONTROL. 4(3-0-9). (Prerequisites: 304-612A, 304-502B). Properties of estimators linear regressing. The innovations process. Innovations approach to optimal linear filtering for continuous-time and discrete-time processes. Smoothing and prediction. Properties of the Kalman filter. Optimal stochastic control of linear systems with direct state measurements. The certainty equivalence principle. Minimum-variance control. Estimation and control of discrete linear systems described by ARMA models. Stochastic control of nonlinear systems.

* **304-604A PARAMETER IDENTIFICATION AND ADAPTIVE CONTROL. 4(3-0-9).** (Prerequisite: 304-603B). Least-squares, maximum likelihood and Bayesian estimates. Hypothesis testing. Identification of discrete systems described by ARMA models using least-squares, generalized least-squares and maximum liklihood. Instrumental variable methods. Stochastic approximation. Use of the extended Kalman filter. Bayesian estimation of systems taken from a finite population. Estimation of noise covariances. Adaptive control of discrete systems using one-step-ahead control laws, enforced separation and open-loop-feedback optimal control (OLFO)

laws. Use of specially-designed inputs. (Alternate years, next given 78/79).

304-612A RANDOM PROCESSES. 4(3-0-9). (Prerequisite: 304-305B or 189-384B). Markov processes, Markov chains, correlation functions and spectra, renewal processes, queues, queuing networks.

304-613B COMPUTER-AIDED NETWORK ANALYSIS AND DESIGN 4(3-0-9). (Prerequisite: 304-303A,B or 304-308B). Computer-aided techniques for the DC, transient and frequency-domain analysis of linear and nonlinear electronic networks; methods of sensitivity analysis; elementary concepts in optimization theory; application of optimization techniques to circuit design. (Alternate years, next given 77/78).

* **304-614A NETWORK SYNTHESIS. 4(3-0-9).** (Prerequisite: 304-303A,B or 304-308B). Properties of positive real functions; determination of system functions; synthesis of driving-point functions; syntheses of lossless two-port and RC two-ports; approximation problems; systhesis of active networks. (Alternate years, next given 78/79).

304-620B INFORMATION THEORY AND CODING. 4(3-0-9). (Prerequisite: 304-305B or 189-384B). Measure of information, limitations of measure, characterization of noisy channels, channel coding and capacity. Estimates for some real channels, source coding revisited (rate distortion), error coding techniques – real and imaginary, feedback and automatic repeat request channels. This course is intended to give the student an insight into the concepts and limitations of Information Theory along with a survey of current practice in error-correcting coding. (Alternate years, next given 77/78).

304-622B ADVANCED COMMUNICATIONS SYSTEMS ANALYSIS. 4(3-0-9). (Prerequisite: 304-522B). This course will allow the student to study the foundations required for modelling advanced communication systems. Analysis of specific classes of systems such as telephone, satellite, troposcatter, microwave for both analog and digital data. (Alternate years, next given 77/78).

304-625B ARTIFICIAL INTELLIGENCE. 4(3-0-9). Prerequisite: 304-529A). Definition, models for an artificial intelligence, data structures, heuristic programming, learning, pattern recognition, man-machine interaction, practical applications and study of selected research topics. (Alternate years, next given 77/78).

* **304-628B COMPUTER COMMUNICATIONS NETWORKS. 4(3-0-9).** (Prerequisites: 304-324A, 304-521A or 304-411A). Classification of networks, voices, data, line-switching, message switching, packets; characterization of information sources; computer interface, terminal interface, network interface, queuing models, queuing networks, capacity versus delay; network system components, multiplexers, concentrators; topological design problems and algorithms; network control and characterization; tree networks, reliability; non-tree network designs. (Alternate years, next given 78/79).

* **304-636B REAL-TIME OPERATING SYSTEM DESIGN. 4(3-0-9).** (Prerequisite: 304-531A). This course is intended for students interested in real-time applications of small computers. The course includes a study of three existing real-time operating systems as well as a design project. The course content includes the following: task scheduling mechanisms, I/O organization, bulk storage organization, incorporation of service routines. Inter-computer communication, task co-ordination, multiple computer operating systems. (Alternate years, next given 78/79).

304-637B COMPUTER SYSTEMS ANALYSIS. 4(3-0-9). (Prerequisite: 304-531A). Computer system specification, hardware-software trade-offs, selection of hardware components, problem solutions using interconnected computers, choice of programming languages, structured programming, technical organization and management. The course includes three case studies and a design project. (Alternate years, next given 77/78).

* **304-638A ADVANCED COMPUTER DESIGN. 4(3-0-9).** (Prerequisite: 304-531A). This course is intended for graduate students with a good knowledge of computer organization, structure and architecture and some knowledge of micro-programming. Topics in hardware technology include functional logic building blocks, arithmetic and non-arithmetic processors, memory utilization and storage management, sequencing subsystems, transmission and exchange. Determination of expected performance by simulation; computer-aided design. Specific examples of solutions to computer design problems. Selected topics on novel computer organizations such as array, cellular and variable-structure computers. (Alternate years, next given 78/79).

304-641A APPLIED ELECTROMAGNETIC THEORY. 4(3-0-9). (Prerequisite: 304-592A or 304-593B). Mathematical techniques, analytical and numerical, for solving E.M. boundary value problems. Maxwell's equations, wave dispersion waves in gyrotropic media, Huygen's principle; Green's functions and integral equations, angular spectrum of plane waves, cylindrical and spherical wave functions, pertubational and variational techniques. Waveguide, antenna, scattering and diffraction problems.

304-647A FINITE ELEMENTS IN ELECTROMAGNETICS. 4(3-0-9). (Prerequisite: 304-543B). Finite elements for the Helmholtz equation in the plane and in space. Elements for axisymmetric problems. Isoparametric and curvilinear elements;

elements for nonlinear problems. Integral equations and the solution of antenna problems. Finite elements in parabolic problems. (Alternate years, next given 77/78).

304-662A ELECTRIC MACHINE DYNAMICS. 4(3-0-9). (Prerequisites: 304-261A,B, 304-502B). Review of electric machine models. State-space formulation of nonlinear differential equations. Solutions through numerical integration, constant speed linearization. Models of control elements, loads, prime-movers, voltage regulators, transmission networks. State equations of integrated power system. Modal analysis of multimachine power system. Operating point stability. Transient stability analysis. Electromechanical resonance. (Alternate years, next given 77/78).

304-663X HVAC POWER TRANSMISSION. 4(3-0-9). Design considerations of EHV and UHVpower transmission systems: audible noise, radio interference, environmental aspects of transmission lines. Coordination of system overvoltages with external and internal insulation strengths leading to economic insulation structures based on quantitative evaluation of reliability.

304-665X SUBSTATION APPARATUS. 4(3-0-9). Description and analysis of major apparatus used in modern power systems: circuit breakers, switches, bushings. Electrical connection of substations; principles of equipment selection based on stresses, reliability and economic requirements. Substation protection. Physical arrangement of substations.

304-664Y HVDC POWER TRANSMISSION. 4(3-0-9). Principles of HVDC power transmission: HVDC transmission circuits, bridge convertor operation, thyristor valve developments, control of HVDC systems, protection of lines and convertor stations, harmonic filtering, modelling techniques for performance studies.

304-666Y POWER SYSTEM OPERATION. 4(3-0-9). Power system optimality criteria: economic, environmental, reliability factors. Short and long-term load forecasting; simulation of river flows; economic operations of hydroelectric thermal and hydrosteam systems. Planning of additional equipment by the global and marginal approaches. Siting of new plants. Planning of interconnections; maintenance scheduling.

304-667Y MODERN TECHNIQUES FOR POWER SYSTEM ANALYSIS. 4(3-0-9). Mathematical descriptions of power systems suitable for computer analysis, and solutions algorithms. Topics will include: matrix algebra, incidence and network matrices, sparse matrix techniques, phase and component representation, short circuit studies, Diakopitcs, load flow studies, transient and dynamic stability studies, contingency analysis, state estimation, system identification.

304-677A,B EXPERIMENTAL TECHNIQUES IN SOLID STATE. 4(0-6-6). (Prerequisite: 304-332B or 304-337B). Experimental laboratory project in solid state involving the following: techniques of laboratory preparation, fabrication and orientation of solid state samples and structures for experimental study; use of special laboratory research apparatus; measurement of electronic, optical and structural properties of samples and structures; evaluation and analysis of electronic behaviour and performance; interpretation of relevant physical processes and phenomena.

304-678A SPECIAL TOPICS IN SOLIDS I. 4(3-0-9). (Prerequisite: 304-332B or 304-337B). Discussion of topics in semiconductor electronics and electronic properties of materials in areas of current research to the department.

304-679B SPECIAL TOPICS SOLIDS II. 4(3-0-9). (Prerequisite: 304-332B or 304-337B). Dielectric properties and molecular structure of solids and liquids. Dielectric theory and applications.

304-681A,B COLLOQUIUM IN ELECTRICAL ENGINEERING. (4 credits). Directed reading, seminar and discussion course in various subjects of current interest in electrical engineering research.

304-685B HIGH VOLTAGE ENGINEERING. 4(3-0-9). (Prerequisite: 304-251A,B or 304-256A). Electrical discharges in gases; uniform and non-uniform fields; corona discharges; the spark mechanism. Generation and measurement of high direct, alternating and impulse voltages. (Alternate years, next given 77/78).

304-688A,B 304-689A,B RECENT ADVANCES IN ELECTRICAL ENGINEERING. 4(3-0-9). Course content suited to the area of specialization of the lecturer.

304-699A,B RESEARCH PROJECT.

E9 DEPARTMENT OF GEOGRAPHY

Burnside Hall
805 Sherbrooke Street West
Montreal, PQ,
Canada H3A 2A7

STAFF

Professors – J.B. BIRD; B.J. GARNIER *(Chairman)*; T.L. HILLS; J.T. PARRY

Associate Professors – W. ARMSTRONG; M.A. CARSON; R.N. DRUMMOND *(on leave Fall 1977)*; P.G. HOLLAND; J. LUNDGREN; B.H. MASSAM; T.R. MOORE *(on leave 1977-78)*; S. OLSON; E. WADDELL *(on leave Fall 1977)*; R.C. ZIMMERMANN

Assistant Professors – J.J. DRAKE; G.O. EWING; WB. KEMP *(on leave 1977-78)*; J.E. LEWIS; L. MÜLLER-WILLIE
Honorary Staff – F. MÜLLER

ADMISSION

M.A. and M.Sc. Degrees

Attention is directed to the Faculty of Graduate Studies admission regulations outlined in the General Information and Faculty Regulations section headed "Admission".

Applicants not satisfying these conditions, but with primary undergraduate specialization in a cognate field, may register for the M.A. or M.Sc. degree in Geography in certain circumstances. In general, they will be required to register for a qualifying year, as will all others who have deficiencies in their preparation but are otherwise judged to be qualified.

Ph.D. Degree

Students who have attained high standing in the Master's degree in Geography may be permitted to proceed to the Ph.D. in two further years. Rarely, a student may be allowed to register for the Ph.D. degree without having first taken the Master's degree. The normal duration of a program, including field work where required, is three years. Normally, the Department will restrict admission to the Ph.D. program to students prepared to work in one of the fields of human or physical geography in which specialized supervision is offered. These, which cover a wide range of systematic areas, are listed in documents available from the Department.

REQUIREMENTS

M.A. Degree

Candidates must:

1. pass written (and in some cases oral) examinations in at least five graduate half courses; three of which must be selected from Geography 183-602A to 610B.
2. attend the Graduate Colloquium, Geography 183-631D, and such additional courses in Geography or cognate subjects as the Chairman and the student's director of research think fit. The additional courses may be for audit or examination; and
3. submit a thesis in an appropriate area of geographical inquiry.

The quality of the thesis will determine the final standing of the student.

M.Sc. Degree

Candidates must:

1. pass written (and in some cases oral) examinations in at least five graduate half courses; two selected from Geography 183-611A,B to Geography 615A,B; one selected from Geography 183-632A,B to Geography 183-635A,B; one selected from the entire list of Geography graduate courses; and one selected either from the list of Geography courses, or from the courses taught in any other department in the University.
2. attend the Graduate Colloquium, Geography 183-631D, and such additional courses in Geography or cognate subjects as the Chairman and the student's director of research think fit; and
3. submit a thesis in an appropriate area of geographical inquiry.

The quality of the thesis will determine the final standing of the student.

Ph.D. Degree

Candidates must:

1. remedy any deficiencies in their formal training in geography and necessary cognate subjects;
2. submit themselves for comprehensive examinations (183-700D, 183-701D, & 183-702D) comprising prepared papers and an oral examination. Competence in certain fields may be tested separately, but as a necessary part of these examinations;
3. submit a thesis based on original research in human or physical geography;
4. attend the Graduate Colloquium. Geography 183-631D, during one of their resident years, and other courses as determined individually; and
5. comply with a language requirement if this is so recommended by the student's committee.

To satisfy these requirements, the candidate may be registered in any of the graduate or undergraduate courses offered by the Department.

COURSES AND SEMINARS FOR HIGHER DEGREES

All courses meet once each week.

183-602A URBAN GEOGRAPHY, PART I. A critical review of environmental and spatial preference and perception in an urban context, together with an introduction to appropriate measurement and scaling techniques.
Professor Olson

183-603B URBAN GEOGRAPHY, PART II. Allocation-location problems in the public and private sectors; urban model-building; urban politics.
Professor Massam

183-604A ECONOMIC GEOGRAPHY, PART I. A geographical study of the phenomenon of entrepreneurship; its logistical, organizational and locational characteristics; scale of operation; the different

forms of entrepreneurship in the economic geography of different levels of economic development.
Staff

183-605B ECONOMIC GEOGRAPHY, PART II. A critical review of research on manufacturing industry, with particular emphasis on (a) the analysis of industrial agglomeration, (b) manufacturing in economically disadvantaged areas, (c) some geographical aspects of the multinational corporation, and (d) innovation and technology transfer.
Staff

183-606A GEOGRAPHY AND DEVELOPMENT, PART I. A review of the spatial problems of economic development in countries of the developing world, together with an examination of processes generating spatial inequality. Ecological considerations in economic development.
Professor Hills and Staff

183-607B GEOGRAPHY AND DEVELOPMENT, PART II. An examination of development problems in rural and urban areas of the Third World, with emphasis on agrarian structures and the social geography of urbanization. Regional emphasis will vary according to the interests of members of the seminar.
Professor Hills and Staff

* **183-608A CULTURAL GEOGRAPHY, PART I.** A review of the aims and realizations of cultural ecology and its reference to research in the Third World, as well as a discussion of ethical questions that arise.
Professor Waddell

183-609B HUMAN GEOGRAPHY: SOCIAL AND BEHAVIOURAL PROBLEMS. A survey of the treatment of society, social institutions and the individual as units of analysis within geography. Explanation and cognitive description in human geography.
Staff

* **183-610B CULTURAL GEOGRAPHY, PART II.** The seminar will discuss the processes by which individuals and communities adapt to their physical, social and ideological environments over time, and on the methods and techniques for measuring and analyzing these processes.
Professor Kemp

183-611A,B ADVANCED CLIMATOLOGY. An advanced study of the principles of physical climatology and their application to the spatial variations and characteristics of energy and water balances in rural and urban environments.
Professors Garnier and Lewis

183-612A,B ADVANCED PHYSIOGRAPHY. An analysis of recent advances in geomorphology.
Professors Bird and Garson

183-613A,B ADVANCED BIOGEOGRAPHY. An examination of the history, methods and objectives of biogeography, with emphasis on plants.
Professors Holland and Zimmermann

183-614A,B SOILS AND WEATHERING. An examination of the major processes operating in soils: weathering reactions, pedogenetic processes, and soil nutrient relationships. The course will include laboratory work and a small project to illustrate the main techniques.
Professor Moore

183-615A,B HYDROLOGY AND WATER RESOURCES. An analysis of recent developments in hydrology, with emphasis on their applications to geographical problems. Snowmelt systems and the hydrological effects of basin development.
Professor Drake

183-622A,B HUMID TROPICAL ENVIRONMENTS. A geographical approach to the study of sample rain-forest and savanna landscapes of the humid tropics, with special attention to the human impact on the balance between forest and savanna.
Professor Hills

183-623A SEMINAR ON REGIONAL RESEARCH, PART I. Presentation of background, and discussion of research interests of varied nature, in a region of common interest to a group of graduate students and staff. Regions will vary according to interest; probable selections will include Québec, the Gulf of St. Lawrence and the Maritimes, the Arctic and Northlands, the Caribbean and tropical Latin America.
Professor Armstrong and Staff

183-624B SEMINAR ON REGIONAL RESEARCH, PART II. (See course 183-623A for description).
Professor Armstrong and Staff

186-631D METHODS OF GEOGRAPHICAL RESEARCH. A review of the accepted methods of research in geographical problems, in both physical and human fields. The approach will be practical, and will require thepresentation of formal research papers for criticism and discussion.
Staff

183-632A,B ADVANCED CARTOGRAPHY. A systematic examination of modern geographic-cartographic techniques for the collection, evaluation, presentation and reproduction of spatially distributed data. Practical experience in the laboratory, the photographic darkroom, field work and visits to cartographic agencies are an integral part of the course.
Professor Drummond

183-633A,B REMOTE SENSING. (Not available to students registered in Geography 183-635A,B). A review of aircraft and spacecraft remote sensing systems and their applications.
Professor Parry

183-634A,B QUANTITATIVE METHODS IN GEOGRAPHY. An examination of certain techniques in geographic research and their limitations. Emphasis is directed to the use of correlation and

regression analysis, and to multivariate extensions of these techniques.
Professor Carson

183-635A,B INTERPRETATION METHODS: AIR PHOTOS AND IMAGERY. (Not available to students registered in Geography 183-633A,B). Basic photogrammetry and interpretation procedures for aircraft and spacecraft photography and imagery.
Professor Parry

McGILL SUBARCTIC RESEARCH LABORATORY

This laboratory is at Knob Lake (Schefferville), in the heart of Labrador-Ungava. Facilities exist for research in most aspects of Physical Geography. Extensive field programs are arranged. All inquiries should be addressed to the Chairman, Geography Department.

E10 DEPARTMENT OF GEOLOGICAL SCIENCES

Frank Dawson Adams Building
3450 University Street
Montreal, PQ,
Canada H3A 2A7

STAFF

Professors – GABRIELLE DONNAY; J.A. ELSON; E.W. MOUNTJOY; V.A. SAULL; C.W. STEARN; J.S. STEVENSON
Associate Professors – R. DOIG *(Chairman);* P.R. EAKINS; R.H. GRICE; R. HESSE; W.H. MacLEAN; R.F. MARTIN; G.R. WEBBER
Assistant Professors – D. FRANCIS; A.J. HYNES
Research Associates – A. BECKER; J.D.H. DONNAY
With the assistance of – R.N. YONG and J.C. OSLER *(Civil Engineering and Applied Mechanics);* O.G. JENSEN; B.W. MacKENZIE; W.M. TELFORD and J.E. UDD *(Mining Engineering and Applied Geophysics);* B. d'ANGLEJAN *(Marine Sciences);* R.L. CARROLL *(Redpath Museum)*

Opportunities for advanced study and research in Geology, Geochemistry and Geophysics are available to qualified students. Graduate programs leading to the M.Sc., M.Sc. (Applied), and Ph.D. degrees and to a diploma are offered.

Financial assistance is available in the form of demonstratorships, research assistantships and some scholarships.

ADMISSION AND REQUIREMENTS

Candidates are to indicate their field, or fields, of interest when making formal applications for admission. Specific inquiries concerning the department should be addressed to the Supervisor of Graduate Students, Department of Geological Sciences, McGill University, 3450 University Street, Montreal P.Q., H3A 2A7.

Applications and all supporting documents should be received in the department before July 1st for admission the following September. Applicants requiring financial assistance should apply as early as possible.

Eligibility

Applicants should have an academic background equivalent to that of a McGill graduate in the honours or the major in geology program. The admissions committee may modify the requirements in keeping with the field of graduate study proposed. In some cases a qualifying year may be required.

M.Sc. Degree

The M.Sc. degree program includes (a) three courses to be chosen with the approval of the research director and departmental chairman and (b) a thesis to be submitted according to the rules of the faculty.

Ph.D. Degree

The Ph.D. degree program includes (a) an approved program of courses to be selected in consultation with the student's director of research according to the student's particular interest and training (b) Comprehensive oral examinations at the end of the Ph.D. II year (c) Research and Ph.D. thesis followed by an oral examination. There are no language requirements for the Ph.D. degree.

Diploma

a) Applicants for the diploma must fulfill the requirements for entry into the Faculty of Graduate Studies and Research of McGill University and for graduate study in the Department of Geological Sciences, as stated in the Announcement.
b) The diploma will be awarded for the successful completion of one academic year of graduate studies comprising at least 3 graduate courses to be chosen with the approval of the Department
c) Students who are awarded the diploma with high standing may be allowed to proceed to a higher degree and will be given appropriate credit towards such a degree. Students wishing to keep open the possi-

bility of entering either the M.Sc. program with thesis or the M.Sc. (Applied) program are advised to follow a program which will satisfy the first year requirements for these programs.

M.Sc. (Applied) Degree

Two options are offered in the two-year non-thesis program for the M.Sc. (Applied) degree: A – Mineral Exploration and B – Engineering Geology.

Option A – Mineral Exploration

The general aim of this two-year program is to train students to be capable of planning and carrying out effective exploration for mineral deposits, and of evaluating mineral deposits in various stages of development and production. Such students must be provided with:

1. a sound theoretical and practical background in the use of modern techniques of exploration,
2. additional information on the economic and technical considerations which distinguish ore bodies from other mineral deposits,
3. some insight into the legal and financial aspects of mineral exploration.

Applicants must have fulfilled similar requirements to those for graduation in either (a) the McGill B.Sc. Honours or Major program in Geological Sciences or its equivalent, or (b) the McGill B.Eng. program in Mining, or its equivalent. They must have taken the following courses or their equivalents:
GEOLOGY 186-344A ORE MINERALS.
GEOLOGY 186-441D MINERAL DEPOSITS.
COMPUTER SCIENCE 308-200A.

If the total number of deficiencies is too great the student may have to take a "Qualifying year".

To provide a sound background to the problems of Mineral Exploration and allow a degree of specialization the curriculum consists of:

a) 8 ½ "core" or essential courses.
b) 3 ½ optional courses approved by the director of the program.

Students are required to work in the mineral exploration industry during the summer session between their two years of residence.

Applicants who have been working in industry for one or more years after graduation should provide one reference from industry and one from a former professor. Applicants coming directly from an undergraduate program must provide the normal (2) references from former professors.

Honours Geological Sciences Graduate – First Year

GEOLOGY 186-604D PETROLOGY OF MINERAL DEPOSITS
GEOLOGY 186-606D APPLIED GEOCHEMISTRY
GEOLOGY 186-612A APPLIED STRUCTURAL GEOLOGY
GEOLOGY 186-613B REGIONAL STRUCTURAL ANALYSIS
MINING 306-423A MINING INDUSTRY ECONOMICS I
MINING 306-326B MATHEMATICAL APPLICATIONS IN THE MINING INDUSTRY
MINING 300-310A ENGINEERING ECONOMY

Mining Engineering Graduates – First-Year

Mining Engineering graduates will be accepted but in the above program will substitute courses required for the Honours Geology degree for the engineering subjects they have already had.

Common Second Year

GEOLOGY 186-535D PHOTOGEOLOGY
GEOLOGY 186-605D MINERAL EXPLORATION and MINING GEOLOGY
GEOLOGY 186-713D ADVANCED ECONOMIC GEOLOGY
MINING 306-431A and -433B ADVANCED EXPLORATION GEOPHYSICS I and II

Recommended Options

GEOLOGY 186-430B GEOLOGY OF ENERGY SOURCES
GEOLOGY 186-541B PRECAMBRIAN GEOLOGY
GEOLOGY 186-603A ENGINEERING GEOLOGY
GEOLOGY 186-609B GROUNDWATER GEOLOGY
GEOLOGY 186-710A GEOTECTONICS
GEOLOGY 186-716D ECONOMIC GEOLOGY LABORATORY
GEOLOGY 186-720D ASSIGNED READINGS AND SEMINAR
MINING 306-216B MINING ENGINEERING TECHNIQUES
MINING 306-423A MINERAL INDUSTRY ECONOMICS I
MINING 306-424B MINERAL INDUSTRY ECONOMICS II
MINING 306-341A MINERAL SEPARATION
MINING 306-420A MINING FEASIBILITY STUDIES I
MINING 306-436B ADVANCED EXPLORATION GEOPHYSICS IV
MINING 306-625D MINERAL INDUSTRY ECONOMICS

Candidates obtaining this degree with distinction may be accepted as candidates for the Ph.D. degree.

Candidates wishing to apply for Professional Engineer (P.Eng.) status must take 3 or more specified one-term courses in engineering. Some of these may be taken as electives.

Option B – Engineering Geology

The purpose of the two-year non-thesis graduate program in engineering geology is to enable geologists and engineers to develop an ability to apply knowledge of geological factors to the design, construction and maintenance of engineering structures.

During the first year of the two-year course, geology graduates and engineering graduates will

follow different programs to broaden their basic knowledge and to bring both groups to a comparable level. Programs of a minimum of five full courses will be selected by the department according to the candidate's background and interest from the courses listed below. Appropriate substitutions may be approved . In the second year, the program will consist of four prescribed courses, as set forth in the following list of courses.

Honours Geological Sciences Graduates – First Year

GEOLOGY 186-603A ENGINEERING GEOLOGY
GEOLOGY 186-609B GROUND WATER GEOLOGY
GEOLOGY 186-535D PHOTOGEOLOGY
GEOLOGY 186-706D ADVANCED SEDIMENTOLOGY
GEOLOGY 186-707D GEOMORPHOLOGY
GEOLOGY 186-714D GLACIAL AND PLEISTOCENE GEOLOGY
GEOLOGY 186-715A INSTRUMENTAL ANALYSIS
GEOLOGY 186-721D RECENT SEDIMENTS AND MARINE GEOLOGY
MATHEMATICS 189-314A and 189-315B ADVANCED CALCULUS AND DIFFERENTIAL EQUATIONS
ENGINEERING 303-312B SOIL MECHANICS
ENGINEERING 303-208B DETERMINISTIC SYSTEMS
ENGINEERING 303-653A STREAM POLLUTION AND CONTROL
COMPUTER SCIENCE 308-200A or B INTRODUCTION TO DIGITAL COMPUTERS
MINING 306-230B GEOPHYSICAL EXPLORATION
MINING 306-321B BEHAVIOUR OF ROCK STRUCTURES
MINING 306-422A APPLIED EXPLOSIVES

ENGINEERING GRADUATES – FIRST YEAR

Basic geology courses as necessary
GEOLOGY 186-603A ENGINEERING GEOLOGY
GEOLOGY 186-609B GROUND WATER GEOLOGY
ENGINEERING 303-312B SOIL MECHANICS
ENGINEERING 303-656A SYSTEMS ANALYSIS IN ENGINEERING
ENGINEERING 303-680A FUNDAMENTALS OF SOIL BEHAVIOUR
ENGINEERING 303-681B ENGINEERING ASPECTS OF SOIL BEHAVIOUR
ENGINEERING 303-682A APPLIED SOIL MECHANICS
ENGINEERING 303-683B ADVANCED FOUNDATION DESIGN
ENGINEERING 303-684A GROUND WATER AND SEEPAGE
ENGINEERING 303-685B DRAINAGE ENGINEERING
ENGINEERING 303-688A SOIL DYNAMICS
COMPUTER SCIENCE 308-200A or B INTRODUCTION TO DIGITAL COMPUTING
MINING 306-620A ROCK MECHANICS I
MINING 306-621 ROCK MECHANICS II
MINING 306-623D GROUND CONTROL AND FRAGMENTATION
MINING 306-331A ADVANCED EXPLORATION GEOPHYSICS I
MINING 306-433B ADVANCED EXPLORATION GEOPHYSICS II

SUMMER VACATION PROJECT

All candidates will work for at least two months on an approved engineering geology project. A report of this work will be required as part of the Geology 186-722D course in the second year program.

Common Second Year

GEOLOGY 186-722D ADVANCED ENGINEERING GEOLOGY
ENGINEERING 303-417A FOUNDATIONS
GEOLOGY 186-720D ASSIGNED READINGS AND SEMINAR or THREE SEMESTERS OF SOIL AND ROCK MECHANICS or OTHER APPROVED COURSES

GRADUATE COURSES

186-501B CRYSTAL CHEMISTRY. 2 hours lectures, 1 hour seminar; Prerequisite: Permission of the instructor). Discussion of crystal structures of important mineral groups, especially oxides, sulphides and silicates. Solid solution. Relation of structure to morphology and to chemical and physical properties of crystalline matter.
Professor Donnay

186-502B CRYSTAL-STRUCTURE ANALYSIS. (2 lectures). Elements of crystallography and diffraction physics basic to structure determination. Choice of crystal; principles underlying photographic and counter methods of collecting intensity data. Data reduction. F^2synthesis. The phase problem. Trial and error methods, heavy-atom techniques, direct methods. Electron density calculation. Refinement of structure.
Professor Donnay

186-503D CRYSTAL-STRUCTURE DETERMINATION. (6 hours laboratory; Prerequisite 186-211A, or 502B). Techniques of structure determination applied to a research problem.
Professor Donnay

186-504B CRYSTAL SYMMETRY. (2 lectures). Derivation of the 32 crystallographic point groups (the geometric crystal classes), 14 translation groups (the Bravais lattices), 73 arithmetic crystal classes (isomorphic with symmorphic space groups) and 230 space groups. Atomic site symmetry vs crystal-structure symmetry. Effect of solid solutions on crystal symmetry. Symmetry information to be gained from X-ray diffraction; powder diagrams vs single-crystal patterns.

UNIVERSITY LIBRARY

Generalized symmetry applied to twinning and magnetic structures.
Professor Donnay

186-534D ADVANCED INVERTEBRATE PALEONTOLOGY. (2 hours lectures, 1 hour seminar). Bias of fossil record; relationship of the phyla; taxonomy, classification, paleoecology, functional morphology and evolution of fossil invertebrates.
Professor Stearn

186-535D PHOTOGEOLOGY. (2 lectures, 2 hours laboratory). The interpretation of rock lithology and structure and surface deposits from air photographs, elementary photogrammetry.
Professor Elson

186-540A PHANEROZOIC GEOLOGY OF NORTH AMERICA. Systematic consideration of the geology of the Cordilleran, Appalachian, and Arctic provinces of North America with emphasis on structure, stratigraphy, crustal evolution and resources.
Professor Mountjoy and Staff

186-541B PRECAMBRIAN GEOLOGY. (3 lectures). A systematic outline of the geology of the Canadian Shield, with additional emphasis on its tectonic evolution and the distribution of ore deposits.
Professors Doig, Hynes, MacLean, Mountjoy

186-602D GEOLOGICAL COLLOQUIUM. (2 hours lectures or seminar and assignments). Introduction to graduate work in the geological sciences. The general course divisions are philosophy and history of the geological sciences, contemporary geological research, and socio-political relations of the earth sciences.
Professor Saull

186-603A ENGINEERING GEOLOGY. (2 hours , lecture, 2 hours laboratory). Introduction to the application of geology in Civil Engineering.
Professor Grice

186-604D PETROLOGY OF MINERAL DEPOSITS. (2 hours lectures or seminar, 3 hours laboratory). Petrographic study of fresh and altered rocks associated with ore-deposits and discussion of processes involved in their formation.

186-605D MINERAL EXPLORATION AND MINING GEOLOGY. (2 hours lectures, 2 hours laboratory and assigned problems). Methods of searching for mineral deposits; modern exploration programs; development of mineral deposits; evaluation of mineral deposits.
Professor Eakins

186-606D APPLIED GEOCHEMISTRY. (2 hours seminar and three hours laboratory). Principles governing the distribution of elements, particularly in the secondary stage of the geochemical cycle; the use of geochemistry in mineral exploration. Individual projects in applied geochemistry.
Professor Webber

186-609B GROUND WATER GEOLOGY. (2 hours lectures or seminar; 2 hours laboratory). Introduction to the geological aspects of ground water occurrence and chemistry and to elementary ground water flow and well problems.
Professor Grice

186-610D PROBLEMS IN GEOLOGICAL SCIENCES. (2 hours lectures). Recent advances in the fields of geological time and the stratigraphic record, materials and processes of the crust, global tectonics and planetary geology, environmental geology and resources.
Professor Francis and Staff

186-612A APPLIED STRUCTURAL GEOLOGY. (2 hours lectures or seminar and 3 hours lab. or problems).
Professor Eakins

186-613B REGIONAL STRUCTURAL ANALYSIS (2 hours lectures, 2 hours laboratory). Interpretation of structural measurements in complexly deformed rocks. Regional geometric, kinematic and tectonic analysis.
Professor Hynes

186-700D PRELIMINARY DOCTORAL EXAMINATION.

186-703D ADVANCED MINERALOGY. (4 hours lectures or seminar and laboratory). Discussion of the chemical and optical variations, and current classifications within the more important mineral groups. The laboratory gives practice in the precise microscopic identification of individual members of these groups using oil immersion and universal stage techniques.
Professor Francis

186-704D GEOCHEMISTRY. (2 hours lectures or seminar and assignments). Current problems in geochemistry and cosmochemistry.
Professors Francis, Saull and Webber

* **186-705D PETROLOGY.** (2 hours lectures or seminar). Selected topics on recent theoretical and experimental work in igneous and metamorphic petrology.
Professors Francis and Martin

186-706D ADVANCED SEDIMENTOLOGY. (2 hours lectures or seminar and 3 hours laboratory). Classical and recent papers on sedimentary rocks, processes and environments of transport, deposition and lithification, sedimentary mineral deposits. Basin evolution. Methods of study of sedimentary rocks and statistics.
Professors Hesse and Mountjoy

186-707D GEOMORPHOLOGY. (2 hours lectures or seminar, and problems). Geological interpretation of topography, surficial processes and deposits.
Professor Elson

* **186-708D ADVANCED STRATIGRAPHY.** (2 hours lectures or seminar, laboratory work). Problems of the stratigraphy of North America. The geological evolution of the continent as it is recorded in the Paleozoic, Mesozoic, and Cenozoic sedimentary rocks.
Professor Stearn

186-709D GEOLOGY OF PETROLEUM. (2 hours lectures or seminar). Theories of hydrocarbon and petroleum origin; migration of petroleum; character of the reservoir and condition of fluids and gases in it. Structural traps, stratigraphic traps. A brief survey of the petroleum resources of the world. Classical and recent papers on petroleum geology are discussed.
Professor Mountjoy

186-710A GEOTECTONICS (2 hours lectures or seminars). The plate tectonic theory. Plate tectonics and orogenesis. Plate tectonics in the geologic past. Problems of tectonic evolution in Precambrian time.
Professor Hynes.

186-711D MINERALOGY OF CRYSTALLINE ROCKS. (2 hours lectures or seminar). A survey of the mineralogy of igneous and metamorphic rocks.
Professor Martin

186-712D X-RAY CRYSTALLOGRAPHY. (6 hours laboratory; Prerequisite: Geology 186-211A). Techniques of x-ray diffraction applied to a crystallographic research problem.
Professor Donnay

186-713D ADVANCED ECONOMIC GEOLOGY. (4 hours lectures or seminar and assigned problems). Ore genesis; physical-chemical aspects of mineral deposits; classic examples and world distribution of mineral resources.
Professor MacLean

* **186-714D GLACIAL AND PLEISTOCENE GEOLOGY.** (2 hours lectures or seminar). Glacial geology and the effects of glacial climates in peripheral areas; stratigraphy and chronology of the Quaternary Era.
Professor Elson

186-715A INSTRUMENTAL ANALYSIS. (1 hour lecture, 3 hours laboratory) Application of instrumental methods of analysis to materials of geological interest. Electron microprobe, optical spectography, x-ray spectrometry, x-ray diffraction, atomic absorption.
Professor Webber and Staff

* **186-716D ECONOMIC GEOLOGY LABORATORY.** (3 hours laboratory per week). Study of suites of ores and rocks from important mining districts. Specific projects may be undertaken.
Professor MacLean

* **186-717D ADVANCED EARTH PHYSICS.** (3 hours lectures or seminar and assignments). Discussion of selected topics in earth physics.
Professors Saull and Telford

* **186-718A STRUCTURAL ANALYSIS OF DEFORMED ROCKS** (2 hours lectures or seminars). Modern topics in structural geology: fold mechanisms, measurement of strain, petrofabric analysis, development of cleavage, mechanisms of flow.
Professor Hynes

186-719D ISOTOPE GEOLOGY. (2 hours lectures or seminar). The nature of isotopes; mass spectrometry; geochronology; significance of certain isotope ratios in minerals and rocks.
Professor Doig

186-720D ASSIGNED READINGS AND SEMINAR. Field of study and director to be specified.

186-721D RECENT SEDIMENTS AND MARINE GEOLOGY. (Also Marine Sciences 395-721D). (2 hours seminar, lectures and assignments). Emphasizes recent research concerning sediments, sedimentary processes, and structure of continental margins, ocean basins and mid-ocean ridges. Sediment diagenesis. Chemistry of seawater and sediments. Evolution of ocean basins; sea-floor spreading and plate tectonics.
Professors d'Anglejan, Hesse and Mountjoy

186-722D ADVANCED ENGINEERING GEOLOGY. (2 hours seminar, 2 hours laboratory or assignments). Application of knowledge of geological materials and processes in the investigation, design, construction and maintenance of foundations and other engineering projects.
Professor Grice

Assistant Professors – D.C. MACLELLAN; F. SANDER *(Director, Bellairs Research Institute)*
Associate Members – M.E. GOLDSTEIN *(Biology)* R. HESSE *(Geology);* ROGER KNOWLES *(Microbiology);* R.A. MACLEOD *(Microbiology);* E. W. MOUNTJOY *(Geology);* SVENN ORVIG *(Meteorology);* H.M. REISWIG *(Redpath Museum);* S.B. SAVAGE *(Civil Eng.)*

Graduate students will take such courses, including courses in other departments, as are considered

McGILL UNIVERSITY LIBRARY

necessary for their training and for the development of the particular fields of specialization. All students are expected to take course 177-442D (for this course, see Section B), 395-660D and 198-309A. Primary emphasis for both the M.Sc. and Ph.D. degrees is placed upon research and thesis presentation. The comprehensive examination for the Ph.D. candidates usually takes place at the end of the second year of study. It covers the whole field of marine science but allows for the specialized interests and training of each student, in Botany, Zoology, Microbiology, Physics or Geology.

Students are accepted on the basis of a 3.0 Cumulative Grade Point Average in an appropriate subject, or high standing in general science; a qualifying year in addition to the minimum degree requirement may be necessary, at the discretion of the Chairman or Vice-Chairman.

The Marine Sciences Centre is inter-departmental in scope, emphasizing the essential inter-disciplinary nature of the science of Oceanography. Excellent laboratory and library facilities are available for research, and opportunities for field work exist in the Arctic, the estuary of the St. Lawrence river, the Gulf of St. Lawrence, the Canadian Eastern Seaboard, and at the Bellairs Research Institute at Barbados. The special research interests of the Centre include the physics of sea ice, the energy exchange between the atmosphere and hydrosphere, marine climatology, the dynamics of estuaries, marine bacteria, growth and life cycles of marine organisms, marine productivity, marine biogeography and sedimentation.

Courses in the Physical Sciences are listed here; the whole list of courses offered (biological as well as physical) can be found in Section "B" of the *Announcement*.

COURSES FOR HIGHER DEGREES

Advanced Undergraduate Courses

198-309A DESCRIPTIVE OCEANOGRAPHY. (3 hours). Major physical and chemical properties of sea water; methods of measurements, space and time distribution. The geostrophic approximation and the dynamic method. General features of the oceanic circulation.
Professor d'Anglejan

198-319B INTRODUCTION TO DYNAMICAL OCEANOGRAPHY. (3 hours). Equations of motion. Geostrophy. Boundary layers. Horizontal wind-driven circulation. Waves and tides.
Professor Ingram

Graduate Courses

395-660D SEMINAR IN GENERAL OCEANOGRAPHY. (2 hours). An advanced seminar course on research in salt water environments, with emphasis on contemporary work. Discussion of the original literature, recent advances and basic theory.
Staff

* **395-692A ESTUARIES.** (3 hours). Classification of estuaries; mixing processes in stratified fluids; salt balance; dynamic balance; flushing; circulation theories; application to the distribution of other water properties, such as nutrients, suspended matter and pollutants; measurement techniques.
Professor Ingram

395-696A SEMINAR COURSE IN PHYSICAL OCEANOGRAPHY. (2 hours). Theoretical aspects of oceanic, estuarine and near-shore dynamics.
Professor Ingram

395-698B TOPICS IN OCEANOGRAPHY. (3 hours). Interdisciplinary studies of selected topics, including: waves and tides, estuaries, short and long term cycles, factors controlling the vertical distribution of organisms, particulate matter and sedimentation.

NOTE: A brochure "Information for Graduate Students in Mathematics" supplements the information contained in this Announcement and should be obtained from the Department.

REQUIREMENTS

Master's Degrees

The Department of Mathematics offers three distinct programs of study leading to the Master's degree. The requirements, in general, consist of a minimum of three courses and a thesis, although in certain cases four courses may be required. The requisite courses for the general program are 189-571D, 189-572D and 189-583A. In some instances 189-372D may be substituted for 189-572D. This program is recommended for students who intend to continue for the Ph.D. degree and are working in pure mathematics. Students who are working in applied mathematics, or probability and mathematical statistics, will generally be advised to enrol in courses other than 189-571D and 189-583A; all students in probability and statistics need to have 189-556D (or equivalent). There are two applied programs designed for students intending to pursue a career in industry and business after obtaining the Master's degree. In the Applied Mathematics program, students are required to pass three (in some instances four) full courses in mathematics. The requirements in the Applied Statistics program are normally four full courses, at least three of which (including 189-556D) must be taken in the Department of Mathematics. Courses are chosen after consultation with members of staff. All three programs require participation in assigned seminars and submission of a thesis. The thesis need not be an original contribution to knowledge, but may be of an expository nature.

Ph.D. Degree

To complete a Ph.D. program the student must: (a) pass six approved courses beyond the Bachelor's level; (b) pass a Comprehensive Examination consisting of a written Part A, which is concerned with his/her general mathematical background, and an oral Part B concerned with his/her specialities; (c) demonstrate facility in reading mathematical articles in English and French as well as one further language (e.g. German or Russian); (d) submit a thesis judged to be an original contribution to knowledge.

Courses

This Announcement is prepared early in the calendar year and will be modified by the time the academic year begins. An updated supplement is available at the Department Office and should be consulted. These changes will be important to a sensible choice of program.

NOTE: WITH THE CONSENT OF THE INSTRUCTOR, PREREQUISITES AND COREQUISITES FOR COURSES MAY BE WAIVED IN INDIVIDUAL CASES.

189-461D COMBINATORIAL MATHEMATICS. (6 credits; Prerequisites: 189-242A or equivalent and 189-246A,B or equivalent. This course is given in alternate years). After a study of fundamentals (partitions and compositions, principle of inclusion and exclusion, etc.) students will be introduced to combinatorial aspects of several fields (graph theory, designs, set theory, group theory, geometry, number theory, etc.) from classical up to and including current research.

189-489A MATHEMATICAL LOGIC. (3 credits). Propositional calculus and first order predicate calculus; completeness, compactness and normal form theorems; theorems of Harbrand, Craig, Beth and Gentzen.

189-490B MATHEMATICAL LOGIC. (3 credits). In alternate years either (1) an introduction to recursion theory, undecidability theorems of Godel and Church, recusively enumerable sets, degrees; or (2) an introduction to model theory, ultraproducts, saturated models, elimination of quantities, decidability.

* **189-551A COMPLEX ANALYSIS I.** (3 credits). Maximum modulus theorem. Rouche's theorem, Weierstrass and Vitali's theorem on convergence of holomorphic functions. Normal families. Conformal mapping, harmonic functions. Entire and meromorphic functions.

* **189-552B COMPLEX ANALYSIS II.** (3 credits). Selected topics from the theory of a complex variable.

189-555A FLUID DYNAMICS. (3 credits). Kinematics. Dynamics of general fluids. Inviscid fluids, Navier-Stokes equations. Exact solutions of Navier-Stokes equations.

189-556D MATHEMATICAL STATISTICS. (6 credits; Prerequisite: 189-357B or equivalent). Probability and distribution theory including discussion of some basic distributions in p-space. Regression and correlation theory. Laws of large numbers and central limit theorem. Sampling theory (including largesample theory). Likelihood functions and information matrices. Hypothesis testing, estimation theory and decision theory. Distribution free procedures.

189-571D HIGHER ALGEBRA. (6 credits; Prerequisite: 189-371D or equivalent). The rudiments of category theory, including adjoint functors; noetherian, artinian and semi-simple rings, represenations of finite groups; a continuation of cummutative algebra, prime ideals, localization and completion; some algebraic number theory and a deeper study of field extensions.

UNIVERSITY LIBRARY

189-572D REAL AND COMPLEX ANALYSIS. (8 credits; Prerequisites: 189-250A,B; -251A,B, 372D). The theory of measure and integration, basic Hilbert and Banach space theory, complex analysis from a modern viewpoint.

* **189-574A ORDINARY DIFFERENTIAL EQUATIONS.** (3 credits; Prerequisite: 189-374D). Review of existence and uniqueness theorems, linear systems, phase space and phase flows, stability theory. Additional topics selected from: periodic systems, Floquet theory, Poincare-Bendixon theorem, perturbation methods, bifurcation theory, strange attractors, boundary-value systems, applications.

* **189-575B PARTIAL DIFFERENTIAL EQUATIONS.** (3 credits; Prerequisite: 189-374D). A continuation of topics introduced in 189-374D.

* **189-578A NUMERICAL ANALYSIS.** (3 credits; Prerequisite: 189-372D. This course is given in alternate years.) Basic error analysis; numerical solutions of non-linear equations by fixed point methods, interpolation, numerical integration and numerical solutions of ordinary differential equations.

189-579B NUMERICAL ANALYSIS. (3 credits; Prerequisites: 189-250A,B -251A,B. This course is given in alternate years). Basic linear algebra, spectral radius, vector and matrix norms. Numerical linear algebra, solution of linear systems by direct and iterative methods, least squares solutions, computation of eigenvalues and eigenvectors, ill-conditioned systems. Solution of non-linear systems of equations, Banach's fixed point theorem. Polynomial approximation, least-squares and uniform approximation. Boundary-value problems for different equations.

* **189-581D DIFFERENTIAL GEOMETRY.** (6 credits; Prerequisite: 189-380D). The geometry of differential manifolds.

189-583A TOPOLOGICAL SPACES. (3 credits). Bases, connectedness, convergence, product and quotient spaces, metrization, compactness, function spaces.

* **189-585 INTEGRAL EQUATIONS AND TRANSFORMS.** (3 credits). Introduction to the theory of Hilbert spaces. Fredholm and Volterra integral equations; exact and approximate solutions. Equations with Hermitian kernels. Hilbert-Schmidt theorem and consequences. Representation formulas for the solutions of initial and boundary value problems. Green's functions. Integral Transforms. Applications.

189-586B ADVANCED BOUNDARY AND INITIAL VALUE PROBLEMS. (3 credits; Prerequisites: 189-316B, 374D, or equivalent). Partial differential equations of applied mathematics. Dirichlet and Newmann problems; complex variable methods. Homogeneous and non-homogeneous problems; Green's functions, integral transform methods, variational techniques. Pertubation theory. Applications.

189-587D ADVANCED PROBABILITY THEORY. (6 credits; Prerequisite: 189-356A or equivalent). Distribution functions on R'. Basic measure and integration theory, with special reference to probability measures on (R'. B') and their correspondence with distribution functions. Random variables. Expectation, including basic inequalities. Independence. Conditional probability. Convergence concepts, laws of large numbers. Characteristic functions. Central limit theorem and its ramifications. Random walks.

189-588D ALGEBRAIC TOPOLOGY. (6 credits). Introduction to homology and homotopy.

* **189-602A,B ANALYTIC NUMBER THEORY I.** Arithmetical functions, elementary theory of the distribution of primes. Proof of the prime number theorem, Dirichlet's theorem on number of primes in arithmetic progression. Asymptotic and convergent formulas for the partitions of n. (A student will normally enrol in both 189-602 and 189-702. The course description is common).

* **189-603A,B LIE GROUPS AND LIE ALGEBRAS I.** Representation of linear groups and their Lie algebras. Commutative, nilpotent and solvable ideals of Lie algebras. Classification of classical simple Lie groups by means of Cartan's sub-algebras. Weights of irreducible representation and structure of semi-simple Lie algebras. (A student will normally enrol in both 189-603 and 189-703. The course description is common).

* **189-611A,B ALGEBRAIC NUMBERS I.** Integral closure. Dedekind domains. Valuations, completions and local fields. Ramification and the different. The discriminant. The groups of units and ideal classes. Adeles and ideles. (A student will normally enrol in both 189-611 and 189-711. The course description is common).

* **189-612A,B ALGEBRAIC CURVES I.** A concrete introduction to algebraic geometry. Topics may vary from year to year and will include: plane algebraic curves, function fields in one variable, linear series and the theory of Riemann-Roch, elliptic curves. (A student will normally enrol in both 189-612 and 189-712. The course description is common).

189-614A THEORY OF RINGS I. Rings and modules. Prime and maximal ideals. Radicals. Semi-simple Artinian rings, semiperfect rings, semiprime Noetheian rings. Projective, injective and flat modules. Morita theory. Rings of quotients, localization and completion. Grouprings. (A student will normally enrol in both 189-614 and 189-714. The course description is common).

* **189-615A,B COMMUTATIVE ALGEBRA I.** Localization and completion. Primary decomposition. Dimension theory. Homological theory of Noetherian rings. Regular sequences Kähler differentials.

Unramified, smooth and étale extensions. The spectrum of a commutative ring and other applications to algebraic geometry. (Normally, a student will enrol in both 189-615 and 189-715. The course description is common).

189-616B HOMOLOGICAL ALGEBRA I. Modules. Diagrams. Free, injective, projective and flat modules. Tensor product and Hom. Derived functors. Dimension theory. Local rings. Cohomology of groups. (A student will normally enrol in both 189-616 and 189-716. The course description is common).

* **189-617A,B CATEGORIES I.** Categories, functors, natural transformations. Adjoint functors and limits. Embeddings and completions. Algebraic categories and standard constructions. Abelian and homological categories. Categories and the foundations of mathematics. (A student will normally enrol in both 189-617 and 189-717. The course description is common).

* **189-618A,B ADVANCED GROUP THEORY I.** The structure of groups. Special classes of groups. Representation theory. Additional topics to suit the class. (A student will normally enrol in both 189-618 and 189-718. The course description is common).

* **189-619A,B APPLIED CATEGORY THEORY I.** Review of adjoint functors, triples and their algebras. Localization with applications to modules, topological spaces and sheaves. Duality theory with applications to Morita theory and the duality theorems of Pontrjagin, Stone, Gelfand and Kaplansky. Categories and deductive systems. Introduction to toposes. Applications to computer science and linguistics. (A student normally will enrol in both 189-619 and 189-719. The course description is common).

* **189-631A,B COMPLEX FUNCTION THEORY I.** (Prerequisite 189-572D or equivalent). Advanced topics in one complex variable, and some topics in several complex variables.

189-633A HARMONIC ANALYSIS I. (Prerequisites 189-372D or preferably 189-572D). Classical harmonic analysis on the circle (Fourier series) and on the line (Fourier integrals). A brief introduction to harmonic analysis on locally compact groups.

189-635A FUNCTIONAL ANALYSIS I. (Prerequisite 189-572D). Banach spaces. Hilbert spaces and linear operators on these. Spectral theory. Banach algebras. A brief introduction to locally convex spaces. (A student will normally enrol in both 189-635 and 189-735. The course description is common).

* **189-637A,B PARTIAL DIFFERENTIAL EQUATIONS I.** A modern introduction to the theory of linear differential equations, using the theory of distribution and Fourier transforms.

* **189-639A,B INTRODUCTION TO POTENTIAL THEORY.** Classical potential theory. Dirichiet problem. Harmonic and superharmonic functions. Introduction to modern axiomatic potential theory.

180-651A ASYMPTOTIC EXPANSION AND PERTURBATION METHODS. Asymptotic series. Summation. Asymptotic estimation of integrals. Regular and singular perturbation problems and asymptotic solution of differential equations.

* **189-653A,BADVANCED TOPICS IN FLUID DYNAMICS I.** Topics selected from linear and nonlinear stability theory and waves, rotating flows, geophysical fluid dynamics, linearization and perturbation methods applied to the nonlinear partial differential equations of fluid mechanics.

* **189-654A,B ADVANCED TOPICS IN FLUID DYNAMICS II.** Topics selected from linear and nonlinear stability theory and waves, rotating flows, geophysical fluid dynamics, linearization and perturbation methods applied to the nonlinear partial differential equations of fluid mechanics.

* **189-655A,B TOPICS IN DIFFERENTIAL EQUATIONS I.** Specialized topics in ordinary and partial differential equations such as stability, bifurcation, qualitative theory of non-linear systems, boundary value problems, advanced solution techniques.

* **189-656A,B TOPICS IN DIFFERENTIAL EQUATIONS II.** Specialized topics in ordinary and partial differential equations such as stability, bifurcation, qualitative theory of nonlinear systems, boundary value problems, advanced solution techniques.

* **189-657A,B ADVANCED NUMERICAL ANALYSIS I.** Specialized topics in numerical analysis such as the solution of ordinary and partial differential equations, advanced computational linear algebra, numerical optimization, approximation theory.

* **189-658A,B ADVANCED NUMERICAL ANALYSIS II.** Specialized topics in numerical analysis such as the solution of ordinary and partial differential equations, advanced computational linear algegra, numerical optimization, approximation theory.

* **189-659A,B OPTIMIZATION I.** This course together with 189-660, 189-661, 189-662 will cover basic areas in optimization such as linear and nonlinear programming, dynamic programming, the calculus of variations and optimal control theory, optimization in abstract spaces.

* **189-660A,B OPTIMIZATION II.** This course together with 189-659, 189-661, 189-662 will cover basic areas in optimization such as linear and nonlinear programming, dynamic programming, the calculus of cariations and optimal control theory, optimization in abstract spaces.

* **189-661A,B OPTIMIZATION III.** This course together with 189-659, 189-660, 189-662 will cover

WATERLOO UNIVERSITY LIBRARY

basic areas in optimization such as linear and nonlinear programming, dynamic programming, the calculus of variations and optimal control theory, optimization in abstract spaces.

* **189-662A,B OPTIMIZATION IV.** This course together with 189-659, 189-660, 189-661 will cover basic areas in optimization such as linear and nonlinear programming, dynamic programming, the calculus of variations and optimal control theory, optimization in abstract spaces.

* **189-670A,B STOCHASTIC PROCESSES.** Basic concepts. Stationary and nonstationary processes. Correlation function. Power spectra. Linear systems. Mean square periodcity and Fourier series. Sampling theorems. Series expansions. Linear mean square estimation.

189-671A,B APPLICATIONS OF STOCHASTIC PROCESSES. Discrete parameter Markov chains, including branching processes and random walks. Limit theorems and ergodic properties of Markov chains. Continuous parameter Markov chains, including the general birth and death process. Selected topics from the following areas: renewal processes, queueing theory, Brownian motion, storage and inventory, statistical inference for stochastic processes.

* **189-672A,B ESTIMATION.** The theory of point and set estimation of parameters in statistical models. This includes Bayesian and decision-theoretic approaches.

* **189-673A,B TESTS OF HYPOTHESES I.** A systematic study of the modern theory of testing statistical hypotheses, with applications.

189-674A,B EXPERIMENTAL DESIGN I. Optimal regression designs. Optimal N-observation designs. Algorithms for generating optimal designs. Latin squares and orthogonal arrays. Balanced incomplete block designs, association schemes. Factorial and fractional factorial designs. Confounding aliasing construction of designs.

* **189-675A,B NONPARAMETRIC STATISTICS I.** Theoretical aspects of order statistics: distributions, moments, product moments. Tests based on the sample distribution function. Statistics of the Kolmogorov-Smirnov type. Applied aspects of various nonparametric tests: description, illustration, theoretical justification, comparisons.

* **189-676A,B MULTIVARIATE ANALYSIS I.** Properties of the multivariate normal distribution. Central and noncentral Wishart distribution. Statistical inference for multivariate normal populations. Hotelling's T!!?. The product-moment correlation coefficient. Canonical correlations. Multivariate linear models. Principal components. Factor analysis.

* **189-677A,B DECISION THEORY I.** Formulation of the statistical decision problem. Bayes and minimax solutions. Hypothesis testing and estimation from the point of view of decision theory. Sequential analysis.

189-678A,B ADVANCED STATISTICAL METHODS AND DATA ANALYSIS I. Statistical data analysis, with special reference to applications of the main statistical methods to problems in medicine, biology, chemistry, etc. Extensive use of computer methods, especially subroutine packages for statistical data description, display and analysis.

189-679A,B APPLIED STATISTICAL METHODS AND DATA ANALYSIS II. Same emphasis as 189-678 but with a different selection of statistical methods.

189-681A,B TIME SERIES ANALYSIS. Stationary stochastic processes. Autocovariance and autocovariance generating functions. The periodogram. Model estimation. Likelihood function. Estimation for autoregressive moving average and mixed processes. Computer simulation; diagnostic checking, tests with residuals. Estimation of spectral density; Bartlett, Daniell, Blackman-Tukey spectral windows. Asymptotic moments of spectral estimates.

* **189-682A,B MATRIX THEORY WITH STATISTICAL AND OTHER APPLICATIONS:** Inequalities for trace and rank. Generalized inverses; idempotent matrices. Schur complement. Factorizations into triangular and diagonal form; singular values. Normal matrices. Algebraic and geometric multiplicity. Computational procedures; Householder transformations, condition number. Applications to least squares. Courant-Fischer min-max theorem; related inequalities. Quadratic forms in normal variables: distribution, Characteristic function, cumulants and independence.

189-683A,B LINEAR MODELS. General univariate linear models with full rank and with less than full rank. Best linear unbiased estimators. General linear hypothesis. Computational procedures. Weighted least squares. Analysis of variance with equal and unequal numbers in cells. Latin squares, complete factorial designs. Prediction and confidence bands, multiple comparisons. Random effects models.

189-684A,B ADVANCED SAMPLING TECHNIQUES. Sampling and subsampling of clusters (one-stage, two-stage, and multi-stage). Unequal probability sampling with and without replacement. Double-sampling procedures. Repetitive surveys. Non-sampling errors (analytical and practical treatment). Analytical surveys. Optimization problems in sampling. Topics on the foundations of sample surveys. Other recent development.

* **189-687A READING COURSE IN MATHEMATICAL LOGIC I.** A highly specialized study.

* **189-688B READING COURSE IN MATHEMATICAL LOGIC II.** A highly specialized study.

* **189-689A READING COURSE IN ALGEBRA I.** A highly specialized study.

* **189-690B READING COURSE IN ALGEBRA II.** A highly specialized study.

McGILL UNIVERSITY LIBRARY

* **189-691A READING COURSE IN GEOMETRY AND TOPOLOGY I.** A highly specialized study.

* **189-692B READING COURSE IN GEOMETRY AND TOPOLOGY II.** A highly specialized study

* **189-693A READING COURSE IN ANALYSIS I.** A highly specialized study.

* **189-694B READING COURSE IN ANALYSIS II.** A highly specialized study.

* **189-695A READING COURSE IN APPLIED MATHEMATICS I.** A highly specialized study.

* **189-697A READING COURSE IN STATISTICS AND PROBABILITY I.** A highly specialized study.

* **189-698B READING COURSE IN STATISTICS AND PROBABILITY II.** A highly specialized study.

189-700D COMPREHENSIVE EXAMINATION: PART A. – WRITTEN

189-701D COMPREHENSIVE EXAMINATION: PART B. – ORAL

* **189-702A,B ANALYTIC NUMBER THEORY II.** Arithmetical functions, elementary theory of the distribution of primes. Proof of the prime number theorem, Dirichlet's theorem of number of primes in arithmetic progression. Asymptotic and convergent formulas for the partitions of n. (A student will normally enrol in both 189-602 and 189-702. The course description is common).

* **189-703A,B LIE GROUPS AND LIE ALGEBRAS II.** Representation of linear groups and their Lie algebras. Commutative, nilpotent and solvable ideals of Lie algegras. Classification of classical simple Lie groups by means of Cartan's sub-algebras. Weights of irreducible representation and structure of semi-simple Lie algebras. (A student will normally enrol in both 189-603 and 189-703. The course description is common).

* **189-704A,B TOPICS IN MATHEMATICAL LOGIC I.**

* **189-705A,B TOPICS IN MATHEMATICAL LOGIC II.**

189-706A,B TOPICS IN GEOMETRY AND TOPOLOGY I.

* **189-707A,B TOPICS IN GEOMETRY AND TOPOLOGY II.**

* **189-708A,B TOPICS IN GEOMETRY AND TOPOLOGY III.**

* **189-709A,B TOPICS IN GEOMETRY AND TOPOLOGY IV.**

* **189-711A,B ALGEBRAIC NUMBERS II.** Integral closure. Dedekind domains. Valuations, completions and local fields. Ramification and the different. The discriminant. The groups of units and ideal classes. Adeles and ideles. (A student will normally enrol in both 189-611 and 189-711. The course description is common).

* **189-712A,B ALGEBRAIC CURVES II.** A concrete introduction to algebraic geometry. Topics may vary from year to year and will include: plane algebraic curves, function fields in one variable, linear series and the theory of Riemann-Roch, elliptic curves. (A student will normally enrol in both 189-612 and 189-712. The course description is common).

* **189-714A,B THEORY OF RINGS II.** Rings and modules. Prime and maximal ideals. Radicals. Semisimple Artinian rings, semiperfect rings, semiprime Noetherian rings. Projective, injective and flat modules. Morita theory. Rings of quotients, localization and completion. Groupings. (A student will normally enrol in both 189-614 and 189-714. The course description is common).

* **189-715A,B COMMUTATIVE ALGEBRA II.** Localization and completion. Primary decomposition. Dimension theory. Homological theory of Noetherian rings. Regular sequences. Kähler differentials. Unramified, smooth and étale extensions. The spectrum of a commutative ring and other applications to algebraic geometry. (Normally, a student will enrol in both 189-615 and 189-715. The course description is common).

* **189-716A,B HOMOLOGICAL ALGEBRA II.** Modules. Diagrams. Free, injective, projective and flat modules. Tensor product and Hom. Derived functors. Dimension theory. Local rings. Cohomology of groups. (A student will normally enrol in both 189-616 and 189-716. The course description is common).

* **189-717A,B CATEGORIES II.** Categories, functors, natural transformations. Adjoint functors and limits. Embeddings and completions. Algebraic categories and standard constructions. Abelian and homological categories. Categories and the foundations of mathematics. (A student will normally enrol in both 189-617 and 189-717. The course description is common).

* **189-718A,B ADVANCED GROUP THEORY II.** The structure of groups. Special classes of groups. Representation theory. Additional topics to suit the class. (A student will normally enrol in both 189-618 and 189-718. The course description is common).

* **189-719A,B APPLIED CATEGORY THEORY II.** Review of adjoint functors, triples and their algebras. Localization with applications to modules. Topological spaces and sheaves. Duality theory with applications to Morita theory and the duality theorems of Pontrjagin, Stone, Gelfand and Kaplansky. Categories and deductive systems. Introduction to toposes. Applications to computer science and linguistics. (A student normally will enrol in 189-619 and 189-719. The course description is common).

* **189-720A,B TOPICS IN ALGEBRA I.** This course covers an advanced topic in some branch of algebra.

* **189-721A,B TOPICS IN ALGEBRA II.** This course covers an advanced topic in some branch of algebra.

* **189-722A,B TOPICS IN ALGEBRA III.** This course covers an advanced topic in some branch of algebra.

* **189-723A,B TOPICS IN ALGEBRA IV.** This course covers an advanced topic in some branch of algebra.

* **189-724A,B TOPICS IN ALGEBRA V.** This course covers an advanced topic in some branch of algebra.

* **189-725A,B TOPICS IN ALGEBRA VI.** This course covers an advanced topic in some branch of algebra.

* **189-731B COMPLEX FUNCTION THEORY II.** (Prerequisite 189-631.) Topics in the theory of functions of several complex variables.

189-733B HARMONIC ANALYSIS II. (Prerequisites 189-633, 189-635 and 189-735.) The contents of this course will consist of further topics in classical harmonic analysis and a more detailed study of abstract harmonic analysis on locally compact groups.

189-735B FUNCTIONAL ANALYSIS II. (Prerequisites 189-572D 189-635.) Banach spaces. Hilbert spaces and linear operators on these. Spectral theory. Banach algebras. A brief introduction to locally convex spaces. (A student will normally enrol in both 189-635 and 189-735. The course description is common).

* **189-737A,B PARTIAL DIFFERENTIAL EQUATIONS II.** (Prerequisite 189-637). A continuation of the theory covered in 189-637.

* **189-738A,B STUDENT SEMINAR IN ANALYSIS I.** This seminar, which is given in alternate years with 189-739, covers some topic in analysis of a fundamental nature or of considerable current interest. Each course is taken, in successive years, by Ph.D. students in analysis: the students give lectures expounding research papers on the topic in question. The member of the staff in charge, starts the seminar, guides the students in their preparation and takes over the exposition at difficult stages.

189-739A,B STUDENT SEMINAR IN ANALYSIS II. This seminar, which is given in alternate years with 189-738, covers some topic in analysis of a fundamental nature or of considerable current interest. Each course is taken, in successive years, by Ph.D. students in analysis: the students give lectures expounding research papers on the topic in question. The member of the staff in charge, starts the seminar, guides the students in their preparation and takes over the exposition at difficult stages.

* **189-740A,B TOPICS IN ANALYSIS I.** This course covers an advanced topic in some branch of analysis.

* **189-741A,B TOPICS IN ANALYSIS II.** This course covers an advanced topic in some branch of analysis.

189-742A TOPICS IN ANALYSIS III. This course covers an advanced topic in some branch of analysis.

189-743B TOPICS IN ANALYSIS IV. This course covers an advanced topic in some branch of analysis.

* **189-744A,B TOPICS IN ANALYSIS V.** This course covers an advanced topic in some branch of analysis.

* **189-745A,B TOPICS IN ANALYSIS VI.** This course covers an advanced topic in some branch of analysis.

189-761A,B TOPICS IN APPLIED MATHEMATICS I. This course covers some advanced topic in applied mathematics.

189-762A,B TOPICS IN APPLIED MATHEMATICS II. (This course covers some advanced topic in applied mathematics.

* **189-763A,B TOPICS IN APPLIED MATHEMATICS III.** This course covers some advanced topic in applied mathematics.

* **189-764A,B TOPICS IN APPLIED MATHEMATICS IV.** This course covers some advanced topic in applied mathematics.

* **189-771A,B TOPICS IN STOCHASTIC PROCESSES I.** This course covers some advanced topic.

* **189-772A,B TOPICS IN STOCHASTIC PROCESSES II.** This course covers an advanced topic.

* **189-782A,B TOPICS IN STATISTICS AND PROBABILITY I.** This course covers an advanced topic.

* **189-783A,B TOPICS IN STATISTICS AND PROBABILITY II.** This course covers an advanced topic.

* **189-784A,B TOPICS IN STATISTICS AND PROBABILITY III.** This course covers an advanced topic.

189-785A,B TOPICS IN STATISTICS AND PROBABILITY IV. This course covers an advanced topic.

189-791D SEMINARS IN MATHEMATICAL LOGIC.

189-792D SEMINARS IN ALGEBRA.

189-794D SEMINARS IN GEOMETRY AND TOPOLOGY.

189-795D SEMINARS IN CURRENT RESEARCH IN ANALYSIS.

189-796D SEMINARS IN ANALYSIS.

189-797D SEMINARS IN APPLIED MATHEMATICS.

189-798D SEMINARS IN STATISTICS AND PROBABILITY.

E13 DEPARTMENT OF MECHANICAL ENGINEERING

MacDonald Engineering Building
817 Sherbrooke Street West
Montreal, PQ,
Canada H3A 2K6

STAFF

Professors – D.R. AXELRAD; W. BRUCE; J.H.S. LEE; B.G. NEWMAN; M.P. PAIDOUSSIS *(Chairman)*

Associate Professors – A.M. AHMED; G.G. BACH; J.C. CHERNA; G. FEKETE; J.M. FORDE; R. KNYSTAUTAS; L. KOPS; C.L. MURPHY; D. PFEIFFER; J.W. PROVAN; A.L. THOMPSON; J.H.T. WU; P.J. ZSOMBOR-MURRAY

Assistant Professors – CHRISTIANNE GUIRAO; R. HOFFMAN

Honorary Lecturers – D. ATACK

Special Lecturer – L.J. VROOMEN

Advanced courses and laboratory facilities are offered for graduate study leading to the M.Eng. and the Ph.D. degrees in Mechanical Engineering.

Graduate studies and research are at present being conducted in the fields of fluid mechanics, mechanics of solids, aerodynamics, flow-induced vibration and hydroelastic stability, mechanical aspects of surgical implants, low cost energy conversion, gasdynamics, conventional and unconventional machining processes, machine tool design and automatic control systems.

Facilities include wind tunnels, a water tunnel, a high enthalpy jet, shock chambers and tubes, a scanning electron microscope, machine tools for conventional and unconventional (ECM. EDM.) methods of machining, X-ray equipment, lasers, hot-wire anemometers and a data acquisition and control computer with remote-access terminals.

ADMISSION

The general rules of the Faculty apply. Candidates who come from other institutions are expected to have an academic background equivalent to the undergraduate curriculum in mechanical engineering at McGill or to make up any deficiencies in a qualifying year. Applicants are requested to state in as much detail as possible their particular field of interest for graduate study.

REQUIREMENTS

M.Eng. (Option A) Degree

This is an option in which a research thesis, course 305-609 and six other courses are necessary for progress in their selected field of research. Selections are made from those listed below, or from courses offered by other engineering departments. Students who do not hold an undergraduate engineering (or equivalent) degree and who are accepted into this option will register for the M.Sc. degree. This applies particularly to students engaged in interdisciplinary research. A thesis describing the candidate's research is to be submitted in accordance with the rules of the Faculty and is the major requirement for the degree.

M.Eng. (Option B) Degree

This is a course type of Master's degree which requires twelve graduate courses for completion. All candidates are required to pass the following courses:

305-605A Applied Mathematics I;
305-610A Fundamentals of Fluid Mechanics;
305-632A Stress Analysis;
305-642A System Dynamics.

These courses are of a basic nature in that they review the necessary fundamentals relevant to the preparation of all candidates concurrently concentrating in the areas listed below. Also listed are courses from which individual programs of specialization may be devised.

A. THERMO-FLUIDS:
305-515A; -533B; -611B; -612B; -615B; -617A; -633B; -650A; -651B; -652B.

B. SOLID MECHANICS AND STRESS ANALYSIS:
305-534A; -535B; -633B; -635B; -643B; -645B.

C. SYSTEM DYNAMICS AND CONTROL:
305-411B; -527A; -528A; -624A; -643B; -645B.

D. INDUSTRIAL AND PRODUCTION ENGINEERING:
305-372A; -527A; -528A; -621B; -623B; -624A; -626B; -633B.

At the end of their programs each candidate is required to submit the necessary material for completion of the courses:

305-603 Design Project I;
305-604 Design Project II;
305-609 Seminar.

Close industrial liaison is envisaged in these courses.

Ph.D. Degree

Candidates normally register for the M.Eng. degree in the first instance. However, in exceptional cases where the research work is proceeding very satisfactorily, or where the equivalent of the M.Eng. degree has been completed at another university, candidates may be permitted to proceed directly to the Ph.D. degree without submitting a master's thesis as

McGILL UNIVERSITY LIBRARY

long as they have satisfied the course requirements for the M.Eng. degree. Courses of study selected for a Ph.D. program will depend upon the existing academic qualifications of the candidate and those needed for effective research. Candidates are required to pass a preliminary oral examination within about 6 months of their initial registration for the Ph.D. degree.

COURSES FOR HIGHER DEGREES

The following courses available in the undergraduate curriculum of the Mechanical Engineering Department may be selected for Graduate credit provided that both of the following conditions are met:

i) the course is recommended by the candidate's supervisor,
ii) no equivalent course was taken during the candidate's undergraduate program.

305-342A STATISTICAL THERMODYNAMICS

305-372A MACHINING PROCESSES

305-411B SYSTEMS CONTROL II

305-431B GAS DYNAMICS

305-475A N.C. of M/C TOOLS

COURSES OPEN TO GRADUATES AND TO QUALIFIED UNDERGRADUATES

* **305-502A TOPICS OF ADVANCED MATHEMATICS FOR ENGINEERS I.** Various aspects of elementary set theory, topology, mappings, linear operators, functionals, functional analysis and variational principles, as applied to engineering research problems. (Text: Simmons: Introduction to Topology and Modern Analysis; McGraw-Hill).
Professor Provan

* **305-503B TOPICS OF ADVANCED MATHEMATICS FOR ENGINEERS II.** (Prerequisite: 305-502A). Various aspects of algebraic spaces, measure theory, Lebesque integration, probability algebra and the theory of distributions as applied to engineering research problems.
Professor Provan

305-507X NUMERICAL ANALYSIS FOR COMPUTER USERS I. Various topics from numerical analysis are selected with an eye to computer usage. Review of finite differences, interpolation and quadrature, ordinary differential equations.
Professor Bach

305-515A INDUSTRIAL AERODYNAMICS. Characteristics of the earth's boundary layer, flow patterns around buildings and structures, their effect on the dispersal of pollutants, modelling and model testing, wind tunnel corrections, shelter provided by buildings, pressure distribution over buildings providing data for the structural designer, wind-oscillations of buildings and structures.
Professor Fekete

305-527A COMPUTER-AIDED MECHANICAL DESIGN. (Evening Course). Computer graphics, automated draughting, function visualization. Interactive techniques and the engineering design process. Two- and three-dimensional curve fitting. Optimization, layout, and packaging problems. Stress and force analysis. Network and flow analysis. Project planning and scheduling techniques. The course is conducted on a seminar and informal lecture basis. Students will review topics on a broad basis but will concentrate on two topics, writing original programming in one of these.
Professor Pfeiffer

305-528A MANUFACTURING AUTOMATION. An integrated approach to discrete manufacturing systems based on the digital computer. Linking the manufacturing function to the computer-aided design function. Computer and direct numerical control of machine tools. Automated inspection, material handling and production control. Technological, social and economic aspects will be discussed.
Professor Hoffman

305-533B AERODYNAMICS: IDEAL FLUID THEORY. Subsonic aerodynamics. Kinematics; equations of motion, vorticity and circulation; solutions of Laplace's equation; conformal mapping; motion around simple bodies. Two-dimensional aerofoils. Three-dimensional flows: airscrews; low and high aspect ratio wings. Supplemented by demonstrations and experiments in the laboratory.
Professor Newman

305-534A CONTINUMM MECHANICS I. Mathematical preliminaries. The Cauchy and Piola stress tensors. Strain and deformation theory. Finite strains and deformation gradients. Rate of deformation tensor. General theory of continuous media. Internal energy. Enthropy as a functional in continuum theory.
Professor Axelrad or Professor Provan

305-535B CONTINUUM MECHANICS II. (Prerequisite: 305-534A). Constitutive theory and material symmetry. Three-dimensional Navier equation of motion. Classical elasticity and elastic potential theory. The Papkovich-Neuber Potential, Linear viscoelasticity. Metal plasticity and plastic constitutive equations. Linear thermoelasticity. The thermoelastic potential.
Professor Axelrad or Professor Provan

* **305-560B BIOMECHANICS OF TISSUES.** Tissue biomechanics is the study of the response of biological tissue to forces and deformations to which it is subjected. Tissues such as bone, tendon and ligament act to transmit load and together with the contractile ability of muscle,

provide a means for locomotion. The course emphasizes the fundamentals of continuum machanics in relation to the morphological classification of various tissues. Basic principles of viscoelasticity aid the student in understanding the rate sensitivity of biological materials. The stress-strain-time or constitutive equations for soft connective tissue components is determined. The mechanical response of muscle tissue in the passive and stimulated states is also examined.
Staff

305-561B BIOMECHANICS OF MUSCULOSKELETAL SYSTEMS. The musculoskeletal system; general characteristics and classification of tissues and joints. Biomechanics and clinical problems in orthopaedics. Modelling of musculoskeletal systems. Passive and active displacements of components: fundamentals of 3-D kinematics, applications, measurement and interpretation techniques, case studies, load-bearing characteristics of muscuoskeletal systems: load-deformation properties of passive connective tissue, passive and stimulated muscle response, fundamentals of linear programming, optimization techniques and sensitivity analysis, experimental approaches, case studies.
Professor Ahmed

COURSES FOR GRADUATE STUDENTS ONLY

305-603A,B, or C DESIGN PROJECT I. A design project undertaken under the direct supervision of at least one staff member. Examination entails the writing of a report which is examined internally by the supervisor and another staff member appointed by the Option B Committee of the Mechanical Engineering Department.
Staff

305-604A,B, or C DESIGN PROJECT II. A continuation of 305-603A,B, or C.

305-605A APPLIED MATHEMATICS I. A short review of complex variables. Analytical methods of solution for partial differential equations occurring with great frequency in engineering will then be given. Perturbation methods, integral methods, asymptotic methods and variational techniques. In addition, numerical methods of solution will also be presented.
Professor Bach

305-606B APPLIED MATHEMATICS II. (Prerequisite: 305-605A). Classification of P.D. Es. according to elliptic, parabolic and hyperbolic types. Finite difference calculus and solutions of partial difference and P.D. Es. Numerical solutions, i.e. matrix and finite element methods for elliptic type, finite difference and characteristic methods for hyperbolic type. Applications of the techniques to problems in stress analysis, fluid dynamics, heat transfer, chemical diffusion and vibrations.
Professor Bach

305-608Y NUMERICAL ANALYSIS FOR COMPUTER USERS II. (Prerequisite: 305-507X or equivalent). Partial differential equations, matrices, Monte-Carlo methods, linear programming and statistics.
Professor Bach

305-609B,C SEMINAR. All candidates for a Master's degree are required to participate and to deliver one paper dealing with their particular area of research or interest.
Professor Provan

305-610A FUNDAMENTALS OF FLUID MECHANICS. Origin of macroscopic properties of continuous media (pressure, density, temperature, transport coefficients) and reconciliation with molecular structure of matter. The generalized Bolzmann and hydrodynamic equations. Continuum formulation of the hydrodynamic and mageto-hydrodynamic equations. Dimensional analysis and parametric studies of the Navier-Stokes equations. Selected examples of exact solutions. Flow between parallel plates with heat transfer and electromagnetic forces. Couette flow and flow between rotating cylinders (incompressible and compressible). Suddenly-accelerated flat plate. Normal shock structure. Parametric expansion of the Navier-Stokes equation and the classification of the various classes of fluid motions (i.e., Stokes, potential, subsonic, supersonic, hypersonic, etc.)
Professors Lee and Knystatutas

* **305-611B STEADY COMPRESSIBLE AERODYNAMICS.** Expansion and compression waves in two-dimensional homenergic and irrotational flow. Prandtl-Glauert and Gothert similarity rules for subsonic and supersonic flow. Crocco theorem of vorticity. Shock formation in a supersonic flow over a curved wall. Method of characteristics for two-dimensional and axially symmetric flow. Two-dimensional and axially symmetric supersonic nozzles and jets. Ackeret supersonic aerofoil theory. Supersonic flow past wings of finite span. Axially symmetric supersonic, isentropic and non-isentropic flow over a cone. Shock bifurcation in ducts. Boundary layer separation owing to shock wave. Shock reflection from boundary layer on flat plate. Methods of measurement and supersonic wind tunnel testing.
Professor Wu

305-612B VISCOUS FLOW AND BOUNDARY LAYER THEORY. Exact solutions of the Navier-Stokes equations. Laminar boundary layer equations. Separation methods of solution. Compressible laminar boundary layer. Significance of Prandtl number. Numerical methods of solution. Stability of laminar flow and the causes of transition to turbulence. Incompressible turbulent boundary layer. Momentum and energy

McGILL UNIVERSITY LIBRARY

equations. Scales of turbulence. Law of the wall, roughness and the prediction of skin friction. Prediction of the turbulent boundary using integral and field methods. Self-preserving turbulent flows including wakes and jets. Methods of measurement. Extension to compressible flow.
Professor Newman

305-615B UNSTEADY GASDYNAMICS I. Kinetic theory and conservation equations, shock detonation and deflagration wave structure and Hugoniot properties, acoustic theory and method of linearization, waves of finite amplitudes, wave interactions, Chester-Chisnell-Whitham theory, geometrical shock dynamics, weak shock theory of Chandrasekhar, Friedrichs and Whitham.
Professor Lee

305-617A UNSTEADY GASDYNAMICS II. Similarity methods in gasdynamics, blast wave theory, non-similar techniques of Sakurai and Oshima, integral methods in shock dynamics, the snowplow mode 1 for $y \rightarrow 1$, asymmetrical shock propagation, asymptotic self-similar motions, implosion dynamics, blast scaling, far field effects and interaction with structures.
Professor Lee

305-621B ADVANCED MACHINING PROCESSES. Metal behaviour under cutting conditions. Machining accuracy of NC machine tools. Machinability concept and application. Some design considerations of cutting tools; optimization of tool shape. Recent developments in abrasive processes. Some theoretical and practical aspects of electro-discharge and electrochemical machining. Lasers in manufacturing. Surface integrity in unconventional machining. System approach in manufacturing.
Professor Kops

305-623B MACHINE TOOL ENGINEERING. (Evening course). Common design features of machine tools. Elements of machine tools. Machine tools for production in large series: automatics, transfer machines and production, line technology, line balancing, group technology, numerically controlled machines and machining centres, design of N/C tooling systems, fixturing for N/C large machine tool system. Economic parameters.
Professor Cherna

305-624A APPLIED PROCESS CONTROL. (Evening course). Hardware and software aspects of real time computers in process control and related applications. Fundamental hardware. Digital and analogue transducers, actuators, filters, interfaces and processors. Fundamental software: Process assembler language and machine architecture, real time operating systems, process oriented subsystems, interrupts, drivers, service routines. (An application assignment is given.)
Professor Zsombor-Murray and Mr. Vroomen

305-626B ADVANCED CONCEPTS OF ENGINEERING DESIGN. (Evening course). The Morphology of the Engineering Design Process. Systems Engineering: Formulation of the problem system; complex systems under constraints; applications to products, equipments and socio-economic-technical systems. Models for the creative process. Algorithms for creative synthesis solution space, morphological analysis, separation of systhesis and analysis, value engineering, synectics, boundary shifting. Feasibility analysis in the technical, economic and use environments. Modelling for simulation and optimization; choice of computer programs for continuous and stochastic models. Decision making and resource allocation. Utility functions, decision matrix, decision criteria and decision trees. Rational choice among alternative design strategies with probabilistic outcomes.
Staff

305-632A STRESS ANALYSIS. (Evening course). Review of small displacement theory of elasticity. Variational principles and their applications. Stiffness matrix techniques and an introduction to the finite element method. Thermoelastic problems, deformation and flow theory of plasticity. Response characteristics of viscoelastic materials.
Professor Provan

305-633B TRIBOLOGY. Friction; wear; solid lubrication, boundary lubrication; externally pressurized bearings; fluid film lubrication; rolling contact bearings; bearing selection and design; lubricant chemistry; films and loops.
Dr. Atack

305-635B FRACTURE AND FATIGUE. (Evening course). (Prerequisite: 305-632A). An introduction to the design aspects of fracture and fatigue, standard specimen fatigue, stress concentrations, crack initiation, linea elastic fracture mechanics, developments in non-linear fracture mechanics and low-cycle fatigue. Where appropriate, fractographic and probabilistic aspects of fatigue failure are discussed.
Professor Provan

305-642A SYSTEM DYNAMICS. (Evening course). Variational methods in mechanics. Hamilton's principle and the equations of motion of discrete engineering systems. Lagrangian formulations for discrete and continuous systems. General methods of discretizing continuous systems. Rigid-body dynamics from Newtonian and Lagrangian points of view. General three-dimensional motions. Dynamic behaviour of linear and non-linear systems, including phase-plane representation. Response of engineering systems to deterministic inputs by classical methods. Stability of engineering systems. Liapunov's definition of stability. Stability of linear systems.
Professor Paidoussis

305-643B VIBRATIONS IN ENGINEERING SYSTEMS. (Evening course). (Prerequisite: 305-642A). Review of analysis of linear continuous systems by classical methods. Response to

deterministic and random excitation. Discretization of continuous systems; receptance, transfer-matrix, finite element, Galerkin methods. General linear algebra methods for analysis of linear systems; classical, numerical, function techniques. Response of generalized systems (non-diagonal mass, stiffness and dissipation matrices) to deterministic and random loads. Application to selected mechanical, electrical and accoustical systems. Introduction to the analysis of nonlinear systems.
Professor Paidoussis

305-645B FINITE ELEMENTS IN DYNAMIC SYSTEMS. (Evening course). (Prerequisite: 305-642A). Concepts, mathematical tools and review of general purpose finite element methods; derivation of stiffness and mass matrices; modelling of complex and built-up systems. Solutions of stress analysis problems. Formation of the dynamical matrix; eigenvalue analysis for large systems with many degrees of freedom. Consideration of damping and motion dependent forces.
Professor Paidoussis and Dr. Pustejovsky

* **305-650A HEAT TRANSFER. (Evening course).** A study of more advanced topics in steady and transient heat flow by conduction, convection and radiation. New developments in heat transfer theory and techniques.
Staff

* **305-651B DESIGN OF HEAT TRANSFER EQUIPMENT. (Evening course).** The design of heat transfer equipment with special attention to the design of shell-and-tube heat exchangers, coolers, heaters, condensers; also, the design of air and gas heat exchangers for gas turbines. The main stress will be on the thermal aspects of the design but mechanical features will also be discussed.
Staff

* **305-652B DYNAMICS OF COMBUSTION.** Summary of basic thermodynamics, statistical mechanics, fluid dynamics and chemical kinetics. Conservation equations for multicomponent reacting systems. Interface boundary conditions. Diffusion flames, droplet and particle combustion. Steady laminar pre-mixed gas flames. Mechanisms of flame propagation. Flammability limits. Flame quenching. Non-steady phenomena in flames. Cellular structure. Steady and non-steady turbulent flames. Spray combustion. Detonative combustion. One-dimensional steady detonation waves. Initiation of detonation. Detonational instability and structure.
Professors Knystautas and Lee

305-700A, B, C DOCTORAL PRELIMINARY EXAMINATION.
Staff

* **305-722A, B SELECTED TOPICS IN MACHINING PROCESSES.** (Prerequisite: 305-621B). A study of more advanced topics in metal cutting, abrasive processes and unconventional methods of machining. New trends and developments in material removal theory and techniques.
Professor Kops

305-734A MICROMECHANICS I. (Prerequisites: 305-543A and 305-535B). Probabilistic concepts in Micromechanics. Stochastic functions and random processes. Statistical mechanics of structured solids. Microstates and the Master equation of structural solids.
Professor Axelrad

305-735B MICROMECHANICS II. (Prerequisite: 305-734A). Probabilistic deformation theory of structured solids. Review of deterministic kinematics. Models of structured solids. The Markovian approximation to the deformation process. Probabilistic constitutive theory and the material functional. Applications to polycrystalline solids and fibrous networks.
Professor Axelrad

* **305-745A ADVANCED DYNAMICS OF ENGINEERING SYSTEMS.** State vector analysis of engineering systems. Liapunov's stability analysis and application to stationary linear systems. General dynamic and Eulerian stability methods for linear distributed parameter systems. Selected topics in ono-linear mechanics. Methods of analysis of non-linear systems. Introduction to aeroelastic phenomena and discussion of selected topics in aerohydroelasticity.
Professor Paidoussis

E14 DEPARTMENT OF METEOROLOGY

Burnside Hall
805 Sherbrooke Street West
Montreal, PQ,
Canada H3A 2K6

STAFF

Professors – W.F. HITSCHFELD; J.S. MARSHALL; S. ORVIG; R.R. ROGERS
Associate Professors – J.F. DEROME; P.E. MERILEES *(Chairman)*; E. VOWINCKEL
Assistant Professor – H.G. LEIGHTON
Special Lecturer – H. WARN

REQUIREMENTS

M.Sc. candidates may enter with a bachelor's degree with honours in Physics or Mathematics and Physics, or a bachelor's degree in Engineering Physics, but in any case only with standing acceptable to the Department. The program then consists of courses 195-651D to 195-656D, and culminates in research towards a thesis. Research is normally

McGILL UNIVERSITY LIBRARY

started after the spring examinations of the first session; it can be completed by the autumn, but typically will require a full year, till the end of the second session. Candidates entering with a bachelor's degree with honours in Meteorology can replace some of these courses by instruction in seminar, and can commence their research without delay. Candidates with some postgraduate training or experience in Meteorology may receive credit for this.

Students with a Master's degree in meteorology or equivalent qualification, again with standing acceptable to the Department, may register for the Ph.D. degree. The ordinary requirements concerning thesis and preliminary examination will apply. The work consists principally of research with one of McGill's research groups, active in dynamic and synoptic meteorology and climatology, and the Stormy Weather Group in physical meteorology, especially precipitation physics. The candidate will be required to attend research seminars and to take a small number of courses, in this or other departments, as appropriate.

COURSES FOR HIGHER DEGREES

195-651D PHYSICAL METEOROLOGY. (2 hours; *Texts* – Mason, *Physics of Clouds:* Oxford; Kondratyev, *Radiative Heat Exchange in the Atmosphere:* Pergamon). Thermodynamics of the atmosphere. Instability and convection. Cloud physics and storm structure. Radar applications. Solar and terrestrial radiation. Radiation calculations and diagrams. Energy budget of the atmosphere.
Professors Rogers, Leighton and Hitschfeld

195-652D DYNAMIC AND NUMERICAL METEOROLOGY. (2 hours; *Texts* – Haltiner, *Numerical Weather Prediction:* Wiley; Holton, *An Introduction to Dynamic Meteorology;* Academic Press). The equations of motion. Circulation and vorticity, development theorems. Linear perturbations, instability. Mathematical models of the atmosphere; application of difference equations and their numerical solution.
Professors Derome, Merilees and Dr. Warn

195-653D CLIMATOLOGY. (1 hour; *Texts* – Sellers. *Physical Climatology:* Un. of Chicago; Critchfield, General Climatology: Prentice-Hall). The general circulation of the atmosphere and the ocean. Climatic classification. The heat and water balance, climatic change.
Professor Orvig

195-654D SYNOPTIC METEOROLOGY. (4 hours). A laboratory course to complement Meteorology 195-651D to 195-653D. Analysis of weather charts and diagrams, forecast techniques, diagnostic treatment of atmospheric dynamics and weather processes. Modern statistical and computer methods are used wherever suitable.
Professor Vowinckel and Staff

195-655D SEMINARS "TOPICS IN METEOROLOGY". (1 hour). One-hour discussions on special topics in meteorology, e.g. lightning studies, meteorology and microwave communications, remote sensing, limits of predictability.
Staff

195-656D DAILY WEATHER DISCUSSION. (2½ hours). One-half hour briefing on the current weather situation.
Professor Vowinckel

195-700D Ph.D. COMPREHENSIVE. (Cognate Subjects).

195-701D Ph.D. COMPREHENSIVE. (General).

195-751D SEMINAR IN PHYSICAL METEOROLOGY. (2 hours). A research seminar in topics in atmosphere physics.
Professors Marshall and Rogers

195-752D SEMINAR IN DYNAMIC METEOROLOGY. (2 hours). A research seminar on theoretical and numerical aspects of current general-circulation studies.
Professors Derome and Merilees

195-753D SEMINAR IN CLIMATOLOGY. (2 hours). A research seminar in topics from synoptic and physical climatology.
Professors Orvig and Vowinckel

Special Lecturers – R.S. BOIRE; J.-P. DROLET; T.E. HAWKINS

Graduate programs leading to the M.Eng., M.Sc. and Ph.D. degrees are available for research in Rock Mechanics, Mining Environments, Mineral Economics, Materials Handling, Applied Geophysics, Electrochemistry, Chemical and Process Metallurgy, Mineral Processing and related Surface Chemistry, Physical and Mechanical Metallurgy. Course programs leading to the M.Eng. (Option B) degree and the Diploma in Mining Engineering are also available.

Special programs are available for those holding degrees in subjects other than Metallurgy or Mining, e.g. Chemistry, Physics, Engineering, Geology, etc.

REQUIREMENTS

Graduate Diploma in Mining Engineering

This Diploma is open to graduates of suitable standing in any branch of engineering or applied science. The Department provides a course of study during the academic year: this is normally followed by five months of approved experience within the mining industry. Candidates will be required to take an integrated group of courses, selected in consultation with the Department and bearing in mind their previous academic training.

M.Eng. (Option A) and M.Sc. Degrees

The M.Eng. degree is open to graduates holding the B.Eng. degree or its equivalent in Metallurgical Engineering, Mining Engineering, Geophysics or related fields. The M.Sc. degree is open to graduates holding the B.Sc. degree or its equivalent in Metallurgy, Geophysics, Geology or related fields. In both cases, at least a high second class standing at the undergraduate level is required.

A candidate must pass courses assigned by the Department. These will be selected from courses offered by the Department and cognate courses given by other departments. The selection will be based upon a consideration of the student's previous training and research interests.

A candidate will be required to participate in an appropriate Research Seminar course.

A candidate must submit an acceptable thesis based upon research successfully completed by the candidate.

M.Eng. (Option B) Degree

The first year of the program involves four months approved experience within the mining industry, followed by eight months of academic study at McGill University. The academic program has been designed to advance diversely-trained graduates to a uniform level of postgraduate academic proficiency within the Mining Engineering discipline and to provide them with the important concepts and analytical techniques necessary for a more problem-oriented second year. The second year provides a sequence of advanced courses, detailed below, together with a dissertation which is handled as an individual research project throughout the academic year. The course work is supplemented by a second four month period of approved experience within the mining industry.

Applicants with a degree in Mining Engineering will be considered for admission to a twelve month program leading to the same degree.

The courses required in the second year are:

306-602D HUMAN RELATIONS IN THE MINERAL INDUSTRY

306-604D MANAGEMENT-LABOUR RELATIONS

306-622D MINING ENVIRONMENTS

306-623D GROUND CONTROL AND FRAGMENTATION

306-624D MATERIALS HANDLING IN MINES

306-625D MINERAL INDUSTRY ECONOMICS

306-628D DISSERTATION

Ph.D. Degree

A candidate for this degree must normally hold an acceptable Master's degree in Metallurgy, Metallurgical Engineering, Mining Engineering, Geophysics, or a related field. The Ph.D. degree will be awarded in the appropriate field.

A candidate must pass courses assigned by the Department. These will be selected on the basis of the student's previous training and research interests.

A candidate will be required to participate in an appropriate Research Seminar course.

Candidates are expected to take a preliminary examination within the first year of their Ph.D. registration.

A candidate must submit an acceptable thesis based upon research successfully completed by the candidate and must satisfy the examiners in an oral examination of the thesis and related topics.

A candidate must also satisfy general faculty regulations relating to Ph.D. degrees.

COURSES FOR HIGHER DEGREES

The courses in this department have been renumbered to conform with the following classification system. The first three numbers (i.e. 306) are the department code. The next digit is the level of instruction. The last two digits are classified as follows:

01 to 29	**general mining courses.**
30 to 39	**geophysics courses.**
40 to 49	**mineral processing courses.**
50 to 59	**extractive and process metallurgy courses.**

MCGILL UNIVERSITY LIBRARY

60 to 69 **physical metallurgy courses.**
70 to 79 **seminars.**

GRADUATE COURSES OFFERED BY THE DEPARTMENT

306-602D HUMAN RELATIONS IN THE MINERAL INDUSTRY. (80-84 hours).

(A) ORGANIZATIONAL HUMAN BEHAVIOUR. A general study of the interrelationships of human, social, technical and organizational forces which underlie actions and procedures of people at work.

(B) MINING ORGANIZATIONAL PROBLEMS. Organizational structures: performance assessments; procedures re employee selection, promotion, communication, operational problems; principles of job control and job training; inter-personal relationships.

Mr. Hawkins

* **306-604D MANAGEMENT-LABOUR RELATIONS.** (80-84 hours). History and character of Canadian and U.S. labour movements; problems of labour relations under collective bargaining processes; management-union relationships; public policy; critical national negotiations.

Mr. Hawkins

306-606D MINERAL/METAL PRODUCTION. (80-84 hours).

* **306-608D THE MARKETING OF MINERAL PRODUCTS.** (80-84 hours).

306-620A ROCK MECHANICS I. (2 hours). A study of the effects of rock properties and ground stresses on problems of mine design.

Professor Udd

306-621B ROCK MECHANICS II. (2 hours, alternate weeks, 3 hours laboratory). The application of the principles of strength of materials to the analysis of problems of ground control.

Professor Udd

306-622D MINING ENVIRONMENTS. (80-84 hours). Health and safety aspects of the mining environment; radiation hazards and control; airborne contaminants and ventilation; design principles for dust control and air conditioning systems; fan theory and application; illumination theory and design; control of noise and vibrations.

Professor MacLachlan

306-623D GROUND CONTROL AND FRAGMENTATION. (80-84 hours). Geo-mechanics, soil and rock mechanics applied to mining operations and mine design; theory of models; deformation, flow and behaviour of fragmented geologic materials; the properties and behaviour of compacted hydraulic/pneumatic stope fill. Principles and theory of explosives, rock information systems, cratering concepts and applications to mining.

Professor Udd

306-624D MATERIALS HANDLING IN MINES. (80-84 hours). Capital investment, economic analysis and design of all currently feasible materials handling systems for open pit and underground mines; bin design, slurry pipe lines, stock piling, port facilities and water transportation; equipment replacement and decision making; compressed air technology in mining. Emphasis is on criteria for selection and case study seminars and the influence of selected systems upon mine design and layout.

Professor Djamgouz

* **306-625D MINERAL INDUSTRY ECONOMICS.** (80-84 hours). The course covers a broad range of decision-making problems in the mineral industry, including the mine development decision, economic problems confronting the mining company – corporate planning, exploration strategy, mine finance and mineral market forecasting – and mineral policy problems (such as taxation and regional development).

Professor Mackenzie

306-626D ANALYSIS OF QUANTITATIVE DATA. (80-84 hours).

306-627D MINERAL INDUSTRY DECISION-MAKING. (80-84 hours).

306-628D DISSERTATION. (80-84 hours). A comprehensive study of mineral technology or economics applied to specific minerals industry cases.

Staff

306-630D INTERPRETATIVE METHODS IN APPLIED GEOPHYSICS. Analysis of geophysical data in seismic, magnetic, gravity and electrical prospecting.

Professor Telford

306-640D ADVANCED MINERAL PROCESSING. (80-84 hours per session). Modern advances in mineral processing techniques.

Professor Finch

306-641D MINERAL DRESSING AND MILL DESIGN. (2 hours per week). Physical and chemical treatments for the recovery of valuable minerals in ore. The application of techniques embodying gravity concentration, electrostatic and magnetic separations, and flotation with emphasis on mill design.

Professor Salman

306-642D MINERAL DRESSING. (2 hours per week). Mineral separations and recoveries by flotation. Studies of sorption processes and surface reactions.

Professor Salman

306-650D TRANSPORT PHENOMENA IN PROCESS ENGINEERING METALLURGY. (2 hours per week). Theoretical studies of selected processes for the smelting and refining of metals. Metallurgical applications of heat, mass and momentum transfer theories.
Professors Davenport and Guthrie

306-651D TOPICS IN CHEMICAL METALLURGY. (2 hours per week). Applications of physical chemistry to extractive metallurgy with emphasis on thermodynamics and electrochemistry; recent developments in extractive metallurgical research.
Professor Thompson

306-653A,B TRANSPORT PHENOMENA IN PROCESS METALLURGY. Process metallurgical applications of heat, mass and momentum transport theories. Methods of numerical solution in the analysis of: continuous casting, ingot solidification, soaking pits, hot mill operations, alloy addition methods in steel-making, etc. Students are assigned individual computer projects and present a report plus seminar on their findings.
Professor Guthrie

306-655A,B ADVANCED METALLURGICAL PROCESS ANALYSIS. Metal extraction processes are analysed from the standpoints of metals recovery, raw materials usage and energy requirements. Techniques which can be used to minimize energy consumption are examined in detail. Optimization models are developed. Students examine and report on the metallurgical and economic feasibility of recently developed processes.
Professor Davenport

306-660D APPLIED X-RAYS. (4 hours per week). X-Ray diffraction methods and their application to chemical analysis, alloying, grain size determination, preferred orientations, deformation, annealing and single crystal studies; fluorescence analysis; introduction to radiography and micro-radiography; electron probe micro-analysis.
Professor Smith

306-661B ADVANCED METALLURGICAL DESIGN. (3 hours per week). A discussion and laboratory course, supplemented by detailed written reports, dealing with metallurgical design problems. Special attention will be given to problems in corrosion, weld design, casting, prevention of metal fatigue, heat effects and materials selection.
Professor Williams

306-662B CRYSTAL GROWTH AND SOLIDIFICATION OF METALS. (3 hours per week). The kinetics of freezing and the structure of the solid-liquid interface. Methods of single crystal growth; growth imperfections in single crystals. Dendritic freezing in pure materials. Alloy freezing and the redistribution of solute; morphological stability during freezing, Eutectic freezing with particular reference to cast irons.
Professor Gruzleski

306-663A DEFECT STRUCTURE AND MECHANICAL PROPERTIES OF METALS. (3 hours per week). Elastic compliances and rigidities; stress and strain deviators; yield criteria; vacancies and diffusion; topology of dislocations and stacking faults; self-energy of dislocations; dislocation interactions with point, line and surface defects; plastic deformation of single crystals and poly-crystals; work hardening and recovery processes.
Professor Jonas

306-664B THERMAL AND ATHERMAL DEFORMATION PROCESSES. (3 hours per week). Empirical approaches to experimental results; elementary rate theory; introduction to activation free energies, enthalpies and entropies; physical significance of activation areas and volumes; experimental determination of activation parameters; rate theory applied to high temperature deformation; periodic internal stress models; rate theory applied to low temperature deformation; athermal deformation processes.
Professor Jonas

306-670D RESEARCH SEMINAR. For students registered for a Master's degree in Metallurgy.
Staff

306-672D ROCK MECHANICS AND GEOPHYSICS SEMINAR. Selected topics in Rock Mechanics and Geophysics will be presented by students and staff members.
Staff

306-673D MINING ENGINEERING SEMINAR. For students registered in the Diploma or M.Eng. (Option B) program.
Staff

306-674D EARTH PHYSICS SEMINAR. Students and staff members will present selected and current topics under the following general headings; cosmology; seismology; earth's gravity, magnetic and electric fields; thermal history; tectonophysics; celestial mechanics.
Geophysics Staff

306-675D APPLIED GEOPHYSICS SEMINAR. Case histories in petroleum and mineral exploration; well-logging methods; geophysical methods applied particularly to mining and civil engineering problems. (Course given in collaboration with Ecole Polytechnique.)
Geophysics Staff

306-765D TOPICS IN ADVANCED PHYSICAL METALLURGY. (2 hours per week). Topics selected from recent research in physical metallurgy.
Staff

306-766A,B STRENGTHENING AND FRACTURE OF METALS. (3 hours per week). Strengthening mechanisms in metals: superalloy and order hardening, solute, precipitate, and dispersion hardening, grain boundary and sub-boundary hardening; theories of lattice friction; discontinuous yielding and

McGILL UNIVERSITY LIBRARY

dynamic strain aging; grain boundary sliding, dynamic recrystallization and superplasticity; mechanisms of ductile and brittle fracture.
Professor Jonas

306-771D RESEARCH SEMINAR. For students registered in a Ph.D. program in Metallurgy.
Staff

306-776D MINING RESEARCH SEMINAR. For students registered in a Ph.D. program in Mining.
Staff

Undergraduate Courses

The following undergraduate courses are available to graduate students who have not taken an equivalent course:

306-230B GEOPHYSICAL EXPLORATION
Professor Jensen

306-321B BEHAVIOUR OF ROCK STRUCTURES
Professor Udd

306-326B MATHEMATICAL APPLICATIONS IN THE MINERAL INDUSTRY
Mr. Bilodeau

306-327A MATERIALS HANDLING
Professor Trotter

306-328B MINE ENVIRONMENTS
Professor Djamgouz

306-332A MATHEMATICAL APPLICATIONS IN GEOPHYSICS
Professor Crossley

306-334B POTENTIAL THEORY IN GEOPHYSICS
Professor Crossley

306-420A MINING FEASIBILITY STUDIES I
Professor Djamgouz and Staff

306-421B MINING FEASIBILITY STUDIES II
Professor Djamgouz and Staff

306-422A APPLIED EXPLOSIVES
Professor MacLachlan

306-423A MINERAL INDUSTRY ECONOMICS I
Mr. Boire

306-424B MINERAL INDUSTRY ECONOMICS II
Professor MacKenzie and Mr. Drolet

306-425B MINE PLANNING
Professor Trotter

306-431A ADVANCED EXPLORATION GEOPHYSICS I
Professor Telford

306-433B ADVANCED EXPLORATION GEOPHYSICS II
Professor Telford

306-435A ADVANCED EXPLORATION GEOPHYSICS III
Professor Jensen

306-436B ADVANCED EXPLORATION GEOPHYSICS IV
Professor Telford

Visiting Associate Professor – A.I. McPHERSON

FIELDS OF RESEARCH

High-Energy Physics

Theoretical: The interests of the McGill high energy theoreticians range from studies of the properties of elementary particles, considerations of the physics of elementary particle reactions, to quantum field theory and applications of group theory. A special feature of some of the work is the close association with nuclear physics both as an aid to understanding particles and also in the use of high energy reactions to further our knowledge of the properties of nuclei.

Experimental: Experiments at the highest available energies are carried out at the Fermi National Accelerator Laboratory. The program is primarily concerned with strong interaction physics. Present activities utilize both counter and bubble chamber techniques and include elastic scattering experiments at large momentum transfer, inclusive reaction studies and properties of neutral mesons.

Ice Physics

Interest centres on ice dynamics-response of floating ice to wind, current and tide-and electrical properties of sea ice. Field experiments in the Gulf of St. Lawrence are in progress. The group is actively involved in an international cooperative experiment in the Beaufort Sea, called AIDJEX. The experiment includes use of satellites and remote sensing aircraft, as well as "ground" observations of standard oceanographic and meteorological parameters.

Nuclear Physics

Theoretical: Problems in nuclear spectroscopy of medium nuclei, collision theory, pion induced reactions and applications of statistical mechanics in nuclear physics are currently being studied.

Experimental (Foster Radiation Laboratory Group): The research program centres around a 100 MeV proton synchrocyclotron and a data handling system based on PDP-8 and PDP-15 computers. Current main activities involve studies of the short-lived nuclei lying far from the region of beta stability, using high speed "rabbit" systems, an on-line mass spectrometer and a superconducting beta ray spectrometer. The laboratory is also engaged in applied nuclear physics research of bio-medical, environmental, and archeological interests.

Experimental (Neutron physics): The experimental program is aimed at isolating a beam of neutrons whose velocity is only a few metres per second. The source of neutrons is a high flux nuclear reactor at the Chalk River Nuclear Laboratories and the very slow neutrons are isolated by their special properties of total reflection. They will be used for experiments on the fundamental properties of neutrons, including their radioactive decay and their interaction with the gravitational field.

Solid-State Physics

Theoretical: Programs of research are in progress on the properties of semiconductors and semimetals in intense magnetic fields, including two-dimensional systems; in dilute alloys, amorphous metals, including magnetic systems, "spinglasses" and layer compounds,

Experimental: The principal lines of research are in the spectroscopy of magnetic insulating crystals, including Jahn-Teller effects, and on the magnetic and transport properties of various materials-amorphous and crystalline – ranging from semiconductors to metallic single crystals. Additional cryogenic facilities and magnets providing high magnetic fields are available at a McGill University laboratory.

Stormy-Weather Group

This group uses the McGill Radar Weather Observatory at Ste. Anne de Bellevue which is equipped with a weather radar of outstanding capability. It records stormy weather in all seasons, supplemented in summer by three radio-direction-finding stations for lightning and three wide-angle-camera stations for stereoscopic cloud photography. There is also a program of cloud-temperature measurement by radiometric photography.

ADMISSION

M.Sc.

Normal requirement is a B.Sc. in Physics, or equivalent, with high standing.

Ph.D.

Normal requirement is a M.Sc. in Physics, ore quivalent. Candidates in good standing may have the option of transfering into this program from the M.Sc. program after one year.

REQUIREMENTS

M.Sc.

Candidates must successfully complete 5 one-semester courses and a M.Sc. thesis, in addition to all the other normal requirements of the Graduate Faculty.

Ph.D.

Candidates must successfully complete a Preliminary Examination and submit a Ph.D. thesis, in addition to all the normal requirements of the Graduate Faculty.

Financial Assistance

Subject to the availability of funds, financial assistance will be offered to students in the form of Teaching and Research assistantships. For new students, financial support will be offered at the time of acceptance.

Further Information

A brochure regarding graduate studies in physics is available on request. The brochure includes a detailed description of the research activities in the department, application forms for admission to graduate studies and information concerning requirements for the M.Sc. and Ph.D. degrees and financial support. Inquiries should be addressed to the Chairman.

ADVANCED UNDERGRADUATE AND GRADUATE COURSES

198-514B GENERAL RELATIVITY. (3 hours). Transition from special to general relativity. Non-Euclidian geometry. The basic laws of physics in

McGILL UNIVERSITY LIBRARY

covariant form. Einstein's equations. Newton's theory of gravitation as an approximation. Propagation of gravitation. Rigorous solutions of the field equations. Cosmology.
Professor Henzi

198-551A QUANTUM THEORY. (3 hours). General formulation, scattering theory, WKBJ approximation, time-dependent perturbation theory and applications, angular momentum, relativistic wave equations.
Professor Contogouris

198-557A NUCLEAR PHYSICS. (3 hours). General nuclear properties, nucleon-nucleon interaction and scattering theory, radioactivity, nuclear models, nuclear reactions.
Professor Lessard

198-558A SOLID STATE PHYSICS. (3 hours). Properties of crystals, lattice vibrations and thermal properties of insulators, free electron model and band structure, semiconductors, metals, optical properties.
Professor Harris

198-559B STATISTICAL MECHANICS. Bose and Fermi gas; cluster expansions; hydrodynamics of superfluids; second sound; Fermi liquid theory; phase transitions; the ising model; fluctations; the Fokker-Planck equation; the Onsager relation.
Professor Zuckermann

198-562A ELECTROMAGNETIC THEORY. (Prerequisites: U1 or U2 honours physics or permission of instructor). Electrostatics, dielectrics, magnetostatics, time-varying fields, relativity, radiating systems, fields of moving charges.
Professor Henzi

198-567B PARTICLE PHYSICS. (3 hours). Basic interactions and symmetries, kinematics, scattering theory, phase space, symmetry and statistics, boson and baryon spectra, experimental techniques.
Professor Stairs

198-572B APPLICATIONS OF ELECTROMAGNETIC THEORY. (Prerequisite: 198-562A). Scattering processes, wave propagation in various media, wave guides, transmission lines and resonant systems, scalar diffraction theory, plasmas, magnetohydrodynamics.
Professor Henzi

* **198-602D BASIC PHYSICS FOR HIGH SCHOOL TEACHERS.** A *full course for M.Ed. students only.* This course covers the basic principles of Classical Physics stressing those actively taught in high schools. The level is such as to stimulate a clear understanding of the implications of these principles in Modern Physics. The physical principles involved in many everyday phenomena will be explored in some depth. Formal topics include Mechanics, Thermal Physics, Waves, Optics and Electromagnetism. Prerequisite: CEGEP-level course in Calculus or equivalent and teaching experience in Physics.

* **198-603C PHYSICAL MEASUREMENT.** A *full course for M.Ed. students only.* This will be basically a laboratory course interspersed with lectures and seminars. Experimental techniques, instrumentation and data analysis will be stressed in the development and carrying out of experiments specifically oriented towards a High School Program. This will include experiments where the result is unknown to the experimenter. (Prerequisite: 198-602D).

* **198-604D MODERN PHYSICS.** A *full course for M.Ed. students only.* The aim of this course is to enable the student to understand the concepts leading to modern physics as well as some of the more spectacular recent developments. Topics include Atomic and Nuclear Physics, Solid State Physics, Modern Optics and Astrophysics. (Prerequisite: 198-602D).
Professor Mathison

198-610B ADVANCED QUANTUM MECHANICS. (3 hours). Basic theory of Quantum Mechanics; treatment of special topics: theory of angular momentum, perturbation theory, scattering-theory, body problems; the Dirac Theory; quantization of the electromagnetic field.
Professor Margolis

198-612A ADVANCED MATHEMATICAL PHYSICS. (3 hours). Selected topics from differential equations, Green's functions and integral equations; applications to physics.
Professor Morris

198-613B ADVANCED MATHEMATICAL PHYSICS. (3 hours). Group representation theory with applications to physics.
Professor Sharp

* **198-616A CLOUD PHYSICS.** (3 hours). Introduction to cloud physics.
Professor Marshall

* **198-617B ICE PHYSICS.** (3 hours). Acoustical, electrical, mechanical and thermal properties of sea ice and fresh-water ice, energy exchange in the atmosphere-ice-ocean system; ice movement.
Professors Pounder and Langleben

198-618B SOLID STATE PHYSICS. (3 hours). Lattices and their excitations; the theory and properties of normal and superconduction metals, semiconductors and their applications; magnetism.
Professor Zuckermann

198-672D NUCLEAR PHYSICS. Gross properties of nuclei, nucleon-nucleon interaction, second quantization, shell model, collective model, pairing model, electromagnetic and beta decay, nuclear reactions.
Professors Das Gupta and Lessard

198-673B THEORETICAL HIGH ENERGY PHYSICS. Introductory theory and phenomenology of strong, electromagnetic and weak interactions.

198-700D PRELIMINARY Ph.D. EXAMINATION.

198-710D QUANTUM FIELD THEORY. (3 hours). The content of the course includes discussions on relativistic single particle wave functions, quantized fields and their symmetry properties, perturbation theory and applications, as well as the use of analytic properties of relativistic quantum fields.
Professor Lam

* **198-714D EXPERIMENTAL SOLID STATE PHYSICS.** (3 hours). Topics, reflecting the interests of the students and the faculty involved, will be selected from the following experimental research areas: experimental low temperature solid state physics techniques; magnetism; electron transport phenomena; fermiology, propagation of electromagnetic waves in solids including resonance effects; semiconductors; superconductivity; electronic structure of alloys; properties of insulators.
Professors Hedgcock and Walsh

* **198-716D THEORETICAL SOLID STATE PHYSICS.** (2 hours). Second quantization; Wick's theorem; Thermodynamic Green's functions; Feynman diagrams. Superconductivity: experimental introduction; phenomenological theories, Landau-Grinsburg theory; pure superconductors and superconducting alloys. Magnetism: Hubbard's model for narrow band transition metals, ferromagnetism and antiferromagnetism in itinerant electron systems; Fedder-Martin model for Chromium; Green's function formulation of response theory; application to theory of spin waves in magnetic metals.
Professor Wallace

198-718A SPECIAL TOPICS IN SOLID STATE PHYSICS. (3 hours). Specialized discussion of current problems in solid state physics.
Solid State Staff

198-720A EXPERIMENTAL NUCLEAR PHYSICS. This course covers the basic techniques of experimentation in nuclear physics. It includes data reduction, nuclear detectors, accelerators, on-line computer techniques, angular correlation, kinematics of nuclear reactions; interactions of photons and particles with matter.
Professor Mark

198-722B THEORETICAL NUCLEAR PHYSICS. Particle hole excitations and giant resonances; deformed Hartree-Fock and angular momentum projection; unified theory of nuclear reaction; direct interaction; realistic forces and calculations of bulk properties of nuclei.
Professor de Takacsy

198-726D EXPERIMENTAL HIGH ENERGY PHYSICS. (3 hours). High energy linear and circular accelerators – detailed design considerations in the NAL 500 GeV proton accelerator, the SLAC 20 GeV electron linear accelerator and CERN Intersecting Storage Rings, future prospects; beam design; high energy detectors – scintillation counters; spark chambers, bubble chambers and new proposals; kinematics; particle classification; spin and particle determination; discrete symmetries; internal symmetries; high energy two-body reactions; multiparticle production; Quark model.

198-729A,B SELECTED TOPICS IN NUCLEAR PHYSICS. These courses cover topics of current development in nuclear physics and the topics may change from year to year; current topics include nuclear fission, heavy ion reaction, superheavy nuclei and back bending.

198-730A SPECIAL TOPICS IN HIGH ENERGY PHYSICS I. (3 hours). Specialized discussion of some current problems in theoretical particle physics.
Professor Margolis

198-731B SPECIAL TOPICS IN HIGH ENERGY PHYSICS II. (3 hours). Specialized discussion of some current problems in particle physics.
Professor Stairs

198-732A ADVANCED THEORETICAL HIGH ENERGY PHYSICS. (3 credits). Particle classification schemes; dispersion relations and Regge theory; multiparticle production models; deep inelastic scattering; gauge theories.

* **198-740D ADVANCED ASTROPHYSICS.** (3 hours). Survey of modern theories including stellar atmospheres, energy sources, stellar structure and evolution; magnetohydrodynamics.

198-799D SEMINARS. Each of the research groups in High Energy Physics, Ice Physics, Nuclear Physics, Solid State Physics and Stormy Weather Physics organizes research seminars to be presented by students, staff and visitors. Ph.D. candidates are required to attend and participate in the seminars organized in their field of specialisation.

E17 SCHOOL OF URBAN PLANNING

McConnell Engineering Building
3480 University Street
Montreal, PQ,
Canada H3A 2A7

STAFF

Professor – DAVID FARLEY *(Director);* – BLANCHE L. VAN GINKEL
Associate Professor – JEANNE M. WOLFE
Assistant Professor – DAVID BROWN
Visiting Lecturers – MORRIS CHARNEY; LLOYD SANKEY

McGILL UNIVERSITY LIBRARY

With the assistance of – GLENN DROVER *(Social Work);* JANE GLENN *(Law);* BRYAN MASSAM *(Geography);* and the Staff of the School of Architecture and the Department of Civil Engineering.

The objective of the School of Urban Planning is to produce qualified professional urban planners, for both the public and private sectors. Students are expected on completion of the program to have acquired basic planning skills, a broad view of urban studies and a field of specialization. To achieve these objectives the teaching and research activities within the program are organized within the context of the broader urban studies and research effort at McGill.

REQUIREMENTS FOR ADMISSION

The M.U.P. degree is open to students holding a bachelor's degree or equivalent in Anthropology, Architecture, Economics, Civil Engineering, Geography, Law, Management, Political Science, Social Work, or Sociology, with adequate knowledge of quantitative techniques.

In addition to the documents for admission required by the Faculty of Graduate Studies and Research (see General Section), the following must be submitted:

1. Statement of specific interest in the area of Urban Planning
2. For architects only, a portfolio containing at least five (5) examples of architectural work accomplished in school and in practice. (Portfolios are not to exceed 8½ x 11 inches in size.)

The deadline for submitting applications and supporting material is March 15.

AWARDS AND FINANCIAL ASSISTANCE

For information regarding awards and financial assistance, please refer to the FACULTY OF GRADUATE STUDIES "POST-GRADUATE FELLOWSHIPS, BURSARIES, AND PRIZES" ANNOUNCEMENT.

REQUIREMENTS FOR THE M.U.P. DEGREE

The program in Urban Planning requires a *minimum* of two and one-half years, including a basic core of required studies and a selection of courses from a group of recommended electives. It emphasizes sponsored research to be carried out by staff and students and the development of a particular area of expertise for each student based on his background.

A three month internship with a member of a recognized planning association is required.

COURSES

Group A – Core Knowledge (All required/no substitution)

409-602D SUPERVISED RESEARCH PROJECT

409-603D PLANNING PROJECTS I

409-604A PLANNING PROJECTS II

409-606B SUPERVISED RESEARCH SEMINAR

409-609A PLANNING GRAPHICS AND ENVIRONMENTAL PERCEPTION

409-610A/B MAN AND HIS ENVIRONMENT I

409-611A/B MAN AND HIS ENVIRONMENT II

409-612B THEORY OF PLANNING

409-613A/B APPLIED QUANTITATIVE TECHNIQUES

In addition to courses in Group A, students are required to complete seven half courses, a minimum of four from Group B (highly recommended electives).

Group B – Development and Refinement (A minimum of 4 half courses required).

301-373A HISTORY OF HOUSING

301-376A STRUCTURE OF CITIES

301-435B URBAN PLANNING I: PLANNING IN QUEBEC

301-436A URBAN PLANNING II: LAND USE REGULATION AND PROJECT DEVELOPMENT

301-625B HOUSING THEORY

303-540A URBAN TRANSPORTATION PLANNING

303-642B TRANSPORTATION SYSTEMS ANALYSIS

407-637B HOUSING POLICY

409-605A GRADUATE SEMINAR

409-607D READING COURSE – URBAN PLANNING

483-145A LAW (PROPERTY – LAND USE PLANNING)

Group C – Specialization Students select courses to demonstrate an in-depth knowledge of one functional area in the field of planning. (A minimum of five courses required).

154-425B ECONOMICS OF ECOLOGY

154-468A URBAN AND REGIONAL ECONOMICS

160-465A THE POLITICS OF PLANNING AND POLICY MAKING

166-222A URBAN SOCIOLOGY

183-319A GEOGRAPHY OF ECONOMIC DEVELOPMENT

183-412B ADVANCED URBAN GEOGRAPHY

407-625B COMMUNITY ORGANIZATION

Group D – The School of Urban Planning encourages students to receive practical experience outside the University setting. A three-month internship with a member of a recognized planning association is therefore required. The internship is viewed as an important aspect of students' planning education and students are advised to compose their study program with this in mind.

COURSE DESCRIPTIONS

Group A – Core Knowledge (All required)

409-602D SUPERVISED RESEARCH PROJECT. The Supervised Research Project is intended to crystallize and focus a student's interests on a particular area of enquiry at the end of studies for a Master's degree in Planning. It should ideally provide the transition into practice or more advanced studies. The options are: 1. A research paper on an agreed-upon topic having the characteristics of a graduate thesis but excluding the detailed editorial requirements of a thesis; OR 2. A new plan for a part of the environment (does not exclude social, economic, political *et al* types of plans) to be presented both orally and in written form. Joint research projects are allowed.
Staff

409-603D PLANNING PROJECTS I (Studio). The first-year studio introduces students to practical situations based on real world problems. The studio runs for the whole of the fall term and the first half of the spring term. Material covered includes: problem definition; data sources, collection and analysis; graphic representation; values and goals; the creative process; problem solving; and policy implications. Students learn to work in interdisciplinary group situations. Each studio problem is terminated by an oral and graphic presentation of work which is open to all members of the program and to which expert outside critics are invited. Students' progress is evaluated according to performance in class, in the oral presentation, and on brief written reports of work.
Professor Van Ginkel

409-604A PLANNING PROJECTS II. (Studio). The second-year studio is designed to permit the study of one local practical problem in depth. Students are divided into small groups of two to six persons, and problems are chosen depending on the experience and research interests of the participants, or for their topical nature. Each group produces a finished report, on which, along with classroom participation, evaluation of student progress is based. The class meets for two half days per week during the fall term, but much more time than this must be spent on studio work in order to complete it satisfactorily. Prerequisite: Planning Projects I.
Professors Wolfe, Farley and Staff

409-605A GRADUATE SEMINAR.

409-606B SUPERVISED RESEARCH SEMINAR. The Supervised Research Seminar consists of group conferences between students and staff for the purpose of formulating and developing the student's interests on a particular subject towards his or her major research undertaking.
Staff

409-607D READING COURSE. Outlines for reading courses must be submitted by the students to the professor of their choice. There are three possible formats for the Reading Course: a) Read and write a brief review of one substantial work or book per week. b) Read around one or more topic in depth and write a substantial review of the literature in this (these) field(s). c) Make exhaustive bibliographic research on one subject and write a major paper on the status of knowledge in this subject.
Staff

409-609A PLANNING GRAPHICS AND ENVIRONMENTAL PERCEPTION. The purpose of this course is twofold; first, to familiarize the student with graphic techniques used in professional planning work, and second, to heighten the student's environmental awareness, especially visual perception. A weekly lecture consisting of theory and a review of practical skills, examples and/or demonstrations is followed by a weekly assignment carried out partially in the studio and partially in the city.
Professor Charney

409-610A/B. MAN AND HIS ENVIRONMENT I.

409-611A/B. MAN AND HIS ENVIRONMENT II. Man and His Environment is designed to examine the nature of man's impact on the environments he inhabits, the way he lives and the effects of his interventions. It treats problems facing man at different scales and in different contexts, and includes reviews of the principles and practice of planning through the case study method. Given the very extensive nature of the subject, the course is given as four six-week intensive units, each taught by a different specialist. Subjects are chosen because of their importance, topicality or complementarity to other courses in the School. Classes, including workshops, are given one afternoon per week, and two assignments, one minor and one major are set for each of the four topics. Evaluation of progress is based on these.
Staff

409-612B THEORY OF PLANNING. The major objective of this course is to attempt to develop a general definition as to what constitutes planning theory. Theories of planning will be dealt with under three specific categories; namely a) Theories of explanation of urban phenomena (Theory of concentric zones, etc.) b) Theories relative to the subject matter of planning-substantive theory (Green

McGILL UNIVERSITY LIBRARY

belts, New Towns, etc.) c) Theories of Process-theories of procedure or implementation. (Advocacy planning, Choice Theory, Transactive planning, etc.) Students are expected to prepare two (2) term papers; a short one in the area of planning history, and a major one in the area of theory.
Professor Wolfe

409-613B APPLIED QUANTITATIVE TECHNIQUES. The specific topics and the level of treatment will be determined as the course progresses, but as a guiding principle it is hoped that by the end of the course all students will have a basic understanding of the following areas. 1) Measurement scales and data types. 2) Principles of taxonomy and classification. 3) Hypothesis testing using parametric and non-parametric tests. 4) Multivariate analysis. 5) Matrix methods for plan evaluation. 6) Recent developments in impact analysis. The emphasis will be on understanding the fundamentals of the topics, rather than offering a cook-book approach. Empirical examples of planning proglem will be used to clarify the general areas.

McGILL UNIVERSITY LIBRARY

F1 DEPARTMENT OF ANTHROPOLOGY

Stephen Leacock Building
855 Sherbrooke Street W.
Montreal, PQ
Canada H3A 2T7

STAFF

Professors – PETER C.W. GUTKIND; RICHARD F. SALISBURY; BRUCE G. TRIGGER
Associate Professors – DAN R. ARONSON *(on leave 1977-78)*; FUMIKO IKAWA-SMITH *(Chairman)*; PHILIP C. SALZMAN
Assistant Professors – DON W. ATTWOOD; MICHAEL S. BISSON; HARVEY FEIT; CARMEN LAMBERT; JEROME ROUSSEAU

PROGRAMS

The department offers training leading to the M.A. and Ph.D. in Anthropology. Admission is to the M.A. program, except when a student already holds a Master's degree. It is expected, however, that most applicants will be oriented towards achievement of the Ph.D.

The M.A. degree evidences the candidate's ability to conduct a research study, and his/her intensive knowledge of a range of major fields within the discipline. The Ph.D. degree evidences the candidate's original contribution in specialist fields. The degree requirements aim at allowing an early development of individual interests within anthropology while stimulating quick progress.

The ideal time for completion of the M.A. should be approximately 20 months, the first year being devoted to the completion of the work on the main fields and of a research proposal, the summer to gathering research data and the following year to writing a thesis, together with some consideration of the Ph.D. project. An ideal time for Ph.D. completion involves roughly a year of preparation for a research study. After passing an examination on their fields of specialisation and on the adequacy of their research proposal, the candidates spend roughly a year in data collection and another year as a minimum in analysing and writing up the research.

In our graduate program, the student-adviser relationship is central. At the start of the year, the incoming graduate students will each choose an adviser with whom they will work out at least the broad outlines and general timetable for the completion of their requirements.

Prospective students should write for full descriptive materials and applications *directly to the Graduate Secretary of the Department.*

Students must submit with their applications the results of the Aptitude Tests of the Graduate Record Examination; arrangements to take the tests should be made directly with the Educational Testing Service, Box 955, Princeton, New Jersey 08540, U.S.A.

In addition to the normal application a statement concerning the student's plans, aims, and interests within anthropology is required.

A number of teaching assistantships are available to graduate students in the Department. Students who wish to be considered for such assistantships should inform the Graduate Adviser of the Department. Fellowships are also available from the University, and are applied for directly to the Fellowships Office of the Faculty of Graduate Studies and Research. Students should also apply for Canada Council and other outside fellowships whenever possible.

Applications for graduate admission must reach the Department not later than 1 March if applicants wish to be considered for September admission, although in exceptional cases later applications might be considered. Applicants can expect to hear the outcome of their application by about 1 April.

REQUIREMENTS

Requirements for the M.A. Degree

Demonstration of competence in four topics of anthropology: e.g. political anthropology, economic anthropology, archaeological theory, methodology, etc. is required as well as work on a culture area. Information available from the Department defines and specifies the competences to be gained.

The presentation and defence of a thesis proposal is required and the completion of a short thesis demonstrating the ability to, and the experience of, having carried an anthropological research project through all its stages – planning on the theoretical, methodological and ethnographic level, gathering data, and writing up of results.

Requirements for the Ph.D. Degree

All requirements for the M.A. degree must be completed. Students holding an M.A. from a university other than McGill may be asked to make up any deficiencies in their prior preparation before continuing on the remaining requirements.

Candidates must (1) demonstrate competence in a language other than English which is relevant to their research plans. They should do this before taking their preliminary examination, and definitely before they submit their thesis. (2) pass an oral examination on three subfields of the discipline. One of these fields will usually be a culture area. The other two special fields will be topics for which departmental supervision is available. The examination will emphasize the relation of the three fields to the field research that the candidate proposes; (3) orally present a fieldwork proposal, often, but not necessarily, conjointly with the preliminary examination; (4) carry out fieldwork and present and orally defend a completed thesis.

COURSES FOR HIGHER DEGREES

N.B. According to need, the 600-level courses take the form either of seminars or of special topics.

151-602A THEORY I

151-603B THEORY II

151-605B CULTURE AREA

151-610A SOCIAL ORGANIZATION

151-612B KINSHIP

151-614A ECONOMIC ANTHROPOLOGY

151-616B POLITICAL ANTHROPOLOGY

151-618A STRATIFICATION

151-620B ETHNICITY

151-625A CULTURAL ECOLOGY

151-630A SOCIAL CHANGE

F2 CENTRE FOR DEVELOPING AREA STUDIES

3437 Peel Street
Montreal, PQ
Canada H3A 1W7

Director – PROFESSOR RICHARD F. SALISBURY

The main function of the Centre is to encourage and coordinate interest in developing-area studies in the social sciences and to draw attention to the necessary links with the applied sciences both at McGill and in cooperation with other institutions through the agency of a Board of Directors and an Executive Committee. To further this end, the Centre offers weekly informal workshops directed chiefly to McGill graduate students and organizes public lectures by visiting speakers.

COURSES AND SEMINARS

The list given below is provided for reference purposes only and represents all the graduate courses offered by the University which could be of immediate interest to students of "development".

CONCEPTS IN SOCIAL ANTHROPOLOGY. ANTHROPOLOGY 151-614A ECONOMIC ANTHROPOLOGY
Professor Salisbury

ANTHROPOLOGY 151-616B POLITICAL ANTHROPOLOGY
Professor Attwood

ANTHROPOLOGY 151-630A SOCIAL CHANGE
Professor Lambert

ANTHROPOLOGY 151-634B ANTHROPOLOGY OF DEVELOPMENT
Professor Salisbury

ANTHROPOLOGY 151-636A URBANIZATION
Professor Gutkind

ANTHROPOLOGY 151-638B COMPLEX SOCIETIES
Professor Salzman

ECONOMICS 154-402A ECONOMIC HISTORY OF LATIN AMERICA
Professor Frankman

McGILL UNIVERSITY LIBRARY

ECONOMICS 154-634A ECONOMIC DEVELOPMENT
Professor Brecher

ECONOMICS 154-724B INTERNATIONAL ECONOMICS
Professor Vicas

ECONOMICS 154-734B ECONOMIC DEVELOPMENT
Professor Levitt

ECONOMICS 154-736B TECHNIQUES OF DEVELOPMENT PLANNING
Professor Levitt

EDUCATION 413-620D COMPARATIVE EDUCATION
Professor Eisemon

EDUCATION 413-641C EDUCATION IN DEVELOPING AREAS
Professor Eisemon

EDUCATION 413-642D EDUCATION OF MINORITY GROUPS
Professor Lipkin

GEOGRAPHY 183-606A GEOGRAPHY AND DEVELOPMENT, PART I
Professor Hill and Staff

GEOGRAPHY 183-607B GEOGRAPHY AND DEVELOPMENT, PART II

GEOGRAPHY 183-609B HUMAN GEOGRAPHY: SOCIAL AND BEHAVIOURAL PROBLEMS
Staff

GEOGRAPHY 183-622A/B HUMID, TROPICAL ENVIRONMENTS
Professor Hill

GEOGRAPHY 183-623A SEMINAR ON REGIONAL RESEARCH, PART I
Professor Armstrong and Staff

POLITICAL SCIENCE 160-647A POLITICAL DEVELOPMENT
Professor Nayar

POLITICAL SCIENCE 160-649A MASS APPROACH TO POLITICAL DEVELOPMENT
Professor Noumoff

POLITICAL SCIENCE 160-660A STATE AND SOCIETY IN NON-DEMOCRATIC REGIMES
Professor Bruneau

POLITICAL SCIENCE 160-724A AFRICAN POLITICS
Professor Kunz

POLITICAL SCIENCE 160-731B POLITICAL IDEOLOGIES
Professor Kunz

POLITICAL SCIENCE 160-747B DEPENDENCE AND DEVELOPMENT
Professor Nayar

POLITICAL SCIENCE 160-748B SOUTH ASIAN POLITICS

Seminars in the field of "development" are also offered on request by the Brace Research Institute and the Faculty of Engineering:

AGRICULTURAL ENGINEERING 336-602A ENVIRONMENT CONTROL IN AGRICULTURAL STRUCTURE
Professor Ogilvie

AGRICULTURAL ENGINEERING 336-609A HYDROLOGY
Professor Broughton

NOTE: Further information about the Centre's plans and activities may be obtained by writing to the Director.

F3 DEPARTMENT OF ECONOMICS

Stephen Leacock Building
855 Sherbrooke Street W.
Montreal, PQ
Canada H3A 2T7

STAFF

Professors – A. ASIMAKOPULOS *(Chairman)*; E.F. BEACH; I. BRECHER; E. KIERANS; J.C. WELDON; H.R.C. WRIGHT

Associate Professors – A. DEUTSCH; A.H. FENICHEL; M. FRANKMAN; J.A. GALBRAITH; C. GREEN; J. HANDA; S.H. INGERMAN; J. ITON *(on leave 1977-78)*; J. KURIEN; K. LEVITT; M.F. LOUTFI; J.C.R. ROWLEY; L.A. SODERSTROM *(on leave 1977-78)*; T. VELK; A. VICAS

Assistant Professors – P. DAVENPORT; G. GRANTHAM *(on leave 1977-78)*; R.T. NAYLOR

Visiting Professors – D. McFETRIDGE; A. PHILLIPS

This announcement is prepared early in the calendar year, and so is likely to need modification by the time the academic year begins. A mimeographed supplement is available at the Department Office, and should be consulted. Changes are not likely to be numerous, but in some instances may be important to a sensible choice of program.

REQUIREMENTS

Admission

Students holding a B.A. degree may be eligible for admission. Preparation equivalent to a McGill Honours Program in Economics is the normal requirement. Students who have deficiencies in their preparation but are otherwise judged to be qualified are admitted to a qualifying year, in which they undertake advanced undergraduate work.

Lectures and examinations in the graduate program in Economics are organized around 10 broad fields: (1) Econometrics; (2) Economic Development; (3) Economic History; (4) Economic Theory; (5) Industrial Organization; (6) International Trade; (7) Labour Economics; (8) Mathematical Economics; (9) Money and Banking; (10) Public Finance.

Courses at the 600 level will be offered in most of these fields in each session, and when such a course cannot be offered in a particular field a reading course, with tutorial assistance, will be made available. Students who have not previously passed a suitable course in Statistics must take the undergraduate honours statistics course, Economics 154-357D. A two-semester course in the history of economic thought is also a prerequisite for a graduate degree in economics, and students who have not taken such a course will be required to take Economics 154-350D. Courses at the 700 level (seminars) are offered in most of the 10 fields listed above. They are generally given in the second term and have as a prerequisite the corresponding 600 level courses.

Requirements for the M.A. Degree

The Master's degree in Economics is obtained after successful completion of the Graduate General Written Examination, course and seminar requirements, and a thesis. The minimum passing grade for graduate courses and examinations is 65%. A well prepared student should not require more than 12 calendar months to complete the degree requirements.

1. The Graduate General Written Examination consists of two comprehensive examinations. Each M.A. student must write two papers:
   i) 2 three-hour examinations in economic theory (micro and macro) and
   ii) a three hour comprehensive examination in another field chosen by the student from the 10 listed above (excluding Mathematical Economics).

The courses in Economic Theory, 154-611D and 154-621D, help prepare the student for the comprehensive examination in theory, and the appropriately named 600 level course provides assistance in preparing for the other field examination; but it is the responsibility of the student to ensure that he/she is adequately prepared for the whole of his/her fields.

2. The student must obtain at least 65% in an approved 600 level one-term course in a field other than economic theory or his/her comprehensive field. This course may be in another discipline.
3. Successfully complete the requirements of one 700 level course (seminar).
4. Complete a Master's thesis, the subject of which must be approved by the Research Committee. The paper written for one of the student's seminars (700 level courses) often forms the basis of his/her thesis.

Requirements for the Ph.D. Degree

The requirements for the doctoral degree are:

1. Successful completion of the Graduate General Written examination in economic theory and in two other special fields,
2. three 700 level seminars,
3. successful completion of the Quantitative Methods course (665A) unless Econometrics is one of the student's fields,
4. a language requirement,
5. successful completion of the Ph.D. Oral Comprehensive examination (normally in the same fields as in (1),
6. a dissertation,
7. three years of residence.

McGill students must normally receive a minimum grade of 70% in the Graduate General Written Examination to be considered for the doctoral program. Students who obtain an average of at least 75% in this examination and in their course and seminar requirements may be permitted to proceed directly to the Ph.D. program without completing a Master's thesis.

Candidates from other universities will be considered for admission to the doctoral program if they possess an M.A. degree and have a good academic record. They will be required to take the Graduate General Written Examination at the same time as the M.A. students before they can proceed to their Ph.D. Oral Comprehensive Examination. At the first examination period they must write the economic theory paper and one of the special field examinations, but they can postpone the second special field examination until the second examination period. Students whose performance, as judged by their results in the Graduate General Examination and their seminars, is considered to be inadequate for Ph.D. work, may be asked to withdraw from the Ph.D. program.

In the first year of the Ph.D. program the student is strongly advised to take the two economic theory courses 154-611D and 154-621D and the seminars 154-720A, Microeconomics and 154-722B, Macroeconomics. These are designed to cover the economic theory requirements for the Ph.D. students. Three seminars will be required (one of which might have been taken as part of the M.A. program at McGill). The passing grade in each course or seminar is 65%. In addition, students must take 154-665A (Quantitative Methods in Economics).

The student must pass examinations in translating into English from an unseen text in two approved modern languages, or an examination in translating one language at an advanced level.

McGILL UNIVERSITY LIBRARY

The student may, if he/she chooses, satisfy the language requirement by passing an examination involving the translation of an unseen text in English into French, at an advanced level.

If the candidate's mother tongue is not English, the Graduate Faculty may, if the Department so recommends, exempt that student from one of the two required language tests. An examination in mathematics may be substituted for one of the language requirements.

The student must pass an Oral Comprehensive Examination (154-799D) in three fields. One of these must be Economic Theory (including History of Economic Thought) while the remaining two are to be chosen from among the fields listed earlier (excluding Mathematical Economics). Before taking this examination the student must have passed comprehensive examinations in economic theory and *two* special fields. At the Ph.D. level, a student is designated either a Pass or a Failure. A student who fails the Oral Comprehensive Examination may resit that examination after a minimum of three months has elapsed, and will be re-examined in all three fields.

The student must write a doctoral dissertation which makes an original contribution to the literature. The topic must be approved by the Research Committee and the dissertation will be supervised by a three-man committee, whose Chairman is the student's Director of Research. It must be passed by an external examiner as well as his/her committee.

COURSES FOR HIGHER DEGREES

154-601D M.A. GRADUATE GENERAL WRITTEN EXAMINATION.

154-602A ECONOMIC HISTORY. Selected topics in European and North-American economic history are investigated from the standpoint of the interplay of institutional change and quantitative growth.
Professor Naylor

154-611D MICROECONOMICS. A systematic course in the elements of microeconomic theory deemed essential for the Graduate General Examination.
Professors Weldon and Kurien

154-621D MACROECONOMICS. A systematic course in the elements of macroeconomic theory deemed essential for the Graduate General Examination.
Professors Davenport and Green

154-622A PUBLIC FINANCE. An analysis of the public revenue and expenditure structure and its effects on resource uses and income distribution. Analysis of the effects of fiscal policy upon the level of employment, prices, and the rate of economic growth.
Professor Kierans

154-623A MONEY AND BANKING. An examination of the effects of money, near monies and financial institutions upon the structure and operations of an economic system.
Professor Handa

154-624A INTERNATIONAL ECONOMICS. A detailed examination of theories and policies in international trade and finance.
Professor Vicas

* **154-631A HISTORICAL EXPERIENCE OF ECONOMIC DEVELOPMENT.** Examination of historical patterns of development in relation to currently less developed countries.

* **154-633D MATHEMATICS FOR ECONOMISTS.** An introduction to the techniques of calculus and linear algebra frequently encountered in economic theory and econometrics.

154-634A ECONOMIC DEVELOPMENT. A systematic treatment of the characteristics and problems of economic development in underdeveloped countries.
Professor Brecher

154-637A INDUSTRIAL ORGANIZATION AND REGULATION. An analysis of the nature of the firm, industrial structure and the effect of structure on firm and industry behavior and performance. The course will also cover standard topics on the economic behavior and performance of regulated industries.
Professor McFetridge

154-641A LABOUR ECONOMICS. A synthesis of theoretical developments in the area of labour economics with stress upon problems of empirical testing.
Professor Ingerman

154-662A INTRODUCTION TO ECONOMETRICS.
Professor Rowley

154-664B ECONOMETRICS. A discussion of Economic Methods of handling errors in variables, autoregression, multicolliniarity heteroscedasticity, lagged variables, dummy variables, and the handling of simultaneous equations.
Professor Rowley

* **154-665A QUANTITATIVE METHODS.** A survey of quantitative methods frequently used in economic research. Special emphasis will be placed upon the formulation and evaluation of econometric models. Illustrations will be drawn from the existing empirical literature in economics. Required for all Ph.D. students who have not taken Econometrics as a field.
Professor Soderstrom

* **154-667A-668B MATHEMATICAL ECONOMICS** A mathematical treatment of basic economic theory.

154-701D Ph.D. GRADUATE GENERAL WRITTEN EXAMINATION.

154-702B ECONOMIC HISTORY. A study of the historical background to economic growth and change in one country during a limited period of modern history. Other countries and other periods will be taken into account for purposes of comparison.
Professor Naylor

* **154-711B THEORY OF THE FIRM.** A specialized study of the theory of the process of the firm.

154-712B PUBLIC FINANCE. Selected topics in public finance.
Professor Kierans

* **154-713B WELFARE ECONOMICS.** This course is intended for graduate students who have had a course in advanced theory and who, in particular, are well acquainted with modern demand theory. It is intended as a supplement to descriptive and analytical economics.

154-720A MICROECONOMICS. Topics in microeconomics. This course is normally a prerequisite for the general oral examination for the Ph.D. degree in economics.
Professor Weldon

154-721B ADVANCED MONETARY THEORY. This seminar will examine selected topics in monetary theory, the theory of monetary policy, and the history of monetary institutions. Seminar participants will be asked to prepare at least one paper.
Professor Handa

154-722B MACROECONOMICS. A systematic examination of selected topics in Macroeconomics. This course is normally required as a prerequisite for the general oral examination for the Ph.D. in economics.
Professor Asimakopulos

154-724B INTERNATIONAL ECONOMICS. Selected problems in international trade, foreign exchange and international movements of capital.
Professor Vicas

* **154-725B COST BENEFIT ANALYSIS.** A discussion of the development and scope of the subject. An examination of the concepts of consumers' surplus and rents, transfer payments, shadow pricing, external economies and diseconomies; a discussion of investment criteria and the problem of uncertainty. A study of some specific applications of the cost-benefit technique.
Professor Iton

* **154-731B CANADA-UNITED STATES ECONOMIC RELATIONS.** A study of key issues affecting economic relations between Canada and the United States. Among the topics analyzed will be foreign investment, the balance of payments, business fluctuations, and commercial and agricultural policies.

* **154-732B TRANSPORTATION.** A study of the economics of transportation; its relation to the general body of economic theory; government regulation with emphasis on factors that fashion it.

154-734B ECONOMIC DEVELOPMENT. Problems of economic growth and planning in selected underdeveloped countries. (This seminar is also listed in the Centre for Developing Area Studies).
Professor Levitt

154-736B TECHNIQUES OF DEVELOPMENT PLANNING. A study of long-term planning to bring about structural changes in the economy and raise growth and employment rates. Emphasis is on underdeveloped countries and underdeveloped regions.
Professor Levitt

154-737B INDUSTRIAL ORGANIZATION AND REGULATION SEMINAR. The seminar builds on material covered in 154-637A. Problems are examined in greater depth with specific topics varying from year to year. In 1977/78 topics will include feedbacks from performance to industry structure and behavior and the role of technological change.
Professor Phillips

* **154-738A SELECTED TOPICS IN ECONOMIC GROWTH.** A study of selected problems in economic growth, with special emphasis on the interactions between employment, investment, productivity and technical change in a growing economy.

154-741B ADVANCED LABOUR ECONOMICS. A combined lecture and research seminar covering selected theoretical and policy issues in labour economics.
Professor Ingerman

* **154-742B ECONOMIC AND POLITICAL DEVELOPMENT.** This course will discuss the continuing Canadian problems of unemployment, inflation and foreign ownership, the Harrod question, "Are monetary and fiscal policies enough?", the necessary integration of all elements of economic policy including trade, exchange rate, competition, resource and growth objectives.
Professor Kierans

* **154-744B HEALTH ECONOMICS.** The emphasis in this seminar will be on describing and analyzing the structure and performance of the Canadian health system, though some attention will be given to recent attempts by the federal and provincial governments to deal with current problems in this field. Readings will be selected from the economics and health literature.
Professor Soderstrom

* **160-745B MACHINERY OF GOVERNMENT.** This seminar will consist of a detailed examination of a problem in Canadian government and administration. Problems will include topics dealing with cabinet government, parliamentary organization, federalism, public administration and the impact of political forces on them.
Professors Kierans, Mallory and Weldon

McGILL UNIVERSITY LIBRARY

* **154-750A SELECTED TOPICS IN ECONOMICS.** This seminar will deal with topics of interest to the students and staff who are organizing the seminar. These topics will be in areas other than those covered by existing seminars and particular attention will be paid to critiques of neoclassical economic theory.
Staff and Students

* **154-761A INPUT-OUTPUT ANALYSIS, LINEAR PROGRAMMING AND MULTISECTORAL ECONOMIC MODELS.** National Economic Accounting, including Input-Output, and Flow of Funds accounts. Analytical uses relating to the impact of public and other expenditures on income, imports, savings, employment, etc.
Professor Levitt

154-762D ECONOMETRICS. Econometric theory and application.
Professor Rowley

* **154-767B APPLIED QUANTITATIVE ECONOMICS.** Co-ordinated quantitative research projects under the guidance of the instructor to increase facility in quantitative research.

154-799D Ph.D. ORAL COMPREHENSIVE EXAMINATION.

NON-CREDIT AND QUALIFYING-YEAR COURSES IN ECONOMICS

154-241D THE INTERNATIONAL ECONOMY SINCE 1850.
Professor Wright

154-250D INTRODUCTION TO ECONOMIC THEORY.
Professor Asimakopulos

154-301B MODERN ECONOMIC HISTORY OF SOUTH ASIA.
Professor Wright

154-311A UNITED STATES ECONOMIC DEVELOPMENT.
Professor Fenichel

154-350D HISTORY OF ECONOMIC THOUGHT.
Professors Vicas and Brecher

154-352D MACROECONOMICS.
Professor Handa

154-357D ECONOMIC STATISTICS.
Professor Kurien

154-404D TRANSPORTATION.

154-408D PUBLIC FINANCE.
Professor Deutsch

154-426D LABOUR ECONOMICS.
Professor Ingerman

154-450D ADVANCED ECONOMIC THEORY.
Professors Asimakopulos and Weldon

154-451B SEMINAR IN ECONOMIC HISTORY.
Professor Grantham

154-453D INTERNATIONAL ECONOMICS.
Professor Brecher

154-458D MONEY AND BANKING.
Professor Veik

F4 FRENCH CANADA STUDIES PROGRAM CENTRE D'ETUDES CANADIENNES FRANÇAISES

3475 Peel Street
Montreal, PQ
Canada H3A 1W7

STAFF

Director – Professor MAX DORSINVILLE (on leave 1977-78)

PROGRAM

In 1963-64 McGill University established a French Canada Studies Program. Much of the energies and resources of the Program are devoted to research and teaching with a view to making McGill a centre of advanced study and original research in this area.

Graduate students may register with the French Canada Studies Program should their main field of study be French Canada. They should apply directly to the French Canada Studies Program which will then contact the relevant department in order to ascertain if the department is prepared to receive the applicant as a degree candidate and to appoint a co-director of research. The Director of the French Canada Studies Program, or his representative, and the departmental appointee will then act jointly and watch over the interests of the applicant.

Graduate students taking courses dealing in whole or in part with French Canada, or who are studying French Canada as their special field of study, are cordially invited to make use of the reference, documentation and bibliographical facilities of the French Canada Studies Program.

En 1963, un Centre d'Etudes canadiennes-françaises fut créé à l'Université McGill. En collaboration avec les autres Départements de l'Université, le but de ce Centre est d'assurer un enseignement et de développer la recherche à un niveau supérieur, sur divers aspects du Canada français.

Les étudiants qui désirent poursuivre des études en vue de l'obtention d'une maîtrise ou d'un doctorat en études canadiennes-françaises doivent agir de la manière suivante: l'étudiant gradué fait sa demande d'admission directement au Centre

d'Etudes canadiennes-françaises. Celui-ci s'assure auprès du Département concerné que le candidat est suffisamment qualifié et l'accepte au niveau de la maîtrise ou du doctorat, suivant le cas. Le Directeur du Centre d'Etudes canadiennes-françaises, ou son délégué, et un représentant du Département dirigent conjointement les travaux de l'étudiant.

Les étudiants dont les cours portent, en tout ou en partie, sur le Canada français, ou qui se spécialisent dans ce domaine sont invités à se prévaloir du service de référence, de documentation et de bibliographie du Centre d'Etudes canadiennes-françaises.

COURSES

* **157-626A PROBLEMES POLITIQUES DU QUEBEC.** The seminar will be conducted in English and French. A reading knowledge as well as a *minimal* ability to understand spoken French is all that is required.
Nous examinerons les principaux modèles qui ont été proposés pour expliquer l'évolution de la société québécoise: le modèle historique, le modèle sociologique, le modèle marxiste. Quelles sont les principales querelles scientifiques ayant cours dans les interprétations historiques et contemporaines de la société québécoise: l'importance de la conquête, l'impact des structures mentales sur le retard économique du Québec, le rôle du clergé, la Révolution tranquille, la lutte pour l'indépendance politique?
Professeur Latouche

* **157-627B ETUDES EMPIRIQUES DE LA SOCIETE QUEBECOISE.** The seminar will be conducted both in English and French. A reading knowledge as well as a *minimal* ability to understand spoken French is all that is required.
Ce séminaire est réservé aux étudiants qui sont intéressés à mener à bien ou à participer à des études empiriques sur certains aspects de la réalité québécoise. Parmi les thèmes suggérés, mentionnons le fédéralisme canadien, le mouvement indépendiste québécois, les relations inter-ethniques au Canada, les mouvements de gauche au Québec. Le but du séminaire est de permettre à l'étudiant d'appliquer concrètement les instruments d'analyse qu'il possède.
Professeur Latouche

F5 DEPARTMENT OF GEOGRAPHY

Burnside Hall
Sherbrooke Street W.
Montreal, PQ
Canada H3A 2K6

STAFF

Professors – J.B. BIRD; B.J. GARNIER *(Chairman);* T.L. HILLS; J.T. PARRY

Associate Professors – W. ARMSTRONG; M.A. CARSON; R.N. DRUMMOND *(on leave Fall 1977);* P.G. HOLLAND; J. LUNDGREN; B.H. MASSAM; T.R. MOORE (on leave 1977-78); S. OLSON; E. WADDELL *(on leave Fall 1977);* R.C. ZIMMERMAN

Honorary Staff – F. MüLLER

ADMISSION

M.A. and M.Sc. Degrees

Attention is directed to the Faculty of Graduate Studies admission regulations outlined in the General Information and Faculty Regulations section headed "Admission".

Applicants not satisfying these conditions but with primary undergraduate specialization in a cognate field may register for the M.A. or M.Sc. degree in Geography in certain circumstances, but in general they will be required to register for a qualifying year, as will all others who have deficiencies in their preparation but are otherwise judged to be qualified.

Ph.D. Degree

Students who have attained high standing in the Master's degree in Geography may be permitted to proceed to the Ph.D. in two further years. Rarely, a student may be allowed to register for the Ph.D. degree without having first taken the Master's degree. The normal duration of a program, including field work where required, is three years. Normally, the Department will restrict admission to the Ph.D. program to students prepared to work in one of the fields of human or physical geography in which specialized supervision is offered. These, which cover a wide range of systematic areas, are listed in documents available from the Department.

REQUIREMENTS

M.A. Degree

Candidates must:

(1) pass written (and in some cases oral) examinations in at least five graduate half courses; three of which must be selected from Geography 183-602A to 610B.
(2) attend the Graduate Colloquium, Geography 183-631D, and such additional courses in Geography or cognate subjects as the Chairman and the student's director of research think fit. The additional courses may be for audit or examination; and
(3) submit a thesis in an appropriate area of geographical inquiry.

The quality of the thesis will determine the final standing of the student.

MCGILL UNIVERSITY LIBRARY

M.Sc. Degree

Candidates must:

(1) pass written (and in some cases oral) examinations in at least five graduate half courses: two selected from Geography 183-611A, B to Geography 183-615A, B; one selected from Geography 183-632A, B to Geography 183-635A, B; one selected from the entire list of Geography graduate courses; and one selected either from the entire list of Geography courses, or from the courses taught in any other department in the University

(2) attend the Graduate Colloquium, Geography 183-631D, and such additional courses in Geography or cognate subjects as the Chairman and the student's director of research think fit; and

(3) submit a thesis in an appropriate area of geographical inquiry.

The quality of the thesis will determine the final standing of the student.

Ph.D. Degree

Candidates must:

(1) remedy any deficiencies in their formal training in geography and necessary cognate subjects;

(2) submit themselves for comprehensive examinations (183-700D, 183-701D, and 183-702D) comprising prepared papers and an oral examination. Competence in certain fields may be tested separately, but as a necessary part of these examinations

(3) submit a thesis based on original research in human or physical geography;

(4) attend the Graduate Colloquium, Geography 183-631D, during one of their resident years, and other courses as determined individually; and

(5) comply with a language requirement if this is so recommended by the student's committee.

To satisfy these requirements, the candidate may take any of the graduate or undergraduate courses offered by the Department.

COURSES AND SEMINARS FOR HIGHER DEGREES

All courses meet once each week.

183-602A URBAN GEOGRAPHY, PART 1. A critical review of environmental and spatial preference and perception in an urban context, together with an introduction to appropriate measurement and scaling techniques.
Professor Olson

183-603B URBAN GEOGRAPHY, PART II. Allocation-location problems in the public and private sectors; urban model-building; urban politics.
Professor Massam

183-604A ECONOMIC GEOGRAPHY, PART I. A geographical study of the phenomenon of entrepreneurship; its logistical, organizational and locational characteristics; scale of operation; the different forms of entrepreneurship in the economic geography of different levels of economic development.
Staff

183-605B ECONOMIC GEOGRAPHY, PART II. A critical review of research on manufacturing industry, with particular emphasis on (a) the analysis of industrial agglomeration, (b) manufacturing in economically disadvantaged areas, (c) some geographical aspects of the multinational corporation, and (d) innovation and technology transfer.
Staff

183-606A GEOGRAPHY AND DEVELOPMENT, PART I. A review of the spatial problems of economic development in countries of the developing world, together with an examination of processes generating spatial inequality. Ecological considerations in economic development.
Professor Hills and Staff

183-607B GEOGRAPHY AND DEVELOPMENT, PART II. An examination of development problems in rural and urban areas of the Third World, with emphasis on agrarian structures and the social geography of urbanization. Regional emphasis will vary according to the interests of members of the seminar.
Professor Hills and Staff

* **183-608A CULTURAL GEOGRAPHY PART I.** A review of the aims and realizations of cultural ecology and its reference to research in the Third World, as well as a discussion of ethical questions that arise.
Professor Waddell

183-609A,B HUMAN GEOGRAPHY: SOCIAL AND BEHAVIOURAL PROBLEMS. A survey of the treatment of society, social institutions and the individual as units of analysis within geography. Explanation and cognitive description in human geography.
Staff

* **183-610B CULTURAL GEOGRAPHY PART II.** The seminar will discuss the processes by which individuals and communities adapt to their physical, social and ideological environments over time, and on the methods and techniques for measuring and analyzing these processes.
Professor Kemp

183-611A,B ADVANCED CLIMATOLOGY. An advanced study of the principles of physical climatology and their application to the spatial variations and characteristics of energy and water balanced in rural and urban environments.
Professors Garnier and Lewis

183-612A,B ADVANCED PHYSIOGRAPHY. An analysis of recent advances in geomorphology.
Professors Bird and Carson

183-613A,B ADVANCED BIOGEOGRAPHY. An examination of the history, methods and objectives of biogeography, with emphasis on plants.
Professors Holland and Zimmermann

183-614A,B SOILS AND WEATHERING. An examination of the major processes operating in soils: weathering reactions, pedogenetic processes, and soil nutrient relationships. The course will include laboratory work and a small project to illustrate the main techniques.
Professor Moore

183-615A,B HYDROLOGY AND WATER RESOURCES. An analysis of recent developments in hydrology, with emphasis on their applications to geographical problems. Snowmelt systems and the hydrological effects of basin development.
Professor Drake

183-622A,B HUMID TROPICAL ENVIRONMENTS. A geographical approach to the study of sample rain-forest and savanna landscapes of the humid tropics, with special attention to the human impact on the balance between forest and savanna.
Professor Hills

183-623A SEMINAR ON REGIONAL RESEARCH, PART I. Presentation of background, and discussion of research interest of varied nature, in a region of common interest to a group of graduate students and staff. Regions will vary according to interest; probable selections will include Québec, the Gulf of St. Lawrence and the Maritimes, the Arctic and Northlands, the Caribbean, tropical Latin America.
Professor Armstrong and Staff

183-624B SEMINAR ON REGIONAL RESEARCH, PART II. (See course 183-623A for description).
Professor Armstrong and Staff

183-631D METHODS OF GEOGRAPHICAL RESEARCH. A review of the accepted methods of research in geographical problems, in both physical and human fields. The approach will be practical, and will require the presentation of formal research papers for criticism and discussion.
Staff

183-632A,B ADVANCED CARTOGRAPHY. A systematic examination of modern geographic-cartographic techniques for the collection, evaluation, presentation and reproduction of spatially distributed data. Practical experience in the laboratory, the photographic darkroom, field work and visits to cartographic agencies are an integral part of the course.
Professor Drummond

183-633A,B REMOTE SENSING. (Not available to students registered in Geography 183-635A,B). A review of aircraft and spacecraft remote sensing systems and their applications.
Professor Parry

183-634A,B QUANTITATIVE METHODS IN GEOGRAPHY. An examination of certain techniques in geographic research and their limitations. Emphasis is directed to the use of correlation and regression analysis, and to multivariate extensions of these techniques.
Professor Carson

* **183-635A,B INTERPRETATION METHODS: AIR PHOTOS AND IMAGERY.** (Not available to students registered in Geography 183-633A,B). Basic photogrammetry and interpretation procedures for aircraft and spacecraft photography and imagery.
Professor Parry

McGill Subarctic Research Laboratory

This laboratory is at Knob Lake (Schefferville) in the heart of Labrador-Ungava. Facilities exist for research in most aspects of physical geography. Extensive field programs are arranged. All inquiries should be addressed to the Chairman, Geography Department.

F6 DEPARTMENT OF HISTORY

Stephen Leacock Building
855 Sherbrooke Street W.
Montreal, PQ
Canada H3A 2T7

STAFF

Professors – C.C. BAYLEY; V. BOSS; P.C. HOFFMANN; H. SENIOR; R. VOGEL
Associate Professors – P.H. BOULLE; L. DECHENE; M.J. ECHENBERG; J.W. HELLMAN; E. LAFFEY; L.L. LaPIERRE; P.T.K. LIN *(on leave 1977-78)*; M.P. MAXWELL; C.I. MILLER; A.R. RIGGS
Assistant Professors – Y. OTA; M. PETTER; S.J. RANDALL *(Chairman)*; J.H. THOMPSON *(on leave 1977-78)*; B.J. YOUNG

REQUIREMENTS

Admission

Candidates should submit their applications before 15 March 1978.

Ph.D. Language Requirements

Canadidates must offer one foreign language for examination purposes and they must also demonstrate a reading knowledge of such other languages as are required for research purposes in their major field. The Department expects that candidates will have successfully demonstrated competence in the one required language by the end of their Ph.D. 3 year.

Requirements for the M.A. Degree

Candidates applying for a Master's degree in History are required to possess an Honours B.A. which may be in History alone or in History and one other subject. When taken in Hisory alone it must include eleven full courses taken n prescribed sequence, together with certain other approved courses notably in foreign languages. Graduate students who enter without this qualificaton may find it necessary to make good any deficiency in their undergraduate program and the Department is prepared to facilitate this.

Candidates may choose to proceed in one of two ways:

1. Candidates may proceed to the degree by the successful completion of the work of one (other than History 101-650D) of the Graduate Seminars listed below and by submitting an M.A. thesis, in the area of their special interest.
2. Candidates may proceed to the degree by:
   a) the successful completion of the work of History 101-616D, Seminar in the Philosophy of History (if not avalable, another seminar should be taken);
   b) the successful completion of the work in two further seminars one of which will represent the candidate's major field of interest and the other his/her minor field,
   c) a Research Paper (History 101-650D) in the candidate's major field.

101-650D RESEARCH PAPER IN MAJOR FIELD. This research paper must demonstrate the candidate's ability to do independent work in his/her major field of interest. It may not be presented before the completion of a full year (one academic session and a summer) of residence in the university. Permission may be given for the summer study to be undertaken at another institution. Regulations concerning the research paper may be obtained from the Department.

101-655D Candidates whose major interest lies in fields in which no seminar is offered may, with the consent of their Director of Studies, offer extra tutorial work and such other seminar work as designated by their Director.

Candidates should check with the Department with regard to graduate seninars in view of the possibility that not all the seminars listed will be available.

Requirements for the Ph.D. Degree

An M.A. in History is the prerequisite for all candidates applying to enter the Ph.D. program. Candidates are required to sit an oral comprehensive examination by September at the end of the first resident year. The examination consists of:

101-702D Comprehensive examination in major field.

101-703D Comprehensive examination in first minor field.

101-704D Comprehensive examination in second minor field.

Candidates must consult with their Director of Studies at the beginning of their Ph.D. work in order to determine their minor fields.

With the completion of the oral comprehensive examination, candidates may proceed with their doctoral dissertation.

The Department is prepared to direct theses of graduate students in the following fields:

British History

a) England in the Middle Ages.
b) Scotland and Ireland in the 16th, 17th and 18th centuries.
c) British History, social and political: Tudor-Stuart and 19th century.
d) British Imperial Policy: 1714-1914.
e) Certain aspects of British Foreign Policy since 1815.

Canadian History

a) The Canadian West.
b) The social and economic history of Montreal, 1800-1900.
c) The History of Lower Canada and Québec in the 19th century.
d) Aspects of the History of French Canada in the modern period.
e) Canadian-American relations.

United States History

a) The history of the United States in the late colonial period.
b) The history of the United States in the 19th and 20th centuries.

European History

a) The constitutional development of the Holy Roman Empire in the 13th century.
b) The Reformation.
c) Aspects of the History of France.
d) Aspects of German History since 1800.
e) Aspects of the history of western Europe 1870-1914.
f) Russian and Soviet History.
g) Aspects of the history of Slavonic Europe.
h) War and Society in Modern Europe.
i) Certain aspects of the history of European-Chinese relations.
j) Aspects of Intellectual History of Modern Europe.
k) Certain aspects of the History of Science from the 16th century.

Non-European History

a) Aspects of West African History.
b) Aspects of 20th Century Chinese History.
c) Aspects of 20th Century Latin America (M.A. only).

The Redpath and McLennan Libraries are well equipped with printed sources for the periods and subjects mentioned above, and students pursuing research in Canadian History will be required, as occasion arises, to avail themselves of the manuscript resources of the Public Archives at Ottawa and the Provincial Archives at Québec, and of parochial and other records in Montreal and its vicinity.

However, the Department may require candidates to spend one year in research at another university or repository of archives.

GRADUATE SEMINARS AND COURSES

101-604 SEMINAR: COLONIAL AMERICA.
Professor Riggs

* **101-605D SEMINAR: MODERN EUROPEAN INTELLECTUAL HISTORY.**
Professor Hellman

101-607D SEMINAR: RELIGIOUS AND IDEOLOGICAL MOVEMENTS IN THE UNITED KINGDOM AND WESTERN EUROPE 1815-1914.
Professor Senior

* **101-608D SEMINAR: SIXTEENTH AND SEVENTEENTH CENTURY BRITAIN.**
Professor Maxwell

* **101-610D SEMINAR: FRENCH COLONIES AND EXTERNAL COMMERCE IN THE EIGHTEENTH CENTURY.**
Professor Boulle

101-612D SEMINAR: GERMAN NATIONAL SOCIALISM.
Professor Hoffmann

101-614D SEMINAR: SOCIAL MOVEMENTS IN WESTERN EUROPE IN THE LATER MIDDLE AGES.
Professor Bayley

* **101-616D SEMINAR: PHILOSOPHY OF HISTORY.**

* **101-624D SEMINAR: SOCIO-POLITICAL DEVELOPMENT IN BRITAIN 1815-1926.**

* **101-626D SEMINAR: THE WESTERNIZATION OF RUSSIA.**
Professor Boss

* **101-636D SEMINAR: AGRARIAN SOCIETY IN RUSSIA – 19th AND 20th CENTURIES.**

101-652 SEMINAR: PROBLEMS IN CANADIAN HISTORY, 1867-1967.
Professor Miller

101-668D ASPECTS OF EAST ASIAN HISTORY.
Professor Ota

* **101-671D SEMINAR: AMERICAN SOCIETY FROM THE CIVIL WAR TO 1920.**
Professor Randall

101-680D SEMINAR: PROBLEMS OF EMPIRE: EUROPE AND ITS DEPENDENCIES IN THE AGE OF CAPITALISM.
Professors Boulle and Echenberg

101-683D SEMINAR: THE HISTORY OF MONTREAL.
Professor Young

* **101-691D SEMINAR: A HISTORY OF CANADA'S NATIVE PEOPLES.** (Open *only* to students in the M.Ed. Teaching of History program).

* **101-696D SEMINAR: REVOLUTIONS IN EASTERN EUROPE AND RUSSIA.**

F7 LAW

Chancellor Day Hall
3644 Peel Street
Montreal, PQ
Canada H3A 1W9

DEGREES

The higher degrees in law are the M.C.L. (Master of Civil Law), the LL.M. (Master of Laws) and the D.C.L. (Doctor of Civil Law), as offered by the Institute of Air and Space Law, and the Institute of Comparative Law. All graduate students except those registered in the Institute of Air and Space Law come under the direction of the Institute of Comparative Law.

Requirements for the M.C.L. or LL.M. Degree

See the general regulations of the Faculty of Graduate Studies and Research on requirements for the Master's degree.

Candidates for admission to M.C.L. or LL.M. programs must hold the degree of B.C.L., with at least second class honours, from McGill University, or its equivalent, and satisfy the linguistic and other requirements of the Institute of study. A candidate must follow the courses prescribed by the Institute, including cognate courses in other departments of study, submit an acceptable thesis and, if required by the Institute, undergo an oral examination designed to test the general knowledge of the field of the research studies.

The degree may be completed, by well-qualified and capable students, within one calendar year, but if all degree requirements have not been completed within this time an additional full academic session in residence is necessary.

McGILL UNIVERSITY LIBRARY

Requirements for the D.C.L. Degree

The program of each Institute consists of a minimum of three years' work from the first registration of the candidate. Only an applicant of proven legal scholarship of high merit will be admitted to candidacy for this degree and normally a candidate should be the holder of both a general degree and a law degree. In the case of a candidate who holds the M.C.L. or LL.M. degree from McGill or its equivalent from another university, two years of resident study beyond the master's degree are required but may be reduced to one year with the approval of the Executive Committee of the Graduate Faculty on the recommendation of the Graduate Studies Committee of the Faculty of Law. This non-resident year must be spent at another university or similar institution. An applicant must satisfy the linguistic and other requirements of the Institute of study and, as a rule, an Institute will not permit a candidate who is not the holder of an appropriate master's degree, or its equivalent, to register directly for the D.C.L. but will require him or her to register for the M.C.L. or LL.M. A candidate for the M.C.L. or LL.M. degree of McGill, who, upon the completion of the first year of resident study, shows considerable promise may, upon the recommendation of the appropriate Institute, be permitted to proceed to the second year of the D.C.L. program without being required to submit a Master's thesis.

At a stage in the program of studies as determined by the Institute a candidate must pass an oral examination, the purpose of which is to test his or her general knowledge of the field of his or her research studies. Further, a candidate will be required to defend his or her thesis before a jury appointed by the Faculty of Graduate Studies and Research and consisting of five adjudicants, including at least two who are not members of the Faculty of Law. To qualify for the degree the thesis submitted must be a significant contribution to legal scholarship, evidencing in concept and execution the individual work of the candidate, and in a form suitable for publication.

INSTITUTE OF AIR AND SPACE LAW

STAFF

Professor – NICOLAS M. MATTE *(Director)*
Assistant Professors – P.P.C. HAANAPPEL; I.A. VLASIC
Associate Professor – M.A. BRADLEY

Degrees and Diploma

The Institute of Air and Space Law operates within the Faculty of Law. The Institute provides facilities for advanced study and research in Air and Space Law and related problems of international law for qualified law graduates or others with appropriate qualifications. The Institute offers a Diploma in Air and Space Law and the degrees of Master of Laws (LL.M.) and Doctor of Civil Law (D.C.L.).

Diploma

Applicants for admission must hold a law degree of high standing from an approved law school in any part of the world or must have an equivalent professional standing. Working competence in the English language is required but examinations and other written work may be presented in French. All candidates must provide evidence of the subjects covered in their prior law studies and of their scholastic or professional standing together with two suitable references.

The closing date for receipt of completed applications is February 1st of the year for which the candidate is applying.

A candidate who satisfies the residence requirements of one session and who passes the prescribed examinations will be awarded the Diploma in Air and Space Law.

The prescribed courses are:

387-611D PUBLIC INTERNATIONAL AIR LAW.

387-612D PRIVATE INTERNATIONAL AIR LAW.

387-613D GOVERNMENT REGULATION OF CIVIL AVIATION.

387-614D SPACE LAW.

387-615D ECONOMICS OF AIR TRANSPORT.

387-616D INTRODUCTION TO CIVIL AND COMMON LAW.

387-617D TERM PAPER.

The Director may require additional courses of particular candidates.

Degree of Master of Laws

A working competence in the English language is required but examinations and written work including theses may be presented in either English or French. All candidates must present evidence of the subjects covered in their prior law studies and of their scholastic or professional standing together with two suitable references.

The prescribed courses are as those set out above for the Diploma, but, in addition, the candidates must present an acceptable thesis on a subject approved by the Director. In order to be allowed to submit a thesis, a candidate must have obtained a mark of at least 65% in each of the courses or seminars for which he or she is registered. No candidate may receive the Diploma and the Master's degree for the same course of studies. A candidate who has already received the Diploma in Air and Space Law may be accepted as a candidate for the Master's degree, but will be required to register for one additional academic session, and may also be required to undertake additional course work beyond the course work already performed for the Diploma.

Degree of Doctor of Civil Law

Candidates for the degree of Doctor of Civil Law must hold the degree of B.C.L. or LL.B. from McGill University or its equivalent from another university. As a rule, a candidate who does not already hold a master's degree will be required to complete the master's degree before being accepted for the doctoral program. A candidate who has obtained the master's degree or its equivalent from another university will, as a rule, be required to complete the courses prescribed for the first year of the master's degree. If his or her performance is not of sufficiently high standard to justify admission to the doctoral program, he or she will not be permitted to proceed any further, but may be permitted to submit a master's thesis to qualify for the master's degree. If his or her performance is of sufficiently high standard, he or she may be permitted to proceed to the second year of the doctoral program without being required to submit a master's thesis.

The degree of Doctor of Civil Law is predominantly a research degree, and will be awarded on the basis of a thesis that represents an original contribution to the development of legal science. The thesis may be presented in English or French. All prospective candidates must provide evidence of the subjects covered in their prior law studies and of their scholastic and professional standing, together with two suitable references. The degree will be awarded, at the earliest, after the completion of three years from the first postgraduate registration of the candidate at McGill University. In the case of a candidate who holds the M.C.L. or LL.M. degree of McGill or its equivalent from another university, two years of resident study beyond the master's degree are required but may be reduced to one year with the approval of the Executive Committee of the Faculty of Graduate Studies and Research on the recommendation of the Graduate Studies Committee of the Faculty of Law. In general, this non-resident year should be spent at another university or similar institution.

INSTITUTE OF COMPARATIVE LAW

Staff

Professor – P.-A. CRÉPEAU *(Director)*
Associate Professors – J.G. CASTEL; ARMAND de MESTRAL; PATRICK GLENN; ETHEL GROFFIER ATALA; H.R. HAHLO; J.P. HUMPHREY, R. KOURI
Assistant Professor – EWA-TERESA ELIASZ

The Institute of Comparative Law operates within the Faculty of Law. As a centre of comparative legal studies, the Institute provides facilities for graduate work, advanced studies and field research in areas of Public and Private Law. The Institute offers the degrees of Master of Laws (LL.M.), Master of Civil Law (M.C.L.) and of Doctor of Civil Law (D.C.L.).

Requirements for Master of Laws and Master of Civil Law Degrees

An applicant must hold the degree of B.C.L. or LL.B. or its equivalent.

An adequate working knowledge of the English and French languages is required from all applicants. Applicants who wish to pursue studies which, in the opinion of the Director, require knowledge of a language other than English or French must possess adequate working knowledge of that language.

All applicants must present satisfactory evidence of the subjects covered in their prior law studies, of their scholastic or professional standing, and of their linguistic proficiency in English and French, together with not less than two suitable references.

Courses and Registration

Two full sessions of resident study at McGill University is the normal minimum requirement for a Master's degree. In exceptional circumstances some programs may be completed in one full session; in such cases *all* components of the program must have been completed and evaluated before the commencement of the second session. There is no uniform program of studies which every candidate must take. Each candidate follows a program of studies, determined by the Director, which in as far as possible is fashioned to meet his or her particular needs as determined by the candidate's prior legal experience and aspirations.

As a rule, a candidate must take in each of the two terms of the academic year a minimum of three courses. A candidate with a civil law background will normally be required to select at least one undergraduate course from the common law program, while a candidate with a common law background will normally be required to select at least one undergraduate course from the civil law program. The remaining courses may be selected, subject to the Director's approval, from the seminars provided by the Institute and any of the courses forming part of the curriculum for the B.C.L. or LL.B.

Each candidate will be required to submit a thesis on a subject approved by the Director either by the end of July following the academic year in which he or she first registered or at such date thereafter as might be determined by the Director. In the latter case, the thesis, with the permission of the Director, may be prepared *in absentia*.

In order to be allowed to submit a thesis, a candidate must have obtained a mark of at least 65% in each of the courses or seminars for which he or she registered.

Examinations, term papers and theses may be written either in English or French.

389-620A INTRODUCTION TO COMPARATIVE LAW. (2 hours, first term). Introduction to the comparative method; differences and similarities between the world's legal systems, and detailed study of selected topics. This course is open to law

undergraduates as a "Comparative Law Course" within the Faculty.

389-630A COMPARATIVE COMPANY LAW AND THE MULTINATIONAL COMPANY: LAW AND PRACTICE. (2 hours, first term). A comparative evaluation of Anglo-American and Continental company law systems - the harmonization of company laws within the European Common Market and the "European Company" - international and multinational companies - structure and management of the multinational company - government control of the multinational company - international controls and the multinational company - anti-monopoly legislation and the multinational company - the Canadian experience. This course is open to law undergraduates as a "Comparative Law Course" and also to students in the Faculty of Management.
Professor Hahlo

389-631A INTERNATIONAL BUSINESS TRANSACTIONS I. (2 hours, first term). An introduction to International Business law designed to familiarize students with the range of laws, national and international, applicable to international business transactions. The course will cover the subject at three different levels: a) private law applicable to international business transactions: Sales, Affreightment, Agency, Insurance, Licensing, Payment, Arbitration, Choice of Law (Unification of Private Law); b) federal regulation, export controls, anti-dumping, export insurance; c) International Law (MFN Standard, Bilateral Trade Agreement, GATT, Selected Commodity Agreements). The focus of the course will be Canadian. However, comparative materials are included and research on problems arising in other legal systems will be encouraged. This course is open to law undergraduates.
Professor de Mestral

389-632B INTERNATIONAL BUSINESS TRANSACTIONS II (2 hours, second term). An advanced research seminar dealing with: a) Canadian direct investment abroad. What legal problems are Canadian investors facing abroad? What type of protection is available to them against non-commercial risks? This will involve an analysis of the international law rules with respect to confiscation, expropriation and nationalization; b) foreign direct investment in Canada. This part is devoted to an analysis of the *Foreign Investment Review Act* and the Canada Development Corporation; c) the International settlement of investment disputes between states and nationals of other states. Form of examination: term paper. Students taking this seminar should have some knowledge of economics, commercial law and international law.
Professor Castel

389-633B INTERNATIONAL COMMERCIAL ARBITRATION. (2 hours, second term). A seminar dealing with the comparative evaluation of this particular alternative to litigation between parties to international contracts in Canada, the United States and the Common Market, with particular reference to international conventions and other instruments in this field. Open to law undergraduates.
Professor Groffier Atala

389-634A COMPARATIVE PRIVATE INTERNATIONAL LAW. (2 hours, first term). The comparative study of basic rules of conflict of laws and enforcement of foreign judgments in the civil and common law systems, with particular reference to international and inter-regional unification efforts. This course is open to law undergraduates as a "Comparative Law Course" within the Faculty. Pre-requisite: Private International Law (undergraduate).
Professor Groffier Atala

389-636A EUROPEAN COMMUNITY LAW I. (2 hours, first term). An introduction to the study of European Community Law and legal institutions, with particular reference to the Treaty of Rome and subsequent instruments. This course is open to law undergraduates.
Professors Lasok and Eliasz

389-637B EUROPEAN COMMUNITY LAW II. (2 hours, second term). A study of selected topics in European Community Law, particularly European Commercial Transactions. It will also examine the legal implications of Canadian participation in the European Economic Community. Pre-requisite: European Community Law I. This course is open to law undergraduates.
Professors Lasok and Eliasz

389-650A COMPARATIVE CIVIL LIABILITY. (2 hours, first term). A comparative study of selected contemporary problems in the field of civil responsibility. Areas of concern include: economic loss, privacy, mental suffering, prenatal injury and the role of strict liability. Pre-requisite: Obligations I or Torts I. This course is open to law undergraduates as a "Comparative Law Course" within the Faculty.
Professors Lasok and Eliasz

389-651 COMPARATIVE MEDICAL LAW. (2 hours, second term). A comparative study of selected contemporary medico-legal problems including civil and criminal liability of doctors and hospitals, consent, medical and hospital contracts, emergency services, organ transplants, death, euthanesia, abortion, sex reassignment, experimentation and medical ethics. This course is open to law undergraduates as a "Comparative Law Course" within the Faculty. Pre-requisite: Obligations I or Torts I.
Professors Crépeau and Kouri

389-670B COMPARATIVE AND INTERNATIONAL PROTECTION OF MINORITIES' RIGHTS. (2 hours, second term). A seminar adopting an international and comparative law approach to the study of the protection of racial, religious and linguistic minorities; definition of concept; early experiments and the experience of the League of Nations; the United Nations with

particular reference to its Sub-Commission on the Prevention of Discrimination and the protection of Minorities; representative national legal institutions including those of Belgium, Switzerland, Finland, Yugoslavia, Czechoslovakia, the Soviet Union and Canada. Each participant will be expected to lead a discussion on an appropriate subject on which an essay will also be required. There will be no written examination. This course is open to law undergraduates as a "Comparative Law Course" within the Faculty.

Additional courses may be offered in September 1977. (See the Calendar Insert for the Faculty of Law.)

Requirements for Degree of Doctor of Civil Law

Candidates for the degree of Doctor of Civil Law must hold the degree of B.C.L. or LL.B. from McGill University or its equivalent from another university. As a rule a candidate who does not already hold a master's degree will be required to complete the master's degree before being accepted for the doctoral program. A candidate who has obtained the master's degree from another university will, as a rule, be required to complete the courses prescribed for the first year of the master's degree. If his or her performance is not of sufficiently high standard to justify admission to the doctoral program, he or she will not be permitted to proceed any further, but may be permitted to submit a master's thesis to qualify for the master's degree. If his or her performance is of sufficiently high standard, heor she may be permitted to proceed to the second year of the doctoral program without being required to submit a master's thesis.

The degree of Doctor of Civil Law is predominantly a research degree, and will be awarded on the basis of a thesis that reqpresents an original contribution to the development of legal science. The thesis may be presented in English or French. All prospective candidates must present evidence of the subjects covered in their prior law studies and of their scholastic and professional standing together with two suitable references. The degree will be awarded, at the earliest, after the completion of three years from the first postgraduate registration of the candidate at McGill University. In the case of a candidate who holds the M.C.L. or LL.M. degree of McGill or its equivalent from another university, two years of resident study beyond the master's degree are required but may be reduced to one year with the approval of the Executive Committee of the Graduate Faculty on the recommendation of the Graduate Studies Committee of the Faculty of Law. In general, this non-resident year should be spent at another university or similar institution.

F8 DEPARTMENT OF POLITICAL SCIENCE

STAFF

Professors – MICHAEL BRECHER *(on leave Winter term 1977-78);* JAMES E. MALLORY *(on leave 1977-78);* BALDEV NAYAR; CHARLES TAYLOR *(on leave 1977-78);* DALE THOMSON

Associate Professors – THOMAS BRUNEAU *(on leave 1977-78);* PETER GOUREVITCH; FRANK KUNZ *(Chairman);* DANIEL LATOUCHE; PAUL NOBLE; ANICE STEIN; BLEMA STEINBERG; HAROLD WALLER

Assistant Professors – JEROME BLACK; BARBARA HASKEL; SAMUEL NOUMOFF; PHILIP SABETTI; JOHN SHINGLER; JAMES TULLY

Visiting Professors – KENNETH McROBERTS; LESLIE MACFARLANE

This Announcement is prepared early in the calendar year and so is likely to need modification by the time the academic year begins. A mimeographed supplement is available at the Department Office, and it is essential for graduate students to consult this supplement in order to obtain a more complete description of the M.A. and Ph.D. program.

REQUIREMENTS

Admission

Students hoding a B.A. degree may be eligible for admission. Preparation equivalent to a McGill Honours Program in Political Science is a desirable requirement Students who have deficiencies in their prepaation but are otherwise judged to be qualified are admitted to a qualifying year, in which they undertake advanced undergraduate work.

Normal deadline for applications for admission to the Departnent is February 15. Applications must be received by that time in order to guarantee the fullest consderation. All applicants, including those who have done their undergraduate work at McGill, must submi at least two letters of reference. Students are equired to take the Graduate Record Examinatior (aptitude test only) administered by the Educational Testing Service, Princeton, New Jersey. Applicants whose mother tongue is neither French nor English should arrange for TOEFL scores to be sent to the Department.

The department awards a number of teaching assistantships each year. The deadline for applications for these awards is March 1.

Requirements for the M.A. Degree

There are three requirements:

1. Seven one-term courses of which at least one must be a 700 level seminar; at least four of the courses must be at the graduate level in Political Science.

2. A written comprehensive examination in one of the following five fields: Political Philosophy, Comparative Politics (Developed Countries), Comparative Politics (Developing Countries), Canadian Government and Politics, International Relations; or an Oral Admission Examination for those students wishing to proceed to the Ph.D. program.
3. A thesis to demonstrate proficiency in research.

Candidates for the M.A. degree follow a program approved on an individual basis by the Department. All students who wish to be considered for the Ph.D. program are evaluated on the basis of their M.A. program. Only a small number of students are permitted to go on for their doctorate. A pass for the M.A. degree does not necessarily imply permission to proceed to the doctorate.

Requirements for the Ph.D Degree

There are six requirements:

1. Ph.D. students are required to take the equivalent of 6 one-term courses in addition to those they have taken at the M.A. level. Of these 6 courses, at least 3 must be at the 600 or 700 level in political science. By the time the student finishes his or her course work for the Ph.D., he or she must complete a total of at least three 700 level seminars in political science, including any taken in the M.A. year. The remaining courses may be chosen from among approved courses in Political Science or related disciplines, but should be at the graduate level whenever possible. With the approval of the Certification Committee, a student may take a reading course on some special subject as part of his or her program, providing he or she is able to find a faculty member who is willing to direct his or her work. Students should note that whereas 65% is the minimum passing grade, doctoral students are expected to maintain an average of at least 70%.
2. Students will be expected to do course work in three of the five fields offered by the Department. In two of these fields, the student will be required to write a comprehensive examination (see below), while in the third field the requirement will be met by the successful completion of two courses or seminars at the graduate level. In the third field the student must have his or her course program approved by the coordinator for the areas in which he or she is specializing.
3. Ph.D. students are required to take 2 written comprehensive examinations from among the following fields: (1) Canadian Government and Politics; (2) Comparative Politics (Developing Countries); (3) Comparative Politics (Developed Countries); (4) Political Philosophy; (5) International Relations. No student may write the comprehensives until he or she has completed the course work. The exams may be written together or separately. They are given each September, January and May.
4. Ph.D. students are required to take an oral comprehensive examination after they have passed their written comprehensives.
5. The student must pass an examination in unseen translation from two modern languages (other than English) at the elementary level or from one modern language (other than English) at the advanced level.
6. Dissertation.

COURSES FOR HIGHER DEGREES

160-601D M.A. GRADUATE GENERAL WRITTEN EXAMINATION.

160-612A EMPIRICAL METHODS. Fundamental principles of empirical research, in which the emphasis will be placed on acquainting the student with the techniques most commonly used by political scientists. The topics include the design of research projects, procedure in carrying out research, problems of measurement, survey research, scaling, data processing, and data analysis. (This course will be offered in alternate years).
Professor Black

* **160-613A SELECTED THEMES IN POLITICAL PHILOSOPHY.** This seminar will examine the political ideas of such thinkers as Francis Bacon, Thomas Hobbes, Edmund Burke and Thomas Paine.
Professor Shingler

160-614B CLASSICAL POLITICAL PHILOSOPHY. An examination of the origins of the Western tradition of political philosophy, with concentration on the major classical texts: Plato's *Republic and Laws*.
Professor Shingler

* **160-615B CLASSICAL POLITICAL PHILOSOPHY.** An examination of Aristotle's "Politics" and Nichomachean Ethics.
Professor Shingler

* **160-616A MODERN POLITICAL ANALYSIS.** An introduction to the concepts underlying modern approaches to the study of politics. The scope of the discipline will be delineated and the foundations of empirical research, including the philosophy and methodology of science, especially as these apply to social science, will be considered. Various alternatives and critiques will be presented and evaluated. (This course will be offered in alternate years).
Professor Waller

* **160-617A PROBLEMS IN POLITICAL THEORY.** Analysis of selected themes in political theory drawing upon recent developments in contemporary philosophy and psychology.
Professor Tully

* **160-619B FUNDAMENTAL CONCEPTS OF POLITICAL THEORY.** This seminar will explore the philosophical foundations of political theory.

160-621A THE CANADIAN POLITICAL PROCESS. An examination of conceptual problems and fundamental issues in the study of the Canadian political process. The topics include consensus versus conflict approaches, the Americanization of Canadian political science, behaviouralism versus post-behaviouralism, the consensual or class basis of political ideology and culture, the competitive or monolithic character of parties, groups and elites, the responsiveness and initiative of the legislature, executive and administration and the formation and effectiveness of public policy.
Professor McRoberts

* **157-626A TOPICS IN QUEBEC POLITICS: DIVERGING INTERPRETATIONS OF QUEBEC SOCIETY.** The major theoretical models used to explain Québec society: the historical school, the liberal interpretation, the Marxist view, the English-Canadian vision of Québec. This course is particularly intended for those students who wish to acquire a general but theoretical background on Québec. (A reading knowledge and a minimal ability to understand spoken French are required; writing and speaking ability are not required.)
Professor Latouche

157-627B EMPIRICAL STUDIES IN QUEBEC POLITICS. This seminar is particularly intended for those students wishing to engage in more advanced research on some aspect of Québec society (for example an M.A. thesis). Major themes of discussion will include ethnic and linguistic cleavages, independentism, federal-provincial relations, electoral studies. (A reading knowledge and a minimal ability to understand spoken French are required; writing and speaking ability are not.)
Professor Thomson

160-628A COMPARATIVE POLITICS. Examination of alternative approaches to the study of comparative politics. Special emphasis on liberal, pluralist and marxist paradigms of the politics of advanced industrial societies. Issues considered include: the distribution of power, the structure of social classes, the role of the state, the distribution of wealth, the formation of public policy, the distinction between "public" and "private", the role of parties and elections, and democratic control of the economy.
Professor Gourevitch

* **160-637B COMPARATIVE PUBLIC ADMINISTRATION.** This is an advanced course in the theories of public administration and the application to different systems in comparative perspective.

160-647A POLITICAL DEVELOPMENT IN THE THIRD WORLD. Review of theoretical and empirical literature on modernization and development; analysis of key elements in the development process – internal and external compulsions, social mobilization and institutionalization economic development and social justice, integration; discussion of different models and strategies.
Professor Nayar

160-649A THE MASS APPROACH TO POLITICAL DEVELOPMENT: CHINA. An examination of the strategy of political and socio-economic development in contemporary China. Specific attention will be devoted to cultural and ideological foundations of socialization, mechanisms of policy adjustment, political and Party organization, decentralization, bureaucracy, and concepts such as telescoping of historic stages, goal motivation, and model emulation.
Professor Noumoff

* **160-660A STATE AND SOCIETY IN NON-DEMOCRATIC REGIMES.** The purpose of this course is to analyze the development of political regimes in selected non-democratic states. The states will include Mexico, Peru, Spain, Zaire, and others which will be dealt with in a more general way. The analysis will be based on both Weber and Marx and will attempt to elaborate a conceptual apparatus for comparisons.

* **160-671B THE THEORY AND EXPERIENCE OF REGIONAL INTERGRATION.** The relevant portions of the literature on integration and transnational relations in comparison to traditional inter-state relations will be examined in order better to understand the relations between Canada and the United States. Theoretical material and case studies. Each student will choose a problem in Canadian-American relations and examine the applicability of the available framework to his/her case. Discussion of weekly readings and a seminar length paper will be expected.
Professor Haskel

160-675A INTERNATIONAL SYSTEMS. This course will examine some of the central problem areas in the study of international systems: stratification, interdependence, power and influence, conflict and conflict-management, alliances, international organization and integration.
Professor Noble

* **160-676A RESEARCH METHODS IN INTERNATIONAL RELATIONS.** (Prerequisite: 160-612A and either 160-678A or 160-679A). An advanced seminar designed for doctoral students. This course will examine alternative research strategies currently being used to explore major theoretical problems in international relations. Students will be expected to read several research projects in depth and to critically assess the advantages and disadvantages of their research design.
Professor Stein

160-677A INTERNATIONAL CRISES. A theoretical and comparative analysis of state behaviour under crisis conditions. Several approaches and methods will first be explored: neo-traditional; decision-making; stimulus-response; bureaucratic polit-

CONCORDIA UNIVERSITY LIBRARY

ics; event data; repetition-reaction; and systemic. Thereafter, with active student participation, in the form of a workshop, the course will compare several crises using the analytic framework of structured empiricism; 1914; Korean War (1950); Berlin (1948, 1961); Cuba (1962); Sino-India (1962); Indo-Pakistan (1965); Arab-Israel (1967-1973). Hypotheses on state behaviour will be tested with the evidence uncovered by these case studies.
Professor Brecher

160-678B STATE BEHAVIOUR. The seminar will examine theoretical and empirical studies of decision-making, the policy-making process, and foreign policy behaviour. The capacity of each approach to explain and evaluate choice and behaviour will be assessed.
Professors Stein and Steinberg

160-679A INTERNATIONAL CONFLICT. An examination of the literature dealing with international conflict. Topics to be covered include the sources of international conflict, bargaining, strategies and dynamics of conflict, crisis behaviour, and the management of international conflict.

160-690A,B READING IN POLITICAL SCIENCE. A graduate student may take one reading course per academic year in a particular field and under the supervision of a member of staff.

160-700D Ph.D. ORAL ADMISSION EXAMINATION.

160-701D Ph.D. GRADUATE GENERAL WRITTEN EXAMINATION, First Field.

160-702D Ph.D GRADUATE GENERAL WRITTEN EXAMINATION, Second Field.

SEMINARS

160-715B POLITICAL THEORY. A seminar in comtemporary political science, with reference also to political philosophy and to the psychological bases and sociological affiliations of politics.
Professor Macfarlane

* **160-721 FEDERALISM.** The seminar will deal in a comparative manner with the political problems of federal societies. Topics for discussion will include theories of federalism, conflict pluralism, federal constitutional traditions and institutional forms. Research will be conducted into selected aspects of Canada and other federal societies.

160-724A AFRICAN POLITICS. The seminar deals with selected problems in contemporary comparative African politics and political thought. The work of the seminar centres around research papers prepared and presented by participants.
Professor Kunz

160-725B CULTURAL DUALISM. A seminar dealing with various aspects of French-English relationships in Canada.
Professor Thomson

* **160-726A CANADIAN LEGISLATURES.** The seminar will examine, in the light of recent research, the role of parliament and provincial legislatures in Canada in the policy-making process. Recent important changes in machinery (e.g. the expansion of committees) will be evaluated in the light of the changing character of Canadian politics and of questions of constitutional theory.
Professor Mallory

* **160-728B COMPARATIVE POLITICS.** For students planning field research, particularly but not exclusively in Western Europe, Canada, and the United States. Training in use of primary source materials; discussion of examples of current work; consideration of research problems and designs. Students present their own projects.

* **160-731B POLITICAL IDEOLOGIES.** This research seminar deals with selected problems of comparative political ideologies, their origins, functions and relationship to political action and institutions.
Professor Kunz

* **154-742B ECONOMIC AND POLITICAL DEVELOPMENT.** This course will discuss the continuing Canadian problems of unemployment, inflation and foreign ownership, the Harrod question, "Are monetary and fiscal policies enough?", the necessary integration of all elements of economic policy including trade, exchange rate, competition, resource and growth objectives.
Professor Kierans

* **160-745B MACHINERY OF GOVERNMENT.** This seminar will consist of a detailed examination of a problem in Canadian government and administration. Problems will include topics dealing with cabinet government, parliamentary organization, federalism, public administration and the impact of political forces on them.
Professors Mallory, Kierans and Weldon

160-747B DEPENDENCE AND DEVELOPMENT. Research oriented seminar on the problems of dependence and development in the Third World.
Professor Nayar

* **160-748B SOUTH ASIAN POLITICS.** An investigation into key political problems of India and Pakistan in their social and economic setting.

* **160-749A ASIAN POLITICAL PHILOSOPHY.** A graduate seminar designed to permit students with some training in either Asia or Philosophy to examine either the historic or contemporary policy of East, South, South-East, or West Asia.
Professor Noumoff

* **160-778B COMPARATIVE ANALYSIS OF FOREIGN POLICY.** A research seminar dealing with selected topics in foreign policy. Students will be expected to undertake original research from primary sources within their areas of interest.

160-779B COMPARATIVE ANALYSIS OF INTERNATIONAL CONFLICT. This seminar will examine recent research on processes of interstate conflict and conflict management. Particular attention will be paid to studies of conflict escalation and deescalation and to research on strategies of conflict reduction. Readings will include reports of major research projects in Europe and North America. Students will be expected to prepare a major paper in which they test competing models of conflict and strategies of conflict management, using data available from major research projects on interstate conflict.
Professors Stein and Steinberg

160-780A, 781B READING SEMINAR. A research seminar on a topic that is not covered in the regular seminars, but which is of interest to a group of students and a faculty member. The exact topic for the research papers will be determined by mutual agreement among students and faculty members involved.
Staff

160-799D Ph.D. ORAL COMPREHENSIVE EXAMINATION.

Undergraduate Courses for Qualifying Year and Graduate Students

When it is appropriate to his or her program, a graduate student may take an undergraduate course approved by his or her adviser. These courses are listed in the *Announcement of the Faculties of Arts, Science* and in the annual course list prepared by the Department in the Fall.

F9 DEPARTMENT OF PSYCHOLOGY

PROGRAMS

Graduate work in the Department of Psychology follows two main lines: experimental-theoretical and applied. Work in experimental-theoretical psychology leads to the M.A., M.Sc. and Ph.D. degrees in the psychology of human perception, cognition, learning and language, physiological, personality, social, child, psycholinguistics and quantitative psychology. Work in applied psychology leads to the Ph.D. degree in clinical psychology, and under special circumstances the M.Sc. (Applied) degree program is sometimes awarded.

Facilities for advanced research in a variety of fields are available within the Department itself. In addition, arrangements with the Departments of Psychology at the Allan Memorial Institute, Montreal Children's Hospital, Queen Mary Veterans' Hospital, the Douglas Hospital, and Jewish General Hospital, permit graduate students to undertake research in a hospital setting.

For full information about all programs, financial aid, and for application forms, contact the Graduate Admissions Secretary, Department of Psychology, McGill University, Stewart Biology Building, 1205 McGregor Ave., Montreal, Canada, H3A 1B1. Telephone 392-5742.

REQUIREMENTS

Admission

Admission to graduate work will depend on an evaluation of the student's research interests and aptitude for original contributions to knowledge or for professional contributions in the applied field. The usual requirement for admission is an honours or majors degree (B.A. or B.Sc.) in Psychology. This includes an introductory course plus six full courses (each equivalent to six semester hours). Experimental psychology, the theoretical development of modern ideas in psychology, and statistical methods as applied to psychological problems (equivalent to an introductory course) are essential. A knowledge of elementary physiology, physics or chemistry, and modern developments in other related biological or

McGILL UNIVERSITY LIBRARY

social sciences is desirable. An applicant who holds a Bachelor's degree but who has not met these usual requirements should consult a faculty member in his or her area of interest to determine which (if any) courses must be completed before an application can be considered. A student with insufficient preparation for graduate work may register as a special student in the Faculty of Arts or the Faculty of Science, and follow an appropriate course of study. Such registration requires the permission of the Department but carries no advantage with respect to a student's eventual admission to graduate studies.

NOTE: Applicants must submit to the Graduate Admissions Secretary by February 1: a completed application form, two copies of the personal academic background form, two copies of all university transcripts, two or more letters of recommendation, Miller Analogies and/or Graduate Record Examination scores, and a personal letter, outlining their experience, interests and objectives in psychology. Applicants should note that the deadline for many scholarships and fellowships is two to three months earlier than the February deadline.

Requirements for the M.A. and M.Sc. Degrees

Candidates must demonstrate a sound knowledge of modern theory, of its historical development, and of the logic of statistical methods as used in psychological experiment. They will be expected to have an understanding of the main lines of current work in other than their own particular field of specialization.

All candidates must take courses 204-650A, 204-650B and 204-660D, and in addition any other course specified by the Department. The primary concern of the candidate, however, is the thesis. A general comprehensive written and oral examination will be held which, in conjunction with the thesis, will determine the candidate's final standing for the degree.

Requirements for the Ph.D. Degree

The candidate for the Ph.D. degree in the theoretical-experimental program must demonstrate a broad scholarship, mastery of current theoretical issues in psychology and their historical development, and a detailed knowledge of his or her special field. A special comprehensive examination is written in one of the following: comparative and physiological psychology, learning and perception, social psychology and personality, measurement, developmental psychology, or any other appropriate area.

Candidates for the Ph.D. degree in clinical psychology must demonstrate a high standard of scholarship in psychology and aptitude for the professional application of psychological knowledge. The clinical program is designed primarily to train senior personnel for work in hospitals and clinics. A number of avenues of specialization are, however, possible. Some students may wish to prepare themselves for careers in university teaching or clinical research; others may have an interest in behaviour disorders in the field of developmental or educational psychology. The minimum time necessary to attain the degree is four years beyond the B.A. or B.Sc. degrees. No intermediate or terminal M.A. or M.Sc. degrees are awarded to students in the Ph.D. clinical program. All students are required to write a thesis and demonstrate research capabilities.

The Department of Psychology does not ordinarily require an examination in a foreign language. It should be noted, however, that all students planning to practise in the province of Québec will be examind on their proficiency in French before being admitted to the professional association.

COURSES AND SEMINARS

204-455D RESEARCH METHODS IN PSYCHOLINGUISTICS.

204-601D Reference number for comprehensive examination written by candidates for the M.A., M.Sc., or M.Sc. (A.) degree.

204-615A DIAGNOSTIC METHODS (CHILDREN).

204-616A PRACTICUM – CHILD DIAGNOSTICS.

204-617B DIAGNOSTIC METHODS (ADULTS).

204-618B PRACTICUM – ADULT DIAGNOSTICS.

204-630A PSYCHOPATHOLOGY.

* **204-635D ADVANCED EDUCATIONAL PSYCHOLOGY.**

204-641D BEHAVIOUR DEVIATIONS. Appraisal and Modification.

204-650A ADVANCED STATISTICS I. A course in advanced statistics with specialization in experimental design.

204-651B ADVANCED STATISTICS II. A course in advanced statistics with specialization in regression techniques.

204-670D RESEARCH PROBLEMS IN CLINICAL PSYCHOLOGY.

204-701D Reference number for comprehensive preliminary Ph.D. examinations.

204-702G SUMMER INTERNSHIP – JUNIOR.

204-703G SUMMER INTERNSHIP – SENIOR.

204-704D ADVANCED INTERNSHIP.

204-705D Reference number for research project of M.Sc. (A.) candidates.

204-710 to 715 COMPARATIVE AND PHYSIOLOGICAL PSYCHOLOGY.

204-716 to 721 LEARNING AND MOTIVATION.

204-722 to 727 PERSONALITY AND SOCIAL PSYCHOLOGY.

204-728 to 733 CLINICAL PSYCHOLOGY.

204-734 to 739 DEVELOPMENT AND LANGUAGE.

204-740 to 745 PERCEPTION AND COGNITION.

204-746 to 751 QUANTITATIVE AND INDIVIDUAL DIFFERENCES.

F10 DEPARTMENT OF SOCIOLOGY

Stephen Leacock Building
855 Sherbrooke Street W.
Montreal, PQ
Canada H3A 2T7

STAFF

Professors – RICHARD HAMILTON; MAURICE PINARD; DAVID SOLOMON *(Chairman);* WILLIAM WESTLEY *(on leave 1977-78)*

Associate Professors – MICHAEL P. CARROLL; ROGER G. KROHN; GERTRUDE ROBINSON; MALCOLM SPECTOR; DONALD VON ESCHEN

Assistant Professors – WILLIAM W. EATON; JOSEPH LELLA; ULI LOCHER; FRANCOIS NIELSEN; PRUDENCE RAINS; RACHEL ROSENFELD; MICHAEL SMITH; MORTON WEINFELD

REQUIREMENTS

Admission

The Department offers training leading to the degrees of Master of Arts and Doctor of Philosophy in Sociology. For admission to candidacy, applicants must have a Bachelor's degree with a standing equivalent to a Cumulative Grade Point Average (CGPA) of at least 3.0 out of a possible 4. The degree may be either in Sociology – in which case it should be equivalent to the honours B.A. degree at McGill – or it may be in another relevant social science. In the latter case, the applicant may be required to take some additional Sociology courses to fill gaps in his or her background. For a detailed description of courses open to graduate and undergraduates, and of preparation required of McGill University honours students, candidates should consult the Announcement of the Faculties of Arts, Science.

For an application to be considered, it is essential that applicants submit with their applications the results of the Aptitude Test of the Graduate Record Examination. In addition, applicants who have specialized in Sociology and who wish to be considered for admission directly into the one-year M.A. program or into the Ph.D. program must also submit the results of the Advanced Test in Sociology of the Graduate Record Examinations. Arrangements to take these examinations should be made directly with the Educational Testing Service, Box 955, Princeton, New Jersey 08540, USA.

In addition, each applicant is asked to submit two letters of recommendation and a transcript of his/her university-level grades along with examples of his/her written work. The deadline for completed applications is March 1.

Candidates who lack sufficient preparation in the social sciences, but whose academic record justifies eventual admission to the graduate program, must register for a qualifying year during which they are required to take courses to widen their knowledge of Sociology. These courses are normally those which are open to graduate and undergraduate students. Candidates must achieve at least second class standing in these courses and an average in all courses of at least 75%; in general, they must, in the opinion of the Department, have achieved sufficient preparation in the subject matter of Sociology before they will be allowed to proceed further into graduate work. Courses in statistics, research methods and sociological theory are required of all qualifying candidates.

A number of teaching and research assistantships are available to qualified graduate students. Students who wish to be considered for such assistantships should inform the Graduate Adviser of the Department. In most circumstances, students who accept assistantships may expect to spend longer than the minimum time to complete their degrees.

Requirements for the M.A. Degree

The program of study is designed to give the candidate an advanced understanding of some major fields of Sociology and to provide him/her with research experience through the preparation of a short thesis. Two full sessions of resident study at McGill is the normal minimum requirement for a Master's degree. In exceptional circumstances the program may be completed in one full session. In such cases all components of the program must have been completed and evaluated before the commencement of the second session. The program will normally include three courses per term. For some candidates, additional courses may be required if, in the opinion of the Department, the candidate lacks sufficient preparation. A thesis is required of all candidates. In addition, candidates are required to demonstrate a knowledge of some particular area in Sociology by passing an examination in that area.

Further details about the requirements are available and can be obtained from the Graduate Secretary in the Department.

Requirements for the Ph.D. Degree

A minimum of three years of study is required. The first year of the Ph.D. program is identical with the program for the M.A. degree. Admission to study for the Ph.D. degree is therefore usually granted to students only after they have attained the M.A. degree in Sociology with high standing. They are then permitted to proceed to the Ph.D. degree in two further years of study subject to the course examination, language and thesis requirements mentioned below. Only students who are very well prepared can expect to complete the total program in the minimum time.

An applicant who has received a master's degree at a university other than McGill should submit a copy of his/her thesis or evidence of equivalent research experience with his/her application for admission.

Course Requirements

During the second Ph.D. year, candidates must complete three courses per term. By the end of the second year, they must have completed both the graduate methods seminar on quantitative methods and the one on qualitative methods.

Examination Requirements

Candidates must take four examinations. These will include examinations in:

(1) Sociological theory, and
(2) three of the special fields of Sociology

One of these special fields can be that on which the candidate was examined in the M.A. program if that examination was passed with distinction.

These examinations must be completed and the student's candidacy for the degree established no later than the end of the third year of graduate study.

Language Requirement

Candidates must demonstrate ability to read French with high proficiency or to read another language which is relevant to the candidate's field of research. The language requirement should be met by the end of the third Ph.D. year.

Thesis Requirement

Candidates are required to submit a thesis on an approved topic. Approval of the topic will usually follow submission of a research proposal. Further details on the requirement and regulations for thesis and for the fields in which the Department is prepared to direct research may be obtained from the Graduate Secretary of the Department.

COURSES AND SEMINARS

All 300, 400 and 500 level courses listed in the Faculty of Arts announcement are open to graduate students as preparation and recommended prerequisites for participation in research seminars. Students must complete a 300 or 400 level course or its equivalent in a subject area as a prerequisite for a seminar in that area.

166-503A SEMINAR: THEORETICAL PARADIGMS IN SOCIOLOGY.
Professor Carroll

166-504B SEMINAR: QUANTITATIVE METHODS OF SOCIAL RESEARCH.

GENERAL INFORMATION

The Faculty of Education offers programs leading to M.A., M.Ed. and D.Ed. degrees. Applicants should be advised that such degrees do not confer certification to teach in the Province of Québec.

The M.A. degree provides opportunities for suitably qualified teachers and other professionals to deepen their knowledge and to gain some facility in research in a major area of education. At present the areas in which students may elect to specialize are Educational Administration, Comparative Education, Educational Psychology, Counsellor Education, Physical Education and History and Philosophy of Education. Students complete their degree work by submitting a thesis in the area of their specialization.

The structure of the M.Ed. degree is different since its purpose is to enable candidates to gain added competence in a professional field, eg., Educational Administration, Counsellor Education, Reading, Special Education, Educational Psychology, or in the teaching of a specific school subject. Programs leading to M.Ed. degrees in teaching subjects are offered in Biology, Chemistry, Physics, Mathematics, Geography, History, Home Economics and French as a Second Language, and English as a Second Language. The thesis is not a requirement of the M.Ed. programs, though students in the teaching subject programs are required to submit a monograph, and others may be asked to serve a period of internship.

An M.Ed. program in Elementary Education has recently been approved by the Graduate Faculty. Enquiries may be directed to Professor L. Haworth, Dept. of Elementary Education.

The Faculty has one formal doctoral program. This is a professional degree in Counsellor Education which is intended to enable selected students who have already attained the level of the M.Ed. in Counsellor Education to continue their studies in breadth and depth and to carry out a significant inquiry to be reported as a doctoral thesis.

At present the Faculty of Education does not offer a formal program leading to a Ph.D. However, under the Regulations set out in the Announcement of the Faculty of Graduate Studies and Research, it is possible for exceptionally well qualified candidates to proceed to the degree of Ph.D. by making direct application to the Dean of the Faculty of Graduate Studies and Research. Such candidates should have a very clear idea at the outset of the area of their prospective research. They should first contact the department concerned to discuss with them the proposed research. Currently the Departments of Social Foundations of Education, Educational Psychology, Educational Administration and English (Reading) have doctoral students under this provision. It should be noted that a Ph.D. in Educational Psychology has received University approval and is awaiting government approval. It offers optional specialization in instructional development, school psychology, or special education in addition to more general areas in the subject. A D.Ed. in Educational Administration and a Ph.D. in Comparative Education are in the developmental stage.

Language Requirement for Professions

Quebec law now requires that candidates seeking admission to provincially-recognized professional corporations must possess a working knowledge of the French language, i.e. be able to communicate verbally and in writing in that language. See *General Information and Faculty Regulations* section.

Entrance Requirements for M.A. and M.Ed. Degrees

For most programs, candidates must hold a bachelor's degree from a recognized university with a standing equivalent to a C.G.P.A. of 3.0. A concentration of courses, related to the area chosen for graduate work, equal to a major program, is usually required, and also a Permanent Quebec Teaching Diploma, or its equivalent, with a second class standing. Exceptionally well-qualified candidates may sometimes be admitted to masters' programs in certain departments before they have completed the two years of probationary teaching. Teacher

certification requirements may be waived for candidates applying for the M.A. program in Pysical Education and Social Foundations of Education and for the M.A. or M.Ed. in Counsellor Education.

Most departments have additional entrance requirements which may be found in the entries of individual departments.

Length of Study for M.A. and M.Ed. Degrees

Most programs can be completed by full time or half time study or by a mixture of both. A Summer Session program is offered but it is not normally possible to complete degrees wholly by summer attendance.

All masters' degrees in the Faculty of Education take at least two years of full time study, or the equivalent in Summer Session and part time work, to complete.

Entrance Requirements for D.Ed. Degree in Counsellor Education

Candidates for the Doctoral program in Counsellor Education must hold the degree of M.Ed. (Counsellor Education) from McGill University, or its equivalent, and have maintained good second class standing in the degree. In addition applicants for the program must supply personal and educational data, take prescribed tests and engage in an interview procedure. For otherwise acceptable candidates who do not meet the academic requirements, courses of qualifying study may be prescribed.

There is no second language requirement.

Length of Study for D.Ed. Degree in Counsellor Education

A minimum period of two years of full time study, including the summer session between the two academic years, is required to fulfill the residency requirement for this degree. A maximum period of seven years may elapse between entrance into the program and the attainment of the degree.

Fees

Students must register every year and must be registered for the Session in which they graduate. For tuition fees see the *General Information and Faculty Regulations* Section.

Applications

Applications for admission to the Faculty of Graduate Studies and Research for degrees in Education should be made to the *Director of Graduate Studies, Faculty of Education, McGill University, 3700 McTavish St., Montreal H3A 1Y2, P.Q.* Summer session and Winter session candidates in Counsellor Education, Educational Administration, and M.Ed. in Special Education are required to apply by March 1. Other candidates applying for admission for the first time and wishing to start in the Summer Session must apply before April 1, and those interested in commencing studies in the fall must apply by July 3. Applications in some programs will close prior to these deadlines when all places have been filled.

NOTE: Admission to the Faculty of Graduate Studies and Research for graduate programs in Education is made by the Dean of the Graduate Faculty on the basis of the undergraduate record and satisfactory professional training. Admission to the appropriate courses is made by the individual departments of the Faculty of Education, and where appropriate, by the departments concerned in other Facultities in consultation with the Faculty of Education.

CENTRE FOR LEARNING AND DEVELOPMENT

The Centre is an independent University unit having the overall goal of helping to improve learning and teaching in higher education. Most of its academic staff are in the Faculty of Education. In addition to its service role to faculty and the University, the Centre can accommodate a small number of graduate students interested in making use of the Centre as a unique site for research in instructional development, evaluation, and educational innovation. Such arrangements are most often made through programs in Educational Psychology, but have been possible through other programs as well.

The Centre is located in the Macdonald Chemistry Building. For more information please telephone 392-5273.

KEY SESSIONAL DATES

August 15	Deadline for submitting doctoral theses for Fall Convocation.
August 22	Deadline for submitting masters' theses for Fall Convocation.
September 12	Lectures begin, first term.
November 8	Convocation.
December 9	Lectures end, first term.
January 13	Registration.
January 16	Lectures begin, second term.
March 13	Deadline for submitting doctoral theses for Spring Convocation.
March 20	Deadline for submitting masters' theses for Spring Convocation.
April 14	Lectures end, second term.

DEPARTMENT OF COUNSELLOR EDUCATION

Professor–FLORENT DUMONT (Chairman)

M.A. Counsellor Education

Additional Entrance Requirements

1) Normally, the first step is to secure an interview with the Chairman of the Department or his deputy.

MCGILL UNIVERSITY LIBRARY

This may be waived for prospective students residing at a great distance from the University.
2) Additional forms must be filed for admission to the Department.
3) Each student is required to take a battery of standardized tests including the Miller Analogies Test and the Graduate Record Examination (Verbal and Quantitative elements). Requirements may be waived for certain applicants. The Department Chairman will inform applicants further during their interviews.

PROGRAM REQUIREMENTS

Students are required to complete the equivalent of ten half courses in addition to thesis preparation (414-621D) and a thesis. The equivalent of three half courses may be selected by the student within the constraints presented below.

Required Courses

The following courses are offered by the Department of Educational Psychology.

414-602D THE USE OF STATISTICS IN EDUCATIONAL PROCEDURES.

414-621D THESIS PREPARATION. This course is offered jointly by the Departments of Educational Psychology and Counsellor Education.

The following courses are described in the M.Ed. Counsellor Education program.

412-602A,B PHILOSOPHY OF GUIDANCE. (Half Course).

412-603A,B THEORIES OF PERSONALITY. (Half Course).

412-605A,B INTRODUCTION TO THEORIES IN COUNSELLING. (Half Course).

412-640A,B ADOLESCENT DEVELOPMENT. (Half Course).

412-641A,B PSYCHOLOGICAL TESTING. (Half Course).

Optional Courses

With the approval of the Department, students must elect one half course from the Department of Counsellor Education and one full course from the Faculty of Education or other Faculties of the University.

M.Ed. Counsellor Education

The Department offers three majors: Elementary School Counselling, Secondary School Counselling and Student Personnel Services (College and University). Each applicant must select a major when applying.

Additional Entrance Requirements

1) Normally, the first step is to secure an interview with the Chairman of the Department or his deputy. This may be waived for prospective students residing at a great distance from the Univeristy.
2) Additional forms must be filed for admission to the Department.
3) Each student is required to take a battery of standardized tests including the Miller Analogies Test and the Graduate Record Examination (Verbal and Quantitative elements). These requirements may be waived for certain applicants. The Department Chairman will inform applicants further during their interviews.

PROGRAM REQUIREMENTS

Students who are certified teachers or who have the equivalence in professional background must complete the equivalent of six full courses. In addition to this they must spend one year in a supervised internship. The Department prefers that the program be undertaken, normally, on a full-time basis. Beyond the six full courses indicated above, degree candidates may be required to take up to four additional half-courses to remedy deficiencies in their academic backgrounds.

Required Courses Common to All Three Majors:

412-602A,B PHILOSOPY OF GUIDANCE. (Half Course). Philosphical foundations of guidance; history, growth, and recent trends of the guidance movement. Orientation to the field in respect to the functions, scope, organization, and administration of counselling services.

412-603A,B THEORIES OF PERSONALITY. (Half Course). Study and comparison of contemporary theories of personality. Emphasis upon theories having significance for counselling and assessment principles. Recent research in personality theory.

412-604A,B DYNAMICS OF GROUP WORK. (Half Course). Study of group organization, with opportunity to develop skills in group leadership. Interpretation of group interaction and typical roles played by members in groups.

412-605A,B INTRODUCTION TO THEORIES IN COUNSELLING. (Half Course). Correlation and interpretation of counselling data and the study of individual cases. Emphasis on the process in counselling relationship, and counselling techniques.

412-611A,B INDIVIDUAL TESTING. (Half Course). This course is intended to make the student familiar with the individual tests in common use and to give him or her some degree of proficiency in their application. Special emphasis will be placed on the Binet and Wechsler scales. There will be opportunities for diagnostic testing under supervision.

414-610A,B, EDUCATIONAL MEASUREMENT. (Half Course). See M.A. Educational Psychology.

Required Courses in Elementary School Counselling Major:

* **412-620A, ADVANCED CHILD PSYCHOLOGY.** (Half Course). Study of the growing person from birth to pre-adolescence with emphasis on the background and methods as well as research on the principles of child development, disturbances in child development, various areas of development, and characteristics of different age levels.

412-621A,B PSYCHOLOGICAL TESTING IN THE ELEMENTARY SCHOOL. (Half Course). Group testing in the elementary school, including readiness, reading, diagnostic, intelligence, interest, aptitude, and other tests.

* **412-622A,B TRENDS IN ELEMENTARY SCHOOL COUNSELLING.** (Half Course). Social, psycholigical, educational factors in vocational development of elementary school children. Implications of the elementary curriculum for career planning and decision making. Functions, relationships, organization, and administration of guidance in elementary education.

* **412-623A,B INTRODUCTION: THE EXCEPTIONAL CHILD.** (Half Course). Nature, identification, cause, and treatment of children's disabilities and their influence on emotional, social, educational, and vocational adjustment. Special services required for exceptional children to develop to their maximum capacities.

412-625A PRACTICUM IN ELEMENTARY SCHOOL COUNSELLING. Practices in counselling. Adapting to counselling sessions person to person, educational, occupational, and social relationships. Practice with individual cases.

412-626B PRACTICUM IN ELEMENTARY SCHOOL COUNSELLING. (See 412-625A for description).

412-639D INTERNSHIP IN ELEMENTARY SCHOOL COUNSELLING. (One Full Year). Study, observation, and practice at respective levels in selected settings; integration of theory and practice through Faculty supervision of experience, group seminar, and individual conferences.

Required Courses in Secondary School Counselling Major:

412-640A,B ADOLESCENT DEVELOPMENT. (Half Course). Normal development of adolescents through young adulthood. Problems and concerns of adolescence which occur with physical, social and personal development, in the context of family and school adjustment.

412-641A,B PSYCHOLOGICAL TESTING. (Half Course). Theory and application of group tests appropriate for adolescents and adults. Specific instruments; intelligence, aptitude, interest and personality, analyzed in terms of basic concepts, reliability, validity, and practical utilization.

412-642A,B INFORMATION SERVICES IN THE SECONDARY SCHOOL. (Half Course). Procedures and systems of utlizing and communicating social, educational, and occupational information and materials. Structure of occupations theories of vocational development.

412-663A,B ORGANIZATION AND ADMINISTRATION OF SCHOOL PERSONNEL SERVICES. (Half Course). The functions, relationships, organization, and administration of guidance services in the secondary school and student personnel services.

412-645A PRACTICUM IN SECONDARY SCHOOL COUNSELLING. (See course description for 412-625/626).

412-646B PRACTICUM IN SECONDARY SCHOOL COUNSELLING. (See above).

412-659D INTERNSHIP IN SECONDARY SCHOOL COUNSELLING. (One Full Year). See course description for 412-639D in the Elementary School Counselling Major.

Required Courses in Student Personnel Services Major:

412-640A,B ADOLESCENT DEVELOPMENT. (Half Course). See course description in Secondary School Counselling Major.

412-641A,B PSYCHOLIGICAL TESTING. (Half Course). See course description in Secondary School Counselling Major.

412-662A,B INFORMATION SERVICES IN STUDENT PERSONNEL WORK. (Half Course). See course description for 412-642A,B in the Secondary School Counselling Major.

412-663A,B ORGANIZATION AND ADMINISTRATION OF SCHOOL PERSONNEL SERVICES. (Half Course). See course description in Secondary School Counselling Major.

412-665A PRACTICUM IN STUDENT PERSONNEL COUNSELLING. (See course description for 412-625/626).

412-666B PRACTICUM IN STUDENT PERSONNEL COUNSELLING. (See above).

412-679D,E,F,G INTERNSHIP IN STUDENT PERSONNEL COUNSELLING. (One Full Year). See course description for 412-639D in the Elementary School Counselling Major.

NOTE: The program more than meets the requirements for admission to membership of the Professional Corporation of Guidance Counsellors of Québec.

CONCORDIA UNIVERSITY LIBRARY

D.Ed. Counsellor Education

The Department offers three majors: Elementary School Counselling, Secondary School Counselling and Student Personnel Counselling (College and University). Each applicant must select a major when applying.

The offerings in the doctoral program consist of courses in three areas: Foundations of Education, Related Disciplines, and Counselling Psychology.

Additional Entrance Requirements

1) Normally, the first step is to secure an interview with the Chairman of the Department. This may be waived for prospective students residing at a great distance from the University.
2) Additional forms must be filed for admission to the Department.
3) Each student is required to take a battery of standardized tests including the Miller Analogies Test and the Graduate Record Examination (Verbal and Quantitative elements). This requirement may be waived for certain applicants. The Department Chairman will inform applicants further during their interviews.

PROGRAM REQUIREMENTS

1) Two full courses in Foundations of Education unless they have the equivalents in their backgrounds.
2) One full course in a related discipline in the University.
3) The equivalent of five full courses in the area of their specializations.
4) One year of field work (412-679D,E,G)
5) A comprehensive examination (412-701D).
6) A thesis.

Foundations of Education

Each candidate, in consultation with the Department, will select a minimum of two courses from the following:

† **411-642D DEVELOPMENT AND ADMINISTRATION OF THE SCHOOL CURRICULUM.**

† **413-617D HISTORICAL FOUNDATIONS OF CONTEMPORARY EDUCATION.**

† **413-627D PHILOSOPHIC ANALYSIS OF THE PROBLEMS OF EDUCATION.**

† **44-635D STUDIES IN EDUCATIONAL PSYCHOLOGY: LEARNING AND INTELLIGENCE.**

†Descriptions for these courses may be found in the programs of the appropriate Departments.

Related Disciplines

Each candidate, in consultation with the Department, will select one or more full courses from offerings in related disciplines available in the University.

Counselling Psychology

All candidates will take the following courses unless they have had their equivalent:

* **412-620A,B ADVANCED CHILD PSYCHOLOGY.** (Half Course). Study of the growing person from birth to pre-adolescence with emphasis on the background and methods as well as research on the principles of child development, disturbances in child development, various areas of development, and characteristics of different age levels.

412-709D ADVANCED THEORY: COUNSELLING MODELS AND SYSTEMS AND SMALL GROUP COUNSELLING. Advanced study of the counselling relationship and process with comparison between the contemporary models and systems. Emphasis on the phenomenological, behavioural and analytic models; research findings relative to these models and implications for counselling practice. Applicability of these models to small group counselling, including methods and problems of groups in counselling; research studies and analysis of small group interaction.

* **412-710A,B THE DISORGANIZED PERSONALITY.** (Half Course). Nature of disorganized behaviour and the adjustment process; adjustment and learning; variety of adjustment reactions; major adjustment mechanisms; the effect of unconscious psychological processes upon behaviour; consideration of the implications for counselling.

412-711D ADVANCED METHODS OF EDUCATIONAL STUDY AND RESEARCH DESIGN. Statistical methods as applied to educational data and problems are systematically studied, including topics such as: correlation and regression, analysis of variance, and other tests of significance including selected non-parametric techniques. Training is given in identifying research problems and organizing useful means for research, and interpreting and reporting observed phenomena.

Required Courses in Elementary School Counselling Major:

412-717D SEMINAR: INDIVIDUAL ANALYSIS AND PROGRAMS FOR EXCEPTIONALITY. Advanced study of diagnostic instruments, with emphasis upon the analysis, interpretation, and integration of all pertinent data; use of projectives, especially in play activities; implications for learning and adjustment problems of the elementary school child.

Identification and needs of exceptionality; special emphasis on programs that have been developed from the education of the exceptional child; study of relevant research dealing with the physical, mental, emotional, and social traits of all types of exceptional children.

412-787D SEMINAR: RESEARCH PROBLEMS IN ELEMENTARY SCHOOL COUNSELLING. The seminar will consist of supervised study of selected topics for the particular option selected. These will be reported on in the seminar and their implications for research discussed. Current research and professional problems in counselling common to all levels will be covered with emphasis on recent literature. Some of these problems are: unified philosophy of the field, ethics of the profession, and legal responsibilities.

412-797D SUPERVISED FIELD WORK IN ELEMENTARY COUNSELLING. (One Full Year). Study, observation, and practice at respective levels in selected settings; integration of theory and practice through supervision of experience, group seminar and individual conferences.

Required Courses in Secondary School Counselling Major:

* **412-720D SEMINAR: CAREER DEVELOPMENT THEORY, PHILOSOPHY AND ORGANIZATION OF EDUCATIONAL PERSONNEL SERVICES.** Contibutions of contemporary career theories to the understanding of the processes and the determinants of career choice and adjustment; life stages and career patterns in personal and vocational development; study of selected problems, designs and outcomes of research in career development.

Analysis of the inter-related functions of all types of specialized student personnel workers with particular reference to their role in the total educational program, such as: admission practices, social systems, provision for advisement and counselling, student activities and self-government, administration of financial aid, faculty-student relations, and the principles governing the scope of such services and adapting them to educational institutions of various sizes and levels.

412-789D SEMINAR: RESEARCH PROBLEMS IN SECONDARY SCHOOL COUNSELLING. See course description for 412-787D in the Elementary School Counselling Major.

412-796D SUPERVISED FIELD WORK IN SECONDARY SCHOOL COUNSELLING. (One Full Year). See course description for 412-797D in the Elementary School Counselling Major.

Required Courses in Student Personnel Counselling Major:

* **412-720D SEMINAR: CAREER DEVELOPMENT THEORY, PHILOSOPHY AND ORGANIZATION OF EDUCATIONAL PERSONNEL SERVICES.** See course description in Secondary School Counselling Major.

412-788D SEMINAR: RSEARCH PROBLEMS IN STUDENT PERSONNEL SERVICES. See course description for 412-787D in the Elementary School Counselling Major.

412-798D SUPERVISED FIELD WORK IN STUDENT PERSONNEL SERVICES. (One Full Year). See course description for 412-797D in the Elementary School Counselling Major.

Candidates having special interests and needs not met by other available courses may register for the following:

412-770D INDIVIDUAL READING. Candidates may, with the consent of the Department, elect this individual reading and conference course in lieu of one of the above courses.

Required for all Doctoral students:

412-701D COMPREHENSIVE EXAMINATION.

DEPARTMENT OF EDUCATION IN ENGLISH

Professor–P. DIAS (Chairman)

M.Ed. Teaching of Reading

Professor–R. EARLE *(Program Director)*, M.W. ANULLS, *Associate Program Director)*

Additional Entrance Requirements

1) The candidate must demonstrate familarity with the procedures commonly used in the teaching of reading. This requirement will normally be met by possessing a Reading Diploma from McGill or its equivalent. Before applying, interested persons are strongly encouraged to meet one of the staff to talk over the program. Call 392-8888 for an appointment or write the Reading Centre.
2) The candidate's undergraduate record must show a suitable concentration in English, Psychology or Education. Work record must show appropriate experiences of both regular classroom and reading or other special settings.
3) Four letters of recommendation are required: two from past university level instructors; one from an education supervisor; one from the candidate indicating knowledge of the program, personal goals and any additional information which might be helpful to the decision committeees.
4) Applications will close each spring as space in the program is filled.

Program Requirements

Students are required to complete the equivalent of eight full courses. Six required courses are listed below. The course 427-670D covers the work done in completing the M.Ed. paper. The final two courses are selected by the student with the approval of the Department. See comments under **Options** for further details.

Required Courses in Reading:

427-665D ADVANCED STUDY OF READING INSTRUCTION. Principles, approaches, techniques and materials for teaching reading in the elementary and Secondary School within the context of total language development; stimulation of desirable reading habits and tastes, provision for individual differences, evaluation and reporting of pupil progress; observation of effective practices in schools.

427-666D AND 427-667D. DIAGNOSIS AND TREATMENT OF READING DISABILITY. (Two related and sequential full courses which cannot be taken separately.) Causes, diagnosis and treatment of reading disability including neurological, physiological, psychological and social factors; use of diagnosis instruments, constuction of informal diagnosis measures; observation of diagnosis and treatment in schools, clinics and hospitals; supervised individual case studies including diagnosis and treatment.

427-669A,B SUPERVISION OF THE TEACHING OF READING. (Half Course). Problems of organization, administration, supervision and curriculum development in reading with particular emphasis on non-graded patterns of instruction and on provision for individual differences in rates and levels of achievement; the evaluation of instructional materials and equipment; the organization of workshops and in-service training.

427-670D SPECIAL PAPER ON THE TEACHING OF READING. Selection and exploration of a specific aspect of the teaching of reading, under the guidance of a faculty adviser; scholarly presentations of a survey and critique of the literature, and of conclusions arrived at by an original treatment.

427-671D PRACTICUM IN READING. Instruction of groups and individuals at various levels and various rates of learning; conferences and the preparation of case studies.

Options:

The equivalent of two full graduate courses approved by the student's adviser. These must include either 414-610A,B EDUCATIONAL MEASUREMENT (Half Course) and 414-645A,B DIAGNOSIS AND ASSESSMENT OF LEARNING PROBLEMS (Half Course) or 414-602D THE USE OF STATISTICS IN EDUCATIONAL PROCEDURES (Full Course). The remaining courses are to be selected with the approval of the Department.

DEPARTMENT OF EDUCATIONAL ADMINISTRATION

Professor – GEOFFREY B. ISHERWOOD (Chairman)

M.A. Educational Administration

Professor – G.B. ISHERWOOD *(Program Director)*

Additional Entrance Requirements

(1) Normally a minimum of two years of educational experience.
(2) A statement indicating the candidate's academic experience, professional teacher training (or rationale for its non applicability), teaching and/or other related experience in relationship to future career plans.
(3) Two letters of recommendation from administrative superiors attesting to the candidate's potential as an administrator to be forwarded directly to the Chairman of Educational Administration.

Program Requirements

The candidate must complete four and one half courses plus a thesis as outlined in the following description with the advice of the department.

Required Courses:

411-612D PRINCIPLES OF EDUCATIONAL ADMINISTRATION. This introductory course deals with the following topics: administration as a field of study, organizations, administrative behaviour, personnel administration, communications. *First Course.*

414-610A,B EDUCATIONAL MEASUREMENT (Half Course). See M.Ed. Special Education.

411-621D THESIS PREPARATION. Seminars for the thesis to include the definition of a problem research design, methodology and the supervision of the thesis. Successful presentation of the thesis completes the requirements for this course. Prerequisites: 411-623D, 411-612D, 414-610A,B.

* **411-623D THEORY AND RESEARCH IN EDUCATIONAL ADMINISTRATION.** The contribution of recent research findings particularly in sociology and social psychology to an understanding of organizational structure leadership, decision making and motivation in the administration of schools and school systems. Prerequisite 411-612D Corequisite 414-610A,B.

either

411-655A,B CASE STUDIES IN ELEMENTARY SCHOOL ADMINISTRATION. (Half Course). The interpretation and discussion of Case Studies relevant to the elementary scene in Québec through the use of role playing discussion, video-taping and simulation exercises. *(Last Course).*

or

411-656A,B CASE STUDIES IN SECONDARY SCHOOL ADMINISTRATION. (Half Course). The interpretation and discussion of Case Studies relevant to the secondary scene in Québec through the use of role playing, discussion, video-taping and simulation exercises. *(Last Course).*

Options:

One and one half courses approved by the student's Adviser.

M.Ed. Educational Administration

Professor – R.H. TALI *(Program Director)*

Additional Entrance Requirements

(1) Normally a minimum of two years of educational experience.
(2) A statement indicating the candidate's academic experience, professional teacher training (or rationale for its non applicability), teacher and/or other related experience in relationship to future career plans.
(3) Two letters of recommendation from administrative superiors attesting to the candidate's potential as an administrator to be forwarded directly to the Chairman of Educational Administration.

Program Requirements

The candidate must complete the equivalent of eight full courses as outlined in the following description with the advice of the Department.

Required Courses:

411-612D PRINCIPLES OF EDUCATIONAL ADMINISTRATION. See M.A. Educational Administration. *First Course.*

414-610A,B EDUCATIONAL MEASUREMENT. (Half Course). See M.Ed. Special Education.

either

411-655A,B CASE STUDIES IN ELEMENTARY ADMINISTRATION. See M.A. Educational Administration. *Last Course.*

or

411-656A,B CASE STUDIES IN SECONDARY ADMINISTRATION. See M.A. Educational Administration. *Last Course.*

Options in Educational Administration

The equivalent of six additional full courses must be taken. At least four of these from the following:

* **411-623D THEORY AND RESEARCH IN EDUCATIONAL ADMINISTRATION.** See M.A. Educational Administration.

411-628B SCHOOL PERSONNEL MANAGEMENT I. (Half Course). (Prerequisite: 411-612D). The major personnel processes and techniques involved in human resources administration in educational organizations. The course deals with recruitment, manpower planning, selection and the training of school personnel.

411-629C,L SCHOOL PERSONNEL MANAGEMENT II. (Half Course). (Prerequisite: 411-628B). Selected school personnel tasks to include job analysis, job evaluation, job enrichment and differentiated staffing, Human motivation and satisfaction will be considered in relation to these personnel functions. (For school administrators actively involved in school personnel work).

* **411-630A,B ADMINISTRATION OF EDUCATION IN QUEBEC.** (Half Course). Consideration of the system of education in Québec. The focus will be, first, on the basic legal framework of education in Québec and the principal legal documents, and second, on the educational system in interaction with other social systems and with society as a whole.

* **411-631D ADMINISTRATION OF EDUCATION IN CANADA.** This course is intended to provide an overview of the structures of education, federally and provincially. Organization, legislation, and provincial commission reports are studied. Comparisons and contrasts between provincial educational programs are considered, with particular emphasis on education in the Province of Québec.

* **411-632D SCHOOL FINANCE AND THE ECONOMICS OF EDUCATION.** A foundation course in revenue income for education in Canada, in general and in the Province of Québec specifically, as it relates to the ongoing process of budget and school management.

* **411-635A,B FISCAL ACCOUNTABILITY FOR THE SCHOOLS.** (Half Course). Consideration of the schools' responsibility to the public in maintaining high quality education within the limitations of accountability and organizational framework. Budgeting and evaluation of pupil progress will be studied as the measures of the schools' fulfilment of responsibility.

411-636A,B SCIENTIFIC MANAGEMENT AND HUMAN RELATIONS IN EDUCATIONAL ADMINISTRATION. (Half Course). Study of the major tenets of the scientific management movement and the human relations movement in administration and their applicability to educational institutions. Selected works in both areas will be studied and developed to give students historical insights into modern school management trends.

411-637A,B BEHAVIOURAL SCIENCES AND EDUCATIONAL ADMINISTRATION. (Half Course). Study of human behaviour within the school organization. Selected works in the areas of human motivation, group decision making, professionalism etc. will be analyzed.

411-642D DEVELOPMENT AND ADMINISTRATION OF THE SCHOOL CURRICULUM. This course deals with the development of the school curriculum at various age levels and in different settings with the organization of the school and the

classroom to implement curricular plans. A study will be made of a variety of organizational schemes and of their development and implementation.

411-645A,B PRACTICUM IN THE SUPERVISION OF INSTRUCTION. (Half Course). Investigation of past and current theory and research dealing with supervision. Leadership and evaluation as roles of supervision will be analyzed in the school setting, with emphasis placed on supervision as the improvement of instruction and learning. Practical experience will include supervision of student teaching.

411-646A,B EDUCATIONAL PLANNING AND MANAGEMENT. (Half Course). An introduction to the theories, techniques, computational methods and evaluation criteria relevant to the design, development and operation of education systems, at the school and school district levels will be examined and related to educational practices, and traditions.

* **411-647A,B RESOURCE UTILIZATION IN EDUCATION SYSTEMS.** (Half Course). An introduction to planning – programming – budgeting systems in education. The historical development, theoretical foundations, mechanics, potentialities and limitations of this approach to resource utilization analysis and planning will be discussed with particular reference to those aspects of alternative approaches employed in a proposal for educational systems.

* **411-650A,B METROPOLITAN EDUCATION: DEMANDS AND RESPONSES.** (Half Course). Study of local and federated school boards, including political demands and responses, organizational styles, administrative routines, and the interactions between administrators and elected officials.

* **411-660A,B COMMUNITY RELATIONS IN EDUCATION.** (Half Course). The basic objectives of this course include: The development of school-community analytical skills based upon relevant sociological and political concepts and techniques; the development of skill in establishing and maintaining effective methods of school-community liaison.

411-661A,B POLITICS OF EDUCATIONAL DECISION MAKING. (Half Course). A study of the nature of political and social constraints within which school systems operate at the local, provincial and federal levels. The contributions of such basic social sciences as political science, political sociology and social psychology will be considered.

411-662A,B POLICY-MAKING IN EDUCATION AT THE PROVINCIAL LEVEL. (Half Course). The process and sources of influence involved in the development and implementation of educational policies at the level of the Provincial Government.

411-663A,B POLICY-MAKING IN EDUCATION AT THE LOCAL LEVEL. (Half Course). The process and sources of influence involved in the development and implementation of educational policies within the local school district.

* **411-664A,B RESEARCH SEMINAR ON THE POLITICS OF EDUCATION.** (Half Course). Seminar on theory and research relevant to the study of the political aspects of educational systems.

* **411-671A,B THE PRINCIPALSHIP.** (Half Course). A study of the principalship from the perspective of role theory. Analysis of theoretical positions and the findings of recent research into the work of a school principal in terms of role conflict. Both theoretical statements and recent research related to the principalship will be considered.

* **411-673A,B LEADERSHIP THEORY AND EDUCATIONAL ORGANIZATIONS.** (Half Course). A study of past and contemporary notions of leadership. The role of the leader in organizations staffed with professionals. The relationship between leadership and personnel and organizational concepts.

* **411-674A,B ORGANIZATION THEORY AND EDUCATION.** (Half Course). A study of contemporary organization theory and the school as an organization. The interplay between structural concepts such as authority, hierachy and centralization will be considered along with human behaviour in organizations.

411-681A,B PRACTICUM IN THE ADMINISTRATION OF INSTRUCTION I. (Half Course). A directed analysis of the administrative experience. On-the-job field studies will be developed and interpreted. Departmental consultation and evaluation will be provided on an individual basis and will focus on specific field experience.

411-682A,B PRACTICUM IN THE ADMINISTRATION OF INSTRUCTION II. (Half Course). Directed implementation of planned change in an educational organization including observation and evaluation of the effects of change. This experience may be provided on the job, or through simulation or games techniques. Departmental consultation will be provided on an individual basis.

411-683A,B PRACTICUM IN THE ADMINISTRATION OF INSTRUCTION III. (Half Course). Planned observation of a specific aspect of administration in a school setting. Practices observed will be examined for their implication on educational systems and for their feasibility in the students' own situtation.

411-685A,B EDUCATIONAL ADMINISTRATION AS A SOCIAL PROCESS. (Half Course). Study of administrative processes including problem solving, decision-making, leadership, control, cooperation, conflict resolutions and goal setting. Specific emphasis will be placed on the utility of these processes for effecting change in the school.

Options in Other Departments

Courses taken outside the Department of Educational Administration must support the

candidate's program and have the approval of the program director.

DEPARTMENT OF EDUCATIONAL PSYCHOLOGY AND SOCIOLOGY

Professor – HOWARD STUTT (Chairman)

M.A. Educational Psychology

Professor – R. EDWARDS *(Program Director)*

Additional Entrance Requirements

1) Statements of academic experience, professional teacher training, teaching experience and future career plans.
2) An introductory half course in statistics should form part of the undergraduate program of the prospective candidate. Students accepted who have not taken such a course will be required to take 414-610A,B Educational Measurement, or an acceptable substitute. See M.Ed. Special Education for course description of 414-610A,B.

Program Requirements

Candidates are required to follow an approved course of study, to select a topic for research, and to present the results of such research in the form of an acceptable thesis. This approved course will include a nucleus of required courses, other courses, at the option of the candidate from a list approved by the Department, as well as taking and maintaining registration in a course entitled Thesis Preparation, until such time as a successful thesis has been deposited with the Faculty of Graduate Studies and Research.

Required courses ensure that each graduate of the program will emerge with a substantive knowledge of the major areas of educational psychology. Optional courses ensure that candidates may pursue work within their special interest. In making such choices, for both required and optional courses, students should consult the program director who will have regard to their previous background in making appropriate decisions for each student. It is the aim of the program to provide students with opportunities for involvement in research projects during each year of their registration. A regular non-credit seminar facilitates familiarity with ongoing research.

For the benefit of students who are unable to follow a course of full time study for two academic years, the Department of Educational Psychology and Sociology undertakes to provide, during the winter session, one full course which commences in the late afternoon. In Summer Session, one full course will be provided, of a duration of 3 hours, 4 days per week. Early (1st June) registration will be required for this course. Each of the required courses will be offered in rotation in this manner.

Required Courses:

414-602D THE USES OF STATISTICS IN EDUCATIONAL PROCEDURES. Tests of differences and relations, analysis of variance, univariate regression, covariance, goodness of fit, scaling and redistribution of scores. Use of calculators and computers. Specific attention to research interpretation, nonparametric techniques, assigning appropriate statistical models.

NOTE:

(1) Prerequisite course: 414-610A,B EDUCATIONAL MEASUREMENT (Half Course), which may not be taken concurrently. Students who have not completed 414-610A,B or its equivalent are advised to complete this prerequisite in the session immediately preceding the session in which they register for 414-602D.
(2) Students also registering for 414-621D Seminars are advised to do so concurrently with 414-602D.
(3) 414-602D will normally only be offered during the winter sessions.

414-615D STUDIES IN EDUCATIONAL PSYCHOLOGY: CHILD DEVELOPMENT AND PERSONALITY. An analysis of the theoretical and research literature in child and adolescent development with particular attention to the major theories of personality. Applications to teaching and other aspects of education.

414-621D THESIS PREPARATION. Seminars on procedures of research and experimental design dealing with the identification of research problems, the collection of data and the analysis and reporting of results. Supervision of the thesis. Successful presentation of the thesis completes the requirements for this course. It is recommended that students attend the seminars concurrently with 414-602D.

414-635D STUDIES IN EDUCATIONAL PSYCHOLOGY: LEARNING AND INTELLIGENCE. The learning section of this course includes an examination of current conceptualizations of learning with emphasis on those from which applications have been made to the educational process. The second section of the course deals with theories of intelligence and intellectual processes. Normally, a student admitted to this course will have completed 414-602D, or its equivalent. Full time students may, with the written consent of the instructors of both 414-602D and 414-635D, take these courses concurrently during the winter sessions.

414-655D RECENT DEVELOPMENTS IN COGNITIVE PSYCHOLOGY. A study of recent developments in cognitive psychology, this course of lectures and seminars will trace the development of the ideas of Piaget, Bruner, Osgood, Ausubel, Berlyne and others who have influenced recent work this area. Other models of cognitive

functioning will also be examined, and attempts made to relate these to theories of intellectual development. Normally, a student who is admitted to this course will have completed 414-635D, or its equivalent, or will possess a background judged to be adequate.

Optional Courses:

MINIMUM OF ONE FULL COURSE:

With the approval of the Department a minimum of one full course must be chosen from 414-603D/414-616A,B – Reading Course, 414-614D – Sociology of Education, from graduate level courses in Educational Psychology or from courses offered by other Departments of the University with the consent of the Department concerned.

Courses in the M.Ed. programs in Special Education and Educational Psychology are usually available as options to M.A. students.

414-612A A GENERAL MODEL FOR UNIVARIATE ANALYSIS. The presentation of the linear model as a general data analytic system that subsumes all analysis of variance, regresssion, analysis of covariance, and ordinary least squares estimation and hypothesis-testing procedures. Primarily, applications oriented towards education and educational psychology. The objective of the course is to describe the single-criterion forms of the model and to provide the tools required for data analysis under that form.

414-614D SOCIOLOGY OF EDUCATION. Specific topics in this course differ somewhat from year to year but in general they deal with education in relation to society as a whole, educational organizations related to each other, the socialization process and the place of education in that process, and the social psychology of learning.

414-624B METHODS OF MULTIVARIATE ANALYSIS. (Prerequisite: 414-612A). An intensive study of multivariate extensions of analysis of variance, analysis of covariance, and regression analysis. Primarily, applications oriented towards education and educational psychology. The main purpose of the course will be to describe the multiple-criterion form of the general linear model and to provide the tools required for data analysis under that form.

414-670D SELECTED TOPICS IN EDUCATIONAL PSYCHOLOGY. A detailed examination of recent developments in Educational Psychology. The content of the seminar will vary from year to year and will be announced prior to registration. Possible topics include classroom behavior modification, language development, information processing models and individualized instruction. This course is open to students who have completed at least half of their master's program.

414-675 STUDIES IN EDUCATIONAL PSYCHOLOGY – HUMAN INFORMATION PROCESSING. An analysis of educational implications of current knowledge of the processes the human uses to detect, recognize, attend to, retain and transform meaningful information. Emphasis on theories and relevant experimental techniques in the areas of attention, perception, memory, problem solving and psycholinguistics. Applications to special education, reading, elementary mathematics and science, evaluation, instructional design, and computer assisted instruction.

M.Ed. Educational Psychology

Professor – L.B. Birch *(Program Director)*

The aim of this program is to offer teachers advanced professional training in the areas of practical contribution of Educational Psychology to teaching: (a) the application of the results of educational research, (b) evaluation of student learning, programs, and educational experimentation and innovation, and (c) a greater understanding of child development and the learning process. Courses will be offered at times to encourage part-time study. The program is directed toward the innovating teacher at any level.

Additional Entrance Requirements

1) Statements of academic experience, professional teacher training, teaching experience, and future career plans.
2) At least two letters of reference from professional colleagues, from at least two former university instructors, and any others the applicant wishes to submit.
3) Applicants are asked to describe their role in any innovative teaching experiences, project or improve or create teaching material, evaluate lessons or programs in their work, or similar endeavors directed toward the improvement of teaching and learning.
4) An undergraduate half-course introduction to statistics or the equivalent. Applicants may take 414-610 (see the M.Ed. Special Education description) after they are admitted, but this half-course does not replace any other course in the progam and should be taken first.

Program Requirements

The program contains three main parts:

(a) four full courses in the principal skills offered by the program,
(b) two full courses in supporting theoretical areas of educational psychology, and
(c) two full courses constituting a Special Activity, the student's major project in the program, intended to demonstrate by performance that the student has succeeeded in the program.

Required Professional Core Courses (3 courses):

414-613D USES OF RESEARCH FINDINGS IN EDUCATION. The critical study of selected research publications with a view to their application to educational practice. Topics of study will be adapted to individual needs.

414-617D EDUCATIONAL EVALUATION: THEORY AND PRACTICE. Educational evaluation theory, design, and application. The course concentrated on the methods and practice of evaluation (1) of learning, including the design of classroom tests (2) for instructional improvement, and (3) for administrative decision-making. The evaluation process is studied in depth. Case studies and a supervised evaluation project provide opportunities for application.

414-649D LEARNING ENVIRONMENTS. An advanced seminar directed toward the integration of knowledge about developmental and environmental effects of learning and their implications for educational practice. Reference will be made to theories of cognitive and social development, authority relationships within school and community and the relation between ideological and technical change and teaching methods. This course has no specific prerequisite but it may only be taken late in a student's program.

Optional Professional Core Courses (Select one):

414-618D DESIGN AND EVALUATION OF INSTRUCTION MATERIALS. (Prerequisite: 414-617D). Design, development, and evaluation of teacher-made instructional materials. Topics include modular and programmed instruction, the organization of appropriate learning settings, and the management of individualized learning situations. Parts of this course are prepared in self-study form.

414-619D THE COMPUTER IN EDUCATION. (Prerequisite: 414-617D). Computer assisted, aided, and managed instruction. Direct experience with remote-access terminals, and the writing, preparation in computerized form, and developmental testing of instructional sequences. Parts of this course are presented in computerized mode.

Background Courses (Select two):

414-614D SOCIOLOGY OF EDUCATION. (See M.A. Educational Psychology for description).

414-615D CHILD DEVELOPMENT AND PERSONALITY. (See M.A. Educational Psychology for description).

414-622D ADAPTING EDUCATIONAL PROCEDURES TO INDIVIDUAL DIFFERENCES. Consideration is given to differences among students and teachers on a wide variety of psychological qualities, and to attempt to provide optimal learning situations in the light of these differences. Other topics include the psychological bases for the individualization of instruction, remedial learning, and programs for exceptionally talented students.

414-623D COGNITIVE DEVELOPMENT DURING SCHOOL YEARS. Particular attention is given to Jean Piaget and the implications of his work and others for educational practice. Educational issues considered include the diagnosis of developmental sequences, selection and development of learning tasks, and features of the teacher-pupil relationship.

Not all courses can be available every year or in the Summer Session. Limited substitution will be considered for entering students for whom a course may be a repetition.

Special Activity (2 required courses):

414-679D and 414-680D SPECIAL ACTIVITY I and II. A practical experience which may be an internship, a minor enquiry or small research project, or an innovation in teaching. It will be completed by a substantial project report, monograph, or production, done under the supervision of the student's advisor and with the approval of the Department.

M.Ed. Special Education

Professor – N. McCARDELL *(Program Director)*

Additional Entrance Requirements

1) Two letters of recommendation of teaching ability from a school principal, or consultant, or administrator.
2) Two letters of recommendation from former professors.
3) A personal report describing interest and experience in the field of Special Education.

An introductory half course in statistics should form part of the undergraduate program of the prospective candidate. Students accepted who have not taken such a course will be required to take 414-610A,B Educational Measurement, or an acceptable substitute.

414-610A,B EDUCATIONAL MEASUREMENT. (Half Course) Statistical measurements in education; graphs, charts, frequency distributions, central tendencies, dispersion, correlation, and sampling errors.

NOTE: Prerequisite to 414-602D. THE USES OF STATISTICS IN EDUCATIONAL PROCEDURES. These courses may not be taken concurrently.

Program Requirements

The program has two main components:

Phase I – Core Curriculum

This part of the program is intended to provide a knowledge basis upon which the student makes decisions related to the development of his or her professional needs and interests.

CONCORDIA UNIVERSITY LIBRARY

Phase II – Special Studies, Field Work, and Internship.

A. – Field Experience and Reading/Seminar – 4 courses
B. – Internship – 4 courses

The requirements of the Internship will, in most cases, be satisfied through full-time employment as a teacher in Special Education assignment in either a school or clinic setting for exceptional children. The student is responsible for obtaining the position.

Students will usually include in their program the Special Education courses listed below. However, students with special qualifications or interests may, with the approval of the Department concerned, substitute other graduate level courses offered by the Faculty of Education or by other facultities of the University.

OPTIONS

With the approval of the Department one of the following:

414-603D READING COURSE

414-616A,B READING COURSE

SPECIAL EDUCATION COURSES:

414-642A/414-643B EDUCATION OF EXCEPTIONAL CHILDREN. (Half Course). Two related and sequential half courses. Introduction to programs and problems of educating handicapped or gifted children.

414-645A,B DIAGNOSIS AND ASSESSMENT OF LEARNING PROBLEMS. (Half Course). Principles and procedures in the education of pupil growth and achievement and in the diagnosis of the causes of poor achievement. Emphasis will be given by the class teacher. Reference will be made to the use by the teacher of tests given outside the classroom by guidance counsellors or psychologists.

414-646A,B PRACTICUM: DIAGNOSIS AND ASSESSMENT OF LEARNING PROBLEMS. (Half Course). Practice in the administration and interpretation of individual and group tests; use of other-than-teacher test results; collection and use of other pertinent data.

414-654A,B PRACTICUM: INDIVIDUALIZED CURRICULA AND SPECIAL TEACHING METHODOLOGY. (Half Course). An opportunity will be given to develop individual teaching programs for selected exceptional children. Practice will be given in the use of specialized teaching techniques.

414-656D CLINIC: REMEDIATION OF SELECTED LEARNING DIFFICULTIES. (Participation as a special education teacher in an interdisciplinary team; planning and carrying out of remedial programs for individual pupils; working with parents of children with learning difficulties.

414-661A,B INTERNSHIP I. (Half Course). Analysis and practice in teaching skills or an equivalent supervised experience.

414-662A,B INTERNSHIP II. (Half Course). The student will be supervised while practising as a special educator.

414-663A,B INTERNSHIP III. (Half Course). A workshop seminar dealing with models of teaching and curriculum content in specific subject areas.

414-664A,B INTERNSHIP IV. (Half Course). A supervised practicum with the student functioning in a leadership role or as a consultant in a (summer) learning centre or equivalent setting.

414-665A,B SEMINAR I: REMEDIATION OF SELECTED LEARNING DIFFICULTIES. (Half Course). This course will involve directed and independent reading as well as opportunities for group discussion. It is designed to assist the student in developing solutions to practical problems related to either the Field Experience or the Internship.

414-666A,B SEMINAR II: REMEDIATION OF SELECTED LEARNING DIFFICULTIES. (Half Course). It is expected that this course will be taken concurrently with 414-662 or 414-664. Directed and independent study as well as group discussion are involved.

414-667A,B PROBLEMS IN EMOTIONAL DEVELOPMENT OF CHILDREN AND ADOLESCENTS. (Half Course). Behavior problems will be examined from a psychodynamic perspective with application to the classroom and teacher-child relationships.

414-668A,B PERSONALITY THEORY IN RELATION TO THE SPECIAL CHILD. (Half Course). This course will examine normal personality development from several theoretical viewpoints. Exceptional development will also be examined with emphasis on the learning problems which can arise out of this.

414-669A,B. COGNITIVE DEVELOPMENT IN RELATION TO THE SPECIAL CHILD. (Half Course). This course will deal with the cognitive development of children and adolescents and with the implications for exceptional children. Attention will be given to language and perceptual motor development.

†At present course 414-656D includes participation as a junior staff member in the Learning Centre under the direction of Dr. M.S. Rabinovitch of the Department of Psychology of McGill.

Ph.D. Educational Psychology

Professor – R. Edwards (Program Director)

NOTE: Pending final approval of this program from the Ministry of Education, students are admissible only on an individual *ad hoc* basis. The Faculty has, however, allowed such students to follow the program as described below.

The aim is to provide advanced training for scholarship, research, and practice in educational psychology, those parts of theoretical and experimental psychology which are concerned with problems of learning and instruction that arise in educational contexts. The Department has strength in several specialties, including special education, school psychology, computers in education, the psychological foundations of instructional development and evaluation, and cognitive and personality development as they affect the educational environment.

The department has research and training arrangements with other departments of the University: The McGill University-Montreal Children's Hospital Learning Centre, the Centre for Learning and Development, the Centre for Medical Education, the Reading Centre, the Department of Counsellor Education and the School of Human Communication Disorders. The department also has a Division of Educational Computer Application which jointly sponsors the Computer-based Instructional Research Laboratory with the Centre for Learning and Development. The Department of Psychology has agreed to cooperate in training students in the clinical aspects of school psychology. We distinguish between a "school psychologist" and a "clinical psychologist working in a school", and emphasize the need for both. The former would have principal interests in education and psychology and be much more familiar with questions of pedagogy and schools as learning settings.

Graduates will be qualified to plan and carry out both basic and applied research on educational problems in an educational institution or system, and to teach educational psychology at a university.

Admission Requirements

Candidates will be expected to hold a Master's degree in Educational Psychology from McGill University, or a recognized equivalent, reflecting high overall standing, study within the area of proposed doctoral specialization, and evidence of research competence. Applicants will also be expected to provide:

1) at least two letters of recommendation, one from a professional colleague and one from a university professor,
2) a 3 to 5 page summary proposal of the intended thesis research,
3) a statement of experience, career plans, and program appropriateness and
4) a copy of the M.A. thesis (which will be returned after examination).

An interview may be required. No standardized admission tests are required.

Enrolment is limited (approximately twelve students) by the availability of supervisory and other resources.

Applicants uncertain of their qualifications should consult the Program Director prior to formal application.

Program Requirements

Students will be expected to participate in the Departmental seminar, a regular meeting of graduate students and faculty members to discuss current developments in research and practice, for which credit is not awarded. Guest speakers from outside the Department take part in this series.

From time to time students may elect or be required to supplement their programs with tutorials of courses from other programs with the cooperation of the departments involved. For example, further statistical training is readily available in advanced courses outside the Department and on a tutorial or seminar basis in cooperation with other departments in the Faculty of Education, as well as within the Advanced Seminar.

Doctoral level courses will only be available during the winter session. Summers are expected to be devoted to research.

Students entering with the equivalent of a McGill M.A. in Educational Psychology will be admitted into Ph.D. 2 and will be required to complete a *minimum* of 2 full years' work.

Theoretical Study

414-712D ADVANCED SEMINAR ON CURRENT PROBLEMS IN EDUCATIONAL PSYCHOLOGY. Research and theory in the study of human learning and teaching and related psychological considerations, e.g., curriculum and program development, human development, motivation, and personality. An exploration of present frontiers of knowledge in these areas and of research and analytical methods appropriate for their study, in the Laboratory and in field settings. Full course, to be taken during the first year of the program.

414-701D COMPREHENSIVE EXAMINATION. Normally taken at the beginning of the second year of the program.

Professional Study

414-760D ADVANCED PRACTICUM, PART I, and 414-764D ADVANCED PRACTICUM, PART II. (Half Course) Apprenticeship in the application of the student's particular interests in educational psychology. This may include training and experience in the teaching of educational psychology at the college or university level and research consultation. For students with particular interests in special education, school psychology,

McGILL UNIVERSITY LIBRARY

and the psychological contribution to instructional development, appropriate experiences in schools, special educational settings, and clinics are arranged. For students particularly interested in educational psychology applied to problems in higher education, experiences are also arranged with the Centre for Learning and Development. The practicum may include research, according to the needs and interests of students. Students are encouraged to partake of a variety of these practicum experiences. Instruction takes the form of internship supervision, and should occupy about one-quarter of the student's time during each year. Practicum assignments will take into account the practical experience which many students may have had before entering the program.

The educator's main laboratory is found in educational institutions, and this practicum may be regarded as corresponding to a laboratory course in research and development. Its function is to broaden candidate's experiences in new educational settings as well as to provide new learning about innovation, evaluation, theory, professional practice and research. It is expected that students will be particularly proficient in educational measurement and evaluation. Considerable importance is also placed on teaching, consulting, and curriculum and program development with subject matter experts and other educational specialists.

Research

A thesis must be submitted, displaying original scholarship expressed in satisfactory literary form, and constituting a distinct contribution to knowledge. Work on the thesis normally begins in the first year, and becomes a major concern in the second year. The thesis, or work related to it and separately published or presented, is expected to contribute to educational practice as well as knowledge.

Supervision

Each student will be assigned to an advisor/tutor following discussion with the Program Director. Advisors may then be changed only if the student's interests develop in a new direction requiring different supervision. All members active in the graduate program of the Department meet regularly to discuss the progress of each student.

In addition, for each candidate a doctoral committee is established which includes a faculty member from outside the Department, and with the adviser as chairman. This committee will assist the student and adviser in planning the student's program. It will also plan, set, and evaluate the comprehensive examinations, and be consulted in the nomination of external examiners for the thesis.

Language Requirement

Students will normally be expected to have a satisfactory reading knowledge of French, and will be expected to obtain this competence as a requirement for their Ph.D. degree. Excellent facilities for learning languages are available at McGill.

DEPARTMENT OF PHYSICAL EDUCATION

Professor – R.E. WILKINSON (Chairman)

M.A. Physical Education

Professor – JOHN CHOMAY *(Program Director)*

Additional Admission Requirements

An undergraduate degree with a major in Physical Education, or its equivalent, from a recognized university. Normally, candidates must have completed a two year teaching requirement before commencing the M.A. (P.E.) program. However, applicants with strong academic qualifications throughout their undergraduate years may be considered for entry into the program without teaching experience.

No entrance examinations are required.

Where possible, all applicants are requested to contact the program director for an interview.

Program Requirements

Students are required to complete five full courses and a thesis as outlined below.

Required Courses:

Three full courses

414-602D THE USE OF STATISTICS IN EDUCATIONAL PROCEDURES. See M.A. Educational Psychology.

434-621D THESIS PREPARATION. Seminars on procedures of research and experimental design dealing with the identification of research problems, the collection of data and the analysis and reporting of results. Supervision of the thesis. Successful presentation of the thesis completes the requirements for this course.

PHYSICAL EDUCATION COURSES

A minimum of one full course from the following:

434-662D ADVANCED EXERCISE PHYSIOLOGY. A comprehensive treatment of the behavior of physiological processes in response to exercise. Emphasis is given in such areas as: nature of muscular activity, regulation and fuel utilization during exercise, aerobic and anaerobic work, metabolic, cardiovascular and respiratory adaptation, evaluation of function capacity and exercise testing. Laboratory experience.

†Offered in conjunction with the Faculty of Medicine.

* **434-664D PSYCHOLOGY OF MOTOR PERFORMANCE.** Critical review of selected research in learning and sport psychology culminating in small group research and analysis.

Topics for review and experimentation may include stress/anxiety, individual differences, retention, social facilitation phenomena, rate of learning and other parameters related to motor learning and performance.

434-665D MOTOR PERFORMANCE OF EXCEPTIONAL CHILDREN. A detailed study of the motor performance of exceptional children based on an information processing model of human performance. Attentional, perceptual, and other processes underlying motor performance will be examined with special emphasis on the differences found in these processes with varying degrees of exceptionality.

434-666A BIOMECHANICS – ADVANCED KINEMATICS. The kinematical analysis of human movement will be performed emphasizing the principles of physics and the mathematical models which underline terrestrial and aquatic locomotion. The implements man employs for sport, the flight of projectiles which result from throwing, striking, kicking and jumping will also be analyzed.

434-667B BIOMECHANICS – SEMINAR. The purpose of this course will be to familiarize the student with the relevant literature regarding the kinematic and electromyographic analysis of human movement patterns.

Optional Courses:

TWO FULL COURSES.

Two additional courses, as approved by the Department, may be chosen from the Physical Education options above, and/or the courses listed below, from graduate level courses in the Faculty of Education, or from other faculties of the University.

434-603D READING COURSE.

434-616A,B READING COURSE. (Half course).

434-671A,B EXPERIMENTAL PROBLEMS. (Half course). Study in one area of: Ergo-Physiology or Biomechanics or Psychology of Motor Performance or Motor Performance for Exceptional Children. To provide an opportunity to conduct a research project and develop an awareness of the problems involved in the area of concentration under departmental supervision.

434-672D EXPERIMENTAL PROBLEMS. See 434-671A,B. This course, however, is more intensive and comprehensive in nature.

DEPARTMENT OF SOCIAL FOUNDATIONS OF EDUCATION

Professor – J. LIPKIN (Chairman)

M.A. Degrees

The Department offers Master of Arts degrees in three areas: Comparative Education (Dr. T.O. Eisemon, *Program Diector)*, History of Education (Dr. J.K. JOBLING, *Program Director)'* and Philosophy of Education (DR. H. SHANTZ, *Program Director).* The appropriate courses will be chosen in consulation with the Chairman of the Department.

Special Entrance Requirements

1) Normally students should have an Honours or a similar good standing in their undergraduate academic or professionalwork. They should also have an emphasis in at least one area of the humanities or the social sciences.
2) Well qualified students may be admitted to the program without teaching experience.
3) Whenever practical, an interview is required.

Program Requirements

Students are requiredto complete five full courses, one of which must be 413-621D – Thesis Preparation, and a thesis. In addition to Department courses listed below, students may, with Departmental approval, elect courses from other departments of the Faculty of Educaton or from other faculties of the University. Normally only one Reading Course may be taken.

413-603D READING COURSE.

413-610D SOCIAL FOUNDATIONS OF EDUCATION. An examination of education and society through the eyes of educational historians, educational philosophers, educational sociologists, and comparative educatos. Particular attention will be devoted to persistent educational problems at home and abroad.

* **413-615D SELECTED ISSUES IN CONTEMPORARY EDUCATION.** In-depth analysis of a limited numbers of issues and problems in education. Three to five contemporary problems will be selected and a variety of approaches used. The following are some examples of issues that may be selected: education and the future; moral education; teacher education; foundations of curriculum.

413-616A,B READING COURSE. (Half Course).

* **413-617D HISTORICAL FOUNDATIONS OF CONTEMPORARY EDUCATION.** A study of contemporary issues in education against an historical background. Some ofthe questions treated in depth will be the changing relations of church and state in education; the problems of mass education; the evolving concept of the university; the impact of the "second industrial revolution" on the school.

413-620D STUDIES N COMPARATIVE EDUCATION. This course seeks to inform the student of contemporary educational developments in selected modern countries and in developing areas, and to familiarize hin/her with some of the techniques and methods used in comparing different systems of education.

413-621D THESIS PREPARATION. Seminars on research procedures, location and extraction of data and presentation of findings. Supervision of the thesis. Successful presentation of the thesis completes the requirements for this course.

413-627D PHILOSOPHICAL ANALYSIS AND THE PROBLEMS OF EDUCATION. An examination of philosophical methods of analysis and their application in the study and clarification of selected educational issues and concepts.

413-637D DEVELOPMENT OF EDUCATION IN CANADA. An historical survey of education in Canada from its beginnings to the present.

413-640D COMPARATIVE STUDIES IN EDUCATION IN WESTERN EUROPE. An in-depth treatment of contemporary education in France and Germany from 1800 to the present in relation to the social forces impinging on it.

413-641D COMPARATIVE STUDY OF EDUCATION IN DEVELOPING NATIONS. An analysis of education in selected Asian, African and Latin-American nations with special emphasis on the role of education in nation building.

413-642D MINORITY EDUCATION IN COMPARATIVE PERSPECTIVE. Comparative study of the dynamics of majority-minority relations and their relevance for educational policy and practice. Special attention will be given to the Québec context.

413-647D HISTORY OF EDUCATION IN FRENCH CANADA. Consideration of the ideas and institutions relating to education in French Canada from the sixteenth century to the twentieth, with particular attention to the historical antecedents of contemporary problems.

413-650D COMPARATIVE STUDIES OF EDUCATION IN COMMUNIST COUNTRIES. Analysis of communist theory and educational practice in the Soviet Union and selected Eastern European and developing nations. Similarties and differences between communist and non-communist educational systems and the relationship between education and the political order willbe stressed.

413-657D LEADING EDUCATIONAL THINKERS. A study of the educational ideas of selected thinkers, past or present, representing various schools of educational thought.

413-667D HISTORY OF EDUCATION IN THE 19TH CENTURY. An analysis of the cultural forces that helped shape education in the century of Darwin, Marx, and Freud. Attention will be given to the impact of nationalism, colonialism, and industrialism on educational development.

413-677D PHILOSOPHICAL ASPECTS OF EDUCATIONAL INQUIRY. A study of basic philosophical questions about the nature and study of education arising from the direction, methods, and concepts empoyed in various areas of educational inquiry.

Ph.D. (Comparative Education)

Students may pursue doctoral studies in Comparative Education on an *ad hoc* basis, under the provisions stated in the General Information section of this calendar.

Normally, applicants for doctoral studies will be expected to possess a Master of Arts degree, with high overall standing, in Comparative Education or in a related Social Science or Humanities field. In addition to academic transcripts and letters of recommendation, applicants should provide a three to five page summary statement of their plans for thesis research, which may be developed in consultation with staff of the Comparative Education program. For further information, write to Professor John Lipkin, Chairman, Department of Social Foundations of Education.

DEPARTMENT OF EDUCATION IN MATHEMATICS AND SCIENCE

Professor – William E. Searles (Chairman)

M.Ed. Teaching of Biology

Professor – William E. Searles (Program Director)

Additional Entrance Requirements

1) A minimum of 36 university level credits in biology, chemistry or biochemistry.
2) Two letters of recommendation from a school principal or science department head attesting to the applicant's competence in teaching biology.
3) A letter of recommendation from a former college or university instructor stressing academic competence.

Program Requirements

1) Four full courses in biology aimed at developing the teacher's existing knowledge and consolidating it as a basic resource for the teaching of biology. These courses are to be selected in consultation with the M.Ed. Teaching of Biology program advisor appointed by the Biology Department.
2) Four half course seminars in the methodology, principles and philosophy of teaching and learning, especially as these relate to modern biology curriculum theory and development. Students may, with permission of the Program Director in the Faculty of Education, elect to substitute one or more of the seminar courses for a half or full reading course.
3) A substantial monograph on some important aspect of the learning and teaching of biology, or a comparative study in curriculum development in biology. The monograph has a credit weight of two full graduate level courses.

The program is available on a part-time or a full-time basis and can normally be completed, part-time, in three calendar years.

417-631A MODERN SCIENCE CURRICULA FOR BIOLOGY. (Half course). An analysis of alternate curricular practices implemented in high schools during the curriculum reform movement of the past decade. The theoretical substantiation of the role of content, process and human values in the curriculum will be examined.

417-632B INSTRUCTIONAL THEORIES IN MODERN SCIENCE CURRICULA. (Half course). Instructional theories and designs appropriate for the teaching of biology within the framework of a Modern Science Curriculum.

417-633A SCIENCE CURRICULUM THEORIES. (Half course). A survey of the various curriculum theories of the 20th century and the associated curriculum focus.

417-634B SCIENCE CURRICULUM DESIGN (Half course). A seminar course to provide an in-depth study of the selection and organization of subject matter in the design of a science curriculum.

417-638D MONOGRAPH.

Options

417-603D READING COURSE.

417-616A,B READING COURSE. (Half course)

M.Ed. Teaching of Chemistry

Professor – Pearl Francoeur (Program Director)

Additional Entrance Requirements

1) A minimum of 36 university level credits in chemistry, applied chemistry, molecular biology or biochemistry.
2) A letter of recommendation from a school principal or science department head attesting to the applicant's competence in teaching chemistry.
3) Two letters of recommendation from a former college or university instructor stressing academic competence.

Program Requirements

1) Four full courses in chemistry aimed at developing the teacher's existing knowledge and consolidating it as a basic resource for the teaching of chemistry. These courses are to be selected in consultation with the M.Ed. Teaching Chemistry Program advisor appointed by the Chemistry Department.
2) Four half course seminars in the methodology, principles and Philosophy of teaching and learning, especially as these relate to chemistry. 417-611A,B; 417-612A,B; 417-613A,B; 417-614A,B Students may, with permission of the Program Director in the Faculty of Education, elect to substitute one or more of the seminar courses for a half or a full reading course (417-603D, 417-616A,B).
3) A substantial monograph on some important aspect of the learning and teaching of chemistry, or a comparative study in curriculum development in chemistry. The monograph has a credit weight of two full graduate level courses – (417-618) The program is available on a part-time or a full-time basis and can normally be completed, part-time, in three calendar years.

Courses:

417-611A MODERN SECONDARY SCHOOL CHEMISTRY CURRICULA. (Half Course). An analysis of the science education literature with a view to substantiating the philosophic and psychological basis that guided the curriculum reform movement of the past decade. Present curricular trends in relation to emphasis on theoretical content, process, environmental chemistry and human values will be examined.

417-612B INSTRUCTIONAL THEORIES IN MODERN SCIENCE CURRICULA. (Half Course). Instructional theories and designs appropriate for the teaching of chemistry within the framework of a Modern Science Curriculum.

417-613A THE APPLICATIONS OF SCIENCE CURRICULUM THEORIES. (Half Course). A survey of the various curriculum theories of the 20th century and the associated curriculum focus.

417-614B SCIENCE CURRICULUM DESIGN. (Half Course). An in-depth study of the selection and organization content in the design of a modern chemistry curriculum.

417-618D MONOGRAPH

Options

417-603D READING COURSE

417-616A,B READING COURSE

M.Ed. Teaching of Mathematics

Professor – R. Whitwell (Program Director)

Additional Entrance Requirements

1) The candidate must be approved by the Mathematics Department (Faculty of Science) in this University before being admitted to the first year of the mathematics component of the M.Ed. in the Teaching of Mathematics.
2) A second class standing in Mathematics is required in the first year before a candidate is allowed to proceed with the educational component in the second year of the program.

Program Requirements

1) Four full courses or eight half courses at the graduate level in Mathematics as prescribed for each individual candidate by the Mathematics Department in the Faculty of Science. This is, at present, a full time program and no candidate is permitted to follow this first year of the program as a part time candidate.

MANITOBA UNIVERSITY LIBRARY

2) A standing of at least 65% is required *in each* of the four full courses or eight half courses before the candidate is admitted to the educational component which is taken in the second year of the program. This second year may be taken as part time study. The candidate is expected to attend seminars in the evenings and to attend summer session in order to complete the educational component.

3) **First Year** – Mathematics component. Individually prescribed courses in Mathematics at graduate level taken in the Mathematics Department, Faculty of Science (Full Time)

Second Year – Educational component. Taken in the Faculty of Education under the guidance of the Program Director.

Courses:

428-611D SEMINAR. Curriculum design in Mathematics at the Elementary, Secondary or College level. The emphasis in this course is on the realistic applications of mathematics in the sociological-technological environment.

428-612D SEMINAR. Measuring achievement in Mathematics. Mathematical task-analysis; hierarchical structuring of tests; criterion-sampling; item-banking. Use of computer for analyzing test data and monitoring individual student competency levels in mathematics.

428-618D MONOGRAPH. The monograph is to be presented to the Program Director by the candidate after the satisfactory completion of the educational component. It will embody the earlier studies of the program and will be written by the candidate with a view to making a contribution towards future mathematics education. Each candidate has the opportunity to combine his/her mathematical knowledge with his/her knowledge of teaching and learning to benefit the educational enterprise.

Options

428-616A READING COURSE. (Half course). Related to matters of concern in Mathematics Education, as directed by the Program Director.

or

428-616B READING COURSE. (Half course). Related to the *candidate's particular interest* in Mathematics Education. This course requires the approval of the Program Director and must be directed toward the improvement of School, College instruction and/or programs in Mathematics.

M.Ed. Teaching of Physics

Professor – Peter Landry (Program Director)

Additional Entrance Requirements

1) A minimum of 36 university credits in Physics, Applied Physics, Mathematics or Physical Chemistry of which at least 18 credits must be in Physics or Applied Physics.

2) A letter of recommendation from a school principal stressing ability in teaching Physics.

3) Two letters of recommendation from a former college or university instructor stressing academic competence.

Program Requirements

1) Four full courses in Physics aimed at developing the teacher's existing knowledge and consolidating it as a basic resource for the teaching of Physics.

2) Four half-course seminars in the principles and philosophy of teaching, especially as it relates to Physics.

3) A substantial monograph on some important aspect of the learning of Physics. The monograph has a weight of two full graduate courses.

The program is given in lock-step with admissions only being made at intervals. The next intake is planned for 1977-78. It is a part-time program which requires at least three calendar years to complete.

198-602D BASIC PHYSICS FOR HIGH SCHOOL TEACHERS.

* **198-603D PHYSICAL MEASUREMENTS.**

* **198-604D MODERN PHYSICS.**

* **198-605D SELECTED TOPICS IN CONTEMPORARY PHYSICS.**

* **417-641A,B SEMINAR I.** (Half course).

* **417-642A,B SEMINAR II.** (Half course).

* **417-643A,B SEMINAR III.** (Half course).

* **417-644A,B SEMINAR IV.** (Half course).

417-648D MONOGRAPH.

M.Ed. Teaching of Home Economics

Professor – Aline Smith (Program Director)

Additional Entrance Requirements

1) Undergraduate degree or its equivalent in Home Economics

2) Recommendation for teaching ability

Program Requirements

1) Five or six full courses drawn from among offerings in Education and Food Science' including the statistics course 414-602D (whose pre-requisite is 414-610A,B – Educational Measurement)

2) Project Report on Home Economics Education to be directed jointly by the School of Food Science and the Faculty of Education.

DEPARTMENT OF EDUCATION IN SECOND LANGUAGES

Professor – Jacques Rebuffo (Chairman)

M.Ed. Teaching of French as a Second Language

Professor – Magdelhayne F. Buteau (Program Director)

Additional Entrance Requirements

1) The Undergraduate Degree must show a concentration of six (6) full courses in French, including at least one full course in French Literature and two full courses in Linguistics
2) A basic methods course in the Teaching of French as a Second Language
3) Two years experience in Teaching French as a Second Language
4) An assessment interview with the Program Director
5) Joint approval by the Department of Second Languages and the Department of French Language and Literature (Faculty of Arts) and/or the McGill French Summer School.

Program Requirements

1) Four (4) full courses including at least one course in French Literature, one course in Linguistics and one course in French Canadian Literature
2) Two (2) seminars offered by the Department of Education in Second Languages: – 431-611D and 431-612D
3) The submission of a monograph on some topic related to the Teaching of French as a Second Language

The program can be pursued on a full-time or part-time schedule. A minimum of two years of study is required. Part-time candidates generally attend at least two (2) sessions at the McGill French Summer School and evening course in various departments of the Faculty of Education and of the other Faculties during the academic year. Nine (9) courses taken at the French Summer School are accepted as the equivalent of three (3) full courses. Elective courses may include courses in Linguistics, Supervision, Group Dynamics, Measurement, Psychology, Communication, Sociology of Education, etc. The individual selection of courses is made in consultation with the Program Director.

Courses:

431-611D SEMINAR I. A review of current theory and practice in the Teaching of French as a Second Language. (3 hours a week).

431-612D SEMINAR II. Survey and critical analysis of application of linguistics to the Teaching of French as a Second Language. (3 hours a week).

431-618D MONOGRAPH

M.Ed. Teaching of English as a Second Language

Professor – Georges Terroux (Program Director)

Additional Entrance Requirements

1. Three full courses in contemporary British and North American literature at the post-secondary level.
2. The equivalent of two full courses in Linguistics; Language, Language learning; General Phonetics; Theory of Morphology and Syntax

N.B. For those who elect 104-630A (General Phonology) and 104-631B (Issues in Generative Phonology) the prerequisite is 104-350/351 (General Phonetics/Phonology).

3. A basic methods course in TESL.
4. A teaching certificate.
5. Two years experience in teaching ESL.

Program Requirements

1. Two seminars offered by the Department of Education in Second Languages – 431-621D and 431-622D
2. One course offered by the Department of English: – 110-784D Language, Linguistics and Literature
3. One course offered by the Department of Linguistics to be selected among the following: – 104-620D Current Issues in Socio-Linguistics; 140-680D Theoretical Foundation of Language Teaching Methods; or 104-770D Problem Language Content
4. The submission of a monograph on some topic relevant to the Teaching of English as a Second Language
5. Two full courses or four half courses at the Graduate level and according to professional needs and academic preparation selected from the following areas: English, Linguistics, Psycholinguistics, Sociolinguistics, Educational Psychology, Educational Administration, Quebec Civilization, after consultation with the Departments involved.

This program can be pursued on a full time or part time schedule. A minimum of two years study is required. The indivvidual selection of courses is made in consultation with the Program Director whose approval must be obtained.

Courses

431-621D SEMINAR I. Application of Linguistics to the TESL Area (3 hours a week)

431-622D SEMINAR II. Survey of Research and Practice in Teaching English as a Second Language. (3 hours a week)

431-628D MONOGRAPH

McGILL UNIVERSITY LIBRARY

DEPARTMENT OF EDUCATION IN THE SOCIAL SCIENCES

Professor – Morton Bain (Chairman)

Program Requirements

The Department offers programs leading towards the Master of Education degree in the Teaching of Geography and the Teaching of History. Both degrees may be obtained by part-time or full-time study, consisting of six full courses or their equivalent and the preparation of a monograph. Courses are offered within the Department of Education in the Social Sciences, the Department of Geography and the Department of History in both regular and summer sessions.

M.Ed. Teaching of Geography

Professor – John Wolforth, (Program Director)

Additional Entrance Requirements

1) An undergraduate degree with at least a major in Geography or its equivalent, from a recognized university.
2) Approval of the candidate by the Department of Geography.
3) Normally, two years of experience in teaching Geography with evidence of superior teaching ability.

Required Courses:

430-611A,B SEMINAR IN THE TEACHING OF GEOGRAPHY I. (Half course). The major objective of the course is to promote critical discussion of some contemporary issues in the teaching of geography. The course examines developments in the field of geography (such as the use of quantitative methods, model building, perceptual studies and simulation) and their relevance to the teaching of geography in the schools.

430-612A,B SEMINAR IN THE TEACHING OF GEOGRAPHY II. (Half course). (Continuation).

* **430-613A,B SEMINAR IN THE TEACHING OF GEOGRAPHY III.** (Half course). (Continuation).

* **430-614A,B SEMINAR IN THE TEACHING OF GEOGRAPHY IV.** (Half course). (Continuation).

430-618D MONOGRAPH PREPARATION AND PRESENTATION. The preparation and submission of a paper or project report on the teaching of geography.

In addition, four full courses are taken with the Department of Geography, details to be announced.

Alternative Courses

With the approval of the program director, one of the following may be substituted for any one full course or any two half courses in the program:

430-603D READING COURSE IN GEOGRAPHY. Individualized guided study of a topic in the teaching of geography selected according to the student's interests and teaching experience.

or

Any other senior or graduate level course offered by the Faculty of Education or by other faculties of the University.

M.Ed. Teaching of History

Professor – David Smith (Program Director)

Additional Entrance Requirements

1) An undergraduate degree with at least a major in history or its equivalent, from a recognized university.
2) Approval of the candidate by the Department of History.
3) Normally, two years of experience in teaching history with evidence of superior teaching ability.

Required Courses

* **430-631D SEMINAR (1) IN HISTORY TEACHING.** A study, analysis and evaluation of contemporary trends in the teaching of history and of their implications for classroom practice.

430-632D SEMINAR (2) IN HISTORY TEACHING. An examination and critical analysis of selected topics and strategies in history teaching.

430-638D MONOGRAPH PREPARATION AND PRESENTATION. The preparation and submission of a paper or project on the teaching of history.

In addition, three full graduate level courses are taken with the Department of History, details to be announced.

Optional Courses

With the approval of the program director, one full course must be chosen from the following:

430-603D READING COURSE IN HISTORY TEACHING. Individualized guided study of a topic in the teaching of history selected according to the student's interests and teaching experiences.

or

Any other senior or graduate level course offered by the Faculty of Education or by other faculties of the University.

MCGILL UNIVERSITY LIBRARY

McGill University
Montreal

Graduate Studies and Research

1977-78

Section "H"
Library Science

NOTE: Courses marked with an asterisk (*) are not offered in 1976-77. The letters which form part of course numbers, have the following significance:
A – Fall term course
B – Winter term course
L – Summer term course
D – Full session course
(Fall and Winter terms)

Legal Deposit I 77

CALENDAR FOR SESSION 1977-78

1977

September 8, Thursday	Enrolment of first year students
September 9, Friday	Program begins for first year students
September 12, Monday	Program begins for second year students
October 10, Monday	Thanksgiving holiday
December 9, Friday to December 14, Wednesday	Examinations for first year students
December 14, Wednesday	Fall term ends

1978

January 9, Monday	Winter term begins (Professional Week)
January 16, Monday	Winter term classes begin
February 10, Friday and February 11, Saturday	Mid-term holiday
March 24, Friday to March 27, Monday (incl.)	Easter Vacation
April 26, Wednesday	Winter term ends

McGILL UNIVERSITY LIBRARY

ISOBEL BEST, Chief Librarian, Town of Mount Royal Public Library; CLAIRE COTE, Chief Librarian, Pointe Claire Public Library; ROSARIO DE VARENNES, Conseiller à l'analyse et à l'automatisation des services, Bibliothèque, Université Laval; DONNA DUNCAN, Head of Cataloguing, McLennan Library, McGill; SHIRLEY EICHELMAN, President-Elect, Special Libraries Association; STUART FRASER, Systems Application Manager, Aluminum Company of Canada, Ltd; RICHARD HAMILTON, Professor of Sociology, McGill; JOHN HOBBINS, Reference Librarian, McLennan Library, McGill; SYDNEY JONES, Cataloguing Department,

McLennan Library, McGill; PAUL KITCHEN, Executive Director, Canadian Library Association; CATHERINE KOLLAR, Government Documents Librarian, McLennan Library, McGill; JOHN LARIVIERE, Conservator, National Museums of Canada, Moncton; MONIQUE LAVOIE, Director of Library Services, Dawson College; PAUL LEGARE, User Advisory Services, Statistics Canada; MARY LEWIS, Chief Librarian, Pratt & Whitney Aircraft of Canada Ltd.; NORMAN MCLEOD, Chief Librarian, Sources Public Library, Roxboro; ELIZABETH McDONALD, Bibliothècaire-en-chef, Le group S.N.C.; JOHN MAPPIN, Book Collector, Montreal; CHARLES MEADOW, Professor of Library Science, Drexel University; MICHEL MENOU, Information Systems Consultant, Paris; BOBBIE MERILEES, Data Processing Division, I.B.M. Canada Ltd.; DEREK DE SOLLA PRICE, Professor of the History of Science, Yale University; NELLIE REISS, Lande Canadiana Librarian, McGill; HELEN ROGERS, Chief, SDI Division, National Library of Canada; ANNA ROVIRA, Chief Librarian, Bibliothèque municipale de LaSalle; MARIANNE SCOTT, Director of Libraries, McGill; STANLEY J. SHAPIRO, Dean, Faculty of Management, McGill; RALPH STIERWALT, Office of Library Coordination, Council of Ontario Universities, Toronto; ROGER K. SUMMIT, Manager, Lockheed Information Systems, Palo Alto, California; GUY SYLVESTRE, National Librarian of Canada; GARRY TYNSKI, Print Curator, Rare Book Department, McGill; LIANA VAN DER BELLEN, Rare Book Librarian, National Library of Canada; SUSAN WILKINSON, Librarian, Aluminum Company of Canada Ltd.; ELAINE YAROSKY, Map Curator, Rare Book Department, McGill; MARIE ZIELINSKA, Chief, Multilingual Biblioservice, National Library of Canada.

2 GRADUATE SCHOOL OF LIBRARY SCIENCE

2.1 HISTORY AND PROFESSIONAL RELATIONSHIPS

McGill University was the first institution in Canada to provide library training and the first to grant a degree in library science. Short summer programs were given from 1904-1927, the first regular sessional program being given in 1927-28. The program of the School was accredited by the Board of Education for Librarianship of the American Library Association, and the B.L.S. (5th year) degree was first conferred in May 1931. In the session of 1956-57, a 6th year Master of Library Science degree was first offered. After 1964-65 the 5th year degree was discontinued and the M.L.S. degree awarded only after two years of graduate study. In January 1975 the School's M.L.S. program was re-accredited by the Committee on Accreditation of the American Library Association under the 1972 Standards for Accreditation.

The School is an institutional member of the Canadian Association of Library Schools (CALS) and the Association of American Library Schools (AALS). CALS in turn represents all the Canadian Schools in the International Federation of Library Associations(IFLA). Individual faculty professional society memberships include, in addition to CALS and AALS: American Library Association; American Society for Information Science; l'Association pour l'avancement des sciences et des techniques de la documentation; Beta Phi Mu (Honorary society); Canadian Association for Information Science; Canadian Association of College and University Libraries; Canadian Library Association; Library Association of Ottawa; Québec Library Association; Special Libraries Association (which has a Montreal Chapter).

The School maintains close liaison with the Corporation of Professional Librarians of Québec, which has sole legal authority to enable a practitioner in Québec to use the title "Professional Librarian". Faculty members also have individual memberships in the Corporation.

2.2 OBJECTIVES OF THE SCHOOL

At a time when society's attitude to and use of information is undergoing dramatic change, the Act establishing the Corporation of Professional Librarians of Québec is one useful guideline in stating the objectives of a graduate school of library science. The Act defines a professional in the field of librarianship as one "whose principal functions are (a) to establish, develop and administer libraries or documentation centres with a view to scientifically preserving human knowledge in any form; (b) to classify and organize means for preserving human knowledge according to the scientific methods currently taught in universities; (c) to render human knowledge accessible to institutions and persons by introducing the methods required for making use of the services of libraries and for establishing a local library system connected with any regional, provincial, federal or international system."

Graduates of our Library School program do indeed perform all of these functions as librarians or information scientists in a variety of library settings: special, university, public, and governmental; they have also been connected with the development of the larger information systems at all levels mentioned in the Act. To state that the School's program aims to prepare its graduates to play a dynamic role in the operation of the libraries of today, to be flexible and perceptive of the need to adjust to new modes in the future, is also to state that the School itself is dynamic, flexible, and responsive to change.

Thus, this brochure is a reflection of the School only as it stands officially at the moment of writing.

Although the broad objectives are essentially long-range, the details and the methods of realization are as flexible as the profession for which its students are being prepared. This is true not only of the M.L.S. program, but also of the ways in which the School is cooperating with the profession in the responsibility of continued education for those already possessing the professional degree.

2.3 RELATIONSHIP TO THE UNIVERSITY

The Graduate School of Library Science is part of the Faculty of Graduate Studies and Research of McGill University; its students are able to participate fully in the varied life of a large university. Further, they are not only allowed but encouraged to elect courses in other units of the University (up to a present maximum of 12 credits) when those courses contribute to their professional education. Similarly, faculty members whose prime areas of responsibility lie outside Library Science, but whose expertise relates to librarianship, participate directly in the instructional program of the school as sessional and special lecturers.

2.4 FACILITIES

The School is located on the street floor of McLennan Library in quarters especially designed for it. Within easy access of each other are the administrative offices, faculty offices, classrooms, cataloguing laboratory, Data Processing Laboratory, and Library Science Library. Student amenities include a lounge, kitchen facilities, lockers, and typewriters.

2.4.1 Data Processing Facilities

Through the terminals in the Data Processing Laboratory, students have access to MUSIC (McGill University System for Interactive Computing), and to programs on the operating system of the Centre. They may also use data processing equipment in the Faculty of Management and in the Computing Centre itself, where programmers are available for consultation on an extended schedule. In the School's in-house Laboratory, there is dial-up access to on-line information retrieval systems at the National Library and at the Canada Institute for Scientific and Technical Information, both in Ottawa. Instructional use is also made of commercial data base vendors in Canada and the U.S. Students in Library Automation are given access to the UNICAT-/TELECAT shared cataloguing system based in Toronto via terminals in the Cataloguing Department of McLennan Library.

2.4.2 Library Facilities

A Branch Library in the McGill Library System's Humanities and Social Science Area, the Library Science Library performs the primary function of serving the School's students and faculty in curricular and research work and is accessible to the McGill community and practising librarians in Montreal. The library acquires 1,300 monographs annually and holds 32,000 volumes and 700 periodical titles. In addition to the main body of professional literature and literature in related fields (such as educational theory and methodology, publishing and printing, communication, documentation, audiovisual media, management, automation, etc.) it has a collection of rare children's books and current children's and young adult literature. To supplement regular class instruction, students (whether hired to work part-time in the library or not) are encouraged to examine the library's internal files.

Students may also use all McGill libraries and through them have access to the continent's major resources. The five areas of the Library system are described in detail in the *General Announcement* of the University.

3 ADMISSION AND STUDY INFORMATION

3.1 LENGTH OF STUDY

The M.L.S. degree is awarded after successful completion of two academic years of postgraduate study. The first year of the program must be taken full-time; the second year may be completed by part-time study. Students wishing to take courses towards their McGill degree at any university in the province of Québec should refer to the section entitled "Academic Credit Transfer Agreement" in the *General Announcement.* In certain cases, credit may be granted for courses taken at other universities after a student's initial registration in the School. Approval of the Director is necessary and should be obtained in advance.

All students, and especially those without previous experience of library work, are strongly advised to work in a library during the summer period between the end of the first year session and the second year of the program.

3.2 ADMISSION REQUIREMENTS

3.2.1 First Year Class (M.L.S. I)

1) Applicants for admission must have a B.A. or B.Sc. degree from a recognized university. The School will take into account the character of the applicant's undergraduate studies and his/her suitability for library work. Courses in the humanities,

sciences, and social studies are preferred as forming a suitable basis for studies in library science. Courses of a purely vocational or professional nature cannot be counted as fulfilling this requirement, which is intended to ensure an adequate academic preparation. Academic standing of at least B(or second class) is required.

2) A knowledge of at least one language other than English is expected; French is highly recommended.

3) Application forms may be obtained from the School and when completed, should be returned to the School. Official transcripts of the applicant's university record must also be supplied. Deadline for receipt of application forms for entrance into the first year of the program is May 15. As enrolment is limited, early application is advisable.

4) Previous library experience, while not essential, will be given consideration in assessing an application.

3.2.2 Second Year Class (M.L.S. II)

A student who has obtained a B.L.S.(Canadian) or a M.L.S. (American) with satisfactory standing from another accredited library school will be considered for admission into the second year. A student who has completed the first year with satisfactory standing at another accredited Canadian library school with a two-year program may be permitted to transfer into second year. The applicant must have academic and other qualifications acceptable for entrance into McGill's M.L.S. program and have taken the core courses required in the first year M.L.S. at McGill. In such cases the full program of the second year, or its equivalent, must be taken at McGill.

3.2.3 Special Students

Students who possess the B.L.S. or M.L.S. are welcome to register for any elective courses for which they fulfill the necessary prerequisites. At the discretion of the Director, work experience may be substituted for such prerequisites. Enrolment is subject to the condition that regular students have priority in cases of class size restrictions.

3.3 REGISTRATION

New students register at the School on Thursday, September 8; returning students register at the beginning of 2nd year program on Monday, September 12, and Tuesday, September 13.

4 GENERAL INFORMATION

4.1 BOARD AND RESIDENCE

Information regarding accommodation can be found in the *General Announcement* available from the Registrar's Office, 845 Sherbrooke St. West, Montreal H3A 2T5

4.2 STUDENT SERVICES

Full information concerning Student Services is given in the *General Announcement.*

4.3 FEES AND EXPENSES

4.3.1 Tuition Fees

The University reserves the right to make changes without notice in the published scale of fees.

Fees are due and payable 10 days after formal registration in the Faculty of Graduate Studies and Research. A late fee is charged for payment after the specified dates, and no days of grace are allowed. Fees may be paid in two instalments; second instalment payable January 15, 1978.

	Tuition	Student Services	Students' Societies
First year	$570	$70	$29.50
Second year	285	35	29.50
Transfer students entering in second year	570	70	29.50
Additional year	40	35	29.50

SPECIAL FEES

Application for Admission	$15.00
Graduation Fee	15.00

Information concerning other special fees may be found in the *General Announcement.*

4.3.2 Fees for Special Students

Approximately $57 per term course
$15 application fee for those registering at McGill for the first time.

Fees of $15 for Students' Societies and $20 for Student Services will be assessed.

4.3.3 Textbooks and Materials

Students should allow approximately $100 for textbooks and supplies. These are available from the University Bookstore and the School. Students in advanced data processing courses accessing external information systems are given a suitable amount of free connect time and may purchase additional time at special student rates.

4.4 FINANCIAL AID AND AWARDS

4.4.1 Scholarships and Fellowships Awarded in the Graduate School of Library Science

Applicants accepted for admission to the program leading to the degree of Master of Library Science and students entering the 2nd year of the program may apply to the Director of the School before March 1 to be considered for the following awards which are made, after due investigation and recommendation, to deserving students who require financial assistance.

JANET AGNEW SCHOLARSHIP IN THE GRADUATE SCHOOL OF LIBRARY SCIENCE. Value: $250. Established from a bequest of the late Janet M. Agnew, a graduate of and former instructor in the School.

ETHELWYN M. CROSSLEY SCHOLARSHIP FUND. $400 from the fund founded in honour of a former student of the School.

SYRA DEENA TARSHIS FLEISHMAN BURSARY. $200 from the fund founded in memory of a former student of the School.

ELIZABETH G. HALL SCHOLARSHIP FUND. $400 from the fund founded in honour of a former member of the McGill University Library staff.

LIBRARY SCIENCE FELLOWSHIP. Value $2,500. Established by the McGill Development Fund in cooperation with the library staff to assist a member of the library staff to attend the first academic year of the M.L.S. program in the Graduate School of Library Science. Open to a present full-time library staff member who will have completed two years' continuous full-time employment within the McGill University Libraries system before the deadline date for applications, and who has been accepted into the Graduate School of Library Science. The Fellowship is tenable for one academic year.

DR. G.R. LOMER SCHOLARSHIPS. Three annual scholarships of $660 each in honour of Dr. G.R. Lomer, former Director of the School.

H.W. WILSON FOUNDATION FELLOWSHIP. A grant in the amount of $3,000 made on a rotating basis to schools with graduate library programs accredited by the American Library Association, for distribution as scholarship aid in amounts and manner considered appropriate by the schools. The McGill Graduate School of Library Science will receive a grant in 1977.

4.4.2 Scholarships and Fellowships Awarded by Outside Agencies

The *Canadian Library Association* has a number of scholarships available to students in accredited library schools. Information and application forms are available from the Scholarships and Awards Committee, Canadian Library Association, 151 Sparks Street, Ottawa, Ontario K1P 5E3.

The *Special Libraries Association* offers four $2,500 scholarships for graduate study leading to a master's degree at a recognized school of library or information science in the United States or Canada. College graduates or college seniors(citizens of the U.S. or Canada) with an interest in special librarianship are eligible. Work experience in a special library is helpful. Further information and application forms may be obtained by writing to the Special Libraries Association, Scholarship Committee, 235 Park Avenue South, New York, N.Y. 10003. Applications must be filed by January 15.

The *National Research Council of Canada*, in cooperation with the Advisory Board for Scientific and Technological Information, offers a limited number of scholarships to assist science or engineering graduates to obtain advanced degrees in the fields of science librarianship and documentation. The awards are made on the basis of high scholastic achievement and evidence of suitability for a career as a science librarian or science information specialist. Applicants must be Canadian citizens or landed immigrants. All communication regarding these scholarships should be addressed to: The Scholarship Officer, Office of Grants and Scholarships, National Research Council of Canada, Ottawa, Ontario K1A 0R6. Application must be filed not later than December 1.

The *Canadian Federation of University Women* offers a professional fellowship with a value of $2,500 open to any woman who has completed a degree from a Canadian university, who is a Canadian citizen or who has held landed immigrant status for one year prior to submitting application and who wishes to pursue graduate work at an accredited professional school. Information and application forms may be obtained from the Canadian Federation of University Women, Suite 209B, 151 Slater Street, Ottawa, Ontario K1P 5H3. Applications must be submitted before February 1.

Beta Phi Mu, the International Library Science Honor Society, offers a scholarship with a value of $1,000 to a student at the Master's level accepted in an American Library Association accredited program. Application forms are available from the Executive Secretary, Beta Phi Mu, Graduate School of Library and Information Sciences, University of Pittsburgh, Pittsburgh, Pa. 15260. Deadline for application is March 16.

4.4.3 Fellowships Awarded by the University

Students will be considered for fellowships administered by the Faculty of Graduate Studies and Research for which they are eligible. These include the J.W. McConnell Memorial Fellowships and the Graduate Faculty Research Fellowship Programs for graduate students in all disciplines. Details of these awards are found in the booklet *Postgraduate Fellowships, Bursaries and Prizes.* This booklet and application forms are available from the Fellowships Office, Faculty of Graduate Studies and Research, Dawson Hall, McGill University, 853 Sherbrooke Street West, Montreal, PQ, H3A 2T6

4.4.4 Bursaries and Loans

Students in any discipline who are residents of Québec can apply for a Québec Graduate Fellowship. Also available to such students is a Québec Bursary and Loan. Application forms and information brochures are available in the Office of the School of Library Science.

Canadian citizens and landed immigrants are eligible for a guaranteed student loan in the province or territory where they have resided for a year preceding the date of application. Residents of Québec apply after May 1 at the McGill Student Aid Office, 3465 Peel Street, Montreal, PQ., H3A 1W7, for these loan funds financed by the Federal and Provincial governments; residents of other provinces apply through their provincial ministries of education.

Additional information including a list of sources of information on awards for graduate study is provided in the above-mentioned booklet, *Postgraduate Fellowships, Bursaries and Prizes.*

4.4.5 Other

American students are also advised to write to the Library Education Division, American Library Association, 50 East Huron Street, Chicago, Ill. 60611, for a copy of *Financial Assistance for Library Education.*

4.5 PLACEMENT SERVICE

The Canada Manpower Center – Student Placement Office provides a range of services to McGill students and recent graduates. Students who seek information about career and job opportunities are invited to consult a placement counsellor.

In addition, the School receives the posts notices of job openings throughout North America.

5 INSTRUCTIONAL PROGRAM

5.1 LIBRARY VISITS

Each year, first-year students visit the Bibliothèque Nationale du Québec, the Bibliothèque de l'Ecole des hautes études commerciales, and a number of public libraries in Montreal in order to gain insight into the diversity of library service. In the Spring, a two-day excursion to Ottawa is arranged, during which students hear lectures about and are given detailed tours of the Public Archives, the National Library of Canada, the Canada Institute for Scientific and Technical Information, and the new Ottawa Public Library, by members of each institution's own staff. Certain second year courses also involve examination of selected special libraries and information centres by smaller groups of students.

5.2 COLLOQUIA

Guest lectures and colloquia, open to all interested, by specialists and prominent individuals in fields related to the library profession are an integral and important part of the School's instructional program. (See list of Special Lecturers).

5.3 PROFESSIONAL WEEK

The first week of the Winter term has been left free for one or more specialized subjects to enable outside experts to be invited for a concentrated course, in an area that supplements the regular course offerings for a particular year. The subject, instructor and credit hours will be announced at the beginning of the academic year in order to enable students to plan their other electives accordingly.

5.4 COURSE SCHEDULES

A denotes fall-term course.

B denotes winter-term course.

A,B denotes course given either in fall or winter term.

Ordinarily an A,B course is offered only once during any one year.

Detailed class schedules are sent to students in August and November. Not all courses are taught in any one year.

5.5 MARKS

Final marks are based on the term's work and/or on examinations. Classification of marks:

100-80% – A; 79-65% – B; Below 65% – failure.

Students who do not fulfill requirements satisfactorily may be asked to withdraw from the School.

Regulations concerning failures and supplementals appear in the *Graduate Faculty Announcement.*

MCGILL UNIVERSITY LIBRARY

6 COURSES OF INSTRUCTION

6.1 FIRST YEAR COURSES

The following courses are required in the first year (total 27 credit hours):

6.1.1 Fall Term

405-602A INTRODUCTION TO LIBRARIANSHIP. (1 credit hour). This course provides: an introduction to the principles of librarianship; consideration of the library in relation to social, educational, cultural, and recreational needs; a forum in which to discuss general professional issues; and an opportunity to explore the characteristics of libraries and librarians as social agents.
Professors Dolan and Hall

405-603A SELECTION AND USE OF BOOKS AND RELATED MATERIALS I. (3 credit hours). Introduction to review-media and bibliographical tools useful in the process of developing collections of books and other materials, including serials, microforms, films, and recordings. Pertinent factors in considering materials in various formats and in evaluating materials appropriate to various user communities. Nature and structure of the publishing industry. Librarian-publisher relations. Copyright and public lending right.
Professor Hall

405-605A REFERENCE MATERIALS AND METHODS I. (3 credit hours). The fall term introduces students to the nature, functions, and types of bibliographies, and to the concept of bibliographic control, in hard copy and machine readable formats, of book and non-book materials.
Professor McNally

405-607A ORGANIZATION OF MATERIALS I. (3 credit hours). Introductory course in the techniques of bibliographic control of library materials. Basic cataloguing principles and practices incorporating concepts of main entry, subject analysis and classification according to standard cataloguing codes. The use of the ISBD formats for descriptive cataloguing. Formal instruction is accompanied by practical assignments in a well-equipped cataloguing laboratory.
Professor Clement

405-609A ADMINISTRATION OF LIBRARY OPERATIONS. (3 credit hours). The first part of this course deals with operations which are not usually performed by professionals such as the ordering and processing of documents and their circulation. The second part consists in a study of the "organization" with examples drawn from the library and information centre environment.
Professor Lavergne

405-610A INTRODUCTION TO DATA PROCESSING I. (1 credit hour). An introduction to basic data processing concepts through exercises in coding, key-punching, flow-charting and simple PL/I programming. Interactive work at a terminal is done on McGill's own time sharing system, McGill University System for Inter-active Computing (MUSIC).
Marie Falquet

6.1.2. Winter Term

Two of the courses marked * in the list of elective courses (6.3) are to be elected by first-year students in the winter term in addition to the required courses listed below.

405-604B SELECTION AND USE OF BOOKS AND RELATED MATERIALS II. (3 credit hours). Basic principles and practice in building library collections for adults. Controversial materials and censorship in the context of selection. Components of a policy statement. Standards for collections. Cooperative programs in developing resources. Alternative sources and methods in the acquisition process.
Professor Hall

405-606B REFERENCE MATERIALS AND METHODS II. (3 credit hours). The winter term concentrates upon two topics. The first is reference service which involves topics such as interviewing techniques and search strategy. The second topic of concentration is factual sources of information like encyclopaedias and dictionaries, and their place within the context of information transfer.
Professor McNally

405-615B INTRODUCTION TO DATA PROCESSING II. (1 credit hour). Using a program package running on McGill's computer, each student designs and implements an information system project, specifying its data, purpose, users, and products; creates the data file, and flowcharts and executes the file manipulation to generate products specified in the design.
Professor Sessions and Others

6.2 SECOND YEAR COURSES

The following 2 courses (total of 4 credit hours) are required in the fall term.

405-611A RESEARCH METHODS. (1 credit hour). An introduction to fundamental aspects of reflective thinking and some of the methods and techniques of research appropriate to the investigation of library problems. Attempts to introduce students to what is involved in planning, conducting, and reporting on research, thereby providing criteria helpful in evaluating published research in library science.
Professor Hall

405-620A THEORY AND PRINCIPLES OF ADMINISTRATION. (3 credit hours). This course is concerned with the application of scientific management to the situation encountered in libraries and

information centres. It deals with management work under the broad headings of information gathering, planning, budgeting, organizing, staffing, directing and controlling. The case study method is used to illustrate some of the problems encountered.
Professor Lavergne

6.3 ELECTIVE COURSES

In addition, the following elective courses are offered. 21 elective credit hours must be completed in the second year; each course listed below is 3 credit hours.

* **405-608B ORGANIZATION OF MATERIALS II.** Cataloguing in depth with a view to such specialties as original cataloguing, catalogue maintenance and administration of the cataloguing department. Investigation of alternative methods of library documentation. The study of developments in international cataloguing standards, codes, and formats. Includes laboratory sessions.
Professor Clement

405-612A,B HISTORY OF BOOKS AND PRINTING. Surveyed are the development of writing, alphabets, and books from their inception, and of printing from its invention in the fifteenth century.
Professor McNally

* **405-613A,B AUDIOVISUAL MATERIALS.** Introduction to audiovisual equipment and typical audiovisual programs in libraries; problems of selection, acquisition, evaluation, organization, housing, and use of non-print materials such as films, filmstrips, phonorecords, videotapes, etc.
Professors Dolan and Hillgartner

* **405-614B PUBLIC LIBRARY ORGANIZATION AND DEVELOPMENT.** The history, organization and development of public libraries with attention to current practices and problems. The importance of legislation to the concept of total coverage will be considered. Emphasis will be on Canadian libraries.
Norah P. Bryant and Special Lecturers

405-630B LIBRARY COLLECTIONS: ASSESSMENT AND DEVELOPMENT. Standards for research collections and quantitative and qualitative criteria for evaluating them. Formulation of an acquisitions policy and elements of an acquisitions program. Inter-library relationships, library specialization, and cooperative programs as factors in the development of collections. Developing research collections in special subject fields.
Professor Hall and Walter Grossmann

405-631B SYSTEMS ANALYSIS. This is a course for students who are sufficiently at ease with the applications of data processing in libraries and information centres to be ready for more advanced work in computerization in terms of the characteristics of the evolving technology (hardware and software) and their effects on the design and implementation of typical systems.
Professor Thorpe

405-632A,B LIBRARY AUTOMATION AND NETWORKS. A comparative examination, from the point of view of the user, of important systems, activities, and problems in library automation. Lectures by experts are central; emphasis is on up-to-the-minute developments and trends. Students are given hands-on experience with the shared cataloguing system of which McLennan Library is a founding member (UNICAT/TELECAT).
Professor Sessions and Special Lecturers

405-633A,B INFORMATION RETRIEVAL. The first part of the course consists of lectures on principles of information retrieval applicable to both batch and on-line searching, and an examination of the literature. The second part is a laboratory on on-line searching, accessing external data bases via terminals in the School.
Professor Sessions and Special Lecturers

405-634A,B PROBLEMS AND DEVELOPMENTS IN CATALOGUING AND CLASSIFICATION. Advanced studies in the problems inherent in several aspects of cataloguing and classification, the general solutions available (e.g. cataloguing codes, classification schemes, etc.), a critical examination of those solutions, and a study of current research into new solutions.
Not offered 1977/78.

405-636A,B GOVERNMENT PUBLICATIONS. The nature and scope of official publications of Canada, Great Britain, the United States, and the United Nations; their acquisition, bibliographic organization, and use.
Professor Astbury

405-637A,B SCIENTIFIC AND TECHNICAL LITERATURE. Introduction to the process of communication and information requirements in the scientific community; sources of scientific and technical information; study of representative reference sources in specific fields of basic and applied science.
Dr. Jack Brown

405-638B BUSINESS LITERATURE. An introduction to the literature used in business. Most classes take place at the Library of The Royal Bank of Canada in Place Ville Marie. Various aspects of business are described and students learn to handle reference questions in this field.
Miriam Tees

405-639A SPECIAL LIBRARIES. A practical course on administration of special libraries using a simulation technique. Following a general introduction, the class, working in groups, sets up and puts into operation a hypothetical special library. Class discussion and visits to special libraries are of paramount importance.
Miriam Tees

* **405-640B COLLEGE AND UNIVERSITY LIBRARIES.** Examines the history, development, and current trends in higher education. Against

this background the role and problems of libraries of academic institutions are studied. Topics discussed include administration, organization, service to undergraduates, service to graduate students and faculty, surveys, standards, interlibrary cooperation. Large non-academic research libraries and national libraries are also briefly considered.
Professor Astbury

405-642A,B LIBRARY MATERIALS FOR CHILDREN. Survey of the history of children's literature in English from its beginnings in folk literature through the mid-twentieth century; study of criteria for the selection and evaluation of children's books, traditional and modern; consideration of standard selection aids; and examination of current titles in relation to the child's reading interests, needs, and abilities.
Professor Dolan

* **405-643B LIBRARY MATERIALS AND SERVICE FOR YOUNG ADULTS.** Study of the interests and reading habits of young adults; survey of books of special appeal to the adolescent; evaluation, selection, and use of print and non-print materials in high school and public libraries; development of library programs including book talks, films programs, and readers' services.
Professor Dolan

405-644A,B RARE BOOKS. This is a brief, practical course on books in rare book departments, with mention of the different kinds of material to be found there and also a few of the special problems arising in the day-to-day running of such a department. Books, maps and prints are shown, attendance at a book auction is arranged, as well as a visit to an antiquarian book shop; visiting lecturers speak on their specialties.
Elizabeth Lewis and Special Lecturers

405-645A,B ARCHIVES AND RECORDS IN LIBRARIES. This seminar aims at introducing librarians to the literature on archives, historical manuscripts, and records management which may prove useful to them as practising librarians in the future. Definitions, principles, and terminology in these three fields are compared with those in library science. Emphasis is placed on records of the various media. Selection, conservation of writings, finding tools, and controls are examined. The impact of the computer and other technological developments are explored. A practical assignment, involving the description of unique papers in publishable form, is called for.
John Andreassen

405-646D A RESEARCH PROJECT. (Prerequisite: 405-611A). Permission to undertake this is granted by the Director of the School to the exceptional student having the necessary experience or academic background.
Staff

405-647A,B INDEPENDENT STUDY. Permission to register for this is given to able students after consultation with the Director of the School. It usually consists of an exploration in depth of a topic in library science which is not emphasized or elaborated on in any other part of the curriculum. Students electing this option work under the direction of a faculty advisor.
Staff

405-648B CRITICAL ANALYSIS OF LIBRARY STUDIES. Attempts to develop the ability to analyze and evaluate library research reports through the reading and discussion of both classic and contemporary studies in the field of librarianship.
Professor Hall

405-649B LIBRARY PLANNING AND ARCHITECTURE. This course is concerned at first with promotion work, the building committee, the building program, the study of the region and the determination of the site. It then deals with the major areas and their relationships as well as with furnishings. Part of the course is given by an architect and various libraries are visited.
Professor Lavergne and Michael G. Werleman

* **405-650B SERVICE TO CHILDREN IN SCHOOL AND PUBLIC LIBRARIES.** Introduction to objectives, standards, functions, and services in school and public library work with children, including trends in the development of elementary and secondary school media centres, the case study method is used in examining problems relating to the organization, administration and evaluation of children's services.
Professor Dolan

405-651A,B REFERENCE SERVICE IN THE HUMANITIES AND SOCIAL SCIENCES. This course investigates the conceptual orientation of the disciplines and their constituent subjects. Also considered are the information needs of researchers in these fields and the extent to which reference sources meet these needs.
Professor McNally

405-652A,B COMMUNICATION MEDIA AND THE LIBRARY. The intention of the course is to use a model of the communication process to describe the culture and society that is the context of libraries; to analyze the interaction process between the library and the community; to analyze and improve library operations by prediction based on the model.
Not offered 1977/78.

* **405-653B THE ORGANIZATION OF KNOWLEDGE.** This course reviews the historical origins, development, and growth of the organization of knowledge, with emphasis on the evolution of the various scientific desciplines and their supporting literature. Case studies, substantially from the history of science, will be used to emphasize the importance of the organization and availability of knowledge. Special topics to be covered include

information flow and access, the sociology of scientific communication, the interaction of science and society, and the growth of the information industry.
Frances Groen

405-654A,B CONSTRUCTION AND MAINTENANCE OF INDEX LANGUAGES. Analysis of concepts and terminology of a special subject field; development of conceptual categories; recognition of a priority of categories; construction of (a) a classification scheme (b) a subject heading structure, and (c) a thesaurus for post-coordinate indexing.
Staff

405-655A,B ORGANIZATION OF NON-BOOK MATERIALS. (Prerequisite: 405-608B). The course covers the bibliographical description of non-book materials as documents for the purpose of information retrieval; their physical arrangement for use, handling, storage and care as fully integrated parts of a library's collection, as well as their alternate arrangements for other uses, e.g. instructional aids, for recreational purposes, archival records, etc.
Professor Clement

405-680A,B BILINGUAL LIBRARIANSHIP AND INFORMATION SCIENCE. This course deals with the structuring and utilization of bilingual information systems. Problems of adaptation of English language cataloguing rules, classification systems, indexes and thesauri to a French environment will also be discussed. A study of the specialized French language terminology will be an integral part of this course. An adequate knowledge of day to day French is a prerequisite.
Professor Lavergne and Special Lecturers

405-690A,B ISSUES IN INFORMATION SCIENCE. A cross-disciplinary examination of present and near-future effects of technological advance, national and international cooperation, copyright laws, rising costs, etc., on the development of new methods of processing and disseminating information and consequent new roles for librarians. Reflecting the Canadian viewpoint, emphasis is on immediate problems and possible solutions.
Dr. Brown

6.4 COURSES IN ANOTHER SCHOOL OR FACULTY

A maximum of 12 credit hours(i.e. four half courses) may be taken, with permission, provided students have the necessary prerequisites. The following are among the courses suggested:

COMPUTER SCIENCE
EDUCATION AND SOCIETY IN QUEBEC
THE FILM
FOREIGN LANGUAGES
GOVERNMENT OF CANADA
HISTOIRE CULTURELLE DU QUEBEC
HISTORY OF BIOLOGY
HISTORY OF SCIENCE
INTRODUCTION TO LOGIC
INTRODUCTION TO SOCIAL PSYCHOLOGY
INTRODUCTION TO STATISTICS
INTRODUCTION TO THE STUDY OF LANGUAGE
LANGUAGE AND THOUGHT
LA LITTERATURE QUEBECOISE
LITTERATURE FRANCOPHONE COMPAREE
LIVRES ET SOCIETE QUEBECOISE
PRINCIPLES OF PUBLIC ADMINISTRATION
PROBLEMS IN SEMANTICS
PROGRAMMING LANGUAGE(S)
SOCIOLOGY OF SCIENCE
SOCIOLOGY OF THE PROFESSIONS
STUDIES IN COMMUNICATIONS
THIRD WORLD LITERATURE
TWENTIETH CENTURY CANADIAN LITERATURE

CALENDAR FOR SESSION 1977-1978

1977

September 6, Tuesday	Registration for 2nd year students.
September 6, Tuesday to September 9, Friday	Orientation for 1st year students.
September 7, Wednesday	Test for College Entrance Mathematics for 1st year students.
September 9, Friday	Registration for 1st year students.
September 12, Monday	Classes begin for 1st and 2nd year students.
October 10, Monday	Thanksgiving Day. Lectures cancelled.
November 8, Tuesday	Fall Convocation.
December 9, Friday	classes end for 1st and 2nd year students.
December 12, Monday to December 23, Friday	Examination period for 1st and 2nd *year students.*
December 25, Sunday	Christmas Day. Administrative offices closed from 5:00 p.m. Friday, December 23 to 9:00 a.m. Monday, January 2.

1978

January 16, Monday	Classes resume for 1st and 2nd year students
February 1, Wednesday	Deadline for applying for graduate fellowships available through the Faculty of Graduate Studies and Research.
Mar. 24, Friday to Mar. 27, Monday	Easter. Administrative offices closed from 5:00 p.m. Thursday, Mar. 23 until 9:00 a.m. Tuesday, Mar. 28.
April 14, Friday	Lectures end for 1st and 2nd year students.
April 17, Monday to May 5, Friday	Final examination period for 1st and 2nd year students.
May 22, Monday	Victoria Day. Administrative offices closed.
June 22, Tuesday and June 7, Wednesday	Convocations.

2 M.B.A. PROGRAM – GENERAL INFORMATION

2.1 HISTORY

In 1962, after several years of design and preparation, McGill's Faculty of Graduate Studies and Research established the Graduate School of Business. During the year following, new faculty members were hired and considerable time was devoted to the final formulation of a new M.B.A. curriculum. The first class was admitted and teaching began in Duggan House in September 1963.

Next door, in Purvis Hall, the undergraduate School of Commerce, part of the Faculty of Arts and Science, continued to function as a separate entity.

An ever-increasing demand for expansion, requiring a controlled and coherent policy which would relate both graduate and undergraduate programs, resulted in the merger of the two schools as the Faculty of Management less than five years later, on June 1, 1968.

The Faculty embraces all management and business education at the University. In 1972 the Faculty moved to the modern facilities of the new Samuel Bronfman Building, in close proximity to the business and commercial heart of downtown Montreal.

The Howard Ross Library of Management, named in honour of a former Dean of the Faculty and Chancellor of the University, is conveniently located on the second floor of the Samuel Bronfman Building. The collection covers business and management, finance, accounting, marketing, industrial relations, industrial psychology, computer programming, statistics, taxation and economics. There are over 184,000 volumes of books, pamphlets, periodicals, corporation and other reports and monographs, together with a collection of government documents.

The library serves a wide community. Many business concerns in the Montreal area, as well as students and staff from the other McGill faculties, use its resources.

Students of the Faculty of Management have full access to most of the 2,000,000 publications provided by the University Library System, many of these located in McGill's specialized collections. The Redpath and the McLennan Libraries house an extensive general collection of approximately 900,000 volumes.

2.2 AIMS AND APPROACH OF THE M.B.A. PROGRAM

The primary objective is to help the student acquire the necessary knowledge and skills to analyse and solve complex organizational problems including problems of change in business, government and other institutions.

This primary objective breaks down into the following sub-objectives:

1. Acquisition of a knowledge of the fundamental concepts and theories necessary for effective management. The first year of the program is devoted to basic theories and concepts in both the underlying disciplines and the functional areas of management.
2. Development of skills in identifying, defining, analysing and solving complex problems.
3. Effectiveness in dealing with people. The program will present the relevant concepts and train the student in interpersonal areas such as group problem-solving, consultation and leadership.
4. Development of self-awareness, responsibility and self-reliance. Various phases of the program are intended to enhance these traits, for example, activities to increase the student's awareness of his or her personal values, belief and goals.

Most management education programs place emphasis on the acquisition of knowledge and analytical techniques. Few programs use the knowledge and techniques to develop the problem-solving skills of the learner. Even fewer programs encourage the self-development and autonomy of the learner. McGill's M.B.A. program does not undervalue the worth of knowledge and analytical techniques. In fact, the major portion of the first year of the program is devoted to basic concepts and theories and to mastering analytical techniques. However, the program is also deliberately designed to enhance such managerial skills as problem-solving, decision-making, researching, communicating, consulting and dealing with interpersonal matters. The design of the second year of the program permits the student to clarify his or her own learning goals and to select learning experiences (research paper, electives, projects) that contribute to the achievement of his or her objectives.

McGILL UNIVERSITY LIBRARY

2.3 REQUIREMENTS FULL-TIME PROGRAM

Requirements for admission include:

a) an undergraduate degree from an accredited college or university (in any faculty) with a Grade Point Average of at least 3.0 out of a possible 4.0, or at least a 70% or B average.

b) the Graduate Management Admission Test and the Test of English as a Foreign Language. The latter is required of students whose mother tongue is not English.

The program commences in September of each year and applications must be received by May 15. Early applicants will be given preference. Applicants are advised of the admissions decisions as soon as all supporting documents and test scores are received. An official score report on the GMAT, taken within the past 5 years, with a minimum score of 500, is preferred. However, the undergraduate record, GMAT score, TOEFL (where applicable), work experience and letters of recommendation are the criteria used in making selections. A personal interview is not mandatory although candidates may be requested by the Admissions Officer to appear for such an interview.

An acceptance into the M.B.A. program will be honoured for three years for an applicant who wishes to delay entry.

A student applying for a delay must do so before the deadline date in order to obtain a refund of the deposit fee.

2.4 APPLICATION PROCEDURE FOR ADMISSION

a) Complete the application form, Personal Background Sheet and address labels. Return the first 3 copies of the application form along with the Personal Background Sheet, the $15 fee and the self-addressed labels to the address below:

Admissions Officer, M.B.A. Program,
Faculty of Management,
McGill University,
1001 Sherbrooke St. West,
Montreal, PQ, Canada H3C 1G5.

Please note that a file will not be opened until an official application *with the $15 fee* is received. Please make sure you have indicated whether you are applying for the first or second year of the M.B.A. program. (McGill graduates are exempt from paying the application fee.)

b) Arrange to have duplicate official transcripts of your undergraduate marks (and graduate, if any) forwarded directly to us by your university. Copies of transcripts received from applicants will not be accepted.

c) Arrange to have two letters of reference forwarded to us by current, or former, university teachers. (Those more than three years out of university may ask employers to provide references. No special forms are provided for this purpose).

d) Arrange to have the Graduate Management Admission Test score and the Test of English as a Foreign Language score (where applicable) forwarded to us directly from the Educational Testing Service.

e) Only if space allows will applications received after May 15 be considered.

2.5 GRADUATE MANAGEMENT ADMISSION TEST

The Graduate Management Admission Test (GMAT) is administered by the Educational Testing Service. It is usually held on a Saturday in the months of January, March, July and November, at the locations and times shown in the Bulletin of Information for Candidates. It is recommended that applicants write the test in November and, in any event, no later than March. (It usually takes three weeks to one month for the test scores to be forwarded to us.)

For a copy of the Bulletin and registration forms, write to the Educational Testing Service, Box 966, Princeton, N.J. 08540, U.S.A. Applications must be received by the Educational Testing Service at least three (3) weeks prior to the test date. The arrangements for taking the test, including payment of a $12.50 fee, are made directly with the Educational Testing Service.

2.6 TEST OF ENGLISH AS A FOREIGN LANGUAGE

The purpose of this test is to determine the English proficiency of non-Canadian individuals whose native language is not English. The test is held on Saturdays in the months of February, May, September and November. Applications must be received by the Educational Testing Service at least five (5) weeks prior to the test date. The fee for this test is also $12.50. For a copy of the Bulletin of Information, write directly to the Test of English as a Foreign Language, Box 899, Princeton, N.J. 08540, U.S.A. (It takes approximately one month for us to receive these scores.)

2.7 FOREIGN APPLICANTS

1. The University is unable to waive or defer the application fee or tuition fee requirement for foreign students. Applications received without the $15.00 application fee will not be processed.
2. There is no financial aid to bring foreign students to study in Canada. If an applicant has been selected to receive one of our awards, the financial aid is awarded only after registration in September. Therefore, foreign applicants must rely on their own resources to enter Canada.

3. Foreign students should contact the nearest Canadian Embassy or Consulate regarding student visas and immigration to Canada. In countries where there is no Canadian representation, students may apply to representatives of the British government for visas. Procurement may take up to three months. The Immigration Department by authority of the Canadian Government does not allow foreign students into Canada without proof of financial support for the duration of their stay in the country. Each applicant must supply us with a bank reference or letter from a sponsor proving he/she is financially able to support himself/herself for the two years of study at McGill. This must be forwarded to the Admissions Officer at the time of application.
4. We cannot assist in finding employment for foreign students. The regulations governing foreign students working in Canada should be checked with the nearest Canadian Embassy or Consulate (visas must be checked too.)
5. Foreign students wishing to work in Canada before applying to McGill, in order to finance their studies, must obtain landed immigrant status. Apply to the Canadian High Commission for landed immigrant status.

2.8 PROCEDURE FOR ACCEPTING OFFER OF ADMISSION

A registration deposit of $50 will be required from those admitted into the M.B.A. program. Cheques or money orders for $50 should be made payable to McGill University: (1) the $50 fee is payable immediately upon receipt of our letter of acceptance and reserves a place for you; (2) if the $50 fee is not paid by the date specified in the letter of acceptance, no reservation will be made for the applicant; (3) the fee is applied to tuition fees for those who inform us by the specified date that they will be joining the program and who register by the given date of registration; (4) the fee is forfeited if accepted candidates do not inform us by the specified date that they do not intend joining the program for the forthcoming academic year; (5) the fee is refundable if accepted candidates inform us by the specified date that they will not be joining the program for the forthcoming academic year.

2.9 TEST FOR COLLEGE ENTRANCE MATHEMATICS & ORIENTATION WEEK

All students entering the M.B.A. program are required to demonstrate an adequate knowledge of college entrance mathematics. During orientation week (the week before classes begin) the student will be required to sit a placement test and those not performing satisfactorily will be required to take a non-credit remedial course, "Survey of Basic Mathematics", in the first term. This course would have to be taken through the Centre for Continuing Education in the evenings. It is suggested that all applicants review Schaum's College Algebra text prior to writing the test.

Further details regarding topics covered in the test will be forwarded at the time of acceptance into the program.

Immediately following the Test for College Entrance Mathematics, a test to determine sections for the Data Processing and Computers course 273-631 will be administered.

Students are required to attend orientation week in order to take these tests, and to participate in a program of course-related films and workshops. First assignments in the various courses will also be presented during that week.

2.10 PHOTOGRAPHS

Students accepted into the program must submit three passport-size photographs for inclusion in the student record booklets within 30 days of their acceptance. All photographs must be in our possession by the end of July at the very latest.

2.11 LANGUAGE POLICY

The language of instruction at McGill is English. Students may write term papers and examinations in French, but reasonable competence in English is essential to succeed. A summer course, English 110-150C, is offered and it is recommended that students who lack fluency in English take this summer course *before* embarking on a program of study at McGill. Information and application material may be obtained by writing directly to the Summer Session Office.

2.12 REGISTRATION

a) All students must register during the normal registration period as indicated in the Calendar of Dates, until the degree is awarded, and pay the appropriate tuition fee or additional session fee of $40.

b) Students who fail to register during the normal registration period may do so later on the date designated by the University for late registration, upon payment of a late registration fee

2.13 IDENTITY CARDS

Students are advised both prior to and at the time of registration of the dates on which pictures will be taken for I.D. cards. Pictures are usually taken at David Thomson House, 3650 McTavish Street, at the beginning of October.

MCGILL UNIVERSITY LIBRARY

2.14 CLASSIFICATION OF STUDENTS

a) Full-time students are those taking a full load of courses required in that academic year.
b) Part-time students are those in the M.B.A. I and M.B.A. II evening program.
c) Diploma students are those who are following the equivalent M.B.A. I courses in the evening with the Centre for Continuing Education.
d) Special students are those who are not working towards the degree. They may take no more than two full courses with permission from the Faculty.
e) Visiting students are those from another university taking a course in the Faculty.
f) Additional session students are those who are working beyond the second year to complete their degrees and who are paying the $40 fee to maintain their registration

2.15 ELECTIVES OFFERED IN OTHER DEPARTMENTS IN McGILL

Students who wish to take an elective offered in another department in McGill must first obtain approval from the M.B.A. Program Co-ordinator. Once approval is obtained, the student must obtain permission from the department offering the course before registering for the course.

2.16 ACADEMIC CREDIT TRANSFER AGREEMENT

All Quebec universities have agreed to permit transfer of academic credit and course fees among themselves up to a maximum of two full courses in any one year. The agreement is intended to include only those courses not offered at the home university and which fit into the student's program requirements. Authorization for an M.B.A. student to transfer courses must be obtained from the Director of the M.B.A. program. Once approval has been obtained, the student must complete a Transfer Credit form, available from the Registrar's Office.

2.17 WITHDRAWALS

Students wishing to withdraw from the program must complete a Withdrawal form available from the Registrar's Office or from the Faculty of Graduate Studies. Students will not be considered as officially withdrawn until this form is completed. Students who drop out but who do not complete this form will be billed for the full tuition. See *General Announcement* for further information concerning withdrawals.

2.18 CHANGE OF ADDRESS

Students who change address during the year must complete a Change of Address form. These are available from the Graduate Program Secretary. It is very important that students inform us immediately or any change of address.

We also appreciate being kept informed of address changes after graduation.

2.19 VERIFICATION FORMS

A verification form, which provides an unofficial copy of the student's record to date, will be mailed by the Faculty of Graduate Studies and Research during the year. It is extremely important that the student check it carefully and inform the Faculty of Graduate Studies and Research of any errors and omissions so that the student's record will be correct at all times.

2.20 LANGUAGE REQUIREMENT FOR PROFESSIONS

Québec law now requires that candidates seeking admission to provincially-recognized professional corporations* must possess a working knowledge of the French language, i.e. be able to communicate orally and in writing in that language.

To demonstrate this capability, a candidate will normally be required to pass an examination set by the Régie de la langue française, unless he or she can show that three years of instruction in a French post-primary school have been completed. The professional corporation will require this proof of attendance or of succesful completion of the Régie examination.

This examination shall test the candidate's mastery of oral and written comprehension and expression in French. The contents may vary in accordance with the current terminological requirements of the profession or professional group. Examinations will take place four times a year, and they may be attempted an unlimited number of times.

In special cases where the candidate can clearly demonstrate to the Régie by means of an interview that a true mastery of French exists, the examination requirement may be waived.

Information on the testing program of the Régie may be obtained by writing to: Régie de la langue française, 800, Place Victoria, 16e étage, Montréal, Québec, H4Z 1G8, Telephone 873-6571.

Students who need to acquire a functional level of proficiency in French may register in courses at either the French Language Centre, 3438 McTavish Street, Telephone 392-5727, for courses during the day, or at the Centre for Continuing Education, 772 Sherbrooke Street West, Telephone 392-4901, for courses in the evening.

Students already proficient in French but who wish to keep up practice may register in courses at the Department of French Language and Literature,

3460 McTavish Street, Telephone 392-4577, or at the Centre d'études canadiennes-françaises, 3475 Peel Street.

* McGill degrees and diplomas currently give access to corporations regulating the activities of the following professional groups:

Advocates
Agrologist
Architects
Chartered Accountants
Chartered Administrators
Chartered Appraisers
Chemists
Dentists
Dietitians
Engineers
Industrial Administration Accountants
Industrial Relations Counsellors
Licensed General Accountants
Notaries
Nurses
Occupational Therapists
Physicians
Physiotherapists
Psychologists
Social Workers
Speech Therapists & Audiologists
Urbanists
Vocational Guidance Counsellors

2.21 SPECIAL POINTS REGARDING THE M.B.A. PROGRAM

a) The M.B.A. program is a two-year program. It cannot be taken in one year.

b) There are two terms each year. The academic year begins in September and ends May 1. (Please note there is no January admission.)

c) It is up to the applicant to supply all the documents required as well as GMAT and TOEFL scores.

d) Applicants must make their own arrangements for accommodation. (Refer to Facilities section of Announcement.)

e) EXEMPTIONS: Students who have completed undergraduate courses equivalent to required first year courses in the M.B.A. program may be granted exemptions. Such exemptions must be replaced by elective courses. Applications for exemptions should be made after registration on the appropriate form.

f) CREDITS: A student with a McGill Bachelor of Commerce degree, or equivalent, or a Bachelor of Engineering degree with a minor in Management, and with a CGPA of 3.4 or better, may be eligible for credit for up to five half courses in M.B.A. I

The student will be expected to complete the remaining M.B.A. I courses on a part-time evening basis while working during the day in a job related to the program.

The student will be required to write a research paper during second year in addition to carrying a full load of courses.

Note that no credits or exemptions will be given for second year courses.

2.22 GRADING AND PROMOTION STANDARDS

a) Pass Mark – The pass mark for each course is 65%.

b) Failures – Any student failing two courses in one term will be asked to withdraw from the program. Students in first year may be permitted to write supplementals for only one failure in each term.

A student applying for a supplemental must have obtained at least 55% on the failed course and an average of 70% on the other four courses. A student obtaining less than 55% on a course may repeat it if he/she has achieved an average of 70% on the other four courses.

Students must apply to write a supplemental through the Graduate Program Office, Room 407, and INSTRUCTORS MUST NOT BE APPROACHED WITH REQUESTS FOR SPECIAL SUPPLEMENTAL EXAMINATIONS.

c) Students who have not obtained an average of at least 70% in each term will not be permitted to continue in the program. Such students may apply to be registered in the Diploma in Management Program offered by the Centre for Continuing Education, 772 Sherbrooke Street West.

d) Rereads – INSTRUCTORS MUST NOT BE APPROACHED INIDVIDUALLY CONCERNING MARK CHANGES OR REREADS.
No marks will be changed without an official reread. Students seeking a reread must apply in writing to the Graduate Program Director and must submit a $10 fee, payable to the Faculty of Management. The fee will be refunded if an error is found in the student's favour. If the result is a lower mark, the lower mark will stand and there will be no refund. Rereads will normally be granted only when a student has failed a course.

e) Entry into MBA II – Students must have obtained an overall average of at least 70% to be permitted to continue into second year, and in order to graduate. In the case of failures and supplemental examinations, the failure and supplemental results are included when computing the overall average.

McGILL UNIVERSITY LIBRARY

2.23 DEFERRAL OF COURSES

Deferral of courses in the full-time program is normally *not* permitted. All students registered in the full-time program are expected to carry a full-time load, i.e. five half-courses per term. Only in *very* exceptional circumstances will students be permitted deferral of courses.

2.24 CHEATING

Cheating on assignments or examinations is a serious offence and may lead to disciplinary action, including expulsion.

2.25 PLAGIARISM

Many members of the teaching staff encourage joint work in small student groups. Generally, mutual effort is considered pedagogically sound. In submitting work in their courses, students should remember that plagiarism is considered to be an extremely serious offence. If a student has any doubt as to what might be considered "plagiarism" in preparing an essay or term paper, he or she should consult the instructor of the course to obtain appropriate guidelines.

3 CURRICULA AND PROGRAMS

3.1 ENTRY TO SECOND YEAR OF PROGRAM

Students may qualify for entry into either full-time or part-time M.B.A. II as follows:

1) Successful completion of the first year.
2) Successful completion of the McGill Diploma in Management program. (For further details see Section 3.3).
3) Transfer after completion of M.B.A. I at another university. In this case applicants should state the reasons for the transfer and forward detailed course descriptions, texts used, a copy of their Graduate Management Admission Test score, and arrange to have their university send two official transcripts of their undergraduate and graduate marks to date before a decision can be made as to their acceptability.

Those interested in applying for entry into the second year of the full-time program should apply to:

Mrs. Sandra Guadagnino
Admissions Officer, M.B.A. Program,
Faculty of Management,
McGill University,
1001 Sherbrooke St. West,
Montreal, PQ, H3A 1G5
(514)392-4336

Students who have completed the bulk of the work towards the M.B.A. degree at another university and who wish to transfer into our program to complete two or three electives will be accepted provided the home university is willing to grant them their degree. In such cases a McGill M.B.A. would not be conferred.

3.2 DIPLOMA PROGRAM

Prerequisite:
Survey of Basic Mathematics (non-credit)

1. Basic Management Statistics (half course)
2. Finance I (half course)
3. Economic Analysis of Business (half course)
4. The Economic Environment of the Firm (half course)
5. Behavioural Science (half course)
6. Data Processing and Computers (half course)
7. Marketing Management (half course)
8. Accounting – A Management Approach (half course)
9. Introduction to Modelling Methods in Management (half course)
10. Industrial Relations (half course)

OR

Introduction to International Business (half course)

OR

Organizational Theory and Design (half course)

The above ten (10) half-courses, offered by the Centre for Continuing Education in the evening, are equivalent to those offered in the first year of the full-time program. Upon successful completion of these courses, a student may apply for entry into the second year of the program on either a full-time or a part-time (evening) basis. Applicants must obtain an average of at least 70% on the above courses and must arrange to have two official transcripts of the Diploma marks forwarded to the Admissions Officer by the Centre for Continuing Education. A student with more than two failures in the Diploma program will not be admitted to the M.B.A. program.

All students intending to register for the Diploma in Management program are required to take the Test for College Entrance Mathematics through the Centre.

An announcement containing more information about the courses in the above program may be obtained from:

Centre for Continuing Education,
McGill University,
Strathcona Hall,
772 Sherbrooke St. West,
Montreal, PQ, H3A 1G5
Telephone: (514)392-5244

3.3 MASTER OF BUSINESS ADMINISTRATION PROGRAM FOR PART-TIME STUDENTS

The Faculty of Management, in cooperation with the McGill Centre for Continuing Education, offers an M.B.A. Program for part-time students. The courses are all given in the evening; they are of the same standard as, and similar to, the full-time courses.

Requirements For Admission To The Part-Time Program

a) In general, the same admission standards apply as for the full-time program but in some cases candidates who have a university degree, but who are not accepted for direct admission into the M.B.A. program, may register in the Diploma in Management through the Centre for Continuing Education. After they have completed four specified M.B.A. I courses, with an average of 70% or better, they may apply for reclassification as M.B.A. candidates.

b) The Graduate Management Admission Test and the Test of English as a Foreign Language; the latter is required of non-Canadian students whose mother tongue is not English.

Admission to the part-time program may be made three times a year. Completed application forms and all supporting documents must be received by the following dates:

June 30th for admission in September;
November 15th for admission in January;
March 15th for admission in summer courses.

Application procedures are similar to the full-time program but should be made to:

Miss Brenda E. Martin,
Supervisor, Part-time Programs,
Faculty of Management,
McGill University,
1001 Sherbrooke St. West,
Montreal, PQ, H3A 1G5
Telephone: 514-392-5938

All M.B.A. I courses in the part-time program are given through the Centre for Continuing Education. For course descriptions, timetables and registration particulars, students must obtain the calendar from:

Centre for Continuing Education,
McGill University,
772 Sherbrooke St. West,
Montreal, PQ, H3A 1G1
Telephone: 514-392-5244

Part-time students are not permitted to register for more than two subjects in each term. The part-time program may be completed in four years and students are advised to complete it within a six-year period.

Foreign Students

There is no financial aid for students registered in the part-time program. Foreign students who plan to seek employment in order to finance their studies must obtain landed immigrant visas. The Faculty cannot undertake to find employment for them. Foreign students with a student visa are not permitted to take employment in Canada.

3.4 M.B.A. PROGRAM: GENERAL OUTLINE

McGill's Management Program, covering two academic years, leads to the degree of Master of Business Administration. The course list below provides an outline of the program, and brief descriptions of the various stages follow:

First Year

Prerequisite:
Survey of Basic Mathematics (non-credit)

1. Basic Management Statistics (half course)
2. Finance I (half course)
3. Economic Analysis of Business (half course)
4. The Economic Environment of the Firm (half course)
5. Behavioural Science (half course)
6. Data Processing and Computers (half course)
7. Marketing Management (half course)
8. Accounting – A Management Approach (half course)
9. Introduction to Modelling Methods in Management (half course)
10. Introduction to International Business (half course)

OR

Industrial Relations (half course)

Second Year

Required Course

Policy and Organizational Theory (full course)

Electives

A student may choose either (a) six electives and a Research Paper or (b) eight electives. All electives in the MBA program are half courses.

General Management Stream

This stream is available to students who wish to cover a broad range in the second year of their program. They may choose their eight electives (six if they do a Research Paper) without following a specified sequence although they must ensure that they have the necessary prerequisite course(s) where these apply.

MCGILL UNIVERSITY LIBRARY

Concentrations

The electives open to a student will depend on his or her area of concentration. The concentrations available are:

Accounting & Finance, Behavioural Science and Personnel, Finance, Industrial Relations, International Business, Management Information Systems, Management Science, Marketing, and Policy.

Notes:

1. Details of the sequence of courses required in each concentration are shown on pages 12-14.
2. Course descriptions for electives are shown on pages 11 & 12.

4 COURSES OF INSTRUCTION

4.1 M.B.A. I PROGRAM

First year students are required to take the following courses:

277-613 BASIC MANAGEMENT STATISTICS. (Prerequisite: College entrance mathematics). Topics covered include: descriptive statistical analysis, common probability distributions (binomial, Poisson, normal), sampling procedures, sampling distributions, estimation, hypothesis testing, distribution-free procedures (tests of goodness of fit and independence), simple and multiple regression, correlation, one-way analysis of variance, classical time series analysis, Bayesian probability analysis. The course stresses the use of computer programs as an aid in statistical analysis.

271-611 ACCOUNTING: A MANAGEMENT APPROACH. This course examines the role of accounting both as an external and an internal information system. However, the stress is primarily on the internal use of accounting data by management for planning and control purposes. The basic concepts of financial accounting are examined and topics covered include the measurement of income, statement analysis, price level changes and aspects of business combinations. In the planning and control area, topics covered include cost and control concepts, costing systems, budgeting, differential cost analysis and the measurement of performance.

279-692 ECONOMIC ANALYSIS OF BUSINESS. This course is primarily devoted to demonstrating the applications of economic theory and methodology in solving business problems. The following topics are discussed in some detail: demand, production, cost analysis, pricing, growth, concentration, profitability, and resource allocation of the firm. Marketing and sales forecasting techniques are also introduced briefly, and attention is given to opportunities for the application of incremental analysis.

273-631 DATA PROCESSING AND COMPUTERS. This course is an introduction to the applications of electronic computers in business and in industry. It covers the following topics: concepts of the logical organization of computers; characteristics of procedure-oriented languages and of executive systems; current trends in computer systems (time-sharing and multiprogramming); and current computer applications and future potentialities, with emphasis on business data processing. The computer course is designed as a service course to the core units. Students will be assigned projects by instructors of core units which will require the use of computers. In the time the students allot to computers they will receive instruction and engage in computer skill development exercises as well as receive guidance by a computer expert on their core unit projects. The design of this course encourages the student to use the computer in the solution of management problems rather than to view computer programming as one more subject to master on the way to obtaining a degree.

There are two sections of this course. The first section is for students who have had previous experience using computers (e.g. some programming); the second section is for students with no previous experience using computers. A test to determine sections will be given immediately after the Test for College Entrance Mathematics.

272-621 BEHAVIOURAL SCIENCE. The course is designed to develop an understanding of the processes that underlie various behavioural phenomena. It is believed that many managerial decisions depend upon a sound knowledge of the dynamics of human behaviour. The course analyzes some of the basic concepts in the area of social psychology and discusses the implication of these concepts for the management stressing the development of an awareness of the methodological problems in behavioural research, the course introduces the student to some of the cognitive and dynamic processes within the individual. The processes contribute to the individual's interaction with other individuals within groups and organizations.

277-612 INTRODUCTION TO MODELLING METHODS IN MANAGEMENT. (Prerequisite: College entrance mathematics). Topics covered include: Introduction to Decision Analysis and Risk Attitudes, Linear Programming and Simulation. The course stresses the formulation of problems and their solution by standard methods or by computer packages.

274-641 FINANCE I. (Prerequisite: Accounting – 277-611 and Economic Analysis of Business – 279-692). An introduction to financial management and the role of finance, both within the firm and the economy as a whole. The institutional framework of the firm is discussed, including legal forms, taxes, financing instruments and the capital markets. An introduction to the analytics of finance is presented including the pricing of financial instruments, simple

models of capital market equilibrium, the financial structure of the firm, cost of capital, dividend policy, investment criteria for new capital spending proposals, and working capital management.

279-691 THE ECONOMIC ENVIRONMENT OF THE FIRM. This course examines the main macroeconomic mechanisms, i.e. income determination and the mutiplier theory as well as fiscal policy; the level of investment, the demand for money and the rate of interest as well as the Canadian banking system and deposit creation; the general equilibrium of product and money markets, and monetary and fiscal policies; the dynamics of investment, the employment sector, and the price level and inflation; the balance of payments and international trade as well as methods of dealing with balance-of-payments disequilibria.

275-651 MARKETING MANAGEMENT I. This course is designed to familiarize the student with the problems faced by the marketing executive and the role of marketing in the corporation and in society. It is increasingly evident that the needs and desires of the customer are of critical importance to the success of profit and non-profit organizations. Students learn to analyze buyer decision processes, as well as the surrounding economic, social, political technological and competitive environment and to convert this analysis into a reasonable marketing strategy. The first part of the course is devoted to measuring marketing opportunities and customer desires. The course then covers the topics of product policy, pricing decisions, distribution, advertising and sales force management. Through lectures, discussions of readings and cases, the student acquires the tools and methods of marketing management, and learns to apply these in the solution of marketing problems.

278-686 INTRODUCTION TO INTERNATIONAL BUSINESS An introduction to cultural, economic and political aspects of domestic, international and foreign environments and their effects on the international operations of business firms. The course seeks to familiarize the management student with the expanded world of the international businessman by examining the underlying concepts of international economic theory; developing a framework for examining country environmental constraints (educational, sociological, economic, political-legal) and relating them to the operations of multinational enterprise; studying the relationship between the international firm and the nation state, with particular reference to Canadian foreign ownership policies; examining the international payments system and balance of payments concepts; and discussing selected topics such as the role of multinational enterprise in economic development and planned economies.

278-687 INDUSTRIAL RELATIONS Unions, management and the public interest; a course designed to acquaint the student with the problems of industrial relations in defferent employment situations; the impact of unions on employees and on management; managerial attitudes toward unions and collective bargaining in a mixed enterprise society; and evolving public policy with regard to labour relations in both the public and private sectors. A few lectures, group projects and seminar papers are used.

4.2 M.B.A. II PROGRAM

Required Course. All second year students are required to take the following course:

272-630 POLICY, ORGANIZATIONAL THEORY, SKILL DEVELOPMENT. This course consists of three parts that run concurrently. In the first part, the entire class meets to discuss the theoretical content of the course, defined in terms of a set of readings. Among the topics covered are organizational structure, organizational power, managerial work, strategic decision making, and strategy formation. In addition, certain classes are kept free to discuss various topics in the fields of Management Policy and Organizational Theory, including, for example, industrial democracy, foreign ownership in Canada, the role of intuition in policymaking, and so on. In the second part, the class breaks into small teams of five or six persons, which select an organization and then study it from a policy and organizational theory point of view. Two reports are written, one descriptive and one normative, and these are discussed in small seminars comprising about six groups. In the third part, the students focus on "skill development", engaging in experiential learning to develop their own skills as managers-to-be. The experiences of the teams (forming, developing, working with an outside organization, etc.) and in-class simulations are used as vehicles for exploring such management skill areas as consulting, problem solving, working in groups, interviewing, leadership, and the like, and making connections between theory and practice.

Concentrations

ACCOUNTING & FINANCE

Three electives from each area, as follows:

Accounting

Any three from:

271-616A Accounting for Decision
271-617B Accounting for Control
271-618A Topics in Financial Reporting I
271-619B Topics in Financial Reporting II
271-614B Taxation Seminar

Finance

Required:
274-650 Finance II

MCGILL UNIVERSITY LIBRARY

Two of the following:

274-645 Financial Intermediation: Theory and Analysis
274-648 Applied Corporate Finance
274-647 Advanced Seminar in Finance
274-649 International Financial Management
274-646 Investments and Portfolio Management
274-644 Canadian Financial Institutions

BEHAVIOURAL SCIENCE AND PERSONNEL

Option 1. **Organizational Behaviour**

Required:
272-521 Leadership Style and Organizational Stress
272-625 Strategies of Organizational Development
272-627 Salary Administration
272-628 Creativity and Adaptive Organizations
276-668 Consulting Seminar

Other Electives to be approved by area coordinator.

Option II: **Organizational Behaviour and Policy Concentration**

Required:
272-521 Leadership Style and Organizational Stress
272-628 Creativity and Adaptive Organization
276-668 Consulting Seminar

Optional:
272-625 Strategies of Organizational Development
272-627 Salary administration
276-565 Business in Society I
276-567 Business in Society II

Other electives to be approved by area coordinator.

FINANCE

Required:
274-641 Finance I (taken during the first year of the M.B.A. program)
274-650 Finance II

Category A:
274-645 Financial Intermediation: Theory and Analysis
274-648 Applied Corporate Finance
274-647 Advanced Seminar in Finance
274-649 International Financial Management
274-646 Investments and Portfolio Management
274-644 Canadian Financial Institutions

Category B:
271-616 Accounting for Decision
271-617 Accounting for Control
277-679 Applied Deterministic Optimization
277-680 Applied Sequential Optimization
277-678 Simulation of Management Systems
271-618 Topics in Financial Reporting I
278-686 Introduction to International Business
277-634 Regression Models in Management
273-636 Management Information Systems
279-697 Topics in Managerial Economics
278-691 Business Law I

Courses in Category A not selected under that requirement.
Others (with approval of area coordinator)

For the M.B.A. concentration in Finance, the student must take both required courses. Finance I and Finance II, three courses in Category A and one course in Category B for a total of six courses. The student is cautioned to observe prerequisite requirements for the courses he/she selects.

INDUSTRIAL RELATIONS

Required:
278-687 Industrial Relations
278-688 Labour Relations in the Public Sector
279-500 Labour and Industrial Relations Theory
279-501 Human Resources in Industrial Society

Optional:
272-625 Strategies of Organizational Development
272-628 Creativity and Adaptive Organizations

Other electives to be approved by area coordinator.

INTERNATIONAL BUSINESS

Required:
Any four of the following:

278-686 Introduction to International Business
278-683 International Business Policy
274-649 International Financial Management
275-660 International Marketing Management
492-437 Comparative Company Law and the Multinational Company (given by the Law Faculty)

Others (to be approved by area coordinator)

Students concentrating in International Business are strongly urged to also do in-depth work in another functional field (e.g. Marketing, Finance, etc.).

MANAGEMENT INFORMATION SYSTEMS

Required:
273-637 Information Systems Design
273-636 Information Systems Administration
271-616 Accounting for Decision
273-635 Advanced Topics in Systems. Technology*
273-638 Advanced Topics in Systems Applications*
Any two of the following:

271-617 Accounting for Control
277-679 Applied Deterministic Optimization
277-680 Applied Sequential Optimization

McGILL UNIVERSITY LIBRARY

405-633 Information Retrieval (given by the Graduate School of Library Science)
308-614 Systems Analysis I (given by the School of Computer Science)
308-615 Systems Analysis II (given by the School of Computer Science)

Others (to be approved by area coordinator)

MANAGEMENT SCIENCE

Required:
At least four of the following;

277-675 Applied Time Series Analysis for Managerial Forecasting
277-676 Applied Multivariate Data Analysis
277-678 Simulation of Management Systems
277-679 Applied Deterministic Opitimization
277-680 Applied Sequential Optimization
277-632 Sample Survey Methods and Analysis
277-633 Applied Decision Analysis
277-634 Regression Models in Management

MARKETING

Marketing Management 1275-651 or equivalent (with permission) is a prerequisite to all the Marketing courses listed below.

Required:
A minimum of any two courses from the following:

Category A:
275658 Marketing Research
275656 Management Science in Marketing
275655 Marketing Planning
275657 Consumer Behaviour

The student must select two *additional* Marketing couses from the list above and/or the following list:

Category B:
275659 Industrial Marketing
275660 International Marketing Management
275654 Marketing Communications

POLICY

Option I. **Management Policy**

Required:
276666 Cybernetics in Management
276668 Consulting Seminar
272628 Creativity and Adaptive Organizations
276665 Business in Society I
272521 Leadership Style and Organizational Stress

Other electives to be approved by area coordinator.

Option II. **Small Business Concentration**

Required:
276664 Managing the Small Business
278691 Business Law I
275655 Marketing Planning
272-628 Creativity and Adaptive Organizations
276-668 Consulting Seminar
272-521 Leadership style and organizational stress

Course descriptions for second year electives are given below and where there is a prerequisite, this is indicated.

N.B. Some elective courses may be cancelled due to insufficient enrolment.

*Introduction of course subject to approval from the Faculty of Graduate Studies and Research. Course descriptions not available at this time.

4.3 COURSE DESCRIPTIONS

271-614 TAXATION SEMINAR (Prerequisites: Finance 274-641, Accounting 271-611, Economic Environment of the Firm 279-691, Economic Analysis of Business 279-692). The object of this course is not to produce "tax specialists", but rather to provide students with an understanding of tax factors in business decisions. The content of the course will cover a wide range of topics including business valuations, financing decisions, international aspects, investment decisions – all from a tax point of view.

Students who take the course will be required to complete several cases, many of which are based upon actual situations which have occurred since the introduction of the new Act. There will be guest speakers invited from time to time.

271-616 ACCOUNTING FOR DECISION. Concerned with the provision of data/information to management for planning and decision purposes. The emphasis is on correctly specifying this data/information, and as a result the course is at a fairly conceptual level. A range of production and investment decisions will be examined, and familiarity with calculus and linear programming will be assumed. It is desirable, but not essential, that the student should already have taken introduction to Modelling Methods in Management. In terms of subject categories, the course is a blend of economics, accounting, finance and quantitative methods. (It is really the first half of a full course on Analysis for Decision and Control, the second half or which is offered in the second semester. Either course may be taken on its own, however.)

271-617 ACCOUNTING FOR CONTROL. Concerned with problems of control in large business organizations, approached at a fairly conceptual level. "Control" is interpreted broadly, to encompass external and internal control, and within the latter financial control, control of time-cost-resources, control of data/information flows. Other topics covered include problems of centralization vs. decentralization (including the transfer price problem), the measurement of performance, and a thorough critique of accounting controls such as budgetary control and standard costing. The course includes inputs from accounting, economics, organization theory and general control theory.

271-618 TOPICS IN FINANCIAL REPORTING I. This course will be an in-depth analysis of corporate financial reporting principles and practices, with an emphasis on developing the abilities of the student to discriminate between the form and substance of corporate financial reports. Particular attention will be paid to those areas which have caused concern in professional accounting and financial analysts circles. Topics covered will include: theoretically optimal properties of financial reports; conventional financial statement preparation; problems of income recognition; extraordinary events; earnings per share analysis; tax liability analysis; asset valuation and depreciation analysis; intangible assets, inventories, mergers and acquisition analysis, lease accounting; pensions and long-term liabilities and foreign exchange transactions. Course materials will include material from accounting principles, hypothetical case analysis, and the analysis of actual financial reports of Canadian and American corporations.

271-619 TOPICS IN FINANCIAL REPORTING II. (Prerequisite: Topics in Financial Reporting I 271-618 or equivalent). This course considers the financial reporting aspects of accounting in an analytical context. Both general and specific problems of financial reporting are considered from the points of view of management, stockholders, the securities markets, governments, and other interested bodies. It will emphasize those theories concerning the nature and importance of financial reporting which have, to some extent, been empirically verified, such as the evidence on the relationship between accounting reports and stock market prices, for example.

272-521 LEADERSHIP STYLE AND ORGANIZATIONAL STRESS. In this course the influence of personality, situational and cultural factors on strategic decision making will be examined. The role of power and political behaviour in organizational life will be reviewed. To analyze these complex interrelationships a psychodynamic model of organizational behaviour will be emphasized.

Selected topics of analysis will be managerial style; superior-subordinate relationships; organizational climate and stress; entrepreneurial behaviour patterns; power and politics in strategic decision making.

Materials will mainly consist of cases and selected readings about leaders of private and public enterprises.

272-624 PERSONNEL ADMINISTRATION. This course will attempt to acquaint students with the functions of a personnel department. The particular topics chosen for discussion represent a broad range of the most current functions that these offices perform. A few of the topics selected are performed by relatively few departments presently (e.g. manpower planning), but because of their increasing popularity are included in this course so that you will be aware of future trends.

272-625 STRATEGIES OF ORGANIZATIONAL DEVELOPMENT. Organizational Development is a process of planned change in an organization's culture (i.e. the learned and shared assumptions about the norms that regulate member behaviour); a long-range effort to improve the organization's problem solving and renewal processes, utilizing the applied behavioural sciences and experience based learning. Students will examine theory, strategies, and techniques of organizational diagnosis and intervention–and will interact with consultants from various Montreal and Canadian organizations as they present case-studies of their on-going organizational development projects.

272-627 SALARY ADMINISTRATION. This course is designed to expose the students to total compensation systems in business and service organizations. The emphasis is on understanding the various compensation theories and their relation to compensation policies within organizations. Behavioural effects of different types of compensation plans and how to make compensation plans more effective with the use of behavioural science knowledge will be discussed. Some of the topics that are covered in the course are: nature of financial motivation compensation theories, job design and job analysis, compensation practices, designing a compensation package, pay and organizational effectiveness.

272-628 CREATIVITY AND ADAPTIVE ORGANIZATIONS. The course will deal with what we know about creativity, the process of innovation, the management of creativity, and the implications of innovation for modern management. The accent will be on studies of actual innovations, of creative individuals and organizations, interviews with creative managers, case studies and field studies.

273-636 INFORMATION SYSTEMS ADMINISTRATION. This course is concerned with the justification, selection, design and implementation of computer-based business information systems. Systems to service functional requirements of the organization, concepts of total information systems will be considered. The case study method will be used.

273-637 INFORMATION SYSTEMS DESIGN. The objective of the course is to introduce basic data and information concepts and their practical application in the development of information systems in the organization. Supplementary readings evaluate the evolution of structural systems analysis techniques. Specific topics include: the systems approach and systems analysis; information from data, economics of information, and methods of information systems development; data base, data structure, association and manipulation of data; systems development methodology (evaluation, justification design and implementation).

273-638 ADVANCED TOPICS IN SPECIALIZED INFORMATION SYSTEMS. (Prerequisite: Data Processing and computers – 273-631). This course will be conducted in seminar/workshop style. The actual material covered varies from year to year depending on the interests of the instructor and students. The course is expected to focus on the application of Data Base and Management Systems.

274-644 CANADIAN FINANCIAL INSTITUTIONS. (Prerequisite: Finance II – 274-650). Two interrelated subject areas are explored in this course. First, the micromanagement of the financial institution is explored using the tools of portfolio and financial intermediation theory. Second, the macro, public policy implications of the institution, their form, and legal framework are investigated.

274-645 FINANCIAL INTERMEDIATION: THEORY AND ANALYSIS. (Prerequisite: Finance I – 274-641). This course examines the demand for and supply of funds for the financial intermediaries, mainly banks and near banks. To this end, simple econometric formulations and models are reviewed and students are familiarized with the institutional aspects of "Canadiana". The role of banking sector in the money creation process is stressed as well as international aspects of montetary policy.

274-646 INVESTMENTS AND PORTFOLIO MANAGEMENT. (Prerequisite: Finance II – 274-650). The prime objective of the course will be to provide the student with a rational framework for investment, be it personal or professional. To this end the portfolio and capital market theory of Finance II is extended and the empirical evidence supporting these and competing hypotheses is investigated for both individual securities and portfolios.

274-647 ADVANCED FINANCE SEMINAR. (Prerequiste: Finance II – 274-650). Selected topics will be discussed by Faculty members, invited guest speakers, and the students enrolled in the course. Each student is required to select a topic for study and prepare a written report for presentation.

274-648 APPLIED CORPORATE FINANCE. (Prerequisite: Finance II – 274-650). Conceptual models and techniques studied in earlier courses are extended and/or applied to decision problems faced by managers in the Corporate Finance area. Such problems include the management of working capital, capital budgeting, capital rationing, capital structure, dividend policy, the cost of capital, mergers and acquisitions, leasing, option valuation, and insurance. The course is intended to enhance the ability of students to consider Corporate Finance problems in terms of applicable theory and techniques.

274-649 INTERNATIONAL FINANCIAL MANAGEMENT. (Prerequisite: Finance I – 274-641 or permission of instructor). This course examines operational problems of financial management in the multinational enterprise: forecasting adversities in the international financial environment; determining the firm's exposure to foreign exchange rate changes; protecting against exchange losses; transfer pricing and profit remittance policies; multinational capital budgeting; use of Eurodollar and overseas sources of capital; consolidation of financial statements; etc.

274-650 FINANCE II. (Prerequisite: Finance I – 274-641). A presentation of the modern theory of finance. A foundation is established here from which students may pursue further specialization or from which specialists in other areas may appreciate their interaction with the Finance function. The theory covers three interrelated finance functions; capital budgeting, corporate finance (including cost of capital, capital structure, and dividend policy), and portfolio theory. An analytic approach is taken where objectives are specified, constraints recognised and the resource allocation of capital on both personal and corporate levels investigated. The course is a prerequisite for Applied Corporate Finance, Investments and Portfolio Management, and Management of Financial Institutions.

272-652 MARKETING MANAGEMENT II. *(Prerequisite: Marketing Management I – 275-651). Marketing Management II is a managerially-oriented follow-up course to the M.B.A. I Marketing Management course. Upon completion of the M.B.A. I course the student has gained an insight into the role of marketing, the problems faced by the marketing executive, and the tools, concepts and theory the marketer has available. But the student has acquired relatively little experience in actually *using* these tools and concepts. Marketing Management II is designed to fill this void. Its orientation is one of decision-making and problem solving. Its focus is specifically on the decision areas of marketing management: product and pricing decisions; communications decisions; and channel and distribution decisions. The course will emphasize the application of marketing theory, concepts and methods to the solution of "real life" marketing problems. At the same time, the methods and tools of marketing will be covered in greater depth than in the first year course. The course will be based on cases and readings. Marketing Management II is a required course for those concentrating in Marketing, and a recommended second course in Marketing for others.

275-654 MARKETING COMMUNICATIONS (Prerequisite: Marketing Management – 275-651). This course involves the study of all transactions between buyers and sellers known as marketing communications. Naturally, advertising will be a central concern in this course as it is widely visible in our culture and of central importance to the marketing mix of consumer goods. Further emphasis will be on the connection between market research, product and mass communication techniques of product positioning.

McGILL UNIVERSITY LIBRARY

This will be extended to total communication strategies involving personal selling strategies, "specialty" advertising and source communication tactics in pricing and packaging in the consumer goods context. Also, the techniques of carryover effects of consumer oriented advertising in the industrial/institutional goods context will be explored.

275-655 MARKETING PLANNING. (Prerequisite: Marketing Management – 275-651). Marketing Planning focusses on the design and implementation of marketing plans. The emphasis is on management decision-making; the student will learn approaches and techniques for formulating marketing objectives, identifying alternate strategies, preparing the marketing plan, and implementing and controlling the plan. These techniques and approaches will be applied in the solution of marketing management cases throughout the course. A field project, involving the formulation of a marketing plan, provides a student with first-hand experience in the planning process.

275-656 MANAGEMENT SCIENCE IN MARKETING. (Prerequisite: Marketing Management – 275-651). This course is an intensive investigation of actual and potential management science applications to marketing problems. It explores the particular marketing problem areas of advertising, pricing, personal selling and product planning. Relevant problems will be structured, analyzed and studied from a management science point of view. The interaction among marketing variables will be considered. The problems of implementation of the management science approach in the real world of marketing organizations will be discussed.

275-657 CONSUMER BEHAVIOUR. This course is intended to acquaint students with a variety of research approaches focusing upon the behaviour of the consumer in the market place. It is intended to sensitize the student to human behaviour in general so that he/she may carry this understanding of basic processes over to the more specific arena of the consumer.

275-658 MARKETING RESEARCH. (Prerequisite: Marketing Management – 275-651 or permission of instructor). Training in the design, execution and interpretation of survey, experimental and other methods in marketing. Emphasis is placed upon sample design, data collection and data processing; evaluation of alternative designs, execution of problems and interpretation of data. A review of illustrative research studies is made; an actual study is designed and data are collected and interpreted.

275-659 INDUSTRIAL MARKETING. The course focuses on formulating policy and implementing decisions for marketing to organizations. The concepts of market selection and product planning, pricing, distribution, buyer-seller relations and industrial buyer behaviour will be studied through the use of cases and assigned readings. The course is essentially practice and problem oriented.

275-660 INTERNATIONAL MARKETING MANAGEMENT. (Prerequisite: Marketing Management I 275-651 or permission of instructor). This course examines the opportunities and problems that confront a firm that wishes to extend beyond the confines of its domestic environment and to penetrate foreign markets. Product, pricing, channel and communications policies are reviewed and modified to strike the appropriate balance between adapting completely to each foreign market, on the one hand, and profiting from an integrated approach on the other. The latter part of the course concentrates on international trade questions and the fundamentals of export marketing in the Canadian context.

276-664 MANAGING THE SMALL BUSINESS. This course will focus on the strategies and operating problems of small business enterprises. It is designed for individuals who are considering entrepreneurial careers in the environment of a smaller company. The characteristics and urgencies of problems that small companies are likely to encounter at different stages in their evolving life-cycle will be explored.

276-565 BUSINESS IN SOCIETY I. (Prerequisite: Economic Analysis of Business 279-692 and Economic Environment of the Firm 279-691). An examination of the underlying ideals and beliefs of the traditional capitalist system; management styles and corporate policies and responsibilities that are compatible with the capitalist ideal; expressed criticisms and concerns about the existing system; traditional approaches, such as anti-trust laws, to making the system more effective.

276-666 CYBERNETICS IN MANAGEMENT. Cybernetics takes the viewpoint that all systems are alike in certain fundamental characteristics. Each system involves variables, environment, purpose, control structures, energy, communication channels, etc. In this course, these basic characteristics and their relevance to the management process will be structured. From the standpoint of management, cybernetics are defined as the science of steering a dynamic and complex organization towards a desired destiny. The course will focus on the engineering aspects and logistics of the management process.

The application of cybernetics to corporate planning will be dealt with. Planning is viewed as a continuous managerial decision process. Emphasis will be placed on the process, and plan documents will be viewed as printouts of this process which tend to be outdated – by definition – at the point of issue. The students will be asked to prepare short research papers on the actual planning practices of selected organizations. The lectures and discussions will utilize many examples of actual practices

concerning the application of cybernetics in designing organizations and organizing corporate planning processes.

276-567 BUSINESS IN SOCIETY II. (Prerequisite: Business in Society I – 276-567). An examination of the emerging capitalist ideology; management styles and corporate policies and responsibilities that may be encompassed within the general framework of business morality (perceived as behaviour extending beyond the law, reflecting a level of aspiration rather than a level of duty); new approaches to making business more "responsive" to the needs of society.

276-668 CONSULTING SEMINAR. This seminar is open to those full-time MBA II students who have successfully completed the fall semester of the daytime Policy course (272-630). It is anticipated that a large corporation will offer a wide choice of consulting topics; and executives will work with students, simulating a consulting relationship. Problems will tend to be those with no "right answers" but with broad implications to the corporation. Students will be expected to spend three hours per week, mainly at company headquarters, with regular written and oral reports to professors and executives. Professionalism will be stressed as part of this effort toward student-executive-faculty cooperation.

277-632 SAMPLE SURVEY METHODS AND ANALYSIS. (Prerequisite: Basic Management Statistics 277-613 or equivalent). This course deals with the design of surveys and the analysis of survey data with particular emphasis on applications in managemnet. Topics covered include: design of sample surveys, sampling procedures including simple random, stratified, systematic and unequal probability sampling; multistage and cluster sampling; judgment sampling; ratio and regression estimation; procedures for non-response and non-sampling errors; introduction to experimental methods and experimental design.

277-633 APPLIED DECISION ANALYSIS. (Prerequisite: Basic Management Statistics 277-613 and Instroduction to Modelling Methods in Management 277-612 or equivalent courses). The course covers the canonical decision model; utility theory and preference analysis including the expected utility axioms, multiattribute utility functions, dominance principles, and methods of preference assessment; role of information in decision making including classical and Bayesian decision analysis, valuation of information and methods of probability assessment; group decision making including group preference functions and topics from game theory; case applications of decision analysis to various areas of management.

277-634 REGRESSION MODELS IN MANAGEMENT. (Prerequisite: Basic Management Statistics 277-613 or equivalent). This course deals with the applications of major econometric methods to management, with particular emphasis on finance, accounting, marketing and managerial economics. Each case or study is made up of theoretical hypotheses about the relationship, its statistical measurement and a judgment on its reliability. Topics covered include: tools for measuring statistical relationships, analysis of demand and cost-output relationships, price and profit models as well as multi-equation models. The course stresses the use of computer programs as an aid in management metrics.

277-671 STATISTICS FOR BUSINESS DECISIONS. (Prerequisite: Basic Management Statistics 280-613). Simple and multiple regression, polynomial regression, stepwise regression, best set of independent variables. Matrix approach to regression. Introduction to design of experiments. One way analysis of variance, two way analysis of variance with and without replication. Analysis of covariance. Multiple comparison procedures. Nonparametric statistical methods. One and multisample problems. Tests of randomness. As well as the usual homework exercises, additional problems using statistical computer programs available on the McGill system are assigned.

277-675 APPLIED TIME SERIES ANALYSIS FOR MANAGERIAL FORECASTING. (Prerequisite: Basic Management Statistics – 277-613 or equivalent). This course is devoted to applications of time series analysis to business problems. Starting with the elementary ratio-to-moving average methods, the course deals successively with the Census 2 method, with the methodology introduced recently by Box and Jenkins, with spectral analysis and with time-series regression techniques. Computational aspects and management applications of the methodology are emphasized. The students are expected to participate by preparing and presenting case studies.

277-676 APPLIED MULTIVARIATE DATA ANALYSIS. (Prerequisite: Basic Management Statistics – 277-613 or equivalent). This course is devoted to the application of multivariate analysis to problems in Behavioural Science, Marketing, Economics and Finance. Computational aspects of the methodology are emphasized and the students will be expected to prepare and present actual cases. The following topics will be discussed: multiple regression and analysis of variance, factor analysis, discriminant analysis, classification procedures, multidimensional scaling, cluster analysis.

277-678 SIMULATION OF MANAGEMENT SYSTEMS. (Prerequisites: Basic Management Statistics 277-613 and Introduction to Modelling Methods in Management 277-612, or equivalent courses). This course is devoted to the methods and skills of building simulation models for Management Systems. It stresses the construction of useful models, the design of simulation experiments and the analysis of the results for making decisions. The students are

McGILL UNIVERSITY LIBRARY

expected to design a complete simulation of a real problem using a standard simulation language.

277-679 APPLIED DETERMINISTIC OPTIMIZATION. (Prerequisite: Introduction to Modelling Methods in Management 277-612, or equivalent). Topics include: Linear Programming and extensions to more general decision problems such as Quadratic and non-linear models, network analysis, and models of discrete decision making. The course stresses the solution of complex management problems using efficient optimization tools of Operations Research. The students will work on real management projects to apply the techniques acquired.

277-680 APPLIED SEQUENTIAL OPTIMIZATION. (Prerequisite: Applied Deterministic Optimization 277-679 or equivalent). This course is devoted to the application of dynamic programming to a variety of decision-making contexts, both in deterministic and probabilistic environments. Topics include dynamic inventory scheduling with uncertain demand, unbounded horizon problems, problems in replacement and maintenance, etc.

278-581 HEALTH CARE ORGANIZATION. Overview and study of the present Canadian health care system: its components, organization, financing and management uncertainties. Interaction and interface between the health system and other social systems: roles of various levels of government and of the private sector. Close to half the course focuses on the Québec health care system: its recent evolution, present organization and foreseeable directions.

278-582 HOSPITAL ORGANIZATION AND MANAGEMENT. The hospital in relation to the outside world: consumer categories of hospital services, relationships with other health organizations, financing, legal framework and professional content. Organization of the hospital: immediate legal, structural and functional aspects. Organization and functioning of major hospital departments and performance evaluations. Management problems and practices associated with bluecollar workers, medical and para-medical professionals.

278-681 MANAGEMENT IN THE PUBLIC SECTOR I. Examination of leading issues in the management of governmental operations with some comparative analysis of other fields of administration. Specific emphasis will be placed on a comparative study of the meaning and measurement of efficiency and effectiveness in government and private enterprise.

278-682 MANAGEMENT IN THE PUBLIC SECTOR II. This course will stress decision-making in the public sector. In particular, it will look at the structures of decision-making in the government at the cabinet, departmental and regulatory agency levels. Particular stress will be placed upon a simulation project based around a current problem.

278-683 INTERNATIONAL BUSINESS POLICY. (Prerequisite: Introduction to International Business – 278-686 or permission of instructor). This course develops and applies conceptual approaches to general management policy and strategy formulation in multinational enterprises. Attention is focussed first on the strategic planning process. The various aspects of management policy studied include marketing strategy, location strategy, technology transfer, labour policy, ownership strategy and planning for international divestement. Emphasis is placed also on developing the student's practical skill using case studies and negotiating international business arrangements.

278-686 INTRODUCTION TO INTERNATIONAL BUSINESS. An introduction to cultural, economic and political aspects of domestic, international and foreign environments and their effects on the international operations of business firms. The course seeks to familiarize the management student with the expanded world of the international businessman by examining the underlying concepts of international economic theory; developing a framework for examining country environmental constraints (sociological, educational, economic, political-legal) and relating them to the operations of multinational enterprise; study the relationship between the international firm and the nation state, with particular reference to Canadian foreign ownership policies; and discussing selected topics such as the role of multinational enterprise in economic development and planned economies.

278-687 INDUSTRIAL RELATIONS. Unions, management and the public interest; a course designed to acquaint the student with the problems of industrial relations in different employment situations; the impact of unions on employees and on management; managerial attitudes toward unions and collective bargaining in a mixed enterprise society; and evolving public policy with regard to labour relations in both the public and private sectors. A few lectures, group projects and seminar papers are used.

278-688 LABOUR RELATIONS IN THE PUBLIC SECTOR. (Prerequisite: Industrial Relations – 278-687 or by permission of instructor). This course covers labour relations in federal, provincial and municipal, as well as in the quasi-public services such as hospitals, schools and government agencies and boards. Students will examine some of the more contentious current issues in public service labour relations and compare and analyse the alternative methods that have so far been evolved to deal with them.

278-601 BUSINESS LAW I. This course concerns itself with an introduction to law with special emphasis on how it affects the businessman. Some topics to be covered include the court systems and their organization; the practical aspects of procedural law; the general nature of contracts and delicts;

legal requisites for the validity of contracts; special contracts – sale; lease and hire; agency; bailment; loans; other special contracts.

278-692 BUSINESS LAW II. (Prerequisite: Business Law I – 278-691). This course concerns itself with the more specific legal aspects of law as they relate to the businessman. Some topics to be covered include: the various labour laws and Workmen's Compensation; Government regulation of business, Anti-Combines, Consumers' Protection Act, etc.; the various aspects of corporate financing business organizations including sole proprietorship, partnership and company law; insurance and bankruptcy; patents and trademarks; commercial papers; tax laws such as sales and use taxes, excise taxes and some aspects of income tax.

279-500 LABOUR AND INDUSTRIAL RELATIONS THEORY. The objective of this course is to provide students with background understanding of modern industrial relations systems and perspective with regard to the nature of the labour movement. The course will be concerned with the history of thought regarding the labour movement during the last two centuries. Changes in economic and social institutions will be examined as part of the evolving context within which the labour movement has developed. Central to the course will be the conflicting theories which have emerged to explain the development of labour's economic and political institutions.

279-501 HUMAN RESOURCES IN INDUSTRIAL SOCIETY. (Prerequisites: Principles of Economics or introductory course in another Behavioural or Social Science. Introductory statistics helpful but not mandatory.) Covers the funadmentals of "manpower" analysis and policymaking for the human resources of Canada and Québec. Introduces a fundamental framework for manpower analysis and policy formations. Reviews occupational forecasting in "manpower" estimation; and, provides an introduction to further human resource analysis.

279-591 FUTURE STUDIES: AN APPROACH TO LONG-TERM CORPORATE PLANNING. Topics and issues discussed will include but not necessarily be limited to:

1. The need and prospects for future studies and long term planning in business.
2. Techniques and approaches, including technology forecasting, social forecasting, delphi techniques and scenario writing.
3. The limits to growth controversy and the Conserver Society.
4. Energy and other resource depletion; pollution and post industrial and post consumer waste; and recycling industries. Some future problems and prospects in these areas.
5. International implications of resource scarcity, and its impact on Canadian business.

279-697 TOPICS IN MANAGERIAL ECONOMICS. (Prerequisites: Economic Environment of the Firm 279-691 and Economic Analysis of Business 279-692). The objectives of this course are: (1) to examine and develop applications of managerial economics in the analysis of business problems, and (2) to provide experience in evaluating business opportunities. Most class sessions will be seminars, in which participants will present a paper or report, and then lead group discussion on the chosen topic. In addition, there may be some lectures and sessions devoted to planning and conducting business studies, and to investigation and discussion with visitors from industry. Seminar topics may be selected from the following list: Market and Sales Forecasting, Production Planning and Scheduling, Business Planning, Control, New Project Evaluation, New Product Development and Appraisal, Price Discrimination, Plant Location, Regulation of Public Utilities, Industry Studies (selected by participants).

280-610 INDEPENDENT RESEARCH PROJECT. This project is designed to familiarize students with the process and the problems of independent research. The student is given considerable freedom in choosing research topics. The study may be a normative one or a descriptive one. It may be based on primary data or on secondary data. In this project students get the opportunity to work on a one-to-one basis with a faculty member for the entire academic year. Members of the Montreal business community act as resource consultants when this appears desirable.

334-540 AGRIMARKETING. This course will deal with agriculture and food marketing, management and policy. The course will include detailed study of marketing functions, commodity marketing, retail and food service marketing encompassing the total Canadian agriculture and food system from producer to consumer.

334-550 AGRIBUSINESS MANAGEMENT. A course in management and agricultural business dealing with the agribusiness firm engaged in agricultural production and marketing and related farm supply business. The focus of the course is on agribusiness organization, operation, financial management and agribusinesss policy in today's complex and changing international environment.

5 FEES AND EXPENSES

5.1 FEES

The University reserves the right to make changes without notice in the published scale of fees.

All students are required to pay **at least half** of the total sessional fee 10 days after they register. The second instalment is due on January 15.

McGILL UNIVERSITY LIBRARY

RESIDENCE Students entering residence are required to pay **at least half** of the residence fee 10 days after they register.

LATE PAYMENT FEE. If payment is received after the time allowed, the following penalties will be assessed: $10 if payment is received within 30 days of the established due date, $25 if payment is received after 30 days of the established due date.

The tuition fees for the first year of the program are $570 plus $99.50 for Student Services and Students' Societies fees (this covers charges for the health service, athletic facilities and membership in the Postgraduate Students' Society). The tuition fees for the second year are $285, plus $64.50 for Student Services and Students' Societies fees. Tuition fees may be paid in two instalments.

Please note that students having completed courses through the Centre for Continuing Education and who are registering directly into the second year must have paid the equivalent of the first year tuition to the Centre for Continuing Education, otherwise they will be required to pay $570 plus $99.50 for Student Services and Students' Societies fees.

Students transfering from another university into the second year program at McGill must also pay the first year tuition fees of $570 plus $99.50 for Student Services and Students' Societies fees.

Details of special fees including the graduation fee of $15.00 are given in the *General Announcement* which may be obtained from the Registrar's Office, F. Cyril James Building.

5.2 STUDENT EXPENSES

Single Student in University Residence Minimum Estimate for 1st Year Students

Tuition	$ 570.00
Student Services	70.00
Students' Societies	29.50
Housing and Food – 9 months (weekday meals only)	1,708.00
Books and Supplies	320.00
Health Insurance (foreign students only)	85.00
Other Expenses (Average)	700.00
	3,482.50

Married Student with Spouse Working, No Children – Minimum Estimate for 1st Year Students

Tuition	$ 570.00
Student Services	70.00
Students' Societies	29.50
Unfurnished McGill Apartment – 1 yr. lease	2,220.00
Food – 1 year	2,000.00
Books and Supplies	320.00
Health Insurance (foreign students only)	150.00
Other Expenses (Average)	850.00
	$6,209,50

Miscellaneous Expenses

Personal expenses vary greatly with individual requirements, and clothing, laundry, transportation, entertainment and other expenses should be very carefully estimated.

6 SCHOLARSHIPS AND FINANCIAL AID

Most of the scholarships and fellowships available through the Faculty of Management are awarded automatically on the basis of academic excellence. However, financial aid forms are completed by all applicants after their acceptance into the program, regardless of whether the financial aid is to be awarded on a merit or a need basis. Please note that students must make separate applications for awards available through the other sources as indicated in the following descriptions.

Qualified students with limited financial resources should not be deterred from applying for admittance to the M.B.A. program. Information on financial aid offered by sources outside the Faculty of Management is listed herein in the expectation that applicants will seek such aid in all cases for which they are eligible.

Foreign Students

The Faculty is normally unable to offer any financial assistance to foreign students. We regret, therefore, that we must have a written guarantee in the form of a bank letter that the student has the necessary funds to complete his studies. Scholarships or fellowships are occasionally awarded to foreign students with exceptional academic ability, but the amount of the financial aid does not cover all the expenses for two years of study. Funds are available, however, through the Canada Council and the Common wealth and Colombo Scholarship Plans as described under "International and Private Awards" herein, and should be applied for through your own government.

Financial Assistance Obtained Through the Faculty of Management

Applicants are considered automatically for the following awards. Scholarship winners will be informed prior to registration.

FORD MOTOR COMPANY OF CANADA M.B.A. SCHOLARSHIP. Two annual non-renewable awards of up to $2,500 to be made by the Faculty of Management Scholarships Committee to students enrolled in either the first or second year of the McGill M.B.A. program. In making this award, preference is to be given to academically qualified women returning after full-time employement in

industry, government or non-profit organizations for graduate study in Business Administration. Should candidates of suitable academic performance and the desired employment experience not be available, the annual award of $2,500 will be divided, as needs and past academic performance jointly suggest, among other qualified students in the M.B.A. program.

H.E. HERSCHORN GRADUATE SCHOLARSHIP. Established in 1965, covering the amount of the current tuition fees and tenable by a student entering either the first or the second year of the M.B.A. program.

McGILL ASSOCIATES GRADUATE FELLOWSHIPS IN MANAGEMENT – These fellowships were established by the McGill Associates, a group of Montreal business and professional men interested in the University, to ensure that the graduate program of the Faculty of Management continues to attract students of a high academic and professional calibre. A number of fellowships are available, each with an annual value of up to $3,600 for students at the Master's level. This amount may be increased in the case of students proceeding to a doctoral degree.

McGILL DEVELOPMENT FELLOWSHIPS IN MANAGEMENT Through the generosity of donors to the McGill Development Program, the McGill Faculty of Management is offering up to ten fellowships, with an annual value of $2,500 to students registering in the first year of the full-time M.B.A. program. Fellowships will be awarded to outstanding candidates on the basis of academic merit and demonstrated leadership ability.

SEAGRAM BUSINESS FELLOWSHIPS OF THE SAMUEL BRONFMAN FOUNDATION. *(Type B Awards)* – Four type B fellowships of $1,600 are given annually by this foundation to students in their final year of a Master's program or in any year of a Doctoral program. Eligibility is limited to Canadian citizens. Applications are submitted on behalf of candidates by the Dean of the Faculty of Management by April 12.

THE CANADA TIRE CORPORATION LIMITED SCHOLARSHIP. An annual award of $1,000 made to a student entering the first year of the M.B.A. program. This award is renewable for a second year of study if the candidate remains in good academic standing. Recipients are to be selected by the Faculty of Management Scholarships Committee.

XEROX OF CANADA LIMITED FELLOWSHIP IN MANAGEMENT. Value $2,000, established as a centennial project by Xerox of Canada Limited to encourage management studies at the graduate level. Open to students in the M.B.A. Program and awarded by the Scholarships Committee of the Faculty of Management.

Applications must be made as indicated for the following awards:

FACULTY OF MANAGEMENT ASSISTANTSHIPS. – Assistantships up to a maximum of $600 are offered to a limited number of students. Student assisants are expected to carry out specific tasks during the year. (Most of these assistantships are awarded to second year students.)

FACULTY OF MANAGEMENT STUDENT LOAN FUND. – A student loan fund has been established and is administered by the Student Aid Office. For further information, apply to the Student Aid Office, McGill University, 3465 Peel Street, Montreal, Quebec.

RODGIE McLAGAN FELLOWSHIPS IN MANAGEMENT. – Two fellowships of $1,500 each have been established by Canada Steamship Lines for graduate study in management. Financial aid forms must be completed and returned to the Admissions Officer by July 1st.

Fellowships and Awards available from various sources

a) The following is a list of awards available through McGill which have been awarded to Mangement students in the past.

BRONFMAN FELLOWSHIPS IN COMMERCE AND ECONOMICS. – The Faculty of Graduate Studes and Research offers two fellowships of $2,000 each plus tuition fees to men and women, preferaby with research experience, who are graduates in Commerce or Economics from accredited universities. The holders are entitled to apply again in a subsequent year. They will be expected to be in residence at McGill throughout the academic session and to be candidates for a higher degree at McGill. A litte teaching work may be required. Apply to the Dean of the Faculty of Graduate Studies and Research, through the Department of Economics, before February 1.

CENTRAL MORTGAGE AND HOUSING CORPORATION GRADUATE FELLOWSHIPS (CMHC). Fellowship stipends are $3,000 plus tuition fees for students proceeding to a master's degrees and $4,000 plus tuition fees for post-master's candidates proceeding to a doctoral degree. (Tenable in a broad range of fields involved in understanding and dealng with urban regional environment.) Candidates must be recommended by the University and mus be Canadian citizens or landed immigrants in Canada. Application forms and information are available from: Administrator, Advisory Group, Central Mortgage and Housing Corporation, Ottawa, Ontario. Completed application forms must be receved by Central Mortgage and Housing Corporation no later than March 1.

McGILL UNIVERSITY LIBRARY

GOVERNMENT OF QUEBEC GRADUATE SCHOLARSHIPS. Competitions are open to Canadian citizens residing in Quebec for at least one year and to landed immigrants with 18 months' residence in Quebec at the time of their application for a grant.

i) **Type B1 — Graduate Scholarships.** Valued up to $4,000 for married students and up to $3,000 for single students. Open to all fields of study but applicants must hold a Bachelor's degree or first university degree.

ii) **Type A3 – M.B.A. Scholarships (Jeunes Administrateurs).** – 75 scholarships available, valued at up to $6,000 for single students and up to $8,000 for married students, tenable for a period of 12 months. Applicants must hold a first university degree with two years of full-time experience in Quebec in some executive capacity in a small or medium-sized business.

N.B. Students must submit the completed application directly to the Quebec Government by February 28th at the very latest.

FRIENDS OF McGILL FELLOWSHIP Value: $4,500 plus fees. Tenable for one year, renewable in competition with other applicants. Open to a graduate student in any discipline who is a citizen of the United States of America. The fellowship is made available through the McGill Development program by the Friends of McGill, Inc., New York. Applications: apply to the Fellowships office, Faculty of Graduate Studies and Research by February 1.

McCONNELL MEMORIAL FELLOWSHIPS. These fellowships were established by the J. W. McConnell Foundation to support postgraduate studies and research at McGill University, and so to strengthen, in quality and numbers, the academic staffs of Canadian universities and schools. These fellowships may be held by students registering in any postgraduate research program at McGill but only those whose homes are in Canada, or who intend to make their homes in Canada, are eligible to apply. The fellowships are intended to cover full fees, living expenses, the cost of books and such travelling as a Fellow's studies may require. The normal value of a first year award is $4,500 plus fees and further allowances are payable for dependents. The initial award is normally for a period of two years, but the fellowships are intended to carry a student through to a doctoral degree and may be held for a total of five years. Fellows will be expected to spend the full calendar year (with the exception of a month's summer holiday) on their studies, and may not accept any remunerative appointment during the tenure of the fellowship without permission. Application forms may be obtained from the Faculty of Graduate Studies and Research and completed forms must be returned to that office before February 1.

MAX BINZ BURSARIES FOR FOREIGN STUDENTS. Established by the estate of the late Max Binz. These Bursaries are valued at $1,000 per annum and are renewable, but are not tenable concurrently with a major scholarship or fellowship. The Binz Bursaries are intended to help defray the expenses of graduate students coming to McGill from overseas countries (including South and Central America and Mexico). Foreign nationals who are Canadian landed immigrants (and therefore eligible for several categories of Canadian financial assistance) are not eligible for the Bursaries. The applicant must be in residence at McGill at the time of application. Apply to Graduate Faculty Fellowships Office, Dawson Hall, McGill University, Montreal, Québec, Canada. Completed applications must be recieved by the Fellowships Office no later than April 1.

SEAGRAM BUSINESS FELLOWSHIPS OF THE SAMUEL BRONFMAN FOUNDATION. (Type A awards). – Eight Type A awards of $1,000 are given annually by this foundation to first or qualifying year students enrolled in a Master's degree program. Eligibility is limited to Canadian citizens. Applicants for first year fellowships may apply directly to: Professor J. P. Sallenave, Awards Chairman, Canadian Association of Administrative Sciences, Faculty of Administration, Sherbrooke University, Sherbrooke, Québec. Completed application must be received before March 15th.

TRANSPORTATION DEVELOPMENT AGENCY FELLOWSHIPS. This federal agency offers postgraduate fellowships for the support of thesis research in a broad range of fields related to transportation. Value: $4,650 plus fees. The fellowship may be held for one year while studying for the Master's degree, and renewed up to a maximum of two more times while studying for the Ph.D. Fields: work relating to any aspect of transportation. Eligibility: Canadian citizens or landed immigrants; only citizens may hold the fellowship outside Canada. Applications: Forms may be obtained from the Fellowships Office, Faculty of Graduate Studies and Research. The due date varies, but will be in early January.

b) The following awards are also available through McGill but are so competitive that they have not been awarded to Management students in several years.

BELL CANADA FELLOWSHIP PROGRAM – Up to a total of eight graduate fellowships in the amount of $3,500 to Fellow and $1,500 to University (Fellow's tuition fees will be paid out of the $1,500) will be given annually; four of which will be new awards. Candidates must be Canadian citizens or must have held landed immigrant status for one year prior to submitting an application. Applicants must be graduates of a university or college with standards accepted by the Association of Universities and Colleges of Canada. The field of study is unrestricted,

but preference will be given to subject areas relevant to the scientific, political, social or economic needs of Canada. On completion of the fellowship, duplicate copies of a thesis or reasonably detailed account of the work done, should be sent to the Director of Awards, A.U.C.C., who in turn will forward one copy to Bell Canada. Apply before March 1 to Director of Awards, A.U.C.C., 151 Slater Street, Ottawa, Ontario K1P 5N1.

GULF OIL CANADA LTD. GRADUATE FELLOWSHIPS. – Nine fellowships of $3,500 each, plus $1,000 for research expenses, open to residents of Canada who are graduates of institutions which are members of the Association of Universities and Colleges of Canada, and are tenable at any such university. Candidates must be Canadian citizens or must have held landed immigrant status for one year prior to submitting application. Unrestricted as to field of study. Apply to the Director of Awards, Association of Universities and Colleges of Canada, 151 Slater Street, Ottawa, Ontario K1P 5N1. Completed applications must reach the Director before March 1.

ISABELLA C. McLENNAN FELLOWSHIP. – $900. Awarded by the Graduate Faculty Scholarships Committee to a woman student in the Faculty of Graduate Studies and Research on the basis of academic merit and financial need. Apply to the Fellowships Office of the Graduate Faculty, Dawson Hall, before February 1.

SOCIETY OF INDUSTRIAL ACCOUNTANTS OF CANADA BUSINESS FELLOWSHIPS. – Five fellowships of $1,200 each are available annually to students enrolled in a graduate business program at Canadian universities. Awards are to be granted to students whose program indicates an interest in Management Accounting and Accounting Research. Apply before April 1 to: Administrative Secretary, Fellowships Selection Committee, Society of Industrial Accountants of Canada, P.O. Box 176, 154 Main St. East, Hamilton, Ontario.

SOLVAY FELLOWSHIP. – Value $3,500 plus tuition fees, offered for the first year of study in the Faculty of Graduate Studies and Research. Tenable in any Department of the Faculty, and open to men and women equally. The holder must have graduated in any undergraduate Faculty of McGill in the session prior to that for which the award is given, and must obtain permission to proceed to graduate study. No teaching duties are required of the holder, who may not hold any other fellowship or bursary, nor receive a salary for teaching or other duties, during his tenure. Apply to the Fellowships Office of the Graduate Faculty before February 1.

Note: For further information contact the Fellowship Office at McGill University, 3rd floor, Dawson Hall, McGill University, Montreal, Quebec, for the booklet entitled *Postgraduate Award, Fellowships and Bursaries.*

Provincial Bursaries and Loans

The applicant must be a Canadian citizen or a landed immigrant with one year's residence and domicile in the province to which he or she applies.

In all provinces, except Quebec and Ontario, the provincial authority listed below administers the Canada Student Loan Plan (Federal) as well as their own programs. The addresses are as follows:

Québec: Apply after May 1, at the Student Aid Office, 3465 Peel St., McGill University, Montreal, Québec, H3A 1W7.

New Brunswick: Deputy Minister, Department of Youth and Welfare, Fredericton, New Brunswick.

Northwest Territories: Director of Education, Government of the Northwest Territories, Yellowknife, Northwest Territories X0E 1H0

Ontario: Ministry of Colleges and Universities, Apply after May 1 to the Students Awards Branch, Mowat Block, Queen's Park, Toronto, Ontario M7A 1C6.

Yukon Territory: The Students Financial Assistance Awards Committee c/o Superintendent of Education, Box 2703, Whitehorse, Yukon Territory Y1A 2C6.

For all other provinces write to the provincial Department of Education.

International and Private Awards

CANADA COUNCIL – The Canada Council offers fellowships and grants in the social sciences and humanities at the master's and doctoral level. These categories extend to undertakings of an interdisciplinary nature, but not to those closely identified with the physical and biological sciences, or with professional training.

Informative leaflets and application forms are obtainable from departmental offices in the social sciences, humanities and related disciplines, from the Fellowships Office of the Graduate Faculty, or from: The Canada Council, P.O. Box 1047, Ottawa, Ontario, K1P 5V8.

COMMONWEALTH SCHOLARSHIP AND FELLOWSHIP PLAN. – Provides opportunities for Commonwealth students to pursue advanced courses in other Commonwealth countries. Canadidates must have graduated from a recognized university or hold equivalent qualifications; age limit normally 35. Successful candidates must plan to return to their own country upon completion of the study for which the award was intended. Graduate awards are usually made for two academic years and the intervening summer. They include tuition, travel expenses, maintenance allowance and a grant for incidental expenses. Closing date for receipt of completed applications varies with country of tenure, but all deadlines are in the Fall for Northern Hemisphere countries; for Southern Hemisphere countries, December 31 (approximately 1 1/2 years prior to

McGILL UNIVERSITY LIBRARY

date of tenure). Full information and application forms may be obtained from the Association of Universities and Colleges of Canada, 151 Slater St., Ottawa, Ontario. K1P 5N1.

CONSOLIDATED BATHURST LTD. GRADUATE FELLOWSHIP. – One postgraduate fellowship of $3,500 per year available to students working towards a post-graduate degree in a university recognized by the Association of Universities and Colleges of Canada and who have been recommended by the faculty of their choice. Though preference will be given to candidates registered in a doctoral program, candidates working towards a Master's degree will be considered. Open to any permanent employee in Canada, being for this purpose an employee with two or more years of service. Open also to any son, daughter or legal ward of a permanent, pensioned or deceased employee in Canada. Candidates must have completed undergraduate studies in a university or college whose curriculum is recognized by the Association of Universities and Colleges of Canada and must have obtained satisfactory results during their undergraduate studies. The decision of the committee will be based upon the student's academic transcripts, a confidential report from the university, reference letters and results of any achievement or aptitude tests taken. A fellowship holder may not hold concurrently other fellowships or awards totalling in excess of $1,500. Apply to: Director of Awards, Association of Universities and Colleges of Canada, 151 Slater Street, Ottawa, Ontario. K1P 5N1. Completed applications must be submitted in quadruplicate no later than May 1.

DEVELOPING COUNTRIES' PROGRAMS. – Students from developing areas should apply to their own Departments of Education to see whether their governments will recommend them for Colombo Plan Scholarships, Special Commonwealth Africa Aid Programs, etc.

FRANCE-QUEBEC SCHOLARSHIPS. – Information and application forms may be obtained from the Fellowships Office, Faculty of Graduate Studies and Research.

INSTITUTE OF MANAGEMENT CONSULTANTS OF QUEBEC THESIS AWARD. – A research paper prize, offered by the Institute of Management Consultants of Quebec, in the amount of $500 will be awarded to the student whose paper best meets the following criteria: i) it must deal with a management theme; ii) be written in English or in French, with no limitations as to length; iii) contribute to the advancement of the art and science of management and iv) be available for publication by the IMCQ in any professional trade magazine.

Each university is to forward its most promising papers. The winner will be announced in June.

LEVER BROTHERS LTD. BILINGUAL EXCHANGE FELLOWSHIP IN BUSINESS ADMINISTRATION. – Up to two fellowships of $7,000 plus summer employment will be awarded annually: one to a French-language candidate who will attend an English-language institution and one to an English-language candidate who will attend a French-language institution. Candidates must be Canadian citizens, under 30 years of age, who have clearly demonstrated a proficiency in the language of the institution they wish to attend. Summer employment for scholarship winners is guaranteed by Lever Bros. Ltd., and will be of a nature that will prove interesting and challenging. Apply to: Director of Awards, Association of Universities and Colleges of Canada, 151 Slater Street, Ottawa, Ontario. K1P 5N1. Completed applications in quadruplicate must be received no later than March 1.

UNITED STATES AWARDS, LOANS AND GRANTS. – For information on the above, contact your local bank branch.

ASSOCIATION OF UNIVERSITIES AND COLLEGES OF CANADA. – The Awards Service of the Association of Universities and Colleges of Canada does not itself offer any awards but it does administer several national and international programs on behalf of Canadian and foreign donors, both private and governmental. Inquiries from students regarding financial aid can be addressed directly to the Association at 151 Slater Street, Ottawa, Ontario. K1P 5N1

There are several other programs which enable foreign students to come to Canada to study, sponsored by the Canadian International Development Agency, under the Department of External Affairs. These include the Colombo Plan, Economic Assistance to French-speaking West Africa, Special Commonwealth Africa Assistance, Caribbean Assistance Program. Interested students can apply through the Ministry of Education or through the appropriate government department in their own country.

FOUNDATIONS AND PRIVATE AGENCIES. Thousands of professional associations, foundations and companies offer financial support for the graduate student. Details about these can be found in the following publications which are available in large public libraries, university reference libraries and consulate or embassy offices.

AWARDS FOR GRADUATE STUDY AND RESEARCH. Perhaps the most useful to Canadian students, this publication lists several thousand awards available to Canadians and to those studying in Canada. Prepared by the Bureau of Statistics, it is available from information Canada (Catalog no. 81-541.

STUDY ABROAD: This UNESCO publication lists awards tenable in Canada, as well as in other countries.

FELLOWSHIPS AND SCHOLARSHIPS OFFERED BY PRIVATE DONORS AND FOREIGN GOVERNMENTS FOR CANADIAN STUDENTS. This publication is available from the Association of the Universities and Colleges of Canada, 151 Slater Street, Ottawa, Ontario, K1P 5N1

ANNUAL REGISTER OF GRANT SUPPORT: List of major awards distributed by American agencies.

GRANTS REGISTER: List of postgraduate awards in the English-speaking world.

Note: Further information on awards through governmental sources is listed in "Awards for Graduate Study and Research". (Catalog No. 81-541). This book is published by Statistics Canada, and is available from Information Canada.

7 RESEARCH

The vitality of a university faculty is reflected in the quality and quantity of its research – the pursuit of new and relevant forms of knowledge. In the McGill Faculty of Management, research serves an important function in the activity of both faculty and students. Research adds to our knowledge of management, and it instills in the student the desire and ability to learn systematically about the managerial environment in which he/she will spend his/her working life.

Management research is challenging and stimulating. It tends to be interdisciplinary , providing an opportunity for people with different backgrounds to work together; it embraces underlying disciplines such as psychology, mathematics, and economics; and as in all of the social sciences, it involves complex problems of conceptualization and measurement.

The following are examples of on-going research projects at the McGill Faculty of Management.

Typical Faculty Projects

1. The problems of financial reporting
2. Length of-stay distributions of hospitalized psychiatric patients
3. The effects of automation on employment
4. The use of computer terminals in management education
5. Analysis of the strategy-making process in organizations
6. The study of optimal organizational designs

Typical M.B.A. Research Papers

1. Capital budgeting and corporate planning
2. A university administrator's financial decision game
3. Foreign investment in Québec
4. Simulation of a supermarket
5. A programmed view of managerial work
6. Legal aspects of marketing in Canada

8 AFFILIATED ORGANIZATIONS AND PROGRAMS

8.1 THE MANAGEMENT INSTITUTE

The Management Institute provides a variety of services on behalf of the University to managers in business, government and non-profit institutions. Within the management development program of the Institute, over twenty daytime seminars and sixteen evening courses are offered each year. These seminars and courses, which cover a wide range of functional areas, are specifically designed to help middle and senior management keep abreast of current developments in analytical and decision making techniques, and to provide a better appreciation of the integrative problems of general management.

Lecturers and seminar leaders, recognized authorities in their fields, are drawn from the Faculty of Management at McGill, from other universities in North America, and also from the community of practising managers in Montreal. All courses and seminars are held on university premises. They are restricted as to number of participants in order to ensure full discussion and individual attention.

Other activities of the Management Institute include The Presidents' Seminar, Operation Catalyst (which brings together senior people in government and business to discuss issues affecting the progress of the Canadian economy), and the McGill Conference on Industry and Government.

The Institute is under the direction of R.N. Morrison.

8.2 THE INDUSTRIAL RELATIONS CENTRE

The Centre generates information on industrial relations through evening seminars, an annual conference, research and special workshops for union and management groups.

It maintains a computerized analysis in French and English of approximately 1,300 Canadian collective agreements. It offers fellowships and research training for qualified applicants and publishes a review of its activities three times a year, which also surveys developments in industrial relations and reports on recent research in the field.

The Centre, housed on the fifth floor of the Bronfman Building has its own seminar rooms, facilities for a data bank with its own terminal lines to the central McGill computer, and access to a library collection of industrial relations publications in the same building.

Frances Bairstow, Director

McGILL UNIVERSITY LIBRARY

8.3 JOINT Ph.D. PROGRAM IN ADMINISTRATION

This academic program is offered jointly by the Faculty of Management of McGill University, Concordia University, l'Ecole des Hautes Etudes Commerciales (Université de Montréal) and the Université du Québec à Montréal.

The principle objective of the program is to educate competent researchers and to stimulate research on administrative problems.

Many of the graduates of this new program may become members of the university community, while others may join private enterprises, public institutions and management consulting firms.

The program encourages graduates to conduct research pertaining *inter alii* to problems relevant to the Québec and Canadian environment.

For further information on this program please contact:

Ms Maureen McAteer
Secretary, Ph.D. Program

Telephone: (514) 392-4726

9 STUDENTS' ACTIVITIES AND STUDENT SERVICES

9.1 STUDENTS' ACTIVITIES

The many student-run clubs, groups, societies, and other activities at McGill run the gamut from conferences on provincial and international affairs, to skydiving, chess competitions, films and theatre, debates, and a winter carnival.

All students registered in the University are members of the Students' Society. Headquarters are in the University Centre, a modern four-storey building, with cafeterias, a ballroom, meeting rooms and offices, lounges, and an experimental theatre.

The Post-graduate Students' Society operates semi-autonomously within the Students' Society. The P.G.S.S. has its own centre, Thomson House, with offices and meeting rooms, and, for relaxation an eating area and a bar, as well as other rooms for reading, games, music, recreation and dancing. During the academic year, the Society publishes the McGill Martlet, a tabloid newspaper, and arranges a number of cultural, recreational, political, and educational events. Its intramural athletic program operates throughout the academic year and the summer session. It issues a handbook at registration containing information designed to solve potential problems before they occur. Copies can be had in advance by writing to the P.G.S.S. at Thomson House, 3650 McTavish Street, Montreal, P.Q. H2C 3G1.

The McGill Dames Society is a social outlet for wives of graduate students. It has accumulated some very useful information of help to newcomers in finding accommodation and employment.

9.2 STUDENT SERVICES

9.2.1 Athletics Facilities

The university offers many facilities for athletic participation and instruction.

The Sir Arthur Currie Memorial Gymnasium has basketball and squash courts, swimming pool, badminton courts, volleyball courts, and facilities for floor hockey, gymnastics, wrestling, fencing, weight-training, track and judo. The McGill Winter Stadium's artificial ice rink is in demand for hockey games, and competitive as well as recreational skating. In Macdonald Park on the side of Mount Royal, the Percival Molson Stadium with a full-sized football field encircled by a 440-yard cinder track, seats 20,000 people. Beside it, also in the Park, are another full-sized football field, a multi-purpose recreational area, and four hard-surface tennis courts.

The University fields teams in a number of intercollegiate sports.

Your Student Identity Card entitles you to use all facilities and admits you to most home competitions free of charge.

9.2.2 University Bookstore

The University has its own bookstore on the main floor of the Samuel Bronfman Building. It carries a complete stock of textbooks for all courses, and other materials and supplies. Individual items not ordinarily carried can be specially ordered on request. The bookstore is open until 8 p.m. Monday to Thursday during registration time and from 9 a.m. until 4 p.m. Monday through Friday during the academic year.

9.2.3 Health Service

A compulsory medical examination and X-ray are standard for all new McGill students.

The Student Health Service provides these and, in addition, is available day and night to provide treatment for any minor illnesses, accidents and emergencies. Professional help is also available for students in emotional or psychological difficulties. If you become seriously ill, the Health Service will refer you to the public service of one of Montreal's excellent hospitals or you may go to a doctor of your choice.

(Note to non-Canadian students: The Province of Québec does not provide insurance for medical purposes to immigrant students and the University has instituted for your protection a compulsory health insurance plan at a cost to you of $85.00 for single students and $150 for married students, payable at registration.)

9.2.4 Housing and Food

McGill is in the heart of the city of Montreal and there are a variety of private rooming houses and apartment buildings which may be considered on arrival. However, if students are interested in University accommodation the following information may be helpful.

McGill has four co-educational residences in Macdonald Park on the side of Mount Royal overlooking the city. They are named Douglas, Gardner, Molson and McConnell Halls, after University benefactors. Accommodation in Douglas Hall takes the from of self-contained suites of three study-bedrooms and one shared sitting room. Douglas Hall has its own dining room, library common room, and recreation rooms. McConnell, Molson, and Gardner Halls house students in single rooms. The four halls together accommodate 816 students. Each hall has its own common room, library, and recreation room. The three buildings surround a central catering and dining facility, Bishop Mountain Hall. Students wishing to live in residence should apply to the Secretary, Co-educational Residences, 3935 University Street when making their application for admission. Upon acceptance into the program, the Residence Secretary should be contacted to see if a decision has been made regarding application for accommodation. Applications should be submitted prior to May 1.

Married students may request accommodation in one of the apartment buildings, especially acquired by the University for married students. The Real Estate Manager, Apt. P.1, 3474 Hutchison St., Montreal, PQ, H2X 2G7, arranges these tenancies.

9.2.5 Placement

The Canada Manpower Centre has one of its offices on the McGill campus and assists the student in seeking permanent employment upon graduation and thereafter throughout his or her career. The Centre is in contact with organizations from all over Canada and the United States and arranges scheduled interviews with interested companies on campus as well as on company premises. Its activities result in a continuing flow of excellent job opportunities being brought to your attention.

As an additional service, it will help you in finding summer employment or part-time work during the session.

2 GENERAL INFORMATION

2.1 THE FACULTY OF LAW

The Faculty of Law of McGill University is Canada's oldest Law Faculty, and the only English-speaking law faculty in Canada teaching the civil law system. Until 1968, the Faculty's undergraduate program consisted of a three-year program of studies leading to the degree of Bachelor of Civil Law. This degree, while providing a liberal education in legal principles and theory, prepared candidates for admission to only the Québec legal professions, as advocate or notary.

In 1968, the Faculty inaugurated the National Program. This Program is an integrated program of studies in Canadian Law in which students pursuing either a civil law or common law degree share a wide range of "Canadian" law courses in areas such as Constitutional Law, Public International Law, Administrative Law, Commercial Law, Criminal Law, and Labour Law. All civil law students take at least one basic common law course, such as Contracts, Torts or Property; all common law students take a number of basic civil law courses. Thus each student receives a basic training in the legal system in which he/she is earning his/her degree together with a serious introduction to the other. Thus a student may still obtain only a B.C.L. degree; alternatively, he/she may study for only the LL.B (common law) degree. This latter program prepares candidates for the Bars of the Common Law Provinces, nearly all of which recognize the McGill LL.B.

degree. But a further year of study after the obtaining of either degree leads to the granting of the second degree (B.C.L. & LL.B., LL.B. & B.C.L.). More and more students are now taking advantage of the opportunity to obtain this basic training in both systems.

It is to be noted that the LL.B. degree is conceived essentially as part of a four year National Program leading to the granting of both LL.B. (common law) and B.C.L. (civil law) degrees. While an LL.B. student may receive his LL.B. degree after three years of study, the Faculty expects that generally LL.B. students will proceed to the National Program. The requirements for the LL.B. degree, with their substantial civil law component and the reduced opportunities for undertaking elective courses during the first three years of study, have been structured to reflect this aim.

Common law students are required to take as part of their LL.B. degree Obligations I, Civil Property I and II, and any one of Successions, Special Contracts I, Special Contracts II, Family Law II or a Comparative Law course as offered from time to time and described as such.

The introduction of the National Program at McGill was made possible by reason of our unique position as Canada's English-speaking civil law school, and the fact that so much of the subject matter in a common law or civil law curriculum is common to both systems. The Faculty believes that its National Program creates an important link between Québec and the rest of Canada. We are now training truly "national" lawyers, for which there is a real need in this country. Our double-degree graduates are experiencing the value of their dual training and the greater role they feel enabled to play as Québecers and Canadians. These graduates are finding their way into federal government jobs in Ottawa; and, in both Québec and Ontario practice, they are called upon to relate the law and practices of the two provinces.

For those intending to practise only in Québec, the National Program is of no less value. Few Québec practitioners deal only with the private law of Québec; much law in this province is common to all provinces, and even Québec private law is touched at many points, especially in commercial practice, by common law doctrines. Moreover, many clients have interests that transcend this Province. Consequently, an understanding of the common law is an asset to the Québec practitioner.

2.2 DEGREES

B.C.L. and LL.B.

The degrees granted in the Faculty are those of Bachelor of Civil Law (B.C.L.) and Bachelor of Laws (LL.B.).

HIGHER DEGREES

The higher degrees in law are the M.C.L. (Master of Civil Law), the LL.M. (Master of Laws), and the D.C.L. (Doctor of Civil Law). Information concerning these degrees and the Graduate programs relating to them is summarized under the heading "General Regulations Concerning Higher Degrees in Law", (section 6.1).

2.3 ADMISSION

GENERAL REGULATIONS

Application forms, which may be obtained by writing to the Faculty, must be completed and submitted by February 1st, and be accompanied by an application fee of $15 by certified cheque or money order made payable to McGill University. Although the deadline is February 1st, the Faculty may consider applications received as late as March 1st, although preference will be given to those meeting the deadline. Applications for admission should be sent to the Admissions Officer, Faculty of Law, McGill University, 3644 Peel Street, Montreal H3A 1W9. Students already registered at McGill University at the time of application for admission to the Faculty of Law will not be charged the $15 application fee. Late applications will only be considered under exceptional circumstances. Applicants should forward their transcripts, including those for their final year, as soon as possible. Candidates for admission may be required to be interviewed by the Chairman of the Admissions Committee or another member of the Faculty. In all cases admission is at the discretion of the Faculty.

The courses given in every case anticipate a least two hours of directed study for every hour of lecture. In addition, each candidate is obliged to write the essays, to attend the seminars, to participate in the Moot Court and Group Tutorial programs, and to fulfil whatever other requirements may be set by the Faculty. Candidates are expected to devote their whole time to their legal studies and are prohibited from taking other academic studies during the academic session without prior approval of the Dean.

No student is allowed to be enrolled concurrently in the Law Faculty program and a professional training program of any Bar, which program consists of a course of lectures and/or period of articling. Where a student is found to be in breach of this rule, the Dean may require him to withdraw from the School.

Students entering the Law Faculty are expected to have a basic knowledge of Canadian Government as preparation for the study of public law. Those who have not taken a basic course on Canadian Government are strongly advised to read R. MacGregor Dawson, *The Government of Canada*, and James S.R. Mallory, *The Structure of Canadian Government*.

ADVANCED STANDING

Applicants for advanced standing must submit, in addition to the Faculty of Law application form and official undergraduate transcripts, official transcripts of their standing in another Law Faculty. In all cases attention is drawn to Section 3.4, Regulation 17, para. 3 of this Announcement.

LANGUAGE REQUIREMENTS

Every candidate, whether a candidate for the degree of Bachelor of Civil Law (B.C.L.) or for the degree of Bachelor of Laws (LL.B.) is expected to have substantial fluency in both the French and English languages.

Candidates will be required to read in both languages and examinations may contain extracts in either French or English. One or more French language optional civil law courses are generally offered by the Faculty.

Examinations, term papers and essays may be written either in English or French. Participation in moot courts may also be in either language. Examination questions are set in the language in which a course is given.

One or more basic courses in the civil law in other than the first year program may be given in the French language only.

The attention of candidates intending to proceed to the Bar of Quebec or the Chamber of Notaries is drawn especially to Section 5.1 of this Announcement.

2.4 ADMISSION STANDARDS

B.C.L. and LL.B. DEGREES

One of the primary qualifications for admission to either the B.C.L. or the LL.B. program is the attainment with a second class standing of a B.A. or an equivalent degree from a university or college which is recognized by McGill University. Candidates holding a diploma of collegial studies with a high standing from a Quebec College of General and Vocational Education (CEGEP) are also eligible for admission; however, candidates holding only a CEGEP Diploma cannot be admitted directly into the Common Law (LL.B.) program but must commence by taking the Civil Law (B.C.L.) program. In exceptional cases, candidates with lesser academic qualifications may be admitted to the Faculty if they are qualified to pursue with advantage the study of law.

Please refer to section 5 for admission to the legal profession. The attention of candidates holding CEGEP diplomas is drawn to the fact that admission to the Bars of the other Provinces may require additional years of pre-law university education. In particular, the Law Society of Upper Canada requires an additional pre-law university year for those holding CEGEP diplomas.

The Faculty may admit a limited number of suitable persons, no matter what their academic qualifications, to attend selected courses of lectures. Such permission will only be granted to applicants who satisfy the Faculty of their capacity to undertake with advantage the study of law. They will not be allowed to proceed to a degree, but will be entitled to receive a certificate specifying the course or courses which they have successfully pursued and the grade which they have obtained.

NATIONAL PROGRAM

Admission into this program is set forth under the heading "Regulations for the National Program," Section 3.3.

2.5 REGISTRATION AND COMMENCEMENT OF CLASSES

Registration in all years of Law is on September 6, 1977. **All students must register in person.**

First year orientation will be held on September 6. Lectures in all years will begin on September 7.

Students registering late will be required to pay a Late Registration Fee and should read carefully the regulation concerning late registration in Section 2.7.

Students in upper years are required at the end of the winter term (and by a date to be announced) to complete an Early Registration Form indicating their course selections for the next academic year.

DEPOSIT

A student whose application for admission has been approved must send a deposit of $100.00 by certified cheque or money order made payable to McGill University within ten days of receiving notification of his/her acceptance. A student who does not wish to register, will be refunded his/her deposit if the Admissions Office of the Faculty has received notification of his/her intention not later than the date specified in the letter of acceptance.

2.6 FEES

The university reserves the right to make changes without notice in the published scale of fees.

Fees are not refundable except under special conditions. See *General Announcement* for regulations.

Tuition fees are charged at the rate of $19.00 per credit. Student Services and Students' Societies fees will be separately assessed in a manner appropriate to those two functions and must be paid at the same time as the tuition fees. The maximum fee

payable by a full-time student is $98. which includes $6 for the McGill Law Journal.

Each student will receive free of charge brief outlines of courses where such are available. Students will be charged $16 for course materials issued by the professor (apart from casebooks, statutes, etc. which will be sold through the McGill Bookstore.) $7.50 will be charged at the September registration and the remaining $7.50 at the second term registration.

The attention of students is drawn to the fact that they will require books and casebooks for their courses which may cost them $350.00 per year.

COMPULSORY HEALTH INSURANCE FOR NON-CANADIAN STUDENTS

All full-time non-Canadian students (including landed immigrants during their first year at McGill) must take out a Health Insurance policy, which is available on a group basis at the cost of $85.00 per student per year for single students and $150.00 per year for married students. In general, the policy provides for payment towards hospital, surgical, medical, diagnostic and other medical expenses.

This Faculty Announcement and the Regulations contained herein govern students registered in the Faculty of Law during the 1977-78 academic year. Students are warned that they will be subject to changes made therein as published from time to time within the Faculty before the time of their fall registration. The attention of all students, prospective or otherwise, is drawn to Regulation 57.

2.7 GENERAL REGULATIONS

NEW STUDENTS

Students entering the University *for the first time* are required to pay their fees either by mail or in person at the Accounting Office.

The first instalment is due within 10 days after registration, the second instalment by January 15, 1978.

RETURNING STUDENTS

Students *who have completed one or more years* and intend to register in the succeeding year must pay one half of the total sessional fee by mail or in person to the Accounting Office before August 19, 1977, otherwise they will not be permitted to register. Instructions for paying fees in advance will be mailed to non-first year students. Students who have been notified by the University of the award of a scholarship, bursary or student loan, and who require this for payment of the first instalment of fees, must obtain from the Student Aid Officer, McGill University, a Permit to Delay Payment of Fees.

The second instalment is due by January 15, 1978. A late payment fee as stated below is charged for payment after this date.

PARTIAL STUDENTS AND STUDENTS NOT REGISTERED IN THE FACULTY

Students from other parts of the University who are taking courses jointly given with the Faculty of Law, should register with the Student Affairs Office at the beginning of each term. Students from outside the University who wish to take one or more courses in the Faculty should initially apply to the Admissions Office for permission to do so. If such permission is granted, these students must then register with the Student Affairs Office.

LATE REGISTERING STUDENTS

Students registering late must pay their fees at the time of registration.

As soon as possible after the prescribed dates for the payment of fees the Chief Accountant will send to the Registrar's Office a list of the registered students who have not paid their fees. Reports of Standing, transcripts of records and diplomas will be withheld until such time as the fees are paid or a satisfactory arrangement is made with the Chief Accountant.

Late registration	$25.00
Late payment fee (after specified date):	
1st 30 days	$10.00
After 30 days	$25.00

2.8 ADDITIONAL INFORMATION

Further information concerning admission, entrance requirements, faculties and degrees, student services, fees and residential facilities, is published in the *General Announcement*, which may be obtained from the Registrar's Office, F. Cyril James Building, 845 Sherbrooke St. West, Montreal, P.Q. Canada H3A 2T5.

3 CURRICULUM

The Faculty of Law operates under a credit system outlined below.

3.1 ACADEMIC CREDIT TRANSFER AGREEMENT

Students wishing to take courses for credit towards their McGill degree at any university in the province of Québec should refer to Regulation 10 and the section entitled "Academic Credit Transfer Agreement" in the General Announcement for details.

3.2 REGULATIONS FOR THE B.C.L. AND LL.B. DEGREES

1. The Faculty grants a Bachelor of Civil Law (B.C.L) degree or a Bachelor of Laws (LL.B.) degree to candidates who have successfully completed ninety-five credits in accordance with the following regulations.

2. A candidate registered for the degree of B.C.L. or LL.B. is required to take the courses prescribed in each year of the degree program for which he/she is registered (as herinafter set forth in Appendices I and III). In obtaining the number of credits required for his/her degree, a candidate must take all the courses indicated as obligatory for the obtaining of the degree and shall not be permitted to register for a course unless he/she has obtained the credits allotted to courses that are indicated as prerequisites.

   The attention of candidates proceeding to the legal profession is drawn to Appendix II and to the regulations of the relevant professional corporations regulating the legal professions in the several Canadian provinces.

3. The remaining required credits are obtained by completing whatever other options the candidate selects to the extent permitted according to Appendix III.

3.3 REGULATIONS FOR THE NATIONAL PROGRAM

4. The Faculty grants the B.C.L. degree to candidates holding an LL.B. degree, and the LL.B. degree to candidates holding a B.C.L. degree, who have successfully completed an additional thirty credits in accordance with the present regulations.

In order to be eligible to proceed to the LL.B. degree, the holder of a B.C.L. degree must have taken, and passed, during the B.C.L. program, Property IA & IIA and either Contracts I or Torts I. Likewise, the holder of an LL.B. degree desiring to proceed to the B.C.L., must have taken, and passed, during the LL.B. program, Obligations I and Property I & II. It is to be noted that candidates who entered the first year of the LL.B. program in 1972-73 or entering in subsequent years are obliged to take in their LL.B. program a larger number of basic civil law courses whether or not they intend to proceed subsequently to the B.C.L. degree. (See Appendix I Part II.)

5. A candidate who has successfully completed the first year of either the B.C.L. or LL.B. program may opt on registering for his/her second year to enter immediately the National Program, and on obtaining one hundred and twenty-five credits in accordance with the following regulations, shall be granted both the said degrees jointly.

   Should the candidate wish to terminate his/her studies after having completed ninety-five credits only, he/she may be granted, at the discretion of the Faculty, either the B.C.L. or the LL.B. degree, according to the courses in which he/she has obtained credits, provided that he/she has then obtained credits for all the courses listed in Appendix I. A candidate who elects to enter the National Program on successfully completing his/her first year should seek the advice of the Dean or his/her academic counsellor as to his/her academic program.

6. In obtaining the number of credits required for his/her degree or degrees under the National Program, a candidate must take and pass all the courses listed in Appendices I and IV.

7. The remaining required credits are obtained by completing whatever other options the candidate selects, subject always to the requirement that he/she has obtained the credits allotted to courses that are indicated as prerequisites; this latter rule also applies to obligatory courses.

3.4 GENERAL REGULATIONS

8. The word *course* as used in this announcement shall include, *inter alia*, tutorials, moots, essays, seminars and any other work for which credit is given, unless the context otherwise indicates.

9. The number of credits allotted each course equals the number of class hours per week except where otherwise indicated. The number of credits allotted to tutorials and moots is set forth in the Appendices.

10. A limited number of the credits required for either law degree or for the joint degrees under the National Program may be obtained in appropriate courses given by other faculties of McGill University or other universities, as arranged from time to time, provided the approval of the Dean or his delegate has been granted *prior* to registration for any courses giving rise to such credits. The total number of non-law credits that may be allowed under this Regulation shall not exceed six.

11. Candidates shall make their course selections for the entire academic year on or before May 31, on the forms supplied by the Faculty for this purpose. Once the delays for course selections have expired, no changes are permitted unless such become necessary as a consequence of factors such as the results of supplemental examinations and re-reads (which may render a candidate ineligible for a course), course cancellations, the addition of new courses, or time-table conflicts. A candidate may apply to

drop a maximum of two of the courses which he has selected, provided he does so within the first five weeks of each term; he may apply to select another course or courses provided he does so within the first week of each term. The selection of courses and any course changes must be approved by the Dean or his delegate.

Admission to some courses or the class sections of a course may be limited owing to heavy demand and the resources available, or because of particular teaching methods in certain fields. Some or all of the courses and seminars sponsored by the Institute of Comparative Law which are open to undergraduate students in the Faculty may be limited in their enrolment on the basis of restricted numbers or academic record.

Candidates are reminded that they retain the ultimate responsibility for their selection of courses, and therefore must bear in mind possible consequences of their choice with respect to professional qualifications (see Admission to the Legal Profession, section 5).

12. The Faculty shall prescribe the program of candidates who do not make their course selections within the specified delays.

13. Candidates will not be allowed to alter or cancel their course registration otherwise than as prescribed above.

14. Each candidate, in his/her third and subsequent terms, must register for not less than twelve credits in each term (with the exception of his/her final term should a lesser number of credits be required for the obtaining of his/her degree); nevertheless, the Dean or his delegate may, under extenuating circumstances, permit a candidate not in first year to register for a lesser number of credits. A candidate may register for a maximum of 18 credits in any term (including 1st year), but in special circumstances the Dean or his delegate may permit a candidate to register for more than the prescribed maximum credits. *The attention of candidates is drawn to regulations 16 and 17.*

15. A candidate who has not succeeded in obtaining a minimum of three-quarters (rounded down to the nearest whole number) of the total credits for which he/she registered in any academic year will not be permitted to continue his/her studies in the Faculty of Law, except as hereinafter provided. A candidate who fails only one course which exceeds one quarter of the total credits for which he/she is registered shall not be required to withdraw from the Faculty by reason of the foregoing rule. A candidate who has not passed three-quarters of the total credits for which he/she is registered may be authorized to continue his/her studies if exceptional reasons for so doing exist.

16. No candidate will be granted a B.C.L. or an LL.B. degree unless he/she has been in full-time attendance at the Faculty for a period of at least three academic years following his/her first registration in First year.

No candidate will be granted both the B.C.L. and LL.B. degrees unless he/she has been in full-time attendance at the Faculty for a period of at least four academic years following his/her first registration in First year.

17. No candidate shall be eligible for any degree or degrees granted by the Faculty unless he/she completes the required number of credits for the same within five years of his/her first registration in First year.

Under special circumstances, a candidate who has interrupted his/her studies after having completed at least thirty credits arising out of courses given in this Faculty may be permitted by the Dean or his delegate, upon recommendation of the Admissions Committee, to continue his/her studies. In such event, the period of interruption shall not be included in the calculation of the five year period.

Candidates proposing to apply for transfer from other law faculties are required to remain in residence for a minimum of two years at the University for the obtaining of a B.C.L. or LL.B. degree.

18. In his/her first year in the Faculty, a candidate shall register for all the courses listed in Appendix III (Part I, or Part II) designated as 1st year courses, depending on the program into which he/she has been accepted. In order to obtain credits for such courses, a candidate must obtain a passing grade.

If the candidate obtains the grade of F in any of the First year courses, subject to Regulation 41, he/she shall (i) be obliged to re-register for and pass such courses, and (ii) not be allowed to register for any course for which any such First year course is a prerequisite.

19. In his/her subsequent terms, a candidate must register for and pass all courses indicated as obligatory in Appendix I, depending on the program which he/she is following. Candidates proceeding to either of the legal professions of the Province of Québec should register for all courses indicated in Appendix II. These courses must be taken in the order indicated in Appendix III. Candidates are referred to their local legal profession regulations.

A candidate must obtain a passing grade in order to obtain credit in any course.

20. In no case shall a candidate who has obtained the grade of F in a course be allowed to proceed to courses for which such course is a prerequisite. Candidates who fail to obtain credit for a course which they are required to complete successfully and who do not write or who

fail the supplemental examination must re-register for that course in the next term in which it is offered.

Candidates who for medical reasons do not write the supplemental examinations shall write those examinations at the next regular examination session in which examinations in those courses are offered. Such candidates are not required to re-register for these courses but must obtain permission from the Dean or his delegate.

21. All grades obtained by a candidate shall be included in his/her transcript, including both grades in the course where a regular supplementary examination is written.

22. There is no limit as to the number of times that a candidate may re-register for a course, subject to regulation 17.

Except as provided for in regulations 18 and 19, a candidate is not under the obligation to re-register for a course in which he/she has not obtained a passing grade.

23. A candidate who registers for a course a second time, or who re-takes a course in accordance with Regulation 20, must comply with all assignments.

24. It is not permissible for an essay or other paper to be submitted twice.

25. No thesis, essay, or paper, is, in the absence of the express permission of the Faculty, received by the Faculty otherwise than on the basis that, save as indicated thereon or therein, the candidate submitting it is its sole author, and that it has not been and is not concurrently being submitted to any other Faculty or University for any degree, diploma, or certificate, or for credit towards the same, or to this Faculty for any other course.

Every degree, diploma, or certificate, and every credit towards them, is given in reliance on the truth of each of those representations.

A breach of this regulation in relation to any assignment shall result in an F grade for that assignment and, in case of grave breaches, may also result in an F grade for the course in which the assignment was submitted.

25a. The following are the University Examination Regulations. Their breach, or the breach of any other rule, regulation or condition relating to examinations, whether established by or under the authority of the University, the Faculty, the Dean, or the Examiner, as the case may be, constitutes, according to circumstances, a breach of University discipline, and may be dealt with as such under the rules in force from time to time concerning University discipline.

No candidate for examination may bring into the examination room any books, notes, or other material containing information pertaining to the examination unless such material is allowed by the examiner.

ii If books, notes, etc., cannot be left outside the examination room they must be put in a place designated by the Invigilator before the candidate goes to his/her seat. When needed, mathematical tables, etc., will be supplied in the examination room.

iii Talk or communication between candidates is forbidden.

iv Candidates must not use or attempt to use any improper source of information.

v Students writing examinations are responsible for arriving at the right time and place. The plea of inadvertence or forgetfulness cannot be accepted.

vi The doors of the examination room will be opened at the hour set for the start of the examination.*

vii Candidates are not permitted to leave the examination room until one half hour after the examination has begun, and in no case before the attendance has been taken. A candidate who leaves before the examination is over must hand in an answer book. Candidates will not be permitted to enter the examination room more than one half hour after the beginning of the examination, except by special permission of the Dean or his representative.

viii Candidates must remain in their seats. If they wish to speak to the Invigilator (e.g. to ask for additional supplies) they should raise their hand.

ix Questions concerning possible errors, ambiguities, or omissions in the examination paper must be directed to the Invigilator, who will investigate them through the proper channels. The Invigilator is not permitted to answer questions other than those concerning the paper.

x No information of any kind that might be of assistance to another candidate is to be written on the question paper. All work must be done in the answer book provided and all books must be handed in. The books must not be torn or mutilated in any way.

xi At the close of the examination candidates must stop writing and hand in their books at once.

ANY BREACH OF THESE REGULATIONS WILL BE REPORTED TO THE CHIEF INVIGILATOR. IF THE OFFENCE IS SERIOUS IT WILL BE REPORTED TO THE SENATE BY THE DEAN OF THE FACULTY. A

STUDENT FOUND GUILTY OF CHEATING OR ATTEMPTING TO CHEAT IS LIABLE TO EXPULSION FROM THE UNIVERSITY.

25b. In addition, and without prejudice to the application of disciplinary sanctions, if any, compliance with all such rules, regulations and conditions is a condition of obtaining credit for courses.

Failure to comply shall, according to the Dean's judgment as to the seriousness of the circumstances, result in an F grade for the particular examination or for the course as a whole, or a reduced grade in the one or the other.

25c. No candidate who fails a course as a result of the application of regulations 25 or 25b shall be entitled to take a supplemental examination in that course. Nevertheless, when in his discretion the Dean considers it just in the circumstances, he may permit a candidate to do so, provided the candidate is qualified in other respects to take that supplemental examination.

25d. The application of Regulations 25, 25b and 25c shall rest with the Dean or his delegate (not being the instructor for the course) who shall require the persons involved to appear before him so that he may dispose of the matter.

When it appears to an examiner, invigilator, or other person in authority that a breach of Regulation 25 or 25a has taken place, he shall note the alleged offence, and, where possible, the time therof, on the paper, and report the matter promptly to the Dean.

25e. Regulations 25a to 25d shall be posted in a prominent place in the Faculty.

*No. vi represents a variation from the University examination rules as authorized by the Senate of the University on April 30th, 1974.

3.5 EVALUATION OF STUDIES

26. Examinations, term papers and essays may be written in either English or French. Participation in Moot Courts may also be in either language. Examination questions are set in the language in which a course is given.

27. In order to obtain credits for his/her courses, a candidate must obtain a passing grade.

Grading will be as follows:
Passing Grades

A	(A + : see note)
B	(B + : see note)
C	

P: Pass (see reg. 48);
Supp: passed after supplemental examination
Failing Grades
F
F. supp: Fail after supplemental examination

NOTE: The grades of A+ and B+ are awarded to indicate superior performance in the A and B groups.

28. The work done by a candidate in any given course may be assessed on the basis of examinations, papers, essays or class, group, or tutorial participation, or other academic activity. However, all candidates in a course shall be subjected to at least one common type of assessment. Joint work by two or more students for credit is not permitted without the special leave of the instructor.

29. Essays and papers are due on the last day of the term in which they are being written unless otherwise indicated. Where any required paper or essay is not submitted on its due date, in the absence of a medical certificate or analogous circumstances, a reduction of one level of grading shall be made for each day (excluding Saturdays, Sundays and legal holidays) that the submission is late. Thus, for example, a paper that would have been graded A+ if it had been submitted on time, would be graded A if submitted one day late, B+ if two days late, B if three days late, and so on in accordance with the scale in regulation 27.

30. The assessment in First year courses (as enumerated in Appendix III) shall include a final written examination to which shall be allocated at least sixty per cent of the weight of grading allotted to each such course. Mooting and tutorials are not subject to the present regulation.

31. The following courses are to be treated for evaluation purposes as full-year courses: Obligations I, Contracts I, Torts I, Property IA, Trusts & Gifts I, Constitutional Law, Taxation I.

32. Any oral examination shall be jointly conducted by the examiner and the co-examiner and the grade shall be given by the examiner in consultation with the co-examiner.

33. No candidate may take an examination or otherwise obtain credits for a course unless he/she has registered for the same and has completed the requirements save in the case anticipated in Regulation 18.

34. All grades are posted in a prominent place in Chancellor Day Hall after each examination session. Such posting shall constitute adequate communication of results for all purposes and candidates shall be deemed to have notice of their grades as of the date of posting.

35. There are three general examination sessions in the academic year: one regular session at the end of each term and one supplementary session to be held preceding the start of the fall term. Dates for the supplementary session shall be posted with the grades after the winter term.

36. Essays and other papers are written under the name of each candidate. Written examinations are anonymous, according to the procedure established by Faculty.

37. Written examinations shall have a maximum duration of three and one half hours inclusive of reading time.

38. When a candidate has not passed a course he/she has the right to a re-read of all written assignments in that course provided that:

    (i) in the case of examinations written at the end of the fall term he/she applies within seven days of the communication of the result; and

    (ii) in the case of examinations written at the end of the winter term he/she applies before June 10 and pays the prescribed fee (ten dollars for each paper with a maximum charge of fifty dollars) to McGill University. The fee shall be reimbursed should a passing grade be obtained after the re-read.

39. Written assignments which have been reread receive the grade which is given by the coexaminer in consultation with the examiner. Other assignments, if any, in the course, keep their grades unchanged. The grade assigned to the course as a whole is then recalculated, giving to the grade on each assignment its appropriate weight. Subject to the following rules, the course grade so recalculated is final.

40. Supplemental examinations are allowed subject to the present regulations. Candidates shall be admitted to (i) *regular* supplemental examinations where having obtained the grade of F in a course, they satisfy the conditions below, or (ii) *special* supplemental examinations in cases where they have been excused from earlier assessments or regular examination sessions by reason of illness or analogous causes. Supplementals in mooting consist of the writing of new factums and the presentation of fresh oral arguments. When a candidate fails an essay that he/she has elected to write as a course, or fails a course as a result of failing a paper constituting part of the weight of grading in a course, he/she may apply to be authorized to write a supplemental to the Dean or his delegate who shall make a decision in the light of the circumstances after consultation with the professor involved as to whether permission should be granted. If a supplemental is allowed it shall consist of the writing of a new essay or paper on the same or a different topic, or a rewriting of the failed essay or paper, or the writing of a regular supplemental examination, as indicated in the decision. Supplementary papers or essays shall be handed in, in the case of a fall term failure, by the last day of lectures in the winter term or by the first day of the August examination session, at the option of the student, and in the case of a winter term failure, by the said date in August.

41. No candidate shall be admitted to regular supplemental examinations if, under Regulation 15, he/she must withdraw from the Faculty, nor may any candidate write more than the following number of regular supplemental examinations:

    (i) one supplemental examination in a course worth more than seven credits; or

    (ii) two supplemental examinations in a course or courses worth altogether seven or fewer credits.

42. By commencing to write any examination, a candidate waives the right to plead any causes which would entitle him/her to a *special* supplemental, unless these causes occur in the course of the examination.

43. Application for *regular* supplemental examinations must be made by June 1st or the first business day thereafter, and must be accompanied by the prescribed fee (ten dollars for each paper with a maximum of twenty dollars) to McGill University.

Special supplemental examinations are granted within the discretion of the Dean or his delegate. Applications for such supplemental examinations by candidates must be made to the Dean or his delegate through the Student Affairs' Office on the form provided prior to, and in no case later than, the end of the relevant examination session. Exception will only be made where it is established that the medical condition or personal difficulties of the student made it impossible to comply with this requirement. The application must be made in writing and be accompanied by the prescribed fee ($10 per paper with a maximum of $50). Any student unable to present himself at an examination for medical or compassionate reasons must communicate with the Student Affairs' Office prior to or within 24 hours of the examination in order to indicate the name of his/her doctor or the circumstances justifying his/her absence and such persons as may attest thereto. The Student Affairs' Office will, in the case of medical reasons, send the student's physician the Faculty's official Medical Certificate, which requires the physician to certify that, in the physician's opinion, the student was not fit to write the examination in question. No other medical certificate will be accepted for the purposes of granting a medical exemption. This requirement for medical certificates applies to all examinations, including mid-term examinations in one-semester courses. The Dean or his delegate may, at his discretion, exempt a student from writing an examination on compassionate grounds, such as the death or serious illness of persons in the student's immediate family.

44. Supplemental examinations are written at the Faculty in the month of August. The grade obtained in supplemental examinations is the grade of the course as a whole, and is final and not subject to appeal. The grade first obtained in the course shall be included in the transcript in all cases, followed by the grade obtained as a result of a supplemental examination.

When a candidate has not passed a special supplemental examination he/she has the right to a re-read of all written assignments in that course provided that he/she applies within seven days of the communication of the result and pays the prescribed fee ($10 per paper with a maximum of $50) to McGill University. The fee shall be reimbursed should a passing grade be obtained after the re-read.

45. Grades obtained by candidates as a result of supplemental examinations shall appear as follows on their transcripts:

i) where the supplemental examination was taken after the grade of F was obtained in a course, a passing grade shall be indicated as "C Supp." (passed after supplemental examination), and a failing grade shall be indicated as F Supp. (failed after supplemental examination);

ii) where a student has failed a regular examination or supplemental examination and re-registers for a course, the highest he/she can obtain in that course is the grade of "C";

iii) where the supplemental examination was taken as a result of illness or analogous causes, the regular grades, as set out in regulation 27, shall apply.

46. Honours points are awarded as follows:

Grade in Course	**Honours Points**
A+	4 honours points (per credit)
A	3 honours points (per credit)
B+	2 honours points (per credit)
B	1 honours point (per credit)
F,F.Supp.	Minus 1 honours point (per credit)

No honours points are awarded for grades of C,P. However, negative honours points shall be calculated in the candidate's average where the grade of F or F.Supp. is obtained.

Final honours are awarded on the basis of the honours points average.

The honours points average is calculated by multiplying the number of honours points obtained in each course by the number of credits allotted to that course (including the double set of minus honours points where regular supplemental examinations are written and failed), adding all the products so obtained, and dividing that total by the sum of the credits of all the courses for which the candidate registered, including double sets of credits where regular supplemental examinations are written and including generally all courses in which he/she obtained C, F or F Supp. but excluding all courses where the candidate obtained P.

47. Degrees in the Faculty are granted as follows:
- First class honours: honours points average of 2.5 and over.
- Upper Second class honours: honours points average of 1.5 and over.
- Second class honours: honours points average of 0.8 and over.
- Pass

48. Credits are given as follows as equivalences (regulation 27):

	Credits *1st term*	*2nd term*
a) Legal Clinic (where this has been elected, and upon the recommendation of the Attorney-Director of the Clinic).	2	2
b) McGill Law Journal (upon the recommendation of the Faculty adviser)		6
i) Editor in Chief (496-041D)		4
ii) Executive Editor (496-042D)		4
iii) Managing Editor (496-042D)		2
iv) Fifteen members of Senior Board (each)(496-043D)		
c) Moot Court Board (upon the recommendation of the Faculty adviser)		4
i) Chairman (496-044D)		3
ii) Vice Chairman (496-045D)		2
iii) Five members of the Senior Board (each) (496-046D)		
d) Courses completed and passed outside this Faculty (regulation 10)	2	2
e) Group Assistants (see regulation 56)		

49. (1) Final Transcripts of candidates who have successfully obtained a B.C.L. or LL.B. degree shall include the following:
    a) the grade obtained in each course;
    b) the credit weight of each course;
    c) the classification of the degree determined in accordance with regulation 47;
    d) a list of prizes granted.
    (2) Interim transcripts shall include:
    a) the grade obtained in each course;
    b) the credit weight of each course;
    c) a list of prizes granted.

3.6 TUTORIALS AND MOOTING

50. Each candidate shall in the winter term of his/her First year participate in the Faculty's Moot Court and Group Tutorial programs. Each candidate shall, in the fall term of second year, participate in the post-First year Mooting Program to the extent of at least one round.

3.7 GROUP ASSISTANTS

51. Group assistants are students who assist in the teaching of certain courses. They must have successfully completed at least two terms in the Faculty.

52. Those courses in which there will be openings for Group Assistantships will be announced. Candidates desiring to act as Group Assistants in one of those courses will so indicate in their course registration sheets. The Dean or his delegate, together with the professors in charge of the courses involved, will select the Group Assistants from amongst those who have indicated their desire to serve.

53. In making the selection of candidates, the Dean or his delegate and the professors involved shall rely, *inter alia*, on the overall academic performance of each candidate.

54. A candidate may not hold more than one Group Assistantship per term.

55. Group Assistantships carry a weight of two credits per term. A Group Assistant meets with the professor in charge of the course and with the First year group as specified by the professor. At the end of the course, the Group Assistant files a report containing an assessment of the work done, of the methods used and of his/her own performance.

56. The authorization of equivalence (see regulations 48 and 27) shall be given by the professor in charge of the course and shall be based on the candidate's performance and on his/her final report.

3.8 CHANGES IN REGULATIONS

57. These Regulations and the other provisions contained in this Announcement are subject to change at any time.

3.9 APPENDIX I

Obligatory Courses for B.C.L. and LL.B. Candidates

476-186D	Mooting II		1

3.10 APPENDIX II

Recommended Courses for Candidates Proceeding to the Legal Professions

PART 1: BAR OF QUEBEC

1. Québec Law

472-416A	Civil Procedure II	2

2. National Law

494-366A	Business Associations I	2		
494-367B	Business Associations II			3
491-313D	Taxation I	2		2
494-465A	Banking & Negotiable Instruments	2		
493-435A,B	Bankruptcy	2	or	2
495-369A	Labour Law I	3		
491-422B	Criminal Law II			3
491-401A,B	Administrative Law I OR	3	or	3
491-403B	Municipal Law OR			2
483-145A	Land Use Planning OR	2		
491-409B	Civil Liberties	2		

PART II: NOTARIAL PROFESSION - QUEBEC

Candidates are referred to the regulations of the Board of Notaries.

PART III: ONTARIO

Extract from the Regulations of the Law Society of Upper Canada: "3. *Curriculum*"

(a) An approved law school shall offer instruction regularly in the following areas:

Agency
Banking and Bills of Exchange
Civil Procedure
Company Law
Conflict of Laws
Constitutional Law
Contracts
Criminal Law and Procedure
Equity
Evidence
Family Law
Jurisprudence or one subject of a jurisprudential nature
Labour Law
Legal History
Legislation and Administrative Law
Municipal Law
Partnership
Personal Property
Real Estate Transactions
Real Property
Sale of Goods
Taxation
Torts
Trusts
Wills and Administration of Estates

(b) It is understood that the different subject areas may be variously combined or subdivided at the different law schools, hence the above list should be regarded as indicating areas of the law in which instruction will be regularly offered. The list should not be regarded as necessarily establishing courses that must be taught separately or in combination under these specific labels. For example, 'Legislation' and 'Administrative Law' might be two separate courses under those names, whereas 'Personal Property' and 'Real Property' might be combined into a single course entitled 'Property'. Or, under a heading like 'Remedies', substantial parts of 'Civil Procedure', 'Contracts' and 'Property' might be combined. The same sort of thing could be done under the heading 'Commercial Law'.

(c) Every student shall be required to take the major basic course offered in each of the following subject areas:

Civil Procedure
Constitutional Law of Canada
Contracts
Criminal Law and Procedure
Personal Property
Real Property
Torts

(d) It is understood that subject to subparagraph 3 (c), the academic planning authority of each approved Law School may provide any or all courses to its students on a required or an optional basis, may require students to elect between alternative courses or groups of courses to attain either diversification or specialization to an extent deemed desirable and may add courses to its curriculum on a required or an optional basis or an optional basis in subject areas other than those listed, in subsection 3 (a).

PART IV: NEWFOUNDLAND

Applicants for admission to the Law Society of Newfoundland who graduated in 1974, or thereafter,

must include in their program of studies major courses in the following areas:

Canadian Constitutional Law
Civil Procedure
Contracts
Criminal Law and Procedure
Personal Property
Real Property
Torts

and, in addition, *should include* two major basic courses in the following subject areas:

Commercial Law
Corporation Law
Evidence
Family Law
Wills and Trusts
Shipping

Applicants whose academic qualifications do not include the recommended subject areas may be ineligible for admission to the Law Society of Newfoundland without further exams in subject areas not included in their academic programs.

PART V: OTHER PROVINCES

Subjects considered as of prime importance for the practice of the law in the Common Law Provinces. As noted above, the Law Society of Upper Canada in 1969 reduced the number of subject areas in which instruction was to be mandatory from 23 to 7, namely Civil Procedure, Constitutional Law, Contracts, Criminal Law and Procedure, Personal Property, Real Property and Torts. This reduction was a cause of concern to the Bars of certain other provinces, the opinion being held by some being that unless certain other courses were also taken, candidates would not be adequately prepared for the practice. Rather than reducing the portability of LL.B. degrees from one province to another by the stipulation of additional compulsory courses, it was decided that the attention of candidates should be drawn to certain additional subjects that are considered to be of prime importance for the practice of law. These are Family Law, Evidence, Wills and Trusts and Commercial and Corporation Law. Candidates are accordingly advised to take these additional courses. Those who do not take them will not be refused admission to the Bar, but the Bars in question will review the regulations as to subjects required to be taken after experience has been gained as to whether the candidates who present themselves have taken a sufficiently broad range of subjects.

NOTE: The subjects listed as being required or desirable for Bar purposes are in some instances taught by the Faculty under different course names.

The Law Society of Alberta requirements concerning training in legal accounting: Text of resolution passed by the Benchers of the Law Society of Alberta in May 1973: "That the Benchers authorize the Education Committee to communicate with all law schools to the following effect: – "That all Law Schools be advised that there will be in Alberta, as of the 1975 Bar Admission Course and subsequent years, a two-hour examination in Legal Accounting and the Society's Rules with respect to accounting and trust accounts, but those persons who in their law course have passed a course in Legal Accounting will be exempt from this part of the Bar Admission examination"."

3.11 APPENDIX III: DEGREE PROGRAMS

Sequence of courses as to year. Students wishing to vary this sequence must seek permission from the Associate Dean at the time of Early Registration by filing a course change form.

PART I: B.C.L. DEGREE

		Credits	
		1st term	*2nd term*
1) First Year			
a) Civil Law courses			
472-140D	Obligations I	4	4
473-144A	Property I	3	
473-145B	Property II		3
472-119B	Civil Procedure and Evidence I		3
b) National courses			
492-116A	Foundations of Canadian Law	3	
491-101D	Constitutional Law I	3	3
491-111B	Criminal Law I	3	
476-187D	Tutorials I	2	
476-185D	Mooting I		1

2) Second Year

a) Civil Law courses

473-253A	Special Contracts I	3		
475-273A	Family Law I	3		
473-255B	Successions			3

b) National courses

494-366A	Business Associations I	2		
494-367B	Business Associations II			3
491-313D	Taxation I	2		2
495-369A	Labour Law I	3		
491-422B	Criminal Law II			3
476-186D	Mooting II			1

c) Electives

Maximum of twelve (12) credits over both terms.

NOTE: Students intending to take the National Program (the LL.B.IV year) are advised to take either Property IA and Property IIA, Contracts I, or Torts 1 as one of their electives.

3) Third Year

a) Civil Law courses

472-416A	Civil Procedure II	2

2) Second Year

a) Common Law courses				
482-236A	Civil Procedure IIA			3
b) National courses				
476-186D	Mooting II			1
c) Civil Law courses				
472-140D	Obligations I	4		4
473-144A	Property I	3		
473-145B	Property II			3
	and any one of the following (making a minimum total of 16 civil law credits):			
473-456A	Family Law II	2		3
473-255B	Successions	3		
473-253A	Special Contracts I			3
473-254B	Special Contracts II			
	A Comparative Law course as offered from time to time and designated as such in the Faculty Announcement or by notice.	2	or	2

NOTE: In their second year common law students are advised to register for a number of the civil law credits required for the obtaining of the LL.B. degree from the courses listed above.

d) Electives

A maximum of thirty-two (32) credits over both terms.

3) Third Year

a) Civil Law courses				
472-140D	Obligations I	4		4
473-144A	Property I	3		
473-145B	Property II			3
	and any one of the following (making minimum total of 16 civil law credits):			
473-456A	Family Law II	2		3
473-255B	Successions	3		
473-253A	Special Contracts I			3
473-254B	Special Contracts II			
	A Comparative Law course as offered from time to time and designated as such in the Faculty Announcement or by notice.	2	or	2

NOTE: In their third year common law students must complete the civil law credits required for the obtaining of the LL.B. degree from amongst those listed above.

b) Electives

A maximum of thirty-six (36) credits over both terms.

3.12 APPENDIX IV

Obligatory Courses for the National Program (Double Degree)

PART I: LL.B. DEGREE (AFTER B.C.L.)

In order to gain admission, the holder of a B.C.L. degree must have taken and passed, during the B.C.L. Program, Property IA & IIA, and either Contracts I, or Torts I.

NOTE: Because of the heavy contract law content of a number of the obligatory courses in the LL.B. IV, it is recommended that the students who intend to proceed to LL.B. IV, or wish to keep that option open, take Contracts I rather than Torts I.

	1st term	*2nd term*
Property IA	2	
Property IIA		2
Contracts I		2
Torts I	3	
Trusts & Gifts I	3	
Real Estate Transactions		2
Evidence IA	3	
Family Law IA	3	
Commercial Transactions	4	
Civil Procedure IIA		3

PART 2: B.C.L. DEGREE (AFTER LL.B.)

In order to gain admission, the holder of an LL.B. degree must have taken and passed, during his LL.B. program, Obligations I and Property I & II. (It is to be noted that candidates entering the first year of the LL.B. program in 972-73 or subsequent years are obliged to take in their LL.B. program a larger number of basic civil law courses whether or not they intend to proceed subsequently to the B.C.L. degree.)

Obligations I	4	4
Property I	3	
Property II		3
Family Law I	3	
Successions		3
Civil Procedure & Evidence I		3
Special Contracts I	3	
Civil Procedure II	2	
Business Associations I & II	2	
Private International Law		3

Note: The attention of candidates intending to proceed to the Bar of Québec is drawn to the fact that they should have taken and passed the courses listed in Appendix III, Part I.

---

4 COURSES OF INSTRUCTION

N.B. The courses and seminars sponsored by the Institute of Comparative Law open to undergraduate students in the Faculty are included in this list. Enrolment in them may however be limited on the basis of restricted numbers or academic record.

493-436A ACCOUNTING. (B.C.L. & LL.B.) (2 hours, first term; not given 1977-78). General principles of accounting of interest to members of the legal profession. A student who has taken a university or CEGEP level or an equivalent level accounting course is excluded from this course.

483-452B ADMINISTRATION OF DECEASEDS' ESTATES. (LL.B.) (2 hours, second term). Wills: the requirements for a valid testamentary instrument, revocation, republication, incorporation by reference, and construction. Intestate succession; mode of descent. Appointment, powers and duties of personal representatives; collection and realization of assets, payment of debts; distribution of assets, including problems of lapse and class gifts, legacies, including abatement and ademption. Overall, the course will concentrate on problematic areas of the law rather than attempt a comprehensive survey of the law of wills, intestacy and administration. *Prerequisite:* Trusts and Gifts I, first term.
Professor Smith

491-401A or B ADMINISTRATIVE LAW I (B.C.L. & LL.B.) (3 hours, first or second term). The relationship between law and the administrative process; problems of delegation; procedures and powers of administrative tribunals; judicial and legislative control of administrative action.
Professor Jones (Section 01)
Professor Grey (Section 02)

494-464A ADVANCED CORPORATION LAW. (B.C.L. & LL.B.) (3 hours, first term). Seminar on various corporate problems; aspects of study include corporate management and responsibility, shareholders' rights and securities regulation. *Prerequisites:* Business Associations I & II.
Professor Caron

491-407A AIR AND SPACE LAW. (B.C.L. & LL.B.) (2 hours, first term). The legal regime of air space and outer space, review of the more important activities in these environments, including international flights, and their legal regulations. Administrative and private air law in Canada.
Professor Bradley

494-465A BANKING AND NEGOTIABLE INSTRUMENTS. (B.C.L. & LL.B.) (2 hours, first term). Canadian law of negotiable instruments, with particular emphasis on the Bills of Exchange Act. The concept and attributes of negotiability. Bills of exchange, cheques, and promissory notes. Aspects of the law of moveable property; nature of ownership; the owner's remedies; their application to negotiable instruments; money as property and rights of recovery and tracing; assignment of debts, documents of title. Banker and customer; banker's security; letters of credit; credit cards and other recent developments. The relationship of federal and provincial laws.
Professor Scott (Section 01)
Mr. Cobbett (Section 02)

493-435A or B BANKRUPTCY AND INSOLVENCY. (B.C.L. & LL.B.) (2 hours, first or second term). Bankruptcy and insolvency in Canadian law. Scope, operation, and content of the relevant federal and provincial laws, with particular emphasis on the Bankruptcy Act, Winding-up Acts, related statutes and the general provincial law. Creditors' rights.
Professor Vallée-Ouellet (Section 01)
Mr. Mendelsohn (Section 02)

494-366A & 367B BUSINESS ASSOCIATIONS I & II. (2 hours, 1st term; 3 hours, 2nd term). The first course is devoted to the different forms of business associations; mandate or agency, partnerships, cooperatives the nature of corporate personality; the two systems of incorporation; constitutional aspects. The second course is devoted to the raising and maintenance of a company's capital; the organs of the company, investors' protection; protection of minority shareholders, reconstruction and amalgamation of companies. Common Law students are advised to take (LL.B.) Professor Buckley's section of Business Associations I.
BUSINESS ASSOCIATIONS I:
Professor Buckley (Section 01)
(B.C.L.) Professor Durnford (Section 02)
(B.C.L.) Mr. Sarna (Section 03)
BUSINESS ASSOCIATIONS II (B.C.L. & LL.B.):
Professor Durnford (Section 01)
Mr. Sohmer (Section 02)
Professor Buckley (Section 03)

494-475B BUSINESS PLANNING. (B.C.L. & LL.B.) (2 hours, second term). This seminar will deal with problems in the corporate law field. The treatment will include taxation and general civil and commercial law aspects. *Prerequisites.* Business Associations I & II and Taxation I.
Mr. Echenberg

472-459B CIVIL EVIDENCE II. (B.C.L.) (2 hours, second term). Principles of Law of Evidence with emphasis on substantive rules in civil law.
Hon. Mr. Justice Meyer

491-409A CIVIL LIBERTIES IN CANADA. (B.C.L. & LL.B.) (2 hours, first term). The "condition" of civil liberties in Canada, with particular reference to the laws of Québec and Ontario and the historical development and status of civil liberties in Canadian constitutional law. Among the subjects to be treated are language and educational rights.
Professor Cotler.

472-119B CIVIL PROCEDURE AND EVIDENCE I. (B.C.L.) (3 hours, second term). A general introduction to the Canadian judicial system, civil procedure in Québec (up to but excluding trial) and evidence.
Mr. Chamberland (Section 01)
Mr. Stein (Section 02)

472-416A CIVIL PROCEDURE II. (B.C.L.) (2 hours, first term). Trial, including examinations on discovery in the Superior Court; provisional remedies, including injunctions; remedies against judgements (revocation and appeal). *Prerequisites:* Civil Procedure and Evidence I.
Mr. Holden

482-236B CIVIL PROCEDURE IIA. (LL.B.) (3 hours, second term). Common law historical development of the rules of procedure and forms of action; traditional common law remedies; pleadings, motions and discovery; forms of trial and methods of proof; rules and organization of the courts, jurisdiction and judgements. Emphasis on Ontario Judicature Act and Rules of Practice.
Professor Del Buono (Section 01)
Mr. King (Section 02)

472-419B CIVIL PROCEDURE III. (B.C.L.) (2 hours, second term). Selected topics in Civil Procedure, including trial by jury, execution, prerogative writs, proceedings related to marriage, proceedings

concerning immoveables, procedure in the Federal Court.
Mr. Altschuler

494-462A COMMERCIAL TRANSACTIONS. (LL.B.) (4 hours, first term). Sale of goods and secured transactions.
Professor Buckley (Section 01)
Professor Del Buono (Section 02)

389-670B COMPARATIVE AND INTERNATIONAL PROTECTION OF MINORITIES' RIGHTS. (I.C.L.) (2 hours, second term). A seminar adopting an international and comparative law approach to the study of the protection of racial, religious and linguistic minorities; definition of concept; early experiments and the experience of the League of Nations; the United Nations with particular reference to its Sub-Commission on the Prevention of Discrimination and the protection of Minorities; representative national legal institutions including those of Belgium, Switzerland, Finland, Yugoslavia, Czechoslovakia, the Soviet Union and Canada. Each participant will be expected to lead a discussion on an appropriate subject on which an essay will also be required. There will be no written examination. This course is open to undergraduates as a "Comparative Law Course" within the Faculty.
Professor Humphrey

389-610A COMPARATIVE CIVIL LIABILITY. (I.C.L.) (2 hours, first term). A comparative study of selected contemporary problems in the field of civil responsibility. Areas of concern include: economic loss, privacy, mental suffering, prenatal injury, and the role of strict liability. This is a graduate course open to undergraduate students and avails as a "Comparative Law Course". *Prerequisites:* Obligations I or Torts I.
Professor Foster & Professor Baudouin

389-630A COMPARATIVE COMPANY LAW AND THE MULTINATIONAL COMPANY: LAW AND PRACTICE. (I.C.L.) (2 hours, first term). A comparative evaluation of Anglo-American and Continental company law systems – the harmonization of company laws within the European Common Market, and the 'European Company' – international and multinational companies – structure and management of the multinational company – government control of the multinational company – international controls and the multinational company – anti-monopoly legislation and the multinational company – the Canadian experience. This course is open to undergraduate students as a "Comparative Law Course" and also to students in the Faculty of Management.
Professor Hahlo

389-651B COMPARATIVE MEDICAL LAW (I.C.L.) (2 hours, second term). A comparative study of selected contemporary medico-legal problems including civil and criminal liability of doctors and hospitals, consent, medical and hospital contracts, emergency services, organ transplants, death, euthanasia, abortion, sex reassignment, experimentation and medical ethics. This course is open to undergraduates as a "Comparative Law Course" within the Faculty. *Prerequisites:* Obligations I or Torts I.
Professor Kouri

389-634A COMPARATIVE PRIVATE INTERNATIONAL LAW (I.C.L.) (2 hours, first term). The comparative study of basic rules of conflict of laws and enforcement of foreign judgements in the civil and common law systems, with particular reference to international and inter-regional unification efforts. This course is open to undergraduates as a "Comparative Law Course" within the Faculty. *Prerequisite:* Private International Law I (undergraduate).
Professor Groffier-Atala

491-101D CONSTITUTIONAL LAW I. (B.C.L. & LL.B.) (3 hours, throughout the year). A comprehensive treatment of the theory, law and practice of the constitution, including legislative, executive and judicial institutions in Canada. The rule of law in executive government and in the lawmaking process. Parliamentary sovereignty, constitutional amendment, and the federal system. A problem approach, with opportunity to draft bills and legal proceedings, will be attempted, in order to develop skills useful in the practice of law.

It will be assumed that students have a basic acquaintance with Canadian governmental institutions, either through a course on Canadian government, or through the reading of one or more basic texts. Students are referred to the current edition of R. MacGregor Dawson, *The Government of Canada*, or to James R. Mallory, *The Structure of Canadian Government, or to Van Loon & Whittington, The Canadian Political System.*
Professor Cotler (Section 01)
Professor Scott (Section 02)
Professor de Mestral (French Section 03)

491-202B CONSTITUTIONAL LAW II (ADVANCED SEMINAR). (B.C.L. & LL.B.) (2 hours, second term). This seminar will provide students with an opportunity to study and analyse proposals which are currently being made for revision or radical alteration of the Canadian constitution. The first part of the seminar will be devoted to a definition of problems. The second part will deal with a number of specific areas of constitutional law which in recent years have given rise to controversy as to the functioning of the existing federal system: such areas will include communications, immigration, language and cultural guarantees, the spending power and authority to promote economic development. The third part will involve a discussion and appraisal of various solutions and models which have or could be proposed for revision of the existing constitution. Students will be encouraged to draft proposals and submit them to the critical scrutiny of the seminar. Students will be required to prepare, on an independent basis, a paper dealing with some topic of relevance to the seminar and will be

marked on this paper and their participation in the seminar. *Prerequisite:* Constitutional Law I. The seminar will be conducted in English and in French and admission will be by permission of the instructor.
Professors de Mestral, Grey et al;
Professor Chevrette et al, Faculté de Droit, Université de Montréal

485-483B CONSUMER PROTECTION. (B.C.L. & LL.A.) (2 hours, second term). A seminar requiring active student participation dealing with a number of selected topics (advertising, product safety, control of interest rates, etc.) primarily of concern to the individual in his capacity as a consumer. The perspective will be essentially economic and substantial attention will be paid to the evaluation of specific rules within the topic areas concentrated upon in terms of the costs, and the distribution of the costs, which these rules impose upon society at large. *Prerequisites:* Special Contracts I or Commercial Transactions or permission.
Professor Tetley

389-652A CONTEMPORARY CIVIL LAW PROBLEMS (LANDLORD AND TENANT AND QUEBEC RENTAL COMMISSION). (I.C.L.) (2 hours, first term). A research seminar on the interpretation, by the Rental Commission, of the Québec *Act to Promote Conciliation between Lessees and Property-Owners,* conducted with the collaboration of the Quebec Rental Commission. Emphasis will be placed upon the reform of the *Act.* The purpose of the course is to develop a methodology for empirical research and to acquire some practical knowledge of the *Act.* English and French will be the working languages of the course, but a good command of written and spoken French is necessary for the empirical study. Special Contracts II or Property IIIA would be desirable for this offering. A limited number of undergraduate students may be enrolled upon permission of the instructor.
Professor Jobin
N.B. Senate authorization pending at time of publication

494-476B CORPORATE FINANCE (B.C.L. & LL.B.) (2 hours, second term). The course will examine problems in Corporate Finance which arise in widely-held companies. Among the topics which may be considered are valuation; senior security holders; dividends and dividend theory; mergers and merger accounting and insider trading and sale of controlling shares. *Prerequisite:* Business Associations I, II. It is recommended that the student have taken an Accounting course.
Professor Buckley
N.B. Senate authorization pending at time of publication

482-142D CONTRACTS I. (LL.B.) (3 hours, throughout the year). A study of the general theory and basic principles of the common law of contract in Canada – offer and acceptance, consideration, intent to create legal relations, privity and terms; standard form contracts, mistake, misrepresentation and discharge.
Professor Foster (Section 01)
Professor Eliasz (Section 02)
Professor Bridge (Section 03)

491-111B CRIMINAL LAW I. (B.C.L. & LL.B.) (3 hours, second term). The exploration of major problems in criminal law and its administration; emphasis on basic concepts which govern the implementation of the Criminal Code in Canada.
Professor Sklar (Section 01)
Professor Del Buono (Section 02)

491-422B CRIMINAL LAW II. (B.C.L. & LL.B.) (3 hours, second term). Principles of the law of criminal evidence and procedure. *Prerequisite.* Criminal Law I.
Mr. Fish (Section 01)
Mr. Proulx (French Section 02)
Mr. Shadley (Section 03)

491-421A CRIMINAL LAW IV. (CRIMINAL LAW AND SOCIETY). (B.C.L. & LL.B.) (2 hours, first term; not given 1977-78). This seminar will focus upon selected areas of human belief and behaviour (such as corporate crime, faith-healing, child abuse, and killings committed under circumstances of extreme provocation) which the law-maker has traditionally sought to control through the use, among other instrumentalities, of the criminal law. The seminar will critically examine, in the context of such areas, the effectiveness of the criminal law in controlling human conduct. The materials will be interdisciplinary in character. It will be open to a limited number of students from Law, the Behavioural Sciences, Political Science and Religious Studies. *Prerequisite:* Criminal Law I or the approval of the instructor.

491-418A CRIMINOLOGY I. (B.C.L. & LL.B.) (2 hours, first term; not given 1977-78). A study of the aims of the penal system with particular reference to defining limits of the scope of criminal behaviour and the purposes of punishment. *Prerequisite.* Criminal Law and Procedure I.

491-419A CRIMINOLOGY II. (The Processing of the Offender: Legal, Psychiatric and Social Work prospectives) (B.C.L. & LL.B.) (2 hours, first term). An examination of the role of the lawyer, psychiatrist and social worker in the processing and treatment of offenders. Problems characteristic of practice in each of these professions will be studied as they interact in the criminal process. The seminar will be conducted jointly by faculty members drawn from Law, Psychiatry and Social Work. It will be open to a limited number of students in Law, Medicine and Social Work who have a particular interest in the field of criminology.*Prerequisite:* A previous course

in criminal law, criminology or corrections or the approval of the instructors.
Professor Sklar with
Dr. C. Angliker of the Forensic Psychiatry Clinic, and Dr. P. Deehy of the School of Social Work

495-471A ENVIRONMENT AND THE LAW. (B.C.L. & LL.B.) (2 hours, first term). The basic objective of the seminar is to examine the actual and potential role of law in protecting the integrity of the human environment from threats posed by scientific and technological advances, rapid industrialization and population growth. Emphasis will be placed on the following subjects: air, water and sea pollution; hazards caused by the uses of nuclear energy; weather modification. If time permits, the inquiry will extend to other environmental hazards.
Professor Vlasic

389-636A EUROPEAN COMMUNITY LAW I (I.C.L.) (2 hours, first term). An introduction to the study of European Community Law and legal institutions, with particular reference to the Treaty of Rome and subsequent instruments. This course is open to undergraduate students.
Professor Lasok

389-637B EUROPEAN COMMUNITY LAW II. (I.C.L.) (2 hours, second term). A study of selected topics in European Community Law, particularly European Commercial Transactions. It will also examine the legal implications of Canadian participation in the European Economic Community. This course is open to undergraduate students. *Prerequisite:* European Community Law I or its equivalent.
Professor Eliasz and Professor Zuijdwijk

482-418A EVIDENCE IA. (LL.B.) (3 hours, first term). The development of Common Law principles of civil and criminal evidence and relevant policy considerations. Stress will be placed on such areas as relevancy and admissibility; hearsay rule; advocacy and trial tactics; function of judge and jury; relationship of rules of evidence to problems of deception, perception and memory; credibility.
Professor Sklar

475-273A FAMILY LAW I. (B.C.L.) (3 hours, first term). The existence and attributes of physical persons, their capacity and incapacity by reason of age, relationship and mental faculties; the family; husband and wife; the law of marriage; its formation and its effects, especially with respect to the rights and duties of the consorts and their property; separation, the annulment of marriage and divorce.
Professor Grey (Section 01)
Professor Ouellette-Lauzon (French Section 02)

485-472A FAMILY LAW IA. (LL.B.) (3 hours, first term). Marriage and divorce; the matrimonial property regime of the common law provinces; parent and child; guardian and ward; interstate succession and dependents' relief.
Professor Zuijdwijk

473-456A FAMILY LAW II. (MATRIMONIAL PROPERTY LAW). (B.C.L.) (2 hours, first term). The effect of marriage on the property rights of married persons, and their relations with third persons; the matrimonial regimes of the Québec Civil code. *Prerequisites:* Family Law I and Property I.
Professor Groffier Atala

486-456B FAMILY LAW III: LAW RELATING TO CHILDREN (B.C.L. or LL.B.) (2 hours, second term; not given in 1977-78). This course will require active student participation and should be suitable for both Law and Social Work students. It will concern itself with the legal and social problems of legitimacy, illegitimacy, and legitimation, custody and access disputes, kidnapping cases, the role and responsibility of step and foster parents, parental rights and the adoption process. The course will be taught on the seminar basis and assessment may be on the basis of term papers and class participation.

483-453A FINANCING REAL ESTATE TRANSACTIONS (B.C.L.) (2 hours, first term). Particular emphasis will be placed on the protection to be given the hypothecary creditor, the methods of financing land acquisition and development; the special problems related to the financing of construction projects; the development of the emphyteutic lease and the net lease as a form of finance, the role of the lawyer in giving economic advice to his clients. *Prerequisites:* Property I & II.
Mr. Carswell
Mr. Mettarlin

492-116A FOUNDATIONS OF CANADIAN LAW (B.C.L. & LL.B.) (3 hours, first term). An introduction to the institutional and philosophical foundations of Canada's two legal systems, with emphasis on some basic principles of Canadian public law.
Professor Eliasz (Section 01)
Professor Grey (Section 02)
Professor Zuijdwijk (Section 03)

125-401A or B FRENCH LEGAL TERMINOLOGY/FRANCAIS JURIDIQUE (2 hours, either term). Ce cours a pour but d'amener les étudiants, futurs légistes, au point où ils pourront exercer leur profession, en français, dans la Province. Ce n'est pas un cours de français général ni un cours de révision; c'est un cours avancé et spécialisé, qui suppose au départ un bonne connaissance du français usuel, parlé et écrit. Les travaux pratiques se feront sous forme de débats, de rapports oraux et écrits, etc.

Le cours est réservé en principe aux étudiants de dernière année. D'autres étudiants seraient admissibles dans les limites de la disponibilité des places. Les effectifs sont limités.

Un examen de classement, obligatoire, aura lieu au moment des inscriptions. Pour plus de précisions, consulter les affiches au Département de français ou à la Faculté de droit.

This course avails as a "non-law" credit within the meaning of Regulation 10.
Mr. Reed

494-461B INSURANCE (B.C.L.) (2 hours, second term). This course deals with the general principles of Quebec Insurance Law, with emphasis placed on the contract of insurance and with some reference to the Common Law.
Professor Tetley

494-463A INTELLECTUAL AND INDUSTRIAL PROPERTY (B.C.L. & LL.B.) (2 hours, first term). An introduction to the law of patents, trade marks, copyright, industrial design and unfair competition, designed to give students a practical familiarity with the principles and practice of the law in an area of increasing and continuing commercial importance.
Mr. McLeod: Patents
Mr. Gadban: Trademarks
Mr. Amos: Copyrights

389-631A INTERNATIONAL BUSINESS TRANSACTIONS I (I.C.L.) (2 hours, first term). An introduction to International Business law designed to familiarize students with the range of laws, national and international, applicable to international business transactions. The course will cover the subject at three different levels: a) private law applicable to international business transactions: Sales, Affreightment, Agency, Insurance, Licensing, Payment, Arbitration, Choice of Law (Unification of Private Law); b) federal regulation, export controls, anti-dumping, export insurance; c) International Law (MFN Standard, Bilateral Trade Agreement, GATT, Selected Commodity Agreements). The focus of the course will be Canadian. However, comparative materials are included and research on problems arising in other legal systems will be encouraged. This course is open to undergraduates.
Professor de Mestral

389-632B INTERNATIONAL BUSINESS TRANSACTIONS II. (I.C.L.) (2 hours, second term). An advanced research seminar dealing with: a)Canadian direct investment abroad. What legal problems are Canadian investors facing abroad? What type of protection is available to them against non-commercial risks? This will involve an analysis of the international law rules with respect to confiscation, expropriation and nationalization; b) foreign direct investment in Canada. This part is devoted to an analysis of the *Foreign Investment Review Act* and the Canada Development Corporation; c) the International settlement of investment disputes between states and nationals of other staes. Form of assessment: term paper. Students taking this seminar should have some knowledge of economics, commercial law and international law. The course is open to undergraduate students. *Prerequisite:* International Business Transactions I or its equivalent.
Professor Castel

389-611B INTERNATIONAL COMMERCIAL ARBITRATION (I.C.L.) (2 hours, second term). A seminar dealing with the comparative evaluation of this particular alternative to litigation between parties to international contracts in Canada, the United States and the Common Market, with particular reference to international conventions and other instruments in this field. This is a graduate course open to undergraduate students.
Professor Groffier-Atala

491-425B INTERNATIONAL CRIMINAL LAW (I.C.L.) (2 hours, second term; not given 1977-78). This course is intended to offer to students interested in International Law and Criminal Law, an opportunity to study crimes against the law of nations, war crimes (the Nuremburg trials, the Eichman case), genocide and the way in which states co-operate to fight organized crime, terrorism, hijacking, etc. Attention will be paid to the subject of jurisdiction (crimes committed in foreign countries, at sea, in aircraft, extradition, international judicial assistance) and the recognition and enforcement of foreign criminal sentences. *Prerequisite:* Criminal Law I *Co-requisite or prerequisite:* Public International Law I.

389-620A INTRODUCTION TO COMPARATIVE LAW (I.C.L.). (2 hours, first term). Introduction to the comparative method; differences and similarities between the world's legal systems; a detailed study of selected topics. This course is open to undergraduate students in the Faculty as a "Comparative Law Course"
Professor Hahlo

492-419B JURIMETRICS (B.C.L. & LL.B.) (2 hours, second term; not given 1977-78). An examination of the use of quantitative methods and symbolic logic in legal analysis, and of the use of computers by lawyers. The emphasis of the seminar will be jurisprudential; what do these new methods of legal analysis tell us about the nature of law?

492-421A JURISPRUDENCE I (LEGAL PHILOSOPHY) (BCL & LL.B.) (3 hours; first term). This course will introduce the main schools of jurisprudence and will attempt to acquaint the student with some of the most significant writings, particularly contemporary writings, in legal philosophy. Special attention will be paid to the way in which legal philosophy and the analytic tools it employs can increase understanding of such contemporary issues as civil disobedience and the relationship between law and morality.
Professor Marshall

492-420A JURISPRUDENCE II (LEGAL PHILOSOPHY) (B.C.L. & LL.B.) (2 hours, first term; not given 1977-78). The seminar will be devoted to an intensive study of John Rawls *A theory of Justice* . It is hoped that close study of this important book will illuminate many of the general problems of legal philosophy.

495-369A LABOUR LAW I. (B.C.L. & LL.B.) (3 hours, first term). An introduction to Canadian labour law including collective bargaining, arbitration and industrial relations generally. Emphasis on the Canada Labour Code, the Québec Labour Code and related statutes.
Mr. Hartt (Section 01)
Mr. Heenan (Section 02)

495-470B LABOUR LAW II. (B.C.L. & LL.B.) (2 hours, second term). Special problems in the development of labour law in Québec and Canada. *Prerequisite:* Labour Law I.
Mr. Finkelman Q.C. and Visitors

483-145A LAND USE PLANNING (B.C.L. or LL.B.) (2 hours, first term). A comparative study of private and public control of land use and development, involving: Master plans, zoning bylaws, subdivision control, urban re-development, expropriation, and regional planning. *Prerequisite:* Property IA or Property I and II.
Professor Kenniff

495-482B LAW AND POVERTY (B.C.L. & LL.B.) (3 hours, second term; not given 1977-78). The course will be organized around the following four themes: First, the nature, extent and meaning of poverty in Canada and the implications for anti-poverty planning and poverty law; second, the differential character of the law concerning rich and poor as reflected in case studies in criminal law, consumer law, housing law, welfare law; third, the perceptions of poverty and the poor by law and lawyers, and the perceptions of law and lawyers by the poor; and fourth, the "delivery systems" available for legal services to the poor among topics to be considered here are alternative organizational models for legal services; the role of the law schools both ideologically in terms of cirrculum and operationally in terms of legal services for the poor; the roles for government and the professional bar; and the alternative action-oriented strategies for law reform.

495-487B LAW OF COMPETITION (B.C.L. & LL.B.) (2 hours, second term). Legal aspects of competition, with particular reference to restrictive trade practices and the present (and proposed) anti-combines legislation in Canada and elsewhere, with some reference to economic theories about competition; and with some references to the *Foreign Investment Review Act* and other types of direct governmental intervention and regulation of the economy.
Professor Grey
Professor Green

491-411D LEGAL PROBLEMS IN GOVERNMENT CONTROL OF BUSINESS. (B.C.L. & LL.B.) (2 hours, throughout the year; not given 1977-78). Legal aspects of competition, with particular reference to restrictive trade practices and the present (and proposed) anti-combines legislation in Canada and elsewhere, with some reference to economic theories about competition. Foreign investment Review Act and other types of direct governmental intervention in the economy – for example, price and resource controls, regulation of marketing, utilities, transportation and communication, consumer protection against unfair practices, hazards to health and safety and misleading advertising, Crown corporations, etc. *Prerequisites:* Business Associations I and II.

491-403B MUNICIPAL LAW (B.C.L. & LL.B.) (2 hours, second term). Municipal institutions in the Province of Québec and their constitution and powers. Judicial review of the acts of municipal authorities and officers, in the general context of administative law. Juridical nullity and other problems. Municipal taxation. Civil responsibility.
Professor Scott

472-140D OBLIGATIONS I. (B.C.L.) (4 hours, throughout the year). The function of the law of obligations, the concept of obligations, the sources of obligations (the general theory of contractual and legal obligation); the performance of obligations; the general theory of civil responsibility (contractual and extra-contractual); the extinction of obligations.
Professor Haanappel (Section 01)
Professor Jobin (French Section 02)
Mr. Mass/Professor Morissette (Section 03)

475-479B OBLIGATIONS IV. (B.C.L.) (MODALITIES AND CAUSES OF EXTINCTION OF OBLIGATIONS) (2 hours, second term). Modalities; joint and several, conditional and alternative obligations and obligations with a term or penal clause. Extinction: payment release, confusion, novation (and delegation of payment), compensation, frustration, etc. *Prerequisite:* Obligations I.
Professor Vallée-Ouellet

471-316A or B PRIVATE INTERNATIONAL LAW I. (CONFLICT OF LAWS) (B.C.L. & LL.B.) (3 hours, first or second term). The function, nature and sources of Private International Law. Conflicts of laws; formulation and development of conflict rules; interpretation of conflict rules (characterization, incidental questions, renvoi, conflits mobiles); operation of conflic rules (application of foreign law, substitution of the laws of the forum). Conflicts of jurisdiction and recognition of foreign judgments.
Professor Castel (Section 01)
Professor Groffier Atala (Section 02)

473-144A PROPERTY I. (B.C.L.) (3 hours, first term). The concepts of property, ownership and possession, and rights in property; the land titles registration system.
Professor Brierley (Section 01)
Mr. Godin (Section 02)
Me Canth Cumyn (French Section 03)

483-146D PROPERTY IA. (LL.B.) (2 hours, throughout the year). Ownership and the doctrine of estates; including interests of husband and wife, uses and Statute of Uses with an outline of trusts

and settlements, concurrent ownership, future interests, and perpetuities, adverse possessions. Commercial land law; easements and profits, restrictive covenants, licences, mortgages, landlord and tenant, fixtures.
Dr. G. LaForest Q.C. (Section 01)
Professor Smith (Section 02)

473-145B PROPERTY II. (B.C.L.) (3 hours, second term). The concepts of patrimony and security on property, moveable and immoveable; elements of the land titles registration system; hypothecs, privileges, pledge, with some consideration given to statutory securities on property.
Professor Caron (Section 01)
Professor Vallée-Ouellet (French Section 02)
Mr. Reis (Section 03)

483-149B PROPERTY IIA. (LL.B.) (2 hours, second term). The basic principles of moveable property; ownership and possession; the acquisition and termination of ownership; gifts, bailments, sale of goods, security devices and and non-consensual liens.
Professor Jones (Section 01)
Professor Sklar (Section 02)

472-418A PROPERTY III. (2 hours, first term). A study of the nature and effects of extinctive and positive prescription; the concepts of renunciation, suspension and interruption; review of various extinctive prescription periods under the Civil Code and under certain other Québec statutes.
Professor Vallée-Ouellet

483-148B PROPERTY IIIA. (LANDLORD AND TENANT) (LL.B.) (2 hours, second term). An examination of the relationship of landlord and tenant and of current problems affecting residential tenancies. *Prerequisite:* Property IA.
Professor Bradley

491-105B PUBLIC INTERNATIONAL LAW I (B.C.L. & LL.B.) (3 hours, second term). The traditional fields of International Law including nature and sources; recognition, territory and acquisition of territory; jurisdiction on the high seas; nationality; diplomatic and consular privileges and immunities; responsibility of states; interpretation of treaties; legal control of force and aspects of the U.N. Charter, special Canadian problems of International Law.
Professor Vlasic

491-406A PUBLIC INTERNATIONAL LAW II (PROBLEMS OF INTERNATIONAL LAW AND ORGANIZATION). (B.C.L. & LL.B.) (2 hours, first term; not given 1977-78). An analytical examination of the Charter of the United Nations and a study of the development of international law and organization by and through the various organs of the United Nations and of the specialized agencies *Prerequisite:* Public International Law I.

492-438B PUBLIC INTERNATIONAL LAW III (LAW OF THE SEA). (B.C.L. & LL.B.) (2 hours, second term). This course will deal with the development of Canadian Law and Policy on the Law of the Sea in recent years and will seek to show the dynamic relationship between Domestic and International Law in this field. It will deal among other things with: the historical development of the Law of the Sea; freedoms of the High Seas; zones of maritime jurisdiction including internal waters, territorial sea, fishing zones and economic zones; continental shelf including boundary delimitations; islands, international straits; international waterways; military uses of the seas, the Arctic and the exploitation of the resources of the seabed beyond the limits of national jurisdiction. Special emphasis will be put upon recent developments related to the Third United Nations Conference on the Law of the Sea, and Canadian positions at the Conference. Foreign students will be encouraged to do research concerning the development of law and policy in their own countries. Students from other disciplines may write on issues related to those disciplines. Materials: Alexandrowicz and de Mestral *Ocean Law, a Canadian Perspective.* (No prerequisite, but it is preferable for students to have taken Public International Law I).
Professor de Mestral

491-404A PUBLIC INTERNATIONAL LAW IV. (INTERNATIONAL LAW OF HUMAN RIGHTS) (B.C.L. & LL.B.) (2 hours, first term). The International protection of human rights, particularly by the United Nations, its Specialized Agencies and the Council of Europe. Topics covered will include the Charter of the United Nations, the Universal Declaration of Human Rights, the two covenants and other human rights treaties, humanitarian intervention, diplomatic protection of foreigners, the prevention of discrimination and the protection of minorities, freedom of information, the status of women, self-determination, implementation, etc. There will be a written examination.
Professor Humphrey

491-405B PUBLIC INTERNATIONAL LAW V. (INTERNATIONAL LAW OF HUMAN RIGHTS) (B.C.L. & LL.B.) (2 hours, second term). A seminar covering approximately the same subject matter as Public International Law IV. Students will be expected to lead a discussion in class and to write a term paper on some aspect of human rights. Subjects will be assigned after discussion at the beginning of the course. Students are advised to take Public International Law IV in the first term; enrollment may be limited.
Professor Humphrey

491-408B PUBLIC INTERNATIONAL LAW VI (FOREIGN POLICY AND THE INTERNATIONAL LEGAL PROCESS: THE MIDDLE EAST AS A CASE STUDY) (B.C.L. & LL.B.) (2 hours, second term). The purpose of the course is to inquire into major problem areas in International Law; to explore the role of International Law; and International Organizations in conflict resolution; to analyse the anatomy

of Canadian foreign policy decision making; to train students in lawyering skills and techniques of conflict resolution. The Middle East will be used as a case study in this course.
Professor Colter

483-451B REAL ESTATE TRANSACTIONS (LL.B.) (3 hours, second term). Problems arising out of the vendor and purchaser relationship. The contract of sale in its drafting, interpretation and enforcement; fixtures, recording and land titles systems; mortgages. Particular emphasis will be placed upon the law of Ontario. *Prerequisite:* Property IA.
Professor Foster (Section 01)
Professor Zuijdwijk (Section 02)

482-434B REMEDIES (3 hours, second term). A study of the various common law remedies available at law and equity – remoteness, measure and mitigation of damages in tort and contract; liquidated, punitive and nominal damages; the incidence of taxation; declaratory judgments, specific performance, and injunction; actions for money had and received, quantum meruit, tracing and following. *Prerequisites:* Torts I, Contracts I or Property IA. (Those electing this course are recommended to have taken all three of these subjects.)
Professor Wade

483-454B ROMAN LAW: OWNERSHIP AND POSSESSION (B.C.L. & LL.B.) (2 hours, second term; not given 1977-78). A study of the concepts of Ownership and Possession in Roman Law and a comparative examination of these topics against the background of civil and common law. After an initial study of the Roman Law, students will submit papers for class discussion. There will be no final examination but both the papers and individual participation in the classes will be assessed for the purposes of grading.

483-455B ROMAN LAW: SALE (B.C.L. & LL.B.) (2 hours, second term; not given 1977-78). The orgins and development of the contract of sale will be studied in detail using original source material. The subject will be considered against the background of changing Roman society and within the framework of the growth of the law of contracts. There will be no final examination but students will submit term papers, which, together with individual participation in the classes, will be assessed for the purposes of grading.

473-253A SPECIAL CONTRACTS I (B.C.L.) (3 hours, first term). The contract of sale and the distinction between civil and commercial matters. *Prerequisite:* Obligations I.
Professor Tetley (Section 01)
Professor Haanappel (Section 02)

473-254B SPECIAL CONTRACTS II (B.C.L.) (3 hours, second term). The contracts of lease, employment, construction, deposit suretyship, loan and transaction, and the basic principles of insurance. *Prerequisite:* Obligations I.
Mr. Frailberg (Section 01)
Professor Jobin (French Section 02)

491-402A STATUTE LAW (B.C.L. & LL.B.) (2 hours, first term). This course will include study of the legislative process, the statute as a legal instrument, its various classifications, purposes and forms, styles of legislative drafting, codification, delegation of legislative power and subordinate legislation, the process of interpretation, interpretation statutes and rules of construction. The course will include exercises in drafting and annotation.
Professor Marshall

473-255B SUCCESSIONS. (B.C.L.) (3 hours, second term). The gratuitous transmission of property by reason of gift, will or legal succession. *Prerequisites:* Obligations I or Property I & II.
Professor Groffier-Atala (English Section 01)
Professor Me Cantin Cumyn (French Section 02)

491-313D TAXATION I. (B.C.L. & LL.B.) (2 hours, throughout the year). The general principles of Canadian Income Tax Law. The emphasis is on Federal, Personal and Corporation Tax with some reference to Québec Income tax rules.
Professor Durnford (Section 01)
Professor Jones (Section 02)
Mr. Gauthier (Section 03)
Professor Caron (French Section 04)

491-413A TAXATION II (B.C.L. & LL.B.) (2 hours, first term; not given 1977-78). The importance of tax considerations in common commercial transactions, both domestic and international. *Prerequisites:* Taxation I, Special Contracts I and II.

493-414A TAXATION III (B.C.L. & LL.B.) (ESTATE PLANNING) (2 hours, first term; not given 1977-78). The course deals with provincial succession duties and gift tax as well as the income tax consequences of death. A critical view is taken of current estate planning techniques such as estate freezes. Particular emphasis will be placed upon those aspects of personal and corporate income tax which are relevant in designing and implementing estate plans. *Prerequisites:* Successions or Trusts and Gifts, and Taxation I.

491-415A TAXATION IV. (B.C.L. & LL.B.) (TAX POLICY) (2 hours, first term; not given 1977-78). Public aspects of tax legislation; constitutional problems; federal-provincial agreements; tax sharing and equalization; municipal aspects. Social problems in policy; wealth tax; negative tax and re-distribution of resources. *Prerequisites:* Taxation I.

491-417B TAXATION V (CORPORATE TAXATION) (2 hours, second term). The course considers, in depth, problems unique to corporations and their shareholders including the small business deduction and refundable taxes; distributions to shareholders; corporate reorganizations and liquidations;

and the capital gain and "rollover" implications. *Prerequisites:* Taxation I and Business Associations.
Professor Durnford
Mr. Pound

491-416B TAXATION VI. (B.C.L. & LL.B.) (INTERNATIONAL TAXATION) (2 hours, second term). The course covers the taxation of non-residents with income from employment, business or property in Canada; the taxation of Canadian residents with income from employment, business or property outside Canada; foreign tax credits; and the application and importance of tax treaties. *Prerequisite:* Taxation I.
Mr. Verchere

485-179D TORTS I. (LL.B.) (3 hours, first term; 2 hours, second term). Basic principles of intentional torts, negligence and liability without fault.
Professor Bridge (Section 01)
Mrs. Somerville (Section 02)

483-449D TRUSTS AND GIFTS I. (LL.B.) (3 hours, first term; 2 hours, second term). The nature of the trust in common law and civil law theory and practice; the various types of trust; the creation, operation, and winding up of trusts; including trustees' duties and powers, and the variation of trusts; breach of trust and the doctrine of tracing. Modern uses of the trust, including income tax, succession duty and estate tax considerations, pension funds, and charitable trusts. Gifts other than by way of trust; including *inter vivos* gifts and donations*mortis causa*;essentials of validity. *Prerequisites:* Property IA & IIA.
Professor Smith (Section 01)
Professor Wade (Section 02)

496-491A (THIRD TERM ESSAY)

496-492B (FOURTH TERM ESSAY)

496-497D (SECOND YEAR ESSAY)

496-493A (FIFTH TERM ESSAY)

496-494B (SIXTH TERM ESSAY)

496-498D (THIRD YEAR ESSAY)

496-495A (SEVENTH TERM ESSAY)

496-496B (EIGHTH TERM ESSAY)

496-499D (FOURTH YEAR ESSAY)

Students electing an essay must exercise great care in selecting the appropriate course number. The appropriate number will depend upon the term or year in which the essay is being written.

Each term a post-first-year candidate may write a substantial essay on a subject, or a number of shorter articles or notes on one or more subjects meeting the approval of the Dean or his delegate, and of the member or members of Faculty to be responsible for supervision and grading. It is a condition of the elective that approval be obtained not later than the end of the first week of term (Regulation 11). In exceptional cases, where the subject-matter calls for a really substantial essay, special permission may be granted by the Dean, or his delegate, to spread the writing of an essay over two terms in one academic year; in such event it shall be deemed to constitute two electives and shall carry the weight of grading as such, and no other essays may be elected by such candidates that year. A one term elective is worth two credits; a two term elective four credits.

496-046A, 047B LEGAL CLINIC. Candidates may elect, with the permission of the Dean or his delegate, to work for credit in a legal aid clinic provided that such clinic has received the approval of the Dean. Candidates accepted for work in a legal aid clinic by the Attorney Director thereof may be granted the equivalence of two credits per term upon his recommendation. (See Regulations 27 and 48).

Note: The Faculty cannot guarantee that the students who register for this course will be accepted due to the limited number of places.

496-048A, 049B GROUP ASSISTANTS. See regulation 51 and following. 2 credits

McGILL LAW JOURNAL

496-001D Editor in Chief	6 credits
496-002D Executive Editor	4 credits
496-003D Managing Editor	4 credits
496-004D Fifteen members of Senior Board (each)	2 credits

MOOT COURT BOARD

495-005D Chairman	4 credits
496-006D Vice-Chairman	3 credits
496-007D Five members of Senior Board (each)	2 credits

476-185D MOOTING I. The Faculty's Moot Court Program is organized by the student-run Moot Court Board, under Faculty supervision. In first year each moot is judged by a member of the Board and a member of the Bar. 1 credit

476-186D MOOTING II. In the second year compulsory round, the moots are each judged by a member of the Board, a member of the Bar and a professor. These are followed by voluntary elimination and final rounds. Inter-Faculty moots are also arranged by the Board with other Law Faculties. 1 credit

476-187D TUTORIALS I. This program involves the division of the First year class into small groups for carrying out written and oral assignments under the guidance of members of

the professonial staff, together with instruction on Legal Bibliography under the guidance of the Law Librarian. 2 credits

5 ADMISSION TO THE LEGAL PROFESSION

5.1 QUEBEC

The attention of candidates for the Bar of Quebec and for the Quebec notarial profession is drawn to the special legislation and regulations governing those professional bodies.

Information regarding admission to the Bar may be obtained by applying to the Bar of Quebec, 84 Notre-Dame Street West, Montreal H2Y 1S9. Tel. 845-9253. Information regarding admission to the Notarial profession may be obtained by applying to the Chamber of Notaries, 630 Dorchester Boulevard West, Montreal H3B 1S6, tel. 866-1793.

Quebec law now requires that candidates seeking admission to provincially-recognized professional corporations* must possess a working knowledge of the French language, i.e. be able to communicate verbally and in writing in that language.

To demonstrate this capability, a candidate will normally be required to pass an examination set by the Régie de la langue française, unless he or she can show that three years of instruction in a French post-primary school have been completed. The professional corporation will require this proof of attendance or of successful completion of the Régie examination.

This examination shall test the candidate's mastery of oral and written comprehension and expression in French. The contents may vary in accordance with the current terminological requirements of the profession or professional group. Examinations will take place four times a year, and they may be attempted an unlimited number of times.

In special cases where the candidate can clearly demonstrate to the Régie by means of an interview that a true mastery of French exists, the examination requirement may be waived.

Information of the testing program of the Régie may be obtained by writing to: Régie de la langue française, 800, Place Victoria, 16 étage, Montréal, P.Q. H4Z 1G8, Telephone 873-6571.

Students who need to acquire a functional level of proficiency in French may register in courses at either the French Language Centre, 3438 McTavish Street, Telephone 392-5727, for courses during the day, or at the Centre for Continuing Education, 772 Sherbrooke Street West, Telephone 392-4901, for courses in the evening.

Students already proficient in French but who wish to keep up practice may register in courses at the Department of French Language and Literature, 3460 McTavish Street, Telephone 392-4577, or at the Centre d'études canadiennes-françaises, 3475 Peel Street.

* McGill degrees and diplomas currently give access to corporations regulating the activities of the following professional groups:

Advocates
Agrologists
Architects
Chartered Accountants
Chartered Administrators
Chartered Appraisers
Chemists
Dentists
Dietitians
Engineers
Industrial Administration Accountants
Industrial Relations Counsellors
Licensed General Accountants
Notaries
Nurses
Occupational Therapists
Physicians
Physiotherapists
Psychologists
Social Workers
Speech Therapists & Audiologists
Urbanists
Vocational Guidance Counsellors

5.2 ONTARIO

Admission to the Bar in Ontario is under the control of the Law Society of Upper Canada. That Society requires that the applicant for admission be a graduate from an approved law school. The Law Faculty of McGill has been approved by the Society. Graduates with the Degree of Bachelor of Laws (LL.B.) are eligible to enter the Bar Admission Course conducted by the Law Society of Upper Canada and to become student members of the Society.

The Bar Admission Course consists of a period of twelve months service under Articles of Clerkship with a member of the practising profession in Ontario followed by a further period of six months of full-time attendance at lectures in Osgoode Hall. Upon successful completion of these courses the candidate may be called to the Bar provided he meets the other requirements of the Ontario Bar. The foregoing requirements are at present under review.

Candidates intending to seek admission to the Faculty should first seek detailed information on the above from the Law Society of Upper Canada, Kenneth Jarvis, Q.C., Secretary, Osgoode Hall, Toronto M5H 2N6, Ontario.

In general it is expected that the governing bodies of the legal professions in most of the common law provinces will treat the LL.B. degree of McGill University in the same way as they treat an LL.B. degree from any of the Ontario common law

schools. Students who have specific inquiries about any particular province should address them to the governing body of the profession in the province concerned.

Candidates for the Bachelor of Laws Degree (LL.B.) and seeking entrance to the Bar Admission program of any of the Common Law provinces must satify the regulations of the particular Common Law province to the Bar admission course or program to which entrance is sought. The attention of candidates is drawn to the pre-law requirements of the Bars of the various provinces. In particular, the Law Society of Upper Canada requires an additional pre-law university year for those holding CEGEP diplomas. Moreover, all such regulations are subject to amendment.

6 GRADUATE STUDIES IN LAW

6.1 REGULATIONS

DEGREES

The higher degrees in Law are the M.C.L. (Master of Civil Law), the LL.M. (Master of Laws) and the D.C.L. (Doctor of Civil Law), as offered by the Institute of Air and Space Law and the Institute of Comparative Law and are granted by the Faculty of Graduate Studies and Research.

All graduate students in Law except those registered in the Institute of Air and Space Law, come under the direction of the Institute of Comparative Law.

GENERAL REQUIREMENTS FOR THE M.C.L. or LL.M. DEGREE

Candidates for admission to M.C.L. or LL.M. programs must hold the degree of B.C.L., with a least second class honours, from McGill University, or its equivalent from another recognized university, and satisfy the linguistic and other requirements of his/her study. A candidate must complete the courses prescribed, including cognate courses in other departments of study, submit an acceptable thesis and, if required, undergo an oral examination designed to test the general knowledge of the field of the research studies.

The requirements for the degree may be completed, by well-qualified and capable students, within one calendar year, but if all the degree requirements have not been completed within this time an additional full academic session in residence is necessary.

In certain cases a transfer of candidacy from the M.C.L. or the LL.M. to candidacy for the D.C.L. may be permitted at the end of the year in residence. Such transfer is open only to a student who shows considerable promise and upon the recommendation of the Graduate Studies Committee. A student so transferred will not be required to prepare a master's thesis but must spend at least one further year in residence at McGill.

See the general regulations of the Faculty of Graduate Studies and Research on requirements for Master's degrees.

N.B.

In exceptional circumstances the Executive Committee of the Faculty of Graduate Studies and Research may grant an exemption from the requirement of a second residential year at McGill to a candidate who has failed to complete all the requirements for the master's degree within one year.

GENERAL REQUIREMENTS FOR THE D.C.L. DEGREE

The program of each department of study consists of a minimum of three years' work from the first registration of the candidate of which at least two years must be spent in full-time resident study at McGill. Only an applicant of proven legal scholarship of high merit will be admitted to candidacy for this degree and normally a candidate should be the holder of both a general degree and a law degree. In suitable cases the holder of the M.C.L. or LL.M. degree of McGill (or its equivalent) may be considered as having satisfied the first year of the doctoral program. An applicant must satisfy the linguistic and other requirements of his/her study and, as a rule, a candidate who is not the holder of an appropriate master's degree, or its equivalent, would not be permitted to register directly for the D.C.L. but would be required to register for the M.C.L. or LL.M. A candidate for the M.C.L. or LL.M. degree of McGill, who, upon the completion of his/her first year of resident study, shows considerable promise may be permitted to proceed to the second year of the D.C.L. program without being required to submit a master's thesis.

At a stage in the program of his/her studies a candidate may be required to pass an oral examination, the purpose of which is to test his/her general knowledge of the field of his/her research studies. Every candidate will be required to defend his/her thesis before a jury appointed by the Faculty of Graduate Studies and Research and consisting of no fewer than five adjudicators, including at least two who are not members of the Faculty of Law. To qualify for the degree the thesis submitted must be in a form suitable for publication and constitute a significant contribution to legal knowledge, evidencing in concept and execution the original work of the candidate.

Insofar as not varied by the above, the rules and regulations of the Faculty of Graduate Studies and Research apply in all matters pertaining to candidature for a degree.

6.2 INSTITUTE OF AIR AND SPACE LAW

Director – Dr. Nicolas M. Matte, O.C., Q.C.
Teaching Staff – See Section 1.6

PURPOSE OF THE INSTITUTE

The Institute of Air and Space Law operates within the Faculty of Law. It provides facilities for advanced study and research in Air and Space Law and related problems of International Law for highly qualified law graduates and others with appropriate qualifications.

The Québec Ministry of Education has recognized the Institute as a research Centre in Air and Space Law (Centre de droit aérien et spatial). The financial assistance provided enables the Centre, within the context of inter-university research, to promote the study and publications relating to various aspects of this branch of international law.

DIPLOMAS AND DEGREES

The Institute of Air and Space Law offers a Diploma in Air and Space Law, and the degrees of Master of Laws (LL.M.) and Doctor of Civil Law (D.C.L.)

REQUIREMENTS FOR THE DIPLOMA IN AIR AND SPACE LAW

Applicants for admission must hold a law degree of high standing from an approved law school in any part of the world, or must have an equivalent professional standing. Working competence in the English language is required but examinations and other written work may be presented in English or French. All candidates must provide evidence of the subjects covered in their prior law studies and of their scholastic or professional standing, together with two references.

A candidate who satisfies the residence requirements of one academic session and who passes the prescribed examinations with an overall average grade of at least 65% will be awarded the Diploma in Air and Space Law.

COURSES

The prescribed courses are:

384-611D PUBLIC INTERNATIONAL AIR LAW
387-612D PRIVATE INTERNATIONAL AIR LAW
387-613D GOVERNMENT REGULATION OF AIR TRANSPORT
387-614D SPACE LAW
387-615D ECONOMICS OF AIR TRANSPORT
387-616D INTRODUCTION TO CIVIL AND COMMON LAW
387-617D TERM PAPER

The Director may require additional courses of particular candidates.

384-611D PUBLIC INTERNATIONAL AIR LAW (2 hours, each term). The purpose of this course is to examine the relevant concepts, principles and norms of international law, as well as political, military and economic factors which govern and affect the use of airspace and aeronautics. The course includes the following topics: flight technology and its various uses; the law-making process affecting the regime of airspace and international air navigation; the evolution and content of the basic principles of international air law from the earliest days of flight to the present; air sovereignty and the regime of the airspace over the high seas and the polar areas; environmental law and airspace activities; the concept and function of nationality of aircraft; jurisdiction over events aboard aircraft; offences against the safety of international civil air transport; the legal regime of international air transport (scheduled and non-scheduled); international governmental and non-governmental civil aviation organizations (ICAO, IATA).
Professor Vlasic

387-612D PRIVATE INTERNATIONAL AIR LAW (2 hours, each term). In the first semester the course studies the liability of carriers by air for passengers, baggage and cargo, with particular stress on the Warsaw Convention and related instruments. The second semester studies the liability of manufacturers of aircraft and of aircraft accessories; liability of air traffic control authorities; liability to persons and property on the ground and the liability of owners and operators of aerodromes.
Professor Bradley

387-613D GOVERNMENT REGULATION OF AIR TRANSPORT (2 hours, each term). In the first semester the course gives a general overview of the field of Government regulation to explain the sources, the reasons for and the purposes of the generally accepted norms of Government regulation. In the second semester aspects of Government regulations in the United States of America are discussed and comparisons made with other countries.
Professor Bradley

387-614B SPACE LAW (2 hours, second term). The basic objective of the course is an examination of the role of international law in the regulation of outer space activities. The course covers the following topics: current and potential future uses of outer space; the law-making process relating to space activities; the legal regime of outer space and celestial bodies; the legal status of spacecraft (including registration); liability for damage caused by space activities; assistance to astronauts and spacecraft in distress; remote sensing of the earth by satellites; the law and organizations relating to space telecommunications; international law and military uses of outer space; international organizations for cooperation in the exploration and exploitation of outer space.
Professor Vlasic

387-615D ECONOMICS OF AIR TRANSPORT (2 hours, each term). The course covers the effects on airline earnings of route patterns, market characteristics, pricing policies and regulatory constraints. Also covered are the resources of finance, personnel and the choice of aircraft. The cargo market is also considered. The examination takes the form of a term paper in which students determine the policies of a model airline for an ensuing year.
Mr. J.J. Smith

387-616A INTRODUCTION TO CIVIL AND COMMON LAW (1½ hours, first term). An introduction to Civil Law for Common Law students in air and space law and to Common Law for Civil Law students. The course studies the history of both legal systems, and compares the law of property, obligations, contracts, torts and commerce in the two systems.
Professor Haanappel

REQUIREMENTS FOR THE DEGREE OF MASTER OF LAWS

A working competence in the English language is required but examinations and written work including theses may be presented in either French or English. All candidates must provide evidence of the subjects covered in their prior law studies and of their scholastic or professional standing, together with two references.

The prescribed courses are as those set out as required for the Diploma, but in addition the candidate must present an acceptable thesis on a subject approved by the Director. In order to be allowed to submit a thesis, a candidate must have obtained a mark of least 65% in each of the courses or seminars for which he/she is registered. No candidate may receive the Diploma and the Master's degree for the same course of studies. A candidate who has already received the Diploma in Air and Space Law may be accepted as a candidate for the Master' degree, but he/she will be required to register for one additional academic session, and he/she may also be required to undertake additonal course work beyond the course work already performed for the Diploma. For the General Requirements, see Section 6.1, third paragraph.

REQUIREMENTS FOR THE DEGREE OF DOCTOR OF CIVIL LAW

Candidates for the degree of Doctor of Civil Law must hold the degree of B.C.L. or LL.B. from McGill University or its equivalent from another recognized university. As a rule a candidate who does not already hold a master's degree will be required to complete the master's degree before being accepted for the doctoral program. A candidate who has obtained the master's degree or its equivalent from another university will, as a rule, be required to complete the courses prescribed for the first year of the master's degree. If his/her performance is not of sufficiently high standard to justify admission to the doctoral program, he/she will not be permitted to proceed any further, but may be permitted to submit a master's thesis to qualify for the master's degree. If his/her performance is of sufficiently high standard, he/she may be permitted to proceed to the second year of the doctoral program without being required to submit a master's thesis.

The degree of Doctor of Civil Law is predominantly a research degree, and will be awarded on the basis of a thesis that represents an original contribution to the development of legal science. The thesis may be presented in English or French. All prospective candidates must provide evidence of the subjects covered in their prior law studies and of their scholastic and professional standing, together with two suitable references. The degree will be awarded, at the earliest, after the completion of three years from the first postgraduate registration of the candidate at McGill University. In the case of a candidate who holds the M.C.L. or LL.M. degree of McGill or its equivalent from another university, two years of resident study beyond the master's degree are required but may be reduced to one year with the approval of the Executive Committee of the Faculty of Graduate Studies and Research on the recommendation of the Graduate Studies Committee of the Faculty of Law. In general, this non-resident year should be spent at another university or similar institution.

6.3 INSTITUTE OF COMPARATIVE LAW

Director (on leave 1977-78)
– Professor Paul-A. Crépeau, Q.C.
Acting Director
– Professor Ethel Groffier Atala
– *Teaching Staff*
– See Section 1.7

PURPOSES OF THE INSTITUTE

The Institute of Comparative Law operates within the Faculty of Law. As a centre of comparative legal studies, the Institute provides facilities for graduate work, advanced studies and research for highly qualified law graduates in certain areas of comparative Public and Private Law. It also serves as the administrative unit within the Faculty of Graduate Studies, for research and graduate work in other fields as well, namely Public Law, Criminal Law.

The Québec Ministry of Education has recognized the Institute as a research Centre in Private and Comparative Law (Centre de Droit privé et comparé). The financial assistance provided enables the Centre, within the context of inter-university research, to promote the study and publications relating to, in particular, Private Law and International Commercial Law.

DEGREES

The Institute of Comparative Law offers the degrees of Master of Civil Law (M.C.L.), of Master of Laws (LL.M.), and of Doctor of Civil Law (D.C.L.).

REQUIREMENTS FOR THE DEGREES OF MASTER OF CIVIL LAW AND MASTER OF LAWS

An adequate working knowledge of the English and French languages is required from all applicants. Applicants who wish to pursue studies which in the opinion of the Director require knowledge of a language other than English or French must possess adequate working knowledge of that language.

All applicants must provide evidence of the subjects covered in their prior law studies, of their scholastic or professional standing, and of their linguistic proficiency in English and French, together with no less than two references. For the General Requirements, see Section 6.1, third paragraph.

COURSES

389-610A COMPARATIVE CIVIL LIABILITY (2 hours, first term) . A comparative study of selected contemporary problems in the field of civil responsibility. Areas of concern include: economic loss, privacy, mental suffering, prenatal injury, and the role of strict liability.
Professor Foster
Professor Baudoin

389-630A COMPARATIVE COMPANY LAW AND THE MULTINATIONAL COMPANY: LAW AND PRACTICE (2 hours, first term). A comparative evaluation of Anglo-American and Continental company law systems – the harmonization of company laws within the European Common Market and the "European Company" – international and multinational companies – structure and management of the multinational company – government control of the multinational company – international controls and the multinational company – anti-monopoly legislation and the multinational company – the Canadian experience. This course is open to students in the Faculty of Management.
Professor Hahlo

389-670B COMPARATIVE AND INTERNATIONAL PROTECTION OF MINORITIES' RIGHTS. (2 hours, second term). A seminar adopting and international and comparative law approach to the study of the protection of racial, religious and linguisitic minorities; definition of concept; early experiments and the experience of the League of Nations; the United Nations with particular reference to its Sub-Commission on the Prevention of Discrimination and the protection of Minorities; representative national legal institutions including those of Belgium, Switzerland, Finland, Yugoslavia, Czechoslovakia, the Soviet Union and Canada. Each participant will be expected to lead a discussion on an appropriate subject on which an essay will also be required. There will be no written examination.
Professor Humphrey

389-651B COMPARATIVE MEDICAL LAW. (2 hours, second term). A comparative study of selected contemporary medico-legal problems including civil and criminal liability of doctors and hospitals, consent, medical and hospital contracts, emergency services, organ transplants, death, euthanasia, abortion, sex reassignment, experimentation and medical ethics.
Professor Kouri

389-634A COMPARATIVE PRIVATE INTERNATIONAL LAW. (2 hours, first term). The comparative study of basic rules of conflict of laws and enforcement of foreign judgments in the civil and common law systems, with particular reference to international and inter-regional unification efforts.
Professor Groffier-Atala

389-652A CONTEMPORARY CIVIL LAW PROBLEMS (LANDLORD AND TENANT AND QUEBEC RENTAL COMMISSION) (2 hours, first term). A research seminar on the interpretation, by the Rental Commission, of the Québec *Act to Promote Conciliation between Lessees and Property-owners*, conducted with the collaboration of the Quebec Rental Commission. Emphasis will be placed upon the reform of the *Act*. The purpose of the course is to develop a methodology for empirical research and to acquire some practical knowledge of the *Act*. English and French will be the working languages of the course, but a good command of written and spoken French is necessary for the empricial study.
Professor Jobin.

389-636A EUROPEAN COMMUNITY LAW I. (2 hours, first term). An introduction to the study of European Community Law and legal institutions, with particular reference to the Treaty of Rome and subsequent instruments.
Professor Lasok

389-637B EUROPEAN COMMUNITY LAW II (2 hours, second term). A study of selected topics in European Community Law, particularly European Commercial Transactions. It will also examine the legal implications of Canadian participation in the European Economic Community.
Professor Eliasz
Professor Zuijdwijk

389-631A INTERNATIONAL BUSINESS TRANSACTIONS I (2 hours, first term). An introduction to International Business law designed to familiarize students with the range of laws, national and international, applicable to international business transactions. The course will cover the subject at three different levels: a) private law applicable to international business transactions: Sales, Affreightment, Agency, Insurance, Licensing, Payment, Arbitration, Choice of Law (Unification of Private Law); b) federal regulation, export controls, anti-dumping, export insurance; c) International Law (MFN Standard, Bilateral Trade Agreement, GATT, Selected Commodity Agreements). The focus of the course will be Canadian. However, comparative materials are included and research on problems arising in other legal systems will be encouraged.
Professor de Mestral

389-632B INTERNATIONAL BUSINESS TRANSACTIONS II (2 hours, second term). An advanced research seminar dealing with: a) Canadian direct investment- abroad. What legal problems are Canadian investors facing abroad? What type of protection is available to them against non-commercial risks? This will involve an analysis of the international law rules with respect to confiscation, expropriation and nationalization; b) foreign direct investment in Canada. This part is devoted to an analysis of the *Foreign Investment Review Act* and the Canada Development Corporation; c) the International settlement of investment disputes between states and nationals of other states. Form of examination: term paper. Students taking this seminar should have some knowledge of economics, commercial law and international law.
Professor Castel

389-611B INTERNATIONAL COMMERCIAL ARBITRATION (2 hours, second term) A seminar dealing with the comparative evaluation of this particular alternative to litigation between parties to international contracts in Canada, the United States and the Common Market, with particular reference to international conventions and other instruments in this field.
Professor Groffier-Atala

389-620A INTRODUCTION TO COMPARATIVE LAW (2 hours, first term). Introduction to the comparative method; differences and similarities between the world's legal systems; and detailed study of selected topics.
Professor Hahlo

Note: Some or all of the courses and seminars sponsored by the Institute which are open to undergraduate students may be limited in their enrolment on the basis of restricted numbers or student record. A number of the courses listed above may be open to undergraduate students in the Faculty of Law and qualify as a "Comparative Law Course" within its Regulations.

There is no uniform program of studies. Each candidate follows a program of studies, determined by the Director, which, in as far as possible, is fashioned to meet his/her particular needs as indicated by his/her prior legal experience and aspirations.

As a rule a candidate must take in each of the two terms of the academic year a minimum of three courses. Moreover, a candidate with a civil law background will normally be required to select at least one undergraduate course from the common law program, while a candidate with a common law background will normally be required to select at least one undergraduate course from the civil law program. The remaining courses may be selected, subject to the Director's approval, from seminars provided by the Institute and from courses forming part of the curriculum for the B.C.L. or LL.B. and in certain cases from courses offered in other faculties.

To complete the requirements for the Master's Degree, a candidate will be required to submit a thesis on a subject approved by the Director. A candidate who has failed to complete his/her prescribed coursework will not be permitted to proceed to the submission of a thesis.

Examinations, term papers and theses may be written in English or French.

Note: In accordance with the requirement of the Faculty of Graduate Studies a pass standard of 65% must be obtained in each course.

REQUIREMENTS FOR THE DEGREE OF DOCTOR OF CIVIL LAW

Candidates for the degree of Doctor of Civil Law must hold the degree of B.C.L. or LL.B. from McGill University or its equivalent from another university. As a rule, a candidate who does not already hold a master's degree will be required to complete the master's degree before being accepted for the doctoral program. A candidate who has obtained the master's degree from another university will, as a rule, be required to complete the courses prescribed for the first year of the master's degree. If his/her performance is not of sufficiently high standard to justify admission to the doctoral program, he/she will not be permitted to proceed any further, but may be permitted to submit a master's thesis to qualify for the master's degree. If his/her performance is of sufficiently high standard, he/she may be permitted to proceed to the second year of the doctoral program without being required to submit a master's thesis.

The degree of Doctor of Civil Law is predominantly a research degree and will be awarded on the basis of a thesis that represents an original contribution to the development of legal science. The thesis may be presented in English or French. All prospective candidates must provide evidence of the subjects covered in their prior law studies and of their scholastic and professional standing, together with two references. The degree will be awarded, at the earliest, after the completion of three years from the first postgraduate registration of the candidate at McGill University. In the case of a candidate who holds the M.C.L. or LL.M. degree of McGill or its equivalent from another university, two years of resident study beyond the master's degree are required but may be reduced to one year with the approval of the Executive Committee of the Faculty of Graduate Studies and Research on the recommendation of the Graduate Studies Committee of the Faculty of Law. In general, this non-resident year should be spent, under appropriate supervision, at another university or similar institution.

7 LIBRARY

The Law Library of the University, located in new Chancellor Day hall, contains at present a valuable collection of over 100,000 volumes. It includes virtually all Canadian works, and the principal law reports of the United Kingdom and France, as well as a selection of reports from the United States, Commonwealth countries such as Australia and New Zealand and Civil Law jurisdictions such as Belgium and Germany. The generous gifts from graduates and friends of the Law Faculty contribute significantly to its maintenance as a first class collection.

The Wainwright Collection, comprising the personal library of the French legal historian Olivier Martin, is a particularly fine collection of early editions relating to French law.

The Law Library is intended primarily for the use of professors of this Faculty and students registered for courses given in it or in the Institute of Air and Space Law or in the Institute of Comparative Law. Permission for use by other persons desiring to avail themselves of this Library's facilities will depend on the space available and the demands being placed on the Library's resources at the time. Attention is drawn to the necessity for persons not registered at McGill University to register and pay a fee to the University where extensive use of the Library is authorized.

The great value of the Law Library to students and to the profession is self-evident. For these reasons the Faculty expects the full cooperation of all in maintaining the integrity of the Library and in preventing damage to books or their unlawful removal.

Law students also have access to all other collections within the University Library system, in particular the McLennan Library, which has the main Social Sciences and Humanities collection.

8 McGILL LAW JOURNAL

The McGill Law Journal is a professional journal published by students of the Faculty of Law of McGill University. Its purpose is to promote the study of the law in Canada and to help in the understanding of the Civil Law and Common Law systems which exist side by side in this country.

9 MOOT COURT BOARD

The Moot Court Board is composed of post First year students of the Faculty of Law and supervises the Faculty's moot court program. Ability and capacity determine the selection of members.

10 SCHOLARSHIPS, PRIZES AND LOAN FUNDS

10.1 SCHOLARSHIPS AND BURSARIES

EDWIN BOTSFORD BUSTEED SCHOLARSHIP. – Founded by the will of the late Mrs. Busteed in memory of her husband, Edwin Botsford Busteed, K.C., B.A., B.C.L., this Scholarship will be awarded to an applicant, chosen by the Faculty, who desires to carry out graduate research on some subject connected with the law of Québec and approved by the Faculty. The value of the scholarship is approximately $1,200 and can be used to supplement funds for graduate studies already received from other sources. Candidates shall make application for this Scholarship to the Dean.

HAROLD G. FOX EDUCATION FUND BURSARIES. – Value approximately $250. Established by donations from the Harold G. Fox Education Fund. To be awarded to needy law students in good standing. Application should be made to the Student Aid Office.

MAURICE GOLDENBERG MEMORIAL SCHOLARSHIP. – Value $225, in Government, Constitutional Law, or Public Administration, established by Sen. H. Carl Goldenberg, Q.C., in memory of his father, the late Maurice Goldenberg. Awarded by the University Scholarships Committee to the best candidate amongst those nominated by the Faculties of Arts and Law.

CHIEF JUSTICE R.A.E. GREENSHIELDS MEMORIAL SCHOLARSHIPS. – Three scholarships covering tuition fees bequeathed by the late Mrs. R.A.E. Greenshields in memory of her husband, the late Chief Justice Greenshields, D.C.L., LL.D., for many years professor of Criminal Law and Dean of the Faculty of Law. Awarded to students entering the Faculty of Law and renewable in each of the two upper years leading to the Bachelor of Civil Law degree, if satisfactory conduct, and at least a high Second Class standing are maintained, or for other reasons at the discretion of the Faculty. Candidates must satisfy the regular requirements for admission to the Faculty, must have a standing of at least high Second Class, and preferably First Class at the university or institution which they previously attended, and must furnish evidence of the need for financial assistance to enable them to study law. Fluency in both English and French is not essential, but preference is normally given to applicants with a good working knowledge of both languages. Apply to the Faculty Admissions Office.

H.E. HERSCHORN FUND. – The Student Aid Office may award a bursary from the interest of this fund to a deserving student in the third or any subsequent

year of his or her program leading to the B.Sc., B.A., M.D., C.M., B.C.L., or LL.B. degree.

EUGENE LAFLEUR SCHOLARSHIP. – This scholarship in the amount of $1,000 presented by the law firm of Messrs. Laing, Weldon, Courtois, Clarkson, Parsons, Gonthier & Tétrault in memory of its founder, will be awarded annually to a student entering the year in which he expects to obtain his B.C.L. degree (whether the student is pursuing a purely B.C.L. program or is taking the National Program). Selection will be made by the Faculty on the principal ground of academic excellence.

LEON LEVINSON SCHOLARSHIP. – Established in 1977 by the associates and friends of Leon Levinson Esq. to mark his 75th birthday and his place as the dean of Canadian court reporters. Awarded annually at the discretion of the Faculty to a deserving member of the communications media (whether journalist or broadcaster) preferably from the Province of Québec in order to assist in the study of law whether as a partial student or degree candidate.
N.B. Senate authorization pending at time of publication.

MACDONALD TRAVELLING SCHOLARSHIP. – Founded by the will of the late Sir William Macdonald "for the purpose of enabling English-speaking Law students to take a course of studies in France," the testator "deeming it of great importance that the English-speaking members of the legal profession should be proficient in the French language." The value of the scholarship is approximately $4,000. The scholar selected is required to pursue a year's study in the Law Faculty of a French university approved, in each case, by the Faculty. The award is made at the discretion of the Faculty to a student of the graduating class proceeding to the Bar, who has obtained first or high second class honours in the final examination, and who would be unable without such financial help to spend a year in France. The Faculty interprets the will of the late Sir William MacDonald as intending that the Scholarship be awarded only to students preparing for the legal profession in the Province of Québec. Under the present regulations the Scholarship must be used in the year in which it is awarded. Candidates should make application for this Scholarship to the Dean.

McGILL LAW GRADUATES ASSOCIATION SCHOLARSHIPS. – The McGill Law Graduates Association offers two scholarships, one covering tuition fees for a student entering Second year and the other for a student entering Third year. Selection is made by the Faculty of Law in conjunction with a representative of the McGill Law Graduates Association, with broad discretion on the basis of need as well as academic and other merit. Apply to the Faculty Admissions Office.

NATIONAL PROGRAM SCHOLARSHIPS. – Three entrance scholarships of $2,500 each, awarded to candidates with distinguished records in pre-law studies, registering for either the B.C.L. or LL.B. degree and with the intention of proceeding to the second degree in the National Program at McGill. Tenable for four years of the National Program if candidate maintains distinguished academic standing.

CHARLES ALBERT NUTTING BURSARY. – Value $250, resulting from a donation made in 1930 by Miss Adelaide Nutting, M.A., R.N., in memory of her brother, Charles Albert Nutting, K.C., B.C.L. 1872. Awarded by the Student Aid Office to needy law students in good standing.

THOMAS ALEXANDER ROWAT SCHOLARSHIP. – Value $250, founded by Mr. Donald McKenzie Rowat, N.P., in memory of his brother, Lieutenant Thomas Alexander Rowat, B.C.L., who was killed in action at Lens, France, on June 28, 1917. Awarded for proficiency in French and in the old French law, on conditions set by the Faculty.

THOMAS SHEARER STEWART TRAVELLING FELLOWSHIP. – Established in 1967 by the family of the late Thomas Shearer Stewart, Q.C., a graduate of the Faculty of Law class of 1908. The Fellowship, valued at not less than $3,000*, is to be awarded annually or as often as the University considers advisable, to a recent graduate of the Faculty of Law designated by the Dean of the Faculty, preference being given to a graduate who is a Canadian Citizen intending to reside in Canada upon completion of his studies. The Fellowship is to be used for a graduate to follow a program of studies in Law at a university approved by the Dean of the Faculty, other than at a university in Québec. Candidates shall make application for this Fellowship to the Dean.

WAINWRIGHT SCHOLARSHIPS. – Established by a bequest from the estate of the late Arnold Wainwright, Q.C., for many years a lecturer in the Faculty of Law and a distinguished lawyer of the Montreal Bar. Two entrance scholarships of $1,500 each for 3 years and $2,000 each for the fourth year. Awarded to undergraduates of promise having distinguished scholastic records registered for the B.C.L. or LL.B. degree and proceeding to the National Program. Tenable for four years if candidates maintain distinguished academic standing. In addition, two scholarships of $2,000 each are available for students who have obtained their first law degree and are entering the last year of the National Program. Wainwright Scholars who show no financial need will be awarded the nominal sum of $100, the balance of monies to be allocated as Wainwright Bursaries to meritorious studnets with need. Apply to the Faculty Admissions Office.
*** It is the policy of the Trustees of the Wainwright Fund to entertain applications for supplements to the Thomas Shearer Stewart Travelling Fellowship from candidates showing an interest in the possibility of a career in law teaching.**

10.2 BURSARIES, PRIZES AND LOAN FUNDS IN ALL FACULTIES

A complete list of scholarships and bursaries in the University generally and the regulations governing the various loan funds are given in the *Undergraduate Scholarships and Awards Announcement* which may be obtained at the Registrar's Office.

10.3 PRIZES

ALEXANDER SCHOLARSHIP. – $100, bequeathed in 1950 by the late Maurice Alexander, C.M.G., K.C., of London, England, as a token of esteem for the late Sir Charles Peers Davidson, former Professor of Criminal Law at McGill. Awarded by the Faculty.

HYMAN BAKER, Q.C. PRIZE. – $100, established by the family of Hyman Baker, Q.C. to commemorate his seventieth birthday. Awarded to the student obtaining the highest standing in Bankruptcy Law.

I. BALLON MEMORIAL MEDAL. – Established in 1955 by Mrs. I Ballon in memory of her husband, the late Isidore Ballon, B.A. 1907, B.C.L. 1908, and awarded to the most outstanding student on the Board of Editors of the *McGill Law Journal*.

CANADA PERMANENT PRIZE. – An annual prize valued at $100, established in 1966 by Canada Permanent, awarded to the student who receives the highest standing in the group of courses comprising Wills, Successions, Marriage Covenants and Gifts.

CARSWELL PRIZES. – A book prize of $200 established in 1948 by Carswell Company Limited awarded to a student in the graduating class. There are two further book prizes of $100 each, established in 1973 by the Company and awarded to a lower year student. These prizes are awarded at the discretion of the Faculty.

PRIX SOUVENIR GEORGE S. CHALLIES – GEORGE S. CHALLIES MEMORIAL AWARD. – Extract from address given by the Hon. Chief Justice Jules Deschênes of the Superior Court to the McGill Law Graduates Association on December 13th, 1973:

Mr. Justice Challies left us prematurely earlier this year and the judges of the Superior Court of the Province of Québec have thought that they should erect a monument, however small, to his memory. Where then better than at his Alma Mater?

We have, therefore, raised among ourselves the sum of $1,900 which it is our pleasure to donate to McGill University, for the money to be held in trust and the return to be given yearly to a deserving student in the judgment of the Faculty of Law, under the name of "Prix Souvenir George S. Challies – George S. Challies Memorial Award".

JOSEPH COHEN, Q.C. AWARD. – This award of $315 is made to a deserving student selected by the Faculty.

JOHN W. COOK, K.C. PRIZE. – $575, awarded annually to an outstanding member of the graduating class in Law as determined by the Dean and Faculty on the basis of high academic standing throughout the course, participation in Faculty activities and possible postgraduate intentions.

JOHN E. CRANKSHAW PRIZE. – Established by friends of the late John E. Crankshaw, Q.C., formerly lecturer in Criminal Law at McGill, the prize consists of $300 to be applied to Bar fees, advocate's gown and any other needs. Awarded to the student who has the highest standing in Criminal Law subjects at McGill and has passed his final examination for admission to the Bar of the Province of Québec.

MAX CRESTOHL PRIZE. – $65, established in 1959 under the Will of the late Max Nathan Zion Crestohl, Q.C. Awarded to the student who, in the opinion of the Faculty, has submitted the best written contribution to the *McGill Law Journal*.

JOSEPH DAINOW PRIZE. – $100, established by Professor Dainow, for writing in the area of Civil Law.

FACULTY PRIZE IN TAXATION I. – This prize, in the amount of $250, is donated by the Montreal law firm of Verchere & Gauthier. It is awarded annually to the student who receives the highest standing in the Faculty's basic course in Taxation.
N.B. Senate authorization pending at time of publication.

AIME GEOFFRION NATIONAL PROGRAMME GOLD MEDAL. – Founded in 1977 by Mrs. H.-E. Vautelet O.B.E. in memory of her late father Aimé Geoffrion K.C., B.C.L., D.C.L. (1872-1946), of the Bar of the Province of Quebec.

Aimé Geoffrion, the grandson of Sir Antoine Aimé Dorion, Chief Justice of the Province, was awarded the Torrance Gold Medal upon his graduation from McGill with the B.C.L. degree in 1893; he served in the Faculty as a Lecturer in Obligations from 1898 to 1906 and as Professor from 1906 to 1919, at which time he was appointed Emeritus Professor. He was acknowledged early in his career at the Bar to be among the leading legal counsel in this province and in Canada. He appeared before the Privy Council in some hundred cases involving constitutional issues, in which he was a recognized expert, and won renown as an advocate in numerous celebrated civil and criminal cases. Infinite as his cases were in variety, his reputation was that of an advocate who referred to legal principles of general application – those transcending the particular characteristics of either Canadian legal tradition.

It is awarded to the student who maintains distinguished standing throughout the four year National Programme or in both the B.C.L. and LL.B. degrees when conferred successively.
N.B. Senate authorization pending at time of publication.

CHIEF JUSTICE GREENSHIELDS PRIZE IN CRIMINAL LAW. – Value $95, endowed by the late Mrs. Greenshields in 1943 in memory of her husband, the late Chief Justice Robert Alfred Ernest Greenshields, D.C.L., LL.D., for many years professor of Criminal Law and Dean of the Faculty of Law, and awarded to the member of the graduating class in Law having the highest standing in Criminal Law throughout the law program.

H.E.F. OBLIGATIONS PRIZE. – $100 awarded annually to the student who in his first year achieves the highest standing in the law of Obligations.

H.E. HERSCHORN PRIZE. – $150, established by the late Mr. H.E. Herschorn, N.P., B.A. 1911, B.C.L. 1914, to the highest ranking graduating student who intends to enter the Notarial profession.

"I.M.E." PRIZE IN COMMERCIAL LAW. – $200, to enable a student to purchase law books, established by Mr. George S. McFadden, Q.C., awarded to the member of the graduating class having the highest standing in Commercial Law throughout the program.

LYON WILLIAM JACOBS, Q.C., AWARD. – Value $100. Originally established in 1957 by donations totalling $500, and increased in 1962 to $2,000 by Mr. and Mrs. Alvin B. Jacobs, Mrs. Sybil Jacobs Phillips, Dr. and Mrs. Morris Lieff, and Mr. and Mrs. Newman Biller, in honour of the late Mr. Lyon W. Jacobs, Q.C. Awarded to a Second or Third year Law student who, in the opinion of the Faculty, shows the most progress in his studies and is also in financial need.

JUNIOR BAR ASSOCIATION PRIZE. – A prize of $50 for the student who obtains the highest standing in Civil Procedure in the First year.

DEAN IRA A. MacKAY PRIZE. – $100, established by Mr. R. deWolfe MacKay, Q.C., in memory of his father, formerly Dean of the Faculty of Arts and Science of McGill University, and awarded at the discretion of the faculty to the student obtaining the highest standing in the field of Torts throughout the program.

CHESTER MACNAGHTEN PRIZES. *See Undergraduate Scholarships and Awards Announcement.*

ADOLPHE MAILHIOT MEMORIAL PRIZE. – A prize of $25, established by Mr. and Mrs. J.N. Mailhiot, of Victoriaville, P.Q., in 1927, to be used for the purchase of law books.

THE PHILIP MEYEROVITCH, Q.C. PRIZE. – $100, established in 1972 by his wife and children, to commemorate his fifty years of practice before the Bar of the Province of Québec. Awarded to the graduating student obtaining the highest standing in Evidence.

MONTREAL BAR ASSOCIATION PRIZES. – A prize of $200 for the student who obtains the highest standing in Civil Law throughout the law program and $200 for the student who obtains the highest standing in Civil Procedure throughout the law program.

ALEXANDER MORRIS EXHIBITION. – Value $120, founded in memory of the late Hon. Alexander Morris, M.A., D.C.L. of Toronto, and awarded to the student who obtains the highest standing in the Second year.

LAZARUS PHILLIPS PRIZE. – $200, established by the wife and family of Sen. Lazarus Phillips to commemorate his seventieth birthday. Awarded to the student obtaining the highest standing in the combined examinations in Company Law and Taxation.

QUEBEC BAR PRIZE. – $100, awarded to the winning team in this Faculty's Moot Court competition.

THE LORD READING SOCIETY OF MONTREAL PRIZE. $150, established in 1952, awarded to the student who obtains the highest standing in the First year.

BENJAMIN ROBINSON MEMORIAL PRIZE. – A prize of $150 established by relatives and friends of the late Honourable Mr. Justice Benjamin Robinson in his memory, to be awarded to the student who obtains the highest standing in the final year of the National Program leading to the degree of Bachelor of Laws (LL.B.)

LOUIS H. ROHRLICK MEMORIAL PRIZE. – A prize of $100, established by associates of the late Louis H. Rohrlick, Q.C., in his memory, to be awarded to the member of the graduating class having the highest standing in Public International law throughout the program.

ELIZABETH TORRANCE GOLD MEDAL. – Founded in 1864 by John Torrance, Eq., prominent Montreal merchant, in me,ory of his wife. Their son, Frederick William Torrance, of the Bar of the Province, was for many years professor of Roman Law in this Faculty and a judge of the Superior Court. The Medal was first awarded in 1865 to Norman William Trenholme, who became, successively, a professor, and then Dean of this Faculty, a judge of the Superior Court and then of the Queen's Bench, and ultimately acting Chief Justice of the Province. The Medal shares the lustre of the achievements of many other graduates distinguished at the Bar and on the Bench, amongst them the Right Honourable Charles J. Doherty, Hon. M. Justice Pierre-Basile Mignault, Aimé Geoffrion, K.C., and Arnold Wainwright, K.C.

It is awarded to the student who obtains, with the highest standing throughout the B.C.L. Program, his B.C.L. Degree as his first law degree at a spring convocation.

GERALD S. TRITT, Q.C. PRIZE. – $100, established in 1961 by the family and friends of Mr. and Mrs. Tritt and awarded to the student with the highest standing in the Special Contracts course.

WAINWRIGHT ESSAY PRIZE. – A prize of $500 will be awarded for the best written contribution by an undergraduate law student, whether the contribution be an essay or other paper and whether written as an elective or as part of a course requirement, or voluntarily. It will only be awarded if a high standard is achieved.

WILSON AND LAFLEUR (LIMITEE) AWARD. – This award of $100 is made every alternate year to a deserving First year student selected by the Faculty.

No scholarships or prizes will be awarded if, in the opinion of the Faculty, there is no candidate of sufficient merit.

10.4 LOAN FUNDS

The *A. Fleming Loan Fund* was established in 1954 by Mr. A. Fleming to aid students in the Faculty of Law. Application should be made to the Student Aid Office.

The *Louis De Zwirek, Q.C. Loan Fund* was established in 1969 by his widow in honour of her late husband from the Estate to aid students in the Faculty of Law. Application should be made to the Student Aid Office.

11 PUBLIC LECTURES

11.1 MEREDITH MEMORIAL LECTURES

In 1949 the Faculty of Law of McGill University began its sponsorship of a series of lectures known as the *Bar Extension Lectures*. These were designed to assist in the promotion of continuing legal education for members of the legal profession in the Montreal area. A variety of topics of current interest both to the members of the Bar and the notarial profession have been offered annually since that time. Since 1961 the lectures have been published as *The Meredith Memorial Lectures* in honour of the late W.C.J. Meredith, Q.C., Dean of the Faculty of Law of McGill University from 1950-1960.

11.2 WAINWRIGHT LECTURES

The *Wainwright Lectures* were established by the Faculty of Law of McGill University in 1973 to honour the memory of the late Arnold Wainwright Q.C.

This eminent Canadian advocate who practised for over fifty years at the Bar of the Province of Québec, had a long association with legal studies at McGill University. He obtained his Bachelor of Civil Law degree in 1902 and was awarded the Elizabeth Torrance Gold Medal and the Macdonald Travelling Scholarship. In 1909 he joined the teaching staff of the Law Faculty as a part-time Lecturer in Civil Law; in 1921 he was promoted to the rank of Professor. His merits as a teacher of the Civil Law for over twenty-five years were recognized by McGill University in 1934 when it named him, upon his retirement, Emeritus Professor. The degree of Doctor of Civil Law *honoris causa* was conferred upon him by the University in 1963.

The bequest of the residue of his estate to McGill University for the use of the Faculty of Law made possible the founding of undergraduate scholarships in law, the enrichment of the Law Faculty Library and the inauguration of the *Wainwright Lectures*. These have been organized to promote the scholarly study of law and, in particular, the Civil Law of Québec, which always remained, throughout his long and distinguished career, the abiding interest of this generous friend and much valued colleague of the McGill Law Faculty.

11.3 WAINWRIGHT MEMORIAL LEGAL ESSAY COMPETITION

This competition, of a value of $2500, created to honour the memory of the late Arnold Wainwright Q.C. is designed to promote, through the publication of research, the evolution and influence of the Civil Law particularly in Canada. It is held every two years. For information concerning the conditions of entry, enquiries should be addressed to The Secretary, Wainwright Trustees, Faculty of Law, McGill University

12 STUDENT ACTIVITIES

12.1 THE LAW UNDERGRADUATES' SOCIETY

The Law Undergraduates' Society is composed of all students in the Law Faculty pursuing either the LL.B. or B.C.L. degree. Through its council composed of the seven class presidents and heads of various groups and societies within the Law Faculty, the Society oversees a number of functions and activities affecting the students of the Law Faculty. Amongst these are included such various undertakings as social affairs and sports, the Association of Women in Law, the Debating Society and many others. The success of these functions and organizations depends fully on active student participation and support, and First year students are strongly encouraged to help with and take part in the carrying out of the various endeavours of the L.U.S.

12.2 CAMPUS LEGAL AID CLINIC

The Campus Legal Aid Clinic is a student run non-credit service for the McGill University community. Law student staff provide legal counselling and

information within the limits of the Bar Act. Only post-first year students are eligible. For further information: 392-8918, University Centre, 3480 McTavish Street, Room B-46.

13 JOB PLACEMENT

While the Faculty recognizes the importance of student placement, it is impossible at the present time to organize a complete job placement service. Every effort is, however, made to bring all inquiries received from law firms, corporations, government agencies, public interest groups, etc. for qualified students or graduates to the attention of the Student Affairs Office which posts such information prominently within the Faculty.

Canada Ltd.; DEREK DE SOLLA PRICE, Professor of the History of Science, Yale University; NELLIE REISS, Lande Canadiana Librarian, McGill; HELEN ROGERS, Chief, SDI Division, National Library of Canada; ANNA ROVIRA, Chief Librarian, Bibliothèque municipale de LaSalle; MARIANNE SCOTT, Director of Libraries, McGill; STANLEY J. SHAPIRO, Dean, Faculty of Management, McGill; RALPH STIERWALT, Office of Library Coordination, Council of Ontario Universities, Toronto; ROGER K. SUMMIT, Manager, Lockheed Information Systems, Palo Alto, California; GUY SYLVESTRE, National Librarian of Canada; GARRY TYNSKI, Print Curator, Rare Book Department, McGill; LIANA VAN DER BELLEN, Rare Book Librarian, National Library of Canada; SUSAN WILKINSON, Librarian, Aluminum Company of Canada Ltd.; ELAINE YAROSKY, Map Curator, Rare Book Department, McGill; MARIE ZIELINSKA, Chief, Multilingual Biblioservice, National Library of Canada.

2 GRADUATE SCHOOL OF LIBRARY SCIENCE

2.1 HISTORY AND PROFESSIONAL RELATIONSHIPS

McGill University was the first institution in Canada to provide library training and the first to grant a degree in library science. Short summer programs were given from 1904-1927, the first regular sessional program being given in 1927-28. The program of the School was accredited by the Board of Education for Librarianship of the American Library Association, and the B.L.S. (5th year) degree was first conferred in May 1931. In the session of 1956-57, a 6th year Master of Library Science degree was first offered. After 1964-65 the 5th year degree was discontinued and the M.L.S. degree awarded only after two years of graduate study. In January 1975 the School's M.L.S. program was re-accredited by the Committee on Accreditation of the American Library Association under the 1972 Standards for Accreditation.

The School is an institutional member of the Canadian Association of Library Schools (CALS) and the Association of American Library Schools (AALS). CALS in turn represents all the Canadian Schools in the International Federation of Library Associations(IFLA). Individual faculty professional society memberships include, in addition to CALS and AALS: American Library Association; American Society for Information Science; l'Association pour l'avancement des sciences et des techniques de la documentation; Beta Phi Mu (Honorary society); Canadian Association for Information Science; Canadian Association of College and University Libraries; Canadian Library Association; Library Association of Ottawa; Québec Library Association; Special Libraries Association (which has a Montreal Chapter).

The School maintains close liaison with the Corporation of Professional Librarians of Québec, which has sole legal authority to enable a practitioner in Québec to use the title "Professional Librarian". Faculty members also have individual memberships in the Corporation.

2.2 OBJECTIVES OF THE SCHOOL

At a time when society's attitude to and use of information is undergoing dramatic change, the Act establishing the Corporation of Professional Librarians of Québec is one useful guideline in stating the objectives of a graduate school of library science. The Act defines a professional in the field of librarianship as one "whose principal functions are (a) to establish, develop and administer libraries or documentation centres with a view to scientifically preserving human knowledge in any form; (b) to classify and organize means for preserving human knowledge according to the scientific methods currently taught in universities; (c) to render human knowledge accessible to institutions and persons by introducing the methods required for making use of the services of libraries and for establishing a local library system connected with any regional, provincial, federal or international system."

Graduates of our Library School program do indeed perform all of these functions as librarians or information scientists in a variety of library settings: special, university, public, and governmental; they have also been connected with the development of the larger information systems at all levels mentioned in the Act. To state that the School's program aims to prepare its graduates to play a dynamic role in the operation of the libraries of today, to be flexible and perceptive of the need to adjust to new modes in the future, is also to state that the School itself is dynamic, flexible, and responsive to change.

Thus, this brochure is a reflection of the School only as it stands officially at the moment of writing.

Although the broad objectives are essentially long-range, the details and the methods of realization are as flexible as the profession for which its students are being prepared. This is true not only of the M.L.S. program, but also of the ways in which the School is cooperating with the profession in the responsibility of continued education for those already possessing the professional degree.

2.3 RELATIONSHIP TO THE UNIVERSITY

The Graduate School of Library Science is part of the Faculty of Graduate Studies and Research of McGill University; its students are able to participate fully in the varied life of a large university. Further, they are not only allowed but encouraged to elect courses in other units of the University (up to a present maximum of 12 credits) when those courses contribute to their professional education. Similarly, faculty members whose prime areas of responsibility lie outside Library Science, but whose expertise relates to librarianship, participate directly in the instructional program of the school as sessional and special lecturers.

2.4 FACILITIES

The School is located on the street floor of McLennan Library in quarters especially designed for it. Within easy access of each other are the administrative offices, faculty offices, classrooms, cataloguing laboratory, Data Processing Laboratory, and Library Science Library. Student amenities include a lounge, kitchen facilities, lockers, and typewriters.

2.4.1 Data Processing Facilities

Through the terminals in the Data Processing Laboratory, students have access to MUSIC (McGill University System for Interactive Computing), and to programs on the operating system of the Centre. They may also use data processing equipment in the Faculty of Management and in the Computing Centre itself, where programmers are available for consultation on an extended schedule. In the School's in-house Laboratory, there is dial-up access to on-line information retrieval systems at the National Library and at the Canada Institute for Scientific and Technical Information, both in Ottawa. Instructional use is also made of commercial data base vendors in Canada and the U.S. Students in Library Automation are given access to the UNICAT-/TELECAT shared cataloguing system based in Toronto via terminals in the Cataloguing Department of McLennan Library.

2.4.2 Library Facilities

A Branch Library in the McGill Library System's Humanities and Social Science Area, the Library Science Library performs the primary function of serving the School's students and faculty in curricular and research work and is accessible to the McGill community and practising librarians in Montreal. The library acquires 1,300 monographs annually and holds 32,000 volumes and 700 periodical titles. In addition to the main body of professional literature and literature in related fields (such as educational theory and methodology, publishing and printing, communication, documentation, audiovisual media, management, automation, etc.) it has a collection of rare children's books and current children's and young adult literature. To supplement regular class instruction, students (whether hired to work part-time in the library or not) are encouraged to examine the library's internal files.

Students may also use all McGill libraries and through them have access to the continent's major resources. The five areas of the Library system are described in detail in the *General Announcement* of the University.

3 ADMISSION AND STUDY INFORMATION

3.1 LENGTH OF STUDY

The M.L.S. degree is awarded after successful completion of two academic years of postgraduate study. The first year of the program must be taken full-time; the second year may be completed by part-time study. Students wishing to take courses towards their McGill degree at any university in the province of Québec should refer to the section entitled "Academic Credit Transfer Agreement" in the *General Announcement*. In certain cases, credit may be granted for courses taken at other universities after a student's initial registration in the School. Approval of the Director is necessary and should be obtained in advance.

All students, and especially those without previous experience of library work, are strongly advised to work in a library during the summer period between the end of the first year session and the second year of the program.

3.2 ADMISSION REQUIREMENTS

3.2.1 First Year Class (M.L.S. I)

1) Applicants for admission must have a B.A. or B.Sc. degree from a recognized university. The School will take into account the character of the applicant's undergraduate studies and his/her suitability for library work. Courses in the humanities,

sciences, and social studies are preferred as forming a suitable basis for studies in library science. Courses of a purely vocational or professional nature cannot be counted as fulfilling this requirement, which is intended to ensure an adequate academic preparation. Academic standing of at least B(or second class) is required.

2) A knowledge of at least one language other than English is expected; French is highly recommended.

3) Application forms may be obtained from the School and when completed, should be returned to the School. Official transcripts of the applicant's university record must also be supplied. Deadline for receipt of application forms for entrance into the first year of the program is May 15. As enrolment is limited, early application is advisable.

4) Previous library experience, while not essential, will be given consideration in assessing an application.

3.2.2 Second Year Class (M.L.S. II)

A student who has obtained a B.L.S.(Canadian) or a M.L.S. (American) with satisfactory standing from another accredited library school will be considered for admission into the second year. A student who has completed the first year with satisfactory standing at another accredited Canadian library school with a two-year program may be permitted to transfer into second year. The applicant must have academic and other qualifications acceptable for entrance into McGill's M.L.S. program and have taken the core courses required in the first year M.L.S. at McGill. In such cases the full program of the second year, or its equivalent, must be taken at McGill.

3.2.3 Special Students

Students who possess the B.L.S. or M.L.S. are welcome to register for any elective courses for which they fulfill the necessary prerequisites. At the discretion of the Director, work experience may be substituted for such prerequisites. Enrolment is subject to the condition that regular students have priority in cases of class size restrictions.

3.3 REGISTRATION

New students register at the School on Thursday, September 8; returning students register at the beginning of 2nd year program on Monday, September 12, and Tuesday, September 13.

4 GENERAL INFORMATION

4.1 BOARD AND RESIDENCE

Information regarding accommodation can be found in the *General Announcement* available from the Registrar's Office, 845 Sherbrooke St. West, Montreal H3A 2T5

4.2 STUDENT SERVICES

Full information concerning Student Services is given in the *General Announcement.*

4.3 FEES AND EXPENSES

4.3.1 Tuition Fees

The University reserves the right to make changes without notice in the published scale of fees.

Fees are due and payable 10 days after formal registration in the Faculty of Graduate Studies and Research. A late fee is charged for payment after the specified dates, and no days of grace are allowed. Fees may be paid in two instalments; second instalment payable January 15, 1978.

	Tuition	Student Services	Students' Societies
First year	$570	$70	$29.50
Second year	285	35	29.50
Transfer students entering in second year	570	70	29.50
Additional year	40	35	29.50

SPECIAL FEES

Application for Admission	$15.00
Graduation Fee	15.00

Information concerning other special fees may be found in the *General Announcement.*

4.3.2 Fees for Special Students

Approximately $57 per term course
$15 application fee for those registering at McGill for the first time.

Fees of $15 for Students' Societies and $20 for Student Services will be assessed.

4.3.3 Textbooks and Materials

Students should allow approximately $100 for textbooks and supplies. These are available from the University Bookstore and the School. Students in advanced data processing courses accessing external information systems are given a suitable amount of free connect time and may purchase additional time at special student rates.

4.4 FINANCIAL AID AND AWARDS

4.4.1 Scholarships and Fellowships Awarded in the Graduate School of Library Science

Applicants accepted for admission to the program leading to the degree of Master of Library Science and students entering the 2nd year of the program may apply to the Director of the School before March 1 to be considered for the following awards which are made, after due investigation and recommendation, to deserving students who require financial assistance.

JANET AGNEW SCHOLARSHIP IN THE GRADUATE SCHOOL OF LIBRARY SCIENCE. Value: $250. Established from a bequest of the late Janet M. Agnew, a graduate of and former instructor in the School.

ETHELWYN M. CROSSLEY SCHOLARSHIP FUND. $400 from the fund founded in honour of a former student of the School.

SYRA DEENA TARSHIS FLEISHMAN BURSARY. $200 from the fund founded in memory of a former student of the School.

ELIZABETH G. HALL SCHOLARSHIP FUND. $400 from the fund founded in honour of a former member of the McGill University Library staff.

LIBRARY SCIENCE FELLOWSHIP. Value $2,500. Established by the McGill Development Fund in cooperation with the library staff to assist a member of the library staff to attend the first academic year of the M.L.S. program in the Graduate School of Library Science. Open to a present full-time library staff member who will have completed two years' continuous full-time employment within the McGill University Libraries system before the deadline date for applications, and who has been accepted into the Graduate School of Library Science. The Fellowship is tenable for one academic year.

DR. G.R. LOMER SCHOLARSHIPS. Three annual scholarships of $660 each in honour of Dr. G.R. Lomer, former Director of the School.

H.W. WILSON FOUNDATION FELLOWSHIP. A grant in the amount of $3,000 made on a rotating basis to schools with graduate library programs accredited by the American Library Association, for distribution as scholarship aid in amounts and manner considered appropriate by the schools. The McGill Graduate School of Library Science will receive a grant in 1977.

4.4.2 Scholarships and Fellowships Awarded by Outside Agencies

The *Canadian Library Association* has a number of scholarships available to students in accredited library schools. Information and application forms are available from the Scholarships and Awards Committee, Canadian Library Association, 151 Sparks Street, Ottawa, Ontario K1P 5E3.

The *Special Libraries Association* offers four $2,500 scholarships for graduate study leading to a master's degree at a recognized school of library or information science in the United States or Canada. College graduates or college seniors(citizens of the U.S. or Canada) with an interest in special librarianship are eligible. Work experience in a special library is helpful. Further information and application forms may be obtained by writing to the Special Libraries Association, Scholarship Committee, 235 Park Avenue South, New York, N.Y. 10003. Applications must be filed by January 15.

The *National Research Council of Canada*, in cooperation with the Advisory Board for Scientific and Technological Information, offers a limited number of scholarships to assist science or engineering graduates to obtain advanced degrees in the fields of science librarianship and documentation. The awards are made on the basis of high scholastic achievement and evidence of suitability for a career as a science librarian or science information specialist. Applicants must be Canadian citizens or landed immigrants. All communication regarding these scholarships should be addressed to: The Scholarship Officer, Office of Grants and Scholarships, National Research Council of Canada, Ottawa, Ontario K1A 0R6. Application must be filed not later than December 1.

The *Canadian Federation of University Women* offers a professional fellowship with a value of $2,500 open to any woman who has completed a degree from a Canadian university, who is a Canadian citizen or who has held landed immigrant status for one year prior to submitting application and who wishes to pursue graduate work at an accredited professional school. Information and application forms may be obtained from the Canadian Federation of University Women, Suite 209B, 151 Slater Street, Ottawa, Ontario K1P 5H3. Applications must be submitted before February 1.

Beta Phi Mu, the International Library Science Honor Society, offers a scholarship with a value of $1,000 to a student at the Master's level accepted in an American Library Association accredited program. Application forms are available from the Executive Secretary, Beta Phi Mu, Graduate School of Library and Information Sciences, University of Pittsburgh, Pittsburgh, Pa. 15260. Deadline for application is March 16.

4.4.3 Fellowships Awarded by the University

Students will be considered for fellowships administered by the Faculty of Graduate Studies and Research for which they are eligible. These include the J.W. McConnell Memorial Fellowships and the Graduate Faculty Research Fellowship Programs for graduate students in all disciplines. Details of these awards are found in the booklet *Postgraduate Fellowships, Bursaries and Prizes*. This booklet and application forms are available from the Fellowships Office, Faculty of Graduate Studies and Research, Dawson Hall, McGill University, 853 Sherbrooke Street West, Montreal, PQ, H3A 2T6

4.4.4 Bursaries and Loans

Students in any discipline who are residents of Québec can apply for a Québec Graduate Fellowship. Also available to such students is a Québec Bursary and Loan. Application forms and information brochures are available in the Office of the School of Library Science.

Canadian citizens and landed immigrants are eligible for a guaranteed student loan in the province or territory where they have resided for a year preceding the date of application. Residents of Québec apply after May 1 at the McGill Student Aid Office, 3465 Peel Street, Montreal, PQ., H3A 1W7, for these loan funds financed by the Federal and Provincial governments; residents of other provinces apply through their provincial ministries of education.

Additional information including a list of sources of information on awards for graduate study is provided in the above-mentioned booklet, *Postgraduate Fellowships, Bursaries and Prizes*.

4.4.5 Other

American students are also advised to write to the Library Education Division, American Library Association, 50 East Huron Street, Chicago, Ill. 60611, for a copy of *Financial Assistance for Library Education*.

4.5 PLACEMENT SERVICE

The Canada Manpower Center – Student Placement Office provides a range of services to McGill students and recent graduates. Students who seek information about career and job opportunities are invited to consult a placement counsellor.

In addition, the School receives the posts notices of job openings throughout North America.

5 INSTRUCTIONAL PROGRAM

5.1 LIBRARY VISITS

Each year, first-year students visit the Bibliothèque Nationale du Québec, the Bibliothèque de l'Ecole des hautes études commerciales, and a number of public libraries in Montreal in order to gain insight into the diversity of library service. In the Spring, a two-day excursion to Ottawa is arranged, during which students hear lectures about and are given detailed tours of the Public Archives, the National Library of Canada, the Canada Institute for Scientific and Technical Information, and the new Ottawa Public Library, by members of each institution's own staff. Certain second year courses also involve examination of selected special libraries and information centres by smaller groups of students.

5.2 COLLOQUIA

Guest lectures and colloquia, open to all interested, by specialists and prominent individuals in fields related to the library profession are an integral and important part of the School's instructional program. (See list of Special Lecturers).

5.3 PROFESSIONAL WEEK

The first week of the Winter term has been left free for one or more specialized subjects to enable outside experts to be invited for a concentrated course, in an area that supplements the regular course offerings for a particular year. The subject, instructor and credit hours will be announced at the beginning of the academic year in order to enable students to plan their other electives accordingly.

5.4 COURSE SCHEDULES

A denotes fall-term course.
B denotes winter-term course.
A,B denotes course given either in fall or winter term.

Ordinarily an A,B course is offered only once during any one year.

Detailed class schedules are sent to students in August and November. Not all courses are taught in any one year.

5.5 MARKS

Final marks are based on the term's work and/or on examinations. Classification of marks:

100-80% – A; 79-65% – B; Below 65% – failure.

Students who do not fulfill requirements satisfactorily may be asked to withdraw from the School.

Regulations concerning failures and supplementals appear in the *Graduate Faculty Announcement*.

6 COURSES OF INSTRUCTION

6.1 FIRST YEAR COURSES

The following courses are required in the first year (total 27 credit hours):

6.1.1 Fall Term

405-602A INTRODUCTION TO LIBRARIANSHIP. (1 credit hour). This course provides: an introduction to the principles of librarianship; consideration of the library in relation to social, educational, cultural, and recreational needs; a forum in which to discuss general professional issues; and an opportunity to explore the characteristics of libraries and librarians as social agents.
Professors Dolan and Hall

405-603A SELECTION AND USE OF BOOKS AND RELATED MATERIALS I. (3 credit hours). Introduction to review-media and bibliographical tools useful in the process of developing collections of books and other materials, including serials, microforms, films, and recordings. Pertinent factors in considering materials in various formats and in evaluating materials appropriate to various user communities. Nature and structure of the publishing industry. Librarian-publisher relations. Copyright and public lending right.
Professor Hall

405-605A REFERENCE MATERIALS AND METHODS I. (3 credit hours). The fall term introduces students to the nature, functions, and types of bibliographies, and to the concept of bibliographic control, in hard copy and machine readable formats, of book and non-book materials.
Professor McNally

405-607A ORGANIZATION OF MATERIALS I. (3 credit hours). Introductory course in the techniques of bibliographic control of library materials. Basic cataloguing principles and practices incorporating concepts of main entry, subject analysis and classification according to standard cataloguing codes. The use of the ISBD formats for descriptive cataloguing. Formal instruction is accompanied by practical assignments in a well-equipped cataloguing laboratory.
Professor Clement

405-609A ADMINISTRATION OF LIBRARY OPERATIONS. (3 credit hours). The first part of this course deals with operations which are not usually performed by professionals such as the ordering and processing of documents and their circulation. The second part consists in a study of the "organization" with examples drawn from the library and information centre environment.
Professor Lavergne

405-610A INTRODUCTION TO DATA PROCESSING I. (1 credit hour). An introduction to basic data processing concepts through exercises in coding, key-punching, flow-charting and simple PL/I programming. Interactive work at a terminal is done on McGill's own time sharing system, McGill University System for Inter-active Computing (MUSIC).
Marie Falquet

6.1.2. Winter Term

Two of the courses marked * in the list of elective courses (6.3) are to be elected by first-year students in the winter term in addition to the required courses listed below.

405-604B SELECTION AND USE OF BOOKS AND RELATED MATERIALS II. (3 credit hours). Basic principles and practice in building library collections for adults. Controversial materials and censorship in the context of selection. Components of a policy statement. Standards for collections. Cooperative programs in developing resources. Alternative sources and methods in the acquisition process.
Professor Hall

405-606B REFERENCE MATERIALS AND METHODS II. (3 credit hours). The winter term concentrates upon two topics. The first is reference service which involves topics such as interviewing techniques and search strategy. The second topic of concentration is factual sources of information like encyclopaedias and dictionaries, and their place within the context of information transfer.
Professor McNally

405-615B INTRODUCTION TO DATA PROCESSING II. (1 credit hour). Using a program package running on McGill's computer, each student designs and implements an information system project, specifying its data, purpose, users, and products; creates the data file, and flowcharts and executes the file manipulation to generate products specified in the design.
Professor Sessions and Others

6.2 SECOND YEAR COURSES

The following 2 courses (total of 4 credit hours) are required in the fall term.

405-611A RESEARCH METHODS. (1 credit hour). An introduction to fundamental aspects of reflective thinking and some of the methods and techniques of research appropriate to the investigation of library problems. Attempts to introduce students to what is involved in planning, conducting, and reporting on research, thereby providing criteria helpful in evaluating published research in library science.
Professor Hall

405-620A THEORY AND PRINCIPLES OF ADMINISTRATION. (3 credit hours). This course is concerned with the application of scientific management to the situation encountered in libraries and

information centres. It deals with management work under the broad headings of information gathering, planning, budgeting, organizing, staffing, directing and controlling. The case study method is used to illustrate some of the problems encountered.
Professor Lavergne

6.3 ELECTIVE COURSES

In addition, the following elective courses are offered. 21 elective credit hours must be completed in the second year; each course listed below is 3 credit hours.

* **405-608B ORGANIZATION OF MATERIALS II.** Cataloguing in depth with a view to such specialties as original cataloguing, catalogue maintenance and administration of the cataloguing department. Investigation of alternative methods of library documentation. The study of developments in international cataloguing standards, codes, and formats. Includes laboratory sessions.
Professor Clement

405-612A,B HISTORY OF BOOKS AND PRINTING. Surveyed are the development of writing, alphabets, and books from their inception, and of printing from its invention in the fifteenth century.
Professor McNally

* **405-613A,B AUDIOVISUAL MATERIALS.** Introduction to audiovisual equipment and typical audiovisual programs in libraries; problems of selection, acquisition, evaluation, organization, housing, and use of non-print materials such as films, filmstrips, phonorecords, videotapes, etc.
Professors Dolan and Hillgartner

* **405-614B PUBLIC LIBRARY ORGANIZATION AND DEVELOPMENT.** The history, organization and development of public libraries with attention to current practices and problems. The importance of legislation to the concept of total coverage will be considered. Emphasis will be on Canadian libraries.
Norah P. Bryant and Special Lecturers

405-630B LIBRARY COLLECTIONS: ASSESSMENT AND DEVELOPMENT. Standards for research collections and quantitative and qualitative criteria for evaluating them. Formulation of an acquisitions policy and elements of an acquisitions program. Inter-library relationships, library specialization, and cooperative programs as factors in the development of collections. Developing research collections in special subject fields.
Professor Hall and Walter Grossmann

405-631B SYSTEMS ANALYSIS. This is a course for students who are sufficiently at ease with the applications of data processing in libraries and information centres to be ready for more advanced work in computerization in terms of the characteristics of the evolving technology (hardware and software) and their effects on the design and implementation of typical systems.
Professor Thorpe

405-632A,B LIBRARY AUTOMATION AND NETWORKS. A comparative examination, from the point of view of the user, of important systems, activities, and problems in library automation. Lectures by experts are central; emphasis is on up-to-the-minute developments and trends. Students are given hands-on experience with the shared cataloguing system of which McLennan Library is a founding member (UNICAT/TELECAT).
Professor Sessions and Special Lecturers

405-633A,B INFORMATION RETRIEVAL. The first part of the course consists of lectures on principles of information retrieval applicable to both batch and on-line searching, and an examination of the literature. The second part is a laboratory on on-line searching, accessing external data bases via terminals in the School.
Professor Sessions and Special Lecturers

405-634A,B PROBLEMS AND DEVELOPMENTS IN CATALOGUING AND CLASSIFICATION. Advanced studies in the problems inherent in several aspects of cataloguing and classification, the general solutions available (e.g. cataloguing codes, classification schemes, etc.), a critical examination of those solutions, and a study of current research into new solutions.
Not offered 1977/78.

405-636A,B GOVERNMENT PUBLICATIONS. The nature and scope of official publications of Canada, Great Britain, the United States, and the United Nations; their acquisition, bibliographic organization, and use.
Professor Astbury

405-637A,B SCIENTIFIC AND TECHNICAL LITERATURE. Introduction to the process of communication and information requirements in the scientific community; sources of scientific and technical information; study of representative reference sources in specific fields of basic and applied science.
Dr. Jack Brown

405-638B BUSINESS LITERATURE. An introduction to the literature used in business. Most classes take place at the Library of The Royal Bank of Canada in Place Ville Marie. Various aspects of business are described and students learn to handle reference questions in this field.
Miriam Tees

405-639A SPECIAL LIBRARIES. A practical course on administration of special libraries using a simulation technique. Following a general introduction, the class, working in groups, sets up and puts into operation a hypothetical special library. Class discussion and visits to special libraries are of paramount importance.
Miriam Tees

* **405-640B COLLEGE AND UNIVERSITY LIBRARIES.** Examines the history, development, and current trends in higher education. Against

this background the role and problems of libraries of academic institutions are studied. Topics discussed include administration, organization, service to undergraduates, service to graduate students and faculty, surveys, standards, interlibrary cooperation. Large non-academic research libraries and national libraries are also briefly considered.
Professor Astbury

405-642A,B LIBRARY MATERIALS FOR CHILDREN. Survey of the history of children's literature in English from its beginnings in folk literature through the mid-twentieth century; study of criteria for the selection and evaluation of children's books, traditional and modern; consideration of standard selection aids; and examination of current titles in relation to the child's reading interests, needs, and abilities.
Professor Dolan

* **405-643B LIBRARY MATERIALS AND SERVICE FOR YOUNG ADULTS.** Study of the interests and reading habits of young adults; survey of books of special appeal to the adolescent; evaluation, selection, and use of print and non-print materials in high school and public libraries; development of library programs including book talks, films programs, and readers' services.
Professor Dolan

405-644A,B RARE BOOKS. This is a brief, practical course on books in rare book departments, with mention of the different kinds of material to be found there and also a few of the special problems arising in the day-to-day running of such a department. Books, maps and prints are shown, attendance at a book auction is arranged, as well as a visit to an antiquarian book shop; visiting lecturers speak on their specialties.
Elizabeth Lewis and Special Lecturers

405-645A,B ARCHIVES AND RECORDS IN LIBRARIES. This seminar aims at introducing librarians to the literature on archives, historical manuscripts, and records management which may prove useful to them as practising librarians in the future. Definitions, principles, and terminology in these three fields are compared with those in library science. Emphasis is placed on records of the various media. Selection, conservation of writings, finding tools, and controls are examined. The impact of the computer and other technological developments are explored. A practical assignment, involving the description of unique papers in publishable form, is called for.
John Andreassen

405-646D A RESEARCH PROJECT. (Prerequisite: 405-611A). Permission to undertake this is granted by the Director of the School to the exceptional student having the necessary experience or academic background.
Staff

405-647A,B INDEPENDENT STUDY. Permission to register for this is given to able students after consultation with the Director of the School. It usually consists of an exploration in depth of a topic in library science which is not emphasized or elaborated on in any other part of the curriculum. Students electing this option work under the direction of a faculty advisor.
Staff

405-648B CRITICAL ANALYSIS OF LIBRARY STUDIES. Attempts to develop the ability to analyze and evaluate library research reports through the reading and discussion of both classic and contemporary studies in the field of librarianship.
Professor Hall

405-649B LIBRARY PLANNING AND ARCHITECTURE. This course is concerned at first with promotion work, the building committee, the building program, the study of the region and the determination of the site. It then deals with the major areas and their relationships as well as with furnishings. Part of the course is given by an architect and various libraries are visited.
Professor Lavergne and Michael G. Werleman

* **405-650B SERVICE TO CHILDREN IN SCHOOL AND PUBLIC LIBRARIES.** Introduction to objectives, standards, functions, and services in school and public library work with children, including trends in the development of elementary and secondary school media centres, the case study method is used in examining problems relating to the organization, administration and evaluation of children's services.
Professor Dolan

405-651A,B REFERENCE SERVICE IN THE HUMANITIES AND SOCIAL SCIENCES. This course investigates the conceptual orientation of the disciplines and their constituent subjects. Also considered are the information needs of researchers in these fields and the extent to which reference sources meet these needs.
Professor McNally

405-652A,B COMMUNICATION MEDIA AND THE LIBRARY. The intention of the course is to use a model of the communication process to describe the culture and society that is the context of libraries; to analyze the interaction process between the library and the community; to analyze and improve library operations by prediction based on the model.
Not offered 1977/78.

* **405-653B THE ORGANIZATION OF KNOWLEDGE.** This course reviews the historical origins, development, and growth of the organization of knowledge, with emphasis on the evolution of the various scientific desciplines and their supporting literature. Case studies, substantially from the history of science, will be used to emphasize the importance of the organization and availability of knowledge. Special topics to be covered include

information flow and access, the sociology of scientific communication, the interaction of science and society, and the growth of the information industry.
Frances Groen

405-654A,B CONSTRUCTION AND MAINTENANCE OF INDEX LANGUAGES. Analysis of concepts and terminology of a special subject field; development of conceptual categories; recognition of a priority of categories; construction of (a) a classification scheme (b) a subject heading structure, and (c) a thesaurus for post-coordinate indexing.
Staff

405-655A,B ORGANIZATION OF NON-BOOK MATERIALS. (Prerequisite: 405-608B). The course covers the bibliographical description of non-book materials as documents for the purpose of information retrieval; their physical arrangement for use, handling, storage and care as fully integrated parts of a library's collection, as well as their alternate arrangements for other uses, e.g. instructional aids, for recreational purposes, archival records, etc.
Professor Clement

405-680A,B BILINGUAL LIBRARIANSHIP AND INFORMATION SCIENCE. This course deals with the structuring and utilization of bilingual information systems. Problems of adaptation of English language cataloguing rules, classification systems, indexes and thesauri to a French environment will also be discussed. A study of the specialized French language terminology will be an integral part of this course. An adequate knowledge of day to day French is a prerequisite.
Professor Lavergne and Special Lecturers

405-690A,B ISSUES IN INFORMATION SCIENCE. A cross-disciplinary examination of present and near-future effects of technological advance, national and international cooperation, copyright laws, rising costs, etc., on the development of new methods of processing and disseminating information and consequent new roles for librarians. Reflecting the Canadian viewpoint, emphasis is on immediate problems and possible solutions.
Dr. Brown

6.4 COURSES IN ANOTHER SCHOOL OR FACULTY

A maximum of 12 credit hours(i.e. four half courses) may be taken, with permission, provided students have the necessary prerequisites. The following are among the courses suggested:

COMPUTER SCIENCE
EDUCATION AND SOCIETY IN QUEBEC
THE FILM
FOREIGN LANGUAGES
GOVERNMENT OF CANADA
HISTOIRE CULTURELLE DU QUEBEC
HISTORY OF BIOLOGY
HISTORY OF SCIENCE
INTRODUCTION TO LOGIC
INTRODUCTION TO SOCIAL PSYCHOLOGY
INTRODUCTION TO STATISTICS
INTRODUCTION TO THE STUDY OF LANGUAGE
LANGUAGE AND THOUGHT
LA LITTERATURE QUEBECOISE
LITTERATURE FRANCOPHONE COMPAREE
LIVRES ET SOCIETE QUEBECOISE
PRINCIPLES OF PUBLIC ADMINISTRATION
PROBLEMS IN SEMANTICS
PROGRAMMING LANGUAGE(S)
SOCIOLOGY OF SCIENCE
SOCIOLOGY OF THE PROFESSIONS
STUDIES IN COMMUNICATIONS
THIRD WORLD LITERATURE
TWENTIETH CENTURY CANADIAN LITERATURE

Administrative Assistant to the Faculty

1.2 STAFF BY DEPARTMENT

Anatomy

Professors – Y. CLERMONT *(Chairman)*, C.P. LEBLOND, D.G. OSMOND
Associate Professors – G.G. ALTMANN, B. KOPRIWA, P.K. LALA, D. LAWRENCE, N.J. NADLER, H. WARSHAWSKY
Assistant Professors – G.C. BENNETT, J.J.M. BERGERON, J.R. BRAWER, E. DANIELS, M.F. LALLI, H.J. MONIE, C.E. SMITH, M. WEINSTOCK, W.E. WILSON
Lecturers – W.C. LIM, S. SAUNDERS, P. WARD, J. WELLS

Anesthesia

Professors – T.J. MCCAUGHEY *(Acting Chairman)*, R.G.B. GILBERT, K. KRNJEVIC
Associate Professors – J.P. DECHENE, A.J.C. HOLLAND, I.R. METCALF, P.E. OTTON, J.K. ROSALES, J.W. SANDISON, D. TROP, J.E. WYNANDS
Assistant Professors – M.S. BATRA, M.F. BURFOOT, R.H. CATCHLOVE, E.M. DUNKLEY, G.E. DUTTON, G.S. FOX, M. GERTEL, D.M.M. GILLIES, G.L. HOULE, P. JACKSON, H. KESZLER, M.E. MORRIS, C.E.B. NORGATE, F.A. ROBILLARD, C.A. SHERIDAN, A.T. TAN, D.H. WALLACE, M. WAHBA, S.K. WEEKS
Lecturers – M.N. ABOU-MADI, R. BORIGHT, M.J. COOKE, L. CUADRADO, J.D.A. FIRTH, D.H. GRAHAM, R.S. HANNALLAH, J.R. HEWSON, F. LAUFER, K.H. SEMENIUK, J.B. SMITH, J.M. YACOUB
Demonstrators – M. CHENG, G.W. COMBS, P. EZPELETA, A.S. GIRGIS, I. KHAN, A.N. MUNGALL, S.H. RAFLA, C.R. SINGH, V. VARTIAN

Biochemistry

Professors – A.F. GRAHAM *(Chairman)*, M.J. FRASER, E.A. HOSEIN, D. RUBINSTEIN, S. SOLOMON, T.L. SOURKES, J.H. SPENCER, L.S. WOLFE
Associate Professors – R. BLOSTEIN, P.E. BRAUN, D.T. DENHARDT, R.M. JOHNSTONE, R.E. MACKENZIE, E.A. MEIGHEN, A.R. WASSERMAN
Assistant Professors – P. DOLPHIN, E. HARPUR, W. MUSHYNSKI
Lecturer – E. VADAS
Associated Members – M.K. BIRMINGHAM *(Psychiatry)* L.F. CONGOTE *(Exp. Medicine)*, J. DUPRE *(Exp. Medicine)*, D. EDWARD *(Exp. Surgery)*, W.C. GALLEY *(Chemistry)*, L. GOODFRIEND *(Exp. Medicine)*, M. JERRY *(Exp. Medicine)*, H. PAPPIUS *(Exp. Neurochemistry)*, J.F. PERDUE *(Jewish General Hospital)*, C. SCRIVER *(Pediatrics)*, J. SHUSTER *(Exp. Medicine)*

Biomedical Engineering Unit

Associate Professors – J.S. OUTERBRIDGE *(Director)*, M.C. MACKEY

Assistant Professors – T.R. FENTON, H.C. LEE, J.L. NEAL
Lecturers – R. DEMERS, J.R. IVES, C. THOMPSON, R. POULSEN

Epidemiology & Health

Professors – R.O. OSEASOHN, *(Chairman)*, M.R. BECKLAKE, S.S. LEE, F.D.K. LIDDELL, A.D. McDONALD, W.O. SPITZER
Associate Professors – M. ARHIRII, D.G. BATES, W.D. DAUPHINEE, L. DAVIGNON, S. DUCIC, G.W. GIBBS, A.S. MACPHERSON, P.V. PELNAR, B. PLESS, J.W. STAMM, N. STEINMETZ, T. TAYLOR
Assistant Professors – G. EYSSEN, F.R. FENTON, R. FLETCHER, S. FLETCHER, J. HOEY, I. HOROWITZ, J.W. LELLA, J.G. LOHRENZ, J.C. MARTIN, S.H. SHAPIRO, R.F. SPENGLER, D.C. THOMAS
Lecturers – D.C. BEWS, T. GERMANSON, R.H. GHEZZO, A.K. PATERSON, B. POLLAK, R. WEST, F.M.M. WHITE

Family Medicine

Professors – W.H. PALMER *(Chairman)*, J.L. McCALLUM, W.O. SPITZER
Associate Professors – M. KLEIN, C. LAPOINTE, N. STEINMETZ
Assistant Professors – M.I. de LEVIE, S.P. EDELMAN, S. FELDMAN, P.H. GRUNER, D. HURLEY, I. KUPFERSZMIDT, W.K. MacDONALD, J.D. MacLEAN, G.M. ROSENBERG, J. ROSTANT, M. SCHWARTZ, J. SEELY, A.D. SIBBALD, S. SINCLAIR, A. SUIKER, I. TANNENBAUM
Lecturers – J. BOILLAT, J.D. BROCK, G.G. CAMERON, F. MacDONALD, J. McCLARAN, R.C. MONKS, L. RIVEN, E. ROSENBERG, J. ZARINCZUK

History of Medicine

Professor – D.G. BATES *(Chairman)*
Associate Professor – J.W. LELLA
Assistant Professor – J. CASSIE
Lecturer – E.H. BENSLEY

Medicine

Professors – D.G. CAMERON, *(Chairman)* A.J. AGUAYO, D.W. BAXTER, M.R. BECKLAKE-McGREGOR, E.H. BENSLEY, J.H. BURGESS, T.M.S. CHANG, B.A. COOPER, R.F.P. CRONIN, J.H. DIRKS, S.O. FREEDMAN, C.J.P. GIROUD, P. GOLD, H. GOLDSMITH, C.A. GORESKY, R.D. GUTTMAN, W.H.P. HILL, M. HOFFMAN, M. KAYE, J. KESSLER, G. KLASSEN, P. MACKLEM, J.B. MARTIN, J.L. McCALLUM, E.E. McGARRY, M. McGREGOR, J.M. McKENZIE, J. MEAKINS, J. MILIC-EMILI, B.E.P. MURPHY, R. OSEASOHN, C.K. OSTERLAND, W.H. PALMER, J.A.P. PARE, B. ROSE, J.R. RUEDY, S. SOLOMON, D.B. TONKS,

Associate Professors – M. ARONOVITCH, C.M. BALLEM, C.H. BASTOMSKY, D. BERCOVITCH, R. BLOSTEIN, F.M. BOURNE, C.M. BRANDT, J.L. BRANDT, G.M. BRAY, G.S.D. CANTLIE, C. COLE, J. CRAWHALL, S. CRUESS, J.H. DARRAGH, W.D. DAUPHINEE, K. DAWSON, N.K.M. de LEEUW, F. DIRKS, R. DOLFUSS, S. DUCIC, J. DUPRE, E.L. FALLEN, R.R. FORSEY, H. FRANK, R.J. GARDINER, A. GOLD, A. GONDA, L. GOODFRIEND, A. GORDON, H. GUYDA, T.R. HALE, R. HAND, D.G. HAWKINS, J. HOGG, H.Z. HOLLINGER, J.L. HUTCHISON, L. JERRY, L. JOHNSON, G.E. JORON, A. KAHN, N. KALANT, A.G. KENDALL, D.G. KINNEAR, D. KINSELLA, J. KLASSEN, B. KOVACS, L. KOVACS, A.W. LAPIN, D.G.M. LAWRENCE, B.A. LEVITAN, M. LEVY, L.H. LORD, D.J. MacINTOSH, O.A. MAMER, R. MANGEL, P. MANSELL, D.G.F. MARPOLE, J. MENDELSON, E.N. MERCER, M.T. MILLER, S. MISHKIN, B. MOROZ, L. MOROZ, R.I. OGILVIE, C.J. PATTEE, B. POSNER, M. RASMINSKY, E.A.S. REID, L.P. RENAUD, H. ROBSON, D. RUBINSTEIN, H.M. SCOTT, S.K.K. SEAH, J.F. SEELY, J.A. SHANKS, L. SHAPIRO, J. SHUSTER, C.H. STACEY, P.B. STEWART, D. STILLWELL, D. STUBINGTON, R.A. SUTTON, A. VOST, R. WILKINSON, G.C. WILLIS, V.M. WHITEHEAD, N.B. WHITTEMORE, M. ZAKARIJA,
Assistant Professors – F.Y. AOKI, E. ARENDT-RACINE, A. ARONOFF, J.T. ARSENAULT, B. BAIN, C. BANJO, H. BARKUN, P.E. BARRE, R.G. BAXTER, L.H. BAYNE, B. BHAVNANI, R.H. BOURNE, N.F. BOYD, P. RONA, H.E. ROSS-MIDGLEY, M. ROZENFELD, P. SCHNEIDER, T. SHIFF, H.E. SHISTER, R. SHULMAN, R. SINGH, P. SMALL, A.H. TINMOUTH, S.M. VARGA-SOLYMOS, G.W. VAVRUSKA, C. VERA, I. WEINTRUB, S. WELLER, G.H. WORSLEY, N. YUSIF, J. ZARINCZUK,

Associated Members – A. BARBEAU, R. BOUCHER, M. CHRETIEN, J. DAVIGNON, J. GENEST, C. MORIN, S. PANDE, J. ROJO-ORTEGA, T. SANDOR,

Microbiology and Immunology

Professors – S.I. VAS *(Chairman)*, B.H. MATHESON, W. YAPHE

Associate Professors – Z. ALI-KHAN, C.A. BUTAS, E.C.S. CHAN, J. deVRIES, P. GILL, R. HAND, L. KAPICA, C.H. PAI, G.K. RICHARDS, H.G. ROBSON, R. SIBOO

Assistant Professors – A.F. DOSS, I.B. FABRIKANT, J.E. FEIN, J. GORDON, E. MANKIEWICZ, M. MARKS, L. MARTINEZ, J.L. MEAKINS, J. MENDELSON

Lecturers – M. BLANC, S. NOMMIK

Demonstrator – C. SHAW

Associated Members – R.D. GUTTMANN, C.K. OSTERLAND

Neurology and Neurosurgery

Professors – W. FEINDEL *(Chairman)*, D.W. BAXTER, G. BERTRAND, R.G.B. GILBERT, P. GLOOR, J.B. MARTIN, F. McNAUGHTON, B. MILNER, T. RASMUSSEN, P. ROBB, J.G. STRATFORD. L. WOLFE

Associate Professors – A. AGUAYO, F. ANDERMANN, J. BLUNDELL, G. BRAY, S. CARPENTER, J.B.R. COSGROVE, A. EISEN, R. ETHIER, R. HANSEBOUT, I. HELLER, G. KARPATI, T. KIRKHAM, D. LAWRENCE, I. LIBMAN, G. MATHIESON, A. OLIVIER, H. PAPPIUS, A. SHERWIN, D. TROP, G. WATTERS, Y.L. YAMAMOTO

Assistant Professors – E. ANDERMANN, P. BRAZEAU, R. CATCHLOVE, C.J. DILA, M. FINLAYSON, R. FORD, B. GRAHAM, D. MELANCON, K. METRAKOS, M. MORRIS, A. MORTON, M. RASMINSKY, L. RENAUD, W. SHEREMATA, W.F.T. TATLOW, J. WOODS

Lecturers – M. AUBE, S. BEKHOR, G. BELANGER, L. CUADRADO, R. HOLLENBERG, P. HUMPHREYS, J.R. IVES, M. LECHTER, J. LITTLE, C. MELMED, W. OLANOW, S.J. ROTHMAN, C. STRAUSS, L. TAYLOR, C. THOMPSON

Obstetrics & Gynecology

Professors – F. NAFTOLIN *(Chairman)*, R.A.H. KINCH, J.P.A. LATOUR, K. RUF, F.J. TWEEDIE

Associate Professors – G.H. ARRONET, H.B. BOURNE, B. CATTERILL, J.R. DODDS, A. FERENCZY, M.M. GELFAND, M. HENDELMAN, T. PRIMROSE, R.J. SEYMOUR, R.H. USHER, M.V.H YOUNG

Assistant Professors – R.M. AIKMAN, A. ASSWAD, P.R. BLAHEY, J. BRAWER, J. CHALLIS, J.E. COFFEY, R. DENT, E.B. de KOOS, A. de LEON LAURENZA, P.G. GILLETT, S. GOLD, G. HABER, A. LALONDE, M. LEONG, C.C. LINDSAY, E.A. MacCALLUM, C. NUCCI, A. PAPAGEORGIOU, R.M. PARSONS, D. POPKIN, R.M.H. POWER, JR., L.D. RHEA, T.N. ROMAN, M. SABIN, L.P. SMITH, G. TOLIS, A. TOTH, D. WILLIS

Lecturers – N. BAKAR, M.E. BOYD, N. BUKA, J. CHOW, P. DORR, P. FOURNIER, R.D. KOBY, K. ROSENFELD, J. STOCKER, E.C. TUCKER

Demonstrators – O. BALABANIAN, S. BODNAR, N.L. CASSAR, N.H. CHAPMAN, W.A.R. COOKE, I.B. GLICKMAN, W. GOLDSMITH, M.S. GURALNICK, R. KAPUSTA, G. MALLOUH, J.G. MULCAIR, A.A. NEUMAN, R.N. SHATZ, G. SIGMAN, L. VENECEK

Ophthalmology

Professors – S.B. MURPHY *(Chairman)*, S.T. ADAMS, J.C. LOCKE

Associate Professors – T.H. KIRKHAM, W. TURNBULL

Assistant Professors – S. BROWNSTEIN, P.L. DAVIS, L.S.S. KIRSCHBERG, A.B. LEITH, J.M. LITTLE, D.W.C. LORENZETTI, R.B. RAMSEY, P. ROSENBAUM, N.E. SAHEB, H.L. TANENBAUM
Lecturers – D. ANDERSON, P.A. CAPOMBASSIS, P. DAWSON, H.A.G. DUNCAN, J.A. FOREMAN, E. GORDON, W.B. JACKSON, A.H. KATZ, M. KHALIL, R. LEWANDOWSKI, R.W. PEARMAN, R.C. POLOMENO, K.E. SCHIRMER, E.D. SVARC, E. WERNER

Otolaryngology

Professors – J.D. BAXTER *(Chairman)*, D.G. DOEHRING, D. LING
Associate Professors – K.K. CHARAN, J.S. OUTERBRIDGE, E.J. SMITH
Assistant Professors – E. ATTIA, M.J. BLACK, B. BRYANS, H. CAPLAN, N. CHAN, A. COHEN, A GROSSMAN, H.H. ILECKI, A. KATSARKAS, R. LAFLEUR, D. LECKI, M.N. LEVITT, A. LING, M. MENDELSOHN, S. MATTINGLY, J.C. McNUTT, M. MENDELSOHN, W.H. NOVICK, C. REED, M.D. SCHLOSS, R. SHAPIRO, G. SHIMO
Lecturers – I. FRIED, J. LEE, R.M. McMILLAN, G.M. SINCLAIR, J. SINGH

Pathology

Acting Chairman – J.B. RICHARDSON
Professors – R. BOLANDE, W.P. DUGUID, J.C. HOGG, S.N. HUANG, D.S. KAHN, J.P.A. LATOUR, M.G. LEWIS, R.H. MORE, G. RONA, H. SHELDON, G. TREMBLAY, F.W. WIGLESWORTH
Associate Professors – M.N. AHMED, S.H. CARPENTER, A. FERENCZY, M.H. FINLAYSON, E.A. HOSEIN, I. HUTTNER, M.E. KIRK, J. KLASSEN, J. KNAACK, J.R.C. LACHANCE, J.O. LOUGH, K.G. MARSHALL, G. MATHIESON, D.R. MURPHY, D. MURRAY, M.R. REESAL, E. ROSENMANN, G. ROWDEN, T.A. SEEMAYER, N.S. WANG, B.I. WEIGENSBERG
Assistant Professors – B. ARTINIAN, J. BELAND, G.R. BERRY, S. BROWNSTEIN, M.L. de CHAMPLAIN, R.D.C. FORBES, W. HAUSER, D. HAEGERT, S. INOUE, D. KALOUSEK, M. MANDAVIA, R. MICHEL, MOINUDDIN, A. RONA, P. SCHOPFLOCHER, J. VILORIA, J.L. WEBB
Lecturers – J.P. de CHADAREVIAN, L. DESORMEAU, J. EMOND, B. MANASC, K. MEAGHER-VILLEMURE, P. PATEL, Y. ROBITAILLE, H. SROLOVITZ, B. SUPERVILLE-SOVAK, B.M. WOLANSKYJ

Pediatrics

Professors – K. DRUMMOND *(Chairman)*, R. BOLANDE, E. COLLE, F.C. FRASER, C.R. SCRIVER
Associate Professors – P. BEAUDRY, M. BELMONTE, D. CLOGG, G. COLLINS, N.R. EADE, A.H. EISEN, J. GIBBONS, C. GIROUD, H. GOLDMAN, H. GUYDA, M. MARKS, A. NEIMS, E.W. OUTERBRIDGE, S. PEDVIS, L. PINSKY, B. PLESS, N. STEINMETZ, R. USHER, G. WATTERS, E.M. WORDEN
Assistant Professors – G. AHRONHEIM. F. ANDERMAN, J. ARANDA, J. AYOUB, P. BENJAMIN, H. BRICKMAN, H. BRODIE, S. BUCKLEY, J. CHARTERS, M. COREY, A. COWAN, R. DeBELLE, C. DUPONT, J.H. ELDER, J. FONG, P. FORBES, F. GLORIEUX, R. GOLD, E. HARPUR, P. HUMPHREYS, R. HUTCHEON, B. KAPLAN, G. KARPATI, M. KLEIN, K. METRAKOS, B. MOROZ, J. NEAL, G. NICKERSON, B. NOGRADY, J.H. O'NEILL, A. PAPAGEORGIOU, P. PENCHARZ, E. REECE, D. ROSENBLATT, A. STACHEWITSCH. H. STRAWCZYNSKI, H. SURCHIN, W.W. TIDMARSH, R. WILLIAMS, D. WILLIS, M. WISE
Lecturers – W.J. ALEXANDER, U. CALLEGARINI, A. CHAN YIP, M. CHERNIAK, L. CHEVALIER, J. CHIU, D. COULTER, B. COSTOM, M. de LEVIE, E. DELVIN, J. DEMERS, A. FELDMAN, Z.R. FOX, V. GOLDBLOOM, C. GRANDBOIS, J. GULYAS, T. GUNN, P. HECHTMAN, M. HUNTER, P. JUNGER, H. KAHNE, M. KAZEMI, J.L. LEBLANC, C. LEJTENJI, SOOK LEE, W. MacDONALD, F. MOHYUDDIN, R. PINCOTT, S. ROTHMAN, T. ROUSSEAU, P. SPIER, N. STEIN,M. WESTWOOD, F. WIENER, W. WOELBER, I. WRIGHT, A. ZELIGER
Demonstrators – J. BELLEY, A.C. BERNARD-BONNIN, P. CAMFIELD, D. DIKRANIAN, F. DOUYON, A. GORDON, C. GRADINGER, H. GRADINGER, S. GUTTMAN, G. HEWITSON, S. KHAKEE, V. KHEDIGUIAN, J. KITEALA, A. KOVACS-BIMBI, F. LEHMANN, D. LORENZ, K. LUBKIEWICZ, G.H. LUPU, B. MANDEL, A.J. MARKUS, R. MARTIN, D. McCRIMMON, P. NEUMANN, M. PAMUKOFF, J.P. POIRIER, B. QUESNEL, D. RABIN, E. RABINOVITCH, M. ROCHETTE, S. ROCHMAN, M. ROZENFELD, A. St.DENIS, P. SENECAL, J. SHARP, C. WANG, N. WASSEF, F. WISEMAN, H.O. YOUNG

Pharmacology and Therapeutics

Professors – J.R. RUEDY *(Chairman)*, B.G. BENFEY, D. ECOBICHON, J. LOWENTHAL, M. NICKERSON
Associate Professors – R. CAPEK, B. COLLIER, N.R. EADE, A.H. NEIMS, R.I. OGILVIE, B.I. SASYNIUK, A.M. TENENHOUSE, J.M. TRIFARO, D. VARMA
Assistant Professors – F.Y. AOKI, J. ARANDA, L.W.K. CHUNG, B. ESPLIN, E. KOVACS, J. KREEFT, G. KUNOS, P.J. McLEOD, A. PADJEN, R.E. RANGNO, J.B. RICHARDSON, B. ROBAIRE, D.S. SITAR, M.S. YONG
Lecturer – D.S.R. EAST

Physiology

Professors – J. MILIC-EMILI *(Chairman)*, R.I. BIRKS, T.M.S. CHANG, B.A. COOPER, P. GOLD, K. KRNJEVIC, F.C. MacINTOSH, G. MELVILL JONES
Associate Professors – H.K. CHANG, M.W. COHEN, M.M. FROJMOVIC, L. GLASS, V. KLISSOURAS,

W.S. LAPP, M. LEVY, M. MACKEY, G. MANDL, G. MISEROCCHI, J.S. OUTERBRIDGE, C. POLOSA, P. SEKELJ, A. WECHSLER, R.L. WILLIAMS

Assistant Professors – A.W. CHAWLA, P. KONGSHAVN, K. LUKOWIAK, P. NOBLE, S. POTASHNER, D.G.D. WATT, P. WELDON

Lecturer – E. CHIRITO

Associated Members – J. CHALLIS *(Obstetrics & Gynecology)*, R.F.P. CRONIN *(Medicine)*, B. DUBROVSKY *(Psychiatry)*, L. ENGEL *(Medicine)*, H.L. GOLDSMITH *(Medicine)*, C.A. GORESKY *(Medicine)*, A. GRASSINO *(Medicine, U. of Montreal)*, D. HORROBIN *(Medicine, U. of Montreal)*, P.T. MACKLEM *(Medicine)*, M. McKENZIE *(Medicine)*, M.M. MORRIS *(Anesthesia)*, S. ROSSINOL *(Medicine, U. of Montreal)*, J.F. SEELY *(Medicine)*

Psychiatry

Professors – M. DONGIER *(Chairman)*, M.K. BIRMINGHAM, H. CAPLAN, B.M. CORNIER, H. KRAVITZ, H.E. LEHMANN, A.W. MacLEOD, R.B. MALMO, A.M. MANN, H.B.M. MURPHY, T.L. SOURKES

Associate Professors – J.V. ANANTHARAMAIAH, F. AZIMA, H. DAVANLOO, I.S. DISHER, B.O. DUBROVSKY, P.G. EDGELL, W.D. ENGELS, F. ENGELSMANN, R.B. FELDMAN, B.A. GIBBARD, B. GRAD, L.G. HISEY, S. LAL, A.P. LEE, E.P. LESTER, J.G. LOHRENZ, F.W. LUNDELL, A.S. MacPHERSON, D.J. McCLURE, H.F. MULLER, J. NAIMAN, J.C. NEGRETE, R. PITTENGER, E.G. POSER, R.H. PRINCE, J.J. SIGAL, L. SOLYOM, J.R. UNWIN, G. WEISS

Assistant Professors – N.R. ALDOUS, M.M. AMIN, C.C.J. ANGLIKER, A. BARTOVA, S. BARZA, J. BEAUBIEN, P.R. BECK, C. BOS, C. CAHILL, C.H. CAHN, G. CHOUINARD, L. CUMBERLAND, J.F. DAVIS, E.G. DEBBANE, S. DONGIER-MONTAGNAC, F. FENTON, H. GRAUER, H.A. GUTTMAN, G.P. HARNOIS, L. HECHTMAN, B.R. HUNT, T. KOLIVAKIS, D.C. LEVIN, E.D. LEVINSON, H.L. LEVITAN, J.G. MAGUIRE, G.F. MORGENSTERN, N.P.V. NAIR, E. NALTCHAYAN, G. PETERFY, D. PIVNICKI, R.A. RAMSAY, J. RUIZ-NAVARRO, S. STEIN, G.C. TAYLOR, G. TURCOT, L. VACAFLOR, S. WILNER, N. WISEBORD, S.N. YOUNG, C. YUNG

Lecturers – E.H. ACHONG, R. ARBITMAN, K. ARVANITAKIS, H. AST, S. BAYRAKAL, P.S. BELIVEAU, C. BENIERAKIS, A. BESZTERCZEY, D.H. BETTS, S. BIKADOROFF, L. BUFFETT, P.B. CAMPBELL, S. CAMPBELL, A.J. CARRE, M. CERROLAZA, J.D. CUTHILL, L. DEMERS-DESROSIERS, H.A. EVANS, H. FREEDMAN, P. GAGNON, J. GARANT, K. GEAGEA, L. GOMEZ, P. GREGOIRE, L, GUERETTE, A. HAUSFATHER, L. HUAPAYA, R. KACHANOFF, R.A. KELLER, R. KIRIAKOS, L. KRAULIS, F.E. KRISTOF, D.J. KUSSIN, M. LALINEC-MICHAUD, C. LAROCHE, G. LAROCHELLE, J. LEVY, G. LOW, G.W. MacLEAN, H.P. MALMO, S.A. MARTIN, A.F. MESZAROS, R.C. MONKS, A.K. MULLER, J.P. NOONAN, D.P. NOWLIS, J. PARIS, J.C. PECKNOLD, I. REBNER, B.M. ROBERTSON, M.M. ROMER, P. ROPER, M.G. SALIB, P.D. SCULLY, R.W. SHEPHERD, S.P. SIMONS, F.A. SMITH, R.M. SMITH, A.A. SURKIS, G. TAHTA, D.S.C. TSANG, D.J. WOOD, P. ZUARDI

Demonstrators – E. ABDELMALEK, J. ALARCIA, S. ANG, P. ASSALIAN, C. BARRIGA, A.O. BARRON, J. BEAUDRY-REMILLARD, J. BENAROYA, E.J. BRAHM, R.D. BROWN, J. CANFIELD, H. CVEJIC, J.L. DeRIVERA, D.F. FRANK, S.C. GAITE, J.P. GAMACHE, C. GOLDEN, G. GREGORIOU, G. HENNING, K. JIMENEZ, R. LAJOIE, R. LAKOFF, M.R. MacFARLANE, K. MISSALA, R. OLIVEROS, S. PERZOW, R.M. RICHARD-JODOIN, N. ROGERS, G. ROSENBERG, A. ROSS-CHOUINARD, N. SOURIAL, M. SUBAK, A. SHEPPARD, G. TAFLER, R. TIROL, C. VILLENEUVE, G.S. WIVIOTT, R. YASSA, G. ZIMMERMAN

Associated Members – T.A. BAN, J.A. CORSON, V.A. KRAL

Diagnostic Radiology

Professor – J. FABRIKANT *(Acting Chairman)*

Associate Professors – W.J. ALEXANDER, W.P. BUTT, R. ETHIER, P.A. FARRER, R.O. HILL, M.B. NOGRADY, M.J. PALAYEW, L. ROSENTHALL, I. SEDLEZKY, G.B. SKINNER, F. WINSBERG

Assistant Professors – F.M. BOSTON, P.J. FITZGERALD, J.H. GAGNON, F.A. GRAINGER, B.B. HALE, M.J. HERBA, N.A. KHAN, D. MELANCON, A.D. ROTENBERG, V. SAYEGH, R.E. WILSON

Lecturers – V. ADRENYI, A. ARZOUMANIAN, G. BELANGER, F. BOURDON-CONACHIE, J.D. CHAN, S. DANAIS, M. DESAULNIERS, J.M. DUMAS, A.D. FRENCH, A. GLAY, M. GOLDENBERG, M.F. GRAHAM, R.E. HANSON, R.S. HIDVEGI, B.B. HYAMS, S. JEQUIER, D.A. KILLAM, R. KIMOFF, P. LANDER, A.H. LATOUR, R. LESPERANCE, W. LIGHT, A. LISBONA, R. LISBONA, A. NAIMARK, M.S. NATHENS, M. O'DONOVAN, A.M. O'GORMAN, D.R. PATTON, M.F. PINSKY, H. REMY, M. ROSENBLOOM, R. SATIN, S.S. SHARE, D.N. SHUSTER, R.L. SLATKOFF, J.W. SPRAGGE, L.A. STEIN, J. TOTH, M. USHER, R.L. WEE, G. WHITEMAN

Demonstrators – G.F. DeCAIRES, S. TAYLOR

Instructor – G.A. WILKINSON

Associated Member – J.C. HOGG

Therapeutic Radiology

Professors – J.H. WEBSTER *(Chairman)*, M. COHEN

Associate Professors – P.A. FARRER, J.J. HAZEL, T.N. ROMAN

Assistant Professors – P. DEL VECCHIO, J.F. GUERRA, T.H. KIM, S.M. LEHNERT, E.B. PODGORSAK, K. SHIN

Lecturers – E.P. CYTACKI, C. GRAVELINE

Demonstrator – F. BEHMANN

Surgery

Professors – A.G. THOMPSON *(Chairman)*, L.G. HAMPSON, L.D. MacLEAN, D.R. MURPHY, F.M. WOOLHOUSE
Associate Professors – H.E. BEARDMORE, N. BELLIVEAU, M.A. ENTIN, R.L. ESTRADA, R.D. GUTTMAN, H.S. HIMAL, E.J. HINCHEY, G.M. KARN, D.T.W. LIN, R.C. LONG, P. MANSELL, A.P.H. McLEAN, E.D. MONAGHAN, J.R. MOORE, P.H. NILOFF, W.L. OGILVY, H.F. OWEN, J.D. PALMER, H.R. SHIBATA, I. SHRAGOVITCH, E.J. TABAH, H.B. WILLIAMS
Assistant Professors – C.M. ALLAN, H.C. BROWN, R.A. BROWN, A.M. CLOUTIER, D. CUNNINGHAM, J.C. DICKISON, R.G.W. GOODALL, A.E.N. GRACE, F. GUTTMAN, H. HIMAL, A. HRENO, R.N. LAWSON, G.W. LEHMAN, R.T. LEWIS, W.C. LLOYD-SMITH, J.K. MacFARLANE, G.G. MACKIE, R.G. MARGOLESE, B. MARIEN, K.G. McCULLOCH, J.L. MEAKINS, D.W. RUDDICK, G. SCHWARZ, I. SHANFIELD, N.M. SHEINER, H. SHIZGAL, H.H. SIGMAN, M. THIRLWELL, B.L. THOMPSON, M. WEXLER, F.M. WIEGAND
Lecturers – C.M. ALLAN, M.S. CHUGHTAI, P. COHEN, G.A. DANIEL, A.N. FREEDMAN, L.G. GENENDER, E. JOMM, A.M. LEGARE, P. MADORE, H.W. MERRICK, G.S. MODE, R.V. MORALEJO, J.J. OSTAPOVITCH, D.R. OWENS, D.F. PAPICH, G.J. PEARL, A.S. POPIERAITIS, F.L. SIMON, H.D. STEVENS, T. TY, S.A. YOUSSEF,
Demonstrator – R. CREPEAU
Associated Members – F.N. GURD, H.R. ROBERTSON

Division of Cardiovascular and Thoracic Surgery

Professors – A.R.C. DOBELL, H.J. SCOTT
Associate Professors – P.E. BLUNDELL, D.J. CHIU, J. MORIN, D.S. MULDER, D.D. MUNRO
Assistant Professors – J.F. SYMES, J.A.S. WILSON
Lecturer – N. POIRIER

Division of Surgical Research

Professors – L.D. MacLEAN, D.R. MURPHY, A.G. THOMPSON
Associate Professors – D.M. EDWARD, F. GLORIEUX, J. GORDON, E.J. HINCHEY, S.C. SKORYNA
Assistant Professors – A.M. DANIEL, E. DELVIN, A.G. FAZEKAS, H. HIMAL, C.A. LAURIN, A.H. McARDLE, W.M. MERSEREAU, A.R. POOLE, Y. TANAKA
Lecturers – L. GREENBERG, C. PIERCE, M. VAN DER REST

Division of Orthopedic Surgery

Professors – R.L. CRUESS, J.E. MILLER
Associate Professors – R.B. GLEDHILL, J.M. McINTYRE, N. MITCHELL, E.C. PERCY, J.G. PETRIE
Assistant Professors – C.E. BROOKS D.L. BURKE, L.B. CONOCHIE, D.S. DRUMMOND, W. FISH, F.A.H. GREENWOOD, D.A. MacKENZIE, G.R. MURPHY, W.R.J. RENNIE, E. ROGALA, M.A. ROSMAN, J.L. SHUGAR, J. TEMPLETON, R.G. TOWNSEND, C.L. WILSON, W.E. WILSON
Lecturers – A.A. BUTLER, B.J. COSTELLO, D.R. FORBES, L. HELLER, T.S. MEARS, J.D. SULLIVAN
Demonstrators – H.I. DUBOW, P. DUBRAVCIK, L. GREEN, H.F. HELMY, G. SELIGMAN, T.N. SILLER

Division of Urology

Professor – K.J. MacKINNON
Associate Professors – B.M.M. MOUNT, J. OLIVER, E.C. REID
Assistant Professors – C.F.D. ACKMAN, J.W. FOOTE, M. LAPLANTE, W.F. LINGARD, D.D. MOREHOUSE, J. OH, Y. TAGUCHI
Lecturers – I.J. de DOMINICO, S.A. JACOBSON, S.G. MacISAAC, T. NEARING, H.H. RABINOVITCH, H.A. ROTTENBERG
Demonstrator – N. HALPERN

2 GENERAL INFORMATION

The one hundred and forty-fifth session of the Faculty will open on September 1, 1977.

Separate Announcements are available for the School of Physical and Occupational Therapy and the School of Nursing.

2.1 BUILDINGS

McIntyre Medical Sciences Building

This building contains the administrative offices of the Faculty of Medicine, the Medical Library, the Osler Library of the History of Medicine, the Departments of Biochemistry, History of Medicine, Pharmacology and Therapeutics and Physiology, the McIntyre Animal Center and a number of special research units (e.g. Anesthesia Research, Aviation Medical Research, Biomedical Engineering and the Cancer Research Unit).

Strathcona Anatomy and Dentistry Building

This building houses the Department of Anatomy, the Faculty of Dentistry and the Protein and Polypeptide Laboratory of the Department of Experimental Medicine.

Pathology Building

Opened for use in October 1924, the building is situated on the north-east corner of University Street and Pine Avenue, adjacent to the Montreal Neurological Hospital and the Royal Victoria Hospital. It is occupied by the Departments of

Microbiology and Immunology, Epidemiology and Health and Pathology. The building has extensive facilities for teaching, research and diagnosis, including the interdisciplinary Meakins-Christie Laboratories which opened in August 1972.

The Montreal Neurological Hospital and the Montreal Neurological Institute

The Hospital and Institute are housed in an eight-storey building, situated on University property adjacent to the Pathology Institute and the Royal Victoria Hospital. The Institute was opened on September 27, 1934 and as the cornerstone states is "Dedicated to relief of sickness and pain and to the study of Neurology". The McConnell Wing was opened in 1953, doubling both the clinical and laboratory space. Originally the Institute assumed the responsibility for the undergraduate and graduate teaching of neurology, neurosurgery and the neuro-sciences in the Faculty of Medicine at McGill. The teaching and research responsibilities have been divided between the McGill teaching hospitals. In 1963 the Montreal Neurological Hospital was incorporated as a separate institution. The Hospital and Institute therefore have three areas of responsibility: clinical, research and teaching. In addition to wards, operating rooms and laboratories for treatment and study of diseases of the nervous system, the building provides facilities for graduate study and research in related basic science fields. A nine-storey addition, the Penfield Pavilion, will be completed by 1978. This will provide modern patient areas, operating suite and intensive care unit, together with enlargement of research and teaching areas.

Allan Memorial Institute

In 1943 a large building and site were donated as a basis for the development of an insitutue of psychiatry. The building was reconstructed to permit the establishment of a fifty-bed unit, together with extensive research laboratories, and was officially opened on July 12, 1944.

In 1946 the first day-hospital in the world was opened at the Institute and in 1953 a fifty-bed wing was added.

A research and training building was added by McGill University in 1963, providing one of the most extensive and modern research areas.

Both undergraduate and postgraduate teaching are carried on at the Institute.

Donner Building

The Donner Building for Medical Research, adjacent to the Strathcona Anatomy and Dentistry Building, was completed in September 1948. Through the generosity of William D. Donner of Philadelphia, the late founder of the International Cancer Research Foundation, the necessary funds were provided for the construction of a building entirely devoted to medical research.

The building houses the Maxwell Lauterman Laboratories for Surgical Research, and also provides facilities for many other types of medical and surgical investigation.

Lady Meredith House

Situated at 1110 Pine Avenue West, this building currently houses the Centre for Medical Education, Continuing Medical Education, the McGill Clinical Scholars' Program, the Montreal Joint Hospital Institute and the Associate Dean's Office (Community Medicine).

2.2 HOSPITALS

McGill University Teaching Hospitals

There are four McGill University Teaching Hospitals. By agreement and tradition the administration, medical staff and scientific personnel of these institutions are closely integrated with McGill University and form the basis for the clinical departments of the Faculty of Medicine:

Royal Victoria Hospital
Montreal General Hospital
Montreal Children's Hospital
Montreal Neurological Hospital and Institute

The Royal Victoria Hospital comprises the following units under one administration:

1. Main Pavilion
2. Medical Pavilion
3. Surgical Pavilion
4. Ross Memorial Pavilion
5. Women's Pavilion
6. Allan Memorial Institute

The total bed complement is 873. Admissions total about 22,000 a year and there are more than 260,000 visits annually to the Outpatient Department. The resident and intern staff numbers 319.

The Royal Victoria Hospital was granted its Charter in 1887. The Pathological Institute and the Women's Pavilion of the Royal Victoria Hospital were opened in 1926 and the Allan Memorial Institute (Psychiatric Pavilion) became part of the hospital complex in the 1940's.

The Montreal General Hospital has a bed complement of 900 for the treatment of acute diseases. In a typical year, there are approximately 20,000 admissions and 200,000 consultations in the Emergency and Outpatient Departments. The Resident and Intern staff numbers 275. "The Montreal General" was founded in 1821 and its record in clinical

teaching is one of the longest in North America. Students were first received in 1823, in what was the first medical school in Canada. This school agreed to form the Faculty of Medicine in 1829.

The present Hospital was opened in 1955. In addition, a five-storey Research Building was opened on Hospital grounds in late 1973.

The Montreal Children's Hospital located on Tupper Street near the Atwater Metro Station, has 300 beds and, in a typical year, admits 12,000 patients. The Ambulatory Services have approximately 200,000 visits, 60,000 in Emergency and 140,000 in the clinics. The hospital admits newborn infants, children and adolescents with all kinds of medical and surgical problems.

The Alexandra Pavilion (formerly the Alexandra Hospital) is now part of The Montreal Children's Hospital and is a centre for diagnostic assessment and treatment programs for retarded children and other programs in developmental medicine.

An active teaching program is maintained for the medical students and for the 125 interns and residents. There are also teaching programs for nursing students and other health professionals. The McGill University-Montreal Children's Hospital *Research Institute* is located in the hospital and sponsors research and postgraduate education in disciplines related to problems of childhood.

The Montreal Neurological Hospital at 3801 University Street, provides neurological and neurosurgical services for the Royal Victoria Hospital and is itself, a completely independent hospital with its own corporation and Board of Directors. There are 135 beds which provide for the investigation and care of patients with organic diseases of the nervous system. The hospital provides the major undergraduate and graduate teaching load of the Department of Neurology and Neurosurgery of McGill University, in conjunction with the other McGill teaching hospitals. In 1975, 1,952 admissions and 730 operations were recorded. Within the same structure, the Montreal Neurological Institute provides laboratories, specialized equipment and a distinguished scientific staff for research in the disorders of the brain and nerves. A nine-storey addition, the Penfield Pavilion, will be completed by 1978.

Specialty Teaching Hospitals

The following hospitals are affiliated with the McGill University Faculty of Medicine. All the departments and services of these hospitals participate in teaching and research in a single specialty:

Douglas Hospital
Montreal Chest Hospital Centre

The Douglas Hospital was opened in 1890 as a centre for the specialized care of mental illness of short and long term duration. There are facilities for children, adolescents, adults and elderly patients. Services are offered as part of an integrated network of psychiatric services, in cooperation with various departments of psychiatry of general hospitals. There is a comprehensive community psychiatric program offered to residents of Ville Emard, Ville LaSalle, Verdun and Pointe St. Charles. There are approximately 1,130 admissions per year and 18,200 visits at the out-patient clinics per year.

The hospital provides clinical instruction and training for residents in psychiatry and in pediatrics, as well as medical students and students of various paramedical disciplines. Experience can also be obtained in research through the activities of the Research Department of the hospital.

The Montreal Chest Hospital Centre is a McGill teaching, training and research specialty hospital, for all diseases of the chest, excluding the heart and great vessels. It operates on an out-patient and in-patient basis including a large general chest and tuberculosis clinic. The hospital contains 124 beds and its facilities include operating rooms, general, special and research laboratories, fully equipped pulmonary function laboratories, physiotherapy and all para-medical allied services.

The hospital provides some specialized programs and services which include a home care program, adult cystic fibrosis clinic, anti-smoking program, out-patient rehabilitation program for respiratory insufficiency, Center for PHAGE typing and identification of atypical mycobacteria for the Province of Quebec, Revised Comprehensive Tuberculosis Program and special emphasis on the present challenge of lung cancer. It maintains an active research program and is fully approved by the Royal College of Physicians and Surgeons of Canada for residency training programs in both medicine and surgery. Residency rotating appointments number approximately 30 annually.

Hospitals Affiliated with McGill University

The following hospitals have been approved and have contracted with McGill University for participation in teaching and research in one or more departments and services:

Jewish General Hospital
Lakeshore General Hospital
Queen Elizabeth Hospital of Montreal
Queen Mary Veterans' Hospital
Reddy Memorial Hospital
St. Mary's Hospital
Shriners' Hospital for Crippled Children

2.3 LIBRARIES

Medical Library

Life Sciences Area Librarian – FRANCES K. GROEN
Assistant Area Librarian – DAVID S. CRAWFORD

The Medical Library is located on the second, third and fourth floors of the McIntyre Medical Sciences Building; the entrance is on the third floor.

The Library is open from mid-September to mid-June from 8:30 a.m. to midnight Monday to Thursday, from 8:30 a.m. to 10:00 p.m. on Friday, from 10:00 a.m. to 6:00 p.m. on Saturday and 1:00 p.m. to 5:00 p.m. on Sunday. During the summer months and at Christmas, the hours are restricted but notification of these changes is posted well in advance.

The Library is open to all who need to use its collections. Borrowing privileges are given to McGill faculty, staff and graduate students, all students in the Faculties of Medicine and Dentistry and to under-graduates whose course-work requires its use. Borrowing privileges are also extended to members of the health professions in the community.

Reference librarians are available to answer reference questions, to help with the use of the card catalogue, reference books and indexes and to assist in the compilation of bibliographies. Since 1973 the library has offered on-line bibliographic and reference services based on the United States National Library of Medicine's MEDLINE system and has recently expanded this to cover other relevant data bases in the life sciences offered by the Lockheed Company and the Canada Institute for Scientific and Technical Information.

One of the strengths of the Library is its journal collection. Of the more than 143,000 items held, over 100,000 are bound journal volumes and over 2,300 titles are currently received. The book collection is particularly outstanding in the area of ophthalmology, due in large measure to gifts from the late Dr. Casey A. Wood. There are also collections of books and journals in many departments of the Faculty.

The library is presently involved with the Faculty of Medicine in the development and utilization of computer-assisted instruction programs in pharmacology and in the provision of additional capability to make use of the many audio-visual presentations now available in the health sciences.

Osler Library of the History of Medicine

The two-storey wing extending out from the third and fourth floors of the McIntyre Medical Sciences Building is the Osler Library, entirely devoted to the history of medicine. Besides library offices and stack space, the Library consists of two reading rooms, the Wellcome Camera, accessible through the main Reading area of the Medical Library on the third floor, and the Osler Room beyond the Camera.

The collection, consisting of about 30,000 volumes in the history of medicine and its sciences and a large quantity of manuscripts, has, as a nucleus, the 8,000 volumes bequeathed to McGill by one of its most famous pupils and teachers, Sir William Osler. It is especially this portion which is rich in 15th, 16th, 17th and 18th century medical books. In addition, all books printed before 1850 have been transferred from the Medical Library to this collection. The rest of the collection has been purchased by the Osler Library itself, especially since 1957, when a generous grant from the Wellcome Trust made active growth of the Library possible. The Library is constantly adding to the collection, especially current work in the history of medicine.

All books in the collection are available for use within the Library and the majority of them are available on loan. Undergraduates and all interested persons may use the Library. For the holdings of the Library, users are urged to consult the card catalogue, and the book catalogue entitled *Bibliotheca Osleriana*, both are in the Wellcome Camera. At present, the collection is not completely catalogued anywhere else in the University.

2.4 MEDICAL SOCIETIES

McGill Medical Students' Society

The Society is an association of all registered medical students. Acting through its elected council and various Faculty committees, the Society performs a number of functions:

1) To represent medical students' ideas, concerns and problems to the Faculty of Medicine, the government, and the public at large.
2) To promote interaction among the medical students of the province through the newly formed Fédération des Associations des Etudiants (es) en Médecine du Québec.
3) To attempt to advance new forms of learning to meet with the desires of the students.
4) To collaborate with the Students' Societies of Nursing and Physical & Occupational Therapy in running the "Annex", the new social centre.
5) To regulate all student sporting and social events within the Faculty.
6) To generally attempt to provide the resources and personnel to meet student needs and wishes as they arise.

Of the many things presently occurring under the auspices of the M.S.S., some of the more interesting are the McGill Medical Journal and the new Women in Medicine Group. The M.S.S. has members on many faculty committees, including the Curriculum Committee and the Admissions Committee. Details of all the activities are easily available from the M.S.S. Office and it is hoped that all students will participate in the Society's activities.

La SOCIETE est une association de tous les étudiants(es) inscrits en médecine. Représentée par son conseil élu et par les divers comités de la faculté, la SOCIETE accomplit les fonctions suivantes:

1) représente les idées des étudiants(es), leurs soucis et leurs problèmes à la faculté de médecine,

au gouvernement et au public en général,
2) facilite la communication des étudiants(es) en médecine de la province par le moyen de la Fédération des Associations des étudiants(es) en médecine du Québec qui a été nouvellement formée,
3) elle essaye de développer de nouveaux cours qui rencontreront les désirs des étudiants(es),
4) de collaborer avec les étudiants(es) de la Société des infirmières ainsi qu'avec la société d'ergothérapie et de réadaptation dans la direction de "l'Annexe", notre nouveau centre social,
5) s'occupe de régler toutes les réunions sportives ou sociales des étudiants(es) en médecine,
6) de façon générale, essayer de fournir toutes les ressources et le personnel afin de recontrer les besoins et les désirs des étudiants(es) qui se font ressentir.

De toutes les choses qui se produisent sous les auspices de la Société des étudiants(es) en médecine, celles qui sont les plus intéressantes sont: le journal médical de McGill et la création d'un nouveau groupe "Les Femmes en Médecine". La Société des étudiants en médecine compte des membres sur plusieurs comités de la faculté y compris le "Curriculum Committee" et le "Admissions Committee". Les détails de toutes nos activités peuvent facilement être obtenus du bureau de la Société et nous souhaitons ardemment que tous les étudiants(es) participent à nos activités.

Osler Society

The Osler Society was founded in the Spring of 1921 by a number of undergraduates in Medicine, its object being to perpetuate the memory and teachings of Sir William Osler by the reading of papers and discussion of topics reflecting his ideals of a liberal medical education. Those interested may supplement their clinical and scientific knowledge by the consideration of those topics of medicine which are of historical, social and literary significance.

The membership includes students from each class in the Faculty. Several professors have shown an active interest in the Society and have actively participated. Each year an Honorary President has been elected from this older group.

3 SCHOLARSHIPS, BURSARIES, PRIZES, MEDALS AND LOAN FUNDS

For details of scholarships, bursaries and loan funds open to students in all faculties, see the *General Announcement*.

Within the Faculty of Medicine, students who demonstrate outstanding performance are recognized through the awarding of prizes and medals. Any prizes and medals awarded to a student are noted on his transcript and become a permanent part of his record, as are University Scholarships which are also awarded for outstanding scholastic achievement.

In view of the high level of academic performance already demonstrated and achieved by students entering the Faculty of Medicine, all other awards available in the Faculty at the undergraduate level including the scholarships and bursaries listed below, are generally awarded by the Faculty on the basis of good standing and financial need. Students requiring financial aid should obtain information and complete the financial aid forms available from the Student Aid Office, 3465 Peel Street, Montreal, P.Q. H3A 1W7.

3.1 SCHOLARSHIPS

DR. MAUDE E. SEYMOUR ABBOTT SCHOLARSHIPS. – A fund of $10,000, established in 1938 by an anonymous donation, in honour of the late Maude E. Seymour Abbott, B.A., M.D., F.R.C.P.(C), LL.D.(McGill), to commemorate her distinguished work in connection with the history of Canadian medicine, the Sir William Osler Pathological Collection and her outstanding research in congenital cardiac disease.

The revenue of this fund provides scholarships awarded by the University to undergraduates of either sex in the Faculty of Medicine, but women are given preference. Awards vary according to the needs of the winners. Further information may be obtained from the Dean's Office, Faculty of Medicine.

EZRA AND REGY ADES AWARD. – An annual award of $200 established by Mr. Ezra Ades in the name of his wife and himself to be awarded to a student entering the penultimate year of Medicine. To be awarded by the donor to a deserving student, (in need), on the recommendation of the Faculty of Medicine Scholarships Committee.

J.H.B. ALLAN SCHOLARSHIP. – Available to undergraduate students in any year.

SIR EDWARD W. BEATTY MEMORIAL SCHOLARSHIPS FOR MEDICAL STUDENTS. – A fund of $100,000 was bequeathed by the late Dr. Henry Albert Beatty, the income from which provides two scholarships, not necessarily of equal value, awarded annually to students of either sex and of any nationality. Open to (i) students registered in the McGill Faculty of Medicine as candidates for the M.D., C.M. degree, (ii) graduates of an accredited Faculty of Medicine registered for postgraduate degrees, (iii) graduates of an accredited Faculty of Medicine registered for a postgraduate diploma in a

clinical specialty, (iv) graduates of an accredited Faculty of Medicine who are employed in a year of research as part of their residency training program. For students who hold or are working towards the McGill M.D., C.M. the award may be held at any approved institution in Canada or abroad. For other qualified students the award must be held at McGill. The holder is expected to devote his year of tenure either to research or to some form of special training excluding the normal training towards the M.D., C.M. and excluding any of the years of residency training required in the Diploma courses. Awarded by the Faculty of Medicine but not unless suitable candidates present themselves. Apply to the Dean's Office on the forms provided for this purpose on or before February 1 of the year in which the scholarship is to commence.

MAX BINZ SCHOLARSHIP. – From the bequest of the late Max Binz, $1,000 is set aside annually for scholarships in the Faculty of Medicine.

JAMES H. CUMMINGS SCHOLARSHIPS. – Two or more entrance scholarships in the Faculty of Medicine bequeathed by the late James H. Cummings. Awarded at the discretion of the Faculty of Medicine.

DR. E.M. FISHER MEMORIAL SCHOLARSHIP. – Available to undergraduate students in any year.

WALTER J. HOARE MEMORIAL SCHOLARSHIP. – Endowed by the late Dr. Charles W. Hoare, a graduate of McGill University, in memory of his son, Walter J. Hoare, who was killed in World War I. Open to pupils of the Collegiate Institutes of the counties of Essex, Kent and Lambton entering the Faculty of Medicine. If there are no qualified candidates in this preferred class, the scholarship may be awarded to a nominee of the Faculty of Medicine.

KEITH HUTCHISON MEMORIAL SCHOLARSHIPS. – Two or more scholarships, in memory of the late Dr. Keith Hutchison, established in the Faculty of Medicine. Tenable in any year of the course and awarded on the basis of distinguished academic standing and financial need. The holder in any one session may re-apply for the following year.

IVES SCHOLARSHIP. – Established in 1967 by a bequest of the late David Fraser Murray, M.D., C.M., 1924. Awarded on the basis of financial need with preference given to students from Nova Scotia, New Brunswick or Prince Edward Island.

CAMPBELL KEENAN MEMORIAL SCHOLARSHIP. – Established by Miss Charlotte Mildred Hagar in memory of the late Dr. Campbell B. Keenan. Tenable in the second, third, or fourth year of the course in Medicine and awarded on the basis of distinguished academic standing and financial need to an applicant who intends eventually to enter surgical practice. The holder in any one session may re-apply for a subsequent session.

JAMES GRAHAME KER AND FREDERICK K. PETRIE MEMORIAL SCHOLARSHIP. – Awarded to a student from Eastern Ontario (Counties of Dundas, Stormont, Glengarry, Grenville, Carleton, Russell and Prescott) or from Montreal on the basis of distinguished academic standing and financial need. Tenable in the second year of the course in Medicine; however, the Faculty of Medicine may award this scholarship to the same student during the third and fourth years.

JAMES O. MEADOWS AND MARIA MEADOWS AWARDS. – A bequest of $200,000 from the late Dame Maria Cowan Meadows to establish awards for undergraduates or graduates in the Faculty of Medicine for the purpose of supporting research. Preference will be given to candidates working in the field of Cancer Research, but worthy candidates working in other areas of medical or surgical research will also be considered. Apply to the Dean of the Faculty of Medicine.

ROBERT SHARWOOD MEMORIAL SCHOLARSHIP. – Tenable in any year of the undergraduate course in Medicine and awarded on the basis of distinguished academic standing and financial need. The holder in any one session may re-apply for the following year.

FREDERICK SMITH MEMORIAL SCHOLARSHIP. – This name is given to one University Scholarship tenable only in the Faculty of Medicine.

DR. JOSEPH TANZMAN AWARD. – A bequest in honour of Dr. Joseph Tanzman, M.D., C.M. 1927, for the establishment of an award in his name. The award is to made to a medical student in any given year from the Province of New Brunswick as a preference. If in any year no such candidate is available, the award may be made to any deserving student in the Faculty of Science. This award will be made by the Scholarships Committee of the Faculty of Medicine or the Faculty of Science as the case may be.

UNIVERSITY SCHOLARSHIPS. – See the *General Announcement.*

3.2 BURSARIES

BELLAM MEMORIAL BURSARIES. – A bequest of $20,000 from the estate of the late C.F. Bellam. Awarded on the basis of financial need. Candidates must be from Stanstead County, Quebec.

DR. BEN BENJAMIN MEMORIAL BURSARY. – Established by his sisters in memory of the late Ben Benjamin, B.A., M.D., C.M., lecturer in the Department of Pediatrics. Awarded on high academic standing and financial need.

JOSEPH ISRAEL BENNETT BURSARY. – A bequest by the late Joseph Israel Bennett, the interest on which is to provide a bursary to be awarded annually to a deserving student.

ELFRIC DREW BROWN BURSARY. – Established in 1973 by a bequest from the late Elfric D. Brown, M.D., C.M. The annual income is to provide bursaries to help deserving students in the Faculty of Medicine.

BEVERLEY COONER BURSARY. – Established by the family and friends of the late Beverley Cooner to assist a deserving student. Awarded with the approval of the National Council of Jewish Women on the basis of financial need and academic standing.

CO-OPERATIVE MEDICAL SERVICES FEDERATION OF ONTARIO BURSARY. – To be awarded on the basis of academic standing and financial need, to a student who has completed the pre-medical years and is entering the first medical year in university, and who has been a member or whose parents have been members of a medical co-operative for at least two years. In the event no first year student qualifies, a second, third, or fourth year student may be chosen.

ANNIE DIAMOND BURSARIES. – Established in 1969 for medical students with financial need. The awards will vary according to the needs of the recipients.

SAMUEL EIDLOW MEMORIAL BURSARY FUND. – Established for worthy medical undergraduate students with financial need.

CHANCELLOR FERRIER MEMORIAL BURSARY. – Established by Mrs. Herbert V. Lacey in memory of her great-grandfather, Senator James Ferrier, Chancellor of McGill from 1884 to 1889. Awarded on the basis of academic standing and financial need, with preference to students from the state of Wyoming.

KINCH MEMORIAL BURSARY. – Established by Miss Dia Joyce in memory of Mr. and Mrs. C.H. Kinch to assist medical undergraduate students.

ROCHE BURSARY. – A bursary donated annually by Hoffman-La Roche Limited. Awarded to a student (or students) in the undergraduate medical course who require financial assistance to complete their education.

SAMUEL ROSENFELD BURSARY. – Established by Mrs. Ida Rosenfeld Letovsky in memory of her late husband, Mr. Samuel Rosenfeld, for worthy medical undergraduate students with financial need.

REUBEN ROSS AWARD. – A bequest from the late Reuben Ross, the annual income to provide an annual award available to students in the Faculty of Medicine on the basis of financial need.

SOLOMON DAVID SACKS BURSARY. – Established in 1973 by Mr. and Mrs. Issie Sacks in memory of their son, to assist a deserving medical student. Awarded on the basis of financial need.

ROSE SCHWARZ – HELEN MARCUS BURSARY. – Established by the family and friends of the late Rose Schwarz and the late Helen Marcus to assist a needy and deserving student who intends to devote summer employment to Cancer Research. Awarded with the approval of the National Council of Jewish Women.

BRUCE SMITH BURSARY FUND. – A bequest by the late Dr. Bruce Stewart Smith "to assist poor but worthy medical students to complete medical training at McGill University".

DR. MILTON C. AND NINA E. WILSON AWARD. – Established in 1970 by a bequest from the late Dr. Milton C. Wilson, the annual income to be available for the support of undergraduate or postgraduate students in the Faculty of Medicine who are in need of financial assistance.

3.3 PRIZES

MR. AND MRS. J.A. BESNER PRIZE. – Approximately $250, awarded to the student obtaining the highest aggregate standing in Phase II of the medical undergraduate course.

H.S. BIRKETT MEMORIAL PRIZE IN OTOLARYNGOLOGY. – $100, established by Miss Winifred Birkett in memory of her father, the late Dr. H.S. Birkett, former Professor of Otolaryngology, for a student who has shown outstanding performance in Otolaryngology. In addition, a specially bound volume containing an address by Dr. Birkett on the history of medicine in the Province of Quebec and a photograph and brief biographical sketch of Dr. Birkett will be presented to the winner.

JAMES Q. BLISS ANNUAL BOOK AWARD. – Awarded to the student who obtains the highest standing in Physiology in the First Year Medical Class.

BRISTOL LABORATORIES OF CANADA PRIZE. – An annual prize of $125 awarded to a student in Phase II.

JOSEPH MORLEY DRAKE PRIZE. – (Founded by the late Joseph Morley Drake, M.D.) – A prize of $125 awarded to the student considered to be the most outstanding in Pathology.

ROBERT FORSYTH PRIZE. – $125, bequeathed by the late Miss Jeanie Forsyth, awarded each year to a student who, upon graduation, has shown particular ability in all branches of Surgery.

CHARLES E. FROST MEDICAL PRIZE AND BRONZE MEDAL. – An annual prize valued at $500

tobe awarded to a medical student who has shown the most promise in the field of Pharmacology. A bronze medal will also be presented to the winner.

HARRY S. GROSS MEMORIAL PRIZE. – $75, bequeathed by the late Mrs. Esther B. Gross in memory of her late husband, Harry S. Gross, D.D.S. 1913, M.D., C.M. 1921. Awarded to the student with the highest standing in Surgery in Phase II of the medical course.

JOSEPH HILS PRIZE. – (Founded by the late Dr. Joseph Hils, of Woonsocket, R.I.). A prize of $75 awarded to the student who obtains the highest standing in Pharmacology in Phase IB.

CAMPBELL HOWARD PRIZE IN CLINICAL MEDICINE. – $50 founded by Mrs. Campbell Howard, in memory of the late Dr. Campbell P. Howard, Professor of Medicine at McGill. Awarded to the student who has shown the most consistent excellence in his written case reports in Phase II Clinical Medicire.

F. SLATER JACKSON PRIZE. – Value $75, founded by Mr. and Mrs. H.F. Jackson in memory of their son, the late F. Slater Jackson, M.D. Awarded to he student with the highest standing in Histology.

CAMPBELL KEENAN MEMORIAL PRIZE IN CLINICAL SURGERY. – $100, established by Miss Charlotte Mildred Hagar in memory of the late Dr. Campbell B. Keenan. Awarded to the student in the graduating class who has shown the highest proficiency in Clinical Surgery. The winner of the Robert Forsyth Prize in Surgery is ineligible.

DR. W.B. LEWIS PRIZE. – An essay prize open to students in all faculties. For further information contact the Scholarships Office in the Registrar's Ofice.

CHESTER MACNAGHTEN PRIZES. – An essay prize open to students in all faculties. For further information contact the Scholarships Office in the Registrar's Office.

MONTREAL CHILDREN'S HOSPITAL CUSHING MEMORIAL PRIZE. – $100 awarded to the student with the highest standing in Pediatrics.

PSYCHIATRY PRIZE. – Value $100, awarded to the medical student who, in the opinion of the Department of Psychiatry, shows the greatest promisein Psychiatry.

SAMUEL ROSENFELD PRIZE. – $50, awarded to the student with the highest standing in Medical Microbiology of the medical course.

MONA BRONFMAN SHECKMAN PRIZE. – $125, awarded for the highest academic standing in Psychatry.

ALEXANDER D. STEWART PRIZE. – $150, founded by the late W. Grant Stewart (Arts 1885, Med. 1888) in memory of his brother, the late Alexander D. Stewart (Med. 1888), to be awarded to the member of the graduating class who, in the opinion of the Faculty, presents in every respect the highest qualifications to practise his/her profession.

J. FRANCIS WILLIAMS PRIZE IN MEDICINE AND CLINICAL MEDICINE. – $500, founded by the late J. Francis Williams, M.D., awarded to the student obtaining the highest standing in Medicine in Phase III of the medical curriculum.

3.4 MEDALS

WALTER CHIPMAN GOLD MEDAL. – Founded by the late Max Strean in honour of Dr. W.W. Chipman. Awarded to the student whose performance in Obstetrics and Gynecology throughout the medical curriculum is considered to be outstanding.

HOLMES GOLD MEDAL. – Founded by the Medical Faculty in 1865, in memory of the late Andrew Holmes, M.D., LL.D., sometime Dean of the Faculty. Awarded to the student graduating with the highest aggregate standing in the entire medical curriculum.

SUTHERLAND GOLD MEDAL. – Founded in 1878 by the late Mrs. Sutherland in memory of her husband, William Sutherland, M.D., formerly Professor of Chemistry in this Faculty. Awarded to a student with a good overall standing in Phase I, and whose performance in biochemistry is considered to be outstanding.

WOOD GOLD MEDAL. – Founded by Casey A. Wood, M.D., LL.D. Awarded to a student for the most outstanding clinical performance in Phase III. The winner of the Holmes Medal is not eligible.

3.5 LOAN FUNDS

MAUDE ABBOTT MEMORIAL LOAN FUND. – Established by the Federation of Medical Women of Canada and available to any woman medical student, first year intern or graduate student. Apply to the Secretariat, Federation of Medical Women of Canada, Box 8244, Ottawa, Ontario K1G 3H7.

BORIGHT LOAN FUND. – Established in 1963 by a bequest from the late George H. Boright for loans to deserving medical students.*

BOSWELL JAMES LOAN FUND. – Established in 1943 by Dr. A. Boswell James and available to undergraduates and graduates.*

*Apply to Student Aid Office.

DAVID M. CALDWELL STUDENT LOAN FUND. – Established in 1973 by a bequest from the late David M. Caldwell M.D. 1919, to assist students in the Faculty of Medicine, with preference given to American students.*

ALEC AND SYLVIA DOLLIN LOAN FUND. – Established in 1965 by Mr. Alec Dollin for loans for medical students.*

KELLOGG LOAN FUND. – Given by the Kellogg Foundation to provide loans up to a maximum of tuition fees in any year to students in good standing who require such assistance. The regulations and application forms are the same as for other loan funds controlled by the University.*

LACEY LOAN FUND. – Established in 1962 by a donation from Mrs. Herbert Van Devanter Lacey, Cheyenne, Wyoming, primarily for aid to medical students from the state of Wyoming but may be extended to others in accordance with the following priorities: Medical students from the state of Wyoming; Dental students from the state of Wyoming; Medical students from other states of the U.S.A.; Medical students from other countries. Loans not to exceed $700 each per year.*

GERTRUDE MUDGE MEMORIAL STUDENT AID FUND. – Established in 1958 by donations from students, graduates, and staff in memory of the late Gertrude Mudge, for many years Assistant Secretary of the Faculty of Medicine. Loans shall not exceed the tuition fees for the year.*

WESTON FAY VOLBERG JR. MEMORIAL LOAN FUND. – Established in 1956 by classmates of the late Weston Fay Volberg, Jr., M.D., C.M. 1953, and available to medical students.*

*Apply to Student Aid Office.

4 CURRICULA, COURSES OF STUDY AND PROGRAMS

4.1 *PROGRAMS IN MEDICINE*

Application for Admission

Admissions Telephone Number: (514) 392-4232

Application for admission to the Faculty of Medicine must be made on the special application forms available only from the Office of the Associate Dean (Admissions), Faculty of Medicine, Room 609, McIntyre Medical Sciences Building. All requests for application materials will be assigned to a mailing list. The materials will be forwarded during the month of September. Applications for the first-year class of September 1978 will be available after September 1, 1977. Applicants to the Four Year and Advanced Standing Programs will be asked to complete a Stage I application, which is reviewed by members of the Admissions Committee. Selected applicants will be invited to complete a Stage II application. There is no fee for the Stage I application. In order to speed up our responses to your Stage I application, we enclose self-adhesive address labels. Please print your name and address on them and return them to us with your Stage I application. **Only official transcripts will be accepted by this office.** The usual time interval for a response to a Stage I application is between six and eight weeks. The Stage II application must be accompanied by a non-returnable fee of fifteen dollars ($15.00 in Canadian funds) in the form of a cheque or money order payable to McGill University. Applicants currently registered at McGill University are not required to pay the $15.00 fee. The deadline for the Stage I application is January 15, 1978 and for the Stage II application, March 1, 1978.

Although the great majority of the entering class is below the age of 27, older applicants will be considered.

During the past few years, the Admissions Committee has selected an increasing number of Quebec students. Twenty percent of the entering class are accepted from applicants outside the Province of Quebec. There is a total of 160 students in the first-year class.

Accepted students for the 1976 entering class had the following credentials: mean G.P.A. (Based on a 4 point scale) 3.58; M.C.A.T. percentile scores, VA. 68, QA. 76, GI. 63, SCI.76.

REQUIREMENTS FOR ENTRANCE

Four-Year Program in Medicine

Applicants must be proceeding toward the satisfactory completion of a course of study leading to the Bachelor Degree at a recognized college or university. All successful candidates must be in receipt of the Bachelor's Degree prior to registration in the first-year of the medical curriculum.

This Faculty does not admit part-time students.

Scientific Requirements:

Chemistry (General), one full course with laboratory work.
Chemistry (Organic), one full course with laboratory work.
Physics, one full course with laboratory work.
Biology, one full course including studies of biology at the cell and molecular level.
In addition, Physiology (human and/or mammalian), one full course with laboratory work is recommended.

Cultural Requirements: In addition to the scientific requirements, applicants are encouraged to have an adequate preparation in English literature and composition, mathematics and a working knowledge of the French language.

In selecting courses, in addition to the specific requirements listed above, an intending medical student should plan his premedical program as a whole and in accordance with a definite educational objective. Emphasis should be placed on the broad educational value and the intellectual training afforded, rather than on the factual content of such premedical curricula. The student is therefore advised to select a major field which appeals to him; this major field may be selected from the natural or social sciences, or the humanities. Certain subjects, though not essential, have been found valuable in medical study and may be included as electives if the curriculum in the major field permits; psychology, sociology, genetics, anthropology, mathematics, languages.

Admission Test Requirements: All applicants are required to take the New Medical College Admission Test. For those applying to the four-year program the test must be taken prior to the close of Stage I applications on January 15, 1978. This test is conducted by the American College Testing Program (P.O. Box 414, Iowa City, Iowa 52240) at various centres in the spring and fall of each year. **CANDIDATES FOR THE FALL 1978 ENTERING CLASS MUST PRESENT SCORES FROM THE NEW 1977 MCAT.** The 1977 MCAT fall test date is October 1st. The fall postmark registration deadlines are September 2nd for those candidates testing in the United States, Canada, and Puerto Rico; and August 29th for those testing in foreign countries. Registration materials will be available at our offices about February 1, 1977. Candidates are warned not to mail too close to the postmark deadline since past experience has shown that packets are sometimes postmarked a day or two after they have been put in a mail box. No late applications will be accepted.

It should be noted that the New MCAT includes tests to measure:

1. Science Knowledge (Biology, Chemistry and Physics)
2. Science Problems (Biology, Chemistry and Physics)
3. Skills Analysis (Reading)
4. Skills Analysis (Quantitative)

It is realized that English is not the first language of many applicants to this Faculty and this fact will be taken into account in assessing the results of this test.

Five-Year Program in Medicine

Canadian citizens and landed immigrants resident in the Province of Quebec, completing the two-year program in the Quebec Colleges of General and Professional Education (CEGEP), are eligible to apply for the five-year program providing they have taken the following science courses: one full year course in General Chemistry with laboratory work, one half year course in Organic Chemistry with laboratory work, one full year course in Physics with laboratory work and one full year course in General Biology. We also recommend a full year course in Mathematics. Persons having attended other technical schools or university programs before attending CEGEP are not eligible to apply for the five-year program, nor are persons attending any collegial or premedical program that is not a Quebec CEGEP. Students in the five-year program will be registered in the Faculty of Science for the first year (Med-P year). Providing that a satisfactory academic standing has been maintained, the student proceeds into the four-year medical curriculum. Such applicants may complete the scientific entrance requirements for the four-year program during the Med-P year.

Application Procedures for the Five-Year Program: Application for admission to the five year medical program must be made on the application forms available only from the Office of the Associate Dean (Admissions), Faculty of Medicine, Room 609, McIntyre Medical Sciences Building. Applications for the five-year program for September 1978 will be available after October 1, 1977. **Only official transcripts will be accepted by this office.**

Admission Test Requirements: Applicants to the five-year medical program must write the New Medical College Admissions Test in the spring of their second collegial year. Registration packets will be available from the medical admissions office around February 1, 1978. You must contact this office no later than February 1, 1978 regarding the deadlines for this test.

It should be noted that the New MCAT includes tests to measure:

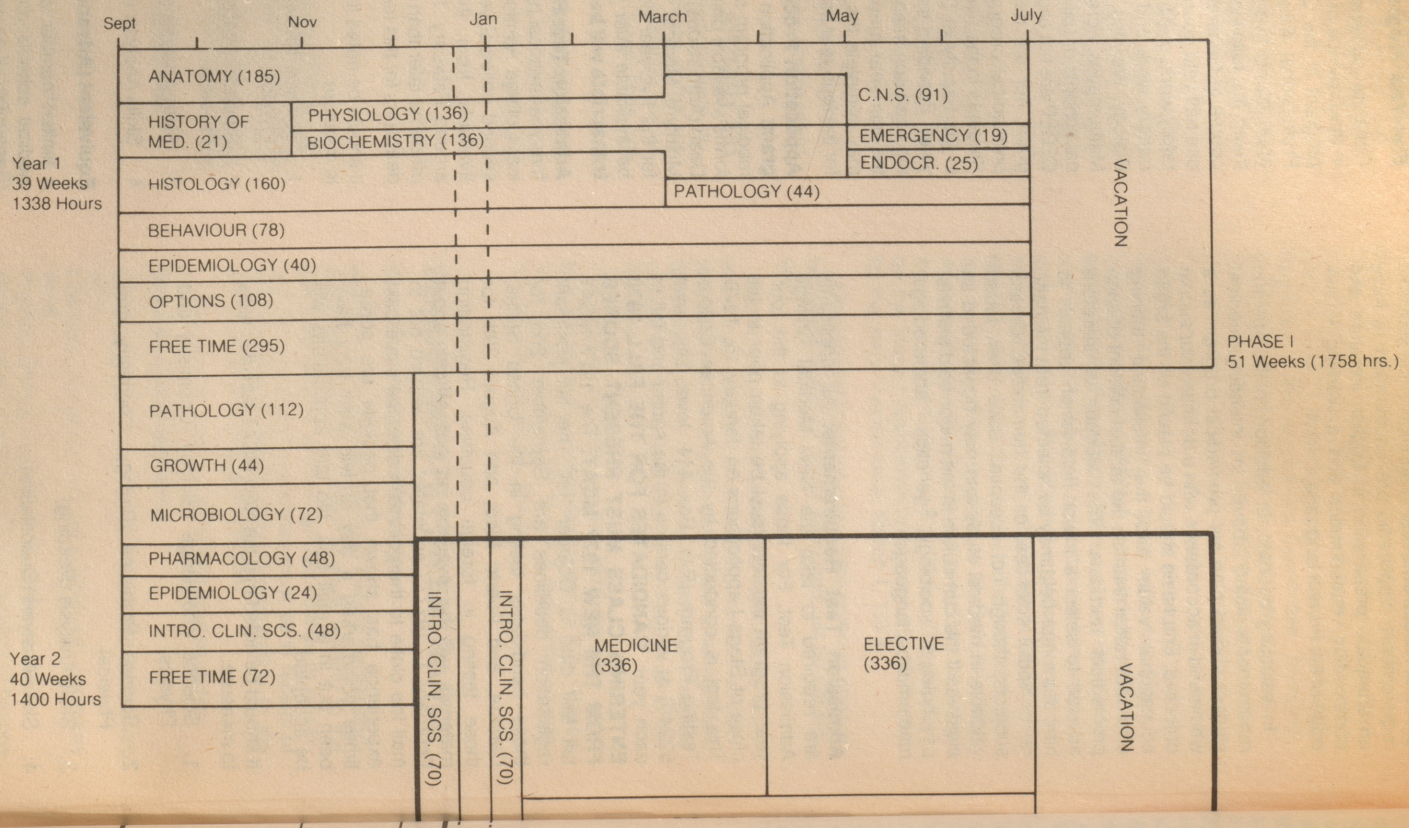
1. Science Knowledge (Biology, Chemistry and Physics)
2. Science Problems (Biology, Chemistry and Physics)
3. Skills Analysis (Reading)
4. Skills Analysis (Quantitative)

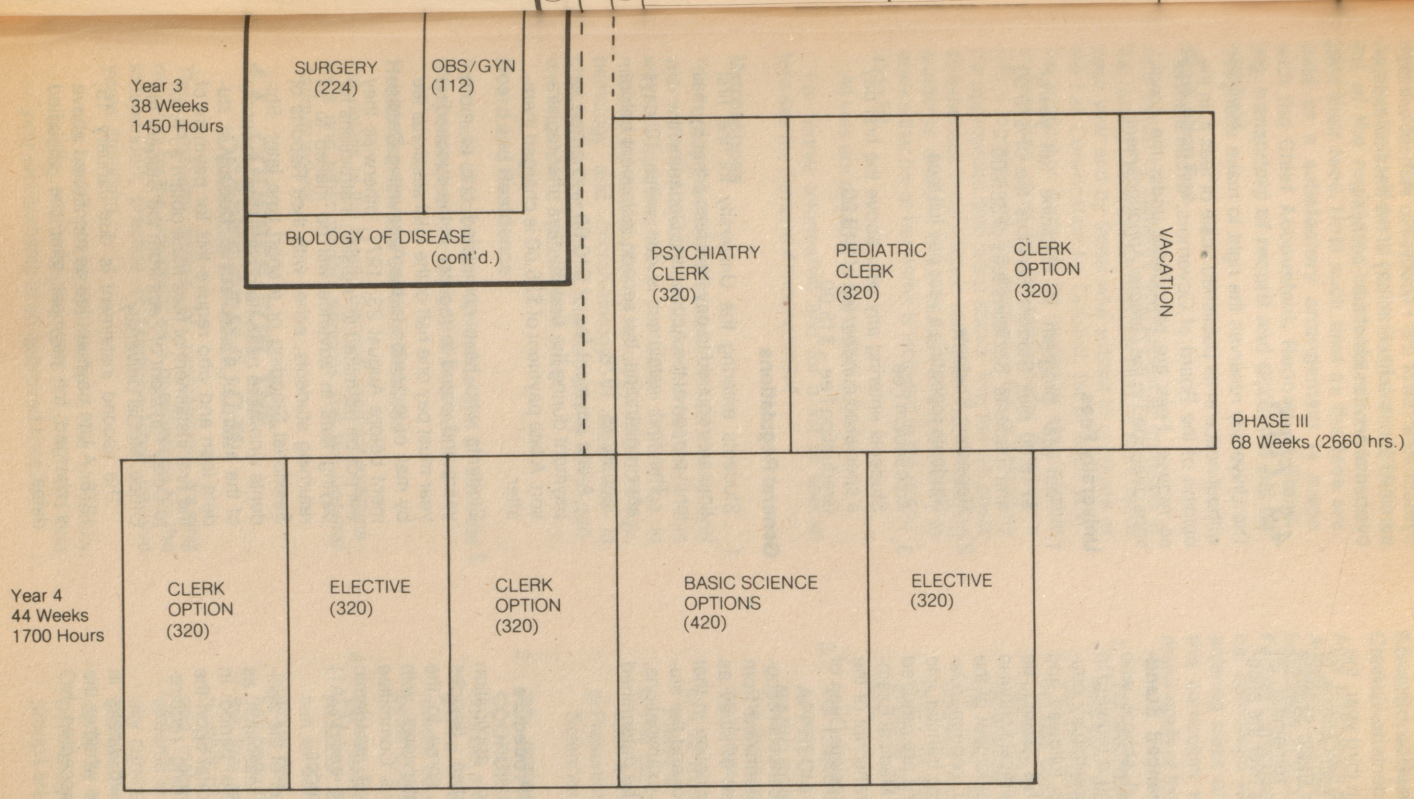
Equivalent (Advanced) Standing

A limited number of transfer students from other medical schools may be accepted into Phase IB (September of second year), Phase II (mid-December of second year) or into an offset Phase II program which will start at the beginning of third year as outlined below. No transfer students will be accepted into Phase III or into the fourth year.

McGILL FACULTY OF MEDICINE CURRICULUM

(numbers represent time in hours)*





* Hours calculated on basis of 35 hours/week in PHASES I & II and in Basic Science options of Phase III; 40 hours/week in PHASE III clerkships and electives. Hours and weeks do not include vacations and holidays.

TOTAL
161 Weeks
5888 hrs.

(revised Aug. 1, 1974)

The offset Phase II and Phase III Programs are designed for students who have completed two years of Basic Science in a traditional medical curriculum and who wish to transfer to McGill for their clinical years. The programs offered are identical to the regular Phase II and Phase III programs except that the curriculum is offset by 24 weeks compared to the regular program. Thus, students in Offset Phases II and III take all of Phase II in third year, the regular fourth year rotations (four 8-week clinical or elective rotations and the 12 weeks Basic Science Options), and then complete the remaining 24 weeks of clinical or elective rotations over the ensuing summer and autumn.

Application Procedures for Advanced Standing: A student of another medical school who wishes to apply for advanced standing is required to submit an official statement of his preliminary education, the medical program he has followed and the standing he has obtained. This should be accompanied by a calendar of the medical school in which he has studied, giving a full statement of the course of study and a Dean's letter of recommendation. In addition, students applying for transfer into the regular or offset Phase II programs are required to take Part I of the National Board of Medical Examiners examinations, and an official transcript of the results must be forwarded to the Associate Dean of Admissions.

The equivalent courses of study in schools recognized by this University shall be determined from time to time. Acceptance of a course of study as equivalent may not include the examination in that subject held by the recognized school and the student may be determined to pass such examinations, individual or comprehensive, as may be determined by this Faculty.

Applicant Review and Notification Procedure

After a review of the submitted application material; the Admissions Committee decides which applicants will be invited to come to the Faculty of Medicine Offices for interviews with Committee members. The Admissions Committee judges applicants on the basis of academic achievement (entire academic record and MCAT) as well as personal qualities and attitudes.

All applicants will be notified by letter of the decision of the Admissions Committee. Inasmuch as admission is offered a considerable period in advance of matriculation, it is provisional upon the successful completion of the remaining requirements for the various programs.

Successful applicants are given two weeks in which to reply to the letter and to state whether the offer of a place in the class will be accepted. NO DEPOSIT FEE IS REQUIRED.

4.2 REGISTRATION

Students in the Faculty of Medicine will register on Thursday, September 1, 1977. There will be a late registration fee of $25.00 for those who register after this date. The fee will not be refunded except by authorization of the Faculty. No student will be admitted after the fifteenth day of the session except by special permission of the Faculty.

4.3 FEES

The University reserves the right to make changes without notice in its published scale of fees if, in the opinion of the Board of Governors, circumstances so require. Fees are refundable under the conditions described in the *General Announcement.*

University Fees

1. Four-year program in Medicine (all years): $719.00 plus Student Services fee of $70.00 and Students' Societies fees of $25.00.

2. Repeating Students
   Students repeating a year pay full fees.

3. *Ad eundem* Fee
   Students entering any year above the first pay a special *ad eundem* fee of $10.00
   Graduation Fee – $15.00.

General Regulations

1. Students entering the University for the first time are required to pay their fees either by mail or in person at the Accounting Department.
   The first instalment is due within 10 days after registration, the second instalment before January 15, 1978.
   A late payment fee of $10.00 is charged for payment during the first 30 days after registration. A late payment of $25.00 is charged thereafter.

2. Students who have completed one or more years and intend to register in the succeeding year must pay one half of the total sessional fee by mail or in person to the Accounting Department before August 23, 1977, otherwise they will not be permitted to register. Instructions for paying fees in advance will be mailed to all returning students, either with their Reports of Sessional Standing or a short time later. Students who have been notified by the University of the award of a scholarship, bursary or student loan and who require this for payment of the first instalment of fees must obtain a *Permit to Delay Payment of Fees* from the Student Aid Office, McGill University.
   The second instalment is due January 15, 1978. A late payment fee as mentioned above is charged for payment after the specified dates.

3. Students registering late must pay their fees at the time of registration, failing which they become subject to the late payment fee and the provisions of the following paragraph:

As soon as possible after the prescribed dates for the payment of fees the Chief Accountant will send to the Registrar's Office a list of the registered students who have not paid their fees. Until such time as the fees are paid or a satisfactory arrangement is made with the Chief Accountant, Reports of Standing, transcripts of record and diplomas will be withheld.

Graduation Fee

Application by students who expect to graduate at the Spring Convocation must be filed by April 1st of each year and by those who expect to graduate at the Fall Convocation by October 1st of each year. An application form will be mailed to each eligible student and must be returned to the Registrar's Office together with the graduation fee of $15.00 by the appropriate date listed above. This fee will cover all expenses in connection with graduation including academic dress. It is the student's responsibility to ensure that his or her name is included in the graduation list.

All fees are payable in Canadian currency.

For further information and for a list of special fees see the *General Announcement*

Microscopes

The Faculty provides all students in first and second year with a first quality binocular microscope. In this way, all students have the same experience in microscopy as it applies to histology, microbiology, pathology and microhistology. A small fee is charged for the rental of microscopes to cover general repairs and maintenance costs.

Board and Residence

For details of board and residence and an estimate of expenses, see the *General Announcement.*

Health Service and Student Services

For details of the Health Service, medical examinations and other student services see the *General Announcement.*

4.4 COURSES FOR THE DEGREE OF M.D., C.M.

The minimum period of professional training required by the University as a qualification for the independent practice of Medicine shall be five years, including:

four years of medical study in the University leading to the degree of M.D., C.M.; and one year on internship in an approved hospital.

While the Faculty's administration exercises a general supervision of arrangements for internship applications, the Faculty of Medicine assumes no responsibilty to provide an internship for any student.

Educational Goals of McGill Faculty of Medicine Curriculum

After four years of deliberations by the Permanent Advisory Committee on Undergraduate Medical Education (PACUME) and, subsequently, by the Faculty Curriculum Committee (F.C.C.), a new medical curriculum was introduced beginning with the entering class of September, 1973. The details of this curriculum are outlined below. Some of the major goals of the new curriculum are:

1. **TO INCREASE FLEXIBILITY.** Student interests vary, the needs of society vary and no man can be master of all fields. To this end, streaming has been introduced in the last year and a half (PHASE III) of the curriculum, the amount of Scheduled Free Time has been increased in the first and second years and Optional courses have been added to the first year program. In addition, Elective programs continue to make up a significant portion of the curriculum.

2. **TO ENABLE THE STUDENT TO BETTER APPRECIATE THE RELEVANCE OF THE BASIC SCIENCES TO CLINICAL MEDICINE.** The three curricular revisions aimed at achieving this goal are:

   a) A 12-week block of basic science teaching in Phase III.
   b) The concurrent teaching of Biology of Disease with clinical disciplines in Phase II.
   c) Presentation of the introduction to Clinical Sciences Course early in second year.

3. **TO IMPROVE THE INTEGRATION AND COORDINATION OF COURSES.** Seven core courses and many option courses are fully integrated. In addition, the timing of many departmental courses has been re-arranged so that better coordination can be achieved.

4. **TO "HUMANIZE" AN "OVER-PROFESSIONALIZED" CURRICULUM.** This is the most difficult to define and resolve; curricular revision alone has strict limitations in this area. What has been done is to continue the emphasis on the first year Behaviour course, introduce a number of first year options in social sciences and make Family Practice one of the major streams in Phase III. Further, in first year, faculty curriculum counsellors act as small group discussion leaders and tutors, introducing students to clinical experiences in their social, psychological and "human" dimensions. The groups are "labs" for the Behaviour course.

Descriptive Outline of McGill Faculty of Medicine Curriculum

The content of the McGill curriculum may be considered under four major headings – CORE, OPTIONS, ELECTIVES and SCHEDULED FREE TIME.

CORE is that portion of the curriculum compulsory for all students. Core *alone* is quite inadequate to prepare a student for medical practice, and it must be supplemented by options and electives. Core includes basic biological sciences, behavioural and social sciences and clinical disciplines. It is taught in all four years of the curriculum.

OPTIONS may be thought of as a defined list of courses, determined by Faculty, from which students must select a specified number according to the rules and regulations of Faculty. Options differ from electives in several respects, the two major differences being that options are courses specifically proposed and offered through Faculty for specific educational purposes and the number of options offered is limited.

At McGill there are two types of options. Those offered in first year are unrelated to the multiple stream or track options of Phase III and might therefore be labelled as "undifferentiated options". The optional courses offered in the clerkship period are tied to the mutliple streams or tracks. Four major clinical stream options and two "branches" of these major streams are offered in Phase III: Internal Medicine – General Stream or Pediatric Branch; Surgery – General Stream or Obstetrical-Gynecological Branch; Psychiatry; and Family Medicine. There are 24 weeks of clinical stream options. In addition to the clinical stream options of Phase III, there is a 12 week block of Basic Science options. During this time a series of courses are offered in various basic biological and social sciences. Although some courses are compulsory, students will in general have considerable choice in this section.

ELECTIVES differ from options in the following ways: the students, not the Faculty, are primarily responsible for selecting the courses; the choice of electives is very large and may be taken in non-university settings. Indeed the only major restriction is that the elective must be in some way related to medicine. Electives are seen as an opportunity for a student to either pursue his major interest in depth or for a student to taste a variety of experiences which might help him decide on his ultimate career. Electives are taken during Phases II and III.

SCHEDULED FREE TIME is synonymous with "Faculty scheduled student learning time". It is a vital part of the timetable as "learning time" is an essential complement to "teaching time". There is relatively little scheduled free time at McGill; most of it is formed in the first year and a half (Phase I).

In summary, the McGill curriculum is broken down as follows:

CORE	86 weeks	53.4%
OPTIONS	39 weeks	24.3%
ELECTIVES	26 weeks	16.1%
SCHEDULED FREE TIME	10 weeks	6.2%
TOTAL	161 weeks	100.0%

PHASES

The implementation of this Core-Options-Electives curriculum is done by dividing the four academic years into three phases as follows:

PHASE I	Beginning of Year I to end of November of Year II (51 weeks)
PHASE II	Beginning of December of Year II to end of December of Year III (42 weeks)
PHASE III	Beginning of January of Year III to end of May of Year IV (68 weeks)

PHASE I

This phase, comprising all of first year and the first 12 weeks of second year, is devoted largely to instruction in the Basic Biological Sciences. Normal Biology is the main theme of the first year (Anatomy and Embryology, Histology, Physiology, Biochemistry, Central Nervous System and Endocrinology) while Abnormal Biology is introduced in the first 12 weeks of second year (Pathology, Microbiology and Pharmacology). A course in Growth and Development is also given during this period. Behavioural Science and Epidemiology are the core non-biological sciences given in this phase. In addition, short courses in Emergency Medicine and the History of Medicine are offered in the first year. The introduction to clinical sciences begins in September of second year with about one half day per week during the first 12 weeks of the year.

As indicated in the timetable, first year students are required to take 108 hours of optional courses. The optional courses in first year are variable and will change from year to year. Students may take credit courses from any of the faculties at McGill University. As well, first year options may also be chosen from courses offered for credit by any of the universities in Montreal. Every student must take six option credits in his first year.

PHASE II

This phase is taken up with three main areas:

1. The bulk of the Introduction to Clinical Sciences Course.
2. The pre-clerkship clinical rotations in Medicine (12 weeks), Surgery (8 weeks), Obstetrics and Gynecology (4 weeks).
3. The Biology of Disease Course which is predominantly a course in Pathophysiology given

concurrently (two half days per week) with the clinical rotations.

In addition, Phase II contains a 12-week elective block.

PHASE III

Phase III which begins in January of third year and includes all of fourth year is predominantly the clerkship phase. The 68 weeks of this phase are divided as follows:

Clerkship	40 weeks
Electives	16 weeks
Basic Science Options	12 weeks

Streaming begins in Phase III and there are four major streams or tracks as outlined above under options. It should be noted that the 12-week Basic Science Block in this Phase is part of the Optional portion of the curriculum. On the other hand the 16 weeks reserved for the Pediatric and Psychiatry clerkships in this phase are compulsory for all students and constitute part of Core.

It should be noted that the purpose of streaming during the clerkship period is not to introduce early specialization. Rather, it is geared to offering the student a well-planned program centered around an area of special interest which may or may not be his eventual career choice. The clinical content of each of the streams is considered to be broad enough to prepare the student for any internship or residency program.

The philosophy underlying the clinical clerkship is that on each clinical service, the clinical clerk will occupy a well-defined position as a regular member of a clinical teaching unit, with increased responsibility for patient care. The clerkship is designed to permit the student to consolidate the clinical skills he has acquired in Phases I and II and to begin to acquire "professional maturity".

The clinical clerkship is structured to satisfy the demands of most licensing bodies. Consequently, students may in most instances, enter directly into straight internships as the first phase of their specialty training.

Each clinical clerk is entitled to four weeks vacation which must be taken at the time allocated in the timetable.

4.5 CURRICULUM REVIEW

The Faculty realizes that there is a need for constant review of the medical curriculum necessitated by:

a) Current rapid advances in scientific knowledge.
b) Probable changes in the role of the medical school in relation to the community with concomitant changes in the delivery of health care.
c) Continued application of principles developed in the field of general educational science to medical education.

Therefore a permanent student-faculty Curriculum Committee operates within the Faculty of Medicine. This Committee is charged with the task of studying the necessity for further curriculum revision and planning the implementation of any modifications thought desirable.

4.6 LEAVES OF ABSENCE

This Faculty has a flexible policy for leaves of absence of up to one year in duration which may be granted at the discretion of the Dean. Such leaves must begin and end at times corresponding to the beginning and ending of rotations and, except under unusual circumstances, at least three months notice is required prior to the commencement of a leave of absence.

Specific regulations concerning leaves of absence are as follows:

During Phase I, leaves of absence of one year duration only can be taken. These may be taken between first and second year or at the completion of Phase I (prior to the four week clinical rotation in Introduction to Clinical Sciences).

During Phases II and III leaves of up to one year in duration may be taken at the beginning of any rotation with the following provisos:

a) Leaves of absence will be granted in only exceptional circumstances prior to the first or second 12 week rotation of Phase II:
b) A leave of absence spanning the Basic Science Option block of fourth year must be planned in such a way that the student will be able to make up that block in the following year.

In general, the time used up for a leave of absence will be made up by offsetting the student's curriculum by an equivalent time period. In some circumstances, permission may be given to make up a short term leave of absence during an elective or holiday period.

4.7 EVALUATION SYSTEM

The courses taken within the Faculty of Medicine are divided into two groups, namely major courses and minor courses. Student evaluation, either by examination and/or by other means (term papers, tutorial assessments of performance in small groups or on clinical services, etc.) is the general rule for all courses whether major or minor.

Major courses are: Anatomy (Embryology), Histology, Physiology, Biochemistry, Central Nervous System, Pathology, Medical Microbiology, Pharmacology, Epidemiology, Biology of Disease, Phase II Medicine, Phase II Surgery, Phase II Obstetrics and Gynecology, Phase III Psychiatry, Phase III Pediatrics, all Phase III clerk option rotations and fourth year basic science options.

Minor courses are: History of Medicine, Emergency Medicine, Endocrinology, Growth and Development, Introduction to Clinical Sciences, First Year Options, Behaviour and all electives.

It should be noted that for the purposes of evaluation the six required first year option credits are combined (by averaging grades or weighing individual assessments) to represent one final composite grade.

For the purposes of evaluation the four-year curriculum is broken down into the following sessions, the end of each representing the time at which regular Promotions Committee meetings will be held to determine whether or not a student may proceed to the next session.

Evaluation Session I
The beginning of Year I until the end of Year I

Evaluation Session II
The beginning of Year II until the end of of Phase I

Evaluation Session III
The beginning of Phase II until the end of Phase II

Evaluation Session IV
The beginning of Phase III until the end of Phase III

EVALUATION PROCEDURES FOR PHASE I. Except under unusual circumstances, a student is not allowed supplemental (or remedial) evaluations in three or more major courses in any one evaluation session. The student will be required to repeat the session or retire as decided by the Promotions Committee, from whose decision there shall be no appeal.

Except under unusual circumstances, a student is not allowed supplemental (or remedial) evaluations in two major and one minor course in any one evaluation session. The student will be required to repeat the session or retire as decided by the Promotions Committee, but he or she may appear before the Promotions Committee to plead his or her case if it is decided he or she should retire.

Unless the Promotions Committee finds special mitigating circumstances, a failure in the supplemental (or remedial) evaluation of a major course will require the student to repeat the Evaluation Session, and no student may repeat such an Evaluation Session more than once. Any student who fails in the supplemental (or remedial) evaluation of two major courses in any one Evaluation Session shall be required to retire without the privilege of further supplemental (or remedial) evaluations unless the Promotions Committee finds special mitigating circumstances.

Except under unusual circumstances, a student who fails in the supplemental (or remedial) evaulations of three or more minor courses in any one Evaluation Session, must repeat that Evaluation Session or may be asked to retire, as may be decided by the Promotions Committee, but he or she may appear before the Promotions Committee to plead his or her case if it is decided that he or she should retire.

A student who fails in the supplemental (or emedial) evaulation of not more than two minor courses in one Evaluation Session may proceed with other subjects in the subsequent Evaluation Session, carrying such subjects as conditions. However, he or she may not be evaluated in any subsequent major course until the conditions have been removed, nor may he or she carry more than two conditions at any time. Should a student fail to remove his or her conditions prior to the time for evaluation in a subsequent major course, he or she will be requied to revert to the previous Evaluation Session unless the Promotions Committee finds special mitigating circumstances.

EVALUATION PROCEDURES FOR PAHSE II. Except under unusual circumstances, a student in Phase II will be permitted supplemental (or remedial) rotations and evaluations in no more than two subjects. When necessary, time for these remedial rotations will be obtained by offsetting the remainder of the student's curriculum by an appropriate number of weeks. If the student should fail one or both of these supplemental (or remedial) evaluations, he or she will, except under unusual circumstances, be required to repeat the Phase or withdraw from Medicine as decided by the Promotions Committee, from whose decision there shall be no appeal.

EVALUATION PROCEDURES FOR PHASE III. It should be noted that for purposes of evaluation credits from Basic Science Option courses are combined (by averaging grades or weighing individual assessments to represent one final composite grade.)

Except under unusual circumstances, a student in Phase III will be permitted supplemental (or remedial) rotations and evaluations in no more than three subjects. Where necessary, time for remedial rotations will be obtained by offsetting the remainder of the student's curriculum by an appropriate number of weeks. If a student should fail the supplemental (or remedial) evaluations of any clinical subject, he or she will generally be required to repeat the major clinical courses offered in Phase III (Pediatrics, Psychiatry and three Clerk Option rotations) or withdraw from Medicine as decided by the Promotions Committee, from whose decision there shall be no appeal.
